[176] According to the story of Guarerai, the choncho is the father of good sorcerers, especially those who make it rain, and the chena is the father of bad sorcerers, or those who hold back the rain. In any public calamity in certain places, all the Indians will gather around the Ipaye, or sorcerer, so that the calamity may cease. If this continues despite the sorcerer's promise and he is unable to blame anyone else for his impotence, as the choncho did, he is killed with blows and burned without pity, but if he can blame it on another chena, the latter will suffer the capital punishment, and his protests of innocence or ignorance will be of no avail. Such is the fury of the mob when they are exalted by the harangues of the good Ipaye!

825 Before passing on from these feared and respected birds, I
787 shall say in passing that at night a whitish bird that they call
763 Tetê walks and flies about. When they see it, it is a sure sign to the Indians that in some house the women are about to cut their hair as a sign of mourning, that is, that someone in the town will die. As for the small owl /lechuza/, Suinda, the beliefs of the Chiriguano are the same as those of the common people of Europe and America, the differences among them being slight (1).

765

1. As will be seen, mourning among the Chiriguano women consists of cutting their hair and wearing the dirtiest rag on their heads. Mourning is always complete, that is, they observe strict mourning for any dead person.

756 /148/ Good sorcerers, represented by the choncho, are very
754 compassionate, and they do everything possible so that the race may enjoy good health, fortune, good crops, without experiencing hunger or epidemics, while bad sorcerers bring every evil to the poor Chiriguano. They hold back rain and order epidemics, as well as hunger and death. Bad sorcerers are called Mbaecuá.

754 The Chiriguano does not die because it is so decreed, because
761 it is a condition of human nature; he does not die as a result of sin of the first man. He dies because bad sorcerers exist; without

/148 cont./

754 them life would be delightful and eternal here on earth where
761 God put him, as has been seen when we were dealing with the creation.

754 The same might be said of sickness. If there is something
753 the matter with a foot, the head, the stomach, or any other part of the body, they do not blame human nature, the elements, the seasons, the sudden changes of the atmosphere so common in the region, but bad sorcerers. If someone dies suddenly, if the old and the young die, if smallpox breaks out in the village, or any other epidemic, it is always blamed on the evil sorcerers (1).

[761] 1. If someone dies because he has drunk in someone else's house, they attribute it to poison administered by sorcery. Death produced by falls, suicide, or murder is not attributed to the sorcerer.

756 Some sorcerers are best for rain and for the fields, and others
622 for illness. If some contagious disease begins to spread around a
623 Chiriguano town or if in the town itself one case or another has
643 appeared, the principle cacique convokes a council of all of
571 the lower caciques; they discuss the appropriate measures to
131 be instituted in order to chase away the sickness at once. The
755 first thing they do is to call one of the well-known sorcerers. Then a commission is formed to take the entreaty to the great charlatan, and usually the one charged with this is the head cacique himself, who is accompanied by one or two of the lower caciques.

755 The sorcerer receives the cacique's invitation as a very
756 great honor, and furthermore, hearing the offers they make
554 him if he manages to drive away or expel the epidemic, there
131 is no idiot who would reject it, since the sorcerer in another town is king for the whole time that he stays there. Everything is at his disposal, men and women, goods /149/ and clothing, food and drink. He spends a better life than that of a great lord (1).

1. The one who explains the object of the

/149 cont./

755 embassy to the sorcerer is the cacique, and his
756 companions limit themselves to saying Añete,
554 that is how it is, just as the altar boy or sacristan
731 says amen.

756 Of course, his arrival is awaited anxiously. All surround
554 him in order to welcome him and give him demonstrations of
574 affection. There is no family which will not bring him whatever
731 it can so that he may cure well. Cooked chickens, boiled eggs,
[178] live lambs, and plenty of chicha are all presents for the great rascal. All of this is still done for any sorcerer.

755 After a short rest, a good meal, and better refreshments,
756 the sorcerer opens his ceremonial with numerous questions in
731 order to try to discover who brought the epidemic to the town, in case it has come in already. If so, he continues in this way and his exorcisms are daily, general for the town, and special for each sick person, as I shall say farther on.

But if the sickness has not come in, he gathers together all of the principal men, they make cigars of tobacco wrapped in maize husks, gather in a circle, light the cigars, and blow smoke in every direction, the sorcerer observing which way the smoke is going. When the location is more or less known, they all go there, club in hand. The sorcerer makes a small excavation and takes from it the charm which he has put there beforehand without being seen; it consists of old, dirty rags mixed with hairs and small bones. Then he burns all that in the presence of the company, strikes the ground with his club and feet, being imitated by all (2).

2. It is not uncommon that the sorcerers themselves take the clothing of persons with smallpox from one town to another in order that the contagion may spread and that they may have some pretext for profit and a life full of gifts.

/149 cont./

755 This done, they return to the town with an air of triumph
756 and pass through all of it, raining blows with their clubs on the
731 corners of the plaza and the houses of the most notable persons, and, the performance ended, he directs his discourse to those who surround him and the others who have come out of their houses. He tells them that they must not be afraid and that they should have confidence in him, for the illness over which he is the master has been dispelled.

He then takes a rest from his labors for several days, takes his leave of the cacique and the principal men, blessed by the frightened inhabitants, and returns to his town. Anyone can understand that, if there is no epidemic, it is a coincidence which will give considerable renown to the rascally impostor, and, if there is one, the blame falls on the townspeople or on some other /150/ bad sorcerer. Then he returns and becomes the healer for all of them. In smallpox epidemics the sorcerer is always one who has had it and who as a sad sign thereof has his face and his nose covered with pox.

755 In the first months after I arrived at the Santa Rosa Mission,
756 an epidemic began to break out; without my realizing what was
731 happening, exorcisms against the smallpox were being carried
164 out by the sorcerer Biringa, but as this disease had thoroughly invaded the town by the end of the year, he returned and paid well for his deceits; his threats that he would make the 255 male students of the school perish were of no avail since both they and the female students became sick, but only one of the boys and seven of the girls died (1).

1. The girls of the Santa Rosa school numbered 235 in the year of the smallpox; those who were dangerously sick received the viaticum before they were taken to the lazaretto. Those about to die even received Extreme Unction in the lazaretto. In January of 1904 there were more than 500 persons in the latter.

/150 cont./

756 Even for rain the sorcerers perform their incantations with
789 their maize-husk cigar, making a turn in the planted fields,
731 but if the drought is general, the incantations are public per-
821 formed in the town in front of the house of the principal cacique.
[197] One of these was performed in the early days of the above-mentioned mission. The missionary had admonished them to stop it, but when they answered insolently, he formed or organized a commission with shotguns and old rifles. The three or four sorcerers fled, but one of them fell into the hands of the commission, was punished for his insolence, and in a few minutes a torrential shower refreshed the entire territory of the mission.

756 In concrete cases, when the sorcerer is required by a
755 particular family, he establishes himself in the house of the sick man; he asks him a thousand questions regarding the sickness, the houses that he has frequented, the friends with whom he has drunk, the companions with whom he has played, and the things that he has earned. Then he lights his maize-husk cigar and smokes, blowing the smoke over the body of the patient, especially the affected part.

Then, depending on the greater or lesser seriousness of the illness, depending on the nature of the disease, whether it requires blows or joltings, which is the most likely, he delivers them so atrociously that they are likely to end the patient's life, and if not he is content with rubbing the affected part hard /151/ and sucking it with his mouth, extracting from the patient's body the worms which the rascal has hidden in his mouth (1).

[164] 1. In many cases worms can be found in the bodies of these Indians between the flesh and the skin. I myself, with the use of fenelina, have made worms as big as chickpeas come out of their bodies, without their having had any wound at all.

/151 cont./

755 Men sorcerers use in their cures, in addition to the cigar, the
756 tupicho. But what the tupicho consists of is difficult to determine. There are sorcerers who use for it a little round stone with some designs on it; according to what I saw in the San Pascual Mission, others use a long bone likewise bearing designs, and, as I saw in Caipipendi and other places, others make do with words alone. The value of the tupicho is not known, but the Indians have much fear of it. I could tell stories about this.

Sorceress Curers

756 There is no doubt about the existence of female curers and sorcereresses, who, like the men, are feared in the tribe, because it is easier for them to administer some slow or violent poison in drinks. They are designated by the name Cuña ipaye, sorceress (2).

> 2. I know several women who are curers and sorceresses at the same time; at least they are considered as such by the Indians of the tribe.

Generally these women are the daughters of sorcerers, but this does not prevent others from being one also. They cure sick men or women with wild herbs, tree bark, and roots which they dig out of the ground. They are in this case true curers, as are certain women among the whites.

756 There are others, and plenty of them; it can be said that
844 every old mother is one for her young daughters. They serve
759 as midwives; they help their daughters and other women in their deliveries. Some of them are so skilled that they are accepted by the women whom the Indians call ladies. During the time when I was living among the Chiriguano, I saw only three die in childbirth.

756 The only thing which is deplorable among these curers is the
278 use of Mbayachi, a poison that they administer with much dissimula-
682 tion, mixing it with chicha and giving it to persons whom they hate, immediately washing or hiding the gourd, glass, or cup in which they administered it to the patient.

/151 cont./

756 278 682 Mbayachi works quite slowly because in general /152/ the sorceress who administers it is careful to infuse in the drink a small quantity so as to avoid its being discovered by the relatives, but if the hated person has none, or the ones he has are very distant in degree or are of little worth, she gives him a strong dose which dispatches him to eternity in a few hours.

The patient who has had the misfortune to drink the poison begins to feel the effect at once: stomach pains, retching, and other known effects. The poison is consumed little by little, and he remains in this state for two or three years, leading a most painful existence, which is shared by the members of the family in their sadness, as they experience all of the burden of the long illness.

Mbayachi is nothing but a poison, and inasmuch as it can be administered among civilized peoples, there is no reason whatsoever to deny that savages can administer it, since they do not fear human or divine laws, take vengeance as a holy thing, and are only with great difficulty discovered (1).

[627] [628] 1. The Indian is not content until he has taken revenge on his enemy: when he achieves it, he says: ayepi ma hese. I have avenged myself on him.

Way to Obtain the Poison

756 278 The way to provide oneself with poison is as follows, according to what Guareral says: The sorceress goes out into the country without telling anyone her purpose. She takes with her a receptacle which generally consists of a little clay jar perforated in the upper part. She goes into the dense woods or forest, where nobody can discover her, covers up her ears and nostrils with cotton and her hands with rags, and undresses completely, so that nothing may disturb her in her work.

/152 cont./

756 Then she[1] waits for some viper to come into sight, and, if
278 it is long in coming, she makes it appear by imitating its hiss.
825 When she sees it, she does not run away or become frightened, but instead, with all the calm in the world, she kills it with a stick, or better with a piece of hollow cane, hangs it from a low bush, and then, from the head down, pours over it chicha oil, which mixes with the venom secreted by the viper. She applies the little jar to the tip of the tail and collects the first venom (2). /Illustration appears here./

2. She cuts off the tip of the tail so that the poison is not left inside the body of the snake. The oil serves to agglomerate the poison and to facilitate the draining.

/153/ If it turns out to be very little, she calls another viper, imitating its hiss, and sometimes as many as five of them come, and she does with them what she did with the first one, until she has obtained enough. She works at this for four or five days; she goes very early and returns late, and when the operation is over, she buries the dead snakes, erases her tracks, gets dressed again, hiding the little jar in her breast, and returns to town as fresh as can be, carrying on her shoulders, and hung from her head a sling full of stems or tree roots, or, if they are in season, algarrobas or some other fruit; the latter are preferred.

756 Venom thus prepared is very pernicious, and in order to
278 administer it in a small dose, it suffices to dampen in it the end of a straw and wash it in the gourd of chicha which the enemy is invited to take. Sorceresses prepare the best chicha, which is called Copiriru, recooked chicha, and, since the Chiriguano is a glutton, he easily falls into the trap, under the pretext of a reconciliation. The method used by the sorceresses to obtain the venom has been discovered because on occasion they have broken the ties of friendship with some intimate friend or kinship with some sister, who knew the secret (1).

1. Sorceresses who possess venom are known; one who wishes to take revenge on an enemy

and does not know how to do it goes to the sorcerers, pays them, and obtains it.

This seems to be a fable which in itself does not merit any importance, as indeed it is not given any by Father Giannecchini, who does not deny it in his writings, as Señor del Campano states. Poison exists among the Chiriguano. They do not extract it from chamico, which is a species of datura, nor do they extract it from other plants or herbs. The sorcerers reveal nothing; the young people do not know about it, and the few old people who are alive only tell what has been said above. Be that as it may, this is a belief of the tribe, and as such I have told it.

Lunar Eclipse

821

One night while waiting for a lunar eclipse, I found myself in conversation with the cacique Andueri of the mission of San Buenaventura de Iro, and I was reminded of something which I remembered regarding this phenomenon which was about to occur on the moon. Chiriguano towns are true hells during an eclipse, because of the shouts, cries, whistles, and every warlike instrument which they use to make noise. When I came to the missions, /154/ the war of Curuyuqui had just happened, and when I heard so much and such an extraordinary hubbub on the night of an eclipse, I believed that it was a new uprising, as was also believed by the inhabitants of Cuevo, who came out armed to find out the cause of so much noise (1).

[114]
[478]

301
533
114

1. The Italian professor Mantegazza states that the Chiriguano, in order to whistle loudly, take out the tembeta or bonon which they have in their lower lip. This is incorrect and denied by all; what the renowned anthropologist refers to must be a special case, since they cannot even drink without the bonon.

/154 cont./

993 [21] [115]

I asked Anduari the cause of such an uproar, and he told me the following story. The jaguar had sworn to destroy the Chiriguano, as had also the Aguara-Tunpa. The Tunpa, who knows everything and always compassionate toward them, told this to his relatives, who are in the sky and who are called Gilrayokasa, the constellation of the Pleiades. These relatives then informed those who were in danger, and they took the precaution of hiding themselves.

Nevertheless, two of the most valiant Chiriguano, in order not to be in continual fear, prepared to put an end to the jaguars. They went out into the countryside, made themselves two long swords of soto wood, and thus armed, they found out where the jaguars drank water. They hid, watching for the arrival of their enemies in order to slay their leader.

They did not have to wait long: when all of them came by and when the leader put his head down to drink from the spring of crystalline water, one of the Chiriguano delivered a great blow on his head with the sword, separating it from the body; with the utmost facility the rest of them fled in several directions, and the head, jumping, disappeared from their presence.

It was pursued by both warriors, but the head prayed to the moon, which it encountered on its way, and the moon took pity and hid it in its breast, and when the warriors arrived and inquired about the jaguar's head, the moon answered in all calmness that it knew nothing and had seen nothing. Naturally they had no faith in its words, and they went away from there, saying to it that one day the tiger would be seen and everyone would know who it was (7).

> 7. When the chief of the jaguars disappeared, the latter were finished and there was calm, the Indians being able to go out once more without fear to their tasks in the fields.

When the young men were far away, the moon rejoined the jaguar's head to its body, and it lived, but it no longer wished to live on earth /155/ for fear of its enemies, preferring to remain with its liberator, reviver, and benefactor, but later it made its ferocity known.

/155 cont./

793 As the Chiriguano had predicted, the jaguar very soon began to put into practice in the heights of the moon its natural inclination to kill and eat defenseless beings. Its peaceful, compassionate, and defenseless liberator lent itself marvelously to its voracity, and the tiger attacked it, but the moon came crying to the inhabitants of the earth, to the Chiriguano, calling them to its defense, if they did not wish to remain eternally in the dark (1).

> 1. If the eclipse is total, they believe that the jaguar has swallowed the moon whole; if it is partial, this is because it did not have time to swallow it.

The Indians, despite the bad deed that the moon had done against them, and more for their convenience than out of compassion, came out of their towns en masse, some with shouts others with whistling, and others with the horns of cows and bulls; they frightened off the Yagua rogũi, yellow jaguar, who out of fear of the Chiriguano, remembering what had happened to it, desisted from its intention, and since then, every time a lunar eclipse occurs, they do the same thing. The fabulous belief passes from the old to the young, from grandfathers to grandsons.

114 On a bright moonlit night the missionary was sleeping peacefully in the Ivu mission, and the moon was obscured by a total eclipse. This was during the month of June in 1909. The missionary did not know the language, and I was absent. The [191] children, who spoke a little Spanish, in their desire for the missionary to see the phenomenon of the eclipse, awakened him with a great uproar, shouting to him: Jaguar is eating moon (2).

> 2. They say nothing of the eclipse, total or partial, of the sun, doubtless because it occurs very rarely; the old people have but an obscure idea of this phenomenon.

4: Nino--213 M-3 (1893-1911) 1912 SF10 Chiriguano SF10

/155 cont./

771 I shall end this fourth chapter by repeating that the Chiriguano in his religion, divinities, and beliefs confuses in extraordinary fashion beings who are good and bad, real and imaginary, as well as fabulous beliefs which conform in substance to certain Biblical tales. The Indian eats, drinks, and [156] [182] sleeps, and he lives like any four-legged animal; he thinks only of the sorcerer, consulting him in his emergencies of illness or want and other calamities, believing that he has the power to alleviate it, there not being any prayer properly speaking.

Chapter Five

Political Organization and Authorities

Introduction

The French Revolution at the end of the eighteenth century set the foundations for the present anarchy with the dethroning and decapitation of the unfortunate and virtuous rulers Louis XVI and Marie Antoinette. /The remainder of p. 156 and the first two paragraphs of p. 157 are omitted in the translation. The following illustration appears opposite p. 157. The remainder of p. 157 follows./

Let it thus be understood that in this Catholic nation /Bolivia/ only the Catholic religion can contain the fury of the human beast. Let the religious orders and the Colegios de Propaganda Fide be promoted, as in the bordering nations, let firm support be given to the Catholics, as in Germany, and there will neither be the explosion of anarchist bombs nor will the heads of the rulers roll through the streets and squares, nor will the corpses of the great lie stiff, victims of the revolver or the sword of shadowy men.

Group of Caciques from the Ivo Mission

/157 cont./

Principle of Authority

600 The principle of authority is innate in humankind and to attempt to destroy it is madness. Ever since man came into the world, the principle of authority has existed, as can clearly be read in /158/ Genesis: Sub viri potestate eris et ipse dominabitur tui; thou shalt be under thy husband's power, and he shall have dominion over thee.

As it is innate in humankind, through guilt more than through necessity in the beginning, the said principle has always been in effect everywhere. There is no nation, no matter how barbarous, which does not recognize this principle as a necessity, and to attempt to destroy it, as the anarchists wish to do, is to wish for the impossible. The Tubicha, great one or authority, say the old Indians, emanates from God himself, and that is why it begins with the same letter. The illustration placed at the beginning of this chapter /see p. 214/ shows several caciques of the San Buenaventura Mission; only the one in the frock coat and cane (Anduari) did not take part in the uprising at Curuyuqui (1).

[551] 1. The Indians in the illustration are; Asicayu, Asucari, Periquiyu, and Guarerai to the right of the cacique Anduari; Chipa and Patiri, or Patricio, at the left.

648 The entire region has today been explored and is under the power of the whites, who first entered with the permission of the owner (ab immemorabili), and after having taken possession, they have made themselves owners, buying lands as
619 property of the nation. Some might believe that the Chiriguano
361 liked to live in great centers, when it is known that formerly
[622] they were very numerous, but one who passes through the territory
[643] will soon understand that each tribe is at most made up of some 40 families and that in each tribe there is a cacique who is dependent upon another greater one, whom they call Tubicha rubicha, great of the great. In one league of territory or even less, an explorer, or passer-by, or sojourner can still find four or five Chiriguano Tribes at short distances.

/158 cont./

000 or five Chiriguano tribes at short distances. The only large town
361 that I found on my travels is Membirai, which is joined to
[114] Choreti guasu on the left bank of the Parapiti. I know Caipipendi,
[62] where I often slept; the Indians are many, but they live in different places, forming groups of 15 or 20 families (2).

797
619
361

2. The beautiful Santa Rosa Mission was formed by bringing together into a single town more than ten small tribes which voluntarily, with their caciques, moved to the place shown them by the missionary. In Yumbía there are three small tribes a very short distance apart.

Attributes of the Cacique

622

Just as in a family there is the authority of the father who governs it, or, should he be absent, that of the mother, who looks after and cares for the proper /159/ rearing of the children so that they may grow properly and not commit disorders or start fights with one another, thus also in every town or tribe there is a Tubicha, great one, whom I shall call cacique, so that my readers may understand that the Great One is a person of authority and prestige. The attributes of the cacique are multiple; when an epidemic has broken out or is about to break out in the tribe, it is he who seeks out the sorcerer to dispel it. If the tribe is suffering a drought, he goes to the master of the rain, who is another sorcerer (1).

[631]
[643]

1. In each tribe there is but one cacique; many caciques are under a regional cacique who can dismiss the lower ones.

[262]
[273]

At the time of planting, while the people of the tribe sleep or rest in their homes, he goes out to the small plaza or in front of his house and, walking about, holds forth to the town, encouraging it to sow sufficient maize so that when it is ripe there

622 /159 cont./
may be general rejoicing with the drinking of the pretasted
[262] Cangũi, chicha, squash and beans to eat together with Aticúi,
[273] meal, and Atipíi, parched corn. In his prolonged discourse
he recommends union in labor so that it may soon be finished,
since the field of the cacique is planted first and then those of
the rest, with all of them helping one another. When I came to
the missions, the soldiers of the cacique Gũiraesa still did it in
this way. I shall speak of this cacique and his family in another
chapter.

622 The cacique also arbitrates the arguments which frequently
692 arise in the planting season, since even among these people
there reigns covetousness of the property of others, should it be
good and free of brush; he settles family disputes, admonishing
the parents and also their children. If a theft occurs, it is also he
who makes claims before the cacique of the neighboring tribe,
but if this should occur within his own, he will summarily administer justice. His sentence is absolute and in general not
subject to appeal (2).

[797] 2. There are several caciques in the missions,
because they are made up of several tribes.
The missionary governs them all, with the result
that the authority of the caciques is almost
nominal.

721 It frequently happens that, as a result of some affront done
to some woman of a tribe, a bloody war begins, which assumes
the characteristics of a regional one. This happened during the
[643] 1850's in the Cuevo region. The cacique Gũiracoti tried without
[837] success to have relations with the wife of Yaveau, cacique of the
right bank of the stream of Cuevo. In revenge the offended man
disposed of a head of cattle belonging to /160/ Gũiracoti;
hostilities were then declared and each cacique prepared for war.

/160 cont./

721 648 Güiracoti was inferior to Yaveau in number of soldiers and in personal valor, but with his lies he obtained the assistance of the Indians of Yuti, Choreti, and Parapiti Grande, and even of the whites who had entered the Cordillera country and were living in Lagunillas (1).

1. Güiracoti led the whites to believe that Yaveau was intending to rebel against them; hence he was able to get the regional cacique of the Parapiti, called Chituri, to come with him.

726 727 [648] The large number of the enemy sowed panic in the camp of Yaveau, who, along with many others, had joined up the Toba. The first battle was lost, and he had to hide with his people on the slopes and hill of Irentà, but, once recovered from the defeat which he had suffered through the superiority in numbers and differences in arms and in races, he soon went in search of the enemy, inflicting numerous casualties among them, and Güiracoti had to leave his tribe, retiring to the left bank of the Parapiti River, in order not to fall into his rival's hands and be run through by his powerful arrow and have the misfortune of having his head separated from his body, which on the point of a spear, would have been exposed to the ridicule of large and small in the enemy camp.

622 574 It is natural for men passing through a strange town to go to the political authority for their needs, as happens in the missions. Many people when they pass through Indian towns, naturally go to the cacique's house; the latter receives those whom he considers greater with the kindness and courtesy that distinguish the Indians of the Chiriguano race: for this reason some explorers have believed that it is the duty of the cacique to receive and provide hospitality for transients and strangers, but I can state that they are mistaken.

/160 cont./

574 The Chiriguano is naturally hospitable, and the stranger is welcomed in any hut of an Indian; he considers himself privileged to receive great persons, equals, and inferiors in his hut, which he at once moves out of in the case of the first, accomodating himself in the plaza or in the corridor, and renders him every service within his ability. The woman brings him water and cooks for him, and the man brings firewood and even takes out to pasture the animals with which he is to continue his trip.

574 178 [431] [273] If the Chiriguano has anything available, such as eggs, chickens, etc., he asks nothing for them and is quite happy if the stranger /illustration appears here/ /161/ gives him whatever he wants to when he takes his leave. If he has any of his pretasted liquor available, the first thing that he presents to his guest is a cup of this beverage. But today the situation is causing changes in their simple customs because of the refined ones of the civilized person, who has taught him to sell a chicken for as much as one boliviano. It is no longer as it once was, because his home was not respected (1).

1. Today they receive friends and acquaintances with respect and affection, because some guests or transients took advantage of the native by demanding things or persons to which they had no right.

622 527 [221] It is also a duty of the cacique to determine the time when the fiestas or public drinking sessions are to begin and their duration; these are generally held before and after planting, before and after harvest. If the rain increases and the previous harvest was very scant, the planting is advanced so that the maize will mature earlier and they will have something to drink for Easter. 622 224 During the other months of the year the cacique directs the public fiestas, the general hunts for jabalíes /wild boar/, quiriquinchos, /ostriches/, deer, chuñas /cranes/, and other wild animals (2).

293 824 191 2. Whenever and wherever maize does not grow in quantity, the Chiriguano imitates the Toba

273
824
171

and the Mataco; thus the fruit of the chañar, mistol, and algarroba are used in the manufacture of chicha.

Subalterns

621
623

The cacique of a tribe is not alone in political, judicial, and administrative administration. In order to have a more correct administration, he, as sole and supreme authority, selects counselors and assistants, whom he seeks from among the most competent persons of the tribe. The primary advisors are whatever sorcerers there may be; these men are thus feared and hence respected by the people, who make use of them in sickness and calamity, both public and private.

621
624
554

Next in rank as counselors come other men to whom they give the name Igũira iya, owner of the stick or baton, according to the signification of the word and which corresponds in Spanish to hombre de mando ó autoridad /man in command or authority/. Thus they are the alcaldes, to whom the cacique hands over part of his authority with absolute subordination, so that through complaints, ineptitude, or other causes, the alcaldes are summarily dismissed and then others appointed. In each tribe there is a single alcalde who does everything, because the cacique, in his town, is better than an emperor, not having to lift a straw and spending his time in prolonged idleness.

/162/ The alcaldes in the tribes take charge of the rest of the settlers; in a search for peons they hear the sarcasms and recriminations of their fellows, and many times they definitely disobey them, even going so far as to insult them with: Mburubicha pa nde? Perhaps you are a cacique?" (1)

1. In the missions with many tribes there are as many caciques and alcaldes as there are tribes composing them. In this regard the custom of the Indians has been respected for a better and more honest administration.

/162 cont./

Abuse of Authority

622
661
643

The Indians who today live under the paternal rule of the missionaries state that formerly caciques committed thousands of abuses; speaking of caciques still alive, they said that they abused everything that belonged to the poor and defenseless Indians, made use of maidens and women of others took possession of horses, cows, sheep, goats, and rags or clothing of their subordinates under any pretext, and in certain cases, as absolute mandatory, life was not safe either.

682

In verification of the last, I am going to relate the following: Before the reorganization of the missions of San Antonio and San Francisco del Parapiti Grande, an Indian strangled his own son and half buried him in the sand near the bank with the aim that any sizable rise would soon carry him off, but before this could happen the deed was discovered, not by betrayal by his wife, whom he had threatened to kill, but by the wheeling about of vultures which were beginning to strip the already decomposing flesh (2).

[643]

2. The murderer of his own son belonged to the upper town and was hanged in public in the lower town where the regional cacique, who was the authority of the presumed Parapiti Canton, resided.

692
643
682
[648]

When the regional cacique had been advised, inquiries were undertaken in order to speak to the evil-doer, and it was not difficult to find him because he was a well-known Indian. Taken into custody and brought before the authority, he confessed his crime. In order to prevent another greater crime the canton authority attempted to intervene, but the regional cacique made it clear to him that justice would be administered in an exemplary fashion by him and that the corregidor, whose subalterns were the whites, should not involve himself in the matter at all.

/163/

643 For these reasons the authority yielded and left it to the
682 cacique to deal with the culprit as he deemed best, following
692 his barbarous customs. Rather than complicate matters, the cacique had two forked sticks of medium height set up, with another piece of wood set between them. He called together all the inhabitants of both towns and in their presence in broad daylight condemned him to the gallows, and the execution was
[671] immediately performed. The cacique has no written laws; he does everything by tradition and applies punishments such as the one related as a deterrent to others, to remove evil from his region, so that the life of the defenseless and the good may be respected and that he may be feared (1).

622 1. When a sorcerer does not manage to ac-
643 complish what he has promised, because he
756 perhaps did not help him, it is the cacique's
686 prerogative to order the death sentence and
692 burning.

Separation from Command

622
631 The dismissal of a cacique is a very simple thing when the
643 abuses he commits are unbearable. In epochs prior to the present time, the oppressed Indians were beginning to withdraw from their obedience to other peoples, and since the latter find it difficult to be able to live in strange lands, they ended up by having recourse to the regional cacique, who in turn declared them free from such obedience, naming another more humane person of the same tribe or who had resided for some time in it. This has become easier today by agreement with the political
649 authority of the Republic, but there is the greater problem that
466 when an abusive cacique has been dismissed and another named
464 by the political authority, he is sure to be subject to all the
622 demands of the whites to provide them with peons, and the
643 latter, who do not like the yoke or the caray /white man/, become impatient and emigrate.

/163 cont./

643 649 464 466 A fact that confirms what has been said happened in the Caipipendi region. The regional cacique Tengua was succeeded by his son Cariti, who, because of the grave errors that he made or was supposed to have made, was dismissed, and the native Tarúire, who apparently at least had very good qualities, was named in his place. This latter, selected by the whites with the consent or nomination of the Indians, had to return the favor of his benefactors who had elevated him and consequently to respond to all the demands and requests for peons, and one time the poor Indians had to go to Santa Cruz as a guarantee for the /164/ unhappy Indians who feared that, under the pretext of jobs in the city, they would be taken to the Beni (1).

[566]

1. In El Beni men are sold for 1,000 Bs. and women at a lesser price. Baron D. Erland Nordenskiold gave a lecture in London proving that slavery exists in Bolivia and Peru.

This concern of Tarúire and suspicion of the Indians originated in a publicly known event which took place in the year 1905, when a party of Indians sold to the rubber plantations were taken from there; rumors of this event spread rapidly through all the newspapers of the Republic, which expressed disapproval of it, and at that time I saw whole groups of families who, with all of their possessions, emigrated to other lands.

643 641 554 The result of this is that today many Indians obey Tarúire, not out of love or loyalty, but out of fear of the harsh punishment which the political authorities would immediately impose on them; and the cacique is now beginning to tire of this task which is so odious for him, for he wants to be tranquil in his home and to enjoy peace. He has repeatedly said this to me and he would be satisfied if they would renominate Cariti, for whom the Indians hold proper respect.

/164 cont./

622 643 648 566 46

Nevertheless, there is no doubt that the cacique of a large number of Indians, like Tarúire, derives great benefits from his office. While the annoyances are continuous, the income is regular, because generally the carar who makes a request for peons always gives their daily pay to the cacique and alcaldes, and if the former visits them in their houses, they save certain considerations for him in the interest of obtaining peons in the future: interest can do much (2).

2. They keep everything they receive from the whites to buy liquor and little for their clothing.

62 595

It would be a very rare case if a Chiriguano cacique did not have issue. It being known that each one lives with several women, privately and publicly, in his own and other tribes, and this is not only the privilege of the caciques: even the subalterns are polygamous. They often marry a widow in order later also to be with the stepdaughter with the knowledge of her mother, who consents to it through fear, out of concern for food, or for a miserable garment (3).

[590]

3. The vice of polygamy is being pursued in the missions, not only among the Indians but even among the caciques: some admonition should come first, however, to convince them and make them understand the ugliness of the vice.

622 [555] [556]

/165/ Upon the death of the cacique of a tribe, the oldest son then succeeds, but, if in fact he dies without issue, the closest relative takes command, or, lacking one of these, some prestigious brother-in-law, if he is liked by the tribe; otherwise someone in the town who combines the best qualities in his person is chosen, and if an Indian enjoys some good fortune in cattle, sheep, horses, etc., he is the chosen one, who is respected and obeyed because of the goods that he has at his disposal for guests and even for treating his subalterns (1).

[661]

1. When a cacique is completely poor, he

/165 cont./

622
661

may be considered the scourge of the tribe, and, as an absolute ruler, he takes from the belongings of his soldiers whatever he wants for himself and for the guests who visit him.

622
562

Very rarely does a woman take command and control of the tribe; this can happen if the cacique who dies leaves only women as heirs, but only with great difficulty does the Chiriguano allow himself to be ruled by a woman; the other tribes would laugh at them and would treat them like women; Salic law is in force among the Chiriguano (?).

2. Nevertheless, there are cases when the law of the Salians has been suspended among the Chiriguano. The woman Iguandúsai governed in Ivu, Parapoti in Aquío, and a certain Arabúsai is mentioned by del Campano.

643

The Regional Cacique

In addition to the cacique, whom the people of a tribe distinguish with the name of Mburubicha, great one, there is another, higher authority whom they call Tubicha rubicha, great one of the great ones, or cacique of the caciques. The great cacique resides in a larger tribe and leads it directly like the other caciques, having alcaldes and counselors.

643
622

The great cacique intervenes and is consulted with regard to the succession of the subaltern caciques; for this reason the sons of the latter always accompany their fathers on the visits they make and try to get the great cacique to like them, in order to succeed their fathers in power, but if the tribe does not want him and furthermore his faults are so notorious and serious as to eliminate him from the honor, the regional cacique very tactfully makes him understand this, adding that by reforming his life he could be chosen again on a day not far off.

/165 cont./

643 [921] In the case of a regional war against another region, the great cacique calls a parliament and consults all the caciques, /166/ counselors, and sorcerers in order to arrange matters perfectly and avoid surprises. When the war has broken out, as he is the most important man, he takes charge of the battles, even leading them personally to a successful conclusion, and, should a defeat be suffered, he does not cringe in defeat, but prepares anew, encourages his soldiers to fight more vigorously to take revenge, and is unlikely to suffer another defeat. This is what happened in the regional war of the great cacique Gilracoti against Yaveau, in which, the latter having been defeated by the former, as I have already related, he retired to the slopes of Irenta and from there marched on his enemies, causing numerous casualties and obtaining a complete victory (1).

643 701 929

[648] 1. In the Curuyuqui War there was a cacique named Chaparilla and another named Tunja, but, as this war was against the whites, Tunja took charge of the military operations.

643 631 Chituri, a regional cacique, was succeeded by his son, the late Azari, in the entire region of the Parapiti Grande, Itatiqui, Tacuaranti, and Ururigua. Yaveau was obeyed by all the Indians of Itiyuro, Curuyuqui, Ivu, Igllpinta, and those of Santa Rosa, living on the right bank of the Cuevo River; subject to Gilracoti were all those living on the left bank of the same river as far as the right bank of the Parapiti; the subjects of the late Tongua were the Indians of the left bank of the same Parapiti up to Gutierrez; the subjects of Machiropo were, as was told me in the same year 1901, all the Indians of Ingre Canton, Iglembe, and Huacaya from the right bank of the Parapiti to the left bank of the Pilcomayo, which includes an area of 24 leagues from north to south and 15 east to west, and when an effort was made to found a mission in Tumbía, on the left bank of the Pilcomayo, Iglembe Canton, he insisted to me that we should not bother them any more because neither he nor the

/106 cont./

643 631 Indians wanted it (?).

> 2. The regional cacique Tengua died in 1900, Machiropa in 1905, and the others who have been named in the middle of the nineteenth century, except Chiruí. Beringai of Igllombe is considered a regional cacique without being one: he is the oldest known Indian, at least among the caciques.

Today only one of the former regional caciques is still living. This is Mandepónai, who must be about 84 years old, a very robust and obese Indian with a constitution of iron. His authority extends throughout the Gran Chaco. He is respected and obeyed up to a certain point by the Toba, Mataco, and Chorotí, and other known tecoi: he is very well received in the other regions through which he passes, and his authority is not contradicted elsewhere, but is not respected either, /107/ because at the present time the Chiriguano element too has almost radically changed its political system: today it is the political authority which rules, and the cacique is a humble servant of any carai who comes to him asking for peons.

643 707 716 718 667 662 The Macharetí Mission exists through his efforts, and he has always been faithful to the missionaries. In the Caraguatí War, the Tunpa tried to get Mandepónai to use his influence to make the Toba and Chiriguano of his region revolt, as Tengua did, but the great cacique was not to be moved: instead he and his people went over to the side of the Santa Rosa Mission and the white Christians who had taken refuge in it.

At that time some whites, perhaps because of their hate for the missionaries of Macharetí, tried to implicate Mandepónai as an accomplice of the Tunpa, but this calumny was belied by his praiseworthy procedure. He gave warning of the day on which the rebels were to burn the mission, went personally with his soldiers to Santa Rosa on January 27, before the final battle, and there confronted Tengua, accusing him of treason to the whites. His loyalty to the missionaries is to his glory.

/167 cont./

and when he addresses his people he does not fail to remind them that if they enjoy peace they owe it to him, for he consented to the founding of their missions; more or less the same thing is said by other caciques or their successors, through whose influence the missions have been founded (1).

1. When the slander against Mandepinat was believed, the delegate Chavarría went to Macharení with all his forces to punish the cacique, but nothing came of it because it all turned out to be false.

/168/

Chapter Six

Towns, Houses, and Work

Introduction

The glacial period and horrible icy places with their new flora and fauna in the dawn of the Quaternary era, a mysterious period for certain modern unbelievers, holds no mystery whatsoever for true believers, who see in it, or in its sudden appearance, a punishment for the disobedience of the first man. Adam sins, and the land, until then so beautiful and fecund, is covered with snows and ice, with brambles and briars; before his sin, no shelter was needed, but, as a result of rebellion against the Creator, he was laden with needs. /The remainder of the introduction on pp. 168-169 is omitted. The following illustration appears opposite p. 169. The remainder of p. 169 follows./

Chiriguano Town

/169 cont./

Towns

It is thus stated in the Holy Scriptures that man from the beginning began to build towns, and all the descendants of the first inhabitants of the earth have followed their example. I believe that my readers have learned that the Chiriguano are different from the other natives who surround them; they consider the Toba and the Mataco to be very inferior, so inferior that they scorn and despise the ornaments and varied feathers that the latter use.

The Chiriguano also, as descendants of the first men, love society and like to live in company, in more or less large towns, in well-formed towns, with houses around a plaza, in contrast to other tribes which, in spite of being sociable, form towns as quickly as they disappear, according to need. Thus it happens that wherever they know that there is food, the Toba and the other nomadic races go there; if they are helping a missionary, they abandon him when the algarrobas, the chañar, and the mistol are ripe (2).

2. Polygamy in the world began with Lamec. From Ada, his first wife, he took Fael who lived in cabins; it seems that the nomadic tribes of America are descendants of his.

I have witnessed both cases, the first in the Tigüipa Mission, where on the right bank of its little river three tribes had gathered in 1905, making their miserable round huts with a few stakes, with branches covered with grass, in which men and women, old and young, and dogs covered with mange lived together. I witnessed the second in the mission of San Antonio del Pilcomayo in 1900 when, the algarrobas already being ripe, some 68 Mataco families disappeared, running off into the woods to seek a life of gifts and surrender themselves to drink and dishonesty, turning their backs on the religion which some of them had embraced.

/169 cont./

In both cases the ranchos which had been formed were left destroyed, despite the fact that the latter, because they had been built under the direction of the missionary, were quite comfortable, new, and /170/ well covered with red straw /paja colorada/, which is the best for the construction of ranchos.

731 361 The Chiriguano Indian does not do this. He also on occasion suffers from a scarcity of supplies, because the land on which he lives produces harvests only when there is no lack of rain. In times of scarcity he bars the door of his house [574] with poles or thorns, temporarily leaves his town, and goes off to distant lands in search of food, gets it, and brings it to his home, but he does not emigrate en masse, nor does he build temporary huts in a foreign place or town, and if he has any relatives in the places where there is abundant food, he seeks them out and is welcomed and well treated by them. He remains there for weeks and even months, until his fellows are tired of him, and then he takes his leave, taking the little food that is offered to him as something precious, and in fact it is in times of hunger.

361 [62] [592] Chiriguano towns are small, consisting of a few houses, most of them not exceeding 20 or 30 houses; these are large and in each one there are up to three families, but close relatives, such as father and married son and married daughter; they form a square and are so situated as to enclose the little plaza. They are not pretty, but they are clean; they are not large, but neither are they as small as those of some towns of the whites. These Chiriguano towns are poor; it is hard to [342] find in them houses with tiles, but they are comfortable, with the roofs, as will be said, having the necessary slope so that they do not readily admit drips (1).

[354]

1. In the upper part of the house they make a long, continuous opening to allow the smoke to escape; it is made in such a way that it does not allow water to come in during the rainy season.

/170 cont./

Modern Houses

342 17 [464] [648]

A Chiriguano house offers nothing special in appearance, but even those of the mestizos who have settled in their country are of the same form and not rarely worse, because naturally since the mestizo is not very fond of physical labor, because he is not an Indian, it is necessary for him to call on the energy of the latter, and the native is not always inclined to lend him this or that service, from which it follows that their houses are inferior (2). /Illustration appears here./

> 2. I am speaking here of the houses that the mestizos or whites build in the countryside where they live; in the towns their houses are normal; they almost all have tile roofs, and there are also some which are white-washed.

342 [192] [184]

/171/ House in the Chiriguano language is called Ho, which is different from what they call Tapi, but. The latter are common in large towns and belong to the lazy people, wanderers, and even the poor. It must thus be understood that the construction of a Chiriguano house is a work of no small importance and care, if one considers that the Chiriguano is poor, so poor that he only has available an ax, a shovel, and a knife, and not always these. Because of the importance that I give to this construction, many who do not know these regions could believe that the houses are very fine, but there is nothing fine about them. None of them is beyond the rank of cabins.

342 335 496

I believe that it is indispensable to describe the way of constructing them and the elements available to the Chiriguano in order to carry this out. If the Indian has some luck in sheep, he pays some of his companions with sheep so that they will help him gather the principal timber, and should this wealth be lacking, he begins to cut and strip bark in the woods by himself, selecting timber of good quality, straight and resistant to the action of water. The principal pieces are generally six posts

[NOT CONTINUED ON P. 235]

516

Partial View of Modern Chiriguano House

/171 cont./

342 335 [476] [574] which form the skeleton of the house, but where the forest is not tall and the trees slender, nine are needed.

Once the timber has been transported with the help of his companions and relatives and they have been treated with food and chicha, the day for setting up the house is set. The center posts are first placed, with the two holes being dug quite deep; next comes the placement of the four or six lateral ones, which are much shorter so that rain will not stay on the roof and there will not be continual and copious dripping. I measured several relatively new houses, and their pitch from the ground to the ridgepole is about 42 o/o in some and in others 38, it being possible to conclude that the average is 40 (1).

1. Chiriguano houses are rectangular with only one room, which, if it is very long, has in the middle another post which holds up the ridgepole so that it may not bend or break.

[178] This proportion is maintained today by the houses in Chiriguano towns, and it cannot be otherwise, because the roof is entirely of straw and the rain would stay on it if it did not have sufficient slope. Some who by mistake build them without this proportion realize at the time of the first torrential rains, and even more in the once, that follow, the mistake that they have made, but in vain, because /172/ it is very difficult for the Indian to correct his lack of foresight.

Once the skeleton of the house has been set up vertically, the rest is simpler to do, except for the placement of the ridgepole and the side beams; the latter can be cut in half to make it easier to move them, in addition to making finding them easier. The placement of these beams is followed by that of the rafters and the reinforcing pieces of wood to strengthen the walls. The rafters are tied with bejuco or with spiny ceiba bark, [824] which is called Samuu by the Indians and Toborochi by the whites.

/172 cont./

342 824 The hardest part is finished with the previous operation: a short rest is taken, and then the owner of the new building must obtain enough hollow cane, engaging for this purpose Indians who have horses. But if the cane is very far away and has owners to boot, he gathers long sticks of astringent acacia or sebil and puts them horizontally every 15 centimeters on top of the rafters with the same above-mentioned lianas. Some [283] people, to tie the cane or sticks, use thin cords made from cowhide, but this, in addition to being more expensive, is less durable than bejuco (1).

[137] [178] [423]

1. Before the whites settled in Chiriguano country, hollow cane was abundant and had no owners; at the present time it cannot be found, and, if there is any, it is in private hands and must be bought.

Generally, before the walls are begun the house is covered with capíi, red straw, or, should this not be available, with capiáncua, straw for harnesses of beasts of burden, which is of inferior quality and very soon frays to pieces with the rain, sun, and strong winds, while the capíi may last for more than ten years.

[476] If it can be obtained by staying for a few days in a place where it is plentiful, he pulls it up there and reduces it to rather large handfuls; the gathering is done in several days, engaging Indians who own horses. When the material is in the town, he rests for a few days or weeks; he informs or invites those who wish to take part, in particular those who are closest to him by kinship or friendship. These then go about tying the capíi be- [354] tween two horizontal canes toward the side of the roots, forming long, narrow lines, and when they are so placed, they attach them horizontally, beginning at the bottom and working /173/ upward or toward the ridgepole, where they leave a large vent to let out the eternal smoke of their inextinguishable fires (1).

1. Now the red straw is disappearing almost completely: the destruction of this necessary

/173 cont./

342 824 element and that of the hollow cane are due to the abundance of cattle, which destroy even the straw for harnesses.

342 574 [476] [131] When the placement of the roof has been completed, they all come down and gather in the hut of the friend, who, as a reward or payment for the service rendered, offers them a cup of chicha, and they drink this amidst jokes and crudities, at times very heavy, especially should maidens or women of 30 years or older who do not keep quiet pass by. But as the people know each other well and are friends, the greatest harmony reigns, and, when everything is finished, they take leave of the owner, thanking him for his gifts, and he shows them his gratitude for the services which they have rendered (2).

2. The workers only ask for chicha in recompense, but if the owner has beans or gourds cooked for them in a stew with considerable stimulant in the form of chili pepper, arivivi, it is a feast or carnival for all.

342 312 [22] The rest of the work is done with less haste and at a more opportune time. In fact, most wait until the rainy season to do it, for then water is abundant, and this to be sure deserves the approbation of all because it is more economical and easier. Thus, taking into consideration the laziness of the Indian man [44] and the tasks which the Chiriguano woman has, it would be expensive and quite tiresome to bring the water on their shoulders from great distances, which is avoided during the rainy season. [356] Then during each shower not only is the construction of the walls of the new houses done, but also the repair of those which have come apart during the year, and it is very amusing to see from a distance the women around the houses with their sleeves rolled up or with the tipoy down to the waist, making holes in the wet ground with shovel or hoe, pouring a little water in, kneading the earth, forming large balls of it, and putting it between the canes which are already attached.

/173 cont./

342 The canes, or sticks, are attached in the same way as in the roof, with the difference that for the walls they are put in double order, outside and inside, so that they can serve as a support for the dampened earth, which in the end is like a large bag, long and tall, around the house. This other work [462] is done by the Indian men, engaged beforehand by the promise of chicha: next they too dig in the wet soil /174/ dampened by the rain or by water, and help the women in the operation of forming the walls.

With such simplicity, the four walls are raised in a single day, everything being completed: at the present time almost all houses have a gallery where the men and women always sit to enjoy the cool of the mornings and the evenings in friendly gatherings, a gallery which is even used for sleeping on excessively hot nights, especially when inside there is an abundance of vinchucas and other insects (1).

381 472 1. In Parapiti a school for 150 girls was built and finished in 12 hours: nothing had been prepared for this building: it was planned the day before and done at once by all the inhabitants.

342 With the erection of the gallery, the house is completely finished, and the Indian content and satisfied. In present-day buildings care is taken to place the door, or entry, at one end of the house which corresponds to the gallery, and many have two, one in front of the other, in order to have a way to the patio which they make with a fence of thorns for greater comfort.

342 The doors are of cane, which they tie together like mats, 18 but vertically, with cotha bark or with cowhide thongs, which [522] are more durable indoors. If an Indian can get a cowhide, [524] he makes a door of Guayaqa wood, or, as the whites call it, zacharosa, or another soft wood, which he puts in a hole left in the construction: he makes another frame with its hinges made of the same wood, nails the hide, and fastens it in this

/174 cont./

342 281 second frame, taking care that it is not very tight so that when it dries it will not warp. He attaches this hide from behind with thongs of the same material, and the result for them is a door de luxe, which could be envied even by some whites, who, in spite of the fact that they have hides, either cannot find anyone to work them for such a door, or who out of avarice and in order not to spend a few coins do not concern themselves with such a comfort (2).

342 322 2. Some of them make very crude doors with two pieces of thorny ceiba wood, which they work perfectly with a knife. No Chiriguano puts a window in his house.

Ancient Houses

342 177 178 Some of my readers perhaps may have believed that the house and its mode of construction just described go back to the origin of the race. /175/ This belief would be an error, because they must understand that the above-mentioned is the result of progress. The method of building houses like the present ones is relatively new; they learned it from the whites, especially from the inhabitants of the Santa Cruz area, where the houses all have galleries, this being noted even in the capital of the department, although they may be of much more importance and may be disappearing in the new buildings. But 184 in Muenagatio, Lagunilla, Charagua, and centers where the Chiriguano have their holdings, houses have gallaries.

There, in addition to giving the houses a better appearance, in addition to the indisputable utility, are a very great reinforcement and protection for the walls of the house, not allowing the torrential rains to wear away or demolish the plastering that 342 171 they do in all the houses. It is true that many houses of the whites in their towns are of adobe, but when the timber is of superior quality it is almost preferable, because this material LEAVES SPACE BETTER AND IS MORE COMPACT.

000 /175 cont./
remains joined better and is more compact (1).

797 1. When a mission is founded, the first building is the mission house made in the usual way. But in the Potosí missions they are all of timber, and any traveler would marvel at their height and strength.

342 178 The ancient Chiriguano houses were of different form, and they were not alike in size or beauty in the towns. Some were distinguished by their roundness and conical form, and others because they were small and low. The latter had no importance at all and could scarcely even be called huts, in spite of the fact that, to the poor Chiriguano, dominated by his laziness, the smallness of a dwelling does not detract from its importance.

342 171 I am going to deal at some length with the way the houses of conical form were built, because they indicate skill on the part of the builder or because they make one's imagination take wing and fly to China, Africa, and Japan, where similar forms are found and thus make us ever more convinced of the unity of the human race.

As explorers, travelers, histories, and well thought out books say and as is also observed in the pictures of illustrated geographies, it is evident that in China, Japan, Africa, New Zealand, and in the east of Australia not a few of the inhabitants /176/ have houses in conical form.

This form seems to be the original one of the human race, and it is very probable that man has used it in the five parts of the world, since it is even found among the Chiriguano.

342 335 In fact, in order to construct a comfortable house before the Conquest, the clever Chiriguano used the following method. He first obtained a single post of some four or five meters and planted it at a depth of approximately one meter (1).

[476] [574] 1. For any small job for which the Indian must trouble his friends, he would get nothing without offering them a drink. Not even money is so esteemed and appreciated as chicha by the Chiriguano.

/176 cont./

342
335 The post thus set up served as a central point for the new house; next he traced a more or less round circle without having any recourse whatsoever to the rules of theoretical geometry, being ignorant of its existence; nevertheless, his reason helped him enough. Having traced the circle and having secured ahead of time enough forked poles /horquillas/ some two meters high, he put them in holes some 50 or 60 centimeters deep around the circumference, leaving the entrance facing the plaza.

Once these poles have been well fixed in the ground around the center pole, the Indian, with the help of his companions and relatives, prepares rafters, straw, bejuco or ceiba bark, hollow cane or small sticks. He then begins, after an appropriate period of rest, to put in place first the rafters, tying them to each other, the center post serving as a prop, and then he ties them to the poles around the circumference, one to each pole, until he finishes. Before beginning, the precaution is taken of singeing the bejuco. The rest is done as has been described in the modern houses, but when the placing of the roof and the walls around are finished, the center post, which would only be an obstruction for the fire which is constantly burning in the center of the house, is removed (2).

[824] 2. Singed bejuco does not rot, regardless of the season in which it has been pulled up. It is resistant and is not attacked by the wood borer. Those who use it so much have experience.

[821] Everyone knows that conical houses are very solid, when care is taken to select good wood and /illustration appears here/ /177/ to cut it during the waning moon. If the rafters have the fork downward, conical houses are much more solid (1).

[554] 1. A house in conical form among the ancient Chiriguano indicated great ability on the part of the builder and status on the part of its owner; for this reason they were owned only by caciques, rich persons, and other important persons.

/177 cont./

Fire

374
372

In conical houses as well as in those of rectangular form, ancient as well as modern, a fire burned, and still burns, night and day: it is never extinguished, but should this happen, the way to relight it is to borrow it from the neighbors. If all the inhabitants of a tribe have temporarily emigrated to a place which is not far away, as happens at the time of general planting, at the end of the harvest, and upon returning to town, they come back bringing their fire with them, as I have seen on repeated occasions. But as today civilization has penetrated and the match has become common, even the Chiriguano will save up one medio, or ten centavos, to buy such a useful combustible, which they use very sparingly, because in their hands this is now a luxury and lends them an air when in a gathering of companions they can bring out and show their box of matches while lighting a maize-husk cigar.

372 177 178

(435) (276)

372

When a fire happens to go out in a place where it is difficult to get it from distant houses, the Chiriguano is not too worried. The man is almost never without a flint, tinder, and a piece of steel: these implements are used to obtain new fire. The tinder is prepared by them from a ball of wild cotton or the flower of the samuu, which they reduce into a skein of thread and put into a cow's horn, which they clear at the wider end, fitting to it a wooden stopper that they keep down with a small wire or agave string: inside the tinder box it extends to the other end, where they make a small hole in order to be able to pull the wire or string and keep the top on tight.

The Indian who does not have all this apparatus does not worry much either. If his fire happens to go out, he makes a small conical hole in a piece of well-dried wood, in which he violently spins a small cylindrical stick, also dry, which does not take long to get hot and then to give off sparks of fire, to which he then applies the tinder, which consists of the dry pith either of the agave or of the /178/ maguey, which when it has taken fire will light any other combustible material (1).

(275)

1. When the road handed over fire to the two

/179 cont./

372 [779] children who had been saved from the Iporu, deluge of waters, he also taught them the way never to lose it, by rubbing pieces of wood together forcefully.

[384] 372 The Chiriguano is quite a hunter, and no wild animal or bird escapes from his eye and hand. On these hunting trips he often needs fire. If he is very far from town and prepares to sleep alone in the forest or in open country, he lights his fire in the way just described, in order to have its company, to keep away the jaguar and the demon, and to light his cigar and prepare his meal.

Work

Cleanliness

356 [362] Many will perhaps come to the conclusion that Chiriguano houses, poorly built and worse maintained because of the continual fire which gives off smoke and ash, are very dirty, without cleanliness or neatness, but nothing is more incorrect. The Indian despite his savagery is clean, and especially for cleanness he pulls out his facial and body hair, bathes daily, and combs his hair often, getting rid of the little animals which might be in his thick hair. The Cofia, or Chiriguano woman, constantly thinks of the cleanliness of her house, gallery, and the ground in front, up to four meters in length and width (?).

[515] [362]

[362] 1. All can see that some Chiriguanos, out of laziness, live in their own very old and dilapidated houses, open to the sun, wind, rain, and dust; in others that have a new roof, walls are lacking, thus exposing them to getting pneumonia, but there is no lack of cleanliness on any of them.

/178 cont./

353 [356] Chiriguano towns attract the attention of all travelers and explorers because of the cleanliness which reigns in their houses, which, despite having a notable quantity of furnishings, are well kept up through the assiduous work of the mistress of the house. [415] [352] Jars with wide mouths are in the corners; those with narrow mouths, in which the chicha must ferment, lean vertically against the walls; the plates and spoons are on small triangular tables of hollow cane in the corners; small ollas are placed inside the empty large pots, and these in times of abundance, and even in times of scarcity, are full, some with shelled maize, others with beans and gourd seeds, and others with wool and cotton for making ponchos, blankets, or outer garments.

[824] [251] /179/ Above, at an appropriate height, they hang a mat of hollow cane or little sticks well tied together well with Ivi, or ceiba, and there they put other trifles or small things, when they do not have anything else to put there, such as cheeses and charqui, or dried meat. The mat is usually hung on one side of the house on one of the rafters by means of thongs of cowhide or other material. They are placed there so as not to be in the way of those who must pass beneath (1).

[824]

1. The Ivi is a species of ceiba, samuu, but it does not have points like the latter. There is another called Cuari or Teyipiruru, which is very straight, has very strong fibers, and is only cut at the branches in order to pull off the bark. A fourth type of ceiba is called Ivirs guasu: it is large and smooth. Each type has its congenial place, like every tree.

Finally, in the corners of the house or where it is most convenient, up high, they put one or more cords, which form an angle from one wall to the other, and there each member of the family puts his own clothing and the men hang the harness of their beasts of burden. Today the Chiriguano who are not lazy are not so poor, and when one enters a house one is amazed by all the abundance of furnishings so well arranged.

/170 cont./

512 With such an arrangement, it is not difficult for the
356 Chiriguano woman, after having taken her bath, made her toilette, and put up her hair, to sweep her house in a few minutes, sweep the rest, put back in its place everything that has been used, to put the beds to the walls, put the coverings on the cords in the corners, and again prepare what is needed for cooking (2).

> 2. The ancient Chiriguano woman did it this way, because she got up very early: today, as she is beginning to be lazy, after having done everything, she goes to the spring, bathes, combs her hair, and carries water.

Cots and Beds

513 No matter how poor a Chiriguano may be, he seeks comfort for sleeping and does not sleep on the ground when he is at home, both in order to avoid sickness and to be free of poisonous animals which abound, such as the snake, the scorpion, and the tarantula, which strike horror just to look at them. Furthermore, they do not sleep on the ground in order to be free of the bite of other insects, such as the vinchuca and the guatacro in certain areas, but despite this their cots are /180/ full of other little coffee-colored bugs, known in every corner inhabited by man.

350 In order to avoid any such accident, one obtains the
322 tafiraguengi, cot, by making it oneself. Cots are of hollow cane, little sticks, or split maguey sticks, which they call conguata guazu. In order to make them, they first make a rectangular frame: in this four holes are made 40 centimeters in from the ends, into which four sticks are introduced vertically: these are the feet. Above are tied canes or sticks which are high at the top and bottom and deep in the middle, and this is the cot. At bedtime they are covered with placing at the head some rag or piece of wood.

/100 cont./

352 The peculiarity of the Chiriguano cots is that they are almost always shorter than the persons who must sleep on it: most of
[513] them measure one meter 60 centimeters. They perhaps have this peculiarity because they sleep curled up like pigs in order to hold together better the little clothing or blankets that they
[178] [237] possess. Today they are beginning to make them longer and to have cots like the whites use: the open part of the latter is closed with cowhides which they attach first lengthwise and then at the sides, equidistantly about every seven or eight centimeters, with many small squares being the result (1).

1. The cots which are made with split agave sticks are soft and preferred: in the Iru Itiatim almost all make them of this material.

524 [97] 516 The Chiriguano man does not like to sit on the ground either: when he is visiting, it would be an insult to make a man sit on the ground: nevertheless for a gathering of friends they do sit
352 [333] down where they wish and stretch out like dogs in the sun. For the reception of visitors they have crude seats. They are of
[574] wood and called Apica. There are some with two places and up to four with their respective dividers: there are some for
[412] men and even for children. They are of a single piece, and they are made by dint of much patience by hollowing them out with an ax. The tree should be a thick one so that the seat may have a little height and the occupant may not cut a ridiculous figure of a punchinello or clown, causing laughter
[433] [434] among the onlookers. They also use benches and chairs like those of the whites: they make the latter for their own use
[124] and to sell to their fellows and to the whites. The wood which they seek out for these labors is zacharosa, because it is soft and easily worked with the tools that are available to the poor Chiriguano, who does not always have an adze and a chisel.
352 Some people also have /101/ hammocks, Quiba ó ipei, but they are so old and black because of the action of the smoke that they arouse disgust (1).

524 1. For a children's game they hang in the

/191 cont./

524 gallery two cords, tying at the ends a piece of cowhide 80 centimeters long by 30 in width, hanging about 60 centimeters above the ground. This is called Sabiuca, swing, and here the little boys and girls swing and rock.

562 Women sit on the ground in their houses and observe the
584 same custom when they go visiting. The man waits until he
576 is told where he should sit and always receives the best seat.
516 The woman does not wait: she knows her place: she arrives, does not greet anyone, leaves her bundle in a corner, if she has one, and then squats down in such a way that from near or far many women squatting like this look like so many cacomades /camacuta/ ready to go off.

Matéo

462 In the furnishings of Chiriguano houses a preferred place
241 is occupied by the matéo, made of gourds divided vertically
415 through the middle. This is man's work: he plants them and
322 cultivates them in his field, and when they are mature they are brought to the house where they are allowed to dry in the shade and also in the sun. Some three months are needed for this or even more, depending on the season. Nevertheless, they are watched throughout to see whether a fingernail will penetrate the skin. When the fingernail will not penetrate, the gourds are ripe. Then they remove the first skin, split them, extract and completely remove the pulp, keep the seeds for the new planting, and, when they are clean, they let them dry for a few days.

462 They are put in a separate place, and a second operation
415 begins. With his Chiriguano patience, with a knife or other
531 instrument, the Indian begins to engrave whatever figures occur to him, such as tree branches, circles with grains of sand, squares, figures of jaguars, dogs, lizards, dogs, chickens,

/181 cont./

462 bulls, deer, etc. If all this carving were woman's work, it
415 would have but one name, Sacuarama, but since it is man's
531 work, each figure has the name of the quadruped, biped, or reptile that it represents (2).

(825) 2. Thus they say Machuru haangaño, figure of a lizard, Yaimba haangaño, figure of a dog. Even the men call the figure of a jaguar or a dove: Sacuarama.

/182/ With this second task the work can be considered finished. Days or weeks are employed depending on the greater or lesser quantities of the mates. They now color all the
[386] etched figures with ground charcoal and paint the empty spaces
[239] with Urucú, achiote, making them firm with the Taragüirisi, which is abundant everywhere, then singeing them in the flame of the fire so that the pictures will never lose their shine and luster or the painting of carbon and urucú come off (1).

237
323
825

1. The Taragüirisi is a species of ant which is common in cold weather. Its length is not over half a centimeter and its thickness three. It moves about the small branches of certain small trees, where it leaves its speckled whitish excrement. All potters provide themselves with an abundance of this material.

Pottery

323
[462] I shall now go on to consider women's work, limiting
317 myself to the most important, such as clay vessels and textiles.
[484] For the former the Chiriguano woman provides herself beforehand with the best clay, which she knows very well and even brings from long distances, if it is not found in the territory of the tribe. Naturally the potter not only wishes to avoid the loss of her labor, but also, insofar as she can, she wishes to

/182 cont./

323 avoid the loss of her reputation as a worker or master of an art which provides her with money and subsistence, despite the low price of the vessels (2).

[648]
[317]

2. There exist some Christians who in their area prohibit the unfortunate Chiriguano women from removing clay from some good veins. For this and so many other reasons, as has been observed by the illustrious Father Pierini, the savage sees in the white, not a brother, but an enemy.

Before going on to the manufacture of the vessel, jar, or plate, the potter provides herself with a potsherd or several of these, depending on the size of the work which she wishes to do; if she cannot find it in the corners of her house because there are no broken pots, she borrows one from her neighbors, and if they do not have any or do not wish to do her the favor, she breaks one of the inferior and smaller ones. In the missions or wherever there are ovens to fire tiles and bricks, the potters can do without a potsherd; they find pieces of well-fired bricks or tiles around the ovens, and with this the primary material is complete.

/183/ Then she submerges an appropriate quantity of clay in water, as much as may be needed for the piece she plans, and she leaves it there until it is completely softened and can be kneaded better than wax. Meanwhile she reduces to the finest powder the potsherd, brick, or tile which she has managed to get, sifts it in the finest sieve, Unupe, that she possesses; next she kneads the softened clay, making sure that it does not harden too much, puts in it all the sifted powder, and mixes it so that it forms a perfect union with the clay, and leaves the lump thus prepared until the next day.

The potter, after having cleaned her house and her person as well, and having fed her children, sits down near the receptacle which contains the raw material, extracts an amount of clay, and begins to knead it, shaping it into the

/183 cont./

323 form of a sausage or thick meatball eight or ten centimeters in diameter, and with this first effort begins the piece in the cleanest and flattest space (1).

> 1. The lump for the piece is kneaded on a sheepskin or goatskin, on top of a potsherd, or on a piece of wood.

415 If a piece is of small dimensions, she finishes it rapidly.
323 Plates, for example, are made very fast, and they can make up to ten in one day; the vessel for keeping water can be made in half a day, but the ones they call Yambui, a large vessel with a narrow mouth, and Ñae, one with a wide mouth, or cántaro, as they say around here, neither can nor should be finished in one day, both because they are large and because it is necessary to work with care and skill (2).

323

> 2. The base of every piece is made out of a portion of clay which they flatten out like a tortilla, on which they make a small rim turned upward, and to this they keep joining the clay in the manner described. The burnishing, which they do with a maize cob, seems very insignificant, but is more than necessary. Without this operation the cántaro would not hold water, much less would it hold chicha.

One who hurried in the manufacture of large pots would never finish them, because the soft clay would always fall down; for this reason the procedure is a slow one. When the base and somewhat more has been made, they suspend the work for a while, so that it may dry through the action of the wind or breezes; in the meantime she continues to polish it, first with a maize cob, Atíguo, and later with a special shell, Inta, and finally with a special stone about three centimeters in

/183 cont./
323 size, which they /184/ call Itaisi, with which the polishing of the pieces is completed (1).

1. The operations which they also perform with the shell and with the stone are for the purpose of giving fineness to the vessels and of closing any chinks.

[824] When they leave the piece which has been begun, they cover it with leaves of the Causíro, palma Christi, and at the time when they begin it again they dampen the edges with a small rag. This rag serves also for dampening the piece before polishing it with any of the above-mentioned tools. When it is finished and before it has been exposed to the air very long, they polish it with the Itaisi, and, when it is quite dry they fire it if it is not to have pictures on it.

531 Every painted piece of pottery is called Sacuarama. The
[192] paintings are white, black, and red. The white is called Toyanti, the black Itau, and the red Itaurucu. They grind
[237] up the three colors separately, dissolve them in water, and apply them with a slender feather from a chicken or other bird. The figures are varied; those of trees, animals, and men are rare; they are lines, unintelligible groupings. Without knowing it themselves, they follow a general system, and some of them make fine pieces, especially for storing water.

323 In order to fire them they select a still day, and a big
[843] piece is carried to the forest, because there is plenty of firewood there and also to avoid having pregnant women coming close to watch, because their presence, according to what they
[237] say, would make the vessel break. They pile firewood around it and light it, taking care that the fire does not go out before it is burning well; sometimes instead of firewood they also use dry cow-manure, and it seems that this is very good for even-
[237] ness of the baking. If the pot has paintings, they let it cool a little when they take it out of the fire and then quickly pass over the pictured the excrement of the Taragüirisi, which melts with

/194 cont./

323 the force of the heat and remains over the paintings like a
[239] binder, without which they would disappear the first time it was used. The Taraglirisi remains on the vessels like a light coat of rubber and the white of the Tovanti becomes opaque (?).

2. When a pot is slightly damaged, they heat it in the fire and on the inside and outside apply the Taraglirisi, and it is as good as before.

/185/ Textiles

286 Another important occupation of the Chiriguano woman
462 is weaving the Asoya for her husband, brother, or son, and the
[294] Cutama for herself. For this she prepares the wool or cotton, spins it opposite the way the mestizo and European women spin, and then bleaches it and finally dyes it.

286 In order to weave, they set up two tall, slender forked sticks in the house, with two sticks across, one above and one below, and arrange or place the threads vertically, and then sit on the ground and begin to run the woof through, thread by thread, which they hit with a pointed stick of ueto wood called Ruca. This, to be sure, is time consuming, if the threads are fine, but, on the other hand, the work is very durable.

291 Ponchos, Asoya, are of two types, one of wool and one
286 of cotton; the first are common from the right bank of the
231 Parapiti River southward and the second from the left bank
249 northward, because in the first region sheep are plentiful, and
[184] in the second, cotton fields. Formerly, before the whites intro-
[177] duced cattle into the region, cotton was cultivated everywhere, and from its product the men were dressed for ceremonies in their Tiru and the women in the Mando, which I shall discuss in the following chapter.

/189 cont./

291 The Cutama, which I have mentioned, has been replaced
296 by the Tipoi of the same form as the former, but made of
(198) chintz, blue drill, linen, merino wool, or cordoroy; they also weave covers for their beds, but these are without colors, and an occasional man has a crude loom, like those they use in Europe with a comb, manufactured by themselves (1).

291

1. The Mondu is attached to both shoulders by means of two large silver pins which correspond to the luxury of the garment; on ordinary days they pin the Tipoi with large thorns, but these have been replaced by needles, pins, and metal clasps.

462 Other tasks of the women are carrying water, maize, and field produce for the kitchen and making chicha and algarroba mead, which we shall discuss below, putting an end to this chapter for now.

/190/

Chapter Seven

Chiriguano Clothing and Adornments

Introduction

/The first paragraph on p. 186 is omitted in the translation. Page 186 continues as follows./

Clothing, which should remind us of the fall of our first parents, their misfortunes, their sufferings, hardships, and their death, our hardships, misfortunes, and death as a consequence of that disobedience, is today used as an object of extraordinary luxury. All of humanity has converted clothing into an object of vanity, and there is no nation, no tribe, however abject it might be or might consider itself, which has not abused or is not abusing clothing and adornments. /The last paragraph on p. 186 and the first paragraph on p. 187 are omitted in the translation. The following illustration appears opposite p. 187. The remainder of page 187 follows./

Cacique Güiraesa with His Family

/187 cont./

000 What did Adam obtain through his sin? Confusion and being thrown out of Paradise in order to be subjected to all the
[186] miseries of life. We have all inherited the pride of the first Adam, and this capital sin causes us to commit errors and more errors, causes the principle of humility to be lost, and causes the favored one to look with disdain on one who is inferior; only religion can remedy these evils, but Catholicism has not penetrated everywhere, and among the Chiriguano, formerly savages in every sense of the word, it is relatively new, for which reason the pride with which they deprecate their inferiors, looking at them disdainfully, is not altogether uprooted; they do not make use of their clothing and adornments, and they strive to appear equal to the whites, whom they consider superior (?).

> 2. The simplicity of dress of the American Catholic women when they go to church is worthy of all praise. Would that they always dressed in this way and that the fashion of hats had never appeared! In Europe they are so large that they bother the spectator in large gatherings, and in the daily services they interfere with the view of the holy ceremonies, and, consequently, they attend without piety.

302

Clothing

The Chiriguano wears his hair long and barely ever cuts the hair near the forehead, either for adornment or so that it may not interfere with his vision, because he does not tie it
301 up like the women and the Quechua Indians. He wraps it
302 around his head and ties it with a band that his wife, mother,
[286] or sister weaves for him. This band is called Yapicuana; it is 1.25 or 1.50 meters long and 5 centimeters more or less in
[177] width. It is of cotton or wool and comes in various colors, but at the present time most of them, where civilization has not sufficiently penetrated, use one of red baize, which they

/187 cont./

301 buy in the store, so active since the founding of the missions.
302 The Chiriguano with his vigorous head of hair and his red Yapicuana
[199] /188/ walks very proudly and shows off both things at feast:
in the presence of his companions (1).

[199]
[114]
[121]

1. An interested party once said that the mission in Yumbía had no purpose because the Indians were civilized. I am sure that this is not true, because the explorer who wants to learn the old customs of the Indians can study them better there than anyone else today. There they wear long hair, the tembeta /lip plug/, and balaca, or band, from childhood.

291 To cover the head they do not all wear a hat. The latter
294 is woven by them themselves with palm leaves. Carandaiti
285 they bring them from the places where they are abundant, Carandaiti, pull out the whitest shoots /cogollos/, take them to their houses, then string them one by one on a long cord, which they make of the same palm, tying them to each other. They hang them there and the action of the air whitens them much more. Then they divide each leaf of three or four shoots into leaflets no larger than 2 1/2 centimeters and begin to weave at the crown, where they form a cross with these leaflets, which they then keep weaving, and, as one ends, they add another, and when the work reaches the edge or brim, they stick the ends in so that the hat will not come undone, pull strongly, cut off the ends, and a round hat has been finished.

Others form long strands one centimeter wide and sew them to one another with cotton thread, and these hats are imperfect
292 cones lined with black or red cloth. They are used by older
554 Indians, those of importance, caciques and sorcerers (?).

291
302
304
178

2. The Quichua /Quechua/ always with his cap, the Chiriguano is abandoning the custom of long hair, the lip is pierced for the tembeta in few places now, and the straw hat is being

/188 cont./

291 302 304 198

replaced by the cloth one, although it costs a great deal; the customs of yesteryear are now disappearing, and those of today, or of the whites, are penetrating rapidly.

302 412 [831]

For the Chiriguano virility consists of a vigorous head of hair; nevertheless, although he prizes hair on his head, he never allows any other hair on his body, except that of the eyelashes and eyebrows, which he forms into arches. He pulls out the rest of the hair on his face and body with his Tendirabá pika, or tweezers. These consist of some little pieces of tin or a piece of cane slit down the middle, and sometimes a knife. With great patience and bit by bit he pulls out or cuts off all the hair that appears on his chin, thus looking like another woman. Others who are called /illustration appears here/ /189/ rich pull out their hair with thin pieces of silver, which they call Mbeivora (1).

302

1. During my stay in the territory I saw only one Indian who had a thick beard, but because of this uncleanliness he was considered disgusting. When the hairs grew, he cut them with scissors. Today the young men are beginning to wear mustaches and goatees, and many shave with razors.

[198]

291 [191]

The ancient Chiriguano clothing was very simple and too immoral, as is still seen among those Indians where the civilization of the Cross has not penetrated, such as the Chacobo north of Santa Cruz and others in the Bolivian Chaco. Boys go about naked until the age of ten or twelve, and girls up to seven, at which age they are content to cover the most delicate part of the body because of a trace of modesty which exists among them. Even grown men make use of this most simple garment when they are in the country busy at work or when they are returning to town loaded with firewood or food.

4: Blow--DSP M-2 (1820-1911) 1913 SP10 Chaiguano SP10

Chaiguano saddle or seat, sagum, bag, belt

/109 cont./

291 Clothing in the fashion of Adam is still seen everywhere. In the towns the men, and almost everywhere the women, are at least dressed from the waist to below the knee, because for work or for coolness the Cutama or tipoy, which can cover them up to the shoulders, is allowed to fall to the waist, the rest being left visible.

292 **Gala Dress**

For the ancient Chiriguano, the Ambícuai, doublet, was fine and festive clothing. This single name includes the Guaraji cangao, hat, the Ambícuai, sagum or frock coat, and the Guaraji timbiao, breeches. Because the doublet is an object of luxury, they do not all wear it, its use being limited to the grandees or caciques, to rich men, and to sorcerers. It is made entirely of tanned skins, which are those of the wild boar, peccary, or pygmy deer. They are tanned with the bark of the Curupau, the astringent acacia or sevil, which contains a great deal of tannin.

Skillful men are needed to make a complete doublet like the one made in the Santa Rosa Mision by the Indian Cachupari, which, when taken to the Turin exposition, was acquired by the Florence Museum, along with the skull that I acquired in Caruyuqui and other objects, such as the Yandugua, a kind of parasol of ostrich feathers, etc., objects which the missionaries of Potosí sent along with the missionaries of Tarija (2).

2. The missionary who was charged with taking all the things to the exposition and leading the Chiriguano of both sexes, as the program directed, was the late Franciscan Father Doroteo Giannecchini.

/190/

291 The crown of the hat is made of four oval parts, as is
294 the brim which surrounds it, sewed with fine cords of the same material, and the edge of the brim is turned upward. The hat has a band of the same material sewed to both sides at the temples to hold it to the throat; a knot or a ring on the band can be used to tighten it.

292 The Ambícuai, which lends its name to the whole outfit,
281 is a perfect camock, but its form is entirely Chiriguano, for it does not hinder the movement of the arms. Its cut is not straight, and both parts are made fast at the chest with two leather straps, which are run through the holes on the opposite side. The camock in back ends in two points, where there is a kind of ornamentation of the same leather, which consists of short, fine strips, like a tassel. The sleeves are wide, as is the whole garment, and are attached to the shoulder, being open at the armpit so as not to impede the movement of the arms, either in hunting or in war, where the grandees also
[126] wear it. In fact, in the photograph taken in Santa Rosa to be sent to the exposition, a hunter and a warrior dressed in this
529 doublet appear outside the circle. In the middle there is a
554 Chiriguano woman with her crown and adornments as queen
562 of the fiesta, who offers chicha to all who are enjoying themselves (1).

1. The queen is the one who serves the dancers as mistress and patroness of the fiesta. This
[128] photograph or figure will not be reproduced in the chapter dealing with fiestas because I could not obtain it.

292 The Timbiao, breeches, is also of leather and is made
[281] of four pieces, wider from the waist to the sacrum and narrower from the thigh to the bottom. It is quite wide and comes to the ankle. It is rougher than the rest, but more valued, and they will give anything to have even a single pair. This garment is tied at the waist with a belt or with two strings which are sewed across the entire width of the garment itself.

/190 cont./

292 The Chiriguano, when he is dressed in these skins, considers himself a grandee, and he is one before his companions and the caciques themselves. But from the beginning, even before it is even worn, such clothing gives off a very disagreeable odor, like that of the piles of dung. Let the reader imagine what it must be like when it has been used for some time. It can easily be understood that the Chiriguano, when [296] wearing the doublet, has nothing else on his body, and that all of the sweat, etc. sticks to it, and it should be noted that the outfit is never washed, which adds to the smell.

[222] [297] /191/ The cacique Nambi of Ivo made his visits to the P.P.C.C. of Santa Rosa Mission to ask for a mission in his town, dressing himself in his old and filthy doublet before making the visit. He embraced the missionaries and talked quite close to them, the result being almost unbearable (1).

1. The outfit is completed by a pair of boots called Timainu, which literally meant companion of the shin bone. These are necessary [224] for hunters so that they will not hurt their legs when they are pursuing wild animals.

The illustration that I put at the beginning of this chapter /see p. 255/ will make the description of the Ambócuai more easily understood. There appear in it a young man and an old man standing, a woman sitting on a chair, and a young girl sitting on the ground. The old man dressed in a doublet is the cacique Gilsaesa of Santa Rosa; the woman who is seated on the chair is his wife, the man on his right is his son Tandareca, and the girl is his Christian daughter, named Prisca.

[291] The Chiriguano who does not have a doublet is satisfied with his long poncho or with a blanket wrapped around his body down to his knees, but today it is rare that he cannot dress himself moderately well with some six varas of linen, [432] which at the most will cost him two bolivianos. Today every- [439] thing can be bought in the small retail stores (2).

2. The doublet is used today in some areas to

/191 cont./

292 make people laugh at the carnival. The
[542] same thing can be said of other antipsiras. I have placed in this chapter the method for making it, as well as the one for the hat, because it is work from which only the man benefits and both are counted among his garments.

Conclusion

463 In the course of the previous pages it has been seen that the Chiriguano is hunter, warrior, and also sorcerer. The first and second categories contain many, and the third one fewer, and this is easily understood, because a knowledge of medicinal herbs is needed and, more than this, the art of knowing how to deceive with prattling, which is not for all.

463 The three classes wear a belt with a bag which hangs from
291 it. The belt is called "Bosa," doubtless because it has a bolso
415 /bag/. In this those of the first and second category put tobacco, maize husks, and flint, tinder, and steel for making fire, and sorcerers add to these things the implements of their profession, which /192/ are the Mbaracajú, a piece of bone, the Rampón, a round stone, both of which are necessary for the curas... miraculous ones (1).

[199] 1. The Bosa does not seem to be of Chiriguano origin. Anduari doubts that it was introduced by the Argentinians or by the Tarijeños /people of Tarija/, but it seems to me that it was the former who introduced it, because it is similar to the one used by the gauchos.

/[illegible] cont./

[illegible] (254) Others who are not hunters, and hunters themselves when they are not engaged in this activity, fasten the breeches at the waist with a belt that they call Caurajé; their wives weave it; it is made of wool and painted in various colors. They all have one, except some of the old men.

[illegible] (251) (252) Another of their conveniences is the Urapura, long bag in its literal translation. The Urapura seems to be the Chiriguano's own; it is of tanned wild boar or pygmy deer hide, narrow at its opening, which they close with a little cord, gathering the opening; they sew around, and through the seam they pass the cord, which is rather long so that it can hang from one shoulder and be passed to the opposite armpit like a horseman's escarcela. This bag is used as a container for carrying provisions on a trip. In it they put boiled meat, parched corn and charqui. This is done by warriors, hunters, and travelers, and, well secured, as has been explained, it is never lost.

[illegible] Finally, there is no lack of another convenience for carrying water. In order not to experience the effects of burning thirst, he has a type of gourd with a hard shell like that of the marán; he empties it, removing the pulp and seeds, making a hole in the middle, puts it in a kind of net of cords, leaving one or two larger meshes near the hole placed at the top, where the Chiriguano himself makes a small circle, fills it with water, stops it up with a maize cob, and during a trip uses it sparingly, if he has foresight, or else he may not have it when he needs it most (7).

7. The Indians who are governed by cacaqidoes in the region of the Gran Chaco traveled with their respective tacú or tatarina on their expeditions to the desert of Paraguay.

/181 cont./

Adornments

/The first paragraph of this section, pp. 189-190, is omitted in the translation. The following illustration appears opposite p. 188, and the remainder of p. 190 follows./

181 The Chiriguano, although they occupy a very lowly place in this corner of the world, although they have little in the way of grandeur and show to display and take pride in, follow the common tendency of humanity, almost as the beast follows its instincts. Without any fear of error, if the Chiriguano were to possess great riches, he would probably invest them in his vices and in the adornment of his body.

When the Chiriguano wants to make a formal visit, he washes his body, dresses in his best clothing, and paints his face with achiote powder. The preparation of achiote seeds has been described in the preceding pages in the discussion of the fiesta /see p. 35/. There I said that in order for the Urucú to be fixed on the Indian's skin it is necessary that he first soften his face, or the part that he wants to paint or embellish, with palma Christi oil.

It has already been seen that the region is hot and that atmospheric changes are very sudden; a period of extreme heat can be followed by severe cold, and in these changes the Chiriguano's skin becomes chapped. To avoid this nuisance, men and women paint their faces and their feet with the cosmetic. They also use it during public drinking sessions, at banquets, and during the preparation of chicha in order to ward off the high heat, as well as during convalescence and after having recovered from smallpox (1).

1. Achiote powder with palma Christi oil is cool in hot weather and warm in cold weather. The neophytes in the missions no longer use it, or, if they do, it is sparingly and as a remedy.

Chiriguano adornments, etc.

[See pp. 273-274 for explanation of numbers]

/190 cont./

302 Another of the cosmetics frequently used by men and women
137 is the Carasapa. This is an annual plant with broad leaves, and
824 its stem grows /196/ to the height of a meter or a little more. The color of the plant itself and of its leaves is, for about half of it, somewhere between red and purple. The flower is large and about 30 centimeters long, its color being the same as that of the plant, but much brighter. There is enough of the plant everywhere, but it is not very abundant. The flower is somewhat heavy when it has seeds, and since the stem is slender and flexible, the result is that when it cannot hold itself upright it leans over toward the ground, forming an arch, hence its name Carasapa, or arched plant (1).

[529] 1. At carnival time even the neophytes paint their faces, as do the whites. They buy face paint which the whites sell, and the infidels forsake their achiote at the carnivals.

303 When the flower and seed are in season, the coquettes do their harvesting in order to use it, and they look pretty. The Carasapa also has its preparation, without which its application would not be easy. They first grind up some white beans, sift this meal very fine, and then grind the Carasapa in a mortar with a little water, put this mixture in a cloth, squeeze over the bean meal the water which comes out, washing or coloring it, and then dry the dough in the sun, spread out on a cloth or a Cutama. The preparation is not difficult, but not all of them go to the trouble to do it, and for those who prepare it, it is a profitable item.

302 The way to use it is the same as for the achiote, but it
[531] does not have any peculiarity, and hence it is only used at fiestas and at carnival time. Maidens beautify their faces by forming two circles of carasapa on their fresh cheeks and paint their eyebrows with achiote. Formerly, when young girls wore the Atira, pompadour /copete/, at fiestas it was painted with the carasapa mixture, after having been oiled with palma Christi.

/194 cont./

302 The flower of the Guambero, purslane, has the same properties as the carasapa, but it is little used, and they content themselves with just sticking the leaves on their faces, and this only at carnival time, the result being a gay set of dancers. Finally, the Indians have a fourth cosmetic, which they call Mboiurucu, or achiote of the viper. It is red, and they assert that it is food for the viper, hence its name. They use it by rubbing it on their cheeks, which makes them a bright red.

292 [527] [178] As noted above, the ancient Chiriguano man, Ava, and the Chiriguano woman of long ago, Cuña, at solemn fiestas and on days /195/ of general rejoicing, after having adorned their faces and washed their persons, wore the tiru and the mandu, respectively (1).

[286] [462]

1. If the Indian dressed in a tiru does not have breeches, guasupi timbiao, he wraps his body from the waist down with a shorter poncho which comes to the calf. It is also of cotton, and the women weave it. It is called Tirupeé, or sheath that warms, "alias" wrap /abrigo/.

The Tiru is a kind of long poncho, from which it differs because of the two openings that it has near the wrists; the hands are put into said openings and remain free for movement, and, the tiru fastened to the wrists, nothing impedes the motion of the one wearing it. It is spun and woven by the women, and the raw material is cotton. The tiru differs in color, some are black, others dark red, and others blue. The first color is obtained with black mud, Tuñúú, mixed with the resin of the algarroba, Piari; the second, with sotillo bark, Urundeibusu; and the third, with wild indigo, Caogüi (2).

[286] 292 386 [824]

[437] [178]

2. Today this is all purchased commercially, and the indigo plant, which is abundant in certain places, is ignored. They buy the indigo and the other colors, just as they buy for their poncho and their tipoi.

/195 cont./

292 The black tiru is first dyed with sotillo bark, and then they
386 immerse it in a vessel which has well-steeped black mud and
824 algarroba resin. After some time they wash it and dry it out, leaving the permanent color. The dark red is made with only boiled sotillo bark. Finally, to dye with indigo they crush this leaf and expose it to the sun's rays, then they crush it again in the same way, after which they put it in a large earthenware vessel with water, in which the tiru is immersed and comes out a light blue, but, if they want it to be like the blue of drill, it is necessary to boil the indigo.

In order to dye everything red they also use a species of onion that they call Tunpaipi, which literally translated, means feet of God and is abundant in the fields, and another
292 one called Chapi, which is found in the hills. Everything said about the tiru is applicable to the mandu of the women, with the sole difference that this is open at both ends and is attached to the shoulders with two enormous silver needles that they call Yu guasu, big needles, which are also disappearing.

When a woman is occupied with domestic and other work,
301 she ties her hair up tightly with a band, Apicuá, /196/ of cotton
302 or wool, so that it will not inconvenience her at her tasks, but
[527] when there is a fiesta, she washes her person, washes her head,
[515] combs her heavy and shining hair, and lets it loose, flowing over her body as far down as it will go (1).

[178] 1. The young women today put up their hair like the white women, making braids through which they draw a band that they call Añopea, braided cord. The hair fastened in the old way was like a baton, since not a hair was to be seen, even horizontally, all of it being covered by the band, añopea.

/196 cont./

301 Over their tiru the men put the Mboivera, which is a small double piece of silver with its hole in the upper part, where they put a double cord of wool, on the ends of which there are [562] tassels of the same color. This ornament is for men, but there are also women who wear them, but smaller ones. If one in- [177] quires about the origin of the mboivera, no Chiriguano can tell you today, but it is almost certain that they received it from the Spaniards, with whom they had relations almost from the time of the discovery, as can be deduced from the history of Tarija, whose first settlers had to fight vigorously to take over the territory which they then occupied. It is enough to see a mboivera in order to conclude that it is not of Chiriguano origin. The work which goes into almost all of them indicates that it is the work of civilized people, since decorations by the engraver's burin can be seen on it (2).

43
301

2. A Mboivera, a Tempeta /sic/ with a ndamicha, four necklaces, and a ndamicha ichi formerly were exchanged for a horse, a cow, ten sheep, or 15 goats, but it should be noted that these pieces of property were worth little. A cow was worth five or six pesos, and the same could be said of the rest. Conscientious travelers today pay up to four bolivianos for a tembeta, because it is a museum piece.

301
435
756

Both men and women adorn their necks with beads /perlas/, Itogũi; necklaces, Risi, are not of beads like those of civilized people, but in spite of this the itogũi has a conventional value among the Chiriguano. For four itogũi necklaces they sold the best that they had, and sick persons gave them to the sorcerer in order that he would cure them, and today, when it is almost impossible to obtain a necklace, it is not rare for a sick person who owns one to make a gift of it to the doctor, even though it may be his passport to eternity, because everyone understands that after the sick person has been treated by a sorcerer in the most barberous manner, if he does not recover it is clear he will die.

/196 cont./

301 Indian youths who cannot sport a bead necklace make them out of shell, Yatita, which is abundant throughout the region.
[321] /197/ The pieces are flat and round like a small button. They make a hole in the middle and string them one by one, making a knot in the string in order to separate them. Since the shells are white, a necklace on a Chiriguano's black neck is like a fly in milk (1).

[562] 1. The shell necklace is worn solely by men. I checked carefully and saw that they alone wear it. I have several of them that I found in a grave which was uncovered by the rain.

301 562 For men there is another necklace of beads, Ndamicha; a string of these with a large one in the middle, Ndamicha ichi, mother of the beads, is valuable. The ndamicha even comes mounted in the hole of the tembeta, which then is valuable and is called Ndamicha-rembeta, tembeta with bead.

114 301 562 It seems that the explorer and expeditionist Touar is not completely correct when he says that these necklaces are made of coralline, malachite, etc. The Indians do not tell where they come from. Perhaps with careful analysis it could be learned what type of material they contain and which animal produces them naturally, such as the coralline. What is beyond doubt is that today's explorers do not give them the value that they would have if they were true pearls. The former value of beads among the Indians themselves was, as I have said, conventional. The same gentleman is not entirely correct when he states that the Chiriguano women wore shell necklaces. Perhaps they were used by the Tapíí women, where he stayed for a long time in his efforts to see Olympus from Izozo.

301 562 Women's necklaces are abundant and are of different forms and colors. Some are round and black, Mboinu, companion of beads, others red and curly, Mboichanchi, curly beads, and others long and black, Sebadilla. There is also no lack of women who in addition to the above-mentioned ornaments place around their necks a string of silver coins, all of the same size.

/197 cont./

301 562 [437] These are of ten-centavo or five-centavo pieces, but they try to have them all alike. From what has been said it can be seen that the necklaces that the women wear are modern, brought by traders, especially peddlers (2).

2. Today neither medios nor reales of pure silver are found, but the Chiriguano Indian women make their necklaces with medios and reales of nickel. These are satisfactory, but the former were better.

301 184 Modern necklaces are common and also worn by the neophytes, but they do not wear bracelets, which are suitable only for the infidels. They make a long string of small blue beads and wrap it around /198/ their wrists, taking care to be sure that each turn is tight and close to the previous one, and so on with the rest which follow.

291 301 186 177 The Chiriguano, because he is proud, does not lower himself to wearing the adornments of neighboring tribes which are inferior to him, but he does easily adapt himself to wearing the clothing and adornments of races which are superior to him. He does not lower himself to wearing bird feathers, to scarring his face and arms, to wearing wooden earrings, like the Toba and others, but he imitates and attempts to surpass his superiors, the whites, by dressing himself like them, the men wearing the fine hat and the women wearing the wool and silk manta, the young men the footwear and boot, and the maidens foreign earrings. Hence, tiny little girls at the moment they are born have the ear lobe pierced, so that in time, even before they begin to walk, the mother can put a pair of earrings on them, while none of the old women whom I know wears earrings in her ears. This is a sure sign that they never wore ornaments in them, and thus, if the modern Chiriguano women wear them, it is because they have seen women and maidens who came from civilized centers or were born there.

/198 cont./

301 I am going to end this chapter by mentioning a fancy ornament which has completely disappeared. It is a woman's ornament and is called Aguá, crown, and whoever wore it was called Cuña aguá vaé, crowned woman. The duty of this woman at the public drinking bouts and solemnities was to direct the women's dance, to direct the singing, and to give drinks to the singers and dancers with her own hands. The aguá was a varicolored band up to three meters long, which was put around the head, crossed at the back of the neck, and held on by thorns, needles, or big silver pins, and both ends terminated in tassels of various colors. It was a very striking ornament (1).

[562] [554] [527]

[126] 1. In order to send a complete aguá to the Turin exposition I had to have it made in the girls' school in Santa Rosa. I could not get one in the town; there were none even at that time.

ooo Here is poor humanity without any exact idea of religion and worship, they are zealous and hard-working for the body, but have no concern at all for the soul. Only Christ can restore humankind, and tear away the veil which was obscuring its intelligence, and only the priest and Catholic missionary can teach him the sound doctrine of /199/ immortality and other dogmas, so that with this knowledge he may first seek the kingdom of God and receive the rest besides (1).

1. Quaerite primum regnum Dei et haec omnia adiicentur vobis.

372 Explanation of the Preceding Illustration [1]

1. Sticks for getting fire.
534 2. Bull's horn for use as a musical instrument.
3. Tail of a quiriquincho /armadillo/ for use as a musical instrument.
412 4. Tweezers for pulling out the hair from the face and other parts.

[1 [i.e., on p. 266.- Analyst]

11. "Aguá," or long band for adornment of the queen in drinking festivals.
412 12. Wooden comb.
534 13. Porongo for playing as a musical instrument.
14, 15. "Senene," or Chiriguano flutes.
16. "Igüiramimbi" for playing as a musical instrument.
17. Stone ax.

/200/

Chapter Eight

The Chiriguano Family

Introduction

000 The theory of the founder of the transformist school, in which he attempts to demonstrate and establish the origin of the human race by means of evolution, is completely absurd. /The remainder of the introduction, pp. 200-202, is omitted in the translation. Page 202 continues as follows./

The Family

Genesis tells us of the origin of the human race, and outside of this book all is confusion; faith teaches us that God created the first man in His image and likeness, and later gave him a companion, taking her from his rib, from which it is deduced that the family began in the world, or in historical times, from the beginning of humanity (2).

792 793 871

2. Readers already know the story which Anduari told me regarding the creation of

/202 cont./

797 the second Chiriguano man and the second
793 Chiriguano woman; I have even made use of
871 this to condemn the vice of polygamy in my monthly instructions to the infidels.

000 /The last paragraph on p. 202 and the first paragraph on p. 203 are omitted in the translation. The remainder of p. 203 follows./

621 It is very natural that the Chiriguano race should form a
59 family. Each tribe, or people, is an association of families.
603 They are made up of fathers and children, but many times they have at their head a grandfather and grandmother who are much respected but who never give any orders or manage things; instead they serve their children willingly as servants, the grandfather in bringing in firewood, planting, and weeding, and the grandmother in everything that a woman can do.

831 There does not seem to be any other race like the
867 Chiriguano in Bolivia, which like none other gives free rein to the passions, especially lewd ones. A maiden who commits a bad act is the pride of her mother, who is content with saying that now her daughter is a woman and ready for it. If a young man does similar things and his father finds out about it, he will ponder the act of his son and say, Cuimbae co, he is a man. This expression is heard frequently (1).

[797] 1. When the missionary attempts to reprehend or
[861] punish the sin of some Chiriguano boy, the father, the grandfather, or the cacique petitions for him, and the best words to lessen the punishment or to say that he deserves no punishment are: Cuimbae ma co, he is now a man.

181 Excessive corruption is the result, and, if the Toba race is distinguished by its inclination toward thievery, the Chiriguano are distinguished by their inclination toward lechery, as old and wise missionaries of the stature of Father Corrado and
000 Father Giannecchini can testify. Let the reader consider that the

1997 /203 cont./ Let the reader consider that the work of the missionary, who strives for and dedicates himself to the reduction of the Indian, would not amount to much if he could make light of immorality, a sin which God anciently punished with two floods, one of water and one of fire, thus manifesting His just indignation with these words: Non permanebit spiritus meus in homine, quia caro est.

595 With these inclinations not at all restrained, but instead fomented with the five physical senses and all the faculties of the soul, it is not strange that there should exist among the Chiriguano a tendency to very frequent bigamy and polygamy as a luxury or a sign of greatness. /204/ If not all have many wives, it is either because it is not easy to support them or because they are not easily found, because every woman would like to be the only mistress in her house (1).

> 1. In the house of a polygamist or bigamist, the one who gives orders and is in charge as mistress and manager is the oldest, as long as she anticipates her husband's thinking; since, as she knows his irremediable incontinence, in order not to lose her authority in the house, she advises a second and third marriage, etc., and then the master of all of these women imposes the respect due the oldest woman.

[643] Almost all regional caciques are polygamists, and they have a woman in almost every town of their dependency, without counting the eight or twelve that they have in the town where they live. Caciques can do this because they have
595 authority, although they [illegible]ot give them anything. Formerly
178 polygamy was much m[illegible] extensive. It is not so now because
[1997] the race has been much reduced, and there has penetrated everywhere, if not the missionary, the Christian, who at times is a reproach for the lasciviousness of the carnal Ava.

/204 cont./

643 Regional caciques are now very few, and they themselves
648 are submissive servants of the whites, who do not let them live
797 as they would like very much, but in matters referring to morality do let them live as they wish. Only the missionary makes them understand that such a life is contrary to divine law, but the Chiriguano refuses to understand this.

595 The important men assert that to possess many wives is
594 necessary for the preparation of chicha for offering hospitality
829 to guests and visitors. This excuse is not satisfactory, because
643 the cacique in the town where he resides is like an absolute king, and nothing is easier than to command his subordinates or relatives and always have his favorite drink; no matter how much of it he may want, he can always ask for more for himself or for his guests.

595 The subaltern caciques in general are bigamists, but they
622 do not become such in their youth, when they are like humming-
[582] birds, but at 40 or 50 years of age. This happens when the first wife is older than the husband, or his eye is caught by another younger woman whom he brings to his house as soon as he has her in peaceful possession. He at once orders the old woman to respect her. If she is quiet and consents, she continues working and serving her rival in the interest of food, but if she is not quiet, she receives a good dose of the stick, is thrown out of the house, and does not get back into it. But there are strong-minded women who do not allow the desecration of their home /illustration appears here/ /205/ where they have lived for years and have children of both sexes, who are then left behind because the man moves to the second wife's house (1).

[162] 1. Formerly, women were abundant because of
[169] wars. Today they are abundant because of the emigration of the Indian men to the Republic of Argentina.

Education of neophytes through work

4: Nino--278 M-3 (1893-1911) 1912 SF10 Chiriguano SF10

/205 cont./

587 595 When the mother of a family is widowed at a mature age, after a year of widowhood, if she was a dutiful wife, she can easily remarry; it is much easier if she has a daughter, even if she is small. The Chiriguano man marries the mother with the hope of being able to marry the stepdaughter when she reaches a suitable age. If at the time of marrying a widow the stepdaughter is already an adult, it is difficult to achieve this end, because young girls abhor this type of union, in spite of the fact that their mother, in order not to be repudiated, often serves as a go-between for the wicked desires of her husband (2).

[593] [762] 2. The stepdaughter, when she sees the impossibility of freeing herself from the evil intentions of her stepfather, will often run away to another tribe, and, if she cannot manage this, will take her life by suicide.

582 In spite of being so inclined to lechery without regard for kinship, even in a direct line, it is worth considering the respect that the Chiriguano professes for consanguinity, regardless of the degree considered. It is unlikely that a man will marry a cousin in the fourth degree, and he tries to respect [593] even more distant degrees. With much more reason the father respects his daughters as holy things, it being completely false what somebody wrote about this, having heard of the case where one Chiriguano or several had lived with their daughters when the mother had died. It could happen that in the future they might marry their cousins, since they see that their superiors do this, but how many of those who are here will be alive a few years from now?

/205 cont./

584

Method of Contracting a Marriage

The Indian has many ways to conclude a naturally
[581] legitimate marriage. He must in the first place have good qualities as a hunter and worker. When he has selected the one who is to be the pearl of his eye and has enough courage to ask her parents for her personally, he makes his visits at night to the family /206/ of his intended. These visits are silent until
[583] the old people ask him the reason for his coming. The young man at first is confused in his answers, but if he observes by the kindness of the questions that there is a thread of hope, he returns and from time to time makes gifts of maize, cheese, and fruits of his labors, such as gourds, beans, and birds hunted by him.

If the young man's manner pleases the old people, they do everything possible to get their daughter to consent, but often the suitor loses everything, either because the old people do not like him or because she abhors him. This last case happens particularly when the suitor is somewhat older (1).

[581]
[579]

1. Among the Chiriguano nothing is appreciated but the manliness of a man and his goodness: looks, wealth, and the nobility of the house are of no value whatsoever.

When the young man is pusillanimous, a third person is used, as is done in every country. The third party also presents himself at night to smoke his cigar and explain the reason for his visit from the first night on, and naturally everything
584 cannot be arranged on the first night. He must come back
583 repeatedly, and meanwhile there must be no lack of gifts for the future parents-in-law. The suitor customarily also brings bits of firewood collected every morning at dawn, which the older people put into the room, whether the marriage is concluded or not (2).

584

2. Each day the person charged with making arrangements for the marriage, or the third

/206 cont./

584 party, gives the young suitor an account of what has happened, encouraging him to have hope.

[583] When the old people want it and the daughter is pleased by the young man's manners, the matter is promptly concluded, and the husband enters the wife's house without saying a word for three or four nights, without letting himself be seen in it during the day. On the fourth or fifth day both of them present themselves to the public, sitting at the threshold of the door. Then the bachelor companions of the newly married man come to him and ask him a thousand questions, congratulating him on his luck. The young woman hears all this with much embarrassment, but this is the first and last time. She will not experience this again.

[593] From what has been said it can be deduced that it is not the young woman who seeks out a man to marry, but he; and in the presence of her relatives, friends, or strangers, she will never manifest in any way her love for her husband,

[583] however much she may truly love him. This reciprocal love often causes a maiden, because her parents are opposed to the union, to run away /207/ to live with her husband in another tribe for a long time, in the house of her relatives, and return with the marriage already contracted in fact.

585 The Chiriguano are not accustomed to having celebrations in connection with their marriages. Only after the marriage has been consummated does the mother of the newly married man, during the absence of her son in his wife's house, make chicha fermout. On the fifth or sixth day she calls them, has them in the house the whole day, makes them drink a little, prepares a small lunch for them with much affection for her daughter-in-law, gives both of them very sound advice, and sends them off as night approaches (1).

591
583 1. It is the law of the Chiriguano that the husband must live in the house of his father-in-law as soon as marriage is contracted;

/207 cont./

591
583

otherwise they will not give up their daughters. The measure is a very good one; this often keeps a man from abusing his authority because of his respect for the old ones and for fear of being thrown out.

300

Life and Tasks during Marriage

The life of man is a continuous struggle, said St. Job, Militia est vita hominis super terram, but life in marriage is a double struggle; one who passes from the estate of bachelorhood into that of marriage sees it as soon as the honeymoon is over. The missionary dedicated to the conversion of infidels, like the parish priest in the administration of a parish, can readily testify as to whether the suffering of his married parishioners is or is not greater than that of his unmarried parishioners.

585

A new life then begins for the Chiriguano newlyweds. As soon as the intimate meal in the husband's house is over, they go out in public freely, go out into the countryside, get supplies of maize, firewood, and water, make the drink ferment, and, when this is ready, invite their relatives and friends and enjoy themselves for a day, without becoming disorderly. Even the neophytes do this on the day of marriage, because they have seen that that is what the white Christians do (2).

[606]

2. This party is held in the house of the parents-in-law, for which reason both of the old people help efficiently, the one in bringing in firewood and the other, the mother, helping her young daughter in everything, including serving the drinkers.

/207 cont./

462 The woman among the Chiriguano is a true slave, and
562 the man her master. His work for the family is limited to planting and weeding, as well as fetching the necessary fire-
[517] wood. In addition, /208/ as a diversion and pastime, he takes his bow and arrow, goes out into the countryside and hunts, or fishes in a nearby river, spending the rest of his time talking with his friends, recounting exploits, telling stories, Miani, playing cards and throwing dice, even going so far as to bet the tipoy or cutama of his wife.

She, on the contrary, is the work horse of the house. She
[482] carries the maize with her Allapoca, a kind of net, goes to
[515] the spring and carries on her shoulders and over long distances some 50 libras of water, prepares food, makes chicha, cleans her house, spins, weaves ponchos, makes ollas, cares for her children, raises animals such as pigs, chickens, sheep, and goats, makes cheese if she has cows, and, as if all this were not enough, in the afternoon she sits down next to her lazy husband, releases his healthy hair, and as a distraction goes looking through that labyrinth for the insects which nest there,
[262] without feeling any disgust. I am not talking about killing them, but about doing away with some with her teeth and making a snack out of others, a very simple thing for these women.

562 Everything is permitted for the man. He can play upon
593 words and make lascivious jokes with other women, but this is not permitted for the wife, nor can she even cast a sidelong glance, which would be enough to cause her to be maltreated and divorced. How many things there are in nature! It is painful to see a mother with her four or five little ones abandoned to suffer hunger and despair, while the rascal of a husband with no just cause at all goes happily off with another, giving her the little that he earns and then getting rid of her at the first chance (1).

593
586 1. When the man turns out to be too lazy, it is the woman who leaves him, going off with another, and the children go with her, because

593 586 /208 cont./

love can accomplish much, and they really love their children, without making much outward show of this.

Finally, the man, whenever he wishes, can dismiss his wife with great ease. He does it with contempt, in biting words, calling her Culla pochi, bad woman, Culla imuquere, lost woman, good only for lighting the fire. No one could endure such scorn for an hour, and she understands that the rascal has won the love of another, younger woman.

515 When a mother goes to the spring or river, she takes her son or daughter with her, bathes herself and also her child, and then grinds up some grains of Netira, a kind of potash, leaving her hair and that of her daughter clean and shiny. The bath is daily, but the washing of the hair with Netira is not.

/209/ Pregnancy and Birth

843 When a woman finds herself pregnant, she does not give up her customary chores, but goes to the field as usual and fetches from there heavy loads of maize and other things. 482 They use for this, as I have already noted, a kind of close-285 woven net which the Toba make with the bark of the caraguata [171] or maguey. Those made by the Chiriguano are like the wooden fruit-baskets /chipas/. They are open on top, where they have an easily untied cord, in the middle of which there is a wide band for holding the weight with the forehead (1).

482

1. The Chiriguano woman lets all the weight of the load she is carrying rest on her spinal column, etc., holding it with her forehead. If the water is some distance away, she does the same; if not, she carries the vessel vertically on her left shoulder, or on her head, where she places a pad of rags.

/209 cont./

843 Near the time of giving birth, she carries less weight,
262 prepares what is necessary, which consists of some cloth pads
415 and her new little olla in which to cook the maize which she
[753] must eat boiled. If the olla were old or used, the newborn would be subject to mal caduco, or epilepsy, and if a woman who has just given birth were to eat parched maize, her breasts would dry up and would not give milk for feeding the child.

844 At the time of giving birth the only person left in the house is the midwife: the others, even the husband, go out, but he returns as soon as the birth has taken place, in order to lend some help to his wife and the midwife, who alone cannot attend to the newborn child and its mother, who fights with her very life against the pains, for which she is consoled at the sight of the fruit of her womb, which for a moment makes her forget her present suffering.

They at once cover with sand every trace of the event, wrap up with bands, cloths, or other things the body of the woman who has just given birth, and lay her on the ground face down, making her rest on a bed which has little or no resemblance to such, but as every Chiriguano woman is strong, she puts up with this as though she were in a featherbed.

184 Throughout the whole world birth is a very dangerous thing,
846 and it is even here. The Chiriguano women also need considerable rest. When some old women were asked about the matter, they stated that childbirth formerly lasted almost two weeks, and they marvel that the neophytes get up so quickly, returning to their customary labors within eight days: they attribute this robustness to the lack of strict fasting in the years of puberty.

846 /210/ It is consequently an error to state that puerperae go to the lake or river to bathe from the second or third day, much less on the same day as the birth. Natural reason would not allow the latter. There might have been some extraordinary case in which some woman walked immediately after giving
[178] birth, but it would not cease to be an extraordinary case. The neophytes are abandoning the custom of their grandmothers and

/210 cont./

846 178 slowly accepting that of the whites. They do not come out of the house until they are completely well, and they only do it on a Sunday morning. They then wear a new dress for the first time and present themselves at the door of the church to receive the post partum blessing (1).

> 1. I saw an extraordinary case, from which no illness resulted. They have been accustomed to the post partum blessing by the virtuous old mistresses, and they continue this.

846 35 302 Soon, in a week or two, the woman is completely well, and she is allowed to go out to bathe and paint her face with urucu, returning gradually to her usual tasks. Childbirth is 846 847 785 regarded by the Chiriguano as a time of fasting, in which some authors say that all the members of the family participate, but this is not true; only the husband shares this obligation, and he does it for two or three days (2).

> 2. They say that it is necessary for the baby's father to fast so that it may not die nor any harm come to it when it grows up.

797 785 846 178 The missionaries try to eradicate from the neophytes the superstition that is represented by the husband's fasting, but when their mothers see that their grandchildren are dying, they reprehend in their children the abandonment of the customs of yesteryear. I knew an old woman who was very attached to these customs and who tried in every way to force her son to fast, in view of the fact that the newborn babies died every time her daughter-in-law gave birth.

/210 cont./

Infant Care

854 [352] For the newborn child to rest in, they have a kind of net which they hang at one end of the lodging. Its mother places it there when it sleeps, and she covers it with a piece of cloth so that the flies will not bother it. Some wool or cotton hammocks are crudely made /211/ by them, and these are called Ini ó quiha, the last term of which literally means quietness.

The mother almost never leaves her newborn child, and to go to the spring or to the river she takes advantage of the time when it is asleep, leaving it in the care of some person, even a little one. She cannot yet carry it in the folds of her clothing, because the child's tender limbs cannot bear such a position. Only when they have become somewhat stronger does the mother walk from one end of the town to the other, to the field, to the spring, without leaving her child at home, like weasels or like the kangaroos of Australia, who do not leave their young in the caves when they go out, making leaps like a jerboa.

147 854 The sun in the Chiriguano region is very hot and yet children exposed to its action do not feel its effects very much, if at all. They receive its rays perpendicularly, from in front, from all sides, and square on their faces, and it is as though they were in the shade. The only effect that it has on them is the copper color of the race, because experience has shown that this color is acquired (1).

142 1. The color of the newborn babies is rather strange; they look like mice. Many newborn babies are completely white, but not like Europeans; the difference between the former and the latter can be seen immediately.

/211 cont./

853 262 There is no special food or more abundant food for mothers after childbirth. She who gives her breasts to her little one eats little and extremely poorly. Her ordinary food is parched maize, parched maize meal, bread made of the same, herbs, beans, gourds, other things of this nature, and rarely a little purchased beef, other meat from animals that died from sickness, lack of pasture, or snake bite, and, finally, game or chicken. In spite of this extremely bad food, milk is abundant in her breasts; the children are almost always hanging from them and sucking and never seem to dry them up, which indicates that they are excellent nursers.

648 464 853 Mestizo or white mothers who sometimes have little or no breast milk because of sickness or some accident make contracts with Chiriguano mothers, pay them well, and treat them better, but it seems that continued good and satisfactory nursing harms them, /212/ it also being prejudicial to the breast as well as to both newborn babies, the weaker child succumbing first (1).

1. Naturally the Chiriguano women refuse to be wet nurses for white children, because they abhor them. When through experience they learn of the sad consequences, communicated by others, they resist even more and only do it when force or the right of the stronger prevails.

845 Twins

[163] [165] Multiple births are rare, and those of two children are frequent. In the former case the newborn babies die very soon, and in the latter case one almost always lives, and many times 736 603 both live. When twins survive or through the death of the mother a newborn child is left an orphan, it is very easy for the grandmother to care for one twin or the orphaned child. [853] [824] Although the old woman may have reached or passed 60, she

/212 cont./

736 very easily manages to make the milk come down. She
603 grinds watermelon seed or sarsaparilla root, Isipocagua, and
824 washes herself repeatedly, squeezing herself over or above her
853 breasts, and makes the famished child suck continuously for several days, and in a short time she achieves the desired result. Sometimes even young women lose their milk. They then look for the root and juice of the sámolo, or cipoi, wash the breasts with this juice, and succeed in nursing their children again (2).

2. In the confirmation administered by the Bishop in October, 1909, in Ivu Mission, an old woman of some 60 years of age presented her granddaughter, whom she had nursed. She is still alive, and so is the twin granddaughter, although not very strong.

Joy and Grief

855 For the Chiriguano race their joy at the birth of a male child is the same as at that of a female child, because if the former helps his father in field chores and in hunting and fishing, the latter helps her mother in household chores, and the father as much as the grandfather very much like to eat meal which has been ground by the hands /213/ of their daughter
765 or granddaughter. If either one dies, the grief that the old
855 people feel is very heavy. I witnessed many times a mother's agonies of grief over the death of her son and the profound feeling of the father over the irreparable loss of his idolized daughter.

797 What I am going to relate will better convince my
758 readers. In the month of July in the year 1909, a rabid dog
164 at the girls' school of the San Buenaventura de Ivu Mission bit Cecilia Yąguándai slightly and Ana Yarandui and Delina Aragúndai more severely. The two latter, younger than the

/213 cont./

797 first, came to me to be treated for their wounds, to which I
758 applied cotton soaked with ammonia, of which I also made
164 them drink five drops. The two went through a high fever for four days, but they are alive. Cecilia did not consider her bite very important and did not come to me; I did not know that she had been bitten. She did not have a high fever either, because in fact scarcely any blood came out, according to what her companions say.

The month of January came, just six months after June, and the little girls who had been treated with ammonia again had the same degree of fever and recovered. The other girl began to be afraid of water and to be laughed at by her companions for this fear, so much so that she was the object of foolish tricks. She went down to the town, she wanted to drink water, was unable to, and she told her parents. At once she said that she had pain in her wrist, in her little breast, and in her shoulder, and nothing could be done to treat her; the sickness got worse and she received the last rites. The night before she died she tried to run out of the house; she howled without rest and tried to hit and bite her mother. In all, she had true hydrophobia, which carried her to the grave in three days (1).

1. The child Cecilia was bitten by the rabid dog right on her wrist, which is where the first pain began six months later. When I blessed her with holy water, she was afraid and shrank away.

Until she was buried, I did not know what had happened in the month of July, but when I saw such a similarity to rabies, I inquired and it turned out to be this which had
753 caused her death. Her parents, since they could not be
754 persuaded that the bite could produce an effect after so long a time, attributed her violent death to sorcery, stating that this must have been done by a young man who a few days earlier

/214/

753 had asked for her as his wife, a proposal which had not been
754 accepted; but it must be noted that the Indians attribute every death to sorcery.

765 The loss of this child was greatly mourned by relatives
[764] and others, and her parents, who loved her very much, burned all of the clothes and things that she had, in addition to having buried with her the best and abundant clothing which her father had just brought her from the Argentine Republic. The girl had three donkeys which had been given to her by her father. They sold them in order not to see them any more, in order not to be reminded of their late daughter each moment and immediately weep.

855 I have related this event so that my readers may know
765 that the Chiriguano love their children whether male or female, so that they may see the grief they feel, and so that they may know that in case of hydrophobia the medicine which I administered to the girls Ana and Delina is a good remedy; after the last fever they are now completely well (1).

114

1. If some new missionary or other readers may not know of it, let them now know that ammonia drunk as drops in water and placed on snake bites and bites of other poisonous animals or insects is very efficacious. In ignorance of having been bitten by a spider, I suffered the consequences for seven months and got well as soon as I applied ammonia to it. For another bite I used ink very efficaciously; it is enough to paint the bitten part with it.

845 Deformed Children

847 It is not easy to ascertain why the Chiriguano kill their
732 children who are born deformed. Some writers have stated that they do it so that all will be valiant warriors, but this reason is not satisfactory because deformed women are not found either, and certainly women are not good for war.

/214 cont./

845 I judge that they take away the lives of these unfortunates,
847 not to do them harm, but to do a highly philanthropic act for
732 them, since they would have even greater suffering were they to be left blind, crippled, lame, one-handed, mute, and deaf for the rest of their lives (2).

[191]
[934]

2. Similar philanthropic acts are still practiced among the Toba and other tribes; so that they will not suffer much and long, they also bury sick persons alive.

732 Today one sees an occasional deformed person, and these isolated cases are either due to parents not brave enough to kill /215/ their children or perhaps they can be attributed to illnesses contracted at an advanced age. As a conclusion to
181 the present chapter, let it be noted that some have written things about which they know nothing, making the Chiriguano out to be ferocious wild animals without compassion, but a particular fact cannot be used to draw general conclusions. True explorers state, as I do, that in general the Chiriguano is humanitarian; he loves his relatives in life and in death, and they are astounded by the conduct of the whites, who upon the death of their relatives slaughter cattle, drink brandy, and play as if it were a fiesta (1).

000

1. The conduct of certain civilized persons should not be reproved by the world. Even in the most civilized nations there are benefit dances. They drink, dance, and do other things, while the poor or the sick suffer. The Catholic takes out his money and gives it away in secret, without ever bragging about it; this is the true way to help humanity.

/216/

Chapter Nine

881

Children, Puberty, the Tembeta (1)

1. This will deal with the puberty of the girls and the imposition of the tembeta for boys, which is carried out a little before their puberty, so that when this does appear they will have the mark of manhood.

Introduction

797 533 [126] At the beginning of this chapter /see p. 294/ my readers will see a small band of young, luxuriously uniformed musicians with a Franciscan missionary at their side. These are the musicians of San Buenaventura de Ivu, whose photograph was taken on the pastoral visit made by the renowned and wise Delegate General M. R. P. Wolfgango Privaser, illustrious and glorious in the seraphic religion, on the 23rd day of September, 1908. His secretary, the intelligent Father Angel Domáica, was the one who was charged with taking this group and the others in the Potosí and Tarija missions.

[648] All the musicians are Chiriguano boys whose fathers were in the 1892 uprising in the fields of Curuyuqui, half a league away from what is today the mission building, which at that time did not exist. They are the sons of fathers who all wear the tembeta and of mothers who in their puberty underwent the strict tests which I shall relate in this chapter.

175 648 Their fathers declared war to the death, not on the Cross, but on the white, be he Christian or not, because he saw in him a tyrant and hangman, and he wished to cast off the yoke by destroying the one whom he considered its maker. But it is certain that the Indian in his hate and rancor, which he has consistently maintained /illustration appears here/ /217/ against the caray /white man/, did not know how to make a categorical distinction, because not all have bad hearts. If there are some bad ones, real executioners of humanity, there are also very good and compassionate ones, from whom they received and still receive favors.

4: Nino--294 M-3 (1893-1911) 1912 SF10 Chiriguano SF10

797
533

The S. Buenaventura de Ivo Band

/217 cont./

175 648 [797] The parents of these youths would not have thrown themselves into a disastrous war if the Supreme Government had quickly decreed the founding of the mission which they desired, as can be read in the history of the Colegio de Potosí; in it is clearly seen what the Ivu people did to try to have the presence of a missionary father, because political authority always showed itself to be humanitarian with the unfortunate Indians.

It has now been 19 years since that bloodletting, and still the pampas of Curuyuqui are sown with human bones; one can still see traces of their fortifications, where they fought like lions, with such unequal weapons; the memory of that horrible and destructive occurrence is still retained (1).

1. Some 500 men and women died in the war, but almost all were outsiders; the others, who knew the place, saved themselves by taking flight and hiding. They do not like to have anyone talk to them about this uprising.

797 87 [648] [175] As a consequence of the war the decree to found the mission came, and just a few days after the defeat the measuring and laying out of the necessary land was done. Today fathers and sons live tranquilly; some of them have gone on to a better or to a worse life, many have experienced the paternal government of the missionary, which they do not tire of praising. The sons have learned the religion and practice it. They have learned the alphabet and read books. They have learned religious singing, and several of them know and play the music which has been taught to them by 797 the missionaries. It is truly surprising to see the changes which have been brought about in such a short time in such bellicose Indians! This is the virtue of the Cross! Others could have done nothing, as nothing had been done or will be

/217 cont./

797 done wherever there are no missionaries (2).

2. In every sense civilization brought by the missionary is preferable. Colonization of the sort which they are trying to implant today is very costly, brings little material progress and no moral progress. I refer to the latter more than to the former.

Education of the Children

000 In man, love and tenderness for his children is natural; just as the birds, the animals, and the very beasts of the forest love /218/ and take care of their young, this same inclination, with much greater reason, is found in the rational creature made in the image and appearance of God. /The remainder of this paragraph and the next two paragraphs on p. 218 are omitted in the translation. The last paragraph on p. 218 follows./

The true love of fathers for their children is only found in the Catholic Religion; this can be proved by many examples of incredulous persons who, despite their incredulity, taught the catechism to their children. Outside of Catholicism, /219/ the potential of the soul is not cultivated, a pure materialism is taught, and how can anyone who does not profess any religion at all educate his children? What education will he be able to give if, in addition to this, he is ignorant? His tenderness or love will scarcely have any effect, never a moral one.

855 This is the tenderness of the Chiriguano. They love their children truly; all of the work of the Chiriguano is only aimed toward the corporal well-being of the child; he gets his daily food for him, thinks about his clothing, sweats in order to shelter him and defend him from the inclemency of the seasons, from the fury of the winds, and from the impetuosity of the rain, but he does not concern himself with his morality.

/219 cont./

855 The child grows up in his sight with all the imperfections of little lambs or kids, because that is also the way in which he, the father, grew up.

855 462 When children of either sex are still in swaddling clothes, they receive the care of the mother, the grandmother, or other women who may be very closely related. It is unusual for a man to take care of newborn children, both because this is natural in all the countries of the world and because it would offend his dignity. But when the child begins to open his eyes well and to have some understanding of external things, he takes it in his arms with all the love that the child in its innocence inspires.

But the one who normally cares for the children of both sexes until the age of six or seven years is the mother. She washes them, bathes them, puts them to sleep, nurses them, takes them from one place to another, carrying them in the folds of her clothes. The father only helps at this task when the mother cannot attend to it because she has others, or because she is busy making chicha, preparing food, etc. (1).

1. If there is no mother because of death or for some other reason, the man finds himself in a difficult situation with regard to his children and quickly seeks out a female relative.

868 School of Arms and Strategy

At the age of seven years and even sooner, the father takes special charge of his male child, with the girls remaining in the charge of the mother; he makes for his son a bow and arrows suitable for his age and strength and begins to train him, teaching him to use them and the way to aim and shoot (2).

2. The father takes his son to the woods, where he begins to hunt little birds, and, if he manages to get some, he takes them

/219 cont./

868 to his mother with satisfaction and then tells his companions about it.

/220/ There are also men who teach boys the way to be quick in fights and even the way to dodge enemy arrows, as well as bullets. The man who teaches this is called Puruncanise, or man who scratches. He is the terror of the boys in the town where he lives. The method he uses is to run after the boys, and woe to the one who out of weakness or carelessness lets himself be caught! In the hands of the puruncanise he suffers the martyrdom of being scratched all over his body with long fingernails, which he lets grow on purpose, in addition to the blame he gets for letting himself be caught by an old man. In a second race it is not likely that the boy being taught will let himself be caught (1).

868 554 463

868 856 239

1. Those who are older have the calf of the leg scratched with the tooth of the Acuti /agouti/ by another of the art. A lot of blood comes out of this, and upon recovering, they say that they are very good at running and can resist fatigue much more than those who did not allow themselves to be scratched.

882 When all the boys of the tribe have received practical lessons from such a neighbor, they indeed may be ready for war, because skill consists in knowing how to shoot in order to injure and also how to dodge the enemy arrow. The Indians who know such strategy are called Queremba by their companions.

[554]

721 726 797 In the last war of Curuyuqui, the Indians attacked the Santa Rosa Mission while Colonel don Tomás Frías was there. He chose as a target an Indian Queremba who seemed to be the chief of the company and lost some eight or ten bullets without having the pleasure of felling him. Almost all the Indians learn this way of fighting; hence their combats do not last long. That of Curuyuqui lasted eight hours because they were sheltered in trenches.

/220 cont./

859 868 The boys have different ways of learning how to be accurate in shooting arrows and to be good hunters and brave warriors. In the field or in the woods they amuse themselves usefully, ambushing and taking as a target little birds and even grasshoppers when there are any, and when they go back home they give proof of their manliness by sticking the arrow into the mortar in which their mother customarily grinds maize.

859 868 526 [411] [824] When the boys gather together in the town, they learn the use of the arrow, shooting it at a wooden wheel which one of them makes roll as fast as he can. This wheel is made of a type of round cactus which grows a cuarta or a little more and is called Zipepe. The boys, armed with arrows, line up, and the best one will succeed in driving his into the soft material of the zipepe. /221/ The zipepe is at the same time a school for target shooting and a game; of the latter they have 524 others which I shall name in passing. They have the Pinono, top. This is different from that of the towns of the Republic. It is a small gourd with a hole in the middle in the upper part. When they spin it, the air produces a prolonged sound like that of little calves who are lowing very gently, and from this comes its name, Pinono.

Another game for young and old is pelota, which has a definite season. This is when there is fresh maize, or the cold is beginning to be felt. They call it Topo, and it is done with the husk of fresh maize; thus, when the fresh maize season ends, the game of pelota also ends, and they amuse themselves with many other games that they have (1).

000

1. These will not be listed because this is not the subject of this chapter, and in addition it would be very tiring for the reader.

/221 cont./

Private Life

593 888 The father and mother take great pains for the material or corporal well-being of their children, both male and female, and they in turn have affection for their parents. Nevertheless there is no lack of creatures with very bad inclinations, who forget their parents' goodness, forget the labors undertaken by the latter in caring for them in their tender years, and abandon them in their old age in the midst of their suffering and privations.

593 861 867 273 The father and mother almost never address harsh words to their children; much less do they correct them with corporal punishment. The children attend the public drinking sessions in the company of their parents, and how strange it can seem to see father and son sometimes drunk together in the streets or in the plaza of the town! They see their fathers in other people's fields, taking advantage of the first fruits, and then the son does what he has seen. He hears his mother telling stories not at all clean, he sees acts not at all moral, he witnesses altercations in the house, hears his mother's jealousy, sees his father's bad deeds, and he thus will naturally follow the same path when he arrives at an age of competence and even before.

855 603 581 If the woman is very young when she is married, as often happens, it is the grandparents who take care of the grandchildren so that the young daughter may have more time to enjoy herself, since in the beginning /222/ marriage is nothing but fun for the young people (1).

855 593 606 1. Young girls help their mothers in the care of their own children and in the preparation of chicha, knowing that the drunken husband will first hit her, or even his parents-in-law if they try to protect her.

The Giving of the Name and Puberty

The giving of the name is done when the boy or little girl begins to understand and articulate words, so that by repetition it may be impressed on their memory and they may know what their name is. Generally, grandmothers in the case of girls and grandfathers in the case of boys have the privilege of giving the name, and they do this by noting some physical peculiarity of the little boys and girls, such as Tesapona, pretty eyes, Saanti, white eyes, Cuñanti, white woman. But sometimes no peculiarity is noted, and they baptize them with the name of parts of the body of animals, such as Yaguacupe, jaguar spine, Tatunai, armadillo tooth, Yaguaracu, jaguar fever. Generally, women's names end in Iru, that is, vessel or receptacle. Thus, for the Chiriguano a woman is something born and destined to serve him as he thinks best (2).

2. Only Catholicism, brought by the Redeemer and preached by the apostles, reinstates woman; where it has not penetrated, she remains a slave, as in Africa and in other places on the globe.

881

For children of both sexes a critical period approaches, the period of puberty, which in many is precocious and which normally occurs at the age of 11 or 12. The life or death of the Chiriguano, his future well-being or misfortunes, depend on this critical period. If all the prescriptions engraved on the minds of the family fathers are observed by those who reach that age, all the rest of their lives will be a delight, and, if not, every kind of calamity will overcome them.

When the maiden shows the first symptoms of puberty, Yimundía, her parents make her rest for a few days until what many out of modesty call sickness, Mbaerasi, goes away. Then she is put in a hammock or something similar, and, lying down on it like a body without a soul, she is

/223/

881 raised to the ceiling. They leave her there for a period of
[785] four days in strict fasting and, of course, without her opening her mouth to speak to anybody, not even to ask for necessary things, because if she should talk or ask for anything, misfortune would appear at once.

At the end of this first test, which the maiden has scarcely felt, they lower her on the fifth day, wash her head with potash of Ñetira, and shave off the adolescent girl's hair. Meanwhile in a corner of the house far from the door, they have prepared a wall like a corner piece, made out of slender sticks a meter and 50 centimeters high more or less.
[785] Wrapped in her tipoi or clean clothing, the unfortunate girl goes there, into her pen, and begins her strict fast, which they call Yicuacu, or hiding (1).

1. This rigorous way of life does not seem at all strange to the maidens, because before it comes their mothers have prepared them for it, and they believe in everything with blind faith.

The girl remains in her enclosure for a week without doing anything, with face to the wall in order not to see or talk to
[262] anybody. Her usual fare is boiled maize, Atiruru. Sometimes she also eats meat if there is any, but in very small quantities. She neither tastes nor desires other foods. Were she to eat parched maize, she would not be good at feeding her children when she has them, because her breasts would be
[271] dry all her life. Her usual beverage should be natural clear
[273] water. Were she to drink chicha, she would be barren, be-
[842] cause it contains alcohol and acridness, which would stop the effects of conception during her marriage.

881 When the week is over, the fasting continues, but less
868 harshly; her parents have obtained cotton or wool, have
867 prepared the spindle and wheel, with the little potsherd in
283 which they put a few ashes or sand so that the spindle will turn more easily. The mother hands over all this to her daughter, who begins to work and learns that she has been born for work.

/223 cont./

881 868 867 283 The young girl receives her mother's injunctions without uttering a word, without making any comment, respects the advice and admonishments in the same silence and more than that of a mute, because she hears and keeps quiet without making any movement at all, without raising her eyes or moving her head. She begins her work as soon as her mother withdraws: she combs the wool or cotton with her fingers, cleans it of /224/ whatever dirt it may contain, and begins to spin, a duty learned from early childhood (1).

[785]

1. The maiden who fasts can only work in the place where she is enclosed; therefore she cannot help her mother even to clean the house.

881 868 867 286 When her mother sees that she has enough to make some small article, she directs the weaving, and the first thing that is made is the Hapicuana for her father and then another for her mother, with which they are very happy, and even their friends congratulate them on the work of the daughter, for whom they, of course, profess sympathy and respect as a sacred person, because she is in the period of fasting or hiding, since both things are done when these maidens reach puberty (2).

2. The same word, Yicuacu, is used for the fasts ordered by the Church for neophytes. There is no other word in the language.

881 885 During the first month or first moon, Yasi, the seclusion or hiding is the most rigorous, because the symptoms of puberty should manifest themselves two times in order that they may be considered true ones, that is to say, the Chiriguano do not believe that a woman is ready for marriage until after it has been ascertained that her menstruation is regular. This, which for women is their relief and their health, is called Hugüi in adults, but for pubescent girls the first as well as the second is called, as I have already said, Yimundía.

/224 cont./

881 885 After this neither the fasting nor the hiding or seclusion are so rigorous, and occasionally the maiden, who is now a woman, comes out of her pen into public life, returns to domestic chores, and begins to attend the drinking sessions in order to be seen and to catch the attention of the young men. An occasional one will do this, but the majority, taking their parents' advice, persist and continue fasting until their hair grows out again, even to the shoulders, and others persist for a year without coming out into the light, with the result that many of them become quite pale like alabaster, and, like people with light blue eyes, when they come out into the light they see very little. But with the whiteness of their skin, their smooth and shiny hair, and their blue eyes, with their ornaments of necklaces and bracelets, and the achiote cosmetics which they charmingly have had put on their cheeks and brows by their older companions, they inspire the admiration of all the people who have congregated (3). /Illustration appears here./

> 3. The reader will easily understand that to come out of seclusion is like a wife who comes out of her house to move into that of her husband; for this reason one comes out highly adorned.

881 867 /225/ During the fasting and seclusion, the maiden does not go out by day; her going out is done at night, not for diversion, but only for what is absolutely necessary, and this is generally done very early, before daybreak, so that she may get used to not being lazy, so that she may know that she ought to be very diligent, to avoid being deceived by sleep, because the one who is to be her companion for life is accustomed to eating early, before going to the field or the forest. For this reason a woman must be an early riser in order to prepare what is necessary for herself, for her husband, and for her children, who also ask for food soon after awakening.

Panorama of the S. Pascual Mission

/225 cont./

881 When she goes out at night, her mother accompanies her,
867 but before this is done she receives a thousand pieces of ad-
593 vice and admonishment to walk slowly and very carefully, not to step on things that might injure her, such as excrement and other things that her enemies or evil spirits have scattered around the house, especially by the door and along the path which she must follow. The maiden listens and keeps quiet, absorbs everything, and does everything as well as or better than a Carthusian novice, because her mother has already filled her head with so many superstitions and has frightened her with too many dangers.

The father rarely concerns himself with his daughter during the fasting period; he only sees to it that she does not lack food and work. He rarely talks to her, but he loves her like
[574] his own eyes and soul. Other persons cannot address her, nor do her parents permit many and prolonged visits during that period; in addition everyone also knows that that house is now sacred and abstains as much as possible from frequenting it (1).

1. When an attempt was made to reorganize the S. Antonio Mission of Parapiti, the daughter of a prestigious Indian was keeping a strict fast. It was said of her that she could die, it was so strict. Hardly anyone could see her, and the poor girl in fact did die a short time later.

885 When the seclusion period decided on by her parents ends,
195 the girl puts away her clothing of what we might call penitence, washes her face, combs her hair, now grown out, adorns her cheeks with the help of her friends, adorns her neck and throat with necklaces of beads, reales, or medios of silver, puts bracelets on her wrists, rings on her fingers, puts on her tipoi of drill or chintz, in various colors, and goes out in public in order that thus decked out she will arouse admiration and some young man may fall in love with her and ask for her to be his wife when it seems appropriate to him, because now she is no longer a child, but a woman who can carry out

/225 cont./

885 195 her duties /226/ serve her companion in whatever he may wish, and henceforth in her answers she ceases to use the ú ú which children use and adopts the é é suitable for women.

885 571 The young woman, in spite of being scarcely 13 years old when she comes out into public life, and despite a slight embarrassment which she feels when first presented to society as a woman ready and suitable for marriage, little by little begins to lose this misgiving, very natural in girls, and acquires frankness in answering quite clearly persons who may question her, whoever it may be, always staying within the limits of morality. What is immoral will cause astonishment in her and perhaps embarrassment at the beginning, but she soon becomes accustomed to it, because she hears it in the house, she hears it at the drinking bouts, during the gatherings and parties. From hearing a lot of this, it begins to cause pleasure in her, which brings on a continual and loud laughter, since day or night the women laugh long and loud. This is usually a sure sign that in a gathering or party there is some gallant present who is giving free rein to his tongue (1).

1. Missionaries who know the language of the Indians and who find themselves at the beginning in a new mission may be astonished by the frankness with which boys and girls of 12 or 13 years answer them.

[827] The men state that their wives are better at enduring hunger and thirst. They attribute this to the strict fasting which they undergo at puberty, but the women say that the neophytes are stronger than they, because they go out sooner after giving birth.

881 178 In none of the missions do the maidens follow the custom of their mothers at the time of puberty. When the first signs appear, the only thing conceded to them is some three days leave for rest, and so that her mother may tell her, as should be done in analogous circumstances, to hide what must be hidden. When this short leave ends, they return to school as before, and continue their work without any inconvenience (2).

2. Many of these maidens, out of modesty,

/226 cont./

881 178 do not advise anyone of their puberty, even their mothers, and the consequences are sad in no few cases. They do not tell anyone because the older girls make fun of them.

163 582 A single thing is noted in the missions, and it is that the neophytes, when they get to the age of about 35, stop having children. Perhaps this is because they marry very young, at about 16 to 20 at the latest. If it is true that the Chiriguano 581 women of old were ready for marriage /227/ as soon as they came out of their hiding or fasting, the union which they contracted was certainly neither continuous nor for life with the same person. One or two months with one, then a rest until giving birth, afterwards again joining the same man, or perhaps she would seek out another if the first had become bored 797 with her or she with him. But this does not happen in the 581 missions; those who contract marriage do it for life, because it is a Catholic union and, as such, indissoluble, just as the natural marriage of the infidels would be, but the Chiriguano does not understand this, since in principle he wishes to be a hummingbird, coming to rest on many flowers and not stopping at any of them until he reaches a certain age.

881 785 184 In the districts where the fasting lasted for a year, such as in Cuevo, before the town of San Juan Bautista and the Santa Rosa Mission were founded, after the first rigorous month the maidens were made to eat meat and beans also, and they were even allowed to drink a little mild chicha, so that they would not become too weak or die. If the chicha had turned sour, it would be prejudicial for later married life, producing the effects of which I have already spoken.

881 178 177 Finally, to conclude such a delicate subject, let it be noted that at the present time the custom of such a rigorous fast for the female sex is observed in very few places; today the region is inhabited by the white race, which is making them understand that all this is superstition, because of the example of their daughters, who, in spite of the fact that they have done nothing of what has been said, live in perfect

/227 cont./
881 health, contract marriage, serve their husbands very efficiently,
178 and educate their children, who are born with all the perfection
177 of nature (1).

1. In the Chiriguano region, even in that part won by the missionaries of Potosí after the year 1870, many maidens of the white race have contracted marriage, having reached a suitable age.

Imposition of the Tembeta

855 The education of the boy, as has already been seen, is the task of both parents. Up to a certain age it is almost exclusively that of the mother, and after the age of six or seven years, exclusively that of the father, who accustoms him to field chores, to hunting, and even to fishing in the areas where
226 there are large rivers. Fishing is done by the women in the
462 little streams, and the men assist them in the diversion of the water and setting up two boundaries in the form of a \/, open to allow the water to pass through, a job they call Parirenta.

881 /228/ The time now comes for the boy to be a man and
[195] not a boy, the time to give up the ú ú of his affirmative answers and to adopt the Ta suitable for the Cuimbae, or man
[304] ready for everything. His father, his grandfather, his mother,
[301] and other relatives make him understand that for this it is necessary that he show his companions the distinctive mark of
[885] the tribe, that is to say, it is necessary to have his lower lip,
[554] Tembe, pierced and to place in the hole the Tembeta, which for the Chiriguano is a sign of his manliness (1).

[192] 1. The tembeta is a word made up of tembe, lower lip, and ta or ita, stone, which literally translated, means stone for the lower lip, where it is put.

/228 cont./

301 [304] The Tembeta usually is a small round piece of tin with two little ears or hooks on the sides which serve to hold it in the pierced lip. The circle of the tembeta is hollow up to near the surface of the hooks; a little wax is put in it, and the ornaments, such as coralline or little light-blue stones of little value, are set in the wax. What is somewhat valuable is the Itogüi, a small green stone in one piece which fills the entire hole of the tembeta. I have one of these, and its stone is fixed in place with a little prong of the same tin. The tembetas are also of hollow cane and of wood, but never of stone, as some writers have stated (2).

2. Though tembeta literally means lip stone, this does not come from its being made of stone; the literal meaning comes from itogüí, which is a stone. The itogüí is also set in those of wood.

178 301 The tembeta, already described, is relatively new. Before Christians and missionaries came into their country the tembetas were of wood, and they were of the same form as the tin ones, with all the ornamentation, but most people used a piece of hollow cane, especially when they were working. [304] This is a little piece of cane cut at a node, which is thinner in the hole in order to be held in the pierced lip. In these there is neither ornament nor wax, because they are for the poor, and for the rich only when they are working.

301 [435] The Itogüi had considerable value among the Indians, being worth a horse, a cow, a burro, etc., but, as I have already said, it was a relative value, since in Tarija, from where they brought them, their value was two bolivianos. From this it can be concluded that the itogüi is not found in [171] Chiriguano country. It owes its origin to the Incas or Quichuas /Quechua/, /229/ but it is the Chiriguano who work the tembetas, in which they set the itogüi, or green stone.

/229 cont./

881 For the piercing of the lip, a full moon is necessary, so
304 that the open wound will not have bad results, will gradually
[821] get larger, and will not form a swelling. The boys who are ready for the tembeta must not be younger than seven years of age or older than 12. In the first case they would not be able to stand the pain, and in the second the piercing would be difficult because the lip would have hardened.

Thus, when the moon is at its maximum and the boy is of the proper age, he little by little becomes prepared for the operation. The mother and father prepare him with loving words, stimulating his vanity so that he may afterward be esteemed and loved by the girls. Then they make him understand the need for piercing his lip, so that everyone will know
[186] that he belongs to the noble Chiriguano race and is worthy of
[885] being a member of it; finally, they make him understand that only when he has the tembeta will the grandees of the nation respect him and treat him kindly (1).

[869] 1. Christian mothers, to encourage their
[171] sons to endure suffering and even martyrdom itself, show them Heaven, an invisible dwelling place. The savage infidels encourage their children with earthly promises, such as the love of women; qui de terra est; de terra loquitur; this is the effect of ignorance.

The boy hears the nice things that his parents say to him as a deaf man hears music. What he considers more and what occupies all his concern is the pain that the opening of his lip is going to cause him. Nevertheless, he cannot hide or run away; he must submit to the operation in spite of his fear
304 of it. In fact, before the full moon the father goes with his
881 son to the house of the surgeon and tells him the reason for his
759 visit, asking him to make his boy into a man. The surgeon-doctor makes an appointment for the next day or another one, and in the meantime he looks for a second boy to undergo the

/229 cont./

304 759 881 same operation, because he never takes one alone. There must always be two, four, six, eight, or ten (2).

[801] 2. In a town of 30 or 40 families there was usually never any lack of boys of the same age. The number of the boys to be pierced should never be an odd number; superstition and nothing else.

304 881 The boys appear for the operation on the designated day, led by their fathers and mothers. Meanwhile, other curious [785] persons gather there, men, women, boys, and girls, to see [114] and /230/ attend this solemn act, which, as I have learned, is not preceded by any day of fasting; thus what certain writers have said in this regard is wrong, as is the rest that refers to the person who does the operation, for whom the qualification of being an Ipaye, sorcerer, is not required for the imposition of the tembeta.

Before beginning the operation the surgeon authoritatively addresses those who are to be men, telling them to be valiant and strong in their pain, without letting their moans be heard or crying, because these are not the signs of a brave man, of a man who wears the tembeta, which is the sign of virility, of a man who must be able to face the dangers of war. Finally, [195] he orders them that it is time to give up the ú, ú in their answers, and in its place he orders them to replace it with Ta.

When this brief and eloquent discourse is over, the first boy stretches out on the ground or on a cot, and in order to give himself courage he says in a vibrant voice, Che rani tayicutuca, may I be the first to be pierced, words which are greeted by the gathering with jubilation and at the same time with wonder, since they already know the pain that he is going to suffer (1).

[195] [193] 1. The Chiriguano Indian also uses the imperative to order himself, that is to say, his verbs still have the first person of the imperative mood, which indicates considerable arrogance.

/230 cont./

304 Then the one doing the operation looks among his imple-
881 ments for the string with which he takes the exact measure-
[804] ments so that the hole will be in the middle and above the
304 chin. Then he prepares the Guasupirasa, which literally means:
413 piercer of the cured skin of pygmy deer. Certain writers have
881 believed that the guasupirasa is a pygmy-deer horn on the
[114] basis of the name guasu, with which the name of the article begins, but it is a mistake. The guasupirasa is a round piece of iron of the size of a costalera needle, which they call Yargüi in Quichua /Quechua/ (2).

> 2. If it were a slender deer-horn, it would be liable to break, and if it were slightly sharpened the hole would be very large and it would be difficult to hold the first tembeta, which should be small. There would be many other problems, which are avoided with the slender and strong iron.

304 As I have said, he takes the appropriate measurements
881 with a string; he puts his hand on his guasupirasa, and upon seeing this the mother is frightened and weeps in silence, and the other people shrink back. Finally, utilizing the services of another practitioner, he has him press very strongly with the index fingers of both hands at the edges of the temples, at the point where the ears are attached, and when he is sure /231/ that the boy keenly feels the pain that the assistant's fingers cause in his ears he quickly and deftly inserts the well-sharpened iron, and the hole is made with considerable skill, the Guasupirasa passing up to the tip of the nose.

He at once puts a hollow little tube of tin on the iron and lowers it little by little in order to pull it out of the pierced lip, where instead there remains in place the little tube, which sticks out a little on both sides of the lip. In
[301] Chiriguano this tube is called Tembetandi, or white tembeta.

/231 cont./

881 304 [828] In general, with the method of pressing strongly on the patient's temples, the one performing the operation manages it so that the patient feels little or nothing of the pain of the piercing, according to what they say, and it is probable, because one sharp pain diminishes or makes another one feel less strong. But it is also certain that the boy, seeing himself before so many spectators and girls, makes every effort not to cry out or weep, because the Indians do not deny that many somewhat cowardly ones do shout and even cry a little (1).

1. Some boys, very fearful, when their fathers begin to talk to them about the tembeta and the need to have the hole made, run off to another tribe in the presence of their relatives, but the latter persuade them, and they return to their town.

I have asked more than one Indian and all agree in asserting that not a drop of blood comes from the hole. The day on which the imposition of the tembeta is done is a day of strict fasting, and they do not even let them drink a little chicha; other foods cannot be chewed by them for several days either. On some, somewhat careless ones, there is a swelling, and on others not. The swelling of the lip is avoided, according to them, by heating the leaves of the bush Urucuna in the flame or embers of the fire and applying them continually around the hole. The cicatrization of the lip may take a month, during which time the little Chiriguano stays at home, letting himself be seen in the streets and in the plaza once in a while (2).

[785] [784] [757] [824] 881

[759] 2. For a Chiriguano it is a great honor to put the tembeta in place on the boys, so that he asks nothing for this honorable operation; but the boy's parents make some small gift, which he receives with satisfaction.

/231 cont./

304 881 [824] Meanwhile the one who performed the operation now gives final admonishments to the boy, and he, following all of these instructions and those of his father, keeps the little tube in continual motion so that it will not stick to the flesh, and on the days that follow he begins to put around it little twigs /232/ from the bush called Yacurimbíu, food of the turkeys. When it has healed, he will cut a larger stick from the same bush and put it in alone, removing the tembetandi, and continue enlarging the hole this way little by little until he can put in a tembeta of hollow cane, which also goes on taking on larger dimensions until it seems big enough. Then he buys a de luxe tembeta and he puts it in, never to remove it again, either day or night, since it would be a great embarrassment for a Chiriguano to appear in public without his tembeta (1).

1. If the Chiriguano were to be without his tembeta while asleep, saliva would run out, because the hole is rather large in most of them.

301 The hollow-cane tembetas are made by every Chiriguano, while those of wood and tin are made by craftsmen. In spite [326] of there not being any blacksmiths or tinsmiths among them [439] and as neither tin or lead nor anything similar is available, [177] the result is that the material for making them is brought from other parts, being bought from the whites, with whom they have maintained relations since the beginning of Tarija, out of which region the Chiriguano were expelled.

The Tembeta in Other Tribes

301 171 The use of the tembeta may be another argument for the unity of the human race; indubitably the Chiriguano use it as a tradition passed on from father to son, and thus successively up to our times. The tembeta is found in use by savage tribes almost throughout the world; in Africa the Noers /Nuer/ and

/232 cont./

301 171 Berry women put pieces of glass and bits of ivory in their lips, respectively; among the Mittoo /Mittu/ and the Lobbatk, men and women wear in the lower lip tembeta that are conical in shape, and in addition the women even wear hoops in the upper lip (2).

2. In many tribes of the world, the tembeta is a mark of modesty, and women who wear it do not show themselves in public without having it in the lip.

In other regions the women are coquettes, only wearing in their upper lip a wood or ivory hoop, which the Sciulus do. Finally, even the Cormá /Korma/, investigated not long ago by the Italian Bottego, wear in their lip wide wooden hoops which increase the wideness of the lip itself.

In North America the tembeta is used by preference by the /233/ women; it serves them as an ornament, and they put around it as many little pieces of wood as they have years of age. The tembetas of the Tapíi of Isoso are small, and those of the Choroti and the Tapiete are of wood or of cane; no doubt up until today it was difficult for them to get the metal to make a de luxe one (1).

101

1. The Tapiete are, or were, Chiriguano Indians. They stayed near the inlets, where there is flat land with hills and streams, in order to be able to do their planting.

301 773 776 According to what is known through faith, clothing was given to humanity as punishment for its disobedience, a punishment which has been converted into the luxury of frequent and extravagant fashions, so also among the Chiriguano does there exist the fabulous belief that the tembeta, which today they consider to be a distinctive mark of the race and a sign of virility, strength, and valor, was nothing other than a bitter and well-deserved punishment which a marvelous and very

/233 cont./

301 powerful being inflicted upon them because of the weakness
773 and laziness that distinguish them, corresponding to the
776 opinion the reader may have formed in the course of these lines. They attribute its origin to the Tunpa, source of all goodness, and to the Aguara-Tunpa, whom they regard as the source of all evil, as has been seen. Under this concept, the one who punished them was not the former but the Aguara-Tunpa. I shall end this ninth chapter by telling a fable in which the belief in the punishments that humanity may deserve from a superior being will be seen.

A Legendary Tale

539 The Indians say that formerly there was no distinction
173 between men; all were of the same color and spoke the same language. It has already been said in previous pages that the Chiriguano of certain regions believe that the original language was Quichua /Quechua/. What caused the diversity
539 of color and the diversity of language? Here is the legend (2).

> 2. If one asks a Chiriguano about the origin of all men, he answers that they are different from us; they have been made ugly, miserable, poor, and ignorant.

Two men of old were short of food and had wretched clothing; they were reduced to extreme suffering and were on the point of dying. The Aguara-Tunpa, in spite of /234/ his evil inclination and his abhorrence of humanity, in spite of his few philanthropic instincts, was moved to compassion for the unfortunate men and went to them and said, "I wish to help you and put an end to your miseries, to your misfortunes and needs, because I can do it; in spite of the fact that you consider my enemy your good friend and me your enemy, I wish to do you a favor so that you may see that when I want to be I am more powerful than your friend, who does not know how to succor you in your present calamities.

/234 cont./

539 "Do you see those weapons in the corner there like useless objects? With them you can put an end to your misadventures if you know how to make use of them, as I shall tell you. Each of you select the ones which seem to be the best." They were arrows, bows, guns, and swords. The cleverer one looked first, and having observed that the guns were of heavy iron, as were the lances and swords, he selected the lighter ones, that is, the arrows and bows.

What was left for his companion to take? They were the only bows and arrows. Perhaps to his own regret and without having much choice, he resigned himself to what remained and took over the guns, lances, and swords. He worked all night to clean them of the rust which had spread over them, but when the sun rose everything was done and he had the satisfaction of seeing his weapons shine like new.

"With these arms," said the Aguara-Tunpa," you will be hunters and must seek your livelihood, and with the same you will defend yourselves from danger, from predatory animals and from your enemies," and, turning to the one with bows and arrows, he added, "You will always be poorer than your companion because you had the indiscretion to decide in favor of the one of little use, because you have chosen the one of little value. The one with the guns will always be superior to you in everything, in intelligence, boldness, fortune, valor, and wealth; his food will always be better than yours, and consequently his clothing, and you will enjoy what is in his house only by serving him and helping him in his labors; from this moment on he will be superior to you, like another marvelous being; you will be taken into his house like a companion in distress and he will sometimes take pity on you because of the blessing which he has received today (1).

[186] 1. They really believe what is told up to this point in the legend, that is, that they are inferior to the whites, but as a punishment, but by destiny; true fatalists.

/234 cont./

539 "I further wish," the Aguara-Tunpa continued, "that you may never /235/ forget the day on which your bad luck made you inferior to your companion; take also this button which will distinguish you from the descendants of the one who is your superior." He made a hole in his lower lip and put the tembeta on him; and that was the beginning of the difference between the white race, or caray, and the Chiriguano, who believe that they owe their misfortune to the Aguara-Tunga (1).

1. Today few Indians believe in such a legend. They consider the fox to be a four-footed animal and the rascal that he is, and the young people listen to storytelling just because they like to hear it.

800 Here we have humanity left to its free will, without being enlightened by the true religion; they believe in a patchwork of lies and superstitions; they respect or are frightened by a wild animal, giving it the name of a marvelous being able to do good or evil to them; tremble in the presence of a dauntless fox, who is a thief without intelligence or speech, and disfigure the faces of their children, making the goodness, strength, prestige, and nobility of the individual consist of a piece of tin, wood, or hollow cane; they subject their tender and delicate damsels to rigorous fasting, to imprisonment for months and even a year, because of a false belief in sorcery, in supposed sicknesses and spells, ruining their health and even risking their lives (2).

799
801
177

2. Almost all the present-day Chiriguano have a slight smattering of the true religion; for this reason they no longer concern themselves with their old customs of fasting, hiding, putting on the tembeta, and long hair.

Chapter Ten

000

Agriculture, Animals, Food

Introduction

The Holy Bible, when it gives us the account or tells us the story of the fall of the first man, makes it clear to us that God, after having made known to him the fault committed, announced to him that he had incurred the punishment of having to seek out and provide himself with food through manual labor and the sweat of his brow.

Actually the land, which up to that time had spontaneously produced in abundance everything that man could have desired, became full of weeds, brambles, and thorns when cursed by God as a consequence of Adam's sin. /The remainder of p. 236 is omitted in the translation. The following illustration appears opposite p. 237./

/237/ Why are there so many weeds and thorns in the forests of America? Because it is little cultivated, uncultivated, because one element is missing, the laborer is missing, and God said that, without labor: Tribulos et spinas germinabit tibi. Let us leave to one side the unexplored territory and confine our consideration to the entire Chiriguano region, which is inhabited today by whites and blacks, or Indians.

The white man wishes to put in practice what, according to the story, was predicted by the Aguara-Tunpa when he made them choose the weapons. The white man wishes to be served and to ride upon his showy and spirited horse, to wear his firearm in his belt or his dagger in his boot and, like a great lord, force the Chiriguano to serve him in exchange for food or money, and thus, for agriculture, the arm of the white is almost a dead one. There are whites who call themselves agriculturalists or farmers because they have many Chiriguano peons whom they order and direct to work in the field for their own interest and profit.

Group of Indian Workers

/237 cont./

648 It can be said with all certainty that the only laborer in
464 the four provinces of Azero, Cordillera, O'Connor, and Gran
466 Chaco is the Chiriguano, who is found even beyond Santa Cruz de la Sierra, where he also works, taken there by the authorities or by the owners of the lands, which they bought in ancient times for a trifle (1).

[425]

1. If one is to credit what the Indians say, in some places land was acquired by barefaced trickery /leva raida/ at the time of Ferdinand VII; in other places, for three or four arrobas of cheese, and in the last ones, for a cow, a poncho, a few varas of cloth, or a few bottles of liquor given to the cacique.

178 Today the Chiriguano, very abject, in many places suffers
[169] in resignation what, according to the story, he did not want yesterday; in other places he is migrating the better part of the time, that is to say, when his presence is necessary for the general planting, to which of necessity the old people must devote themselves if they want to live without dying of hunger and in order to be able to welcome the migrants when they return for a few days to show off their new clothing, their work from other regions, to sell it immediately for very little, to slaughter some cattle of their own or of their elders, and to go back at once without even saying good-by.

Property Rights

648 The object of the present chapter is to describe the
[241] method of cultivating the land when the Indians lived alone in the country, before the whites had moved in among them; now they scarcely give them /238/ room to do their planting
177 as best they can. Nonetheless, since they keep them con-
648 tinually occupied, food and clothing are never lacking to anybody in a Christian's house, where the Indian gets them

/238 cont./

177 648 for himself, for his children, and for his wife (1).

1. Perhaps without intending to do so, the whites have done and are doing a work of charity for the Indian, that of moralizing him somewhat through work, during which he neither gets drunk nor thinks of trifles, etc. Only in some places a little moderation is needed in order not to discourage him.

241 773 776 It was also the Aguara-Tunpa who taught the Chiriguano the cultivation of land, since, seeing that he had not been able to remedy his misery and needs by handing over the bows and arrows, he once again visited his poor hut, and seeing him thin and emaciated, he gave him all kinds of seed so that he might make them bear fruit, teaching him the method of burying them and advising him also of the way and the time for pulling out the weeds with a weeder, because he would have seemed bad before his enemy and before the Indian himself if he had not completed his philanthropical work, after criticizing so much the true friend of Chiriguano humanity (2).

2. The Aguara-Tunpa, Fox God, did not tell him that the seeds could be eaten right away, because in that way they would have been lost immediately. After they had germinated, he advised that when they were ripe, he could have food for himself and for his family.

423 Every Chiriguano has a small plot of cultivated land, sufficient for himself and for his family. Nobody had previously entered the area in which the Indians live, so that nobody disputed their property rights, as they should not be disputed today, because they are the owners ab immemorabili, and no individual could have sold what belonged to the community.

/238 cont./

423 To acquire possession of a small plot of land, the
311 Chiriguano selects beforehand the part that he likes best in the region, which he judges to be wet enough because it is on the slopes of ridges or hills or because water collects there in the rainy season. Naturally, the site which he intends to cultivate must have no signs of previous cultivation, because if there were any the owner or his descendants, even though at some distance, would immediately place a claim before the competent authority, the cacique.

423 If the plot has not been tilled, he can be sure of not being
[241] disturbed, and before the rainy season ends he plants on it anything /239/ which will be visible, such as the Gilindacaguasu, a large gourd which spreads a great deal, invades everything, and is not easily strangled by weeds. Another way to acquire property is to break all the bushes around the site, or, finally, to make cuts with his ax on the largest trees.

No one can lay claim to a place that belongs to the community of the Indians, where anyone has worked, and the one
241 who made the prior signs is regarded as the owner. The rainy season passes, the cold comes and dries up the grass and the leaves of the trees; before August ends, the Indian sets fire to the whole new plot, which consumes the grass and the brambles and makes useless the larger trees. All the ashes
[461] that are left are fertilizer for the land, and the fire has destroyed all the seeds of the weeds and brush, so that the first planting which is done on the new plot is almost free of weeds, which saves labor for the lazy Chiriguano (1).

1. The old Indians still do some work in order not to have many weeds in their fields, but the modern ones are little concerned about it now in many areas. Moreover, the cattle do not leave any time, invading everything and eating up the pasturage in a short time. It is very sensible to prohibit the burning of the fields after the harvest.

/239 cont./

Old Method of Farming

241 In planting the fields which are already old, they use the same method of applying fire to the weeds and stubble that are left after the harvest: this method is even coming to be practiced by the whites and the mestizos. As far as fertilizing the land, the Chiriguano does not worry about it, because the lands are virgin and the Indian hardly plants maize on a large scale, and, if it rains regularly until the grain has become hard, the crop is abundant and the farmer has enough to eat and an abundance of chicha to drink, which is what he wants.

412 Formerly the ava had nothing but a wooden shovel and a stone ax, which is hard to find today. He obtained his livelihood with these insignificant tools: the ax served him for cutting trees and bushes and the spade for pulling up all the grass and brush. The spade was like those used by bakers for putting bread in the oven; it was of soto wood and was attached to a rather long handle with bejuco vines or strips of tobowichi bark: the handle was always long, because the Indian /240/ neither knew nor does he now know how to bend his back at his farm chores: these spades were also made from the shoulder blade of cattle, horses, or asses (1).

[324] [239]

000

1. Baron don Erland Nordenskiold, in addition to the pots from various regions of Bolivia, sent to the Swedish museum pots made by the Chiriguano, wooden spades, and stone axes.

241 Planting was usually done in the month of November, after the ground had received at least two rains. Then the Indian would first destroy with his spade the small amount of grass that had come up, and then he would notify his friends and relatives so that they might help him to plant on the day indicated. The cacique took part in the general planting, ordering that those under him should help one another: thus, early on the said day, at daybreak, they would

[242] [476] [534]

/340 cont./

241 [476] [534] go to the plot, waking each other up with shouts, whistles, and by means of the Huacananti, cow's horn.

The method of planting is very simple. When the land is soft, the planter makes a small hole with his spade, using two or three blows, then pushes the spade forward, throws in two or three grains of seed and covers them. Then, without moving he makes another hole to the right, horizontal to the first, and a third to the left, performing the same operation as in the first, after which he takes a step and continues as before until he finishes. With many working, the planting of a plot is soon finished.

241 361 512 The Indian does not work beyond midday, and he tries to finish the job before leaving it in order not to return: therefore that the work sometimes lasts until two in the afternoon. Then the owner and his companions stop, return to the town, where they are awaited with plenty of food and chicha, which the former has ordered prepared, if the previous harvests were abundant (2).

[293] [262] 2. In any case, if there were a lack of chicha, because of previous scarcity, and mead made from algarrobas, the housewife should still wait for the planters with food mixed with some meat and plenty of chili peppers.

241 476 They formerly continued in this fashion until the planting of a tribe was completed: one day on one's own plot and another on that of a companion, and even the cacique did the same; today this is difficult to manage, because now they are not so close. Nevertheless, in times of scarcity, if someone prepares chicha for those who may wish to help him in planting or weeding, they leave or refuse money for a few matés or /341/ glasses of this much desired liquor. Even the whites get peons more easily this way.

/241 cont./

Modern Farming and Seeds

241 177 [407] Today planting with the spade is disappearing, and if this tool is necessary for weeding, an iron one has been substituted. The plow has become general, as have the yoke and oxen, and in the missions even boys of 12 break in oxen two and a half years old. They first do the planting for the mission, then for themselves and their fathers, and finally they help those who have no sons; the missionary provides them with young oxen, plowshares, and even halters when they are very poor.

The neophytes in most of the Potosí missions have learned to perfection this new method of farming, and they are so advanced that they are competitive with and even superior to [868] many mestizo farmers. The older ones teach the younger [407] ones, fathers teach their sons, and the latter as well as the former manufacture plow and yoke out of selected wood with [231] all the perfection that these implements require. It is satisfying to see upon a farm 40 or 50 yokes of oxen, directed and driven by young men and boys who yesterday were like 46 their grandparents! The whites themselves do their planting on a large scale, aided by these Chiriguano, who receive in exchange double daily wages (1).

> 1. A peon plowman is not obliged to bring oxen; it is the white who waits for him with the yoke hitched. If a peon brings his own, he earns up to triple daily wages, because they are worth exactly three strong peons, the two oxen and the man who drives them. Thus it is not much to pay him triple.

243 262 Today it seems to me that there must not be another country where the different types of maize thrive better. This is the principal element, the daily food, not only of the Chiriguano tribe, but of all those who inhabit most of Bolivia. Here in particular, when there is no harvest, its lack is greatly felt by whites and blacks, that is to say, by mestizos and by Chiriguano.

/241 cont./

There are 11 varieties of maize planted by the Indians and their neighbors of the white race, the mestizos of Tarija and Santa Cruz. The maize used most for Chiriguano food is called Abati hendi vaé, or abati iyu vaé, shining or yellow maize; the kernel of this variety is actually a glowing yellow in color and /242/ from it they make parched meal and meal for the manufacture of chicha. The second variety which is used quite a lot is the Abatindi, or white maize; this is used for parched maize and also for parched meal; likewise used for this is the Abati canana, whose kernels are similar in color and form to the teeth or seeds of the pomegranate. Next the Abati hesanca vaé, or light maize, is quite highly esteemed (1).

1. The Abati hesanca vaé is known by the Tarija farmers under the name of pisangalla maize; others call it pearly or sugar maize, because it is the color of pearls and is sweeter than that of the other types.

[273] The Indians even plant the Abatiúú, or black maize, but it is not greatly esteemed, and when they make chicha from this maize its color is that of chocolate in milk. If the previous harvest was scarce or almost nil, the Indians at the first rains and others in damp places, which through antonommasia they call Mocuinti, plant the Abatinai, small maize. The plant does not rise more than one meter above the ground, its ear is one jeme /measure from thumb tip to forefinger tip when extended more or less, and its fruit ripens very quickly. They plant little of this in order not to lose the seed. Almost the same as this is the one they call Muruchu, shiny small one. It is the same color as the first variety, but it is not abundant; its ear has eight short rows.

/242 cont./

The seventh type has no peculiarity. It is called Cachinchi, which in the language means curly, and it actually is; the kernel is rather small at the end, but not at the beginning, and in the middle it is very soft; it contains considerable saccharine, and they use it for parched maize. They also have the Abati guayeta, then the Abati chore, which they use for parched meal, and finally they have the Saimpini, gray, very good for parched maize because of its softness (2).

[177] 2. It appears that formerly these Indians did not have the Abati guayeta. It is very probable that it was introduced after the Conquest, or as soon as they had any relations with the whites.

262 Maize is a very common food for the Chiriguano Indian, and he eats it in different ways, but in times of plenty one tires of eating the same thing, like the Hebrews, who in the desert had become tired of eating manna. They remedy this difficulty with the Intina, side dishes /companage.

The first, Abati tina, is the Cumanda, French bean /alubia/; there are also 11 types of French beans, or [263] cumanda. All are eaten with salt or without /243/ it, with maize meal, with parched maize, or without them. Here they are; Cumanda háigũe, bean with a yellow kernel; Cumanda sacuayu, which literally means bean with yellow eye; Cumanda úú, black bean; Cumanda gũiraya, which literally means bean owner of the trees, because it is a climber; Cumandandi, white bean; Cumanda pucu, long bean with red kernel; Cumanda mi, small bean. This one is not small because of its grain, but because of the plant, and it is the one that the whites call yellow poroto; Cumandansi, sour bean; Cumanda guasu, large bean, it is because the plant is very thick. There is another called Gũira rupía because it resembles birds' eggs, and, finally, there is Saimpino, which is similar to the gray egg-colored maize (1).

244 1. The Cumanda guasu, or large bean, is the

/243 cont./

244 one preferred by the Chiriguano, and he has good reason, as it is quite edible, the least damaging to health, in addition to being the seed which is most resistant to drought. It is very abundant, and as many as four harvests can be taken from it.

262 The Chiriguano plants whatever type of beans /judías/
252 he has or can obtain from his neighbors or companions when
[244] he runs short, because only in the case of maize, which he prefers to eat parched and not boiled, does he plant several varieties. All beans /alubia/ are good to the Indian because of the use that he makes of them, which is to boil them and eat them, to roast them under hot ashes with their pods, or, by making a hole in the ground, to heat it and burying the pods there so that they will cook.

244 If the Chiriguano frequently lacks beans to mix with the maize, it is unlikely that he will be without gourds, which grow with little cultivation and which are so resistant to drought; it is also extremely easy for him to plant this food, so much so that women and children devote themselves to it, because not many plants are needed in a plot for an abundant harvest.

244 Twelve classes of gourds are known, but only five are
262 edible; the other seven are used for matés. The edible ones
[415] are the following; Andai, Güindaca guasu, Güindaca mi, Güindaca mi guasu, yiquisigua; the latter has an edible interior and the exterior is useful for domestic purposes, to keep
249 any object in its hard shell. The gourds that serve for matés are Iá, true maté; Iá pua, round maté; Iámpe, flattened maté; /244/ Iá guasu, large maté; Iá-rai, small maté, Iá pucú, long maté, and Iá pani, twisted maté (1).

1. The Indian does not include in the number of gourds the one the two children used to free themselves from the deluge of water because it was a miraculous one.

/244 cont./

252 262 Gourds are eaten boiled, roasted, and in broth; the seed is enjoyed when roasted with maize meal, parched maize, or beans. They also eat them as broth, which they call Güindaca mi quira, or grease of the gourd, to which they add chili pepper and salt, just as they do with beans cooked in ollas with the whole pod, which they call Sopirigua.

241 If the Chiriguano manages to plant a little maize beans /poroto/, and gourds, he is content and stops planting other, less important seeds. Few plant Yeti, sweet potato, Mandiporopi, mandioca, Tacuaneé, sugar cane, and Monduvi, peanut. They all plant watermelons and other melons; many plant figs and tunas, or nopal, and few cultivate orange trees, because this Indian has little patience for waiting on the ingratitude of certain plants which require much care and are very slow in yielding fruit (2).

[192] [177] 2. Names for watermelon /sandía/ and melon /melón/ do not exist in the Chiriguano language, which indicates that these fruits were introduced by the whites, from whom the Indians got them.

222 245 262 The nopal is very abundant in this area, rising to some three or four meters; its fruit is very exquisite, as everyone knows. Its cultivation is nil; it is enough to pluck off a branch of the main plant and bury it halfway, and its sweet fruit will ripen from the second year on. It is the plant that the Chiriguano value most.

245 Even the fig tree, which also needs little care, is cultivated. They call it Iva, as well as calling the nopal Saini, and both plants seem to be native, because they grow in hot places, and the name indicates that they have always had them. The fig tree requires more cultivation than the nopal, but this is relatively insignificant; they pull off a branch, plant it during the rainy season, and let it grow fully without pulling off any shoots (3).

439 3. Whites who live among the Indians are

/244 cont./

439 occupied in other, more lucrative trades; they rarely plant fig trees and nopal, and this benefits the Chiriguano, who sells both fruits, receiving money, meat, or charqui from the white man.

241 When any of this planting is done, all the desire of the Chiriguano is that it yield; he fervently beseeches the favor of heaven, /245/ or the sorcerers, masters or the rain, that there may not be a lack of the necessary moisture, and he, with his own hands, sees to it that the planting is quite free of all weeds.

262
252 Use of the Ripe Produce

If the weather is favorable and the Indian has taken care of the planting, the reward of his little bit of sweat will not make him wait long. In exactly three months, or even before, he can already begin to savor Abatíqui, tender maize, which the mestizos call choclo. The first of these ears are eaten roasted and almost never boiled, because they say that prepared in the latter fashion they are tasteless. They go on to say that roasted choclo must be cooked only a little in order not to lose its ability to fatten, and if it is roasted under ashes with the whole husk, it is almost as sweet as sugar. How well, dear reader, do my Indians know what is good for the body, and how they know the way to get fat and what is most pleasing to the palate! They are good gourmets despite their poverty! It seems that they belong to the abdominals described by Father Saj.

When the choclo is somewhat more mature, they eat it with more pleasure, and then they also very nicely prepare Simbícuai, humitas/small cakes made of tender maize and sugar/. The method is very simple: instead of a knife or spoon to pull off the kernels, the young Chiriguano girl or old woman, pretty or ugly, with good teeth or bad ones, uses these instead of a mortar and pestle to grind it; it is done with the teeth very

/245 cont./

252
262

clean, and, of course, in view of the chewing the choclo turns out well seasoned with the clean, white saliva of the old or young women. Then they wrap up the chewed matter in green husks, tie it up, put it under the ashes, and, when it is cooked, they eat it as if it were a very delicate victual, and let it be noted that if the Chiriguano humita were not made thus, it would turn out tasteless for lack of sauce and salt, which things they make up for by means of the abovementioned procedure (1).

1. The whites here and elsewhere make humitas, grinding up choclo in a mortar and mixing in cheese, curds, meat, and other ingredients; but the Indian follows his old way without adding anything other than saliva to it.

The season of fresh maize lasts some three months, because the Chiriguano, accustomed to heavy food, eats it as fresh even when it is very ripe. When the choclo season ends, the woman gathers a few ears of abatindi or /246/ saimpino, husks them, sits down near the fire, where she has put her potsherd or clay vessel, and she tosses the maize there to parch, stirring it with a little stick or with the cob of the maize itself, being careful not to overcook it, so that it may not lose its substance. They eat very little boiled maize, Atiruro, and even the parched corn, Atipíi, must be accompanied by its Intina, side dish, which should be something unusual (1).

1. For their side dishes they make use of beans, gourds, meat, fish, empanizado, large Isaú ants, cicadas, lizards, worms, melted tallow, honey, gourd leaves, wild herbs such as the Mandió, and locusts, whose appearance sometimes makes him happy because now he has it for his roasted maize.

/246 cont./

252
262

It is not likely that in times of abundance the Indian will resign himself to always eating maize in the same fashion, both because he becomes tired of it and because there are also old people who are toothless and cannot eat parched maize very well. To avoid both things, the Chiriguano mind has found various ways to prepare maize dishes, in addition to those already noted. He savors with satisfaction Aticúi, meal; to make it, the Indian woman, after having been huddled for a long time near the fire, takes her pestle, tosses a quantity of parched maize into the mortar and grinds; then she sifts the ground maize in a fine palm sieve and grinds it all up again, so that the aticúi, which the whites call pito, may be palatable enough.

As easily as she prepares aticúi, she also makes Muinti, which is the seventh way of eating maize. For this she puts a small number of kernels in water and lets them soak overnight; in the morning she takes them out and puts them in a sieve so that all the water may run off. She then proceeds to grind them little by little and once finished, sifts it and parches it as she did the meal. From the remains from grinding the muinti, called Abaticure, named arrocillo by the whites, she prepares Achi. To make it, she grinds the arrocillo again, puts salt and chili pepper in the meal, and parches it.

The ninth way of using maize is a little more complicated. It is frequent, but not usual. It is called Muintimimo. To make it, kernels are steeped and ground early in the morning and then sifted in a fine sieve; next one prepares a plate which has small holes for the purpose, and the ground meal, which is covered with bran, is put on it; finally, the plate is put on an olla of boiling water, its edges sealed with /247/ a paste of ashes so that the steam may not escape, and then it is left to cook by steaming (1).

1. To see if it is ready, she taps on the bran with her fingers, and, if it sounds like cooked bread, it is a sign that it is time to remove it from the olla, throw away the bran, eat what is wanted, and save the rest.

/247 cont./

252 Infrequently the Indian drinks a broth of ground maize,
262 Hapi; when he does not have meat, he uses beans and gourds for his broth. If he does not have these either, he prefers Cagüí rai, which he prepares by soaking and grinding the maize, removing the bran, and cooking it. They also chew it sometimes, let it ferment, and eat it when it is ready; anyone who sees this last food could not help but be disgusted, but for them it is a very excellent dish.

The twelfth and last way of eating maize is Muyape,
[263] bread. The preparation is the same as that of the Hebrews when they eat unleavened bread, but the Chiriguano put salt and chili pepper in it; after it is kneaded, they cover it with ashes and fire and let it cook well; when it is done, they take it out, wash it with water until the ashes which have stuck to it are gone, and, well washed, it has the color of bread, which invites both big and small to savor it; it is what the Indian likes best, and the women make it frequently in times of plenty. Its odor and taste are very pleasant, especially when just made.

273

Cangüí — Chicha

All the ability of a wife consists of knowing how to make chicha well, the delicious cangüí of the Chiriguano, who is capable of walking a hundred kilometers or more to drink it, when invited with all the rules of native diplomacy. Cangüí is his coffee, his soup, his wine, his food, his drink, his everything. In a certain way it is his God, and I am sure that many would renounce heaven for chicha, because they know almost nothing of what heaven is, and, on the other hand, they know that chicha is a sweet thing which gladdens the heart and leads to conversation and singing; therefore, every Chiriguano woman must take special care from even before puberty to learn well the method of preparing it. Here it is (2).

[177]

2. The method of making the chicha which the whites call arrope is somewhat different, but the Chiriguano Indians do not use it and learned of it only recently.

/248/

273 She prepares and grinds an amount of maize corresponding to the number of vessels she wishes to fill and then sifts it in a special sieve which has large holes, Unupesa; from this first job there is always left a kind of sifting, or arrocillo, that they call Abaticure, which, after being soaked and sifted, is again ground, after which they roast it a little on potsherds, chew it, and keep it in a vessel for a period of four to six hours. This is called Timisúú, chewed thing.

Meanwhile water has been collected, and the pot has been put on the fire and is near the boiling point; before it boils, the lighted firewood is taken away to stop its action; she throws into the pot the dry meal which she ground first and mixes it with the hot water, keeping it from becoming lumpy. Then she removes a small quantity of this mixture and puts it in a small vessel, into which she puts all the Timisúú, which mixture they call Umopirai. Having done all this, she stirs continually with a maté, bringing the liquid up to a certain height and letting it fall back into the vessel so that it will acquire the necessary sweetness. When the mixture has become quite sweet, she pours it all into the ollas which are on the fire, brings them to a boil, stirring it all continually for a period of 24 hours (1).

1. If the liquid were not made to fall from a certain height into the vessel, it would not be sweet at all. The spatula with which she stirs the liquid day and night is called Mbaepivaraca.

[412]

At the end of 24 hours, it is fully cooked; she removes the fire and takes out the thick liquid, putting it in other pots with a wide mouth. The women, both big and small, then sit down and begin to chew until the end (this operation may last some two hours). Then different ones pour water into it, strain all the ingredient in a very fine sieve, Cangũi mbogua, and, once finished, bottle the clarified liquid in other pots with narrow mouths. The lid for these vessels is a small jar or a gourd, and, to seal it hermetically, they plaster it with a

/248 cont./

273 mortar of clay, and thus the fermentation works without interference and in a few days. When the fermentation is over, they carefully remove the clay and the lid, and the Cangüi appears, covered with a good dose of oil, a sure sign that the chicha has been made perfectly (2).

2. When the weather is hot, the fermentation of the chicha works in three days, but in cold weather six or seven are needed.

Before beginning to drink it, the housewife collects and removes the oil /illustration appears here/ /249/ and fills the cups for the drinkers; she pours a few drops of this oil into each one. If this precaution were not taken, all of the oil would pour into a single cup, and the woman who had made the chicha would be deprived of the praises of all the hangers-on. When the Chiriguano woman wants the chicha to be better, when she wants Copiriru, or or recooked chicha, after she has strained it, as has been said, she brings it to a boil again and, when it is cold, bottles it.

[302] Note that Chiriguano women who are getting ready to prepare chicha first anoint their faces and calves with palma Christi oil and over this put achiote paint and then begin the job. They say that with this cosmetic, they feel the heat of the fire less, but, be that as it may, it is certain that to see those women so painted in a house with a big fire and lots of smoke is the same as seeing the furies of hell; the resemblance is not remote.

In another chapter it will be seen that a lot of chicha is made for the fiestas celebrated after the harvest, but it should be noted here that food is prepared for this general drinking and the grand hotel is open to all in the plaza, where townsmen and outsiders, men and women, gather into separate groups, because the European civilization of the mixed schools, mixed dances, mixed parties, mixed baths, etc., etc., which are true sewers of prostitution, has not arrived here (1).

[527] [576] 1. In fact, at the public gatherings the men drink at a decent distance away from the women; their conversations are crude, but do not exceed the limits, because the woman is in the company of her husband.

Hunters

224 So that there may be plenty of food at the public drinking, the men, as soon as they have finished the job of bringing in firewood, take their bows and arrows, and horses if they have any, and go hunting. The places are suitable for the purpose: some hunt Taitetu, wild boars; others pursue the Yandu, ostrich; many go in search of Picasuguasu, large pigeons, Yeruti, turtledoves, Picúi, little doves. They also hunt: Guasu, /250/ pygmy deer; Sariama, chuñas /cranes/; Ayuru, parrots; and Tatu, quiriquinchos /armadillos/ (1).

[262] 1. The armadillos are of several types; the meat of the Taturapúa, balled armadillo, is not good, because it feeds on carcasses; the meat of the rest is better than that of the pig /chancho/; it is not harmful like that of the latter.

[251] The hunters take some 15 or 20 days to return, but as they take game, they cut it open, clean it, and dry it in the sun, so that it will not spoil, because they do not carry salt, since they do not have it, for making jerky or charqui.

224 231 Almost all the Chiriguano are hunters, and the infinite number of dogs that they keep in their houses have the ability to pursue the wild boar, the quiriquincho /armadillo/, the ostrich, the chuña /crane/, or the pygmy deer. These dogs are almost like Old World wolves, with pointed ears and a curled tail; they are so skinny they look like harps, so bad with mestizos and whites that it seems that they have learned to hate them as their owners do, and they are so attached to the latter that they never leave their side. They go with them everywhere; it is not unusual to see an Indian who is going to the field followed or preceded by eight or ten dogs, who are falling down from being so thin, and yet, should they flush a pygmy deer or a chuña, they will not let it get away. To walk alone at night through a Chiriguano town is to expose oneself to being eaten alive by these hungry tigers who all gather when the first one barks.

/250 cont./

224 184 Although all the Indians are hunters, not all can or go to hunt; some stay in town to help the women put the jars /cántaros/ in the plaza, and others do not go because they have other food [231] available for their friends. Some of them have goats and sheep, [574] others even chickens and cows; these take pride in being able to offer their friends in the public plaza chicken soup, or one of lamb or kid, or a succulent roast of veal, since there is no doubt that anyone would prefer fresh meat to charqui or dried meat of wild animals.

Animals

231 From the little that has been said with reference to animals it can be deduced that the Chiriguano have some, and they are the horse, ass, mule, cow, sheep, goat, chicken, and dog; all of them have Spanish names, /251/ except the chicken, Uru, and the dog, Yáimba. It is possible that these last are native, that is, that the Chiriguano have always had them, since they have their own name in the language; but if one reflects a little some doubt rises in the mind. The chicken, so it seems to me, is called Uru by the Chiriguano because it has some resemblance to the turkey buzzard, which they call Urugũi and which is a species of crow. The dog is called Yáimba in Chiriguano, no doubt because he [177] is very faithful to his master, Ya, which really means owner-master, and Imba, beast, so that the dog turns out to be a special beast which, more than others, loves its owner or master, and I say this because other tribes who are neighbors of the Chiriguano and are in a complete state of savagery do not have the dog, from which it can be deduced that they acquired it when the Spaniards entered their country (1).

1. For my opinion to be complete and closer to the truth, the word Imba should have an h; nevertheless, I do not give this as more than an opinion. The literal meaning of the word Yáimba would be: beast of the owner.

/251 cont./

Other Comestibles

226 184 After this digression I return with an account of comestibles in order to end the chapter now. The Indian finds in everything goodness and sweetness for his molars. He is very eager for fish, [437] but not all the tribes have it nearby; when they learn that there is fish in abundance on the banks of the big rivers, they travel as far as 150 kilometers to barter; they take maize or meal and trade it for fish. Those who live on the river banks are valiant fishermen, with no distinction by sex; they fish with hooks, staying in the water for hours, but they know with great sensitivity when the fish has taken the bait into its stomach; others fish with nets, which they have in every size, as I have seen on the Parapiti River, as well as on the Pilcomayo, near the Pirapo toward the west (2).

[438] [435] [431] 2. The Indians who bring fish back to their tribes do business, selling them at 10 and 20 centavos each; they also eat them and present them to friends and relatives.

226 Others make large baskets of hollow cane, open at a single point, put them in the river, and the fish go in without being able to get out; these baskets are called Pari. Along the rivers I even saw two lines of rocks sticking out of the water and ending /252/ in an angle, where the water forms a small waterfall. There, at the angle, they put a big net or other apparatus and catch many fish. They call this apparatus Itapare; even the carcancho /a bird/ will place itself at the angle and have a breakfast of fresh fish.

Finally, at waterfalls eight or ten meters high, they place close by a big net which gets all the smaller or medium-sized fish, since the big ones go up and down easily, while the former fall into the net; in the places where the fish are small, they divert the course of the stream and thus manage to catch all those which are left without their element.

/252 cont./

262 As very savory food there are also cicadas, ants, lizards, locusts, and some green worms which cause disgust just to name them. If a head of cattle dies and putrefaction has begun, the Chiriguano finds it excellent; give it to him and it is a grand gift, and that day is a carnival for him; he does not try to find out whether the animal died from the poison of a viper or rattlesnake or from rabies (1).

262
252

1. When Indians bring home the meat of dead cattle well into a state of putrefaction, they boil it in ollas and throw away the liquid, and in this way it loses much of its bad smell.

262 I do not know whether it is through superstition or because they
178 are descendants of the Jews that this tribe formerly did not eat the flesh of the pig; although they like and hunt the wild boar or the peccary, they did not touch the domestic pig, but today almost all of them, with the exception of some women, eat it.

261 The Chiriguano suffers in times of hunger or scarcity of food,
262 but he looks for food in the earth; this is very harmful food, which produces various ailments, such as consumption and
[252] dysentery. He looks for the potato of the serpentine arum, ex-
[164] tracts it, and, making a hole, heats it, throws the potatoes there, and covers it with ashes and embers, leaving them overnight; on the following day he and his family eat, but it gives them a bad stomach-ache, which makes them throw themselves down with their bellies to the ground until the pain abates; the same potato, raw, is efficaceous for killing worms in the galls of animals.

[222] Another food in times of scarcity is the Caraguata; this
[252] is a kind of aloe with leaves without the oily liquid; the edible part is the roots, which have a flavor like mandioca; it is considerable work to pull them out of the ground, where they are firmly attached, and the mealy substance is /253/ little enough; to eat it, it is roasted in the coals or under the ashes. When it is the time for fruits and want threatens, the Chiriguano

/253 cont./

261 feed themselves with: algarroba pods, Hibope; chañar /a legume/.
262 Cumbaru; mistol /a fruit/, Yua; tusca, Hibopene; sour algarrobos, Hibope tayi; nopal fruits, Saini; or from the fig, Iva; the higuerilla /little fig/, Caicantina, the thistle /cardo/, Tapiacaru, and the ulala /a kind of cactus/, Ñancagüina (1).

[137]
[132]

1. The fruits mentioned and many others are plentiful in the whole area, but in the Ivu region they are more plentiful; the years have now greatly changed; it does not rain as regularly as in times past and the crops are somewhat certain only at the foot of the mountain ranges.

181 Indubitably the Chiriguano, although superior to other nomadic tribes that surround them or border them, are very unfortunate and poor, but, on the other hand, their life is peaceful, they bother no one, and they do not wish to be bothered. When the Chiriguano Indian has food, he is the happiest being on earth; his savage bliss can today be envied by all the rulers and great of the world who live without knowing whether or not they will wake up on the morrow, in view of being surrounded by so many anarchistic dangers, so many bombs and dynamite that the obscure sects make explode, so many excesses that occur and are reported in the newspapers, and so many deaths that are taking place. Oh, this kind of savagery has not penetrated among these savages! That is why they sleep peacefully without fear, in the town, in the countryside, and in the forest, and they are happier than others; those who seek bliss on this earth may well envy these Indians.

Chapter Eleven

Fiestas: Songs. Carnival

Introduction

300 /The remainder of p. 254 and the first paragraph on p. 255 are omitted in the translation. The following illustration appears opposite p. 255. The remainder of p. 255 follows./

What were the occupations of men in Rome and other cities before embracing Christianity? What are the occupations of peoples in countries where anarchism is reigning as a consequence of the laic school? The history of ancient peoples tells us, and the modern as well. What did the Roman Empire do, when after so hard a struggle to broaden its dominions, it reached its apogee? It spent its time in fiestas which were true orgies, hair-raising days during which human blood ran like water. What is done in the kingdoms of the Old and New Worlds where the Christian is a modernist? They spend their time in theaters, where their souls are prostituted: they drink in inns and winehops until they descend lower than the category of an irrational animal: they spend their time in the bull ring, taking pleasure in the struggle of three ferocious animals (1).

> 1. In modern instruction, they have suppressed the idea of God, which is acquired by means of the catechism or similar work: from this suppression comes anarchism, which does not respect legitimately constituted authority. In certain games three beasts are observed: the bull with his brute strength, the bullfighter with his skill, and the spectator with his bestiality.

If civilization is thus to be understood, it is better that the savages not know it or hear about European or American civilization, with the latter taking the lead: it is better that they have their fiestas according to their customs, for, when all things are considered, it is necessary to choose the lesser of two evils: I maintain that the fiestas of the savages, for example, of the Chiriguano, are less scandalous than those of certain regions.

Facade of a Girls' School

/255 cont./

those of certain peoples who, without going further, are close to those who know nothing about civilization, whose morals, compared with those of these unfortunates, are far lower because of their refinement (2).

2. Some moderns would have civilization consist of purely material education without attending to the yearnings of the heart; for them it is all the same whether man dresses or goes naked.

527 In the course of this chapter my readers will learn that I can be little mistaken in what I stated above, and they will also learn that even the Chiriguano have fiestas, which they call Arete, which /256/ are celebrated neither for saints, emperors, nor kings, nor are they celebrated in a disorderly fashion, nor do they allow themselves to be disemboweled by a bull, as sometimes happens to mestizos or Spaniards; much less are they celebrated for open abandonment to luxury; they are celebrated only in order to drink and stuff oneself, and to enjoy the fruit of the labor involved in the planting of the maize, to have a few days of general rejoicing, to drink, in sum, like good brothers (1).

[526] 1. In the general drinking a certain immorality in their words is to be lamented, and they sometimes test their strength and valor with pugilism.

Before the Fiesta

241 231 177 Before the white race entered the region, cattle were almost unknown and the few that the Indians had were tame, nor had they taken to their hearts the desire for maize as they do now; thus the Chiriguano easily did his planting and weeding in less than a month, leaving the rest to God, but I speak badly, to the good sorcerer, the sun, and the rain. Today if he does not put a fence around his planting, the cattle of the Christians and the Indians very soon reach the crop, and a little carelessness is

/256 cont./

241 enough for this. Although there are good fences, there are better
231 and braver bulls or calves, who with their horns are capable of
177 opening iron gates, opening the way to all their females, whom they then call with much affection with their prolonged bellows (2).

2. The harmful cattle even become ferocious; if a man alone tries to chase them out of the field without the help of good dogs, he will be charged.

241 The harvest marks for the Chiriguano the time of the year
22 that he calls Mbaepiro, which literally means a dry thing or things, and everyone will understand that this corresponds to autumn, in which season the trees and every bush take off their beauty and raiment. Men and women then are busy carrying in
[343] what the land has produced for them; the maize crop is kept in the plot itself, in a kind of house of sticks called Abatío, maize house, and the woman little by little, as needed, brings it to the town for the daily meal and for the preparation of chicha (3).

3. If the harvest of gourds is not abundant, they put them on the maize in the same shed, if they do not build another; the bean crop is brought immediately to the tribe or town.

527 /257/ After this the Chiriguano spends his time in idleness, drinking here today, there tomorrow, visiting with some, playing with others, enjoying, in sum, with almost no work, a better life than the greatest ruler in the world. The harvest is cut be-
[221] tween May and June, and after it the libations in honor of the belly god begin. As the desire to drink is extraordinary, before having the general libation, the families, one by one, begin to make a small quantity of chicha to be drunk among a few friends and relatives.

/257 cont./

527 622 It falls to the cacique to give the order for the general drinking, and this is not long in coming. Twenty or thirty days before it takes place, he puts a large vessel in front of his house; this is the signal. Then in the evening, or when he judges best, he addresses a long discourse to his subjects, exhorting them to prepare what is necessary for the Arete; he stresses in this discourse that maize is a thing for drinking, once it has been obtained through the kindness of the sorcerer, lord of the rains. He adds that it is very proper not to lose the ancient custom of drinking and having a great feast to show friendship and courtesy to neighbors who live in other tribes. He underlines in his discourse the need to prepare good chicha and plenty of it and to prepare much wild game, so that those who are to participate as guests can enjoy these things and other, domestic foods to their full satisfaction, and that this may be a great honor for the townspeople.

I do not believe that anyone doubts the completely satisfactory effect that the cacique's discourse has on the mind of the Chiriguano, who wants nothing more than to drink, sing, and dance; thus, after the said speech, great joy appears on all faces, and all sigh in expectation of the arrival of the happy day when they can gather as good friends (1).

622 461 1. The caciques are very happy in their speeches for fiestas, but when it comes to work, they are not so much so. Humanity is not naturally inclined toward work. When a crop was very abundant, it was unlikely that they would plant the next year, and they would be content with very little.

527 On the next day activity has already begun, and the first thing is to go to the field or plot to provide themselves with sufficient maize so that there may be no lack of chicha. The women then begin to grind night and day, while the men bring in firewood; then, when /258/ there is enough firewood, they go off in considerable numbers to hunt in order to have meat and be able to invite their friends.

/258 cont./

527
574
576

When the cacique sees that all has started well, he prepares to go to the neighboring towns to ask their inhabitants to honor him with their presence on the day set, seeing to it that the first invitation is to the cacique or the sorcerer in honor of whom the feast and drinking are being prepared. The one who does the inviting is called Purumuncau vaé, he who gives to drink, and the one invited is called Ucau vaé, or he who partakes. When the one who is doing the inviting has arrived at the house of the one who is to be invited, he explains to him the object of his visit, begging him at the same time to condescend to accept, he and all his people, an acceptance which he and his will consider a great honor (1).

1. In order to further influence the decision of the one invited, the inviter, on his diplomatic visit, refers to the old custom of general libations, which it is essential to keep alive at any cost.

The one invited does not have to be told twice; he accepts at once, noting that he should have been the first to set this good example, but that circumstances and a great deal of work have not permitted him to do so, but it should not be left undone for this reason, and then he will have the honor of accepting with all his people. After this act of Chiriguano diplomacy and etiquette which they have not yet abandoned, the inviter takes his leave, satisfied with his trip, with the good reception, the acceptance, and, above all, for having gained the lead on his friend, who with his people, once the fiestas are over, will say this publicly with the following words: oremana ma pevi, we have been shamed by you, and enecatu ruyepi ne, but we shall take revenge, meaning: we shall not delay in inviting you to our town so that we may enjoy ourselves there too (2).

[721]

2. If the one invited were not to accept for himself and his people, it would be a very grave affront which undoubtedly would start a war.

/258 cont./

The Fiesta

527 The evening before the arete finds everything cleaned up and ready in the town; they have everything put outside, at a convenient distance from each house, in front of same, the vessels full of chicha already fermented, and another in the house which will be fermented in a little while so that it may not turn sour or run short. I never had the curiosity to count the vessels in these general drinking bouts, which are not very frequent; I only know that each family fills three large pitchers /259/ and from them can be deduced the quantity, or number of cannons ready there for firing and heroic defense in the battle with their owners and other hangers-on. I was at a fiesta in a town of some 350 families, and it lasted for more than a week.

301 527 [302] The people invited also get ready and begin to draw near the place of the arete, but first they have adorned their bodies. The coquettes round off their pompadours, paint their little faces, and wear their best clothing, as all do, adorning their necks with necklaces, their arms with bracelets, their breasts with the Boivera, and their whole persons with the Mandu or the Tiru. There is no lack of women who adorn their heads with the Aguá, a crown that they make of leaves, or of tin cans, adorned with painted wool or cotton with tassels down to the knees; in sum, they dress up in their best (1).

527 574 1. Nobody enters the town where the fiesta is being prepared; on the night before all sleep a short distance away.

The arrival of the outsiders is on the morning of the day itself. Before this takes place, the inhabitants have already arisen in order to hold the reception. Those invited, after getting up, again clean up their persons and their adornments; the chief, ucau vaé, mounts a horse, which is also done by the other riders, and they begin to gallop like a troop of madmen, whistling and shouting as loudly as they can; those who are on foot follow, running in the same way; next come the young women, also

/259 cont./

527 running, and at the end the mature women and the old women
574 more calmly (2).

2. The first men and women enter the town where they have been invited, making an uproar like a thousand demons, in which they are joined by the startled dogs.

527 All the men and women gather in front of the house of the
574 cacique, purumuncau vaé, who bids them all welcome, thanks
273 them for the honor that they are doing him, and there then takes place a quite ridiculous scene, which is greatly celebrated by the Indians. The host cacique has placed in front of his house a large vessel full of chicha, which sticks out of the ground at least a meter high. Well then, before the libation begins, they all jump from one side of the vessel to the other. This jump is called Ucaugüiñampo in some places, and in others, Uyapirae. As I have said, all of them jump, men and women, and especially the unmarried young men and women; some do it without any trouble, and others, particularly some of the girls, stumble because of their laughter and their tight clothing, fall to the ground, and this contretempts/260/ causes much hilarity. While this is going on, the older women and men arrive, and the fiesta begins.

527 There is nothing special in the beginning; it is only note-
273 worthy that as the beverage has been prepared in honor of a particular person, he is served first and continually; he must accept some from all the men and women, for otherwise he would be impolite, and thus in a short time the guest's belly is like a swollen bomb and soon his face begins to look repulsive, just as all those of the retinue are not long in having the same appearance (1).

1. During the extraordinary drinking sessions, rare is the family that prepares Copiruru, or recooked chicha, because it is very intoxicating and disturbs the animation of the guests and townspeople.

/260 cont./

527 273 [554] [562] The drinking continues for several hours, half in silence with a moderate and placid gathering, with the important men seated on benches or seats and some of their inferiors standing and others sitting on the ground, all of them separated from the women, and these latter, as I have already observed elsewhere, look like so many mortars. When the gathering is well attended, the sight is very pleasant, because anyone who has never seen it will be astonished by the variety of costumes and by the ornaments and cosmetics with which they adorn their faces and feet, and I have in fact seen some travelers stay for quite some time to contemplate this simple custom of those who are called the savages of Bolivia (2).

2. What a pity that there is no photograph of such gatherings! The one taken in Santa Rosa is scarcely a simulacre, since at that time there was not even any chicha for those who formed the wheel or gathering for the dance to drink.

The Dance and Songs

527 533 126 By the time they are quite full, they begin the dancing and singing of the Ayarise. I do not give the Spanish words here, for the real meaning is not known; I could explain them with conjectures and by analogy with other, similar ones, as was done by Father Giannecchini, whose words the Italian del Campano transcribes in his book, but they themselves do not know the meaning. The notes of the Ayarise are written and printed here so that any band that so desires may have a pleasant piece for some capital plaza: risum teneatis amici. The band music was set down by a maestro of the Potosí missions in the year 1903 and touched up this year by the missionary Franciscan Father Domingo F. Regini.

/261/

The Music for the Ayarise

527
535 The signal for the dancing and singing is given by the host,
533 who first makes a short speech to the maestro, who is carrying
[293] in his hands a Yandugua, a kind of parasol or umbrella made of ostrich feathers fastened around a long, straight piece of hollow cane. All the feathers have their natural curve outward (1).

[293]
[126] 1. The Yandugua in the Florence museum was purchased in the San Buenaventura de Ivu Mission by the Reverend Father Prefect Friar Romualdo d'Ambrogi, tireless missionary of Potosí.

See the picture on page 77.

527
535 After the speech that the maestro and dancers listen to as if it were a Good Friday sermon in church, the singing and the dance begin. The maestro keeps time with his yandugua, the men dance by moving their feet from the knee, striking the ground without moving from the place they occupy, and the women behind the men with a maté in hand, full of chicha or not. The women take one step backward and another forward, and, not staying in the same place, they walk in time around the men with the formality and exactness of priestesses and hold hands with the other hand, two by two.

527
533 The larger the number of dancers, the more noise they make; there is no staying near them, because the men sing too loud. At a distance, to a person who is used to these songs, they seem relatively pleasant, but at night when one hears them for the first time and does not know what they contain, a thousand things will pass through the mind. Here are the verses of the Ayarise:

[539] Ayarise, rise -- Mborisese, sese -- Rosa yainde -- Imbaragüe -- Yuma chúrere -- Yuma chuépa -- Soro poco -- Eh! Eh! -- Saisá -- saisá -- Cururu hetesimi pinte -- Hevi sunzu -- Iparanta tapiti -- Cha machá imbarayu -- Imbará, boteriyu -- Eh! Eh! (2).

2. It is perhaps appropriate and my readers may like

/261 cont./

527 533 539 to know the approximate meaning of the Ayarise, and so I put it in this note: "Let us sing, companions -- let us keep on singing -- with our women -- and orphans -- we are all here -- singing and dancing -- I know and I like this song -- The toad and the green frog stop -- and the rabbit makes an effort -- I am tired -- I stop and go off. Eh! Eh!

529 535 533 The Chiriguano can sing all day with these few verses, as in fact they do, but with rests. In order to finish the song all together and rest and drink for a long while, the men make a great stamp on the ground with one foot in time /262/ and a shout out of time, and everything stops with a special resounding and prolonged laughter of the women dancers.

Without leaving the circle of the singing and dancing, the lord of the fiesta has the dancers served abundant drink, which they partake of to their satisfaction in order to begin the Ayarise again as they were doing before, always at the command of the Purumuncau vaé and under the direction of the maestro, who does not put down his Yandugua (1).

[293] 1. There is one maestro of the ayarise, and he always has his yandugua, but this does not prohibit others from having one; there may be as many as ten in one dance, and they serve as parasols when the heat is very oppressive. The Indian Guarerai of Ivu had six and he lent them out during the solemn fiestas of the town.

527 The dancing and singing of the ayarise continues in this fashion until nine or ten in the morning; then the banquet is prepared in the public plaza, where they choose the cleanest place. There men and women sit down in separate places, and at once they bring from the houses the food, which has been prepared upon plates, where there is broth mixed with meat well seasoned with salt and chili peppers. Meanwhile two enthusiasts of the town

/262 cont./

527 are gathering together all the people, shouting like madmen and making known their great joy. The lord of the fiesta has arranged beforehand that the morning reception should take place in one location and the afternoon affair in another, and in this way not only is there time to prepare, but there is also food every day for the outsiders and for those who are not outsiders.

In the afternoon, at four o'clock more or less, they eat again with more enthusiasm than before, because their happiness is greater and then, it will be understood, ex abundantia musti os loquitur. But great friendship and harmony prevail; then they sing a little more, one by one, and when the sun sets there is a general rest (2).

2. From the afternoon oration until two in the morning there is complete silence; at that hour the song begins anew, with dancing and drinking. Today, since the voice of the cacique is little heeded, there is no schedule.

[622]
[178]

535
184
173

Mbapa páure

This dance is similar to a quadrille; couples execute it by making turns through the streets of the town, both day and night. According to what the Indians of Ivu say, the Mbapa páure is not general for the Chiriguano race, but peculiar to certain regions, and it is not more than a hundred years old. They even say that it had its origin /263/ at the foot of the Itácua mountain range in Cordillera Province and then spread there up to Menbirái and Choreti Guasu.

When the war of the cacique Yaveáu took place, the Indians of Güiracoti, living on the left bank of the stream of Cuevo, fled to the left bank of the Parapiti River, where they stayed and learned this new dance and song. Thus, when they returned to their lands, when Yaveáu, through having avenged himself excessively, had pardoned and forgotten the affront he had received, they brought back the novelty and began to introduce it into their towns.

/263 cont./

535 Someone went to teach it in the towns located behind the
184 hill of Aguaragüe, and the towns located on the right bank of
173 the Cuevo River intended to introduce it, but, seeing the dismal consequences that resulted from it, they have abstained to this day, so that it is a fact that the Mbapa páure is now limited to the small towns of Caraguatarenta, Ñagua, and Caraguatagüe, and it is certain that it is neither heard nor seen in the large towns of Santa Rosa and Ivu, which are a few kilometers away (1).

[837]

1. In the towns where the Mbapa páure is sung, there are upset marriages, because the dance is between a man and woman holding hands, which does not happen in the Ayarise; therefore, or to avoid said upsets, many caciques do not allow it to be introduced into their area of jurisdiction.

The Music of the Mbapa páure

627
533 This is another piece of music which has been scored for a
535 band by the Reverend Father Domingo F. Regini; it is much
[184] simpler than the ayarise, but the song and dance attract a great deal of attention, because they are not known in all the Chiriguano towns. It is a kind of carnival which lasts for a long time, but when the said time is over, nobody again remembers the Mbapa páure until a year has passed. Here are the words of
[539] the song: Tavia, Tavia -- Erecosiye mbapa páure -- Tirisoti, tirisoti -- Ancua chopi -- Chopi nano saraviyé -- Eh! Eh! Uetepeso, güeremeso -- Yagua tairari, yagua tairari -- Yurumbopi -- Yémanta -- Eh! Eh! (2).

2. Explanation: Let us sing the mbapa paure, like the blackbird sings, let us sing until we are left with our mouths twisted and we are tired, even though it give us a pain in the chest, let us challenge even the jaguar, and let our mouths stretch. Eh! Eh!

/263 cont./

527 273 The fiesta of the Ayarise is an annual one, and it is always understood that the Indians have drink; thus in the general fiestas it does not end in one day; /264/ it lasts a long time until the chicha bottled in the vessels outside comes to an end; when this is finished, they repair to the large pitchers indoors, which are in reserve, like the reserve corps in a war. After eight or ten 527 574 days the fiesta can be considered at an end, and then the ucau vaé with all his soldiers takes leave of the purumuncau vaé with thousands of thanks, congratulating him for the order which has been maintained, the joy which has reigned, and the abundance of food and drink prepared. On finishing the praises, the guest in turn invites his friend and all the people for a similar affair in his tribe, with the month and day immediately being set.

527 273 Thus does the Chiriguano fiesta end, leaving everyone content and satisfied. But it is repugnant to see them drink without resting; the surroundings of these places look as though they were flooded by rain, their bodies give off an unpleasant odor, their faces seem swollen, their eyes out of their sockets, their lips with the tembeta sag like a baby lamb's, and just to approach one of them or the place where they are drinking is the same as approaching a sewer, such is the fetidness! But the Chiriguano is very content and glories in the piglike state in which he finds himself, saying, Asagũipo, I am drunk, and when he is getting over his drunkenness, he confirms what a good state he was in. Poor beast! (1)

[178] 1. Formerly, the intoxication of the Chiriguano was almost never complete; today, with the use of liquor, he frequently loses consciousness. Would that this harmful drink could be eliminated! The mission Indians no longer glory in their drunkenness; they say that they have been drunk, but not as an honorable act.

[797] [177]

/264 cont./

But unfortunately worse beasts than the Chiriguano are found, and some are the civilized persons who profess the doctrine of Epicurus; these, not content with getting drunk and eating more than a beast, throw up in order to stuff themselves again, and furthermore, in their dances and parties, they make a diabolical mixture of both sexes. Indeed, it seems that civilization walks on all fours and is giving way to savagery, and it is to be preferred that there should not penetrate among the savages a certain modern civilization which perverts these simple ones, whose customs are natural and they do not perform their acts with the refinement of the civilized.

Without going very far, let us enter a large aldea, which I do not wish to name; let us look for a barrio that has a name; let us enter one of the many chicha places there; what a spectacle! Chairs overturned, women stretched out full length, without even knowing the state they are in; /265/ men in frock coats lie on benches, if not on the ground, with their clothing unbuttoned, choco /crowned/ hat under the tables, frock coats tossed down like rags, handled canes thrown in a corner pellmell, kerchiefs here, mantas there, boots on the floor, wine containers mixed with glasses; in sum, complete disorder, the effects of drunkenness from drinking, the product of material civilization, of lay teaching, schooling without God.

One does not see in the Arete of the Chiriguano as much filthiness and scandal, as much disorder and abjection, as are seen in the taverns of certain countries, where one does not drink under the pretext of a fiesta; one drinks for the sake of drinking, as one kills for the sake of killing; no, the Chiriguano is very far from doing this. If it is being introduced to a degree, it is the effect of the contact which the barbarian has begun to have with civilized man.

Profound modern thinkers have recognized this truth, despite their having remained for a short time among these and other Indians in a completely savage state; however, let us set aside this account which is painful to the spirit and once more take up our story.

/265 cont./

52
517 They spend the rest of the year in diversions, playing cards and shooting dice, hunting doves and wild animals, going fishing, or fishing where the large rivers are, organizing private drinking parties, today in one barrio, tomorrow in another, today in Mengano's house, tomorrow in Fulano's, the day after tomorrow in Sempronio's, until planting time returns once more.

The Indian concerns himself very little about his house, which sometimes is at the point of falling in on him; his house is better ventilated than a sieve, it rains more inside than out, he sleeps there almost like a toad, he sleeps on the damp ground or above it on a miserable cot, placed over the mud or the water, and his sleep is like that of the dormouse (1).

[164]

1. This way of life in the dampness in their houses or outside of them is the cause of many skin diseases, fevers, and tumors.

Hospitality

574
576 The Chiriguano is very hospitable and it would be hard to find any other race which is his equal in this; he receives and serves everyone in his house, both whites and those of familiar condition, for example, the Toba, and, with greater reason, those of his own race. They visit from one town to another, and at the first meeting or at first sight they say immediately, /266/ depending upon the age of the person seen: Ndempuama pa tuti? good day, uncle, if it is in the morning; Ndecaaruma pa? good afternoon; or Ndepintuma pa? good evening. Literally, these three salutations have another meaning. The first means "Have you reached this day, have you arisen healthy and vigorous?" The second, "Have you reached the afternoon?" And the third, "Have you reached the evening?" He who receives the greeting answers, Ampuama, checaaruma, or chepintuma, respectively.

/266 cont./

574 576 [194] The second t of the word tuti is pronounced double (1).

1. In other places the salutation is different. They say Catapiri or Aguyeti, good things, prosperity. But the other seems to me to be more in conformity with the universal salutation, as is done everywhere.

If the visitor is a person he knows, the host then says, Nde pa co? Is it thee? And the other answers, Checo, it is I, and then goes on to say Imeño pa nei? Are you living? Imeño aí, I am living. And he enters the house of his uncle, grandfather, brother-in-law, or whoever it may be, since it seems that the Chiriguano has relatives everywhere, and he would have them all over the world, if there were Chiriguano all over the world.

574 576 622 Often it is the cacique who receives strangers, if these come looking for him, as naturally happens, but any Indian at whose house he may come will at once say to him with all courtesy, Eyú, come in, if he is on foot, and Egüeyi, come down, if he is mounted. At once he presents him with the best seat that he has and begins the conversation; meanwhile the lady of the house puts at his disposal a large jar of chicha with the respective maté or tumbler, and, aided by her daughters, she prepares the best meal. The captain, or cacique, of Tiasía prepared for me a 123 [622] maté of boiled corn with salt, arivivi, or very hot chili peppers, and hard-boiled eggs chopped into small pieces.

I noted the great cleanness of the food and the utensils, and then, as I have already said elsewhere, I had a long talk with the Indian, who was quite loquacious and frank, about various religious matters, and in conclusion he made me understand that he would not go to the Boicovo Mission or to the others, because prayer and baptism cause death; that my companions and I had made it not rain that night in order that we might not get wet, and that it is not God who created man, and, when asked who it was, he answered naturally and with astonishment, Ndicuaá á pa? Don't you know? (2) /Illustration appears here./

797 771

2. In the other place I did not set down everything

Chiriguano carnival, "The Fight of the Bull with the Jaguar."

/266 cont./

797
771

that the cacique had said with reference to their idea of the missionary, whom they consider to be very powerful with regard to the elements of nature; this Indian's ideas concerning the creation of man are very base and immoral; other, more enlightened ones do not tell it this way.

574
576

/267/ Whether the visit is long or short, at the time of leaving the guest thanks the master of the house, saying, Ayirobia catu ndereé, I thank you very much, and goes off, saying, Aha ye ma, I am going, and the master of the house answers, Tunpa reño eguata, travel or go with God, but first he makes him promise to come back to visit him whenever it is convenient.

Carnival

541
177

If I ask the Indians of Ivu who introduced the carnival among them, some answer that it was the subprefect of Lagunillas who came and built a small fort here and another in Cuevo; others say that it was a white man whom I know and shall not name, and I conclude that it was both of them. The former told them that the carnival was a fiesta of merrymaking, and the latter taught them to do it the way they do it today, as I shall go on to describe. If I ask other Indians, they answer that they learned it from the whites, from which it can be deduced that this general madness is not their own; they do it because they like everything which smacks of killing time, drinking, and dancing. The very word "carnival" indicates that it is not a Chiriguano [184] fiesta; therefore it should not be confused with the Mbapa páure, which is somewhat similar because of its immorality; this latter is older and is not found in every tribe, in addition to having a set time, after the first cold until about the middle of July (1).

[648]

1. The whites of Cordillera, with their chief, set up the said fortifications after the rebels who had attacked Igllembe had been defeated; they had not come to help the subprefect of Azero.

/367 cont./

[54] [177] [648] Don Antonio Menduiña, who had requested aid: he fought on bravely alone, helped by his soldiers from Azero.

Thus, even though it is not of Chiriguano origin, the carnival is greatly celebrated here, so much so that it bears the name of [178] Arete, fiesta, through antonomasia, and all the old fiestas are [461] gradually disappearing, yielding to this one. For the days that [292] this residue of paganism lasts, the Chiriguano works almost all year in spite of the laziness that accompanies him: for it is he gladly helps the whites, receiving in exchange money to buy clothing for himself and his wife and children: and on these days all are on great parade, showing off luxurious garments of every form and color, garments which, to be sure, they do not dare put on /368/ during the other days of the year, neither for the Ayarise nor for the Mbaya peure.

In such circumstances there is hardly any difference between [532] blacks and whites: the men well dressed, and even the infidel women with garb adorned with gauze, fancy hats, and multicolored ribbon: the children cover their faces with masks which they have made beforehand by carving tobocochi wood: young men prefer to show off on horseback, riding at a gallop, and others, such as the old people, amuse themselves by looking at the dancers and Agiteros /maskers/, for whom everything is allowed because it is carnival.

[54] [535] [529] By way of preparation for the big fiesta, or because one drinks and has fun, they make merry on the compadre and comadre days, and on Quinquagesima Saturday, all day, the maskers and dancers practice the dances that they call Atico. [532] On the next day from eight to nine they begin the carnival, dancing to the music of drums and flutes of hollow cane, and the one who is called lord of the fiesta is someone in disguise with a mask that depicts an old man with a white beard, usually mounted on a burro: the one who is thus disguised directs the fiesta, makes his speeches in each corner of the plaza, recommending harmony and happiness (1).

1. The principal man so disguised has subalterns.

/368 cont./

541
586

who also give their long or short speeches. If asked, the masked men say that their town or region is Matamoroche.

If there is no partner, the women dance among themselves, but as soon as a man appears, she dances with him, holding hands, and many couples dance quite close together; their style of dancing is to raise first one foot and then the other to the rhythm of the music. The zapateo /tapping with the foot/, as they call this dance, lasts until the Sunday or Saturday of Temptation without rest, and on the next day, which is the last, the game begins. At ten o'clock several young men in masks and/or, leaving covered what is purely masculine, robed themselves completely with mud, furtively approach the group of dancers, and then charge in every direction, squeezing among the better dressed and thus creating confusion among all. This game is called the game of the pigs, and they imitate them very well (2).

541

2. Before, this game the disguised men pour over the dancers bean pods and maize siftings left from the preparation of the chicha; this is in order that there may be plenty in the following year.

/369/ The games in the afternoon are quite varied; once the game of the pigs is finished, or even before, two little blacks come out with maize-husk cigars in the mouth and a rope in the hand, leading a person in the disguise of a bull, who is defended and protected by a furiously dressed woman, who holds up a flag hanging from a hollow-cane pole; the little blacks are the bull's masters and they even lead dogs, and when the bull is under the flag, he is not bothered much.

At the same time, as though he had come out of the forest, another person appears disguised as a jaguar, and he begins to fight with the bulls; if the bull begins to get the worst of it, the masked men who play the role of dogs rush to his defense and hound the jaguar, as three on horseback also do. Once

/269 cont./

541 in a while the jaguar catches some little dog and makes it cry out, and sometimes it unseats some rider. After a longer or shorter time, the bull or jaguar dies in the battle; generally the former survives, because they kill the latter among them all, between the dogs and cowboys. Then people in disguise who are playing the role of butchers appear, buy the bull from the little blacks with stone or bone money, and butcher it.

535 541 Immediately the dancers form a large circle, holding on to each other with both hands, and they dance this way three times; a number of women huddle over and three others pass under the extended arms of one couple of the circle itself, and a number of others join together, forming a big mass with faces outward, with hands linked together and crossed, remaining this way until another couple dances around them without holding hands, but rather with the man trying not to be caught by the woman, and, if this happens, he then hides amidst the others until his companion has gone by, coming out again to dance until he has gone three times around, taking the same precautions each time as on the first (1).

> 1. The circle is made up of all the couples who have come to participate in the fiesta; it is made up of a man and a woman with both arms extended and with the hands held; the circle takes up a lot of space, according to the number of couples.

Finally, with the whole circle dancing, they make three circuits in the town, dancing, hands joined, at the corners of the plaza and in front of the houses where they had danced on the previous days. /270/ All of the masked persons join in the first circuit; they form their circle and the head man makes his speech, then the older ones form a seat with their canes crossed, make a little boy sit there, raise him up some two meters, form with crossed canes a shield around his head, and all the rest pour on him a prolonged shower of blows with the hollow cane, without hurting him, and then they let him down. They do this three

/270 cont./

535
541
times in different locations (1).

[292]
[562]
[177]

1. At the carnival, during the three days, there are women who dress like men and men who dress like women, but both cover their faces well so as not to be recognized; this was also taught them by the white man.

[152] On the second circuit all the Agüeros, the masked ones, a mestizo term, ask from house to house for provisions, and they accept everything, even bean pods and watermelon rinds, and on the third circuit, which is the farewell, there begins the wailing of big and small masked persons, laden with provisions and scraps; these weepers really make the old people and others cry, because some of them are thinking of their departed ones who are not present at this festivity which is ending, and others perhaps because they think they will not get to see another carnival. I questioned an old man who was really crying, and he gave me the preceding answer. When the last circuit ends with the drums muffled as a sign of sorrow, all of them, riders, dancers, and agüeros, go out of the town and go to a place where they throw away the masks and immediately go to the river, or a spring, to wash their hands and faces a little (2).

535
541
177

2. All of the foregoing games in Ivu were taught them by the same white man whom I have mentioned, and in the beginning he taught them by demonstration, causing astonishment, particularly in the women and the old persons; many of the said games are immoral, especially the circles and the massed group.

796
177

Easter

Forty days later the Chiriguano has another fiesta, that of the Pascua de Resurrección /Easter/, which was introduced by the whites; the old Indians call it nice because it is quiet, as they call the carnival very noisy.

/270 cont./

796 call the carnival very noisy. There is nothing special about it and it lasts three days; /271/ some play the violin, and men and women sing the Alleluja. Couples hold hands as they walk through the streets. If both are women, they walk with their [533] arms about each other's neck. They sing through the streets [554] and in the houses and in front of them; in this latter case it is [539] a sign of esteem for a family. The words are few: Osi ma Pascua, alleluja, Easter has come, alleluia, Ucuera yema Yandeya, alleluja, Our Master came back to life, alleluia (1).

1. The song of Alleluia begins as follows: Santísima Trinidad /Most Holy Trinity/, osi ma pascua Aleluya; aleluya, aleluya, aleluya, aleluya, aleluya, aleluya, etc. Ucuera yema—Yandeya, Jesucristo; aleluya, aleluya, aleluya, aleluya, aleluya, aleluya, [194] etc. The s of Osi is pronounced as though it were double.

Chapter Twelve

Offensive and Defensive War

Introduction

There is no people or nation in the world which has not experienced the horrors of a war more or less bloody, more or less prolonged, and more or less disastrous. Troy burns, and Aeneas, the founder of the Roman Empire, takes advantage of the confusion, avails himself of the very darkness as his shield, and saves himself. /The remainder of p. 272 and the first paragraph on p. 273 are omitted in the translation. The following illustration appears opposite p. 273. The remainder of p. 273 follows./

Bows, arrows, etc. /see p.382 for additional explanation/.

/273 cont./

175 History tells us that the Chiriguano were not the first in-
727 habitants of the region that they now occupy. Other savages
728 had lived here, who handed over the territory by reason or right of the stronger. Subjugated by the number and valor of the invaders, some of them emigrated to perish, and others remained as vassals in their own land and little by little came to an end, leaving the Chiriguano masters of their land.

175 In time the Incas tried to conquer this extensive territory,
648 leaving behind innumerable marks of their tenacity, but they
[101] had to abandon this noble thought, contenting themselves with calling them with great contempt: Chiriguanos or Chirihuanos,
175 cold excrement. But however warlike or invincible a people
648 or nation shows itself to be or is, its hour to succumb arrives.
797 What was not achieved by the Incas or by the arms of the Spaniard here has been brought about by the patience of the missionary and the tenacity of the whites of Santa Cruz and
648 Tarija. Today the dread Chiriguano is subdued and bows his
797 haughty head. He has been reduced to nothing, and one who does not live in the missions is the vassal of the white man, who has dominated him completely. It is the disposition of Providence, which subdues the proud and decrees that they experience, although much more gently, what they made the
[181] invaded ones experience. It seems that in the last war of Curuyuqui, the Chiriguano learned his inferiority, but it cannot be denied that this race has been one of the most warlike that has existed here (2).

175
648
727
266

2. The Incas tried to conquer the Chiriguano in order to moderate their customs. The Chiriguano treated the Tapíi with great cruelty; according to what has been told by the natives of Parapiti, they fattened them in order to eat them later.

/273 cont./

721 I am not going to consider the Chiriguano at war with the Incas or with the Spaniards or with the whites who occupy the region. I am going to consider him at war with his own kind, or with the inhabitants of /274/ other towns which border his. Sensitive to the extreme, the Indian will fight on any pretext, however minor it may be considered, such as the abduction of a woman, her attempted violation, cattle stealing, or any other offense; they are enough to make the pride of the native scheme for vengeance and carry it out without any loss of time.

721 173 643 [727] Among the Indians of Ivu there is still kept alive the memory of the four or five wars which the regional cacique Yaveáu of Cuevo and its vicinity waged against Yuti, where among the women killed was the wife of the Indian Cairama, who still lives in the Santa Rosa Mission; against Choreti, where, while retreating, he killed several whites; against Itau and Carapari, from where he brought a small cannon as booty; and against Parapiti, where he was defeated, leaving some 200 victims on the battlefield on the left bank of the river. It has already been seen in the preceding pages that the cause which brought about this prolonged and bloody war was the attempt of the cacique Gíiracoti with regard to Yaveáu's wife, which he avenged to excess (1).

1. The cacique Yaveáu waged a war of extermination against all the towns noted, because they all fought on Gíiracoti's side, but he could do nothing against Chituri, the cacique of Parapiti.

721 411 My readers, having thus understood that the Chiriguano is very warlike, must be convinced of another truth, that is, that they are prepared to take up arms on any occasion, from which it can be deduced also that it is a fact that in every house they had available as many bows as there were persons fit for war, in addition to having ready as many dozens of arrows, because it was a law that in war each warrior had to carry at least a dozen.

/274 cont./

Offensive War and Weapons

643 When a tribe was preparing to attack another, if it foresaw
701 that it would last longer than usual, and the cacique judged that
705 more preparations were required, in his position as supreme chief or captain general he would commission subalterns called Queremba, experts, to inspect all the armament available, and if the report of these chiefs was not satisfactory, a general order was given to make up and repair all the deficiencies as quickly as possible.

411 The bows and arrows were made in the public plaza or out-
824 side each house; the wood which was to serve for bows was different from that for arrows. War bows measured /275/ a meter
[283] and a half more or less, and to shoot one they used a twisted cord made of pygmy-deer hide, which was both light and strong. The wood that they use even today for hunting bows is called Igũirapitiragua.

The arrows are made of different kinds of wood, but the most common are Ovei, guayancansillo /a kind of guaicum/, Yaguasíi, tola, and Igũirane, smelly wood. This last is very poisonous, and the tribe that uses it must be a very bad enemy of his opponent, because whoever is wounded with these arrows will recover only with difficulty, and the wound is a continual suppuration of illness, which slowly consumes him, almost without any hope of his being able to be helped and to enjoy life once more with his companions.

Every arrow ends in a point, and on both sides it has its edges the opposite way so that when it enters the flesh it is difficult to remove, and one who does not know how to remove it can produce a greater wound than the one the arrow made when it entered.
[233] The arrow is inserted into a little piece of hollow cane, one
[239] meter long, where it is securely attached with string made of toborochi bark, and the string is covered with a little bit of wax (1).

1. At the end of the cane, with the same string and wax, many attach a feather of a falcon or of a carcancho, not for decoration, but so that the shot may be more accurate. The feathers of these birds are more resistant than others.

/275 cont./

411 [492] Warriors on horseback, in addition to having bows and arrows, use the lance; it is a piece of a knife or of iron tied to the tip of a stick; note that each warrior, according to what they say, cannot carry more than a dozen arrows, because they are heavy. 534 726 In order to inspire terror and fright in the attack they make on the enemy town, they use the Igüiramimbi, a wooden musical instrument, the Senene, and the Huacananti, or cow's horn (2).

> 2. The first is round, and it is very hard to pierce it, and the second is long. Both are of good wood, and they engrave figures and signs on them. They hang them from the neck by means of a cord. The wood is like ebony.

722 While some of them are preparing the bows and arrows, the braver men do not remain idle, nor do the women; the latter prepare the necessary provisions and even the chicha to celebrate the triumph, if they win it, and the former encourage the more cowardly ones, showing their ability as queremba in the streets and the plaza, animating them all, making them understand that triumph depends on them and that it is necessary to triumph at all costs if they do not wish to be subjected to the harsh condition of the conquered, thus losing everything, wife, children, home, and property.

726 704 /276/ When all the weapons are ready, those of the cavalry saddle their horses, putting the arrows on the right side, so that they can easily get them in case of urgency, because it is characteristic of the cavalry to yell insults at the enemy and to sow confusion on the battlefield with shouts and the noise of the igüiramimbi, huacananti, and porongos. Then, all of them, [292] foot soldiers, horsemen, and queremba, don their garb, some the [714] jacket /coleto/, others armor of garabatá, and they put on the [411] back of the left hand a strap of pygmy-deer hide, so that they [302] will not hurt themselves when they shoot the bow, and, finally, they all color their faces and arms with ground charcoal dampened in water. Let the reader consider if this army of demons would not frighten even the dead!

/276 cont./

March and Inspection

726 Finally they take leave of their families, telling them to be very careful not to go far from the town. The cacique gives his [727] instructions to the men who stay behind on guard; the women once more tell their husbands to fight like brave men and to bring back the heads of their enemies in order to drink chicha from their skulls, and then, in perfect order, the march of the army toward 701 the place of combat begins. They say that the cacique does not 643 carry arms and that his presence only serves for giving orders that they promptly execute without losing any time (1).

1. If the cacique were seen to be attacked or surrounded by the enemy, his soldiers, especially the cavalry, would come quickly and boldly to his defense.

726 The combat is never begun by day or late at night, but in the early morning. For this reason, before the soldiers depart, they calculate the distance and the time that it may take to cover it. In order not to be seen or heard, they go through the woods, if there are any, and try to arrive at night at a certain distance from the enemy town. They make their camp at a distance of four or five cuadras and wait for the dawn, in order to be able to enjoy their triumph, the pillaging and other ensuing things, by the light of day, or to be able to beat an orderly retreat in case of defeat (2).

2. Nobody in the town discovers the proximity of the enemy, because the Indians do not go out of their town after midnight, and the invading horsemen with their horses stay at a suitable distance so that the horses will not give them away with their neighing.

/277/

726 But before the combat begins one or two of the bravest men go out of the camp at the cacique's order to reconnoiter the field [825] or enemy town. The scouts enter the enemy town with every precaution, imitating, on the one hand, the noise of the fox, on the other the call of the Yancuruntu, owl, and, finally, that of the Surumucucu. If no one discovers the presence of these scouts, the combat when it comes is terrible, but, if they are discovered, the alarm signal is given, and the fight begins at once, into which the ones invaded throw themselves with their naked bodies, and they may easily come out victorious, throwing back the enemy in their formidable charge (1).

1. From this the whites deduce and believe that the Indians are preparing for war against them when they hear the Yancuruntu, owl, in their houses in the country.

The scouts, if they are not discovered, leave the town with much caution, return without delay to the camp, and report to the cacique the state of the enemy, and all listen with great interest to this account. The cacique thanks the scouts for their valor, intrepidity, and daring and once more charges all to be careful and brave in the coming attack. Then he orders silence, and they all rest without sleeping, each group talking in very low voices so that nobody will sense their presence.

726 714 292 Before the hour of combat comes, the cacique and the queremba order the preparations; the riders saddle their horses and come up to the infantry soldiers, who tighten their bows and put on their wrist the deerhide guard, fasten their aprons or girdles at the waist to cover the most delicate part of the body, some of them put on the armor, Ayo, made of tree bark, others the Tim, lifted to the waist, and all of them put on ostrich feathers, chicken feathers, or maize husks around their faces so that they can recognize one another in the heat of battle, not wound one another, and assist one another in case one or more of them is surrounded by the enemy.

/277 cont./

Combat and Pillaging

726 Finally, the infantrymen get in the center, the horsemen on both sides, and the queremba in front, because they must always be the first to be wounded. Matters thus arranged, facing /278/
[704] the enemy, still in bed, the invading army moves forward at a trot, and when it has come as far as some 100 meters from the town, the infantrymen and horsemen set out at full speed, they pound the horns, porongos, senene, and igũiramimbi, all the soldiers raise an infernal shout and sow confusion in the little town. The inhabitants, losing no time, take up arms and come out to fight with courage. The women, children, and dogs add to the confusion and run in terror to hide if they can. Mean-
726 while the combat is terrible and bloody on every side, the in-
727 vaders fight with tenacity for victory, and those invaded, for their own defense, for that of their wives, children, and property. They fall, some run through by an arrow, others opened by a lance, those seriously wounded and dragged by their long hair, these trampled by the horses of the cavalrymen, who charge the unfortunate ones without pity or mercy (1).

[621] 1. Chiriguano towns were formerly made up of 40 or 50 families, and therefore the combat could not last for many hours, since those invaded were in addition taken by surprise.

In a few minutes the little plaza and the streets are full of dead and wounded. Some of the cavalrymen detain the fleeing children and women and prevent the flight of the defenders, who--a few of them--have been trying to give up the unequal fight. The fight is over before the sun appears. If the number of defenders is quite low, the invading cacique stops the battle and orders the killing of the few survivors, without concerning himself with those who have already fled.

/278 cont./

726 727 Then they enter the houses, pillage anything of value they find, break al the clay vessels, pour out all the chicha, without taking any forfear that it may be poisoned, and, finally, before the eyes of th women and children prisoners, set fire to the town, which burns until it is reduced to ashes.

[203] As soonas victory has been declared by the invaders, the cacique order that one of the horsemen take the happy news to their town, sothat the women can rejoice and finish the fermentation of the chcha. Meanwhile, when the pillaging is over and the houses reduce to ashes, they divide among all of them the women, girls, and chidren, and take them triumphantly back to the town. Some lancers opped from their victims some heads of the men - killed in the ombat, which will serve as trophies of war.

/279/ After the Victory

727 524 857 The victors are received with extraordinary joy, and then all glances are firs fixed on the heads that are on the tips of their lances; they isult them and jeer them with much cruelty, hang them from some tree in the town or in the plaza, and there they stay as toys for the ittle boys, who set up games using them as targets to learn the use of the arrow and be good shots, and when they have become tred of seeing them there, they take them down, tie them to strings, and drag them through the streets, attracting everybody's attntion with their shouting and games. They are thus very inhumane, and their parents watch with pleasure what their children ae doing (1).

1. Ater or during the war of Curuyuqui, they brought to the town the head of the Indian Chahico, and they did more or less what I have said, with slight differences.

/279 cont./

727 Those who are older, men and women, surround the poor prisoners and insult them until they are tired, recriminate against them for the war, to which their husbands may have given rise, mock once more the memory of the dead men who did not know how to defend their town, calling them men of no courage, good only for women's work, good only for making chicha, and when they are tired of talking, the festivities begin with drinking, dancing, and singing, with which they celebrate their splendid victory.

The prisoners remain silent, do not raise their heads, do not say a word, and even refuse to eat food if it is offered them. They cannot oppose the brutal acts of their conquerers, who would put an end to their lives if they attempted to do such a thing.
797 The last war of Curuyuqui is still living proof of what has been
727 said, but happily many unfortunate women had help in their misery because of the presence of the missionary (2).

> 2. When the defenseless damsels understood the intention of their masters, they ran away, making a joke of the vigilance of those brutes, entered the school as a last refuge, and learned religion.

727 During the days of celebration and afterward, they start
[525] playing their dice game, and they wager the prisoners, who are no good to them, among whom are the mature women, boys and children under seven, and an occasional girl whose new owner does
[437] not need her. When they are tired of them, they barter them or
[438] sell them for nothing, for a sheep, a goat, /280/ a hat. The sale or barter is not done in the town of the conquerers, but in others farther away. Thus it happens that many innocent boys and girls may find there relatives who would pay even more than what is asked for them.

/280 cont./

72

Defensive Warfare

But the invading army is not always victorious, as in the case just related. Sometimes it gets the worst of things, and then the complete reverse happens. Those who were left in town weep when they get the news; the defeated men return, and they all weep about the defeat they have suffered, and many for the death of their loved ones. Without losing any time they prepare for defense, because they know perfectly well that the ones invaded will quickly take revenge for the injury received, appearing before them as invaders.

Then there are many and similar precautions for both armies. The town which awaits the vengeance arranges for all those unfit for combat to get to safety with their few belongings at a certain distance from the town and, if at all possible, in a secret place. They position sentries day and night, and any noise, any cloud of dust, any sign is immediately reported to the cacique and to the queremba (1).

1. They put sentries on all the high places. This is what both armies did in the year 1892, the one from Curuyuqui in Ivu and those being besieged around the Santa Rosa Mission.

When a town is prepared for defense, the combat in the area is atrocious, and, if the number of combatants is equal, the invaders get the worst of it. Without surrendering, they abandon the field after a few hours and beat a retreat until all danger has disappeared, and they return to their homes neither defeated nor triumphant.

722
782

While the men fight or go to battle, the women raise their supplications to the sun, throw sand or ashes into the air in the direction of the enemy, and in a very sad tone of voice, letting fall sincere tears which would move anyone, they say in a high voice, Tiamini, cheru cuarasi, tuguáicho pochi, tiamini, tiaminiete, tumano pochi, may they be defeated, my father the sun, the perfidious enemies, may they be defeated, very badly defeated, may the evil ones die.

/280 cont./

000 defeated, may the evil ones die. While the war lasts, it is the
722 rule that women and their daughters must not sit in a squatting
284 position, but with their legs stretched /281/ out in front, so that
516 their fathers and husbands who are in battle will not feel any
828 tiredness (1).

722
533
535
177

1. The Italian del Campano, relying on the writings of Father Giannecchini, a missionary of the Colegio de Tarija, writes in his work that, before the fighting began and during it, women and maidens come out to the plaza and in a loud voice sing and dance the Aré aré. This song and dance must have originated among the Toba, who at that time were numerous in the Gran Chaco region, because in the Ivu region and other regions they scarcely know the name of the Aré aré, and not all share in that knowledge, as has been proved, for in no combat which has occurred to the north, south, and west of Ivu has the Aré, aré been danced and sung.

726 During the Curuyuqui war the Santa Rosa mission was in-
727 vaded by the rebels, who, in spite of their number and strength, were unable to enter the town which they intended to burn. Then and afterward the missionaries witnessed painful scenes of women who, crying their hearts out, raised their voices and threw ashes to obscure the enemies' vision. Bitter memories of that massacre are still retained, at which some of them laugh today, but they cried then. Whenever I hear the sad stories, my eyes overflow with tears (2).

726

[648]

2. The Curuyuqui rebels first attacked the town of Cuevo, whose inhabitants had taken refuge in Santa Rosa the night before. In a few days they attacked the mission, from which it can be concluded that their hate was against the whites, and concomitantly against the Indians who were

/281 cont./

726 648 helping them in the town and against the missionary who had brought them.

Peace

727 728 Every time a war between Chiriguanos ends, those who got the worst of it are the first to resume friendly relations. They do it little by little, and the women are most useful for this, the same ones who, with their tongues, contributed not inconsiderably to promoting hostilities. The conquerers readily accept the overtures of peace and immediately resume visits again, during which, if the conversation touches on the last war, the conquered avoid it, that is, they excuse the deceit suffered through some trick, but from time to time they must silently endure the reproaches of one or another bold woman, who are not lacking in the towns (3).

3. A certain young girl, a student in the Santa Rosa Mission, reproached the captain at Ivu, who was asking for a mission in his town after having tried to kill the missionary. But I have already said that this war was directly against the whites.

701 723 643 [704] When a war is regional because several tribes take part in it under the command of a single cacique, as happened in Yaveau's war /282/ against Güiracoti, both regions try to have an equal number of foot soldiers, cavalry, and queremba; otherwise it would be very hard for the weaker side to enter the combat. Güiracoti came to battle aided by the whites and men from Parapiti, but, when he saw that he had fewer people, he fled from Yaveáu, who pursued him with all his men (1).

1. The cacique Yaveáu in his first defeat recovered and suitably prepared for a general and decisive charge on the slopes of the range of Irenta, located one league from the Santa Rosa Mission.

/282 cont./

729 When a regional campaign has ended, the caciques involved,
728 with the intervention of others who did not take part in the struggle,
643 try to re-establish peace, because although the Chiriguano is rather warlike and proud, he is also just as peaceful and desirous of living quietly in his home. Hence it is quite easy for peace to be accepted by both parties, and it is sealed with a general fiesta, first in the town of the defeated cacique and then in that of the victorious cacique. All the great and important people of both regions and of the regions which have taken part in the friendly arrangements come together at these fiestas, and even then they do not turn to talk of the stormy time, except to anathematize the one who, according to them, was to blame for so much anguish; little importance is given to the words of the women (2).

[648]

2. As the Curuyuqui war was against the whites and since the latter triumphed and pursued them to the death, there could not be any party afterward, but in time friendly relations were renewed between the Indians of Ivu and Santa Rosa, and to this day they continue in perfect harmony, because they live with the help of the missionary whom the Ivu people had asked for previously.

Then each regional cacique enjoins his men not to disturb public peace again, and these in turn make speeches to their subalterns at night about the advantages of peace, and both caciques shake hands, promising to decide matters in a friendly fashion in any future disagreement which might arise between the two regions, but sometimes the opposite happens, because the victor finds it hard to yield, considers himself superior, and does not know that negotiations are preferable.

729 Finally, each one returns to his town satisfied, the repair
728 of the destroyed houses is ordered immediately; the time of general planting comes, and they all report to work peacefully in order to have abundance once again and with their hopes based on being able to enjoy in time the fruit of the little sweat that falls, to their own advantage and that of their family.

Chapter Thirteen

Illnesses, Remedies, Death, and Mourning

Introduction

One moment of reflection suffices for a man to understand that there is no true happiness on earth; he who can glory in being happy in this world finds many sorrows: unsatisfied desires, unexecuted orders, unfinished projects. The careless execution of injunctions constitutes thorns for the heart of the man who could call himself blessed. He would like everything to go along as he desires, and when this does not happen he suffers, and if he does not express his suffering he suffers much more (1).

1. It is a great relief for a man to be able to communicate his sufferings to a sincere friend, but it is difficult to find such, because he who has a friend has a treasure, and the treasure is a rare thing.

/384 cont./

000 The philosopher Foción said that he who has the fewest desires to satisfy is the happiest man on earth. This is a truth based on experience, but it is not true happiness: it is part of it, because complete happiness is not attained here.

The true Chiriguano dressed in the old way and his wife with her tipoy must have been the happiest beings on earth, but as they are children of the first man, they also inherited affliction, pain, and death. These three things are almost always the consequence of illness, and they come from the intemperate life that I have described, just as they also come from the drinking and eating.

515 751 The Chiriguano takes no care of his person, although he loves life, which he would like to be eternal, however much he may walk dragging himself along. His foodstuffs are not at all [262] hygienic; he eats /illustration appears here/ /385/ often and with [252] too much greed rotten meat, vegetables, and maize itself, which [271] he parches but never cooks completely. The water he drinks is not [273] always clear or free of microbes and small worms that are visible; the very chicha that is manufactured with such elaborate effort and care is drunk still sour, and, finally, shelter is unimportant. In periods of great heat he lies on the ground, taking on his back the burning rays of the sun; he protects himself little in the abrupt changes of temperature, and if he gets wet in the rain or has taken a voluntary bath of cold water or water heated by the sun, he lets his clothes dry on his body; from these come the illnesses that I shall presently enumerate, illnesses that he suffers from, which make him unhappy and then carry him to the grave.

753 821 The rainbow that God gave to Noah as a sign that He would not flood humanity again with the waters of a new deluge is a sad sign for the Chiriguano. If this so natural phenomenon appears in a town and begins in front of or over a house, when it disappears it does not end or turn to nothing but hides itself in the belly of one of the residents, who in time will get sick and die of dropsy, from which it follows that this illness, which is rare among them, is caused by the rainbow (1).

1. Another natural phenomenon is the whirlwind.

Group of Chicken Eaters

/285 cont./

753 821 which rises continually to the sky in these interminable plains, taking behind it all of the trash that it finds along its way. It is called Cuumino, and, according to them, it causes pains in the feet, knees, and bones. When a whirlwind begins in a town, they try to cut it with a knife.

Illnesses and Remedies

164 The most common illnesses among the Chiriguano are the intermittent fevers that are endemic, tuberculosis or consumption, eye disease, convulsive coughing, diarrhea, dysentery, mange or itch, and tumors accompanied by a kind of leprosy that covers a large part of the body. The intermittent fevers appear at the time of the first rains and continue until the time of the fruits and fresh maize. These fevers are not fatal, but one who is attacked 757 by them has a rather afflicted life. Their remedies are vegetal; they boil quebracho or algarroba bark, and they drink this water, but it does not always have a salutary effect. /286/ If a small dose of quinine is administered during the intermittent fevers, they immediately get well (1).

1. They get well with a small dosage, perhaps because their bodies are not accustomed to the remedies of the apothecary. Another efficacious remedy for the intermittent fevers is bitter coffee or coffee with a little sugar.

164 The itch, tumors, and leprosy do not cause death. 262 Chiriguano food is almost always saltless. They are not careful 263 in selecting it, and stinking meat does not disgust them. Their 951 water is not always clear; they bathe at any hour and, after bathing, 515 do not dry their bodies. If it rains, they let the wet clothing dry on their person. From this and other causes come the many skin

164 /286 cont./ From this and other causes come the many skin
757 diseases which do not let them sleep. The itch is cured with saltpeter found in the dry stream beds. They call it Curuyuqui, or salt for curing the itch, but this remedy does not always produce its effect. The itch principally attacks those of few years, and
[237] nursing infants catch it from their mothers. Lepers are cured very efficaciously by means of hot cow dung, and it is enough to apply it two or three times for a cure within three days without any further remedy, but they do not resign themselves easily to using this repugnant but efficacious remedy.

164 Smallpox and measles are epidemics which appear from time to time; for this reason I do not put them in the list of endemic diseases like the former ones. The Chiriguano runs from smallpox as a person with hydrophobia does from water, since through experience he knows that anyone who gets it has a hard time being saved from a horrible death. When it enters a town, it sows fear and desolation. Sick people resign themselves to death, and the healthy ones flee in terror to other tribes. It seems that it is not easy to attack smallpox directly, and up to now only vaccination has better effects (2).

797
164

2. When smallpox breaks out, the missionaries go wherever their ministry is needed, like doctors and priests. Up to now none of them has caught it, perhaps because they are vaccinated or because they have different blood.

In 1909 the town of Cuevo, which is about eight kilometers from Yvu, was decimated by smallpox. I vaccinated all the people of Yvu and those who were not residents there. But the vaccine did not take in all of them, as occasionally happens. Nevertheless, few got sick and only two died. The remedy that I administered after the initial fever had begun was rather strong wine vinegar. The sickness ran its course only in those who had not drunk the /287/ vinegar or who had not been able to retain it in the stomach. I administered one cup every six hours three times, and it was enough for this terrible illness, which would cause so many deaths in Cuevo, to pass almost unperceived in the San Buenaventura Mission (1).

1. More people became sick and died in the

/287 cont./

797 164 Santa Rosa Mission, but the use of the vinegar, which I began to administer later, made the mortality stop.

Measles usually attacks children, as does diarrhea, and because they are very delicate it is difficult to treat them, for which reason almost all of them succumb. Lemon and vinegar are efficacious remedies for both illnesses; in many cases I have administered camomile with good results. Diarrhea in infants comes from a scarcity of food, for then the mothers eat very hot things, such as the fruit or potato of serpentine arum, algarrobas, and other wild plants, as a result of which the infants drink the very hot milk, which damages their bellies and produces inflammation (2).

164 261

[757] 2. There exists near or around the lakes a herbaceous plant called pazote, and by the Indians and whites páico. A tisane made from this herb is efficacious against smallpox and measles.

Dysentery occurs in older people, and an occasional case of it shows up even in children. The cause of this illness is the very poor diet in times of want, when they eat wild roots and fruits. Here there is a very effective remedy, which the whites call meloncillo and the Indians Ñurantimbucu. This is a thorny bush with long thorns, from which its name comes. At the time when it buds, or in the springtime, its thorns are slightly purple, and its roots are the remedy. They are boiled and the patient is given this water to drink for a week. The eye sickness attacks all, big and small, without distinction and is so bad that some lose their sight completely or are left with only one eye. In the missions this is treated with white lead or lead acetate, and it suffices to apply it two or three times to bring about a complete cure.

164 757 [797]

164 The convulsive cough, or whooping cough, is another illness which attacks children up to ten years old, causing many deaths. It shows up in the cold months and even in the rainy season, sometimes attacking grown-ups, among whom it does not cause death. There is in the hills a yellow flower which around here is called

[757]

/287 cont./

164 757 vira-vira. The tisane made from these flowers has salutary effects, but it is not strong enough to bring about a radical cure, /288/ especially if the precaution of wrapping the child up after the potion is drunk is not taken (1).

1. Most effective for whooping cough is the use of petroleum. The child is anointed from his forehead to his belly and made to drink a few drops. In 1910 almost all of those whom I treated with petroleum got well.

164 Consumption, or tuberculosis, attacks men and women and appears in both sexes as a stomach-ache. This pain can be considered the beginning of the sickness, which usually appears after the age of 40, but in certain places it carries to the grave persons who have not yet reached the age of 20.

In the Santa Rosa mission this disease alone, in less than ten years, caused the death of more than 70 schoolgirls; at that time this mortality was attributed to the bad water there, but as it is found in other places where the water is excellent there must be another cause. For young people or adolescents it could not be the continual fires, because there are none in the schools.

164 754 755 The Chiriguano has no remedy for tuberculosis, and one who gets it is resigned to death, because whether or not he attributes everything to sorcery, he believes in it and in the poison in this case; hence the sick person goes for help to the sorcerer, who to get rid of the illness, without succeeding, uses atrocious and even immoral means when dealing with women (2).

[797] 2. The missionary buys remedies from the apothecary to treat the Indians. These remedies are almost always repugnant. If the sick person does not drink it in the presence of the missionary, he will pour it out; he has more faith in the sorcerer.

/288 cont./

Other Illnesses and Remedies

759 According to the illnesses that exist, there are doctors and medicines among the Chiriguano. The former have not gone through any university other than experience, learning from the latter to prepare medicines, not only from plants and herbs, but also from minerals and even from the excrement of animals. The doctors receive the praise of individuals who know less than they and are differentiated even by name from the evil sorcerers, who are called Mbaecuá, while the former are called Ipaye, and the medicines or drugs are called Moa.

757 The oil that is necessarily a side product of the preparation of chicha is very good for curing headaches. Salt, ground and mixed with the urine of infants, is drunk and is a good anodyne for stomach-aches. Dampness and cold produce a tightening of the nerves, which causes atrocious pain in more /289/ than one person. To cure this disorder they pull up a branch of ulala /a cactus/, Nancagüina, strip off the spines, parch it, and, when it is good and hot, apply it to the affected parts and get well. They use something else to cure dysentery. They burn yellow maize, grind it with watermelon seed, and have those attacked by the disease drink it (1).

1. The meloncillo /little melon/ is a remedy which the whites told me about. It is more effective, but the Chiriguano have no faith in it or do not use it out of weakness.

When a sick person suffers a pain in his side, he asks for a halled-armadillo shell, grinds it up, and drinks it. At the same time what is left is heated at the fire and applied to the pain, and it stops as if by magic. If measles comes out on the lips, the sorcerer or doctor applies a tick which has been taken off some dog's flesh, and thus it disappears. Sometimes tumors or a swelling in the throat and in the knees appear, and these are made to disappear through the application of the herb called Urucuna. It is heated at the fire in a small olla and applied. Another herb, called Yandurimbíu, is also good for this. They

[64]

757 /289 cont./
also get sick with vomiting of blood or a hemorrhage (2).

2. A hemorrhage is treated by drinking every hour a mixture of equal parts of water, wine vinegar, and bee's honey. They soon get better with this remedy.

The Casupaya is used for a stomach-ache, and root boiled soto root cures the pains produced in the feet by hot and wet ground. Guaya is a species of bejuco which is plentiful in Ivu. It is heated, applied to a swelling in the side, and cures it. Guaya root is eaten by the Indians, but if dogs eat the excrement of the Indian or the tuber itself, they die in a few minutes, which also happens to foxes. Among the Indians goiter /papero/ is not so frequent, although it exists in certain places. They say that it comes to those who sleep in the sun. They cure themselves of it with Tutía, which is a yellow fruit similar to a small apple which abounds in the pampas. Eye sickness is treated with algarrobillo bark, which they grind and then put drops of the liquid into the eye. The small caraguata cures diarrhea (3).

3. Incipient goiter is also cured by tying around the throat on a rag the blood of the turkey buzzard, carcancho, or bandurria. The mineral water of Ivu contains the germs of goiter.

The Cáairo is an herb one meter high. There are two types, one of which has red flowers and is used to decorate altars, and the Indians use the herb and flowers to treat the itch. It is a more /290/ effective remedy than saltpeter since it breaks out again with the latter. The kind that has yellow flowers is most abundant in Ivu and is used to treat the intermittent fever. Cáairo means bitter herb. To treat leprosy, which I have mentioned, they also use snake fat and Inái, which literally means tooth of the water. It is a little plant which grows up out of the water and is quite small. To treat whooping cough they also use an empty yellow-wasp nest, which they burn or boil in water, and, strained once, they give the lukewarm water to the sick people to drink.

/290 cont./

757 The Tingui is a large tree; with its bark tied to the belly, they cure incipient dropsy, which in their language is called Ipunga. Boiled mistol root and tapir fat cures gonorrhea. With chicken, beetle, and cicada fat they cure earaches. Only a few
752 drops need be put in. For poisoning they use wild chirimoyo root, Araticu; for snake bite the herb called urururu, calabash, tobacco, and its nicotine. For wounds produced by a rabid dog, they use melted wax applied to the wound. If the wound was produced by a weapon in a fight, it is treated by applying burned chicken feathers to it. Finally, if in women the uterus becomes displaced, it is put back in its place by giving the patient ground shell drunk in water.

600 These and many others are medicines that the Chiriguano use; I shall not make a list of the others because during my investigations I have come to realize that this is tied up with superstition, with which the witch doctors inoculate the sick (1).

1. It is not surprising that the Indians believe in the sorcerers, because even the whites let themselves be deceived by these impostors, who exist even among Christians.

Death and Funerals

963 When a Chiriguano is fatally sick, all his nearest relatives begin to gather, and, as the illness progresses, the distant relatives, friends, and neighbors frequently pay visits, while those nearby never leave the house where death will soon reign. If the sick person is a married man, the woman is continually at the head of his bed, holding him up on her knees, stroking his vigorous hair, and caressing his face, while furtive and silent tears slide /illustration appears here/ /291/ copiously down her cheeks, almost all of which come to rest on the dying man's shoulders or chest, providing him with a palliative for his pains, because he understands the misery which his wife is feeling and the way that she and his children, if he has any, will miss him (1).

1. When the woman is past 40, she sheds real

/291 cont./

763 tears, because the Indian had taken her as his wife until death, and with his death she loses everything. She will now be poor.

When the death pangs approach, the sick person enjoins them to cry as much as possible, admonitions which are made before he loses the use of speech. The said admonition is not addressed to the one who in a short time is going to be left a widow, but to the relatives and friends, because the widow already knows that she must bewail the absence of the one who was her companion (2).

[578 627] 2. If the dying man believes that he has been poisoned, before he loses the use of speech he charges his nearest relatives to take vengeance after the days of mourning, if the supposed enemy is known.

The death pangs come, the death rattle begins, his face pales, his nose thins, his lips and tongue become dry, his eyes turn glassy, his eyelids and eyelashes are paralyzed; the dying man begins to grab at his blankets or anything else with his hands, he looks from side to side and seems to be insensible of the objects that surround him. He is about to fade away. Then the persons around him understand how close the fatal moment is. At the impossibility of helping the one who is struggling, who is about to be inert, they begin to utter the wails which are the precursors of death.

They do not have to wait long: the dying man gives a last breath and begins to expire, until his mouth is wide open, which is observed by the widow, who gives a cry, the sign that her 764 husband has now died. Then the funeral formally begins: they dress the deceased in his best clothes, comb him very carefully, paint his face and feet with palm-Christi oil and achiote, double up the knees, put his crossed hands there, and tie him up thus, so that on the day of burial he will easily go into the clay pot that they have prepared beforehand, where they will put him when it is time to be buried.

/291 cont./

764 Now the funeral begins, which consists of crying as hard as possible, men and women, and shedding real or false tears. While they are crying they also dig the grave, /292/ which at most is two meters deep. The weeping lasts all night without rest and is accompanied by strict fasting, because so long as the deceased is visible, it would be a dishonor to take food. If there are young children in the house, they are taken by the neighbors or by some relative who takes care of them with all humanity through everything, since the unfortunate ones, when they see so much confusion, act stupid and go after the first person who shows them any tenderness. To wet their mouths and in order to cry unceasingly, those who attend the funeral, drink a little new chicha, if there is any; otherwise they are content with a little water (1).

[824]

1. Those who cannot shed tears because they do not mourn the death of the deceased put chili pepper in their eyes, and with this, which they call a medicine, the tears fall copiously.

On the next day, when the grave has already been dug, they first put the deceased in the vessel, Yambúi. They also put in a small jar of chicha, a little parched meal, a flintstone, a steel, tinder, fresh maize husk, and tobacco, a live parrot or chicken, a bow and arrow, and other things which belonged to the deceased, and they close it with another jar, and if the dead person is a nursing infant, they put in its sepulcher a small jar of the mother's milk. All these things are necessary for the journey to the other life and clearly indicate that the Chiriguano have an idea, although a material one, of the immortality of the soul.

[795]

764 995 Now enclosed in the funeral urn, they lower it into the hole by means of ropes, and meanwhile the cries redouble, until it disappears below the ground. The body is placed with the face toward the east, because they all want the deceased to attain glory, the paradise which is shown by the light of the sun. Placed thus, the deceased or his soul will not always be going about in search of happiness; he will run toward the sun as iron or steel goes toward a magnet.

/292 cont./

Mourning

765 The interment over, they cry all that day, until the sun sets and night comes; then everyone goes home, only the closest [785] relatives staying to weep. Fasting, already mentioned, lasts for [302] three days, and on the first day after the burial all the women relatives cut off their hair and lay it on the grave. While cutting it off they look toward the east. The hair stays on the grave for some time, and later they take it off, and, if they burn it, it is [826] not on the grave, but away. They prefer not to burn it, however, because they would feel heat /293/ on their heads. If they notice or sense some noise coming from the hole, they heat a stone, put it on top, and the noise stops (1).

764 765

1. If the deceased is a cacique, they all weep until dawn, and afterward they meet every night for about a week.

765 They also put on the grave the tembeta, the bag, and the weapons which belonged to the deceased, such as his lance or some kind of saber, bows and arrows, so that he will not go looking for them, and when for any reason they leave the house alone, they put over the hole the pestle of the mortar, and, if this is done, the deceased will not move from his place. The souls of [775] those who have died in a bad way, for example, suicides, walk about continually, find no rest, go shouting at set hours, and are, according to what they believe, demons or their companions.

The dead person's nearest relatives sincerely grieve over the disappearance of the deceased, as the tears and sorrow shown on their faces prove. If, instead of a man, it is a woman who disappears from among the living, the widower feels the same grief; if the dead woman leaves small children, the picture that the house presents is truly heart-rending, the house where the morning sun will not find present the mother who so tenderly cared for her little ones (2).

2. The children demand to go back and they

/293 cont./

765 are allowed to when the burial is over; an aunt accompanies them, especially a maternal one if they have one, and stays in the house for a while, if she does not have children of her own.

They look for her in vain, silent and confused, and not even the tenderness of an aunt, who must swallow her own tears in silence, can distract them from their thoughts. When she hears the motherless ones looking for and asking for the one who was the author of their days, she answers the poor creatures with emotion, and even with force, that she will soon return, either from a nearby town or from the field, and meanwhile tears run down her cheeks, giving the lie to her pretended serenity. But the innocent little ones do not understand and continue with their questions, looking at the aunt dismayed and even frightened. What a sad picture!

768 587 When it is a woman who leaves her husband a widower with children, naturally in a short time he must find another wife who will serve as mother to the motherless children and take care of the house, because a man cannot attend to the things which are the domain of a woman. For a short time he can get his close relatives to attend to such things, but they soon get tired or return to the duties of their own home. Then the widower must look for another woman privately and without hurting the feelings /294/ of the neighbors, who naturally understand the distress of the widower who, if he has a mother or an unmarried sister, does not take such a step and tries to abstain from a second marriage as long as he can, but in every case before the year ends he will have found a new companion to brighten his days and make his life pleasanter (1).

768 587 593 602 855

1. The widower tries to marry a sister of the deceased or a close relative, so that she will have affection for the motherless children. When a new wife is tyrannical or is thrown out, either some other relatives of the deceased or of the widower himself take care of the children; the Chiriguano feel deeply the suffering of bereaved children.

/294 cont./

765 589 If it is a woman who is widowed, it is the law of the race that she must observe mourning for a period of one year, without it being permitted to shorten this period for any pretext whatsoever. After having wept for her departed husband for a whole [302] day and after the burial is over, as has been said, she cuts off her hair and deposits it on the grave, where it remains for a long 589 time, which I have not established exactly. This is the best 765 offering that a widow can make to her late husband, and whether 577 or not she loved him, it is a law which she must observe; otherwise she would incur the scorn of the people of the town, who 302 would wonder at her conduct, she would lose her reputation, and the relatives of the deceased would resent it very much; they would take the children whom she loves so much away from her, and it would be hard for her to remarry.

765 As a sign of mourning, a loving widow, as well as one who 589 is not, finds the dirtiest and most ragged piece of cloth that she [292] has in the house and puts it on her head; she wears this during the entire period of her widowhood. One who arrives in a Chiriguano town for the first time will wonder about this piece of apparel and ask about its significance, because there is always some woman who is wearing mourning for her husband, her son, or her brother, if it is not for her father or mother. Finally, the widow is condemned to cry day and night for one long year, and one who does not cry as she should incurs the wrath of the relatives of the dead man. When I was a missionary in Santa Rosa, the cacique Yaritui died of nothing less than malignant smallpox. The widow cried for him so much and so loudly at the beginning that very soon she became hoarse. Nonetheless, the relatives complained of her actions, accusing her of little love (2).

2. The weeping during mourning is done by the woman four times a day, at sunrise, noon, sunset, and at some time around midnight. At this last hour it is very sad.

/295/

If while asleep they sometimes dream of the dead one, very soon the widow, or whoever the dreamer is, gets up and makes a commotion, which lasts for several minutes. Also, when one

/296 cont./

765 589 of the relatives comes from afar to the house of the departed, he does not greet anyone, but asks where the grave is, goes there, and, crouching down with his face toward the wall, cries for several minutes, and, when this is over, he then greets the living and the conversation begins in subdue tones.

589 765 539 [197] The song, as well as the way of weeping for the dead, is the same in all the tribes, but there are some small differences, as happens in the language itself.

Duelo de una viuda

A Widow's Lament

1. If the deceased is a grandchild, she says: Chinamaimo ngai! Beloved grandchild! And if it is a son or daughter: Chemempi mi ngai! Beloved son or daughter!

/296 cont./

765 589 When the year of mourning ends, the widow continues her silence until one of the relatives of the deceased visits her with all respect as a person worthy of veneration, because she has wept much and with grief for the dead: he tells her that this is now enough, that she can go out and again appear at the public drinkings, since this visit takes place two or three days before some general drinking affair. The widow makes them ask her many times and once more reflects on the virtues /296/ and greatness of the husband she has lost through death: she curses the bad sorcerers and poisons, finally consenting to stop mourning, leave the house, and take part in the coming fiesta (1).

1. During the year of mourning the widows are continually cloistered in their homes, coming out only when they have to: they go to the spring for water and to the field for food.

[302] [301] [292] During the year the hair has grown out at least some 30 centimeters: she then removes the rag from her head, combs her hair carefully, puts the well-known cosmetic on her face and feet, adorns her neck and arms with necklaces and bracelets, dresses in her best tipoy, and goes out with some woman friend. In this first appearance she does not take part in the dancing or singing, so that all may know that she still feels the absence of her husband, and all respect her silence. Only afterwards does her public life begin anew, like the sun, that is, she sings and dances as before.

581 581 589 A few weeks later, if someone should ask her to be his wife, she will probably consent, if she is still young and has small children, because the reader can imagine the suffering of a widow, who must seek food for herself and her little ones. Oh, how often have silent tears run down my face on seeing the tears of widows and fatherless children who, for lack of food, not knowing whom to ask for aid, have come to the missionary or to one superior to them to ask for help! How could one deny it? Only a heart of bronze could have done so.

797 936

/TM cont./

000 If the missionary goes into the forest and goes among the barbarians in the name of Christ, he teaches them to love him and to know him, and, like his divine Master, he is compassionate toward the afflicted and toward those who are suffering. Like Him, he does not close his ear to one who asks for charity, but divides what he has with the hungry, dresses the naked, and, when he has nothing else, at least has soothing words to console the sad. This is the life of the missionary, which, by great effort and much perspiration, is gradually transforming the places and the hearts of the inhabitants of this region, into which civilization has come through him. Oh, how the Supreme Government and the inhabitants of Bolivia should appreciate him, both of them, because of his work of moral and political civilization! But even should men not recognize this, his eternal reward will be greater (?). /Illustration appears here./

114
997

2. The work of the missionaries is greatly appreciated in Europe. Some governments exempt them from military service and give them free passage on ships and railways. This is even done by the countries of Catholicism. The missionary of San Buenaventura de Ivu /the author/ has been exempted from military service by the Italian Government.

Chapter Fourteen

Infidels and Neophytes of the Missions

Introduction

The continual revolts of the Chiriguano against the white race clearly demonstrate their aversion toward the Christian element, which they consider to be the effective cause of their misfortunes and of the almost total loss of their territory, of which not too long ago they considered themselves the legitimate owners and absolute rulers. It is as clear as the midday sun that the Christian, with the patience and constancy of an anchorite and in many circumstances risking his life, has gradually taken over the extensive region. Today there is no corner where an occasional Christian family is not living. In many places the Chiriguano tribe has completely disappeared, whether through epidemics or through loss of freedom; in some places a rather considerable nucleus exists under the control of a master, either because of the territory which it cultivates or because of a debt which has been contracted (1).

1. The caciques of the Caraypati war, in their ignorance, thought that they could recover the lost territory and, in revenge, take over most of the Republic.

The Indians located in the area to the left of the Pilcomayo River took only one thing into consideration when they resolutely refused to have a conversion mission founded: they only considered that behind the missionary would come those whom they considered invaders; they only understood that white Christians would gather behind or around the Cross, which Father Giannelli planned with considerable daring in the middle of the nineteenth century. But why is it that the Indians of Tarairí /198/ are still owners of their land? Because of the missionary, whom one faction, in its ignorance, wanted to leave when the destruction of the flourishing missions of San Francisco and San Antonio began, where six years ago building a new London was attempted, with almost

/200 cont./

797
695

nothing yet begun, but rather with a most evident deterioration of the building and the gardens which the Franciscans of Tarija left behind so well arranged and so flourishing (1).

1. When the Tarairí Mission was established through the persuasive words of the missionary, it was attacked by neighboring tribes and by the warlike Huaiyoñis, who were located some 100 kilometers away. The Chiriguano missions were founded where there was no nucleus of whites.

The people of Tarairí were the first to see a Franciscan father in their territory, and they are the last to understand the material advantages that the mission brings to them. The people of Tigüipa, Macharetí, Boinayo, Cuevo, and Ivo, and, finally, those of the two Parapití missions, called San Antonio and San Francisco, came to realize that only the missionary could present their territorial rights before the Supreme Government and assist them in countering the ill will of some whites who, because they were too tyrannical, brought about the Curuyuqui uprising, in which the Indian was completely humiliated when he believed he would exterminate all the whites (2).

2. Through the suggestion of the missionary, the Indians of Itatiqui were assisted in their small territory by the Prefecture of Santa Cruz, before which proceedings for purchase were in process. Today they have been helped by the Supreme Government, which has proclaimed an edict for measuring and setting boundaries, but they have scarcely half a league left to them, despite having possessed from time immemorial three and a half leagues.

926
181

It has been seen in the course of these pages that the Indian is formidable at the beginning of battle, but if victory does not come soon, he turns cowardly and flees.

926
648
181

/298 cont./

soon, he turns cowardly and flees. The eight-hour battle at Curuyuqui, considering that the weapons were so unequal, can be regarded as a prodigious feat, because once the Chiriguano were so far from their towns, they had to resign themselves to winning or dying before falling prisoner.

797
197

Infidels

The adult Indian has no appreciation of religion, whatever it may be. To be sure, first his ignorance and then, more than anything, his pride and laziness contributed to this, because he turns his back on anyone who tries to instruct him. Some of them come to the monthly instruction, but almost all are like those described by the royal Psalmist in that they have eyes but do not see, ears but do not hear, /299/ and a tongue but do not speak, do not sing praises, and do not worship their Creator (1).

1. It seems that the demon of luxury has them blind, deaf, and mute with regard to religion and worship and keeps them away from the Spirit of God.

It is not likely that the Chiriguano will ask for the founding of a mission, because he does not want anyone to disturb his peace and tranquility in his own land. He considers the mission an unbearable yoke for himself and for his children. It is almost useless, it is almost a waste of time, to speak to the Indian about the supernatural, to make him yield and accept the mission. He does not understand or wish to understand why animalis homo non percipit ea quae Dei sunt. Only when he sees himself persecuted with regard to his person, his family, and his property, only in order not to fall completely into slavery, only to free himself from the harassments which he receives from his fellow man, does he then ask for a mission with much insistence, until he obtains the end desired. This is also one of the ways that God uses to secure the redemption and salvation of an endless number of souls (2).

2. There are a number of Chiriguano families

/299 cont./

797
177

in Pipi; to free themselves from such vexations, they have been asking for a mission. There are still more of them in Caipipendi; I have spoken with them repeatedly, because they have their own land, but they are still not inclined to ask for the founding of a mission, and the reason for this is clear, they are not greatly persecuted.

Even in this case the adult proposes the bases of the agreement; he asks for freedom to follow his barbarous customs, without being obliged to receive baptism and consequently to enter the church to hear Mass and to do other things proper to Catholic worship, because his hair and the tembeta are out of place in God's house, and they feel extreme embarrassment on seeing themselves mixed in among children, young people, and whites. The advantage that religion presents is the education of the youth and the baptism of the infants, who in great quantities fly straight to heaven, because there are many who die, regenerated by holy baptism.

Provided that he does not speak to them about religion or about receiving baptism, the missionary can do what he wishes with the adult Indian. It is enough if he only shows a little foresight from the beginning regarding the way in which they must live in the mission. One who freely and spontaneously gave his name obeys in every respect, provided that effort and care are taken to suppress any disorder or disobedience immediately.

[464]
[466]

If he is needed for personal labor, it is not likely that he will refuse, at least in the first years, even though he be paid no wages /300/ nor given anything, since he understands that the missionary orders the construction of a building, not for speculation, but for the moral and civil progress of his children. If the missionary ordains, as is the case, that during the night they cease singing, they will comply, in spite of the fact that at times it is necessary to remind them with some sharpness, noting here that words alone are of little value.

/300 cont./

797 177 In sum, the adult Indian infidel, when carefully watched over, is quite submissive in complying with the orders of the missionary father, and even when drunk he is gentle and humble. Although it is quite true that he wishes to know nothing of religion as long as he lives, in order not to learn to pray and to comply with what religion demands, nevertheless today almost all ask for or receive baptism at the time of death. The difficulties which formerly occurred with respect to the sick who were in danger of death, which would be interminable in the telling, have now almost completely disappeared. (1)

1. It is more difficult to baptize old women, for it is they who advise a sick person to refuse to accept baptism, while others coax him to accept for material gain. In such cases it is very necessary to know their language.

[595] If an Indian or a cacique had two or more wives when a mission was founded, bit by bit the missionary can make him give them up until he has but one. This requires some effort, but through persuasion and threats the desired end can be obtained, because this is one of the conditions which the minister of God sets when he is asked by the Indians to establish a mission. This is what I did in San Antonio del Parapiti, and they accepted all the conditions very willingly.

761 797 177 The adult Chiriguano is not baptized while he enjoys good health; he only does it at the time of dying and when he is almost sure that he cannot live any longer. In the past it was even difficult to baptize infants, because they were convinced that baptism is the cause of death, for in their ignorance they did not understand that those who receive baptism in a serious illness died because of the gravity of the disease.

The missionary, because of his long experience, easily recognizes who is in danger of dying, and it is unlikely that he will err, because the serious illnesses of the Chiriguano are known diseases, such as dropsy, smallpox, dysentery, and consumption, to name the principal ones. He thus baptizes precisely those who cannot live, because it would be very

761 /301/
797 difficult afterward to make them comply with what religion re-
177 quires. The result of this is that the Indian believes without founda-
tion that baptism causes death (1).

797
762
177

1. Some of them experience so much sadness with being adult Christians that they try to take their own lives; this happens when they are half out of their minds with some dangerous illness.

797
177 When a baptized person whose life is in danger survives, it is not likely that he will comply with what religion requires, and only at the missionary's insistence is the matter finally resolved, but he enters the church secretly, seeking the corners or the sacristy, so that no one will see him, and, when there is a change of missionaries, he takes advantage of the ignorance of the one who is new to the mission so as not to attend religious ceremonies. Then what kind of Christians are these? In church they are like idiots, being almost unable to learn prayers, either because it is difficult or because they are unwilling to learn them. In church they are little different from brutes; in their houses they behave like the infidels among whom they live; they play, sing, and drink the same as the rest of them (2).

2. We should not be too astonished by the behavior of the Indian who has survived after being baptized while gravely ill, because the poor souls had never seen a church in their lives nor did they know anything about the obligations of praying to and worshiping a Supreme Being, about whom, in their unbelief, they had no exact idea and barely a remote one.

In a mission already old, all this does not happen. There are Indians with tembeta and long hair, there are old women with their tipoy who go to Mass and comply with the other obligations of the Catholic Church, but almost all are mute, that is to say, they do not utter a single word of prayer. Some will say, and I too say, that with time the opposite will be the case, but

/301 cont./

797 177 this time has hardly come, because the infidel in the Chiriguano missions does not leave followers, since his children have almost all been baptized. They are getting old and dying without being replaced.

797 763 177 Some of them are baptized in order to make the missionary happy and in order that the family will not suffer any blame, but several times it has happened that as a dying person who had no thought of being made a Christian breathed his last or gave almost no sign of life, the relatives hastily called. Finally, others [764] accept and profess being Christians so that the missionary will permit or tolerate the burial of the body in their own home, and this is the first thing that the sick person asks for after being catechized, for which reason many difficulties are encountered. When it is hinted to the sick person /302/ that he must repent, he either denies completely that he is guilty before God or he does not abhor his past actions. All of these difficulties occur at the beginning of a mission; everything changes with the passage of time, and there is scarcely any which is not in the end easily overcome (1).

797 177

1. When a mission is founded, it is ordered that the missionary be told about sick people so that he can comply with the charity of Christ, to make them know the truth, the reward or punishment which awaits them in eternity. For just this reason he reprimands those who hide the sick. When the latter explicitly refuse to be baptized, and the missionary does not manage to convince them of the error, he leaves them. Such cases have occurred.

273 For the Indian infidel, drunkenness is a very honorable act, an action which indicates greatness, friendship, and benevolence, and he glories in it, saying clearly and with great satisfaction, Asagtipo ma, I have got drunk. They say it to anybody and appear before anybody in this state. Nevertheless, [799] when corrected and admonished by the missionary, if they do not hide it when he is inspecting the town, at least they avoid appearing at the mission house.

/302 cont./

With regard to material things, the Indian in the missions has more freedom than the others outside. He does not lift a hand without being paid. He works in the construction of buildings, such as house, church, rooms for the teaching of letters, music, arts and crafts, he builds fences, and, despite the fact that all of this is for their benefit and that of their children, they are paid for it. They only have the task of planting and weeding, but in the end the missionary provides them with yokes of oxen, plowshares, and even harness, and the produce is theirs to keep or is used to buy merchandise. Thus they do nothing gratis (2).

2. The merchandise brought by the missionaries from Tarija and other places is distributed gratis to the students and sold at warehouse cost to the older ones.

They are completely free to work in their fields or for the whites, but they must tell the missionary or the cacique. Nevertheless, they do not always comply with this. If, however, someone needs them for work and they do not feel like it, they answer rather that the missionary will not let them or that they must talk with him first, but it is enough for him to intervene and request it, and the Indian will come up with all sorts of objections, and if the missionary starts to listen to them all, soon nobody will obey him. He must show himself to be firm and that he knows how to distinguish true necessities or reasons from deceptions and traps, so that he will not be fooled. In the Chiriguano missions it is almost impossible to get 50 per cent of their labor, as the mission rules require. /illustration appears here/ /303/ believing perhaps that missionaries make them work for nothing, or are making a profit out of them (1).

1. The 50 per cent is not obtained in any mission. Only in Parapiti do the men work half a day per week, but this is a custom imposed by the priests before the founding of the mission, because they had no funds whatever. The missionaries take advantage of this custom for plantings and buildings which are for them themselves.

The School of San Francisco Solano, Working in the Shade of the Hurdle or Shelter

/303 cont./

362 What the Chiriguano thinks least about is his house: it is
356 very hard to find one who makes a comfortable one. If he does
797 begin to build one, he is a long time finishing it, if indeed he ever does, and if it falls into ruins, he bothers little about repairs: when it rains, the house fills up with water and becomes a mud-hole, but he and the family are there sleeping and snoring like dormice. To make them renovate their villages, it is almost always necessary to threaten them and promise punishment and at times apply it, so that what happened in the fable of the toads will not occur.

461 The Indian is always ready to drink: if for this it is neces-
293 sary to pile up firewood and carry it from great distances, no one shirks: everyone shakes off his natural laziness with great enthusiasm. Both men and women then become quite active for ten days or two weeks, in order then to drink for six days or more, during which their faces become repugnant, both because of the cosmetics with which they think they beautify themselves and because of their state of half or total drunkenness. Then they talk of many things, and then finally some of them remember about collecting from others, and quarrels arise from this, and to stop these and also to put an end to the idleness the missionary must firmly intervene. If the Indians had a good crop of maize and the drinking bout were prohibited entirely or in part they would organize them in the fields where they plant, and then worse things would happen.

797 Chicha by itself does not cause much damage in their stomachs,
293 and they easily bear up for several days without more than a half-inebriation: the bad thing now is a scandalously widespread abuse of alcohol, which very soon intoxicates them until they are senseless and do not even know that they are alive. The missionary is vigilant in his enforcement of the rules, but it seems that they are members of a secret sect, and they tell him only when it is all over, or when they wish to avenge some grievance.

/303 cont./

Neophytes

799 177 The infidels' children, or neophytes, grow up like their parents or even worse, being different from them in having a purely /304/ materialistic civilization; on the missionary's part special care is taken in their education; their parents hand them over, or, more accurately, the missionary takes them, from the age of seven, and they surrender them without the least resistance, but if they can hide them, they make no excuses and let them grow up in the forest (1).

1. Nobody should be surprised if they leave something to be desired and try to hide their children, because it should be taken into consideration that it was and is a pleasure for the infidel to see his son grow up to be like him.

799 871 177 When they have entered the school, the children learn from the first letters up to writing, if they can; the more intelligent even learn music, and the most able learn masonry, tailoring, carpentry, shoemaking, and tanning. The school is daily, morning and afternoon, and all of them attend from the age mentioned until they are grown up or married, which generally occurs at the age of 18 or 20. The children are absent from school only by permission, but there is never any lack of those who, when they can, mock the vigilance of the teacher, as even happens in the great centers.

The children have time to spare in which to learn reading, writing, and all that they ought to believe and practice in order to demonstrate their religious beliefs through good works. They are not ignorant of what our Holy Mother Church demands; they see the good examples of fervent Christians as well as the evils of others, and, since humanity is more inclined toward evil than toward good, the tender plants, not well grounded in the practices of Religion, can easily adhere to what is contrary to divine law

/304 cont./

799
871
199

and our Holy Mother Church (7).

2. The children know how to pray much better in the missions than in other centers, because in every mission there are two teaching establishments, one for boys and one for girls.

The youth grow up under the punctilious care of the missionary, who, by example and word, imbues their hearts with every goodness and love of holy and moral things, and moreover he makes them avoid, insofar as possible, all contact with the old people, managing it so that they see nothing, especially at night, not allowing them to sleep in their houses, except in case of illness and mourning, but it is not easy to avoid it altogether, because three times a day the children go down to the town to eat in their homes, and at fiesta time they are given a holiday, /305/ which they use in hunting birds or in bringing in firewood and foodstuffs (1).

1. The girls receive a more polished education under the uninterrupted vigilance and care of preceptresses, who teach them, in addition to theoretical-practical religion, all the chores of their sex, from spinning to embroidery in silk and gold: the vestments and chasubles for use in the solemnities are the work of these girls.

799
199
293

What is most ruinous to young neophytes are certain whites of the neighboring cantons, whose profession it is to sell liquor and coca, which they secretly bring into the missions at times of celebration, during which even those of the race enter into the same trade, because they have seen that it is a very lucrative business.

167
593
598

In addition many of them emigrate temporarily to the establishments of the Argentine Republic, where, with the excuse that they are going to earn a great deal with a little work, they lead too free a life, drink liquor like water, and become accustomed to drunkenness: then the first thing that they buy is an outsize

/305 cont/

knife: they learn to use it like the gauchos, get into fights, are injured, and even get killed, and, when they return to the mission, they only bring a little black clothing for themselves, a trifle or nothing for their wives, to whom they deliver a sovereign beating on the first chance they get, with reason or without, and then, at the first drinking bout they molest peaceful people, disturb public order, and always or nearly always it becomes necessary to bewail the spilling of blood. Let there be added to all of this the fact that the virus of irreligion is beginning to be inoculated hereabouts, and inasmuch as they are not well grounded in the dogmas of the Catholic faith, the result is that those who do not behave like infidels or indifferent persons are Protestants on the haciendas of the Argentine Republic and Catholics in the mission.

There is no doubt; moral, religious, and civil progress in the course of time; it is not the work of 40 or 50 years, as some believe. How long does it take to implant social reform among civilized people? How long did it take the Church to become established in the Roman Empire? Truth fought against error for more than 300 years; she was persecuted, shut up in the catacombs, and bathed in the blood of millions of martyrs of the Catholic faith, but in the end she triumphed and raised herself, radiant, above the ruins of error which had reigned for so many centuries.

No effort to implant social reform is made in the missions; what is being done is to build, to uproot the Indian from the jungle, to make him come out of barbarism, and to begin to teach him to be a man, to consider himself nobler than the brute; an effort is being made to remove from him the superstition /306/ in which he was born, so that he may believe in the maxims of the true faith. What sacrifice then must it not cost the missionary, who spends the best years, or even all the years, of his life in order to realize this grandiose project without earthly recompense, but rather with the marked scorn of those who should appreciate his highly civilized work (1).

1. The Father Prefect Friar Romualdo d'Ambrogi has been in the Potosí Missions since the year 1872; almost all the missions have been founded by him;

/306 cont./

799

no son of Bolivia can glory in having worked as this man has for the nation which did not see his birth. If others work, they are well paid, but not the missionaries.

It has already been noted above that the children, in addition to writing, are taught music, arts, and crafts; thus, what Campos says, that the missionary is trying to make an anchorite out of the Chiriguano, is not true. It would be more than enough for the missionary if his neophytes simply practiced the Religion like faithful Christians and, like the inhabitants of the Republic, obeyed the laws of the Nation. For this reason, after having learned what they ought to do and practice and what has been said above, they help their parents with the work in the field; others lend their services to the whites by day, week, or month (2).

2. It would be possible here to list a pleiad of the missionaries of Tarija who have sacrificed themselves civilizing the Chiriguano; instead of thanking them, Campos' ire was raised against them. As a National Delegate, he should have done the former; in other regions the missionaries would have been decorated.

The poor missionary buried here far from the centers of civilization strains to make his town flourish, even materially; he teaches them everything he knows when time permits, tries to have them instructed in the rest outside of the missions, in the capitals. The lovely buildings, the grandiose churches, the well-organized orchestras are the work of neophytes under the immediate direction of the missionary, but what deceptions! When he least expects it, the musicians disappear one after another, the blacksmiths and other skilled workmen take flight, some temporarily and others remain in a foreign and distant land for long years, deserting wives and children. The material suffering which is experienced in the missions is bearable, but the moral suffering is not so much so; nevertheless there is resignation throughout, because God allows it to be thus, and this is

/306 cont./

797 continually shown (3).

3. A rest is almost imperative after a long stay in the missions, in order to refresh the spirit, because a bow which is always bent breaks, says the Evangelist St. John.

/307/ There is no traveler who does not marvel upon considering the progress of the missions, upon considering the beautiful works of the Indians, when they think that years ago there were impenetrable jungles and bare hills on the site now occupied by the grandiose temple and buildings. As was said by an enlightened Englishman, Protestant in religion, of course, the Catholic missions among the Chiriguano are like oases in the desert, and to see them at a distance stirs who knows what in the heart; even I do not know what I experience when on some journey I again approach and see them in the distance.

The Method

The method established since the beginning of the first founding of the missions cannot be improved upon, in that it looks toward moral and civil progress and has yielded practical results, especially in some missions where, despite the fact that they have been in existence only few years, almost all speak the national language moderately well. Is this not a near prodigy, achieved with a race whose language has no analogy with

000 civilized languages? /The remainder of p. 307 and the first paragraph on p. 308 are omitted. The remainder of p. 308 follows./

167 464 [797] Following the method which has been implanted, the missions progress and would progress further if the Chiriguano were not so changeable. Neither in their towns nor in the neighboring cantons is there any lack of work for them; but rather it is day laborers who are not to be found; they prefer to go far away where they may earn less than here, spending their small gains on things that are useless and harmful to them (1).

[511] 1. There are neophytes who stay on the haciendas

/309 cont./

167
464
511

of the Argentine Republic for eight or ten years: they drink it all up and when they want to come back they scarcely bring back more than a knife and a small black garment /hemina/, which costs little.

If one asks the reason for this procedure, so strange for them themselves, they answer that in their town they could never save up ten or 15 bolivianos, because they spend them immediately on trifles for themselves and their families, while in the Argentine Republic they keep their money in the master's house and, when they come back, buy clothing and even animals, tools, saddles, and other items. There is some truth in this, but just as it is not completely true that here their money does not last, neither is it completely true that they bring clothing and other things from Argentina. Those who are a little careful and who are not lazy dress very well here, while the vice-ridden in Argentina let themselves be overcome by laziness and return as naked as they were before: they arrive, spend or waste, if they have anything, and finally go off to live as they please (2).

101
167

2. The Chiriguano Indians call the gauchos, or natives of Argentina, criollos /Creoles/: they apply the same name to those of their own race who settle there for many years.

799
89
191
177

The method of instruction as it is applied yields prodigious results in the girls, who, in addition to learning their letters and worship, learn in the schools the tasks proper to their sex, from spinning to embroidery in silk and gold: certain mission schools for girls, for example, the one at San Antonio del Parapiti and the one at San José de Tigüipa arouse real admiration in visitors, both because of /illustration appears here/ /309/ the handiwork which is done in them and, in the former, because of the Spanish language, which from first to last they all speak with considerable perfection, since from the beginning the language of their parents has been absolutely prohibited for them in the school, even among themselves.

Gr Mono—410 M-5 (1000-1011) 1010 SP10 Chicagoana SP15

799

Interior of Old St. Pierre's Church

/309 cont./

799 87 868 191 177 Should this method be followed, in a few years nobody would know that the mission Chiriguano belong to the race, because little by little the parents would teach their children the Spanish language, as I have already seen them do in the San Pascual de Boicovo Mission, and, if the morality still leaves something to be desired, later perhaps by means of preaching, the advice of the missionary, and the example of those who are good, all will be corrected. Semen est verbum Dei; it does not fall upon completely sterile ground (1).

799 177 1. The San Pascual de Boicovo Mission is so advanced in every respect that application has been made for it to be promoted to the rank of parish. In language, clothing, and behavior they differ little from the whites.

799 291 177 Almost from the beginning the schoolgirls were forbidden the use of the tipoy, being forced to dress in the same way as the women residents of the nearby towns; today they are very accustomed to the said clothing and do not change it for any reason in the world in the missions; only those girls who run away and even practically denounce their religion dress in the tipoy again, like the infidels, in order not to be recognized. By means of the teaching of the Catholic religion, the learning of the national language, and the change in clothing, the transformation is continually taking place, until little by little the distinction between the races will disappear, by means of the union of their tastes.

What the missionaries have done for the clothing of the girls, they are also doing for that of the boys, trying to make it decent. For both boys and girls, so long as they reside in the schools, the missionary of each mission provides their clothing, having it brought from some departmental capital and distributing it free of charge twice and even three times a year, or when he sees the needs of each student. In this way, after they are married, they themselves work in order to continue dressing in the same fashion or better than when they were in school, since some also wear socks /botines/ and shoes, and there are a number of women who

/309 cont./

797 29 177

in addition to the ordinary clothing, use a waist /corpiño/, hat, socks, and small rug /alfombrita/ in church (2). /Page 310 and

[184] [192]

2. The place where they dress most elegantly is in the missions of the Parapiti Grande, especially the women, who even have saddles for traveling and for riding about on horseback.

the first paragraph on p. 311 are omitted in the translation. The remainder of p. 311 follows./

Conclusion

797 In conclusion, let it be noted for a final time that the Bolivian nation and people have opened to commerce and industry the broad region described in the first chapter of this work. This is due to the Franciscan missionaries, whose labor dates from the year 1609; they faced all the dangers; they risked their lives in the forests, in the torrential rivers, on the summits of the hills, they suffered thirst, hunger, fatigue, cold and heat, they endured with resignation the calumny and persecution of the people without conscience who never failed to make them the target of their filthy mouths and tongues.

[448] The work has been accomplished; previously nobody went among the Chiriguano without the risk of falling victim; today the entire region is one with more or less large towns, there are provincial capitals, cantons and vice-cantons; the merchant passes through the Chiriguano towns, sleeps, very highly esteemed, in their houses, and the whites themselves, scattered throughout the region, have every guarantee of safety. This is a real prodigy owing to the Religion of Jesus Christ, preached by the missionaries; it is one more proof of the fact that the Cross is constructive.

[177] /312/ It is evident that the native element is disappearing because of the causes previously enumerated during the course of these lines (1).

1. If the present missions remain and new ones are founded in the centers that are left today,

/312 cont./

000

the race can endure for a longer time. The same is true, if, instead of forts, the Government, at less expense, were to found missions in the places which are being explored at the present time; useful hands would be obtained for commerce and for agriculture, without the destruction of the poor humanity.

I finish by giving thanks to the Divine Providence which has brought about here the civilization of the race, utilizing for this purpose its simple and humble subjects, such as the sons of Francis of Assisi, who came to this New World immediately after it was discovered.

To those readers who have followed me benevolently and to those who have charitably criticized my poor writing, I give my sincere thanks and at the same time pray that they will deign to pardon such errors as they might find. Laus Deo.

End of the Work

/Illustration appears here./

/313/ Appendix

121
126

The time and place do not now permit me to draw a map of the entire region that I have described in the first chapter of this ethnography; nor do they permit me to write clearly about the other tribes which populate the eastern part of the Bolivian Chaco, which has recently been explored (1).

1. I believed that a map was indispensable for the "Guide to the Chaco." I drew it recently, and it is soon to be published at the expense of the Supreme Government. I may perhaps get an extra run of 1,000 copies for the present work.

Mataco SI 7

291

Group of Mataco Indians

C /313 cont./
121
122 If the Supreme Government and the friends who have helped me in this first edition continue to provide me with their considerable support, I plan to return to the region, to make better studies, to get certain data about the other tribes, to get views and panoramas with photographic cameras, and then bring out a second, more polished edition.

C
131 Since, however, through my nomination as a Corresponding
[114] Member of the Geographical Society of this city of La Paz, I am making studies appropriate to this science, I shall set down in these pages the approximate geographical degree occupied by the known tribes which populate the extensive zone of the Bolivian Chaco.

The Chiriguano Indians are numerous from 18° 50' to 22° latitude south of the Paris meridian and from 65° to 66° 50' west longitude. However, small groups can be found at 17° 30' latitude and other groups at 22° 35' toward the south of present-day Yacuiba (2).

2. I follow the Paris meridian in placing the tribes because in the body of the work I have used the same to indicate the location of the Cayuguari Indians.

C /314/ The reader who has accompanied me as far as these
121 lines will have quite a clear idea of the Chiriguano Indians, their language, customs, and beliefs, and consequently I have nothing to add with regard to them, because this would be a repetition of what I have said. I shall say something about the others, so that Bolivians and foreigners may know the Indians with whom they are to deal.

Tapúi or Isoseños

Ce
161 The Tapúi Indians are as many as 2,000 between children
131 and adults; they occupy both banks of the Parapiti River at 19° and 19° 50' latitude and 62° 30' to 65° longitude from the Paris meridian.

Chane SF8
Tapui
Zamuco SK14

C Ce /314 cont./

567 They were the slaves of the Chiriguano and formerly lived
Ce in the immediate area of the region presently occupied by the
195 city of Santa Cruz de la Sierra, from where they had to emigrate
648 upon the arrival of the Spaniards who founded said city.
167
131 These Indians speak the Chiriguano language with slight
differences in pronunciation, and they have some peculiar words,
C Ce but they understand one another perfectly.
197 They are completely pacified and go continually to the
Ce haciendas of the Argentine Republic; almost all of them know
464 the Spanish language, especially the men; they dress decently
167 and help the industrialists who have settled there and who are
191 the owners of the land.

Ce In olden times the Isoseños or Tapúi were very poor and
177 lazy, but today their condition has improved because white
648 Christians from Santa Cruz have settled among them, to whom
464 they lend important services in cattle raising and agriculture,
133 but the latter is very limited because in the best season the
principal region of Isoso is flooded by the continual overflowing
of the Parapiti River.

Sirácuas or Empelotos

Z
101 These human beings are called Sirácuas because they
342 open deep holes in the ground in the form of caves with a wooden
291 spatula and rest therein; they are called Empelotos because
both the men and the women go about naked.

Z Rarely do they let themselves be seen and only by chance;
101 they are few, there may be as many as 1,500; the language
161 they speak is unknown, and so they are in a completely savage
197 state.

Z /315/. Their residence is the thickest part of the woods and
131 at a short distance from Isoso between 19° to 20° latitude and
65° 50' to 64° 10' longitude.

Zamuco SK14
Tapiete SK13
Yanaiguas

/315 cont./

Z 648 721 Nothing is known about the origin of these wretched Indians because they run away from civilized people; nor do they allow the latter to occupy the region that they inhabit, because they kill treacherously by night or even by day, if they are superior in number.

Z 221 Perhaps in some distant day they can be reduced with the colonization of the territory, because it is supposed that they follow the dry course of the Parapiti River in order to be able to live, at least in winter, when the water in the lakes dries up.

Yanaíguas or Ñanaíguas

T 174 197 It is not true that the Ñanaíguas are Chiriguano in origin, for if this were so they would all speak something of the language. Those who understand it are rare, and those who speak it very rare; the latter have learned it from their dealings, not only with the Chiriguano, but also with certain whites to whom they have begun to lend their services.

T [464] T 131 Their territory is located between the Parapiti River and the stream of Cuevo, from 20° to 20° 32' latitude and from 65° to 65° 40' longitude.

T 181 177 648 They are not numerous, but are quite inoffensive and peaceful, for which reason it is easy to reduce them, and I do not believe the day is far off. In the region of these and other Indians, there are explorations going on today which will necessarily result in intercourse and subsequent civilization, given the peacefulness of the natives.

C 101 186 T 101 The Chiriguano have given [illegible] said name to these Indians. They call them Yanaíguas because they are dwellers in the forest, and this is a term of contempt, because, according to the Chiriguano, only wild animals live in the forest.

T 177 464 648 As I have said, these Indians are not like the previous ones, who run away from civilized people; they are already working with the whites, although not more than half a day, like the Toba and Mataco, and without the tenacity of the latter. They are often seen on the right bank of the Parapiti in little

Tapiete SF13
Yanaigues
Bolivian Indians SF3
Cayuguari

T
177
464
648

/315 cont./

bands of 15 or 20 looking for water, and they do not run away on seeing some passer-by (1).

1. The region in which they have begun to lend their services to white farmers is on the right bank of the Parapiti halfway between Isoso and Parapiti cantons.

/316/ Cayuguari Indians

000

The region inhabited by these Indians is now being explored. The idea, which I can call a colossally good one which will benefit the Nation, originated with the subprefect of the Azero, Don Ramón Menduiña, who inherited the patriotic spirit of his late father, Don Antonio.

BI.
648
464

This gentleman aroused the enthusiasm of the inhabitants of the town of Carandaiti, and they responded to the desires of the subprefect with the opening of 22 leagues of road, in the construction of which were involved Indians provided by the Padre Conversor of the Machareti Mission in May and June of 1911 (1).

BI.
648
643
[921]

1. Recently the Supreme Government put forward as captain of the tribes of Irentagüe the nomination of the Indian Abacatu, who in years past caused much damage to the settlers of Carandaiti in company with the Cayaguari Indians; today he lends his service to the expedition in the region, which is located east of Carandaiti, but I hereby state that this region, like Carandaiti, belongs to the province of the Azero and not to that of the Gran Chaco, as has been erroneously stated in the nomination of the said native captain.

/316 cont./

000 Neyertheless the expedition has been entrusted today to Lieutenant Colonel Ovando, who has got as far as Lake Picuígua, but information as to the main thing is lacking, that is, a hamlet of Cayuguari Indians, where there is a lake with permanent waters, on whose shores could be located a fort with a strong garrison.

BI 131 114 The road from Carandaiti to the central region of Cayuguari is traced in the body of this work; the geographic degree that it occupies is more or less indicated on General don José Manuel Pando's map, as well as the nature and character of the Indians, and so it is not necessary to repeat it in these lines.

BI 648 721 181 It is appropriate that explorers should go and present themselves in a peaceful manner to these warlike Indians, and also that they go prepared for any attack, because these Indians have the bravery of the Chiriguano and the perfidy of the Toba.

000 The founding of a conversion mission is more important in this region than in other places, in order to form a population nucleus and to reduce with gentleness these dwellers of the forest.

Ta 131 The tribe of Toba Indians is rather numerous; it inhabits the left bank of the Pilcomayo River from 21° 34' latitude to the southeast and at 65° 39' longitude.

/317/ Tobas

The tribe of Toba Indians is adjacent on the west to the Chiriguano race, to which it is completely related. These Indians lend considerable service to white Christians and consequently to the few inhabitants of Villa Montes; rarely do they cross to the right bank of the river, which belongs to the Matacos or Noctenes, as has been said in another place.

Ta 302 [147] The Toba Indian is very robust, and the woman the same; both wear their hair short and paint the entire body, especially when they are marching off to war. Some of the men and almost all the women paint their faces down to the throat in an indelible manner.

/317 cont./

304 With a thorn, tough straw, or a needle, they scratch their skin, making various designs on it, and then spread ashes, ground charcoal, or the juice of some special roots over same and let it dry for several days, until it has penetrated well below the surface of the epidermis; then they take their bath, wash their faces, the spots disappear and the designs remain in a [171] stable fashion. In this regard they imitate the Turks, with whom they certainly are not acquainted.

301 304 Another distinctive mark of the Toba race is their pierced ears, in which they place two pieces of wood to serve as earrings. These pieces are so heavy and so thick that in time they spread and stretch the ear lobe until it touches the shoulders, for which reason those who wear the said earrings are much more repugnant.

301 304 177 178 But as they now have a great deal of contact with whites, they are abandoning this distinctive trait, as well as the first-mentioned one, just as the Chiriguano tembeta is also disappearing. The tribes that have remained isolated from intercourse with the whites and the Chiriguano, however, for the most part continue both distinctive traits, and the men go about almost completely naked.

181 In not too distant times the Toba was very ferocious, but today he has somewhat modified his ferocity; nevertheless his haughtiness and treachery are still part of his very being, and it is never advisable to trust this hardy inhabitant of the forest.

648 The white man who deals with him must always be prepared, treat him as an inferior, combine gentleness with moderate firmness, pay for his labor without being too liberal, and not resort to violent methods when at midday he casts aside the implement with which he has been performing his task.

721 648 /318/ Colonel Rivas and the explorer Creveaux perished on their expeditions because they were too trusting. The latter, too kind, committed the error of disembarking in a Toba camp, his people left their weapons in the boats, and in the attack that the Indians made only one was saved to carry the fatal news to a suitable place.

Ta 593 152 684 834 /318 cont./

The Toba is jealous of his wife and she of her husband; neither of them allows any slips of this sort; should such a thing happen, revenge is certain; the boy or girl may easily die poisoned; as far as girls are concerned, they are rather free before marriage.

Ta 581 584 But should the latter be inclined to contract matrimony, the young Toba must merit her hand; it is necessary that he be an able hunter, a valiant warrior, and he loses many nights' sleep playing the "pimpin" in front of the girl's house. If her parents form a good opinion of the suitor, they promptly hand her over to him without further preliminaries; otherwise he can resign himself to seeking another girl.

Ta 584

Ta 721 648 Toba attacks on the houses of whites are frequent, and they steal whatever they can, killing the older men and taking captive the women, boys, and maidens, not so much for their own use as to profit from ransom.

Ta [492] [262] But in general these attacks are for stealing cattle, horses, and mules, the first to eat and the latter for riding, since the Toba is a great horseman and he has need of other people's mounts for his wars and attacks.

Ta 492 They do not use saddles or bridles, and they guide the horses with slaps of the hand; if they are pursued, they run like the wind, on the animal's back, on the side, or even with their bodies under the steed's belly to avoid a sure shot. In horsemanship they are superior to all the other tribes, including the Chiriguano tribe, which they nonetheless respect.

Ta 732 734 They kill their defective children, and, as a philanthropical act, those who are sick with prolonged illnesses and the old who are fatally ill are buried alive so that they may not suffer so much (1). /Illustration appears here./

A 732 764

1. This is not strange if one considers that the Aimarães /Aymara/ of the altiplano strangle the dying for hygienic reasons, so that they will not smell bad when they move them to the public cemetery which is very far away.

Group of Toba Indians

/319/

Matacos or Noctenes

M 131 648 This tribe is also very numerous; it lives on the right bank of the Pilcomayo River, occupying the part opposite the zone occupied by the Toba, with whom they maintain friendly relations which are disturbed from time to time, especially at the time when the algarrobas and other fruits ripen.

M 797 177 A group of these Indians in times past formed a part of the San Antonio del Pilcomayo Mission, where today the Chaco Delegation is located, occupying the mission buildings. But because they are as fickle, or perhaps more so, than the Toba, Religion and the State could make little progress with such Indians.

M 131 197 648 T 186 These Indians are very numerous and in small groups extend as far as the shores of the Bermejo; their language is totally different from that of the other tribes and they hardly mix, although they maintain friendly relations with the Toba, to whom they are considered to be inferior.

M 181 578 273 Their physiognomy is overly languid; sadness can be read in their faces, and they are very miserable; nevertheless they are ferocious in war, in jealousy, or in a state of drunkenness; they injure and kill one another. Out of these considerations the women refrain from drinking to the state of inebriation in order to prevent their husbands' disorders and to hide the weapons in the event of the outbreaks which frequently occur (1).

M 273 [171] M [243]

1. In the drinking bouts they are the same as the Toba; they make a mead from the fruits of the algarroba, which is almost as intoxicating as brandy; they also make mead from other wild fruits; they do not make chicha because they hardly plant maize.

M 181 721 648 They are more peaceful Indians than the Toba, are not very warlike, and do not attack the houses of the whites but profit when they can from the latter's cattle, especially should a famine break out due to a lack of wild fruits.

/319 cont./

433 They do not work, plant, or do anything similar; they
229 are but mediocre fishermen and barely hunters. To live they
241 lay up great stocks of chañar, algarrobas, and mistol fruits, and with some gourd seeds placed under the earth they have extraordinary harvests if the year is moderately rainy.

786 They organize their orgies when the algarrobas, chañar,
578 and mistol are in season, and then the quarrels and murders occur
682 among the men; these crimes go unpunished by the authorities, for there are none. But if the one who has perished had relatives they will take revenge.

342 /320/ They do not bother to build houses or such things.
513 They make a kind of oven; for it they bend some branches of small trees, fix them to the ground, cover these branches with straw or grass, and they sleep underneath in a pile in the company of their dogs.

164 This is the reason for the excessive mange which kills
515 them and makes them look so disgusting, since they are not at all partisans of the daily bath, as the Chiriguano are, and when they do bathe, they roll about in the river sand or in the ashes of their oven-houses.

584 They do not seek the consent of their parents for marriage
585 nor do they have ceremonies. Do two young persons, a man and a woman, love each other? They leave the common settlement, go to the woods, stay a few weeks, and then return, now married, to live with their in-laws or to make another oven like the one of their elders.

586 Young people divorce each other easily, but they are
152 more constant than the Chiriguano in married life. Nonetheless,
837 the women are very jealous and do not readily consent to their
593 husbands' being with other women; for this reason they keep them content with the work of bringing them much fruit from the forest and caressing them.

302 Men and women cut their hair; some of them stain their
301 faces and pierce their ear lobs, in which they put a piece of wood, like the Toba, but this is not a distinctive mark of the race.

Mataco SI7
Choroti SK6

M /320 cont./

791 They have a vague idea of superior beings, whom they fear
796 without worshiping them: the cleverest one becomes the sorcerer
756 and exploits the poverty of his companions, especially today when
648 they are earning money from the whites, to whom they lend im-
464 portant services.

M They frequently move from the region that they occupy to
169 the Argentine Republic: they work, dress, learn some Spanish
177 and a slight smattering of civilization, and return to their lands to live as before.

Choroti

Ci The zone located southeast of Toba territory is occupied
131 by the Choroti Indians, who have their own language. They
199 occupy the geographic degree 22° 30' latitude and 64° 10' longitude, on the left bank of the Pilcomayo River.

Ci They are quite numerous and peaceful, and they are not
181 treacherous like their neighbors, the Toba. Nevertheless, they
648 inspire respect in all the neighboring tribes; if a mission were to be established at said degree, the conquest of all the Bolivian territory /321/ up to 24° would be accomplished without the need of so many small forts, which are such a great expense to the Nation and which do not create centers of trade and civilization.

Ci Father Gianelli in years past visited the Choroti Indians,
799 was received with displays of affection and appreciation, and
199 found among them good inclinations toward becoming civilized, but at that time the harvest was too much for so few evangelical workers.

Ci The Choroti are not so lazy and savage as the other tribes;
181 they devote themselves to the cultivation of a few seeds and to
241 the raising of cattle, although on a small scale. They are also
231 hunters, however, and when they occupy the banks of the
224 Pilcomayo, they take advantage of the fruits the river brings them, especially in the great floods.

Choroti SK6
Mataco SI7
Güisnais

Ci /321 cont./
301 Doubtless through being very close to the Toba, they
302 pierce their ear lobes, in which they put pieces of wood, and
171 they also stain their faces.

Ci In the expeditions to the Paraguay they have never shown
648 themselves to be hostile to the whites and soldiers; rather they
[464] have lent important services and it was they who saved the life of Señor Touvar and his companions when they became separated from the expedition. Therefore the reduction of these Indians to civilized life would be very profitable.

Güisnáis

M These Indians occupy the western bank of the Pilcomayo
131 facing the Choroti Indians and southwest of the region occupied
101 by the Mataco. The geographic degree of their territory, with a very slight difference, is the same as that of the Choroti, since they are separated from the latter only by the river bed.

M They are a division of the Mataco; they speak the latter's
101 language with very little difference; their customs are nearly
181 identical and their number quite small. They are of a peaceful
241 nature like the Choroti, and like them, they plant gourds and
231 other vegetables. They also devote themselves to the raising of
197 domestic animals, such as cows, horses, sheep, goats, and chickens.

M Even the Güisnáis frequently come out for jobs in the
167 Argentine Republic, from where they also bring back weapons,
177 in order to use them particularly in the woods, killing birds, wild
464 boars, deer, and other quadrupeds.
224 They have more religious ideas than other tribes, and it

M seems that their great-grandparents might have belonged to
174 some former Argentine mission, because, more than others, they
171 recognize a true divinity. /322/ Nonetheless in their great
776 ignorance they confuse ideas, and in great fear they recognize in
[756] sorcerers a power that they do not have.

/322 cont./

648
464
466

The tribes described here are friends and allies of the Chiriguano, and, when the latter have an abundant crop of maize, the former draw near to the towns of their friends; according to tribes, they build their ovens, where they hide, along the bank of some rivulet or some stream.

They remain there, help the Chiriguano in the harvest, perform menial services for him by carrying wood, cleaning house, and doing other domestic chores, and in exchange they get a little maize for themselves and their family. When they go back into the forest, they take several libras or arrobas of maize, depending on the harvests that the Chiriguano may have had.

In the Tarija missions this happens quite frequently, because they are nearer to their territory. The caciques of the savages then present themselves to the Chiriguano cacique to announce their arrival and the presence of their tribe and the latter in turn brings him before the P. /padre/ Conversor to obtain the necessary permission.

In these circumstances none of the tribes is lazy, because they understand that in order to eat it is necessary to work, under penalty of being immediately thrown out of the foreign territory where he has found so much abundance. Neither are they permitted many months stay, because they are capable of staying until they use up all the maize and leave the Chiriguano's cupboard bare.

Several times I saw these tribes in a state of temporary emigration, and it was pitiful to see such poverty, forlorness, filthiness, ignorance, and want. Long rows of ovens could be seen in communication with one another, full of men, women, children, and dogs, and living there worse off than dirty animals in filth.

4: Nino--436 M-3 (1893-1911) 1912 SF10 Chiriguano
Tapiete SK13

/322 cont./

Tapiete (1)

797 1. With the persuasive word of the Catholic
101 missionary they could serve as an intermediary element between the Toba and Tapiete /sic/, to whom they are adjacent on the west and southeast, respectively.

648 These natives have caused several casualties among the soldiers of the Bolivian forts and lately also among the Argentinian, which indicates that one should not have much trust in them, especially when it is foreseen that they are plotting some revenge.

131 The Tapiete tribe is more numerous than its neighbors, the Choroti; it occupies the same left bank of the Pilcomayo River /323/ from 22° 55' latitude until it enters the territory claimed by the Republic of Paraguay and from 63° 10' eastward.

174 They have been settled there since time immemorial, when the Chiriguano emigrated from Paraguay; as a result, then, they were Chiriguano in origin; this is shown by their language, their inclination to work, their fondness for planting, their customs, and the place they chose.

291 Because they are so isolated from the civilized centers, they have acquired savage customs and at the present time use very simple clothing, scarcely covering the most delicate part of the body, and formerly they did not do this, at least the men.

199 The language that they speak is Chiriguano, but there are
648 differences in words and pronunciation because of the intercourse that they have had with the Toba, Mataco, and Choroti, with whom, however, they do not mix and even have hostilities on so few occasions.

648 These Indians have several times destroyed Bolivian forts and killed soldiers, but the aim that they had and will have is to flee from the white man, whom they judge to be an invader; I believe that a Conversion Mission would yield good results among them, since they do not hate the white man systematically.

Tupiete SA13

T
433
648
169

/323 cont./

They devote themselves to planting, hunting, fishing, and raising livestock: they rarely go en masse to Chiriguano towns and even more rarely to those of the whites, to which they do little damage.

Miscellany

C
824
757

In the section "Flora" in Etnografía Chiriguana /Chiriguano Ethnography/ I described the passion flower of the Chaco region of Bolivia, which is called granadilla de monte /wild passion flower/ there. Its roots are medicinal and those with pretension of being doctors there employ them to cure tapewpem.

There is a small tree called "Naranti mbocu," long thorn, by the Chiriguano, and melocotillo /small melon/ by the whites of Santa Cruz. It grows three or four meters high at most: when it blooms, its tips are aliquite light purple: its roots are put on to boil for a period of one and a half hours, and the clarified water is an effective remedy for treating dysentery.

C
122

The Franciscan school /colegio/ at Pitoní, the Reverend Father Prefect of Missions, and the Padres Conversores of the same school deferred to my suggestion that they /324/ help me in publishing the Etnografía Chiriguana, for which I thank each and every one of them from the bottom of my heart.

I extend in these pages the same thanks to a group of gentlemen from the city of Sucre, who, encouraged by Doctor Don Tomás Arana, assisted in the publication with a subscription of ten bolivianos per copy.

Finally, special thanks have been earned by two young ladies from the city of Sucre and another from the city of Oruro, who, through special deference to the author, have favored him with extraordinary alms, without imposing upon him any obligation whatsoever.

4t Niho--436 M-3 (1880-1911) 1912 SF10 Chiriguano SF10

/324 cont./

127
128

Some of the lithographs for Etnografía Chiriguana have been reproduced from the Anthropologie Bolivienne of Doctor Arthur Chervin, as well as others from the work of Señor del Campano, and the rest from photographs which I was able to get from some amateur photographers among the Franciscans.

Some of those of the first-named author and all of those of the second were reproduced from the album which is kept in the Pocoí missions and in the Franciscan Colegio de Tarija.

If the author of the Etnografía had had the necessary time available and had been able to rely upon a collaborator, it would have been easy, most easy, to have reproduced with photographic apparatus important scenes, beautiful landscapes, enchanting panoramas, high and thick palm groves, immense beaches on great rivers, and other innumerable beauties which exist in the region. In a second edition all this could be done, if the Supreme Government would make available the necessary funds so that a scientific tour might be made through the entire region in the company of a photographer.

Agradecimiento del Autor al Supremo Gobierno de Bolivia

La gratitud es una virtud, mediante la cual se agradecen los beneficios que se reciben en esta tierra; es natural y sobrenatural, aquella se funda en la naturaleza y esta en un principio divino por el cual la persona grata se hace merecedora de los bienes eternos allá.

La persona ingrata se hace abominable ante la humanidad y ante Dios, así nos lo demuestra la amargura que experimentó Judas, hombre-Dios al recibir la afrenta de Judas que tantos beneficios había recibido de su Divino Maestro.

¿Faltan acaso en el mundo personas que en tiempo de tribulación, pesares y desventuras acudan por consuelos á otros, declarándoseles amigos y luego, obtenido el fin, se les vuelven contrarios, murmurando de sus bienhechores y acusándolos de lo que no es, porque su ojo perverso les hace ver negro al blanco y blanco al negro? No faltan, y la historia de las Naciones nos proporciona de ello innumerables ejemplos.

La religión no puede menos de reprobar la ingratitud y aprobar la virtud contraria, de donde es necesario deducir que el cristiano que profesa la verdadera, debe manifestar su gratitud á los que le hacen un beneficio.

Esta obra que pronto será impresa, la principié con la esperanza de ser auxiliado en su publicación por el actual Mandatario Excmo. señor Presidente de Bolivia el Eminente Dr. don Eliodoro Villazón, que me animó á ello mediante carta de 1908. Y mis esperanzas han tenido su cumplimiento.

Efectivamente á principios de este 1912 me dirigí oportunamente al Excmo. señor Presidente, á los Ministros de Instrucción, Hacienda y Colonización señores M. R. Ma-

riaca, Carlos Torrico y Julio La-Faye, con intervención del señor Cancelario de la Universidad de Potosí señor Dr. don Nestor D. Morales y el Supremo Gobierno que tanto aprecia las obras científicas ha determinado hacer imprimir mi escrito por su propia cuenta en las oficinas tipográficas de La Paz.

Este acto eminentemente patriótico y nacional honra grandemente al Excmo. señor Presidente y á su ilustrado gabinete y compromete grandemente la gratitud del autor de la «Etnografía Chiriguana,» concluída con mucho trabajo en la misma región que describe.

Por medio de estas pocas líneas pues el suscrito agradece profundamente al Supremo Gobierno de Bolivia la deferencia con que ha sido honrado, habiendo aceptado la publicación de su obra en la manera que se determina en el oficio que literalmente reproduzco á continuación:

«Ministerio de Guerra y Colonización—Bolivia—De-
« partamento de Colonización—Nº 410—La Paz, 23 de Fe-
« brero de 1912.—Al R. P. Bernardino de Nino.—Potosí.
« Señor: En respuesta á su atento oficio de 11 de Enero
« último, junto con el cual se ha servido U. enviarme copia
« de la propuesta elevada ante el Supremo Gobierno, para
« la edición de una obra confeccionada por U. sobre la re-
« gión oriental de la República y la Etnografía de las razas
« que la pueblan, tengo á bien manifestarle que la falta de
« fondos disponibles en el Presupuesto Nacional de esta ges-
« tión impide aceptar el primer extremo de su indicada pro-
« puesta, siendo más factible el segundo, en atención á que
« el Gobierno puede encargar la publicación de su trabajo
« en la Intendencia de Guerra de esta Ciudad, que cuenta
« con los medios precisos; en cuyo caso tendrá U. derecho á
« los 500 ejemplares que solicita, conservando justamente la
« propiedad intelectual de la obra.

«Estando pues aceptada su proposición en una de las
« formas indicadas, espero que se servirá U. enviar los ori-

« ginales respectivos á este Ministerio con las aclaraciones y « documentación necesaria para el objeto ya indicado.

«Con este motivo saludo á U. y me repito su atento y « seguro servidor.—Por el señor Ministro, José Lavadenz, « Sub-Secretario de Colonización.»

A pesar de que en el oficio original anterior figura tan sólo el Ministro de la Guerra, otras comunicaciones oficiales que se hallan en mi poder, demuestran que el Excmo. señor Presidente y su Gabinete, tuvieron empeño en la publicación de mi escrito, por cuyo motivo mi agradecimiento por este favor extraordinario lo dirijo de una manera especial, primero al Excmo. señor Villazón y luego á los señores Ministros.

Potosí, Marzo 15 de 1912.

Fr. Bernardino de Nino.

NOTA.—Por razones justificables en vez de hacerse la edición de la presente obra en la Intendencia de Guerra, se hace en otra particular, para lo cual, el Supremo Gobierno fué deferente á mi petición de ayudarme con la suma de dos mil bolivianos que ya recibí, comprometiéndome á entregar al señor Ministro de la Guerra doscientos cincuenta ejemplares de la misma al terminar la edición.

INTRODUCCION

La historia es un recuerdo de lo pasado, un consejo para la actualidad y un aviso para lo venidero; ella nos da reglas para precaver los infortunios, hace que las generaciones presentes eviten las sorpresas y los venideros conozcan los acontecimientos pasados.

Los pueblos sin historia, sin sentimiento público, no merecen el honor de la gloria, ni del respeto universal. La historia de los pueblos es doble, política y religiosa, la primera puede considerarse y fundarse en el origen, en sus costumbres, en el traje que adoptaron, en su relación con los demás, en las guerras y cacerías, en los regocijos públicos y privados, en el trance de este mundo al otro y la segunda en la relación que guarda con los seres invisibles, genios ó seres maravillosos, Divinidad ó Ser Supremo, en sus prácticas piadosas, en el culto exterior que tributan á Dios reconociendo su poder y bondad; todo lo cual da origen á la Etnografía propiamente dicha.

Las épocas posteriores al diluvio, cuyos horrores describe el inspirado caudillo del pueblo hebreo en el Génesis, se presentan á la posteridad cubiertas de un intenso velo, efecto del pecado del primer hombre, cuyos descendientes confundidos en la Torre de Babel, que la soberbia humana levantára en las llanuras del Senmár, fueron adquiriendo costumbres depravadas, errores profundos, acerca de su ori-

gen sublime y divino, prácticas nada conformes á los principios de moral no sólo, si que también repugnantes y contrarias á la existencia del género humano, las que se hallan todavía vigentes en aquellos lugares del vasto imperio Chino y otros pueblos y tribus, donde no ha penetrado aún la verdadera Religión, la luz del Evangelio de Cristo Redentor, que más rápido que el rayo, desde el Gólgota se difundió maravillosamente por las cinco partes del mundo hasta penetrar y resplandecer en la Oceanía y las Américas, descubiertas por el inmortal Genovés Cristobal Colón.

Testigos de estas intensas tinieblas son la Caldea, la India y la Persia, el Egipto, la Grecia, la China, el Japón y tantos otros pueblos que por no admitir un solo Dios, cayeron en el error de ofrecer incienso á muchas divinidades, hasta adorar al Dios desconocido «Ignoto Deo» como en Grecia.

Roma, hoy capital del mundo católico, que llama continuamente á sus puertas á los grandes y pequeños de un mundo íntegro, divinizó por una serie de siglos al hombre, á las piedras, á los metales y bosques, quemó incienso á la prostitución, deificó á sus emperadores y erigió templos al vicio, á la mentira, al error, á la la lascivia y cuando el Pescador de Galilea asoma á sus puertas y predica una moral enteramente nueva, las calles de la ciudad eterna se inundan de sangre, el anfiteatro presencia la muerte atroz de millones de víctimas, de innumerables mártires que firmes en la fé de Cristo y en la moral evangélica, ponían gozosos su blanco cuello bajo la cúchilla del verdugo, ó hacían despedazar su inocente cuerpo con una bestia feroz.

El pueblo Ebreo, pueblo escogido por Dios para conservar la verdedera Religión y la verdadera idea de la Divinidad, pueblo elegido donde debía nacer el Redentor del género humano caído con el pecado del hombre primero, se arrastró y prosternó quemando incienso ante un becerro relumbrante de finísimo oro y habría caído en la ignorancia

más completa, como se encenegaba continuamente en los vicios más deformes, según vemos en la historia sagrada, si la omnipotencia divina y su misericordia no hubiesen velado por él proporcionando avisos por conducto de sus patriarcas, profetas y sumos sacerdotes, castigos ejemplares que éstos aplicaban y temores de las penas eternas que explicaban con los libros santos en los templos los levitas.

Cuando Cristo triunfó de la muerte en la cima del monte Calvario, un pueblo nuevo fervoroso que bebió la Doctrina inmaculada de los labios del mismo Redentor y de sus apóstoles, el pueblo cristiano en suma reemplazó al pueblo judaico repudiado por Dios por la soberbia de no reconocer al Divino Ungido, por el crimen horroroso de haber sacrificado al Divino Libertador después de haber dado innumerables pruebas de su divinidad, resucitando muertos, aderezando cojos y tullidos, haciendo caminar paralíticos, ver ciegos, oir sordos, hablar mudos y operando grandes curaciones de enfermos incurables con sólo el poder de su voluntad divina, ó de su dulce palabra.

Sin embargo, el pueblo cristiano que bebe la sangre y come la carne del Cordero Inmaculado en el Sacramento del amor, en la Mesa de los Angeles, aún este pueblo cuando olvida la ley divina, se entrega á los excesos de la crápula y quema incienso no á un becerro de oro, sino á los vicios inmundos, comete excesos inauditos, de los que se avergonzarían los mismos bárbaros por no decir los mismos salvajes de los bosques de América y Hotentotes de Africa.

El sitio de la Comuna de París en 1871, descrito brillantemente por el Gran Tribuno boliviano Dr. don Mariano Baptista, nos da una perfecta y horripilante idea de lo que es capaz el hombre aun cristiano, cuando llega á negar al Cristo, á su Evangelio. El socialismo había arrancado la imágen del Redentor de todas las escuelas, había proscrito la oración, había gritado: La Marsellesa; no hay más oración que la Marsellesa. A todos lados de París era incen

dio, porque el petróleo había sido esparcido con profusión las mechas incendiarias colocadas en los interiores y los barriles de pólvora amontanados en los sótanos. Y, ¿quiénes preparaban la catástrofe? Infelices jóvenes seducidas por sus madres, á quienes la revolución había arrancado la idea religiosa. Desmelenadas como arpías concurrían á los Clubs para poner pronto en ejecución las resoluciones tomadas, arrancando el principio religioso del corazón, quitada la idea del trabajo que moraliza las turbas y sustituido el socialismo juntamente con el anarquismo, los hombres aún más civilizados retroceden, se embrutecen y cometen excesos.

Si esto sucede en las naciones civilizadas, ¿qué debe esperarse en los pueblos y tribus de los bárbaros, en los pueblos y tribus de los salvajes? Los hay en casi todo el mundo donde no penetró la verdadera civilización, mas no vayamos lejos, concretémonos á la tierra de Colón y escojamos de entre todas las naciones del nuevo mundo á nuestra querida Bolivia, donde hemos pasado el mejor tiempo de la vida..... la juventud.

¿Qué hay en este hermoso suelo del Grande Bolivar? Territorios interminables, ríos caudalosos y bosques interminables, donde pululan innumerables tribus. Si fijamos nuestra vista al Norte, encontramos indígenas, si al Sur, bárbaros, si al Poniente, salvajes; mas concentremos nuestra mirada al Noreste y al Este y nuestra memoria se confundirá sin poderlos enumerar: los feroces Sirionós acechan continuamente al pobre viajero que va á Guarayos ó á Corumbá con sus negocios, ó que regresa con su recua cargada de mercaderías, hacen peligrosos los caminos por tierra, como por agua; los tobas y los matacos se disputan ambas orillas del Pilcomayo á pesar de las armas de la Delegación y fortines que saben incendiar á menudo; los tapietes amenazan continuamente los últimos baluartes y á todo su personal, porque el cañón y la bayoneta son impotentes para civilizar é infundir en el pecho de hierro y en el corazón rudo del salvaje ideas

4: Nino SF10 Chiriguano

humanitarias, ideas filantrópicas, porque el cañón destruye, no civiliza.

No me ocuparé de estas tribus en el decurso de mis páginas, de todas ellas se puede componer un libro estudiando su origen, sus costumbres, su relación con las demás tribus y aun con los blancos, su relación con los seres invisibles ó imaginarios, su idioma y sus hazañas, mas renuncio á esta ardua tarea y me concreto á la raza chiriguana, la que ha sido conquistada por los misioneros de Tarija, desde mucho antes de la Independencia Sud-Americana y luego por los iguales del Colegio de Potosí desde el año 1870 por una comarca cerrada al comercio y civilización.

Lo primero que haré en el decurso de estas líneas, es poner la descripción de la región chiriguana, luego seguirán: el origen de la tribu ó raza, el idioma, la estadística, el carácter físico y moral, la religión, la ordenación política, el pueblo, las costumbres, la imposición de la tembeta en los varones, el ayuno en las doncellas, las enfermedades, las guerras, los cantos, las reuniones y por último la muerte y el luto. Procuraré que esta obrita sea algo amena y para ello me permitiré insertar una que otra fábula que antiguamente era tenida como cierta y como tal la acatan aún hoy en ciertas regiones.

ADVERTENCIA

Sale á luz este pequeño trabajo que algunos pueden llamar no sólo inútil, sino también mal empleado, pero talvez otros que tienen el gusto de estudiar las razas, lo hallarán provechoso para la Etnografía, á pesar de que ella es insuficiente para dar una idea perfecta de la raza, entre la cual vivo desde el año 1893.

Antes de dar principio á este tercer trabajo he procurado adquirir erudición. No soy el primero en escribir de estos indios, me han precedido el D'Orbigny, el Pelleschi, el Man-

4: Nino SF10 Chiriguano

tegazza, los Franciscanos Conrado, Cardus, Martarelli, Giannecchini y el señor del Campano, etc. Pero en Bolivia no se conoce una obra completa, apenas existen apuntes ó páginas de autores dignos por cierto de todo respeto y muy competentes y los exploradores tampoco han presenciado todo lo que han escrito, de donde han provenido errores que habrían ciertamente evitado si las relaciones no las hubiesen hecho como de tránsito.

Con toda la calma posible, paciencia y tiempo ilimitado me he colocado al habla con los indios más ancianos y de buenos conocimientos, los cuales me han explicado algunos puntos, otros los han hecho corregir y los últimos me han hecho añadir; pero ya he dicho que con mi escrito no pretendo ni siquiera igualar la ilustración de los que me han precedido, sólo daré más extensión á las ideas emitidas por otros, ideas que han sido confirmadas en su mayoría por los indios á quienes me he dirigido.

Advierto finalmente que como los chiriguanos están en contacto con los indios de las Misiones y éstas antiguas y modernas son en número considerable; después de haber terminado lo que me he propuesto, añadiré á manera de conclusión un capítulo relativo á los chiriguanos infieles, á los neófitos ó nuevos cristianos y al método que emplean los Misioneros para reducirlos religiosa y civilmente y á lo que cuesta conservarlos en la fe católica.

Cada cual habrá comprendido que para evitar confusión, esta obrita será dividida en capítulos y los capítulos en párrafos para mayor claridad y para descanso del lector. Ciertos términos que debo estampar aquí necesariamente, serán escritos en idioma chiriguano con su correspondiente explicación, para que cada uno comprenda la fuerza del lenguaje. Podría también formular algunas proposiciones usuales con su correspondiente castellano, mas ni lo admite la calidad del libro algo voluminoso, ni es necesario, porque

hay varias obritas manuales impresas en esta República de Bolivia.

Los amantes de Etnografía procuren disimular cuanto puedan las faltas que hallaren, antes bien les ruego atiendan tan sólo á las noticias que relato con toda sencillez y difusión. Con las advertencias que preceden voy á principiar.

San Buenaventura de Ivo, Mayo 20 de 1911.

PRÓLOGO

Je prends mon bien partout où je le trouve.

El R. P. de Nino, Misionero Franciscano del Colegio de Propaganda Fide de Potosí, me ha honrado encomendándome la presentación al público del libro que hoy ve la luz y respecto al cual ya anunciamos su preparación en algunos números del «Boletín» de la Repartición Nacional que corre á nuestro cargo.

Muy especial motivo nos asistía para aceptar tan grata tarea: pues ello importa para nosotros, y para el interés científico del país, valioso material de colaboración que nos trae el sabio Misionero cuyo íntimo conocimiento de los indios chiriguanos, entre los cuales ha vivido como catequista durante largos años, es indiscutible.

Pesaba, asimismo, en nuestro ánimo otra poderosa circunstancia para recibir con merecido aplauso la «Etnografía Chiriguana»: pues teníamos en cuenta, que, en 1914, por acuerdo tomado en Lóndres, al clausurarse las sesiones del XVIII Congreso Internacional de los Americanistas, se ha fijado la reunión del XIX, en Washington y esta Ciudad de La Paz, cual ocurriera en el XVII, que celebró sus sesiones en la conmemoración del Centenario Argentino de 1810, en Buenos Aires, finalizando en la ciudad de México.

Teníamos que prepararnos para la actuación que se ce-

lebrará en Bolivia y ello nos sugirió la idea de que el meritorio trabajo del R. P. de Nino se dedicára en calidad de homenaje, cual lo ha hecho el autor, al XIX Congreso Internacional de los Americanistas.

Se crée generalmente que el conocimiento de la flora, de la fauna, de la geología, de los productos de exportación basta ámpliamente para llevar á cabo la obra de la colonización. Puede enviarse técnicos, ingenieros, que recorran una comarca en todo sentido y con ello trazar el cuadro exacto de sus fuentes de riqueza, el agente humano, empero, el elemento esencial sendas veces habrá sido omitido.

La opinión que emitimos será la que forme el lector americanista qué lea con detenido estudio, cual lo merece, el importante libro del misionero del cual nos ocupamos. A no dudarlo la convivencia del catequista, en diaria observación de los neófitos de su reducción, hace penetrar más íntimamente en la índole ó *alma* de los seres que están á su cargo. Quien lea los muy numerosos detalles y hechos observados y consignados en el presente libro, no dudamos, nos dará la razón. ¿Puede el explorador naturalista, el geógrafo observar aquello de que nos dá cuenta el R. P. de Nino? Creemos que la sabia perspicacia de un d'Orbigny, mal puede penetrar una faz que le está oculta.

Tanto es así, cuanto el mismo eminente explorador, cuyo nombre acabamos de citar, en sus estudios de Mójos y Chiquitos, siempre recurrió á las fuentes impresas y manuscritas que nos dejáran los Padres de la Compañía de Jesús, hasta su extrañamiento, en 1767.

Lo que más nos ha interesado, tratándose de la moderna *ciencia americanista*, es el asunto de que trata el autor: la *Etnografía Chiriguana*, vale decir el estudio de la materia prima, en su lengua, usos, costumbres, tradiciones, creencias, etc.

Se han aducido proposiciones muy graves sobre cuestiones que, entre las razas incultas, á menudo hállanse re-

4: Nino SF10 Chiriguano

cónditas, son un arcano. Mr. Tarde ha dicho con razón: «Aquello que no se ve entre la gente primitiva, como entre nosotros, es á menudo más esencial para tomarse en consideración que lo que se ve. Así, pues, lo que de ordinario no se ve entre éllos, porque ello es un arcano impenetrable, es lo que atañe á sus relaciones internas, lo que en el fondo de su corazón se pasa». Es así como en apoyo de nuestro juicio sobre el libro del Padre Bernardino de Nino asentamos, tenemos la opinión del R. P. Froberger, quien asegura «que todos los misioneros de la Congregación del Cardenal Lavigerie, que predican el Evangelio en la región de los Grandes Lagos Africanos, sin discordancia afirman que tan sólo después de una mansión de muchos años en el seno de esas agrupaciones de negros, es dado penetrar la mentalidad y, sobre todo, la psicología de esas tribus incultas. Parece, pues, que la expansión civilizadora á países nuevos, no es asequible sin el prévio estudio de tales gentes, es decir sin la etnografía».

Esta ciencia data de ayer, en su forma y en el campo de su indagación, siendo legítimamente llamada *ciencia americana*, cuyos centros de estudio son las Sociedades, cuales la «Smithsonian Institution» y otras de la Unión Americana. Nuestro Hemisferio es el campo fecundo para la investigación, en el que quedan restos de pueblos primitivos, como la rama chiriguana de la que trata el Padre de Nino.

A la inteligente colaboración que antes recibiéremos de otros ilustres franciscanos, RR. PP. Fr. Rafael Sans, Fr. Nicolás Armentia y Fernando de M. Sanjinés, cuyas obras sobre historia geográfica, exploración de nuestros ríos, etnografía lingüística, etc., dimos á la publicidad; hoy nos viene el valioso trabajo que presentamos al público y que será, seguramente, apreciado en alto grado por los congresistas de 1914.

Ahora sólo nos queda, como lo hemos hecho para los Misioneros Sans y Armentia, consignar, aunque brevemen-

4: Nino SF10 Chiriguano

te, algunos rasgos biográficos respecto al R. P. Fr. Bernardino de Nino.

Este sabio observador de cuanto atañe á los indios de las reducciones que corrieron á su cargo, nació el 29 de Agosto de 1868 en los Abruzos Aquilanos. Hizo sus estudios elementales en su país natal, Prátola Peligna. De ahí fué á cursar sus estudios superiores y demás materias, al Seminario Episcopal de Sulmona, donde recibió las cuatro órdenes menores iniciándose para el sacerdocio. Entró á la orden franciscana, vistiendo el hábito de novicio, en 1886. En 1891 ordenóse sacerdote y luego embarcóse para nuestro país.

Fué en 1893 que se le destinó á las reducciones de indios chiriguanos.

En 1901 fué elegido Prefecto de Misiones, y terminado el período de seis años, durante los cuales abrió las Misiones del Parapiti Grande, eligiósele Vice-Prefecto en el año 1907.

El fruto de lo que había observado en su carrera de catequista, principió á ser conocido en 1905, con la publicación del «Nene Chiriguano», destinado á la enseñanza de las escuelas de Néofitos.

Ya, en 1908, emprendió más vasta tarea, escribiendo la continuación de la «Historia de las Misiones de Potosí».

De 1909 á 1911, escribió la Etnografía Chiriguana, que ve la luz pública.

En 1911, practicó la visita de las Misiones de Tarija, y durante ella escribió las «Rasgos históricos de las Misiones de Potosí» por órden del M. R. P. Comisario y Delegado General, Fr. Wolfgango Priewasser, para que tal documento se publicára en el «Archivo Franciscano,» cual se está editando.

En 1911 fué elegido Delegado del Comisario en Bolivia para las Misiones, Conventos y Colegios, cargo que ejerció durante nueve meses.

Al presente, desde Mayo del año 1912, hemos contado

4: Nino SF10 Chiriguano

con su colaboración, encomendándole la redacción de una «Guía del Chaco,» que tan largo tiempo estudió y que la generalidad de nuestro público no conoce cual merece ser conocido.

Dicha Guía, presentada por nosotros al señor Ministro de Guerra y Colonización, será publicada muy en breve, mediante la autorización que hemos solicitado.

No será esto lo último que recibamos como cooperación de los Padres misioneros: pues esperamos algún contingente más, que de ellos hemos solicitado: artes y vocabularios de las lenguas indígenas de Bolivia, que aún se hablan por las tribus reducidas por los Colegios de Propaganda Fide. Tales elementos muy fundadamente son de primordial importancia para la investigación americanista, y ya, con el apoyo del distinguido Director del Museo de La Plata, hemos hecho conocer el yuracaré, leco, tacana, cavineño, faltando algo más en este orden.

Dejamos al público el formar juicio sobre la obra que le presentamos, no dudando que mucho hay que aprender en ella, si queremos darnos cuenta de la vida y manera de ser del indio que mora en las remotas regiones de la República, sobre nuestras fronteras con los Estados vecinos.

La Paz, 1º de Diciembre de 1912.

Manuel Vicente Ballivián.

ETNOGRAFÍA CHIRIGUANA

CAPÍTULO PRIMERO

DESCRIPCION

INTRODUCCION

Cuando un historiador, ó un etnógrafo se propone hacer la Historia ó la etnografía de una tribu ó raza, naturalmente debe comenzar con la descripción de la comarca que ocupan los seres humanos que deben *embargar* por un tiempo más ó menos largo la mente del escritor. La descripción general de la región es casi tan necesaria como el origen de la tribu, ella sin embargo no posible que sea en el decurso de la obra, grande ó pequeña que ella sea, el atractivo en el trabajo desdoblegar de vez en cuando un cuadro fantasía y decorosa así y amplia lírica y como fragmentos, cuando inesperadamente se le presenta la ocasión de describir ó la ligera un delicioso panorama, como el que se presenta á la vista del viajero en la cumbre del cerro Huamanta y el igual en el cerro de Iravia para bajar á Cuevo.

En mi obrita «La continuación de la Historia de Misiones del Colegio de Pitanda dije que para dar cima á un capítulo como el presente, se necesitaba tiempo, ilustración, acopio de material y tranquilidad de espíritu, cosas á propósitos difíciles de hallarse juntas en un escritor Misionero como el que escribe.

¿Acaso creerán mis lectores que en tan poco tiempo puede haber cambiado mi situación? Si lo creen, es debido á la bondad de su corazón, que la situación del que escribe en vez de mejorar, parece haberse agravado. Sin embargo sin ninguna pretensión me voy á ocupar en la descripción de la comarca chiriguana, sólo porque lo requiere naturalmente la obra. En mi anterior nunca pretendí escribir esta tercera que me costará un poco de trabajo y tiempo, porque, repito: que para escribir se necesita sosiego y al Misionero no se lo dejan los indios con sus molestias continuadas, de donde proviene la diversidad de estilo, suave ó agrio, brillante ó oscuro, amenos ó pesado, natural ó estudiado que se observa en una misma obra de un mismo autor. Pero es un hecho que sólo aquí puedo relatarlo, pues solamente los indios son capaces de allanar las dificultades que naturalmente se encontrarán en el decurso de estas páginas.

La comarca habitada por los chiriguanos la conozco casi toda, excepción hecha de algunas zonas relucidas, pero esto poco importa, tanto porque no son de importancia histórica, cuanto porque he adquirido datos al respecto, los cuales son conformes con la parte principal. Podría formarse con fácilmente un mapa regional, pero no tengo inconveniente en decir que para ello me falta competencia.

Vista general

La región que habitan actualmente los indios chiriguanos se compone de muchas cuchillas que corren de Norte á Sur, están divididas por serranías variadas en tamaño, altura, peñas elevadísimas, despeñaderos profundos y hondanas incalculables. Su longitud es muy considerable, mientras su latitud no pasa más allá de ciento ochenta kilómetros. Las montañas se elevan sobre el nivel del mar hasta tres mil y más metros, pero á esa altura ya no hay ni vestigio de arbolada, mientras que á 1,900 metros el bosque es exhuberante.

En medio de las cuchillas las cañadas corren en todas direcciones y hay algunas que de lejos parecen cerros, ó que se confunden á serlo, otras hay completamente aisladas y de pequeñas dimensiones, pero llaman la atención del paseajero por su forma cónica, como el tradicional «*Tampopati*,» situado al principio de las pampas de Yva. No hay cañon que no dé cabida en su seno á una multitud de árboles de todo tamaño y aspecto, como el sotó, á otra mul-

titud de enredaderas como el bejuco y plantas rastreras de la familia de los cactos, de los que el indio saca su provecho comiendo la fruta, cuya dulzura y acritud juntas pudieran agradar y ser preferidas por la más aristócratica dama de la ciudad de París.

En las cañadas saca provecho el indio formando su sembradío con su respectivo vallado, allá también se alimenta su vaca con la ternera que corre y juega por la llanura y allí doquiera viven las alimañas, los impávidos zorros, los inofensivos osos hormigueros y las tímidas corzuelas, mientras los monos buscan los bosques y las breñas de los cerros para entretenerse en algazara estrepitosa y los cóndores aman cernerse por los aires á una altura extraordinaria, aunque lo practiquen desde la cima de cerros elevados.

Mientras las serranías se extienden de Norte á Sur, el curso de los ríos es bastante caprichoso, caminan al Norte, retroceden al Sur, se dirigen al naciente, avanzan con intrepidez al poniente, pero el curso dominante de todos ellos hasta las pampas del Gran Chaco es de Oeste á Este, venciendo todas las dificultades que presentan á su paso las serranías de donde se precipitan con fragor extraordinario, como en los «*Pirapo*» (salto de los peces), ó cascadas de los ríos Pilcomayo y Parapiti.

En el territorio de los chiriguanos abundan los torrentes ó quebradas; más numerosos son los riachuelos que pronto pierden sus aguas, porque á los pocos kilómetros se encuentran con arenales interminables. Si el agua escondida, dejara de aparecer de vez en cuando en el curso de las quebradas que son arroyuelos en su origen, la vida sería casi imposible aquí, pues son contados los lugares como Yvu que sin tener río, ni cosa parecida, posee abundante y excelente agua. Los manantiales aparentes en el curso de los torrentes son de grandísimo provecho en los lugares donde no hay lagos, ni lagunas, porque el indio por su pereza no es capaz de construir un lago artificial para su aguada. En Itatiqui, p. e. había no há mucho unas 150 familias de chiriguanos, podían haber formado un lago para tener un elemento tan necesario, pero ni lo hicieron, ni lo harán por propia iniciativa y van á los cinco kilómetros para conseguirla, ó cuando menos está la chiriguana con su cántaro esperando que se reunan las gotas que sudan en el cerro del poniente, de donde le viene el nombre de «Itatiqui» piedra que gotea.

Los lagos son naturales, pero no permanentes, hay muchos y grandes, en unos las aguas son muy buenas, en otros ni el ganado

la bebe por contener mucho salitre: todos ellos reciben el agua del cielo que á veces cae con mucha fuerza y los llena en una sola vez. Los cristianos blancos van formando lagos artificiales especialmente en el Gran Chaco y en las cercanías de Caipipendi. Cuando el agua falta de una manera absoluta, el indio escarba la tierra, busca la raiz del «*xipoy*,» samolo, que es grande como una sandía; la corta por encima, estruja la pulpa con su mano, se convierte en agua y bebe; con esto se remedia la necesidad, cuando empero esta bebida es prolongada, engendra enfermedades.

El terreno se presta para la labranza y para la ganadería, mas ambas industrias retroceden en aquellos años en que escasea la acción benéfica de las lluvias. Entonces se pierden las cosechas y los ganados mueren por falta de alimento y por la mucha agua que beben en los ríos ó en las lagunas, en cuyas orillas se quedan por falta de fuerzas; sin embargo esto sucede raras veces en toda la comarca que por abarcar mucha extensión recibe acá y acullá aguaceros que hacen renacer la naturaleza.

Extensión y superficie

La tribu ó raza chiriguana fué numerosísima y como tal abarcaba una extensión extraordinaria de territorio; se encuentran vestigios de estos indios en las cercanías de Tarija, se los encuentra más allá de Santa Cruz, donde aún actualmente hombres y mujeres chiriguanos en su mayoría son los que prestan servicios á las familias decentes. Hácia la capital de la República todavía recuerdan los indios que sus abuelos vivían en Tacopaya y más allá aún, en Talisco, comprensión del mismo cantón. Luego se extendían hácia el río Bermejo y finalmente hácia el naciente á las pocas leguas de Carandaiti, donde comienza ya la zona árida habitada por tobas y otros salvajes.

Antiguamente pues el territorio chiriguano lindaba al Norte con la provincia de Sara, al Sur y Suroeste con la Argentina y ciudad de Tarija, al poniente con el territorio de Tarabuco y al naciente con la colonia de Carandaiti. Abarcaba según los anteriores límites una extensión de doscientas leguas de Norte á Sur y suroeste y más de noventa leguas de poniente á naciente.

Hoy se ha reducido mucho este extenso territorio por motivo de la emigración, causada en parte por los blancos, bajo cuyo dominio la mayoría no se resigna á permanecer; las pestes que diezman la raza influyen poderosamente á reducirlo más y muy luego

apenas quedará el nombre. Hoy apenas alcanza por el Norte hasta Abapó, por el Sur hasta Itiyuru de Yacuiba, por el Oeste hasta Montegudo y por el Este hasta Carandaiti, unas cien leguas de Norte á Sur y unas 40 de poniente á naciente.

Abarcaba antiguamente algunos grados de latitud y tres y medio de longitud; conforme han perdido bastante de esta superficie, así acabarán de perderla toda, porque á pesar de ser los dueños natos del territorio que les entregara Dios, como uno de ellos me decía no há mucho, no saben cultivar y adelantar la agricultura, prefieren ir á servir lejos á otros, siendo dueños del territorio en su casa. Hoy por hoy en poder de los indios apenas quedan unas cuantas leguas denominadas Caipipendi en la provincia de Cordillera, cantón Gutierrez y todo el territorio ocupado por las Misiones, más uno y otro están expuesto á pasar á dominio ajeno, porque realmente el indio no es capaz de hacer fructificar el terreno que posee; entonces los pocos sobrevivientes en el territorio serán siervos en su propia casa, como lo son tantos otros en las tierras que fueron propias.

El terreno es muy deleznable, á lo menos el que ocupa actualmente, falta en él la piedra y el casquijo y como los aguaceros á su tiempo son torrenciales, abren fácilmente rendijas que en pocos años se convierten en hondas y anchas quebradas. Para esto contribuye mucho el ganado vacuno que por su pesadez remueve la tierra más que otro ganado con su pezuña, por esto en ciertas cañadas angostas ó de poca latitud apenas hay lugar para sembradíos, pues son muchas las quebradillas que se han formado. Así es la cañada del cantón Huacaya; si en ella viviera hoy la multitud de indios que había antiguamente, por causa del bosque y de las quebradas difícilmente hallaría en las llanuritas terreno bastante para todos los sembradíos de maíz, alubias y calabazas que tanto apetecen para su comida y regalo; sólo para otros elementos sería una cañada muy apetecida, sino estuviera toda con dueños.

Cerros ó montañas

El territorio chiriguano por ser muy extenso, como ya se ha visto, es bastante variado, desde Talisco hasta Monteagudo y desde Tarija hasta las salinas de la Provincia O'Connor en la ciudad de Entreríos es muy montañoso y pocos son los lugares que se extienden para formar una llanura de algunas leguas. Sino

hay cerros muy elevados, entre cerro y cerro que determinan las cañadas, hay una infinidad de colinas de todos tamaños por su elevación, latitud y longitud.

Las pampas principian insensiblemente desde Monteagudo por el poniente y desde Aguairénta, donde comienza el Gran Chaco; dichas pampas desde Monteagudo se agrandan poco á poco, ó se vuelven pequeñas según lo permiten las serranías hasta llegar á la última cordillera que se halla al Este de la Misión de San Buenaventura de Yvu á una legua de distancia, atrás de la cual principian las inmensas llanuras del Gran Chaco, donde ya se pierde el horizonte.

Las principales montañas son: la de Padilla, denominada por antonomasia «El cerro,» por su configuración es el mismo que hácia San Juan del Pirai llámase «*Curi*». (1) En este punto el camino por el cerro es muy fragoso y largo, más hácia Padilla si es bastante largo, en cambio es cómodo tanto para bajar, como para subir, si se exceptúa uno que otro punto de corta distancia. El cerro de Padilla llama la atención de todos, producen allí y sazonan bien tanto las patatas cuanto el maíz y de ambos lados está el cerro sembrado de casas de todas dimensiones. Desde Enero hasta Mayo los sembradíos le dan un aspecto bastante pintoresco y ameno, se eleva como 2,310 metros sobre el nivel del mar, por cuya razón sin duda no contiene arboleda que recién se encuentra exuberante en el plano hacia Monteagudo en el riachuelo denominado Limón.

Vienen en seguida los cerros denominados Huacangui, Bartolo y Cazaderos, los dos primeros se hallan á la márgen derecha y el segundo á la márgen izquierda del río Acero que besa las faldas de este último; ninguna particularidad tienen los tres, tan sólo que son poblados de árboles, son bastante elevados y el camino por los mismos es pésimo. El cerro Cazaderos abunda en tigres y es el mismo que hay que atravesar ó subir para ir de San Juan del Piray á San Pablo de Huacareta; antes de subir dicho cerro hacia San Juan, hay otro pequeño llamado Ñañoloma, llama la atención de todos por ser muy angosto, bajo y recto, es una raya que se levanta en medio de la cañada y sigue sin terminarse hácia el Sureste; el río Piray y el Parapiti bañan los pies del Ñañoloma.

(1) El cerro es distinto del Curi, porque aquél es más bien un enorme peñón que termina en las serranías de Limon.

Monteagudo tiene una llanura bastante accidentada, pero no es estorbada por cerros sino recién á las trece leguas, es decir hasta el río Parapiti en Matara, donde hay otro cerro solo renombrado por ser camino y camino pésimo. El río Parapiti lo baña en sus pies y por el mismo con mucho atrevimiento se abre paso en la dura piedra, formando allí una cascada; por este mismo cerro se sube para ir del Cantón Ingre, al igual de Igüembe, cuyo paso es también demasiado fragoso.

Desde Matara hasta Ivo siguen los cerros y colinas de poca consideración, si se exceptúan los cerros de Itiranti, Saararenta y el Incahuasi que separa la provincia del Acero de la de Cordillera; en Incahuasi hay una infinidad de restos de fortalezas y casas que según dicen y el nombre «Incahuasi», casa de Inca, lo indica, fué campamento de indios quechuas, cuando á las órdenes, de uno de sus emperadores quisieron conquistar á todos los chiriguanos, pero tuvieron que detenerse en la cumbre de dicho cerro sin atreverse ya á bajar á las pampas de Carapuricito, donde eran esperados por todos los indios, aliados con los tobas.

Cuevo, como todos los cantones de la frontera, está cerrado entre dos serranías, la de Saararenta al poniente y la de Aguaragüe al Naciente, esta es la última que se halla, es bastante elevada, mide 1,500 metros y con ella terminan las cordilleras hacia el este, para dar lugar á las llanuras del Chaco Boliviano.

En la cumbre del Aguaragüe la perspectiva es muy deliciosa; á la derecha se vé el pintoresco panorama del Cantón Cuevo con sus colinas, lagunas, pastales, bosques y quebrada que con su arena parece un inmenso listón de tocuyo que serpentea por toda la comarca y á la izquierda se extienden las interminables llanuras, perdiéndose la vista á lo lejos. Desde dicha cumbre se divisan las lagunas y campos de Carandaiti hasta perderse el horizonte por las pampas habitadas por los salvajes.

Las serranías ya nombradas del territorio antiguo y moderno de los chiriguanos siguen al Norte y al Sur hácia Santa Cruz y hácia Tarija y la Argentina, en cada lugar toman distintas denominaciones, pero son ramificaciones de los renombrados Andes. La última, el Aguaragüe, la he recorrido hasta Santa Cruz y pasa al Norte de dicha ciudad, lo mismo por el suroeste hácia Tarija y provincia O'Connor, termina en el Tartagal de la República Argentina.

Ríos y Lagunas

Fácilmente se comprende que esta vastísima superficie y extensión de territorio cruzada de Norte á Sur por tantas montañas de todas alturas y dimensiones y de muchísimas colinas en todas direcciones, está surcada por ríos, torrentes, quebradillas, riachuelos, manantiales abundantes, mientras en el Gran Chaco todos estos desaparecen y comienzan á verse las lagunas y lagos naturales ó artificiales.

Los ríos que bañan la región chiriguana son cuatro: el Pilcomayo, el Parapiti, el río, Grande ó Guapay y el Acero. El Pilcomayo principia al Noroeste del departamento de Potosí y atraviesa el territorio chiriguano por el Sudeste. Su agua cristalina y dulce hasta el sur del Cantón Igüembe, es algo salada en Huacaya y Villamontes, porque al Sudeste de Ibopeiti recibe como afluente al rio Salado, de aguas algo abundantes; contienen mucha sal, porque pasan por las salinas de la provincia O'Connor. Su lecho es ancho y poco profundo, pero, su agua es abundantísima desde Diciembre hasta Abril por ser estación lluviosa. Si en Villamontes abren los alemanes ú otros la gran acequia que ya proyectó el Supremo Gobierno, ya se hará casi imposible aún con lanchas la navegación de este río hasta los esteros del P. Patiño, porque no habría agua suficiente para ello

Abundan en el Pilcomayo los peces: el bagre, el sábalo y el dorado; de este último hay algunos muy grandes, de un metro y medio de longitud. Las primeras avenidas en la estación de agua arrastran y matan muchos peces, dejándolos en ambas márgenes tendidos en el suelo, ó amontonados como piedras y leñas. Entonces los indios chiriguanos, tobas y matacos llenan sus casas, perros y cuervos acuden allí por miles y se hartan, mientras el aire se llena de miasmas insoportables

La época más conveniente y segura para pescar es desde los fríos de Mayo hasta fines de Julio y en ciertos años hasta mediados de Agosto, entonces todos los indios son pescadores, pescan para si y para negociar, abren el pescado por el medio verticalmente y hacen secar al sol Si nadie va allá por cambalache, salen ellos á vender á 20 centavos cada uno; pero generalmente las tribus lejanas de los ríos cuando es tiempo de pescado, van á las orillas del mismo, llevan maíz ó harina tostada y en cambio traen pescado en abundancia.

[facing p.9]

Río Parapití

Las orillas del Pilcomayo son dificultosas para abrir acequias, porque son bastante elevadas, pero hay que confesar también que los indios no se preocupan de adelantos, no aspiran como los blancos que se han domiciliado en sus orillas; éstos también por ser pocos, pobres y de reducidos alcances, prefieren casi todos enriquecerse luego con poco trabajo y poco expendio de dinero, por esto se dedican á la cría de ganado vacuno y de cerda que prosperan sin mucho cuidado, ni gasto.

El Parapiti es el segundo río nombrado, contiene menos agua que el primero y en Pomabamba, donde principia, es muy insignificante, pero á las diez leguas, ó sea después de haber atravesado la serranía del Curi, ya comienza á ser respetable y en frente al pueblo de San Juan del Piray parece una bestia feroz que se dispone á luchar con un contrario de menores fuerzas, como es el río Armado, cuyas aguas hace retroceder ó detener, como se detiene el lacayo á la presencia y á la vista de su amo.

Este río corre de poniente á naciente con pocas irregularidades hasta Mariqui del cantón Parapiti, de aquí se dirige al Norte y desde su principio atraviesa la parte céntrica del territorio chiriguano. En San Juan del Piray el río dista del Pilcomayo unas doce leguas, fácilmente podrían unirse ambas aguas y formar uno solo, para lo cual hubo proyecto, pero causaría mucho daño á la agricultura, especialmente en la Provincia de Cordillera y el Pilcomayo apenas tendría la ventaja de aumentar sus aguas y ser talvez navegable desde Villamontes hasta los Esteros.

En San Juan del Piray el río Parapiti recibe como afluentes el río Armado y el río Piray y más allá de San Pablo de Huacareta se le unen aún las aguas del río de Sauces y varias otras. Recién pues el Parapiti es río de alguna consideración y su lecho es peligrosísimo casi en todos sus pasos por la falta casi absoluta de piedra, especialmente desde las Misiones de San Antonio y San Francisco hasta el cantón Isoso.

En este punto el río se pierde completamente desde el mes de Junio hasta Diciembre ó Enero, obligando á los industriales á practicar grandes excavaciones en su lecho para poder abrevar sus ganados que deben descender hasta los cinco metros de profundidad en ciertos sitios. Es fácil verse el curso del río ya seco, porque en tiempo de grandes avenidas va dejando en la orilla toda la basura que arrastra y en su lecho toda la arena; las aguas aparecen nuevamente para formar el río San Miguel en la Provincia de Velasco.

El provecho que saca del Parapiti la agricultura y la ganadería es indiscutible, sin él sería casi imposible la existencia del cantón Parapiti y cantón Isoso. Toda la riqueza de ambos territorios desaparecería, no habría ganados, ni establecimientos azucareros, ni arrozales como los hay actualmente en ambas orillas que se prestan á maravilla para abrir acequias y regar los cañaverales que los hay en abundancia. Sin embargo las avenidas extraordinarias de ciertos años perjudican mucho haciendo desaparecer casi completamente plantaciones y enseres para la elaboración del azucar.

Este río contiene pocos peces, no hay más que el bagre y el sábalo y otros de poca estimación; los dorados grandes no existen y sólo hay algunos pequeños en su afluente el río Piray, pero ¡cosa extraña! no penetran al Parapiti; en la confluencia retroceden. Más abajo de la Misión de San Francisco los peces desaparecen, porque el agua disminuye hasta perderse casi toda cerca de Mariqui.

En Isoso la siembra de maíz se practica por el mes de Junio para recoger la cosecha antes que principien las grandes avenidas que todo lo inundan, de modo que en tiempo de lluvia sólo se contentan con sembrar frejól, calabazas, melones y sandías á lo lejos del lecho del río, pero no siempre produce el fruto, pues la región es algo árida. Las aguas de este río son bastante dulces y debe ser una de las causas de que la agricultura es muy vigorosa en sus orillas, como puede observarlo cada viajero.

El Guapay ó río Grande es el tercer río de que hice mención, en Cordillera se llama Abapó y Guapay ó río Valiente por los chiriguanos, tiene principio en el departamento de Cochabamba, baña la provincia de Arque y atraviesa el Norte de la comarca chiriguana, bañando parte de la provincia de Cordillera. Pasa por Santa Cruz y confunde sus aguas en el Mamoré; sus aguas dulces y cristalinas contienen abundantísimos peces

Las márgenes de este río en la provincia de Cordillera permiten fácilmente la abertura de acequias para dar fertilidad á los terrenos adyacentes. Allí en la márgen izquierda, especialmente en Abapó y Cabezas parece que el río invita al hombre para que saque provecho de sus aguas, regando grandes extensiones de territorio. ¡Cuánta riqueza tendría la República con una colonia de ultramar en las márgenes de este río! Pero mientras no haya medios de transporte con la construcción de líneas férreas, es imposible todo adelanto, es imposible pensar en colonias, porque el

inmigrante ni viene á pié, ni está acostumbrado á alimentarse tan sólo de tostado, mote ó calabazas con alubias.

El río Acero es afluente del anterior. Tiene origen más allá de Supachuy y á las cuatro ó cinco leguas del pueblo es ya caudaloso, sus aguas hacen andar muchas paradas de molino, son cristalinas y dulces, abundantes en peces, sábalos, bagres, dorados y otros muchos. El lecho del Acero es muy pedregoso, sin duda porque corre por cerros y colinas bastante ásperas: sólo en tiempo de lluvias es peligroso cruzarlo, porque contiene abundante agua y es impetuoso, en otros tiempos se pasa sin cuidado alguno.

Además de estos cuatro ríos principales hay otra multitud de riachuelos y quebradas que contienen abundante agua, mientras no se alejan de los cerros ó no dejan de deslizarse entre medio de colinas pedregosas; pues conforme llegan á los arenales, ya se pierden, y entonces aún para beber, es necesario practicar excavaciones más ó menos profundas. En la provincia de Acero, cantón Tiencha existe el riachuelo Taperilla que arranca desde lejos y convierte aquella comarca en una delicia y la hacé muy productiva, pudieran allá practicarse grandes plantaciones de todas las plantas y semillas productivas.

Desde el cantón Igüembre comienza la aparición de lagunas naturales y artificiales: las primeras terminan en el cantón Cuevo y las segundas comienzan á parecer desde Buyuivo, vice-cantón Sancaroinza y siguen por Caipipendi, Carandaiti,, Parapiti, márgen derecha. Unas y otras están expuestas á secarse durante el año, pero si las lluvias son abundantes alcanzan fácilmente á la nueva estación lluviosa. Las lagunas son un grandísimo beneficio en las zonas áridas, y sin ellas no habría vida, como no la hay donde faltan; cabalmente por carencia de agua es dificultoso atravesar las llanuras del Gran Chaco para ir más pronto al Paraguay. Un ferro-carril de Santa Cruz á Isoso y de éste al Oriente, línea recta, salvaría toda dificultad; serían cien leguas por terrenos llanos algo accidentados.

Clima

Sin tener en cuenta uno que otro caso aislado en toda la comarca ó en parte de ella podemos sentar como principio, por la experiencia, que en la vasta región habitada por la raza chiriguana, no hay más que dos estaciones en el año, llamadas verano é in-

vierno, á pesar que ellos distinguen nominalmente las cuatro estaciones: «*Arucu, Roi, Macutiha, Ipiroba*», calor, frío, siembra y cosecha, ó sea: verano, invierno primavera y otoño.

Las dos estaciones de que yo hablo son muy marcadas; por la abundancia de lluvia el verano y por la sequía el invierno. Las primeras lluvias principian en el mes de Noviembre ó á fines de Octubre alguna vez, aumentan gradualmente y son frecuentes en el mes de Enero, escasas en Febrero, irregulares en Marzo y generalmente se suspenden en el mes de Abril, ó pasada la Pascua. Son precedidas las lluvias y acompañadas de relámpagos, rayos y truenos que llenan de espanto, especialmente cuando se les agrega algún viento impetuoso y terminan dejando en el aire una frescura incomparable; rara vez la lluvia cae con calma como en otras partes del mundo.

La lluvia casi siempre la trae el viento Sur, raras veces los demás vientos, nunca ó casi nunca el viento Norte. En la comarca en que actualmente habita el chiriguano casi nunca se vé la nieve, raras veces cae en las montañas más altas, que se deslíen en las primeras horas de sol. En las noches de Junio y Julio se congela alguna pequeña cantidad de agua, pero no sucede todos los años.

La temperatura es muy variable en todo lugar y es irregular aún en toda la comarca antigua, tanto por la elevación de los lugares, cuanto por los accidentes atmosféricos. La temperatura más baja es 5, la más alta 34 y la media 18. Los meses de más calor son Noviembre, Diciembre y Enero y los más fríos Mayo, Junio y Julio; sin embargo caen heladas aún en los meses de Agosto, Setiembre y Octubre que son muy sofocantes por la carencia de lluvias que refresquen la atmósfera. Aunque el calor sea muy fuerte en los meses de Noviembre, Diciembre y Enero, viene templado por la acción benéfica de las lluvias que caen con frecuencia y en abundancia, pero si, como sucede, se suspenden por alguna temporada larga, el calor es casi insoportable de día ó insufrible de noche, corriendo el sudor por el cuerpo, como baño que no deja ni conciliar el sueño sino por las mañanas que siempre son algo frescas.

La temperatura arriba indicada se observa regularmente en el centro de la comarca; al Norte, poniente y Sudoeste varía. En Santa Cruz marca más grados el termómetro, en Padilla y en Tarija menos, hay días en que puesto el termómetro al sol ha marcado 60 grados de calor y á pesar de esto no produce frecuentes insolaciones á estos indios que nada de abrigo llevan en la cabeza en sus tareas de la campiña.

En los meses de frío sólo cuando domina el viento Norte, se gozan días muy agradables y de una claridad excelente, mas el viento Sur todo lo descompone, cubre el cielo de nubes y principia la llovizna y el frío que entristece el corazón, produciendo las enfermedades, porque los cambios son muy repentinos aun en la estación de lluvias. Fácilmente el viento Sur en el verano hace perder en pocos días las cosechas, ¿de qué proviene esto? He dicho que las lluvias son traidas casi siempre por el viento Sur, pero sucede que en vez de lluvia cae granizo en una gran extensión de territorio, entonces se resfría inmediatamente la atmósfera, principia el viento que es frío, cuya frialdad se aumenta pasando por la región del granizo y, como los maizales son todavía tiernos, fácilmente se pasman. Grande es el granizo que cae, revuélvese la tierra, la hace abrir y mata pájaros, ovejas, cabras y otros animales, sino pueden esconderse entre espinos, ó debajo de árboles copudos, mas esto ni sucede con frecuencia, ni todos los años.

Los temblores son rarísimos, los he oido dos veces durante mi estadía en la región, el año 1899 y el 1909, mas el viento á veces es tan impetuoso que parece produce temblor; y no hay duda que arranca árboles y los desgaja, arruina los edificios y desmantela los tejados. Los extranjeros en este clima tan ardiente ó inconstante luego envejecen y canan, pero los naturales acostumbrados desde la niñez y, á pesar de los vicios de la bebida y otros á que se entregan, gozan de una vida relativamente sana y larga.

Se comprende con facilidad de lo dicho que aquí las estaciones del año guardan un orden distinto del que se ve en el continente antiguo. A pesar, pues, que no habría más que dos estaciones, podemos y debemos considerar siempre las cuatro para seguir la regla general del universo que divide el año en cuatro partes. El verano principia el 21 de Diciembre, el otoño el 21 de Marzo, el invierno el 21 de Junio y la primavera el 21 de Setiembre, pero todas ellas se adelantan á la época señalada, como cada cual que aquí habita, puede ser testigo.

Fertilidad

La serranía del Aguaragüe que se halla al naciente y á una legua de distancia de la Misión de San Buenaventura de Yvu, es la última en el territorio chiriguano. Pueblos reducidos y familias esparcidas acá y acullá, de estos indios, hállanse todavía al Este de dicha serranía á la distancia de unas 15 leguas, pero más allá

ya no, porque la zona es árida y seca «*igüi utini vae,*» como ellos dicen, y el chiriguano acostumbrado á sembrar maíz, alubias y calabazas no puede vivir donde falta la lluvia para su sembradío y el agua para su baño diario.

Cuanto más el viajero se vá acercando al Gran Chaco, encuentra menos agua y menos fertilidad, los mismos campos de Yvu son una prueba patente, raras son en dicho lugar las cosechas abundantes. Cuando en otros lugares las lluvias son torrenciales, en Yvu escasean, cuanto más se camina al poniente del Aguaragüe, tanto más el terreno es fértil, porque los cerros y colinas son más frecuentes y más altas, el agua es más abundante y por consiguiente el terreno con más humedad, lo que es necesario para la producción agrícola.

Los campos son á propósito para el ganado vacuno y caballar, para multiplicar ovejas y puercos; el año que deja de llover empero, carece de alimento para los ganados, como carece de agua, el sufrimiento es mucho y mueren bastantes, cerca de las aguadas que tienen á grandes distancias de los lugares donde hallan de que comer, como son las faldas de los cerros y la cima de las colinas, abundantes en hojas de árboles.

La campiña se viste de hierbas en el verano, mas principia á embellecerse la región en la primavera y antes aún. La rigurosa arboleda seca y sin hojas durante los meses de frío principia á vestirse de verde follaje en los comienzos del mes de Setiembre y en pocos días la naturaleza rejuvenece. Es muy hermoso contemplar entonces desde una pequeña altura una extensa pampa, donde haya algarrobos, sotos y catalpas ó lapachos, verdes los primeros, colorados los segundos y amarillas y moradas las terceras.

El territorio es productivo sólo en tiempo de lluvia, porque el chiriguano por lo general no se toma la molestia de practicar una buena acequia donde puede; todo lo espera de lo alto de los cielos. En las orillas de los ríos podían haber hecho maravillas en los tiempos pasados, hoy es ya difícil, porque son muy pocos y se contentan como sus abuelos del maíz, un poco de caña dulce y otras golosinas, como camote ó batata, mandioca y maní.

Las siembras en grande escala comienzan á fines de Noviembre ó á principios de Diciembre, después que el territorio haya sido regado con dos ó tres aguaceros abundantes. El maíz crece muy alto y cuando no falta la humedad produce dos y hasta tres frutos cada planta. Los frejoles producen tres cosechas. La caña dulce se eleva á la altura de dos metros y aún más, la mandioca

produce una arroba cada planta y la batata más aún, porque una sola planta puede extenderse y se extiende ocho y diez metros, siendo productiva en cada raiz que introduce en la tierra, hasta que se la cubra allí convenientemente con tierra.

No se puede dudar de la feracidad de la comarca que describo, pero los pobladores no la cultivan. Si hubiese en este territorio personas á quienes gustara el trabajo, el terreno produciría más; para esto no sirve ni la gente mestiza, pues el que fué peón en Sucre ó Tarija, aquí quiere ser señor, porque no es chiriguano, de donde proviene que las mismas orillas de los ríos, esas márgenes del Parapiti y Río Grande, que parece estén convidando al agricultor, permanecen casi incultos. El cantón Ticucha es otro territorio, donde una colonia de extranjeros haría maravillas, plantando viñas y árboles frutales y tantas otras producciones que pueden desarrollarse allí; lo mismo dígase de tantos otros parajes.

Parece que en ciertos lugares no produce la uva, pero es porque no se han hecho ensayos; no há mucho el P. Misionero de San Antonio del Parapiti plantó unas 200 cepas, ¡quién creyera! á los seis meses algunas plantas produjeron su fruto bien sazonado y las plantas se desarrollaron de un modo extraordinario. Casi en todas las misiones hay el cultivo de la viña y en Charagua la hay en grande escala por obra de extranjeros, de modo que lo que se necesita, son hombres pensadores y buenos agricultores para hacer producir estos hermosos territorios, especialmente las márgenes de los ríos, donde se pueden establecer plantíos de caña dulce, platanales, cafetales, viñas y tantos otros elementos que producen por acá.

El bosque desde el pie del Cerro de Padilla es muy vigoroso y así sigue al naciente hasta terminar al Aguaragüe. Las higueras producen con poco cultivo, el nopal sin ninguno, pues abunda en las colinas y cerros y, fruta tan agradable y refrigerante, es del primer ocupante. Producen las chirimoyas, las naranjas, limones y guayabas, la cebolla y la patata, el algodón produce en todas partes, el tomate y el ají madura en todo el año y en las huertas la lechuga, las coles, coliflores y pimientos constituyen la belleza de algún paraje sin tener en cuenta el provecho que reportan los gastrónomos. Aún los duraznos darían buenas frutas, pero son muy perseguidos por las mariposas negras que las dañan antes de que sazonen.

Sin trabajo el terreno no producirá más que abrojos y espinas

y hasta mientras habrá acá solos chiriguanos y solas vaquerías, poco será el adelanto y poca la población, porque el indio no tiene aspiración, la vida es relativamente barata; los blancos prosperan cuidando bien sus ganados y del terreno no se puede obtener más fertilidad, porque las propiedades de unas cuantas familias son muy extensas y no permiten fácilmente el domicilio de numerosos arrenderos que ni siempre dan buenos resultados, ni todos vienen ó piden arriendo para la sola labranza. Todos desean enriquecerse con facilidad y pronto y lo mejor es criar ganado, de donde resulta que existen grandes extensiones de espinas y abrojos.

Flora

En el decurso de esta somera descripción he hecho notar que en el país de los chiriguanos los cambios atmosféricos son muy repentinos, sin embargo se ha notado que la región es bastante fértil, cuando es irrigada por las lluvias ó por acequias, porque riachuelos abundan especialmente en la región montañosa y uno que otro río caudaloso baña los terrenos adyacentes con sus abundantes aguas.

Abundan colinas, pampas y cañadas y estas son circunstancias para hallar en este territorio todos los climas. Hay en efecto calor sofocante, frío intenso, clima templado, permitiendo así encontrarse tierra para todo cultivo desde la despreciable calabaza hasta la sabrosa chirimoya, desde el generalizado maíz hasta el trigo, el arroz y la cebada, desde la mora que produce espontáneamente hasta la rica uva, cuyos racimos llegan á pesar tres y cuatro libras.

Voy á hacer una breve reseña de algunos árboles y plantas que conozco sin pretender la nota de botánico, estudio que no he cursado. Sólo diré lo que he aprendido con la experiencia y la lectura con detención; al describir ciertas plantas, haré conocer también el uso que se hace de la corteza, raíz, hojas y ramas de algunas.

Acacia balsámica.—Es la quina-quina bajo cuyo nombre se conoce aquí en el territorio chiriguano, árbol elevado y recto, madera óptima para construcciones, porque no la daña la carcoma, por acá la usan mucho en la construcción de las techumbres especialmente para las llaves ó tirantes, donde deben apoyar las armaduras; es abundante en la provincia de Cordillera y aún en el Acero.

Acacia saponaria.—Este árbol es grande y su madera liviana quizá más que la del cedro, pero es menor su aprecio, es blanquecina, suple mucho para hacer puertas y ventanas, pero el empleo mayor que se hace de dicha madera es en las talabarterías para hacer bastos para aperos y sillas. Las semillas son semejantes á las orejas de mono y son buenas para lavar ropa y tener el cutis del rostro libre de manchas; aquí se le conoce con el nombre de «*timboy.*»

Acacia amarilla.—Es un árbol mediano de madera algo liviana y dura, por cuya razón de la misma se hacen gavetas ó bateas y yugos para los bueyes. Para hacer fuego no es buena, porque es hediionda cuando se quema, de donde le viene el nombre chiriguano «*Tatane*» fuego que hiede; la madera es amarilla.

Acacia astringente.—De esta clase hay muchos bosques reducidos acá y acullá, es el árbol que más abunda, la madera es buena para tirantillos, porque no la roe la carcoma, la corteza contiene mucho tanino y es el árbol que más usan para curtir pieles tanto los indios como los blancos; éstos lo llaman sebil y aquéllos «*Curupau.*»

Achiote. Bixa orellana. —Se cultiva en las chacras y huertas, crece hasta la altura de dos metros y medio, sus hojas son verde-oscuras; produce abundante fruto en una especie de cápsula, guarnecida de erizos, adentro está llena de semillas rojas encendidas y éstas son las que dan mucho aprecio al arbolillo. Sirven para dar color á la comida y con ellos se pintan el rostro y los pies los chiriguanos, como se verá; para este último fin se prepara de antemano, haciendo hervir muchas cápsulas en una olla y del cocimiento se forman pastas de todo tamaño, según el valor que se les quiere dar, se hace comercio por chiriguanos y blancos.

La bixa orellana ó «*Urucu*» como lo llaman los indios, es planta de mucho valor para el chiriguano, camina desde lejos para conseguir una pequeña cantidad en los pueblos ó lugares donde se elabora.

Algarrobo.—Donde abunda mucho este árbol de extraordinaria grandeza, es en las pampas, así en la llanura de «*Curuyuqui*» de la Misión de Yvu, Isoso, Parapiti y el Gran Chaco se le encuentra formando bosques. Es muy corpulento, tiene ramas extensas que tocan hasta el suelo en unos, su tronco es grueso y no siempre recto, la madera es excelente, parecida al roble á pesar de ser oscura, y se usa mucho para hacer toneles, marcos de puertas y ventanas y aún para barriles. El árbol en chiriguano se llama

«*Iropei*» y la vainilla «*Iropei*» es larga, comprimida y amarilla; cuando está en sazón, es dulce y muy buscada por los ganados y por los chiriguanos, es su comida y bebida en tiempo de carestía y cuando no, lo es también y la aloja que hacen, es demasiado embriagadora. En la orilla del Pilcomayo aún los blancos se alimentan de esta vainilla; los tobas, chorotis, matacos y otros arman sus orgías, cuando madura el algarrobo.

Algarroso chico.—Es árbol más pequeño que el anterior, aún su fruto es más pequeño, de color overo y más dulce que el verdadero algarrobo, pero no es tan abundante como el primero. Como las vainillas son pequeñas y las semillas abundan en ella, tiene poco aprecio entre los chiriguanos, sólo lo comen por necesidad ó por golosina, la madera tiene poco aprecio, porque hay otras mejores sin duda. En chiriguano se llama «*Irope vai.*»

Algarroso agrio.—Es también pequeño y se le denomina agrio, porque realmente así es el sabor de las vainillas. En tiempo de carestía es también alimento de los chiriguanos, las vainillas son pequeñas y el árbol tiene sus parajes de simpatía, los indios chiriguanos lo llaman «*Irope-tagi.*»

Algarroso negro.—Entre los indios se llama «*Iropeuro*» y los blancos lo llaman tusca, se multiplica y crece muy luego. Alrededor de una sola bañiga pueden contarse á veces veinte ó treinta plantas recién nacidas, lo que indica que el ganado vacuno lo come en abundancia y es el mismo ganado que con su vientre lo va sembrando donde no hay. Se eleva á la altura de unos tres metros y contiene mucha espina, lo que dificulta bastante caminar por donde abunda; cuando no hay otro alimento, es un recurso para el chiriguano.

Algarrobilla.—La madera de esta planta que los chiriguanos llaman «*Iyãirogpiro*» es negra y muy buena para ebanistas, es una especie de ébano, sólida. Los instrumentos de guerra y de fiestas de las tribus son de esta madera, su tronco es tortuoso y rara vez está un solo tronco, las flores son amarillas y las bayas son muy buscadas por las cabras, pero las hace abortar.

Algodoncillo.—Es este un arbusto frondoso y de muchas ramas, crece hasta dos metros de altura, tiene flores amarillas y un capullo blanco cuando está maduro, se recoge entonces, se seca al sol, se arranca la materia de las semillas y se limpia. El algodón «*matalique*» tiene mucho uso, con él se elaboran hamacas, ponchos, alforjas y costales, fácil sería aún elaborarse la manta, pero no se hace, porque la que viene del extranjero, es muy barata y más

vistosa á pesar de no tener la fortaleza de aquella. Sus hojas compuestas como cataplasma son antimaláricas y sus semillas en forma de pomada sirven contra las herpes y erupciones cutáneas, de las semillas puede extraerse aceite para alumbrar.

Ahora.—La ahora es un arbusto que crece apenas un metro, tiene parejas de espinas que son las peiopas, que contienen tierra mezclada con arena. En dichas peiopas prospera en abundancia, pero se la encuentra sin en otros lugares. La fruta madura es roja y por su forma como la piña, como la pulpa y las semillas son como la chirimoya, así en el sabor de la pulpa; antes de madurar esta la cortezas tiene mucha semejanza con la chirimoya; los chirigusnos la llaman «*Anoíco*.»

Algarrobo blanco.—Tiene color defoul grandes dimensiones y su presencia es abundante casi en todas partes, la madera es blanca y buena en lugares secos; si penetra la humedad, se destruye en pocos años, así se vé por la experiencia. La corteza que se halla debajo de la primera que es resquebrajada, hervida en agua tibia y puesta en maceración por una noche, cura la fiebre intermitente, los argentinos la llaman cacha, los blancos quebracho y los chirigusnos «*Iyáicoco*.»

Algarrobo.—Hay en abundancia aquí y es árbol de medianas grandezas, su madera tiene poco aprecio, pero la fruta, grande como un grano de uva de color café oscuro, es un grandísimo recurso en tiempo de escasez para el pobre chirigusno. Madura en Enero y Febrero y es apetecida sea por el grande y por los ovejas y porcinos; los blancos la llaman algarrobo y los chirigusnos «*Yaá*.»

Banano. Ahora.—Cultívalo en las huertas y en las chacras tiene valladáo, forma natural y cada planta dá á producir un racimo muy grande en algunos; al quitar el racimo maduro se debe cortar esta la planta que lo produjo, para que las demás produzcan el suyo. Las hay de varias clases grandes y chicas, éstas son muy dulces para comerlas como fruta, aquellas más hervidas y asadas, los blancos la llaman plátano y los chirigusnos «*Yacuda*.»

Higuera ahuma.—Es un arbusto pequeño de una vara de altura, bajo tiene tiene una raíz grande como sandía y más grande aún, contiene mucha pulpa que estrujada se convierte en agua potable, á la vez sagda, dando resina; los chirigusnos la llaman «*Sipai*.»

Cataipa.—Es este un árbol grande y de bastante solidez, su madera se emplea en la construcción de las casas, el color de la

madera es amarga, pero resiste cortada en algo verde; sus flores son
amarillas, y los chiriguanos las usan para blanquear su dentadura,
son agrias y por esto el árbol en chiriguano se llama «*Tapi*»
ó sea agria, los blancos lo llaman lapacho.

CEDRO.—Árbol grande con tronco diferente y arrugado de pocos,
hojas anchas y flores grandes y blancas que producen una materia
semejante al algodón sin hebras, por lo cual es más suave y
esponjoso; se emplea para colchones y almohadas y cuerdas para
velas. La madera es esponjosa y de ningún duramen, se fabrican
arcas para guardar agua perfumada y de este modo no se dañan
tanto. La corteza es buena para la elaboración del jabón, la
corteza es medicinal, los blancos la llaman tabacuchi y los chiriguanos «*Kiwando*» *los hay de varios colores y todos más ó menos se utilizan.*

CEDRO.—Este árbol es más chico que el anterior, pero su madera es
mucho más superior, y muy fibrosa y bastante liviana, se
emplea para hacer arcas y durar mucho tiempo, si se pudren y
si les cae la carcoma. Cuando florece es muy hermoso, las flores
son rojas encendidas y buenas para cordales, los chiriguanos la
llaman «*Kiwando*».

PALMA.—Árbol alto, derecho y bastante grueso, la madera es
fuerte y dura, si el árbol se le hace una incisión, manan una resina
muy roja, su corteza es óptima para endurecer la dentadura y para
curar el escorbuto. *Se extrae de este árbol la goma llamada*
sangre de drago, los blancos le llaman tipa y los chiriguanos
«*Chiriguillipa guasu*».

PALMA.—Planta arborícola que abunda en ciertas lagunas y
esteros formando por los agujeros de los ríos que salen de montes; la
emplean los indios para trabajarlos de sus casas y los arcabucos para
los fuertes y los otros para colocar en los habitaciones sobre las
cuales tienden también sus camas para dormir; es la tabla ó matera
de los blancos y el «*Chipiapa*» de los chiriguanos.

ESTOMAQUITO.—Este árbol de tamaño muy grande, tiene flores
blanquinosas y fruto del tamaño de un higo, amarillo, es comestible,
y es apetecido por los loros y monos; los chiriguanos lo nombran
mano fruto, y lo llaman «*Iguani*».

GUAYCURÚ DE CHAPO MAMOSO.—Este árbol no abunda mucho,
no se le encuentra en todas partes, tiene tamaño regular, tronco
recto y corteza lisa y más blanda que la higuera, la madera es
blanda y no tiene uso ninguno, es parecido á la de la ceiba ó tabacuchi.
Las hojas semejan á las de la higuera, el fruto es del cala-

mo tamaño y forma, pero amarillo; es comestible y bueno, hervido ó asado; si se come crudo, lastima la boca, en chiriguano se llama «Chiomatina.»

Guayabo.—Se halla este árbol frutífero en estado silvestre y cultivado, es de medianas grandezas, el fruto cuando está maduro es amarillo por afuera y morado por adentro y su sabor agridulce es muy agradable y lozano. Las frutas verdes y las raíces son astringentes, los chiriguanos lo conocen con el mismo nombre, la madera no tiene uso ninguno y si la tuviera los indios no harían uso, porque prefieren frutas comestibles; sientan, cuando se destruye cualquiera de estos árboles y otros como el algarrobo.

Gravesa.—Esta planta prospera en el tronco de los árboles altos, allí pone sus raíces y de allá se descuelgan otras que penetran en la tierra, raíces y lianas son de color oscuro; de la corteza se elaboran muy fuertes é incorruptibles cabestros, no se halla en todos los parajes. Se la encuentra donde la márgen izquierda del río Paraguay; su fruto asemeja al del maíz, por cuya razón se llama maíz de aire, y es comestible.

Higuera amarilla.—Es el guapay del chiriguano y el higuerón del vulgo, á pesar de ser el fruto bastante acre, es comestible. Los murciélagos lo aprecian, y es indudable traer este árbol cerca de las habitaciones; contiene jugo lechoso como la higuera común y aplicado á las heridas, las cicatriza. Adelante de la higuera anterior hay, la común que prospera con muy poco cuidado; en los pueblos, especialmente de los Misiones, se cultiva bastante por los naturales y su fruto les sirve para su regalo y comercio con los blancos.

Mandioca.—Esta planta se llama «Mandio ó Mandiparapi» por los indios chiriguanos. Una obrita escrita por un Misionero descalzo de las Misiones antiguas del Paraguay refiere que esta planta la dejó á aquellos indios el Apóstol Santo Tomás, que, según la tradición de los mismos, vino á esta parte á predicar la doctrina del Redentor. La mandioca es un exquisito manjar y muy digestivo, se come hervida, asada y frita en manteca de pavo. Es planta cultivada por los blancos y por los indios.

Mara ó Ceiba.—Este árbol se encuentra en todas partes, es madera sólida, mas la parte blanca que contiene á los lados es corruptible, es algo pesada y dura, sólo se usa para marcos de puertas y ventanas y sólo para mesas. La hoja es permanente, pero no tan buena para sombra, si se tocan las hojas con alguna fuerza para arrancarlas, producen una erupción cutánea que desaparece sólo con miel de abeja; así me contó don Tomás.

Melocotón.—Este árbol originario de la Persia es bastante productivo en esta región, pero su fruto por ser muy perseguido de la mariposa negra no llega á sazón, porque siempre resulta con gusanos. También produce el manzano en las alturas y donde la atmósfera no es tan caldeada, mas ambos árboles son de las huertas, no son de la región, han sido importados por los blancos y ellos los cultivan, lo mismo dígase del membrillo.

Molle.—No se halla este árbol en la parte céntrica de la comarca, de modo que aquí no produce naturalmente, sólo se obtiene cultivándolo; los blancos y los Misioneros lo han introducido en sus pueblos con buenos resultados. En la jurisdicción de Padilla se le encuentra en abundancia, tiene hojas permanentes y medicinales, lo mismo la resina que mana del tronco; de las semillas se hace una bebida refrigerante y agradable parecida al vino, sólo el olor es algo desagradable. El eucalipto es otro árbol que prospera aquí con regularidad, pero también es importado, sus hojas aún permanentes son muy medicinales contra las fiebres endémicas, su tronco es una madera excelente. Ambos árboles no tienen nombre en chiriguano, de donde se deduce que han sido importados como la viña, la higuera común, el melocotón, membrillo, etc.

Mora ó morera.—Este árbol se halla en estado silvestre desde la márgen izquierda del río Parapiti en la provincia de cordillera. Se eleva á la altura de unos quince metros, es corpulento, muy coposo y la fruta es más pequeña que la de la morera cultivada, la madera es sólida y compacta como la del soto y de mejores cualidades aún, se la emplea para máquinas de moler caña dulce, cuyos plantíos son abundantes desde las orillas del río Parapiti, donde se elabora azucar de óptima calidad. En las faldas de los cerros se halla también la zarzamora, cuya fruta es tan agradable al paladar, pero su espina, parecida á la de la uña de gato, es bastante peligrosa y punzante. La morera en chiriguano se llama «*Tatagigua*»

Naranjo.—Tampoco el naranjo, ni el limonero son naturales de la región chiriguana, sin embargo prosperan mucho y se elevan á mucha altura. Donde hay facilidad de abrir acequias y poder regar el naranjo y el limonero, producen frutos grandes y de mucho jugo, aquéllos son muy dulces y el acre de éstos es bastante suave. El cidro prospera y es planta importada aquí, sus frutos son grandes como calabazas. Los chiriguanos cultivan uno que otro naranjo, mas los blancos lo cultivan en grande escala, conoz-

4: Nino SF10 Chiriguano

co algunos naranjales bastante poblados y los hay en casi todas las Misiones.

Nogal.—Este árbol de extraordinaria elevación se halla sólo en estado silvestre, las hojas son pequeñitas y algo parecidas á las del verdadero nogal, el fruto es comestible, pero su cáscara no se rompe con facilidad. El sabor y las propiedades son las mismas que las de las nueces, de modo que puede extraerse de ellos el aceite que suple al de oliva. La madera es algo oscura, buena para carpintería y ebanistería, pero es inferior á la del verdadero nogal, este se halla en estado de cultivo, donde hay bastante humedad: con las hojas, la cáscara del tronco ó las raices se prepara un color café oscuro para teñir lanas, para dar color á las demás maderas y para tinta de imprenta.

Nopal.—Es planta fructífera que más abunda en la región y se halla en todo paraje sin ningún cultivo, por cuya razón es apreciadísima del chiriguano, naturalmente perezoso. Mas como es persiguida por el ganado vacuno, principia á desaparecer ó mejor dicho poco se la encuentra en el bosque y en la rasura, pero ya el indio lo cultiva, porque fácilmente prospera sin necesidad de riego y se multiplica sin necesidad de enterrar otros gajos. Es propia para la pereza del indio; las flores amarillas salen al rededor de cada pala y la fruta madura allí también, está llena de pequeñas semillas y pulpa dulce, agradable y refrigerante. Unos árboles son revestidos de puas largas y otros son desnudos, apenas tienen una que otra espina imperceptible: el fruto es agradable en ambos y sirve para regalo y comercio del indio que vende á los blancos, los que apurados para enriquecerse más pronto y con más facilidad poco se preocupan del nopal y de la higuera: en chiriguano se llama «*Saini.*».

Palma ó palmera.—La palmera tiene parajes de simpatía, donde forman bosques inmensos y á veces como una gran guirnalda crecen al rededor de un lago; es árbol muy elevado y liso sin ninguna rama, sus hojas son en forma de abanico y se utilizan para hacer sombreros y para cedazos que se venden á 30 ó á cuarenta centavos cada uno. La madera es buena para tirantes en las casas y la cavan también como hojas para la techumbre, duran bastante tiempo, si se tiene la precaución de cortarlas después del plenilunio; en chiriguano se llama «*Cucandati*» y el lugar que ocupan «*Cucandatiti*» palmar.

Palmacristi.—Planta de poca duración, crece hasta la altura de cuatro metros, tiene tronco blando y hueco, hojas grandes y

flores en forma de racimo de uva. Las semillas se hallan dentro de erizos pequeños como las castañas, dichos erizos en unas plantas se abren de por si con el calor del sol, en otras hay necesidad de abrirlos ó romperlos con cuidado, mediante un martillito ó piedra. El nombre indica que es planta hermosa, pero dicha hermosura consiste en las hojas anchas, abundantes, pecioladas; las hay de varias clases por su tamaño y bondad de semillas, conozco cinco especies. De esta planta ó de sus semillas se extrae el óleo ó aceite de ricino, empleado en la medicina; en las Misiones lo usamos para alimentar la lámpara del Santísimo Sacramento y los chiriguanos lo usan para mezclar con las semillas del «*Achiote*» y poner dicho cosmético en el rostro y pantorrillas hasta los piés La planta se llama en chiriguano «*Cusiro*» y el aceite «*Vandi.*» Aun las hojas del Palmacristi son medicinales, unas son cálidas y otras frescas, así cuando el dolor de cabeza proviene de insolación, se aplican las hojas del tártago blanco, al contrario si proviene de la mucha humedad, se aplican las hojas del tártago colorado, las semillas del tártago morado oscuro son pequeñitas, pero contienen más aceite que otras.

Papayo.—Este árbol no es originario como el palmacristi, ni tampoco se le encuentra en estado silvestre como éste, es cultivado en las huertas ó en las chacras bien valladas, crece muy pronto y produce su fruto al año de ser plantado, su tronco es recto, blando y hueco, algunos tienen dos y tres ramas y se levantan hasta cuatro metros de altura. El fruto es refrescante, amarillo con corteza lisa, del tamaño y forma de un pequeño melón, aún el sabor es algo parecido, pero más digestivo. Muchos frutos se agrupan alrededor del tronco y se hallan aún acá y allá en cada hoja, pero siempre pegados al tronco, las plantas que producen estos frutos son las buenas y las llaman hembras. Hay otras que llaman machos, pero sus frutos son inútiles, no están pegados al tronco, sino que cuelgan de él como cordeles, es inútil tenerlas. Para tener un buen papayo aseguran que en el trasplante, hay que tener la precaución de poner ó enterrar dos plantas en cada hoyo, de las cuales una siempre será hembra, y la que resultare macho se arrancará; ignoro la verdad de esto, pero así lo he practicado en Enero de este año. El fruto contiene muchas semillas que molidas y bebidas en orchata hacen arrojar las lombrices, el fruto y el árbol contiene leche resinosa. Para que, pues, el fruto sea bueno y digestivo, es bueno cortarle las extremidades y practicarle unas cinco ó seis rayas verticales para que salga dicha resina, al día siguiente

[facing p. 25]

Una planta de papaya

es ya muy agradable. Sin embargo es óptimo tener la precaución de que principien á entrar en sazón en la misma planta; en este estado y sin rayarlos duran hasta seis días sin dañarse; fácilmente pues se trasbadan á grandes distancias.

Pasionaria.—Es una enredadera que trepa por los vallados, vistiéndolos en tiempo de lluvia con su abundante follaje, lo mismo que la «*supua*» cuyo fruto es comible y agradable asado ó hervido lo mismo que la hoja. La fruta de la pasionaria es del tamaño de una manzana y lisa como ésta, la corteza es delgada y el interior se halla cubierto con una película filamentosa blanca, rota la película, aparecen los granos de la fruta, acri-dulce muy agradable, éstos son cenicientos y aperlados y muy apreciados por chiriguanos y blancos La flor de la pasionaria es morada, forma guirnalda como corona de espinas, tiene su caliz, cinco pétalos y tres clavos, por cuya razón se la llama pasionaria y es por cierto digna de admiración; los indios la llaman «*Marucuya*».

Piñon.—Planta euforbiácea, este arbolito existe en estado de cultivo y á esta región chiriguana fué introducido por los cristianos blancos, crece en las huertas y doquiera y su elevación máxima es de tres metros. Su tronco pequeño es delgado y copudo y su fruto consiste en unas semillas negras que no son comibles, molidas y diluidas en agua tienen virtud poderosa purgativa, por lo mismo hay que emplearlas con mucho cuidado, porque pueden causar la muerte

Sauce.—Crece y desarrolla el sauce en las orillas y en el lecho de los torrentes, como en las márgenes de los riachuelos, lo cual demuestra que busca lugares húmedos, pero de estos parajes muchas veces lo arranca la impetuosidad de una avenida. Nada tiene de particular el sauce común, solamente sus ramas son útiles en la construcción de las casas por flexibles, hebrosas y de poco peso, del tronco hacen poco aprecio; es árbol alto y grande con hojas muy menudas. Además del sauce común hay también el llorón, cuyas ramas tocan hasta el suelo, ni es originario, ni se le encuentra en estado silvestre; algunos blancos lo plantan para hermosura de sus patios interiores. El sauce común en chiriguano se llama «*Igüirapuca.*»

Saúco.—No se halla en todo lugar, sólo se le encuentra en los riachuelos de poca agua y que estén en el bosque, crece hasta cuatro metros de altura, su tronco es delgado y blando, sus ramas tienen médula fácil de extraerse y sus flores blancas del formado de un quitasol, son sudoríferas. Los blancos buscan mucho estas flo-

res para sus dolencias, aún las hojas son medicinales, se beben en decocción y se obtiene un buen purgante ¡Lástima que se halle en tan reducidos parajes!

Soto.—Este árbol jigantesco se halla en todas partes desde la provincia de Tomina, pero hay lugares donde más abunda; en la primavera cuando principia el broto, las hojas son coloradas y luego se vuelven verdes, en el otoño sus frutos, apetecidos por los loros, son colorados y están en forma de racimos como las cerezas; vistas de lejos por un europeo, cree éste que son cerezas. La madera del soto es sólida ó incorruptible, en la humedad ó en el agua es mejor que el hierro, pues no se deteriora, es usadísima en la construcción de las casas, especialmente cuando son de maderamen; del soto se extrae mucho tanino que emplean los europeos en las curtidurías, por los blancos es llamado aquí palo cuchi y por los chiriguanos «*Urundei.*»

Tabaco.—Planta anual que prospera bien en todas partes, pero sólo los blancos la cultivan en grande escala, especialmente en Sapirangui y Chiquiacá, cuyos productos tienen bastante fama; aun uno que otro indio hace producir para su consumo y para regalar á sus amigos; hay otra planta parecida y, en falta del verdadero tabaco, el indio se engaña á sí mismo con las hojas de aquélla; el verdadero tabaco en chiriguano se llama «*pentí*» y el segundo «*huacapentí*» que explicado literalmente dice: tabaco de vaca. En Bolivia hay mucho consumo de tabaco envuelto en papel ó chala de maíz, raros son los cigarros de puro tabaco como los habanos y otros; el chiriguano fuma mucho y toma esta costumbre desde muy tierno, niños de cuatro años principian á fumar, las mujeres también fuman.

Tacuara.—Antiguamente cuando no había ganado vacuno, la tacuara ó caña hueca era muy abundante, todavía se conservan los vestigios de algunos inmensos cañaverales, pero la planta se ha reducido apenas al cultivo, de modo que lo que antes se hallaba en el bosque á disposición del primer ocupante, hoy se halla en posesión de particulares y quien piensa hacer una habitación, debe pagar la cañahueca á razón de ochenta centavos por ciento y lo peor del caso es que no se halla en todas partes; esta falta se suple con varillas de árboles, pero ni son livianas, ni siempre derechas como la caña. Más allá de Santa Cruz hay todavía bosques; además se hallan bosques de otra caña llamada «*Bambú,*» es la mayor que se conoce y en chiriguano se llama «*Tacuarembo*» se eleva hasta la altura de unos 15 metros y se emplea para hacer

escaleras y andamios en las construcciones, porque es liviana y sólida. los retoños son tiernos, contienen una sustancia azucarada apetecida por los indios, hoy es poco buscada, porque abundan las plantaciones de caña dulce que es de gran utilidad para la elaboración del azucar y del alcohol, esta última prospera con mucha facilidad y poco trabajo; se practica la plantación de dos modos, haciendo surcos y enterrándola, ó plantándola con estaca, el primer modo es mejor donde no penetran las avenidas de los ríos. En la falda y cima de los cerros que contienen humedad, hay otra especie de caña delgada muy sólida y pesada que no es hueca como las demás clases, se llama caña brava por los blancos y por los chiriguanos «*Tacuarembo*» la utilizan para peines de telar y catres para dormir.

Tamarindo.—Este lindo y provechoso árbol no es originario, pero prospera con bastante cuidado y crece á una altura respetable, el fruto que produce es abundante, consiste en vainas abundantes del tamaño de las vainas del garbanzo más ó menos, la pulpa es negrusca, agradable al paladar, pero destempla los dientes y las muelas. Es astringente y se administra como fármaco en las inflamaciones viscerales especialmente á los párvulos, es también buena bebida, tónica en los días de excesivo calor; se prepara con azucar, agua y un poco de dicha pulpa; el árbol es bastante delicado para el frío y las flores se pasman fácilmente con el viento sur, por esto es que los blancos lo plantan en sus patios rodeados de habitaciones.

Taringui.—El nombre de este árbol es chiriguano, el taringui en unas regiones se le encuentra, en otras no, es de la especie de los cactos, se eleva hasta seis metros, su ramaje es abundante y cerrado, lo que da lugar á una sombra pareja contra los rayos abrasadores del sol, sus ramas ú hojas son estriadas y armadas de puntas, el fruto es pequeñito, pero dulce y por demás agradable, es muy apetecido por los zorros que sólo lo consiguen cuando cae del árbol. La ulala ú opuncia es inferior al taringui, sus hojas tienen la misma forma, el color es ceniciento y son menos abundantes ó mejor dicho pocas, el fruto es una baya lisa que cuando está madura, es morada y se abre en tres partes cuando está sazonada; es un dulce desabrido, pero que gusta bastante á blancos y chiriguanos; el color es morado encendido, abunda y en ciertos años de carestía es un recurso para la humanidad en los meses de Febrero y Marzo; en chiriguano se llama «*Ñacagüina.*» El caraparí es otro cacto, más alto que los anteriores, también tiene su terreno de simpa-

tía, pues no se halla en todas partes, es admirable por sus hojas ó ramas altas estriadas, cenicientas y armadas de puntas, su fruto es muy agradable y perseguido también por los zorros, el tronco es blando como todo cacto, sin embargo se hacen puertas de esta madera y duran bastante, la pulpa del tronco se utiliza en medicina para curar las enfermedades del hígado, etc; dicen que es buena aún para la papera. Hay otra especie de cacto que crece unos 20 ó 25 centímetros, es redondo y grueso, estriado y armado de espinas, en chiriguano se llama «*Zipepe*;» los niños, como veremos, forman ruedas quitándole las espinas y mientras las hacen correr, les sirve de blanco para tirar la flecha; finalmente hay otro que rastrea y es largo, se llena el suelo donde nace y ese paraje se hace impenetrable, éste tiene y produce un fruto bien rico que se llama en chiriguano «*Tapinaru*.»

Tilandsia.—Esta planta se conoce por los chiriguanos con el nombre de «*Caraguata guasu*», su paraje privilegiado son las colinas, y de entre éstas hay las de su simpatía, crece bastante y sus hojas son extraordinariamente anchas y largas de color ceniciento, en medio nace un varejón que se levanta bastante, es buena madera para costaneras de las casas; de las hojas machacadas forman cordeles y de estos se forman sogas óptimas para atar bestias en tiempo de lluvia. Los tobas y aún los chiriguanos hacen una especie de red que llaman chipa ó «*añapoca*» muy útil para que las mujeres puedan llevar en esa especie de bolsa cualquier peso, de la misma hacen redes para poder pescar en los ríos, son trabajos que llamarían la atención en cualquier parte del viejo mundo.

Existe otra *caraguata* pequeña que invade grandes extensiones de terreno impidiendo la entrada á todo animal, porque tiene espinas en sus hojas hácia abajo; en tiempo de carestía su raíz es alimento del pobre chiriguano, la raíz contiene poca harina del sabor de la mandioca, pero cuesta un triunfo arrancarla: la hoja de esta tilandsia es también buena para hacer cordeles.

Finalmente hay una tercera que prospera en abundancia en los árboles y en las peñas de los cerros, esta ninguna propiedad tiene, es grande por sus hojas que miden hasta un metro de largo, la planta es gruesa, la hoja carnosa y se usa para adornar las calles con arquerías en las procesiones; el aloé es parecido á la segunda clase de tilandsia, pero las hojas del aloé son anchas y gruesas, llenas de jugo, mientras las de la tilandsia son delgadas, arqueadas y secas, el aloé no es abundante, apenas se halla una que otra mata ó planta.

Tomate.—Esta planta que produce frutos tan agradables y provechosos para el arte culinario, prospera en estos terrenos con exhuberancia, el fruto de cada planta es abundante y los produce todo el año, cuando se tiene el cuidado de resguardar la planta del frío ó de las pequeñas heladas que suelen caer en Junio y Julio; para conseguir el efecto basta amontonar bañigas secas en dos ó tres puntos de un tomatal y encenderles fuego; plantas de tomates verdaderos se hallan también en el bosque, pero se supone que algún pájaro llevó las semillas en dicho paraje; el tomate es planta internada al territorio chiriguano, como lo es la cebolla, la patata y las berzas.

En el bosque hay una clase de tomate en estado silvestre, tiene algo de semejanza y de sabor, pero se diferencia bastante del verdadero, se coge verde y se deja madurar en una habitación encima de algún madero, á los pocos días se vuelve de un color rojó; señal que está en sazón. El ají también produce en abundancia y con poco cuidado; es planta que dura hasta tres años, teniendo el cuidado de podarla, al segundo y tercer años los frutos son muy picantes. En el bosque abunda otra clase de ají pequeño y redondo, produce espontáneamente, se llama arivivi por los blancos y «*quii ruii*» por los chiriguanos, es picante y curan algunos con él la enfermedad, ó inflamación de los ojos; sin embargo no hay que confundirla esta plantita con otra igual, cuyos frutos carecen de gusto y se llama por los chiriguanos «*Aguara quii*» que literalmente quiere decir, ají del zorro, el mejor modo de no confundirlo, es probar el fruto, se encuentra en todas partes

Tuno —El eterno Hacedor de todas las cosas en su bondad y misericordia dispuso que esta planta pequeña, necesaria bajo todo aspecto, diera su fruto en toda región habitada por el hombre, así es que aún aquí á pesar del excesivo calor, se cosecha en abundancia y no se defraudan las esperanzas del agricultor, si él tiene cuidado de regar el sembradío oportunamente. También prospera en los terrenos de regadío la cebada, pero ambos cultivos están abandonados por las razones ya expuestas en estas páginas y también porque los pájaros mucho persiguen ambos productos, como sucede en los arrozales que se hallarían vacíos, si se dejaran á discreción de los volátiles.

Prosperan además juntamente con el maíz, ó en otros parajes el trigo llamado de Guinea ó sorgo dulce que los chiriguanos llaman «*Triru*» y es originario, es dulce, madura juntamente con el maíz y lo chupan, como aún la cañota que es una especie de sorgo

sin dulce que sirve para hacer escobas para barrer, la semilla de ambas plantas es apetecida por los pájaros.

Vid.—Más adelante he dicho que esta planta necesaria para el Sacrificio por excelencia, como el trigo, prospera en esta región con bastante vigor. Aquí añado que en el bosque hay un árbol que se eleva hasta ocho metros del suelo con hojas pequeñas y madera insignificante, su fruto es del tamaño de una aceituna, de color café oscuro y de sabor parecido á la uva, madura en el mes de Febrero, es comible y se llama en chiriguano «*Iracigu*» Hay también en estado silvestre la vid originaria con tronco sarmentoso, sus frutos son como el racimo de la uva, son blancos y son aún negros y buenos para elaborar el aguardiente.

Yerba del diablo.—Es la datura que tanto abunda en los campos y en las chacras que es una verdadera plaga, se eleva á un metro de altura, es ramificada, tiene hojas anchas, flores blancas y fruto armado de puntas que secas, punzan lo suficiente para arrancar sangre, las hojas y semillas hacen perder la memoria. A propósito de esto recuerdo un hecho: una india distraidamente ó por ignorancia cubrió la olla de comida caliente con las hojas de la datura; á la media hora comió ella y le produjo fuerte dolor de cabeza y vértigo que le duró poco; comió también su nietita, alumna de escuela de unos seis años, ésta perdió completamente la memoria y todas sus acciones eran de una demente, este estado le duró unas 24 horas, parece que el chiriguano ignora que esta planta y sus semillas y hojas son venenosas; éstas secas son medicinales, alivian los efectos del asma y se receta á los indios asmáticos, los cristianos la conocen con el nombre de chamico y los indios con el de «*ozuzi*» ó sea yerba dolorosa.

Sapallo.—De esta planta rastrera hay once especies, de las cuales hablaré en otro capítulo; sólo añado que producen también aquí las sandías y los melones, lo mismo que el pepino y la zanahoria. La «*curugua*» y la «*curuguami*» de los chiriguanos son plantas parecidas al sapallo, pero trepan por los árboles y allí producen el fruto oblongo, dulce y fragancioso; al entrar á una habitación, luego se descubre si hay frutos de *curugua*, estos son comibles tanto verdes, como maduros, pero son preferibles en estado de sazón.

Dejo de hacer la descripción de muchos árboles y hierbas, cuyas virtudes para la medicina son conocidas, de otras me ocuparé cuando trate de las fármacos; sin embargo antes de olvidarme dejo consignado aquí en la terminación de la flora que la región donde

hay lugares húmedos, abunda en cedros seculares, cuya madera se emplea en carpintería para puertas, ventanas, mesas, etc. Para que sea incorruptible es preciso buscar plantas maduras cuyo color es rojo claro, el blanquecino es perseguido por la carcoma; el olor de la madera es narcótico, y esta propiedad hace ahuyentar los insectos, el olor es parecido al cedro del Líbano, por esto los conquistadores pusieron á este árbol el nombre de cedro que los chiriguanos llaman «*Iyüirane*» ó palo hediondo.

Fauna

Cuadrúpedos

En este párrafo me ocuparé de la descripción de los cuadrúpedos, como lo indica el título y luego en los siguientes párrafos de otros seres vivientes. Al ocuparme de éllos no entiendo hacer una anotación completa para no alargar demasiado esta obrita, me limito pues á la descripción de algunos.

Agutí-hutia.—Parece que este cuadrúpedo roedor sea propio de la América del Sur, mas es cierto que se halla en la región de los chiriguanos quienes lo llaman «*Aguti*» Las orillas de los ríos y las lagunas grandes permanentes forman su paradero muy querido; persiguido por los cazadores y perros, se zambulle y nada por debajo de la agua burlando á unos y otros con salir á la orilla opuesta, donde con presteza se interna al bosque. Sus cuevas tienen varias entradas y salidas cubiertas de hojas, mientras una sola queda abierta, en sus pies tiene cinco dedos; si algún bicho peligroso entra á la cueva por la puerta ó entrada abierta, huye por cualquiera de las que están cubiertas ligeramente.

En esta comarca hay otras dos clases de *aguti*, viven en los cerros, bosques y pampas y son muy parecidos al verdadero, pero ni tienen los mismos instintos, ni tampoco los cinco dedos en los pies; tienen pezuña como los corderos, penetran á los sembrados, comen calabazas y maíz, y se alimentan aé 1 de las cáscaras de ulalas y otros cactos; por los chiriguanos son considerados como el tipo de los ladrones, así á un hombre ó mujer que tenga maña de ratero ó ratera, se los compara al *aguti*, diciendo: «*Mbuimomda aguti.*» Ladrón como un agutí.

Anta ó danta.—Es el tapir americano desconocido en otros puntos, es del tamaño de un ternero de año, no tiene pezuña sino dedos en las cuatro patas, vive en el bosque en estado completamen-

te salvaje y es terrible, se enfurece por hallarse perseguido, de lo contrario no acomete, se alimenta de hierbas y hojas, su carne es sabrosa y abundante, la piel es gruesa y dificilmente por esta razón puede el tigre carnearlo, corre despacio, pero atropella por todo doblando ó rompiendo á su paso todo arbusto, es también nadador; de su piel los talabarteros hacen jáquimas y bridas, son de mucha duración y por lo mismo apreciadísimas. Cuando el tapir es pequeñito, tiene piel como la corzuela con listones amarillos y se domestica fácilmente, abunda en las cercanías de los ríos y son muy raros en las llanuras, pocos se encuentran ya en la provincia del Acero, en la región de Cuevo y otras no hay uno ya, sin duda porque estos parajes se van poblando de otra clase de hombre ó sean blancos que los destruyen fácilmente con el uso de la pólvora; los chiriguanos apetecen mucho su carne y llaman á dicha bestia «*Borevi.*»

Ardilla.—Cuadrúpedo trepador que busca su alimento en los árboles por donde sube y baja con mucha rapidez; las hay de dos clases, una de color rojo y grande y la otra oscura y más pequeña, pero ambas son muy graciosas con rabo bastante largo casi del tamaño del cuerpo hasta la nuca, y poblado de pelo algo largo muy suave; cuando duermen, se cubren y preservan del frío, del rocío y aún de la lluvia con dicho rabo que llevan horizontalmente por lo largo de su cuerpo para trepar y bajar con más ligereza Contiene muy poca carne entreverada con nervios y á pesar de ser buen comestible, poco se ocupan de darles caza los indios, solamente los niños las persiguen por diversión y para ejercitarse en el manejo del arco.

Armadillo.—Este animal llamado por los indios «*Tatu*» abunda; los hay de seis clases y son: «*Tatu*» nombre genérico, ó verdadero armadillo, «*Tatuirapúa*» armadillo boleado, «*Tatu rabucu*» armadillo con pelos, «*Tatu guasu*» armadillo grande, «*Tatu acuti*» especie de viscacha, «*Angaya tatu*» especie de rata grande, pero también con escamas comunes al armadillo. Para los indios la carne de todos ellos es comible y estos de Yvu y los de Itatiqui van en su persecución continuamente. En los lugares secos, como las pampas del Gran Chaco, abundan más los armadillos; allá debajo de la tierra forman sus cuevas en grandes extensiones, siendo peligroso caminar en cabalgadura por dichos parajes, porque las bestias se hunden fácilmente y los que andan á galope, se exponen á fracturarse las piernas y brazos, cuando se libran de romperse la crisma.

[fac. nº P. 33]

Grupo de indios Tapietes.

El armadillo grande es poco menos de una vara de longitud, su cueva es correspondiente á su tamaño y aún más y no pocas veces el jabalí ó el pecari perseguidos por los cazadores y perros, encuentran en estas cuevas un refugio seguro. La carne del armadillo grande no es tan buena para los civilizados, pero lo es la de los otros, la he comido repetidas veces; la grasa ablanda los tumores y los nervios encogidos; los armadillos se nutren de gusanos. Sin embargo el armadillo verdadero es perjudicial á los sembradíos de maíz, cuando están recién sembrados, porque busca y come la semilla, como es perjudicialísimo en los sembradíos de melónes, de los cuales apenas deja una película delgadísima; cuando se cebe en los melones, no deja sazonar uno. Los indios conocen bien el lugar donde el armadillo es abundante, tan luego que practican la siembra del maíz, en las noches de luna ó sin ella van allá y ayudados por los perros cazadores, hacen matanzas.

Cobayo.—Este animalillo es innocuo y abundante por doquiera, sus parajes son los cercos, donde se esconde con facilidad, es semejante á ratas grandes sin cola, su carne es muy sabrosa y de su piel hacen bolsas para guardar tabaco, yesca y pedernal los fumadores. Cuando ve al cazador ó cree hallarse en peligro próximo, corre pronto á guarecerse en la espesura de los cercos, mas escondiéndose el cazador, no tarda mucho en salir nuevamente en busca de alimento por las mañanas y tardes, y entonces con flecha ó escopeta es fácil matarlo, los chiriguanos lo llaman «*Apereá.*» Hay otra clase de cobayo de todos colores y del tamaño del anterior, mas éste es doméstico, el color del verdadero cobayo es pardo claro.

Conejo.—Cuadrúpedo en estado silvestre originario de América, es del tamaño de un gato grande, su color es blanco oscuro y aquí no lo hay de otro color, en otros puntos de la América del sur sí; su carne es sabrosa, los indios la apetecen y lo cazan, su forma es igual á la del conejo doméstico y en idioma chiriguano se llama «*Tapiti.*»

Ciervo.—Se encuentra en todas partes y le llaman «*Huana*» los chiriguanos, y hurina los blancos, los hay aún de color blanco sin astas las hembras y con ellas los machos, otra clase se llama «*Huanacuaa*». Ambos se nutren de hierba y pequeñitas son graciosas con su piel matizada de manchas molladas, se domestican con mucha facilidad cuando maman, les sirve de alimento, cuando se domestican, la leche de cabra ó de oveja. El *huanacuaa* es muy parecido al ciervo, macho y hembra tienen astas ramificadas de viejos, pero

su carne no es tan buena como la de aquel, andan en tropa. Los cazadores persiguen ambas clases, porque contienen mucha carne, por cuya razón le llaman «*Ainsu*» que quiere decir grande, los cazan con bastante trabajo y con el auxilio de los perros adiestrados para el efecto, ó sinó se esconden, remedan su balido ó chasquido y cuando se acercan al tiro de la flecha, no yerran en matarlos. Los chiriguanos curten la piel de estos animales y hacen coleto, del cual hablaré á su tiempo, mas hoy va desapareciendo este vestido de lujo chiriguano, ni tampoco curten; actualmente usan dichas pieles para sus camas, sin embargo es óptimo material para calzados por su suavidad y blandura natural.

Gamo.—Parece que esta clase de animales es de la región montañosa y templada, no se la encuentra desde Monteagudo, ni los indios de aquí lo conocen, pero se hallaban y se hallan todavía en su antiguo territorio de Padilla, Tomina, Tarvita, etc. Es el gamo del tamaño de una cabra, con pezuña, de color ceniciento y bastante ligero para correr, se alimenta de hierbas, es buen comestible y anda en tropa.

Guanaco.—Es una especie de camello, del cual se diferencia por su tamaño y porque no lleva joroba como aquel, En la cumbre de los altos cerros de Potosí y otros frígidos montes se hallan en abundancia, parece pues que los cerros y el frío debieran ser los parajes de simpatía y únicos para poder prosperar. Sin embargo en las pampas del Gran Chaco, donde el calor es sofocante y casi siempre escasea el agua, se encuentran tropas inmensas de este cuadrúpedo, se domestica fácilmente y en este estado es una verdadera llama.

Gato.—Los hay domésticos y se llama «Minta» y los hay silvestres y éstos son de dos clases, el uno se llama «Baracaya» muy perjudicial para las gallinas; de noche se acerca á las viviendas de campo y aún á los poblados y degüella las gallinas que puede, su carne es sabrosa y agradable y los indios lo persiguen. La segunda especie se llama «Eira ó Yaguarundi» según los lugares; es una especie de tigre pequeño poco menos que un zorro, en su piel tiene manchas moldadas y es ligerísimo para correr y trepar á los árboles, no es perjudicial, ni se acerca á las viviendas de los poblados; los chiriguanos lo cazan sólo para arrancarle la piel para vender á cualquier precio.

Jabalí.—Nada más á propósito para el jabalí que los bosques y las faldas de los cerros, donde es difícil penetrar. En los bosques pues se multiplican y forman tropas inmensas; esta bestia es

feroz, raro es el caso de encontrar en estado solitario esta clase de cuadrúpedos, tan semejante al puerco doméstico. Los indios lo llaman «*Taitetu*» y apetecen su sabrosa y agradable carne, pero casi nunca van solos á cazarlo, porque es animal temible y acomete con ímpetu, sólo con el auxilio de los perros consiguen matar algunos y entonces los demás huyen, mas ¡hay del cazador que se encuentre solo! el remedio de ponerse en salvo es subirse á un árbol que tenga buen tronco y mejores raices, de otro modo con su rabia y entre muchos despedazan la planta; si el cazador tuvo la precaución de no dejar su arco y flechas, desde ese lugar algo seguro y certero, mata fácilmente á los jabalíes que quiere. Cuando este animal persigue al cazador, deja de perseguir al perro que se mantiene á una cierta distancia, porque sin su amo que lo defienda, se acobarda á la vista de tamaños colmillos que suenan como martillo sobre yunque.

León.—No es el majestuoso de África, ni puede ser aquí el rey de los animales, es el Puma y los indios lo llaman «*Yaguapinta*» ó sea tigre colorado y realmente es bastante parecido al tigre en sus facciones, tanto que fácilmente hay cruce entre ambos animales, resultando un neutro más feroz y rapaz que los dos. He visto el pellejo de uno de estos animales cruzados que hizo un daño incalculable en la hacienda vacuna y caballar de la Misión de San Pascual. El león de aquí es del tamaño de un perro grande rojo, no acomete sin ser perseguido, y herido; perjudica en los rebaños causando estragos hasta terminarlos y trepa árboles cuando se ve perseguido. Los indios lo matan con flecha y un buen perro lo ahuyenta del rebaño que cuida. El león tiene pelo corto y rabo largo, cabeza grande, patas grandes como las del tigre, pero no tiene melena como el león africano, su carne es agradable puesta unas cuantas horas en salmuera, el pellejo no tiene valor intrínseco, por cuya razón sólo lo persiguen como animal dañino. Sin embargo dicha piel es medicinal, aplicada en los dolores de espinazo y caderas, los cura, ó mitiga.

Mofeta.—Este animalillo es muy lindo á la vista y abunda en ciertos parajes, penetra á los gallineros para comerse los huevos y si puede, los pollitos también. Para el indio no tiene atractivo alguno el animalillo; antes bien huye de él, porque para defenderse echa un líquido sumamente hediondo, por cuya razón todos los animales huyen de él, incluso el tigre, con más razón huye el hombre; se siente á mucha distancia, y si ese líquido llega á rociar la ropa de algún desprevenido, el hedor dura algunos días.

Tal defensa la usa sólo cuando se ve perseguido, por lo demás ni es grande, ni es peligroso, y en chiriguano se llama «*Amiesce*» ó sea animal hediondo.

Mono.—El mono ordinario en chiriguano se llama «*Mochi*». Se encuentra en toda la región, pero abunda desde la márgen izquierda del Río grande ó Abapó, que especialmente de mañana mete mucho ruído con sus silbidos ó cosa parecida. Andan entre muchos y prefieren trepar por las peñas, donde abunda la tilandsia que en estas páginas ocupa el tercer lugar, cuya médula comen. Son muy perjudiciales en los sembradíos de maíz; cuando los indios en tiempo de choclo ó maíz fresco van á su sembradío, antes de volverse al pueblo cogen unas ocho ó diez espigas, les quitan casi toda la chala, dejando unas hojas en cada espiga amarrándolas una con otra á modo de alforja, las echan al hombro colgadas de la espalda y pecho y siguen su camino. Mientras eso, los monos todo lo han observado, bajan, hacen la misma operación y suben nuevamente á los árboles, ó á la peña alegres y contentos á comer el fruto de su habilidad.

Hay cuatro clases de monos, negros, blancos, amarillos y rojos, también hay el orangután que los indios llaman «*Caraya*» de donde el lugar llamado *Carayayua*, cueva de Caraya ó orangután. La carne del mono es buena, pero los chiriguanos no le dan caza, los matan por perjudiciales y cogen vivas las crías para diversiones, ya se conocen las habilidades del mono.

Oso.—Hay en esta región el verdadero oso que los indios llaman «*Tuguayuyu*» y los blancos *jucumari*; tiene cabellera larga que de la cabeza baja, cubriéndole el rostro, tanto que para mirar bien, la levanta con sus manos. Es temible cuando está irritado, arroja piedras, desgaja ramas de árboles sirviéndose de ellas como garrote; el tigre nada puede con este animal, y si sabe sus fuerzas y destreza con él, difícilmente sale con vida. Tiene carne excelente y los indios le dan caza, pero ¡hay! de aquél que se atreve solo y yerra el tiro de la flecha, hiriéndole ligeramente, pues acomete con toda presteza y alcanza á su enemigo.

Pecari.—Semejante al jabalí es el pecari llamado por los chiriguanos «*Tagua*», este animal es más temible que su semejante y tiene los mismos instintos. Ambos cuadrúpedos se alimentan de raices, de mistol, chañar, algarrobas y tantos otros frutos que hay en los bosques; los cueros de estos animales se curten con facilidad, pero los indios apenas les dan el uso para sus camas. El tigre es perpetuo compañero de los pecari hembras que tienen crías,

4: Nino SF10 Chiriguano

porque cuando pasa, hace presa de alguna que tenía calma y paciencia, pero aun tiene presencia y grafía fuerte el animalillo en modo de ser oído, la madre y los machos acudan á la defensa; y si estima la vida, la prudencia le aconseja trepar por un robusto árbol. Las crías se domestican pronto y más que el pecarí doméstico; no se apartan de la persona que le tuvo cariño cuando fué pequeño. Una de estas crías se domesticó con los métodos aprendidos del Paraguay, día y noche estaba con ellos sin estorbarles y cuando salían del salón de música para correr carreras por el pueblo, el pecarí iba por delante haciendo mil monerías y dando bríncos al son de los instrumentos.

Pequeño ratón. — Este pequeño animal no abunda, pero se le encuentra, prueba á las gallinaceas que generalmente se hallan en los árboles. Según he oído, no es perjudicial, tan sólo gusta acompañarse de noche con las gallinas, pero éstas le tienen como á todo animal extraño. Toda su piel está cubierta de pelos flexibles y largos, cuando se ve perseguido, se encoje y erweja dichos pelos con tanta fuerza que lastima cualquier parte del cuerpo; alguna vez se le ve perseguir á las gallinas, mas no para comerlas. Los chiriguanos le llaman «*Cuti*.» Si un perro lo muerde, se le llena la boca de pelos que produce dolores.

Tamándua. — Es un animal silvestre innocuo que fácilmente se domestica, posee un hocico muy largo y angosto, lo introduce en los hormigueros y con la lengua, á la cual se pegan una infinidad de hormigas, hace su sabroso almuerzo; en el estado doméstico se alimenta sólo de leche, pero da pena verlo sorber esto líquido con su lengua delgadísima gota por gota. En esta especie de animales aparentemente no se conocen machos y todos pertenecen al parecer al género femenino. Sin embargo es muy probable que todos los individuos de la misma especie participen de ambos sexos, á pesar de que en todos ellos aparecen tan sólo el género femenino.

El oso hormiguero ó el Tamándua es inofensivo, ni se ocupa de los semoradillos, antes bien destruye los hormigas. El indio lo cuna para comerlo, porque casi todo es carne buena para él, pues dice que es pobre y con este título aprovecha de todo hasta de los animales empanzonados y muertos con hidrofobia. La carne del tamándua es algo hediondo, huele á hormigas, y del cuero usan para sus camas; éste, á ora el cuero, es medicinal, aplicado en las caderas cuando están doloridas, cura con bastante prontitud. Se llama «*Tamá*.»

Tigre. — He aquí el cuadrúpedo rey de las selvas de la comarca

chirigano y otros; animal temible por su fuerza, habilidad y rapiña, temible por sus colmillos y garras, temible su fin, porque aunque comparemos á todo bicho, cuando está hambriento ó se percatado y herido. Este rey de los bosques, cuevas, ocre y brisas, trepa por los árboles, salta las peñas ó cruza los ríos según las circunstancias lo requieran para la conservación de su propia existencia. Animales silvestres y domésticos, chicos y grandes, aves y reptiles y los mismos pueblos huyen y se escondan á la vista de esta bestia feroz; el mismo hombre queda muchas veces víctima de sus garras y colmillos y hasta una vez para seguir atacando al hombre. Si el tigre se cría en los terrenos, generalmente frecuenta su alimento diario, si probó la carne de jumento, éste será su alimento, su cruz y su todo, disminuyendo respecto al toro y si más no fuerzas con este horrendo animal, lleva siempre la peor parte.

Cuando el tigre se provisiona de una cumbre y comienza á devorar ovejas, caballos, ó bueyes, es preciso matarlo ó desterrarlo á fuerza de perseverancia, porque es tan atrevido que sin miedo penetra á los corrales, cercanos á las casas y mata los terneros que quiere, contentándose con chupar la sangre; pero sólo tiene tiempo para tanto, carga el primero y se lo lleva á una certa distancia aprovechándolo con toda calma. Parece que este animal conoce el imperio que tiene sobre todos los demás, incluso el mismo hombre; si se encuentra en cualquier ocasión, él no huye, sigue con su calma y cadencia. La prudencia aconseja que el hombre se detenga, no tenga miedo y hable fuerte y así el animal se aquieta, estudiando al hombre, así lo ha experimentado y lo han experimentado otros; sólo lo persiste así, hablándose sin armas y sin fuerzas previas, se expone al peligro de ser su víctima.

Los indios lo llaman *Tigrero* y es el jaguar de los castellanos, parecido á la pantera, de modo que no es el verdadero tigre de Africa, sin embargo parece que son iguales ambos en ferocidad, pero no en tamaño y en hermosura; al del Africa lo he visto hembrilla. A pesar de ello el cuero del tigre ó del jaguar es apreciadísimo aquí, hay dueños de ganados que regalan al matador de un tigre una vaca gorda que tiene bastante precio. El precio ordinario es de treinta ó cuarenta duros.

Los indios matan al tigre ó firiquen con el auxilio de buenas perras, llamadas tigreras; los criaderos blancos tienen diferentes nombres, son lado, con exteriores y con trampa. Para matar con lazo se hace la barrilla fuerte y se amarra al mejor perro, éste sigue

inmediatamente en persecución y los demás perros y cazadores siguen al tigrero, si el tigre trepó por algún árbol, el perro tigrero no va adelante hasta descubrirlo; entonces comienza á ladrar como quien pide auxilio, llegan los demás perros, llegan los cazadores y visto al animal encaramado al árbol, le dan la muerte con uno ó dos balazos, y sinó espera luego, una vez en el suelo lo acaban de matar entre cazadores y perros.

Mas no siempre el asunto se termina tan fácilmente, hay tigres que cansan á los hombres y á los perros en subir y bajar por los árboles, en correr y pararse para hacer frente y matar algún perrito descuidado de una zarpada, en cambiarse entre matorrales, donde es peligroso acercarse y difícil hacerle un tiro certero y por último en trepar peñas inaccesibles á otras bestias. De este modo muchas veces se termina el día sin conseguir nada de provecho quedando el jaguar más fuerte que antes; sin embargo se aleja de dicho concurso por algunos días tanto para descansar, cuanto para evitar otro encuentro desagradable y peligroso.

El segundo modo de matar al tigre es la estricnina, conocidos son los efectos de este veneno poderosísimo; para conseguir este fin los indios procuran averiguar luego donde el animal tiene carne fresca, allí colocan el veneno en la pieza que más le gusta, teniendo el cuidado de no manosear la presa y de borrar la huella de sus pies. Pero es de advertir que algunos tigres comen, comen un poco y dejan lo demás, así es que no siempre es seguro matar al tigre con veneno. Además como tiene mucho olfato, difícilmente se acerca nuevamente á la res envenenada, si advierte indicio de peligro; el temor lo hace muy circunspecto, cuando ha hecho daño.

Hay un tercer modo de matar al tigre mediante trampas; cuando se presienta de un lugar, se conoce un paraje y un camino angosto por donde necesariamente debe pasar sin que pueda hacerse á un lado. Generalmente se busca el camino que conduce á la res carneada, allí pues, á un lado del camino, amarran un rifle, cuyo cañón va dirigido al camino, algo más adelante del cañón cruzan el camino con un bejuco atirantado para que el tigre haga esfuerzo para abrirse paso, en la parte del rifle hacen partir un cordelito del bejuco al gatillo ó sea dicho al disparador, al cual lo amarran; colocando el rifle con bejuco, el tigre no se preocupa del bejuco, porque está acostumbrado á pasar por debajo. Cuando la bestia llega sin sospechar, enreda el cordel ó bejuco atirantado, éste á su vez hace caer el gatillo, el arma dispara y la bestia cae herida de muerte, porque la bala le penetró en la paletilla ó en el

sobaco; el bejuco debe colocarse á la altura del pecho de la bestia, sólo así es infalible, los mismos perros caen en esta trampa.

Finalmente, aunque raro, se mata al tigre con puñal. El que tiene buenos hígados para ello, lo ejecuta con toda serenidad. Conocido el paraje donde ha principiado á ser perjudicial la bestia, va á su busca con un poncho, un puñal sólido y un perro tigrero, éste es necesario sólo para saber el paraje y detener al animal; tan luego como esto sucede, el cazador envuelve el poncho en el brazo izquierdo, remanga su camisa y calzones y se acerca resueltamente puñal en mano; el tigre entonces embiste prontamente, mas el cazador lo deja pasar á un lado, á la segunda y tercera embestida practica lo mismo para que se canse un poco; cuando embiste por cuarta ó quinta vez lo recibe de frente, introduce su brazo forrado en la boca del animal y con la derecha armada del puñal le parte el corazón; lo único que se necesita es serenidad, valor y destreza; quien no posee estas cualidades, no debe exponerse al peligro de morir, ni siquiera perseguir al tigre en compañía de otros; pues el animal sabe distinguir al valiente del cobarde y éste es el primero á ser embestido y por consiguiente á ser malamente lastimado.

La piel del tigre, como ya dije, tiene su valor intrínseco, es usada en talabartería para caronas de ensillados y para alforjas, es un lujo de personas de rango. El animal posee bastante grasa y ésta es remedio eficaz para el reumatismo, dolores de huesos y otras enfermedades, los indios la llevan á vender al interior de la República y la cambian por ropas usadas. Es de advertir empero que la falsifican, como falsifican la grasa de víbora, porque ya se comprende que no es frecuente la matanza de esta bestia feroz; rara vez el solo chiriguano persigue al tigre, y no siempre está dispuesto á ayudar al blanco, pero éste obliga á sus peones, quienes reunen la grasa y venden ó regalan á sus amigos ó parientes. La carne del jaguar es buen alimento, huele es cierto á salvaje lo mismo que la piel, pero dicha carne puesta una noche en agua salada ó salmuera, pierde el mal olor; aseguran que esta carne es igual á la de vaca.

El tigre macho es bastante grande, medí uno, tenía dos metros de longitud desde el rabo, un metro de altura y pesaba siete arrobas. La hembra es más pequeña, medí una ración muerta, tenía desde el rabo un metro y diez centímetros, setenta y cinco centímetros de altura y cuatro arrobas y medio de peso. La hembra pare de tres en tres años y los tigrecitos recién nacidos son siempre dos, macho y hembra, la madre cuando tiene crías es peligro-

[facing p. 41]

Industria agrícola de las Misiones

sísima, las defiende á todo trance, mas los cazadores primero matan la madre y luego procuran prender vivas á las crías; lo consiguen casi siempre y las llevan á sus casas para domesticarlas, pero es un imposible, porque es siempre tigre; he visto dos de estas crías bien encadenadas, pero malísimas. Por lo general las crías apartadas de su madre, mueren á los pocos días ó por falta de alimento adecuado como es la leche, ó también por desesperación al verse en medio de seres extraños á su naturaleza

Zorro. —Este cuadrúpedo no escasea por acá entre los chiriguanos, parece pues que se acostumbra en todos los climas, es tan impávido que de noche se pasea por los pueblos sin hacer advertir su presencia á los perros, mas si lo sienten, lo persiguen pronto y hasta lo matan aunque les cueste, porque perro de indio chiriguano y zorro van á la par en flacura, mas entre varios consiguen el intento de victimarlo.

Nada deja esta bestia impávida, de todo lo que encuentra hace su comida, causa mucho daño en los cañaverales desde que las plantas principian á tener dulce y hasta arranca las plantitas recién colocadas en los surcos ó en los hoyos. De las sandías y melones hace destrozo sin dejar que maduren y de este modo el labrador muchas veces no prueba estos regalos. En los maízales perjudica bastante también, pero éste es un elemento abundante y no se siente tanto el perjuicio; cuando puede conseguir gallinas, no se excusa de proporcionarse un buen almuerzo ó cena y con este fin se acerca á los pueblos y casas de campo también de día

Los hay de varias clases y tamaños, pero son inferiores, como todo animal á los del otro hemisferio. Difícil es ahuyentarlos de los cañaverales, de los cuales se disminuirá el daño, sólo disminuyendo los zorros y esto se consigue sólo con la estricnina ú otro tóxico que metido en pequeños trozos de carne, se colocan en los distintos caminitos que han abierto causando daño en los plantíos de caña dulce.

Veremos en el decurso de estas páginas que los chiriguanos lo veneraban como divinidad con el nombre de «*Aguara-Tunpa*» ó Zorro-Dios, á quién daban más poder desde que tenía capacidad de destruir las obras del verdadero *Tunpa*. Hoy que la región ha sido invadida y poblada por tantos blancos y extranjeros y los chiriguanos se han reducido á un puñado, esparcidos por acá y acullá, pocos son los que creen en semejante patraña.

El chiriguano persigue al zorro y le mata como animal dañino y perjudicial, pero no come su carne por ser muy hedionda y flaca,

en uno que otro caso la como, haciéndola orear para que pierda el mal olor y cuando la encuentra gorda; de los indios tobas es comida ordinaria. Los niños se divierten con este pobre animal, prendiéndolo vivo y haciéndolo luchar con los perros que lo victiman á muerte lenta.

Termino aquí esta somera reseña de los principales cuadrúpedos por su tamaño, ferocidad y caracteres particulares. He dejado la descripción de muchos por hallarse en otros lugares y, de otros por no presentar á la consideración algo de singular, ratones y ratas abundan y algunos años invaden los pueblos. No deja de haber raposas que se domestican con facilidad, al hurón se le vé pocas veces, es muy inquieto é inocuo, pero tiene la particularidad de perseguir todos los insectos de una habitación.

Reptiles, anfibios, peces é insectos

No es necesario ocuparme de una manera particular y extensa de las clases de vivientes indicados al principio de este párrafo, porque se los encuentra en todas las regiones del mundo, describiré las particularidades singulares de los conocidos y la naturaleza de algunos que son propios de aquí y de la América del Sur.

Casi todas las serpientes son venenosas acá por ser el lugar muy cálido, pero la que más es la de cascabel, opera rápidamente con su ponzoña y sólo con adustión inmediata puede el paciente librarse de sus efectos mortíferos, mientras el boa, grueso y largo, es inocuo, tanto que algunos labriegos lo domestican, lo colocan en los cañaverales para que ahuyente á todo bicho perjudicial, aún al zorro que como se ha visto, es el animal que más perjudica en la caña dulce.

Puede contarse entre los anfibios el «*Boicaracara*» ó sea la serpiente sapo que no es otra cosa que la tarántula de agua, mas es muy venenosa aquí, se la encuentra cerca de los lagos en las ciénagas. Ranas se encuentran en muy poca cantidad en el centro de la región; abundantes donde hay agua y en las orillas de los ríos, las comen solamente los tobas y otros bárbaros, los chiriguanos no. De sapos «*Cucaracas*» hay una infinidad *por su tamaño, color y canto, distinguiéndose entre todos el que llaman los blancos* «*Rocoto*» que de noche en tiempo de lluvia y, donde hay agua, continuamente se oye y fuerte á la distancia de un kilómetro

El sapo es medicinal, se prenden vivos uno ó dos de esos más grandes, con suavidad, uno tras de otro se aplican

en las partes del cuerpo infectas por la erisipela y cura con toda eficacia, quedando muerto el animal, sin duda porque con su vientre frío absorbe todo el calor que el enfermo contiene en dichas partes doloridas, más de una vez he visto curar así la erisipela. En tiempo de lluvia los hay tan en abundancia que es imposible dormir cerca de donde se reunen á dar su destemplada retreta; al terminar un fuerte aguacero es cuando la bulla de los sapos es más atroz.

Abundan los peces en los grandes ríos, donde hay sábalos, bagres y dorados; éstos últimos alcanzan hasta la longitud de dos metros, como he visto, son muy sabrosos y chorrean sangre como la carne de vaca. Luego hay en los mismos ríos, riachuelos y lagunas permanentes una infinidad de peces pequeños «*pira*» buenos al paladar y finalmente no faltan las anguilas «*Chorinchi*» ni tampoco las útiles sanguijuelas «*Ecoipe.*» Los indios que viven en las orillas de los ríos caudalosos, hacen comercio de pescado, forman, es cierto, sus sembradíos, pero generalmente no cosechan por la falta de lluvia, pero obtienen maíz en cambio de pescado, los sábalos disecados tienen el sabor del bacalao, valen 10 y 20 centavos.

Los insectos son innumerables, pero no tan abundantes y variados en sus formas, magnitud y color, como en la región del Beni, Mojos y otras, son cien veces más numerosos que todos los cuadrúpedos y volátiles juntos, los hay molestos, como los mosquitos y zancudos y los hay ponzoñosos, sin embargo, raras veces causan la muerte.

Hay avispas y son de varias clases, pero las amarillas ó rojas son más bravas: hay abejas en los árboles, en los tejados, en las paredes y en la tierra y todas forman colmenas para elaborar miel y cera, mas la miel mejor, es la de las abejas llamadas señoritas. Ambas cosas, es decir, miel y cera saben beneficiar los indios, pero á ello se dedican poco, porque lo consideran trabajo de viles y pobres y el chiriguano no quiere considerarse tal; cera se consigue apenas en tiempo de carestía, ni en este tiempo se dedica el neófito ó nuevo cristiano á ganar su pan buscando la cera

La picada de araña casi siempre produce malas consecuencias, las que pueden evitarse con el uso del amoniaco; es otro insecto numeroso, en tiempo de lluvias extienden sus telas de un árbol á otro interceptando el camino por ancho que él sea y con frecuencia los viajeros que andan de noche ó madrugan, se molestan con estas telas que se les pegan al rostro y á los vestidos, como se

prenden no pocas veces las mismas arañas que son tán asquerosas; la picada de éstas que viven en el bosque, aseguran, que no es ponzoñosa.

Toda araña en chiriguano se llama «*Yanduti*» y la tela «*Yanduti nupa* ó sea cama de la araña; de la tela de las arañas del bosque los niños hacen hondas para cazar pájaros ó para sus juegos; mojadas, son bastante elásticas. La verdadera tarántula que los blancos llaman apasanca y los indios «*Yanduti huasu*» es bien fea con su pelusa, ocho piernas y dos brazos Los naturales aseguran que es venenosa, pero su picada no es mortal, casi nunca salen entre dos, pero matando una y se quiere saber, si tiene compañera, basta quemar la muerta, para que la viva salga al momento de percibir el olor. Las apasancas ó tarántulas salen cuando está por llover y no producen buena impresión; el enemigo acérrimo de las arañas, comprendida la tarántula, es otro insecto volátil del tamaño de una bellota que los cruceños llaman «*Curadifunto*» y que otros aseguran ser la nimanina; es cierto que este animalejo que se introduce á las habitaciones, no persigue al hombre, pero si se le irrita y no puede huir, pica

Causa horror la vista de los alacranes, escorpiones y escolopendras que en chiriguano se llaman «*Apensa*» no son abundantes, mas se las encuentra en todas partes, su picada no parece fatal, pero uno que me picó en el sobaco sobre la ropa interior de lana, no me dejó dormir toda una noche á pesar del amoniaco que tomé y puse en la herida apenas perceptible.

Las vinchucas, cucarachas y una polilla que roe el papel, causa asco, especialmente las primeras que son incalculables en los lugares habitados, son hediondas y ensucian toda la ropa y las paredes blanqueadas de los edificios. El modo de matarlas es destrozarles la trompa ó pico largo y ya no vivea, tienen su astacia: en la oscuridad se acercan primero al que está en cama, le dan un dechazo, y se retiran para observar si hace movimiento y está despierta la persona; si ésta no da señales de vida, se acerca y chupa la sangre hasta hartarse, sin embargo las pequeñitas son más molestas y causan fiebre ó malestar, se multiplican naturalmente, depositan doquiera los huevos y de por si salen las crías, en principio los huevos son blancos y cerca ya de salir la cría, se vuelven rojos. Las cucarachas abundan en habitaciones determinadas, donde hallan alimento, comen aún las cejas y pestañas de las personas dormidas, colocan sus huevos en las paredes; si éstas se hallan blanqueadas, arrancan yeso y cubren con él su pequeño ni-

do, de donde salen hasta cincuenta crías que pronto echan á correr. La polilla daña solamente los libros y papeles y son molestas para los tenedores de éllos, su color es plateado ó ignoro el principio de su multiplicación, las vinchucas son negras, las cucarachas color café y ninguna de las tres es venenosa. En chiriguano la vinchuca se llama «*Timbucu*» ó sea nariz larga.

Las hormigas son una plaga constante aún para los sembradíos de maíz que destruyen por completo cuando nace, lo son también para las huertas y para las viñas, á las cuales perjudican muy mucho en ciertos años aún las avispas y mariposas negras que dañan la uva al tiempo de madurar, éstas se matan y se destruyen sólo con la miel que se coloca en artesas, donde mueren, durante la noche, á millares: aquéllas se destruyen sólo quemadas, inutilizando los racimos de que se adueñaron. Las hormigas en chiriguano se llaman «*Tasi*» y la mariposa negra se llama «*Cococoro.*»

Las langostas y los gusanos no constituyen plaga constante aquéllas tienen años determinados y éstos aparecen cuando por Noviembre hay muchas mariposas blancas que colocan el gérmen en las hierbas. Los gusanos por lo regular caminan de noche, en las madrugadas y por las tardes y la langosta voladora desde las diez hasta las cuatro ó cinco de la tarde; por donde pasa la larva de ésta, queda el sembradío como barrido, la larva no retrocede, ni se ladea, sigue la dirección del naciente y del cerro, cruzando pampas y trepando montañas; si se las detiene en su curso, son capaces de permanecer un mes en el mismo sitio, sólo se puede disminuir el número, matándolas en las zanjas. Sin embargo cuando las plantas del maíz se hallan á la altura de unos 60 centímetros, las larvas pasan por debajo sin hacer perjuicios mayores, y entonces mejor es darles paso y apurarlas moderadamente; con la lucha diaria se llega á defender un sembradío, aunque sean innumerables, pero defenderlo del gusano, es un imposible.

La langosta es blanca y colorada, ésta en chiriguano se llama «*Tucupinta.*» aquélla «*Tucunti.*» la blanca aparece á fines de Octubre ó á principios de Noviembre, su paso por una región no es rápido, permanece días y semanas volando de sur á norte y viceversa hasta depositar sus huevos, éstos son introducidos en la tierra por la hembra, ayudada por el principio activo, consisten en un cañuto de unos tres centímetros que contiene hasta cien huevos. Una vez introducido el cañuto en la tierra, cierra el agujero con un humor amarillo que hace salir de su boca, y va á otro lugar á practicar la misma operación. Los huevos permanecen en la tierra un mes

para que nazcan las larvas, éstas tardan tres meses para hallarse en estado de volar, son las langostas coloradas, no tienen dirección fija, pero vuelan y paran por los cerros y pocas veces bajan á las pampas, sólo si éstas son muy extensas, anochecen allí, más siempre arriba de los árboles ó de los matorrales, entonces el chiriguano madruga y hace provisiones para muchos días, y en seguida en el pueblo se declara la disentería que lleva muchos al sepulcro.

Las niguas son abundantes donde hay chanchos y perros, á quienes persiguen constantemente, es la nigua una pulga pequeña en la forma y en el color, pero no en los efectos, se introduce en la piel, causando un ligero escozor, es fácil sacarla tan pronto como se advierte su presencia, pero si llega á establecer su morada y forma nido, consistente en una pequeña bolsita de piel, cuesta desarraigarla. Produce la nigua hinchazón y molestia é imposibilita el andar, cuando sienta sus reales en los piés: para que esto no suceda, se levanta con aguja primero la piel al rededor de la bolsa que se procura arrancar íntegra, en el hoyo que deja, se deposita ceniza, especialmente de cigarro y desaparece todo peligro de inutilizarse por algunos días el paciente.

El guanaco es parecido al piojo, pero más grande y los hay de todo tamaño, en chiriguano se llama «Guanaco;» también estos insectos están un tanto internados en la tierra y pican fácilmente á los que van descalzos ó con ojotas, los hay en abundancia desde Yvu hasta mucho más allá de Santa Cruz de la Sierra, su mordedura no es venenosa, pero en algunos produce grano é hinchazón en todo el cuerpo y en otros hinchazón en las partes más inmediatas. A mi compañero le produjo el primer efecto y sanó luego con cinco gotas de amoniaco tomadas en agua, á mí me produjo el segundo, fué en un viaje y como me faltaba el amoniaco, sané de la hinchazón, que me molestó todo el día, con hojas tiernas de plátano y sebo derritido que me aplicó una anciana en Guariri, donde pasé la noche y desperté sin señal ninguna y sin dolor: los indios mascan el tabaco y se curan con facilidad.

En tiempo de lluvia son abundantes las luciérnagas «Chocopi» los escarabajos «[illegible]» y las cigarras «[illegible]» las primeras son muy luminosas y comen las algarrobas grandes y pequeñas: con unas dos ó tres luciérnagas debajo de un cristal se ve perfectamente y los niños se alumbran de noche, los segundos anuncian la mudanza del tiempo, porque entonces salen muchos alrededor de la luz ó del fuego, y las terceras con su silbido fuerte y robusto semejan al anuncio de la salida ó parada del tren ó al de las maqui-

narias cuando deben principiar ó dejar el trabajo los jornaleros, de éstas hay cinco clases: «*Ndi*, *Ñaguina guasu*, *nancanazou*, *gote*, *chipitiriru*.»

Las moscas que no se ven en otros parajes, á lo menos en abundancia, aquí las hay en demasía, cuando en la estación de lluvias y de calor, se hacen muy molestas en la mudanza del tiempo, invaden las cocinas, las despensas y las carnicerías. Se encuentra aún la cantárida, de cuyo polvo se fabrican las llamadas «moscas de Milán.» Los tábanos «*ambutu*» se hacen molestos y abundantes en los meses de Febrero y Marzo y hay otra clase de moscas grandes que persiguen á todo ganado lastimado, en las heridas deposita su gérmen que se resuelve en asquerosos gusanos, por las cuales las pobres bestias andan, corren, se arrastran por el suelo y se escamen como si estuvieran locas. Aún en las heridas de los hombres descuidados ó dormidos depositan el mismo gérmen; he visto y curado á varios en sus fosas nasales, en sus oídos y hasta en la garganta, sinó se cura á tiempo, produce la muerte, como sucede frecuentemente a las crías de los ganados.

La polilla que daña la ropa de lana se la halla, en abundancia y dicha ropa no se debe descuidar por mucho tiempo, la lana se libra de la polilla sólo cerrada en fundas de algodón y se ahuyenta de las petacas y baules el animalillo mediante el tabaco de fumar. El maíz y otros cereales son perseguidos por otra polilla llamada gorgojo que no deja sano el maíz para otro año, pero si se guarda en trojes nuevos con chala, no se remueve y se halla en lugares algo ventilados, no se daña por dos años y aún más.

En la campiña y en las habitaciones abundan los grillos, poco perjuicio hacen en aquélla y bastante en éstas. De su pequeña boca no escapa ni la seda, antes bien parece que es el género de vestido ó adorno que más persiguen, se posesionan alguna vez de las cómodas en las sacristías y hacen perjuicios irreparables, dañando los mejores ornamentos sagrados.

En la campiña, en las praderas y en el bosque hay un sinnúmero de otro insecto que tiene aquella propiedad. Apenas [illegible] el [illegible] que cree, á saber: polvorío en principio, colorada luego y garrapata de grande. En los tres estados es peligroso, produce escozor y si el atacado se rasca, luego aparecen las llagas que se curan con dificultad y en mucho tiempo, una vez las lleva tres meses á pesar de los fármacos que les aplicaba tres veces al día. La garrapata es fácil de desprenderse en principio, arrancándola y procurando que no quede en la piel la cabeza, pero si está bien prendida, se

unta con sebo ó aceite la parte, donde está posesionada y cae de por sí; de lo contrario dura el dolor y el fastidio algunos meses.

Hay lagartijas de todo tamaño y color, las más pequeñas, son inofensivas causan algún miedo, pero son más bien de provecho, porque persiguen á los insectos, conforme los sapos, en las habitaciones. En los bosques hay una especie de lagarto de un metro de longitud, corre muy ligero; cuando se vé perseguido y acosado, se defiende mordiendo, pero no contiene veneno, vive en parajes determinados y es perseguido por los indios que lo comen y aseguran que su carne es sabrosa. En los ríos grandes hay el caimán, especie de cocodrilo, que también se le encuentra en las lagunas de agua permanente, pero rara vez; este es anfibio, muy temible y peligroso y difícil de matar por tener escamas muy duras, pero más que taco, como el tirador está casi al mismo nivel que el animal, la bala se dirige horizontalmente y es natural que rebote ¿así no sucede acaso, cuando los niños arrojan piedras al lago? El caimán vive meses íntegros en el agua y hasta sumergido en el barro, cuando se secan las lagunas. En el agua no es tan temible como cerca de las orillas, donde fácilmente mata á todo animal ó persona descuidada. La hembra del caimán pone huevos bastante grandes y cuadriongos, los cubre con hojas secas cerca de las orillas de los ríos y lagunas, pero no los empolla, los cuida desde el agua y los defiende de los agresores. Las crías salen del cascarón con el calor del sol y entonces la madre las conduce al agua, cuidándolas por una temporada más ó menos larga. El caimán come de todo, seres vivientes y muertos, pero éstos constituyen su alimento ordinario, cuando puede, ataca á los vivos, pero siempre de frente; de todo lo que cuentan de este anfibio repugnante, hay mucho de exageración, basta por consiguiente lo poco que he escrito relativamente á él, en chiriguano se llama «*Yacare*.»

Finalmente, en ciertos parajes existe en demasía una clase de insectos muy parecidos á las hormigas, son blancos con cabeza roja, unos los llaman hormiga blanca, y otros piojo de tierra y los chiriguanos «*Cupii*.» es cierto, sin embargo, que no tiene los instintos de la hormiga. Dicho insecto que causa asco al solo verlo, es peligroso para los edificios y madera de cedro algo tierna y aún para la cañahueca; roen la médula de estos dos elementos, dejando apenas una pequeña corteza sin dañarla exteriormente en lo más mínimo. Sucede pues que un propietario cree que el techo de su casa se halla en excelentes condiciones y, cuando menos piensa, se le puede caer encima con peligro de hallar la sepultura en su pro-

pia habitación ó pieza. Los confesonarios de algunas iglesias de nuestras reducciones han quedado completamente averiados. Donde hay esta clase de insectos acuden una multitud de sapos y tras de éstos van las víboras y culebras para hallar un sabroso almuerzo, aunque estén en un confesonario, como me sucedió en cierto paraje.

A veces este insecto se posesiona de las paredes de un edificio ó de una iglesia, forma allá sus cañutos parecidos á ramitos de arboleda, es tierra que saca de dichas paredes; otras se adueña de los cimientos y extrae tierra continuamente. El mejor remedio en ambos casos para que no daño mucho ni unas, ni otros, es dejarlos en paz, no quitarles la tierra que elaboran ó extraen, de otro modo si más se les quita, más extrae, quedando huecos muchas veces cimientos y paredes. Aseguran que de los cimientos pueden desterrarse fácilmente, quemando allí pólvora ó encendiendo petróleo; de año en año ó más talvez estos piojos ponen alas y vuelan para no volver más, pero se quedan en el lugar las larvas.

Para terminar este párrafo algo diré también de otras tres clases de insectos, para que vean mis lectores que nada falta en la región chiriguana. Los voy á nombrar con perdón de alguna niña delicada ó apuesto pimpollo que por casualidad pudieran leer estas líneas. Son la pulga, el piojo y el chinche; los primeros sólo abundan en tiempo de frío desde Mayo á Agosto cuando arrecia el sur, el segundo es propio de la gente sucia y los matan comiéndoselos bonitamente por diversión, los últimos anidan en los catres y el mejor modo de destruirlos por un tiempo largo, es colocar el catre infecto por unos dos días en medio del agua en un lagar, en una corriente de agua, ó en un lago.

Aves

Si en la región que voy describiendo, abundan los cuadrúpedos mansos y feroces, del poblado y del bosque, si son innumerables los insectos que molestan al hombre de día y de noche, causándole chichones, tumores y hasta perjuicios más notables, como la pérdida cuanto menos de un ojo; sino faltan animales ponzoñosos como el cascabel, si hay sabrosos y enormes dorados que regalan el estómago de los consumidores, existe también una infinidad de aves de todo tamaño, color y belleza que cruzan por los aires, alegran con sus armoniosos cantos las frescas mañanas, revolotean por encima de los edificios descansando allá satisfechos, juegan por la

atmósfera purificándola y proporcionan al chiriguano y al que no lo es, alimento exquisito con sus carnes, á pesar de que algunos, sino les hacen perder todo el sembradío, le aligeran lo bastante los trabajos de la cosecha. De algunos de ellos me voy á ocupar brevemente.

Águila.—La que se conoce por estos parajes, no es la águila real, ó la verdadera, es semejante á ésta en la forma, pero no en el tamaño. Las hay de dos clases, una negra y roja y otra ceniciento, vive siempre en la campiña, no se acerca á los pueblos, ni á las casas de campo y se nutre de víboras muertas, de langostas, grillos, pajaritos, lagartijas ó insectos, no es perjudicial al hombre, ni á lo que le pertenece, ni éste la persigue, así que vive á sus anchas. En chiriguano se llama «*Güirapinta.*»

Avestruz.—La región de los avestruces que los chiriguanos llaman «*Yandu*» principia desde Yvu. Aquí los he visto en estado silvestre, en Santa Rosa ó Igüembre en estado doméstico. Sin embargo, si en Yvu principia su región, donde los hay en abundancia, es en el Gran Chaco, allá en las pampas de Carandaiti los he visto del tamaño de un borrego con un listón negro en el cuello y pecho, los he visto en tropas de diez, quince y veinte y algunos tan mansos y tan cerca del camino que era muy fácil matarlos de un tiro de escopeta, lo que me llamó por cierto la atención, pues otras veces los he visto solitarios y correr como viento al sólo oir la voz humana. Preguntada la razón de este procedimiento diferente de ser solitarios y sociables, mi chiriguano y otros compañeros de él me dijeron: que sólo se reunen en el mes de Julio y Agosto para la propagación de la especie, lo mismo se reunen en menor cantidad en Octubre y Noviembre, lo cual indica que depositan los huevos en dos épocas no muy lejanas una de otra.

El avestruz hembra es más pequeño que el macho, sus plumas son más desvaloridas y tampoco tiene collar como éste, deposita unos veinte ó veinticinco huevos en el mes de Setiembre, equivalentes á 240 de los de gallina por su peso y sustancia. Otros huevos en menor número los deposita en el mes de Diciembre, mas ni siempre, ni todas las hembras, sino las más jóvenes. Medí y pesé uno de estos huevos, tenía 15 centímetros de longitud por 28 y cinco milímetros de circunferencia, su peso era de una libra y media, equivalente á doce de gallina que también pesé. Con uno de estos huevos se alimenta bien una familia de cuatro ó cinco chiriguanos que los buscan en tiempo de carestía y cuando no lo es.

Se hallan nidos en Setiembre y en Diciembre y es el macho

[facing p. 51]

Figura del Yandugua o quitasol

que empolla los huevos, especialmente cuando en un mismo nido depositan dos hembras sus cuarenta ó cincuenta huevos, *ñatas*, mientras el macho se enflaquece sobre el nido para dar calor necesario á los huevos, van en busca de otro macho á triscar nuevamente á sus anchas á otra pampa lejana. Asegura mi indio y todos los que he preguntado al respecto, que es costumbre de todos los avestruces no empollar uno ó tres primeros huevos que depositan; la hembra al tiempo de depositarlos, escarba, prepara el lugar que debe ocupar el nido, con su pico desmenuza la tierra y con ella cubre los dos ó tres huevos de reserva. Cuando las crías comienzan á salir del cascarón, el macho rompe los huevos de repuesto, allí se aglomeran moscas y otros insectos, de los que se alimentan los recién nacidos ¡Cuán admirable es la Providencia de Dios que ha dotado de instinto particular á todo ser viviente para luchar por la propia conservación!

El avestruz se nutre de todo lo que encuentra, especialmente de insectos, frutos del campo y hierbas, limpia y refresca su cuerpo con arena ó tierra que recoje con su ancho pico, corre con mucha velocidad ayudado por sus alas, pero nunca vuela, porque las alas son pequeñas y suaves y su cuerpo es pesado. Para prenderlo ó cazarlo, más se necesita destreza que valentía, porque en su carrera siempre caracolea y hace quites, especialmente cuando se halla en peligro próximo; si su carrera fuera algo en línea recta y no tuviera los quites tan repentinos y bruscos, un buen caballo y un perro medianos pronto lo alcanzarían. Este semivolátil sería el rey de las aves, si volara. En estado doméstico, es bastante perjudicial para las personas descuidadas, engulle todo lo que halla, hasta llaves y dinero y en un campo de alverjas entraría con ellas sin hacerlas saltar, en una huerta todo lo destruiría; prendido vivo en estado silvestre, embiste y se defiende dando de coces que lastiman.

Su carne es un alimento excelente y la he comido repetidas veces, los indios van á la caza del avestruz para frotarse con sus grasas; de las plumas hacen comercio, ó las guardan formando con cinco de ellas el «*Tandagua*,» especie de quitasol del cual hablaré á su tiempo. La grasa es un remedio eficacísimo para el costado, reumatismo y mal de cuerpo en los hombres y animales para la frialdad de los miembros y para arrancar las espinas, untando con ella la parte opuesta donde penetró.

HAVENGUETA.—Es ave que los indios llaman «*Tatiú*» porque así canta, tiene pico largo, piernas rojas y altas, plumas rojas y cenizas

cientas y cuello largo, se nutre de gusanillos ó insectos y generalmente se halla en las praderas y orillas de ríos y lagos. La carne es como la de la gallina pintada, pero muy dura, mas si se arranca la primera película antes de hacerla hervir ó asar, se cuece con facilidad.

La bandurria es algo parecida á la grulla, mas es estacionaria, abunda en todo lugar y no es solitaria, pero tampoco se unen entre muchas, una bandada se compone á lo sumo de unas doce ó quince y es frecuente hallar una sola pareja. Si de éstas se casa una, la compañera vuela al momento y huye, pero vuelve siquiera dos ó tres veces para averiguar lo acontecido, de este modo es fácil al cazador matar ambas. La bandurria tiene mucho instinto y al acercarse el cazador pronto huye; cuando son muchas, vuelan como las grullas yendo una por delante para romper el aire, no vuelan á mucha altura, generalmente duermen en el hueco de las peñas, donde es fácil cazarlas después de la bajada del sol.

Ilama.—Es ave nocturna grande como un cóndor y de color blanquecino; los hay de dos clases, el segundo es más chico y negro, cruzándose con collar blanco; al primero los chiriguanos llaman «*Yaucurunta*,» porque cuando canta, parece que forma esta palabra, la hembra del Yaucurunta contesta «*Yapacapiti*» que en castellano quiere decir: «entemos» de donde los blancos toman pretextos y hacen correr voces que los chiriguanos piensan sublevarse, si por acaso dicha pareja de bubos acierta á cantar en un poblado ó cerca de una casa de blancos. El segundo se llama «*Yaucurunta*» porque sólo canta, ninguno de los dos es perjudicial; abundan donde hay arbolado; el primero se nutre de murciélagos, sapos y culebras, por cuyo motivo no tiene atractivo para el chiriguano, pero es ave muy linda y sus plumas son de un terciopelo finísimo; el segundo es buen alimento para los indios, quienes le dan caza en las noches de luna clara.

Caramaiti.—Avecilla del tamaño de una golondrina con su copete lacre, plumas cenicientas y pecho blanco. La región de los cardenales principia en Parapiti Grande, una que otra vez pueden verse Yeu algunas parejas y por los campos de Caramaiti hay también algunas. Los he visto en ambos lugares, como he visto que en Parapiti andan bandadas de quince y veinte. No tiene más particularidad que su copete y el canto en ciertas horas del día. Los indios chiriguanos de Parapiti y algunos Tapiú de Isoso procuran pescar viva esta avecilla y llevarla al interior de la República, á Sucre ó Potosí y venderla ó cam-

biarla por ropas usadas; bajo este concepto es un pequeño comercio lucrativo.

Carpintero ó Picamaderos.—Es ave negra con copete colorado encendido y en chiriguano se llama «*Arapatuare;*» cuando vuela por miedo, hace mucho ruido con sus alas, es rápido y vuela en línea recta. Es un afán continuo el de este animalillo del tamaño de un rondón el trepar sin descanso árboles secos y huecos, golpeándolos con su pico duro para hacer salir y comer los insectos que contiene. A veces el viajero al oir estos ruidos en el bosque, cree que alguien está cortando leña y labrando madera, ó se inclina á creer que el prolongado ronquido de un árbol seco y hueco golpeado por el picamaderos, está por caer, supuesto que ignora que recibe picotazos de esta avecilla; alguna vez me han sucedido ambas cosas. El chiriguano no pierde tiempo en cazar al carpintero, porque es semi-solitario y apenas se hallan tres ó cuatro en un paraje, sólo los niños lo persiguen por diversión y por aprender á ser certeros en el manejo del arco y flecha.

Cóndor.—El cóndor es el rey de las aves acá y es llamado por los indios «*Guapi,*» vive en las alturas de los cerros elevados y desciende á las pampas, cuando vé ó huele el cadaver de alguna bestia en putrefacción. Se cierne continuamente por los aires á mucha altura formando grandiosos círculos en su continuado vuelo, lo hace así sin duda para descubrir su alimento con la vista ó el olfato, pues con su método de volar, abarca no sólo los vientos principales, sino todos los demás aún que pudieran llevar el hedor de los cadáveres. Es un hecho comprobado, dígase lo que se quiera, que tan luego como principia la putrefacción de una bestia muerta, pronto se reunen allí cóndores y cuervos.

Solamente sobre una carroña se reunen en cantidad y sólo entonces también á una pequeña distancia el viajero puede contemplar su magnitud, lo negro de sus alas y plumas, la blancura de su pecho y su collar tan hermoso. Allá en la cumbre del cerro de Ipaguasu camino á Igñende tuve la satisfacción de mirar por pocos minutos unos veinte ó treinta de este rey de los aires ¡qué hermosos y que colosales! parecían carneros. Todo su cuerpo es blanco, menos las alas; arrancadas las primeras plumas que son algo ásperas, queda en seguida una plumilla de mucha finura y suavidad. La piel puede sacarse íntegra con dicha plumilla y con unas diez ó menos también puede formarse una regular cobija de una blancura extraordinaria y quizá de un valor que pudiera competir con la piel de chinchilla

Por lo relatado se comprende que el cóndor es una de las aves mayores que existen así; su presencia es provechosa para purificar el aire siendo así que su alimento consiste en cadáveres de ganados y otros animales, además de poderse utilizar su piel y aún la grasa que constituye un fármaco excelente para el reumatismo y la artritis. Sin embargo hay lugares de querencia, donde se reunen en cantidad y son una verdadera plaga para la hacienda vacuna, ciegan á los terneros recién nacidos y apartados de la madre, que va pastando á lo lejos y luego los destripan. Si los terneros son algo crecidos, tienen los cóndores otro procedimiento, estando aquellos lejos de su madre, entre dos ó tres cóndores los cupujan hácia algún despeñadero, los golpean con alas y como no pueden huir, corren de un lado á otro al borde del despeñadero, fácilmente ruedan y caen en él, donde sino están muertos, quedan imposibilitados para correr, ó por haberse tronado las piernas ó por ser angosto el lugar de la caida, bajan en seguida los volátiles de la hazaña y otros más que vienen y entre alazos y picotazos que se dan uno á otro, hacen un exquisito almuerzo ó cena para principiar de nuevo al día siguiente hasta terminar y buscar otros terneros descuidados.

Nadie persigue á los cóndores, porque no tiene atractivo ni para el indio, ni para el blanco, éste necesariamente debe tomar la defensa de su ganado, cuando el cóndor es dañino, lo mismo que hace con el tigre; es difícil matar á éste por su ferocidad y lo es también matar á aquél, porque vuela en seguida, pero instintivamente conoce cuando ha hecho algún perjuicio notable. Sin embargo, como el ganado vacuno es bastante en todas partes, el daño que hacen nuestros buitres no es notable, porque no es á un solo dueño.

CRÍTICA.—Nosotros somos que este ave semi-útil es el mismo carpintero ó sea el ave que persigue y se alimenta de ellaras y carpinteros, mas parece que no están en lo cierto, pues los chiriguanos que lo dan esta contestación para matar de su carne, ocurren que su alimento no consiste en ellaras, sino en otros animalejos como cucarachas, langostas, grillos y otros insectos, de donde se puede deducir lo contrario. Los indios desde la márgen derecha del Parapiti hácia el Sur lo llaman «*Sariñaca*» y desde la izquierda hácia el Norte indios y blancos lo llaman «*Sevori*,» lo mismo se llama en Guaraya.

La cholla tiene piernas largas y rojas, plumas amarillas y negras, corre mucho por pampas y lomas y vuela también algunas veces, especialmente cuando se la persigue, entra por las cañaras

y por las tardes. Las hay en todo lugar, aun no en abundancia, generalmente andan con su pareja y á lo sumo son tres, suelen cantar á la vez, principia la hembra y sigue luego el macho, prolongando así el canto por unos cuatro ó cinco minutos, en un canto ó grito muy estraño. Dicen que anuncian la proximidad del viento ó de la lluvia y si está nublado, anuncian la proximidad del tiempo despejado ó claro. Los cazadores sin el auxilio de buenos perros difícilmente cazan esta ave, por lo mismo que corre y vuela en casa apurada.

Garza.—Es ave bastante grande, pero liviana, tiene pico grueso y algo largo, vuela poco y tiene su paradero en los lagos, lagunas y orillas de los ríos, donde encuentra su alimento. Las hay de dos clases, una completamente blanca, muy blanca, por cuyo motivo los chiriguanos la llaman «*Gárcanda*» ó sea pájaro blanco, la otra es ceniciento y pera en los mismos lugares, los chiriguanos no las persiguen, porque montieren muy poca carne.

Gallinazo.—Es volátil negro y repugnante á la vista especialmente por su cuello y cabeza calva, se nutre de cadáveres ó animales muertos, aunque sea cuerpo humano, si se encuentra, cuando puede, de arrancar las tripas y cuatro tiernuras, corderos y lechones recién nacidos que halle durmiendo y hijos de sus madres; en el primer caso constituye un excelente portillador del ano hasta desaparecer todas las mismas que salen de las cavidades, porque cuando los hay, las tienen en pocas horas, pero, como abundan, se reunen en cantidad. Por los gallinazos se devoraron las crías y animales muertos ó cazados por el tigre; algunos gallinazos se atontaban en las cavidades de vacas y caballos, dando á pensar de la lengüeta que tienen, pendiente, tarde ó temprano, algún perjuicio.

Raro es que el indio persiga el gallinazo, porque su carne es dura y indigesta, sin embargo alguna vez lo mata para comerlo; se sirve de la sangre caliente de este animal para curar su pequeño ó la de su hija, que se asegurara de asegurar vacío; pero el efecto cabal dicha sangre en una tira de lienzo y la amarra alrededor de la garganta, asegurar que produce algún efecto. Mas debe contenerse de pequeñas incisiones de cuerpo y no de aquellas cicatrices de arrobas como existen en forma de alforjas que se ven en abundancia por Potrero, Piraí, San Juan y Pozoalmonte.

Con los mismos instintos del gallinazo hay otra ave grande, llamada carancho por los blancos y «Characo» por los indios, no mata sin embargo terneros, persigue al y mata cordillos, lechones y pollos, devorándolos con su imperdible y dominio á la chuza.

Este ave sin vergüenza, al cuido abierto en todas partes, es capaz de penetrar á las cocinas y meter el pico en las ollas, pero su morada diríamos son los morales, allí anida, hueva y mora; y, como la casa más natural del mundo, á su derecho cuchillo le sacan las tripas á cuando menos lo hace tuerto. El pájaro penetra á los nidos de los pájaros más pequeños y cebo hueva á sus hijos para comerlos; es por lo mismo un tirano y mal vecino, de donde provienen que todos son sus enemigos y algunos lo persiguen aleándolo del nido. Así lo practica el ave que los chiriguanos llaman «Chirapijuna,» otra llamada «Suirirí» se pasa en los huertos del naranjillo y lo pérdida hasta que se coma á largas distancias.

Aseguran los indios que la grasa del naranjillo es remedio eficaz para la vista y que la cochina antes de que se introduzcan los tiranos actuales que resultan más eficaces y activos; mucho en escasa, si está gorda. Las plumas del naranjillo y del gallinato son muy fuertes y los colocan á la extremidad de las flechas para que no se doblen cuando son arrojadas y sean por consiguiente más certeras.

Geografía. — El calor es por donde escasito en ciertas. Aparece del año, llegando el termómetro en la sombra hasta 32 grados y la fuerza del sol hasta veinte, pero no se cura que este estado de calor, sea normal. Hay nieves en el año y en los cerros hay veranos y días en los cuales con dificultad se aguanta el frío, éste es más intenso en Junio y parte á todo Julio. De aquí pretende que la gobernación sólo está en pregunta, comienza á fines de Abril y vuelve á principios de Octubre, los hay completamente secos y los hay aun pocos blancos. Estos nublados son la ocupación á en el tiempo de las gallinas y aquellos en los cuales debajo de los tejados, anidan sus abundantes, como lo son los cerdos que salen determinados, cuando deja de llover.

Ganado. — Abunda este cuadrúpedo indígena y ninguna cría sale la, pretiguar, porque vuela con mucha rapidez, por esto dicen los chiriguanos que es el rey ó presidente de las aves y lo llaman «Chiriapijú,» hace mucho perjuicio en los gallinaceos, anida con las gallinas, porque aquellas generalmente son bastante despejadas de hierbas y cercas y las cercas se encuentran bien alineadas alrededor de los planes.

En las cercas colocadas en las alturas y que están rodeadas de matorrales ó cercas, suele á pasar desaparecer el gallinato, porque las gallinas se cuandan luego; aparecen muchas blancas que planeando

4: Nino SF 10 Chirlguano

[facing p. 57]

Palmarito delante de la casa de Mans Icharo.—Salinas

un madero de unos tres metros cerca de la casa y colocando en la punta una olla ú otro cacharro, ahuyenta á este ave de rapiña, del cual, ni el loro se libra.

Lechuza.—Ave nocturna que habita en los bosques y se posesiona aún de los edificios, donde hay murciélagos que destruye completamente. No es perjudicial, antes bien es provechosa, porque destruye aún los ratones, es del grandor de una pava, pero de un plumaje muy precioso, algunas ó la mayoría son como terciopelo y bastante fuertes casi iguales á las del buho. Conozco una sola clase de lechuza que los indios llaman «*Saiude*,» no tiene aprecio alguno y vuela en su completa libertad, raras veces se acerca á las poblaciones, porque no tienen abrigo para tales bichos, sólo lo tienen los templos, donde hay artesonado

Loros.—Esta región parece la tierra de los loros, los hay pues en grandísima abundancia, de diferentes cualidades, tamaños, colores, con cola larga ó corta, azules, verdes, váriopintos, blancos ó blanquecinos, aptos para aprender á hablar y remedar al hombre y á los animales y completamente inútiles para esto. Cuando el maíz principia á madurar y hasta que esté en estado de cosecha las bandadas de loros son una verdadera plaga: por poco que el labrador se descuide, ya no cuenta con la cosecha. Los blancos para defender sus chacras algo grandes, ensillan sus caballos, como si anduvieran en persecución de bestias feroces.

Otros cristianos y chiriguanos también defienden sus sembradíos de los loros de distinto modo. Matan dos ó tres perros y en falta, cabras ú ovejas viejas, las colocan á la cima de los árboles que hay de distancia en distancia en las chacras y á estas los loros no se acercan siquiera. No vayan á creer sin embargo mis lectores que los loros se amedrentan de los cadáveres, como algunos ó la mayoría cree por acá; lo que los ahuyenta son los gallinazos que revolotean alrededor de su comida ó se asientan en dichos árboles atraídos por el cebo, por esto hay que tener la precaución de colocar el cebo donde los gallinazos no pueden alcanzar con su pico, ni les es fácil asentarse, así se cansan unos y llegan otros, el maíz madura, se seca y los loros se pasan ó van á alimentarse con la semilla del soto que también abunda en tiempo de chacras. Sin embargo los más prefieren tener en las chacras á sus hijos que gritan continuamente para espantar los loros ó les arrojan flechas y piedras. En este oficio se ocupan aún los chiriguanos grandes, porque la carne de loro es un alimento muy sabroso, á pesar de que algunos son muy duros, la prefiero á cualquier ave silvestre y doméstica. Pa-

ra prender vivos á los loros habladores, amarras á uno domesticado y mediante trampas consiguen á los compañeros que se acercan al prisionero.

HORNERO.—Esta avecilla en chiriguano se llama «*Tiantía*,» su color es rojo y su magnitud es la del gorrión, es manso y no se asusta fácilmente, sin duda porque nadie lo persigue. Se le llama hornero por la estructura de su nido, ¡es cosa admirable! pájaro tan pequeño trabaja con su pico un verdadero horno en miniatura. Cuando recién acaba de llover, principia luego el albañil á trabajar su casa, pero si la lluvia tarda, vuela á las orillas de los ríos, torrentes, lagunas y acarrea el material necesario, no se contenta de una casa vieja, cada año la quiere nueva, por esto ciertos árboles ó sus ramas están llenos de estos hornos.

Para la colocación de su horno el pajarito escoje árboles seculares y grandes como algarrobos, quebrachos y otros, mas éstos últimos son de preferencia, procura que las ramas sean sólidas y desembarazadas de ramas pequeñas. El horno es relativamente grande, á un lado deja una abertura alta y estrecha prolongando las paredes de ésta hácia adentro hasta cierto punto, para que la lluvia con viento no penetre en su nido que coloca atrás de dicha pared, así es que sus huevos y crías quedan completamente al abrigo. La pared de la abertura tiene forma de espiral de dos vueltas y un poco más, el barro de toda la casa está mezclado con excremento de caballo ó buey y la cama ó el verdadero nido es de lana limpia y rala.

En dichos hornos hay una segunda abertura redonda y angosta al lado derecho de la primera á unos cinco centímetros de altura, quizá para huir de algún peligro; pero es más fácil conjeturar que practique esta ventanilla cuando algún animal extraño, como p. ej. el ratón toma posesión de la primera vuelta del espiral, donde el mismo ratón practica una tercera abertura para salir por ella. Conjeturo así, porque los hornos que voy describiendo no son iguales, los hay de una, de dos y de tres aberturas. En los hornos abandonados palitiean otros pájaros llamados tarachis que muchas veces desalojan al dueño de su casa nueva aún.

MACANCA.—Animal ó ave muy conocida, pero que no abunda; indios y blancos la llaman con el nombre que encierra estas líneas, lo que hace suponer que no hay en otros parajes ó no la conocen por su nombre. Su canto es monótono y largo por las mañanas y tardes, forma un monosílabo: «*guá guá guá*» y sigue así horas y horas hasta fastidiar. Esta ave es del tamaño de una paloma gran-

do, con plumas blanquecinas en el pecho y cenicientas por encima. Estoy por creer que es el verdadero serpentario, porque á las víboras los prende vivas para alimentarse, éstas le tienen mucho miedo y huyen en verlo á cielo, de su carne no come el chiriguano, así que vuela y canta á su gusto y regalo.

Mayuta.—Es un pajarito muy bonito de tres colores, amarillo, rojo y negro, domina el primer color, se domestica con facilidad, pero su canto no es variado, es una diversión colocarlo al frente de un espejo, especialmente si es macho; se encrespa, canta con gana y acomete á su figura, creyéndola un competidor. Hasta la márgen derecha del río Pilcopiti dentro de la última serranía de los Andes llamada Aguaraqui no se vé uno, principian á verse en la márgen izquierda y precisamente en la Misión de San Francisco. La Misión de San Antonio del Pilcopiti grande situada en la misma márgen, apenas dista 5,400 metros de la igual de San Francisco, sin embargo en sus alrededores nadie vi un mayuta. O no hallará allí alimento adecuado, ó el frío de las mañanas será más sensible por estar muy cerca de la montaña. Los chiriguanos y Tapiti prenden vivo al mayuta y lo llevan á vender lejos.

Mimiri.—Esta clase de ave no abunda en la región, si está en todo lugar, gusta permanecer donde corren arroyuelos de agua para cantar á satisfacción, es negro claro y algo grande. Canta fuerte y con mucha gracia desde la salida del sol y antes de ocultarse este astro; alegra al viajero el canto tan claro y fuerte de este pájaro, se le oye á larga distancia. Los blancos le llaman chicuaqua.

Murciélagos.—Los murciélagos son abundantes en tiempo de calor y muy repugnantes; en ciertos edificios con techo de paja ó con paredes sólidas con redes, todo lo cruzan con sus inmundicias y causan verdadero asco. Los templos que tienen artesonado y no tienen caja ó abandonado en sus cimacuyas, se llenan de estos animalejos repugnantes y donde habitan hay gran limpieza. De noche muerden á toda clase de animales y aún al hombre durmiendo, los hay de dos clases uno chico y otro grande.

El indio chiriguano tiene idea confusa del fin del mundo que llama *ayapi* término del tiempo. En aquel entonces, dice, parecerá *mandiri yaiso*, murciélago grande, nos comerá y todo se acaba. La lechuza y el buho son compañeros del murciélago y la matan no por matar, sino porque es su alimento.

Pajaros.—Son de cuatro clases á saber: palomas, tórtolas, mentirosas, chiriguanos y tórtolas, cuyos nombres respectivos en chi-

riguano son «*picuau, picuái, picui geruti.*» Las grandes andan en bandadas que oscurecen el sol en tiempo y después de la cosecha del maíz en Mayo, Junio, Julio y Agosto. Las medianas se llaman monteñas, porque su paradero fijo son los matorrales, abundan también y son quizá más sabrosas que las primeras, son sociables como las torcaces y vuelan en bandadas muy grandes. Las ulinchas que son pequeñuelas, son mucho más abundantes y sabrosas; se acercan á las casas y penetran aún á los patios, para dormir buscan árboles copados; las últimas ya he dicho que son una especie de tortolilla y van parejas, su canto es muy triste.

Para cazar las torcaces el indio atisba el árbol donde paran en abundancia, coloca y amarra una que prendió viva; con paja forma una especie de horno abierto por abajo y allí se oculta. Lleva flechas y espera que las torcaces vayan á visitar á su compañera y como no ven al enemigo que se halla escondido, son heridas y caen muchas hasta que al indio se le terminen las flechas, lo mismo practica en el suelo á donde bajan á beber.

A las monteñas y ulinchas matan de noche, chicos y grandes andan con llamaradas de fuego, éste les oscurece la vista, caen y las matan á garrote. En Mayo y Junio en ciertas pampas y lomas cree un espectador presenciar la estratagema que usó Aníbal contra Fabio Máximo, cuando para abrirse paso en la angostura del valle de Casilino cerca del río Volturno, amarró material inflamable á las astas de dos mil bueyes, encendió é hizo dirigir á los bueyes á las alturas, consiguiendo así salida franca y victoria sobre el ejército romano, el cual creyendo ser los bueyes enemigos que corrían por todas direcciones, abandonó la angostura para defender otras posiciones y fué derrotado al día siguiente. En los meses indicados los jóvenes y niños poco duermen de noche por ir en persecución de las palomitas y tener sabroso alimento al día siguiente ellos y sus familias, pues es grande la matanza que hacen de palomas y otros pajaritos que tienen la desgracia de dormir cerca de aquéllas.

Pato. Donde hay lagos ó lagunas son innumerables los patos por su tamaño y color, unos son tan grandes que parecen gansos, los hay negros, blancos, rosados y pardos, estos últimos son gordos y sabrosos. El chiriguano come la carne del pato, pero no lo persigue por la dificultad que encuentra en ello, cuando puede lo caza, mas como esta ave palmípeda coloca ó deposita sus huevos en las orillas del lago, encima de las hierbas ó escondidos entre los matorrales que se desarrollan cerca de las lagunas, son

buscados con avidez por chicos y grandes, hombres y mujeres, porque en estos parajes el lecho de las aguas no es profundo. El pato en chiriguano se llama «*Ipe*» que literalmente quiere decir: en el agua, como laguna se llama «*Ipa*» ó sea agua ancha ó extendida.

Pava.—Tienen sus lugares de querencia y no se retiran lejos, allá se las encuentra precisamente á la salida del sol y antes de anochecer, éllas mismas se descubren al acercarse el cazador ó cualquier otro, porque luego comienzan á graznar y vuelan de árbol en árbol asustadas, con lo cual hacen un ruido desagradable. Son las pavas del tamaño de una gallina grande con cola bien larga y plumas negras; las hay de dos clases, la más grande se llama «*Yacu*» y se hallan en abundancia desde la márgen derecha de la quebrada de Cuevo; las otras llamadas charatas por los blancos, se llaman «*Amucua*» en chiriguano, éstas abundan desde la márgen izquierda del río Parapiti, provincia de Lagunillas.

Ambas clases son muy sabrosas, pero es mejor la charata. Las charatas se domestican fácilmente cuando son pequeñas, el macho es bravísimo en estado doméstico, acomete á todos, aún á las personas de casa; aturden las charatas antes de la salida del sol con su graznido tan fuerte y repugnante. Cuevo dista unas veinte leguas de Parapiti y poco más de dos de la Misión de Yrú, en la región de aquél ó en sus alrededores no se ve, ni se oye una charata, en el territorio de ésta se encuentra una que otra pareja y conforme se avanza al norte de dicha Misión hácia Parapiti, aumenta el número de tales aves.

Pelícano.—Este volátil en chiriguano se llama «*Tanga*,» porque cuando canta parece que diga «*Tangá, Tinguí, Tanga*». Las orillas de los ríos y lagunas constituyen su paradero, allá encuentra alimento, se nutre de sapos recién nacidos que tienen colita y se nutren también de pecesitos; duerme en los árboles y vuela perfectamente á pesar de su magnitud, vuela á mucha altura y por el camino que recorre, canta de distancia en distancia y dicen los indios que cuando canta el pelícano, está próxima la lluvia. Esta ave no abunda, siempre andan entre dos y á veces entre tres, su carne es buena para el chiriguano.

Perdiz.—Tampoco falta esta clase de ave en la comarca chiriguana, las perdices son de tres clases una más grande que otra, viven en las pampas, en los bosques y en los cerros. En el idioma la verdadera perdiz se llama «*Iscamba*,» la segunda que para en los cerros como su querencia especial, se llama «*Guáico*» y silba como los arrieros que arrean jumentos, la tercera que es la codorniz, se

llama «*Inamba tindi*». Existe una cuarta perdiz grande como la primera, pero de color rojo y por esto se llama «*Inamba pinta*,» mas el *guáiro* es más grande que todas; á todas éllas persiguen los indios con el auxilio de los perros adiestrados para el efecto.

Picaflor.—Se ven muchos de este volátil, mas parece que por acá hay de una sola especie, son los pequeñitos y en chiriguano el picaflor se llama «*Chiao*,» suele colgar su nido en cualquier ramita de árbol y también en alguna paja ó cañahuera de los tejados, sólo se ve perseguido por los niños, á quienes toda avecilla causa gracia y contento.

Hay también una especie de oropéndola que forma su nido muy gracioso, cónico como un globo con la parte ancha abierta hácia arriba, lo cuelga de las ramas de los árboles mediante hilos largos y delgados, á veces en un mismo árbol hay muchos nidos; ni las víboras, ni otro pájaro grande pueden perjudicar en tales abrigos.

Tordo.—Los tordos son innumerables en todas partes desde Monteagudo hácia el oriente; andan en bandadas, los machos son completamente negros más que la tinta de escribir y las hembras algo pardas. Causan perjuicios incalculables en los sembradíos recién labrados, escarban y comen la semilla con mucha destreza, al tiempo de nacer arrancan la planta tierna del maíz, trigo, cebada y arroz, es por consiguiente una verdadera plaga y, por poco que el labrador se descuide, de su labranza recogerá viento, su carne es buena, pero el indio sólo lo persigue como perjudicial. El tordo tiene el placer singular, como ninguna ave ave de seguir al ganado vacuno que pace tranquilamente en la llanura y algunos lectores pueden comprender el objeto y fin de esta singularidad.

Esta clase de tordo, llamado en chiriguano «*Tocumbia*,» canta poco y tiene menos gracia en su canto. Pero hay otra clase de tordo bastante gracioso, se le halla unas nueve ó diez leguas al Sur de la ciudad de Santa Cruz de la Sierra, es también negro, como negra es la hembra, se domestica mucho y canta variadamente y fuerte. Es una preciosidad y un encanto ese animalillo; sin embargo en estado doméstico todos los otros pequeños que halla, los levanta graciosamente con su pico y escande, bien pueden ser liras estrellas ó quietos. Quiere al amo y aborrece al extraño, se encrespa y pica fuerte.

Un tordo de esta segunda especie vale algo más de cinco bolivianos ó duros en Santa Cruz, y en Salta ó Tucumán vale hasta treinta moneda; hay indios en Paraguái y otros que hacen co-

nercio de tordos, los prenden en las inmediaciones del paraje llamado Basilio y en jaulas los llevan hasta la República Argentina.

TUCÁN.—Ave muy singular por su pico largo casi como su cuerpo, dicho pico es amarillo, rojo y negro, pero muy liviano, de lo contrario siendo tan grueso, difícilmente podría sostenerlo. Quien por primera vez ve al tucán, llamado «*Tucano*» en chiriguano, cree que lleve alguna espiga de maíz en su pico. Los tucanes andan entre muchos y tienen sus lugares privilegiados, no conozco más que una sola clase. Se asegura que el pico rasgado y tomando su agua, ataja el flujo de sangre, parece que el tucán sólo vive en climas cálidos, si le llevan á otros parajes, perece.

URRACA.—Este volátil es algo grande y alcanza, los hay de varias especies por la diferencia de las plumas. Se domestica con facilidad y en las casas es útil, porque mata todos los bichos ó insectos que pululan en ellas, pero su mansedumbre no excede á la del tucán, es inquieta y bullanguera tanto en las casas, como en el bosque.

Hay término á esta somera descripción de la tierra habitada por los chiriguanos y de lo que en ella se contiene. Todos comprenderán que no pretendí averiguar y describir minuciosamente todas y cada una de la plantas, todos y cada uno de los cuadrúpedos, anfibios ó insectos, todas y cada una de las aves, sino de aquellas que me parecieron de más importancia; si al pensar de más lectores muchas, ó pocas falta, tendrán la bondad de disponer las faltas, mientras tanto voy á dar principio á la verdadera etnografía que será algo larga para que resalte más clara y amena.

CAPITULO SEGUNDO

ORIGEN, IDIOMA, ESTADÍSTICA

INTRODUCCION

No son pocos los hombres, aun entre aquellos que son considerados como sabios, que en la magna cuestión del origen del hombre, rinden homenaje á ciertas teorías que la sana razón, la buena lógica y la ciencia bien entendida rechazan de consuno.

El último absurdo en esa serie de disquisiciones es el delirio de Darwin que hace descender originariamente al hombre, ser racional, de otro ser irracional, cual es el mono. Empero, esta teoría, lejos de resolver la cuestión, la complica, como quiera que no nos dice de donde, si de quien procede el mono; con lo cual, dicho se está que la dificultad queda en pié, agravada por la deficiencia de razones que pongan de manifiesto la verdad del sistema darwinista. La teoría de la evolución nada define; y, en cuanto se refiere al hombre y á su origen, es contraria á todas luces al siguiente principio metafísico, tan exacto como evidente. *El efecto no puede esperar á la causa;* ó lo que es lo mismo—*Las perfecciones del efecto no pueden esperar las perfecciones de la causa.* Es, pues, absurdo afirmar que el hombre, ser racional, se origine de un ser irracional, de un bruto, cual es el mono.

Lo propio á un ser, y aun en su mayor escala, cuando se trata de averiguar el origen y organización de los grandes pueblos que en la historia de la humanidad ocupan un lugar prominente, ó por su civilización ó por la extensión é importancia de sus conquistas sobre los demás pueblos. Tampoco en este ramo del saber humano faltan hombres que sin el debido examen ó por falta de

4: Nino SF10 Chiriguano

criterio admiten hechos que por lo fabulosos é inverosímiles llevan en sí mismo el sello de la fabulosa.

En los anales de los pueblos se encuentran dos clases perfectamente deslindadas; la edad fabulosa y la edad histórica, propiamente dicha.

La primera es por su naturaleza mitológica y fantástica. Allí abundan los acontecimientos más inverosímiles, los hechos de armas más sorprendentes, personajes fabulosos, revestidos de gran poder, especie de semidioses, y una antigüedad que se remonta á millares de años. Una cosa es común á todos esos pueblos, y que el hombre estudioso debe tomar en cuenta, y es, que todos ellos reconocen, como fundadores de sus respectivas dinastías, á los dioses; circunstancia que nos dá la clave para encontrar en esas tradiciones fabulosas la verdad histórica de los Libros Sagrados, referente al origen del hombre y de los pueblos.

El *Génesis*, el libro más antiguo que se conoce, y cuya autoridad y veracidad no han podido ser desmentidas hasta ahora, nos cuenta que el primer hombre y la primera mujer fueron creados por el Supremo Hacedor de todas las cosas: que desde su cuna, á consecuencia del pecado de nuestros primeros padres, Adam y Eva, la humanidad se dividió en dos grandes bandos; el de los *hijos de Dios*, que tuvo por padre á Seth, y el de los *hijos de los hombres*, que descendían de Caín. De estos últimos dice el Sagrado Texto: *Ibi erant gigantes à saeculo, viri famosi. Estos eran los hombres de gran poder de aquellos remotísimos tiempos, y varones de gran fama* (Génes., c. 6). En cuya frase fácil es descubrir á los héroes fabulosos de la antigüedad. Si á esto se añade la historia de la torre de Babel y de la dispersión de aquel pueblo famoso, tendremos todos los grandes acontecimientos que desenvuelven el fundamento lógico de mi asserto.

La historia propiamente dicha se desarrolla en los pueblos á medida que éstos avanzan en el progreso de la civilización.

Los tribus salvajes no pueden tener historia en el rigor de la palabra, porque carecen de civilización y de los medios adecuados para adquirirla, principalmente de la escritura. Esta es indudablemente la gran palanca que ha levantado á los pueblos de su postración é ignorancia.

Cierto es que los chiriguanos no tienen historia escrita, pero no carecen de ciertas tradiciones, más ó menos fabulosas, respecto á su origen.

Y por lo que hace á la historia que podríamos llamar moderna, guardan noticias de épocas relativamente recientes, y de cuya veracidad no se puede dudar, por cuanto estas noticias históricas están relacionadas con la conquista de estas regiones por los españoles, como se verá en el párrafo siguiente.

Origen

La tribu chiriguana carece de escritura, por cuya razón es difícil averiguar á punto fijo su origen, el lugar de su procedencia y el tiempo en que se verificó la inmigración. Admiran* cuando ven el papel que llaman «*Tuapipir*,» piel de Dios y con llaman feliza, porque por su medio pudieron hacer conocer nuestros pensamientos y deseos á los amigos y parientes á grandes distancias. ¿Qué dirían pues, si tuvieran una idea cabal del telégrafo y teléfono y de tantos otros inventos modernos como la de volar por los aires de este siglo XX, que justamente puede denominarse: siglo de los globos?

Cuentan que el «*Apuaro-Tuapa*,» Dios-nuevo, quiso destruir la obra del Dios verdadero haciendo morir á todos los hombres. Para conseguir esto se sirvió del «*Apuaro*,» agua grande, abrió pues las puertas á orillas de los mares é inundó toda la tierra, las aguas de la superficie terrestre llamaron las del cielo «*Apuaro*,» diluvio y así pereció la raza humana. Más antes que se consumara la total destrucción del chiriguano, en el cual se conservaba la humanidad, una mujer tomó á dos de sus niños, hombre y mujer, los metió en un «*Ituyuta*,» cuero grande, los dejó á discreción de las aguas y cuando éstas disminuyeron, se encontraron en el Paraguay, donde volvieron á multiplicarse (1).

Dejo que carecen de escritura, pero en cambio tienen una especie de tradición oral «*Mimi*,» que transmiten de padre á hijo. Sin embargo está también recargada la tradición en el velo de la confusión, porque cuenta nuestros á sus tiempos, de donde resulta que los patriarcas verdaderamente se ignoran, porque «desconocen los nombres de aquellos grandes que estimaron en Dios. De todas guerras que han sostenido contra los que eran antes de la conquista, desde la colonización del norte Tupanqui (1648) y con-

(1) Los dos niños después del desastrosa no perecieron de sed, porque el "Cuaro" agua, se secó á compasión, transformándose en un pajarillo; de donde procede que el verdadero chiriguano entre pájaros é otros animales domésticos.

tra los españoles en tiempo del coloniaje, nada sabía [illegible], pero los más antiguos, y ellos sabían algo más que los [illegible] dueños españoles y Misioneros de las diversas Ordenes religiosas del Paraguay y de Bolivia.

Por mi [illegible] cual aseguran que en provincia en del Paraguay, aquí se habían multiplicado y el desaparecieron el nuevo mundo, que habían escapado á uno de los capitanes portugueses, trajeron la noticia de sus compañeros y bajaron en masa por los orillas del río Pilcomayo hasta llegar á la región que actualmente ocupan, desalojando, á otros indígenas que estaban poseyendo esas tierras (1).

Sin embargo los antiguos y actuales, por su antigüedad de este lugar dan á entender que en procedencia viene del Brasil. Dicen, pues, que en los tiempos antiguos existieron una guerra, formidable con los blancos que vinieron de tierras lejanas, montados por Aves, ocasionando la desigualdad de las armas y la pérdida en el combate. Fueron perseguidos hasta que penetraron en las fronteras del Gran Chaco, que atravesaron llegando al Paraguay. Durante la campaña se desbalagaron y levantaron. Entonces en varios puntos, de los que nuestros ancianos, uno está en Gualeguay, dos en el cuartel Cuarto y el cuarto en Cumbayapú, perteneciente á la Misión de San Bernardino de Tarija, donde tuvo lugar la subdivisión y dispersión de los chiriguanos el año 1892 (2).

Dicen Sotiano tienen cimientos de piedra, están hechos con arte y son muy grandes, no es creíble por consiguiente que hayan sido levantados por indios más tratados que los actuales. Cuna más bien que fué obra de los conquistadores, quienes siguiendo el ejemplo de Cortés, Cortés y Pizarro se pusieron el abrigo de Aves contra la flecha chiriguana. La existencia de dichos cimientos y la existencia de los animales no se sabe otra cosa. Agregaban también que aquellos eran gente grande, tanto se conducían en la cantidad por miedo á que recuerdo y dicen pobladores después la región (3).

---

(1) Debe relacionar á la leyenda de los que vinieron que se asemejan más con los chiriguanos.

(2) El Gobernador explicó esos sitios, como un mapa de procedencia por uno de ancianos, situado desde la quebrada de Cuevas de Sorocuyo o Sarayte, distantes una estimación de unos 4,000 metros, situada en una colina rodeada por el mismo cimiento, tiene un escalón y una pirámide y dentro todo la comarca.

(3) Debían relacionar á lo que dice el P. Cardiel, cuando los antiguos se establecieron en el lugar que hoy ocupa la ciudad de Santa Cruz de la Sierra.

[illegible]

De lo expuesto se deduce que es más probable ser la raza chiriguana de origen paraguayo, así lo han asegurado también los habitantes de aquella región á los que acostumbran á trasladar al trabajo en los ingenios de la República Argentina y á los indios que en otras parcialidades desde Yrú, Cayapandí y Paraguí van á Corumbá. Unidos pues á éstos, tuvo noticia de la existencia de un lugar llamado Yrú y de otro llamado Paraguí, fundados por sus ancestros que vivieron á sus parientes los chiriguanos. Además hay tradición que en tiempo no muy lejano muchas familias radicadas por más parientes de los que vamos á citar á sus parientes residieron en los antiguos del río Paraguay.

Sin apoyo de la autoridad clara el idioma que poco se diferencia del Guaraní, hablado en la República del Paraguay, en varias regiones del Brasil y aún en Cuyaba, y el idioma es un argumento irrefragable de una á otra nación, pero como en estos últimos lugares está dicho idioma muy cultivado y en aquél, del Paraguay, fué general hasta época no lejana, bien se puede asegurar que los chiriguanos son oriundos del Paraguay.

Esta Nación pretendió en muchos días ensanchar é extender su dominio en los territorios ocupados por los chiriguanos, especialmente hasta el grado 22, en los cuales están situados casi todos los Misiones comprendidos los del Paraguí Grande, que se hallan al grado 19' 48' de latitud Sur del meridiano de Paris. La diplomacia boliviana puede argumentar pudiera para mantener su derecho con el establecimiento de los Misiones-sólo, principalmente de los del Paraguí, cuya primera fundación se remonta al siglo XVIII. Allí el Franciscano F. Narciso Lizarralde, erigió el edificio moral y material, cuyos testigos quedan como noticia, autorizado por el Obispo Arzobispo de Chuquisaca y autorizado por la R. Audiencia de Charcas. Si el idioma chiriguano, si la tradición de esta raza le dan derecho al Paraguay, porque todos los autores y exploradores están de acuerdo en afirmar que esta raza no existía así antes del siglo XIII. En el siglo XV fueron civilizados los chiriguanos por el inca Yupanqui con numerosos ejércitos del Cuzco. Luego en el siglo XVI el Virrey residente en Lima trató en vano humillar el orgullo de esta raza y por últimos todos son que la Nación boliviana ejerce así autoridad plena desde antes y después de la guerra de la Independencia y los Misiones progresaron y progresan á la sombra de la bandera boliviana que ampara los fomento en estos lejanos tiempos.

Puede objetarse observar y decir: ¿Por qué los chiriguanos

4: Nino SF10 Chiriguano

emigrando del Paraguay, no se establecieron en las orillas del Pilcomayo y en los parajes inmensos del Gran Chaco? A primera vista esta pregunta constituye un serio embarazo á quien no conoce la raza, pero es fácil contestarla satisfactoriamente. Todas las tribus bárbaras permanecen en el ocio y en la indolencia y se contentan de lo que proporciona la naturaleza para vivir y subsistir, así lo practican los salvajes al Norte de Santa Cruz, así los tobas, matacos, chorotis y otros que no se preocupan de sementeras y sólo se contentan de cuta, pesca, raíces y frutas silvestres, las que, cuando escasean á consecuencia, son saludadas por los tobas y matacos con el *Tinajin*, especie de tamboril, para que maduren pronto y bien.

Mas el chiriguano á pesar de ser indolente, escaso emigrado, como sus vecinos, no lo es tanto como las demás tribus, desde que se unió con los Cariocas. Adelantado de gustarle la pesca y la caza, no deja de hacer sus sementeras de maíz en grande escala, donde emplea sus fuerzas para después aprovechar de sus cosechas consistiendo en *Mipiri* tostado, *Mirocro* maíz ó maíz hervido, *Mirocio* harina *Mapuyo* pan, *Cimpiri* chicha, etc., sucede que los tobas y otros silvícolas en la casa ó despensa del chiriguano. Para conseguir esta clase de víveres no eran cultivadores las orillas del Pilcomayo ó una tribu muy numerosa, adelantándose otra intermedia en el bosque de aquel trayecto habrían devastado sus sementeras ó los dueños habrían robado en una ocasión nuestra. Tampoco podían conseguirlo en los parajes del Gran Chaco, porque así como la división estipulante de la flecha y adelantó el maíz en nuestras partes, arranja á una inmensa crisis, efectos de los hayes de los quirigualtos, sementeras habradas y otros de la especie que existen allí y los fieras la son partidas estacionarias. (1)

Era muy natural en consecuencia que la raza emigrante del Paraguay buscara para sus necesidades tierras ó parajes que le permitieran cultivar bien su natural inclinación al cultivo del *Chiriguano* maíz, *Chiriguano* cultivo, y *Chiriguano* alcohol, porque por los nombres que dan á todas estas legumbres, se deduce que no los han conocido después del descubrimiento de América, sino nuestros autores, conforme todos los antiguos chiriguanos *Tinajin*, pesca, *Cira*,

(1) Los tobas comunicaron á *Chiriguano* maíz y alcohol desde que se sugestaron al gobierno de los Padres Franciscanos en la Misión de San Francisco del Pilcomayo, hoy Villamontes, hoy nombrados muy pocos.

gritos, o *Wiche*, o gritos. Lo cierto es que la raza chiriguana se ha distinguido y se distingue de los demás que habitan permanecen en estado salvaje, y tanto los tobas, como los matacos y chorotis consideran á los chiriguanos sabios y cuerdos, circunstancia por interés de unos y otros cuerpos, y jamás se ha verificado mezcolanza natural de chiriguanos ó chiriguanos con las tribus indicadas. (1).

Los tobas generalmente han asistido en las guerras á sus amos, han vivido por largas temporadas entre ellos, especialmente en tiempo y en época de tocuas y alzamientos comunes. Así lo practicaban antes que los Misioneros abriesen Cuyo é Ivo al comercio con la fundación de las Misiones de Santa Rosa y San Bernardino y así lo practican todavía en las Misiones Franciscanas de Macharetí, Tiptipa y Tarairí por hallarse cercanas á dichas tribus.

Los lugares que los chiriguanos escogieron para su residencia después de la emigración, fué la montañosa, como la que con vistada con fines fortuitos, necesarios para no perder el fruto de sus trabajos y evitarse de la cosa á esta raza radicada en los lugares apartados de la serranía, ni tampoco en los lugares impenetrables, buscan solamente para las tribus en estado de completo salvajismo (2).

Más que la tradición de los chiriguanos y la fábula del *Aguero Tiengo*, por los cuales se nos da á entender que la raza de que se ocupa, procede del Paraguay, hay autores extranjeros que vienen en apoyo de mi opinión. Entre los primeros descuellan los Misioneros Franciscanos Cardús y Machoretti, siendo el más reciente de ellos el M. R. P. Cárcoba, quien en su historia del Colegio y Misiones de Tarija asegura que la opinión más generalizada es, que los chiriguanos procedieron del Paraguay por más que la lengua guaraní está esparcida por muchos lugares del Brasil y algunos de la República Argentina, pero, como manifiesta de decir, la lengua es un argumento poderoso para conocer el origen de una tribu y se ha manifestado ya, que el guaraní se habla generalmente en el Paraguay, tanto que no sería sin error decir

(1) Los tobas son más inteligentes y más sufridos que los matacos; dicen también entonces sujetos á los Misioneros en San Antonio del Pilcomayo, situado á su margen derecha.

(2) Cayguari con otros ya chiriguanos se fué al desierto á vivir entre los salvajes al Río de Corumbá.

que el Brasil y á la Argentina los guaraníes hayan sido de la misma Nación (1).

Entre las autoridades explorar tomaron al alférez d'Orbigny: según éste, antes que se verificase el descubrimiento de América por el inmortal genovés, los chiriguanos ocupaban los últimos ramales de los Andes Bolivianos, eran completamente desnudos, eran antropófagos y de origen guaraní (2). El inca Tupac-qui había promovido cuatro guerras hasta los chiriguanos con el fin de conquistarlos para la civilización incaica, pero sus esfuerzos fueron inútiles, porque su ejército siempre quedó vencido por la ferocidad del chiriguano que contaba también con el lugar que ocupaba y por consiguiente bien conocido para burlarse fácilmente de los soldados de los incas.

Parece que los incas en su empeño de civilizar á los chiriguanos llegaron con sus ejércitos hasta el límite de la provincia de Cordillera. Existe en efecto en la cumbre de la serranía que la divide de la del Azero y del mismo Itapirengui una fortaleza de grandes dimensiones, toda ella de piedras bien colocadas, se la llama «Cocalomi,» «casa del inca» y da el nombre á toda la serranía, cuya elevación bárea el «ser, del puerto» como límite en la ley de demarcación interdepartamental entre Santa Cruz y Chuquisaca, cuando el año 1908 se trató de la ley de enlinderamiento.

Esta frase es gaiñeba compuesta de la terminología de la lengua quechua, el idioma chiriguano al ignorar tiene idiomas que se le parecen, es muy probable para que aquel fuerte haya sido construído por los quechuas y como los fuertes están dirigidos personalmente por el inca, éste mandaría construir como en toda la cumbre del cerro, como se ve con hoy (3).

En un lenguaje histórico averiguando también que después del descubrimiento del Brasil y desde regiones de Sud-América como así indian hacia del Paraguay, porque en tantas guerras que habían mantenido con los portugueses, llegaron á chiriguar al pelo. Trazando con descubrimiento general, se vinieron á Bolivia por la cuenca del río Pilcomayo; en el Gran Chaco hallaron la región ocupada á los cordilleras ocupada y habitada por los frontera chiriguanos

(1) En el capítulo: Religión y Creencias notarás más diferencias la filiada del Agnaro Tompa.

(2) Los indios del Paraguay son diferentes que los indígenas Tupi-Guaraní son anchuras y en las subdivisiones de tribus, comunes á sus colectivos y otros.

(3) El camino de Cotapacaisto á Mamaguada por Incaberri no es antiguo, lo hizo abrir don Gregorio Padilla.

[facing p. 93]

pero como pudieron entenderse fácilmente, porque hablaban el mismo idioma con pocas diferencias, se unieron á ellos y de este modo los chiriguanos aumentaron de número (1).

Los cuatro mil indios huidos del Paraguay, por las continuas relaciones que habían tenido con los portugueses, poseían al tiempo de hacer alianza con los chiriguanos una pequeña tintura de civilización superficial, como en Méjico los de Tlaxcala la aprendieron de Hernán Cortés y demás españoles. A consecuencia de este rango de civilización comenzaron á usar algún vestido para cubrir en principio lo más delicado del cuerpo, dejaron de devorar los cuerpos de sus contrarios y prisioneros y fueron más humanitarios en su trato.

Habiendo establecido su morada y formado una sola tribu con los chiriguanos, introdujeron sus costumbres humanitarias y benignas entre sus feroces amigos, éstos suavizaron en tanto su soberbia y altivez, imitaron á sus aliados en el modo de vestir y principiaron á dejar la bárbara costumbre de ser antropófagos por lo cual hoy y mucho antes aun se distinguen de los tobas, matacos tapietes y otomacos (2).

Los chiriguanos así unidos fueron multiplicándose mucho más y extendiendo sus dominios en los distintos departamentos de la Audiencia, cuya provincia ya tenían en mayor extensión. Antes de concluirse un siglo del descubrimiento de este nuevo mundo eran numerosísimos en los alrededores y más allá de Santa Cruz de la Sierra. Los fundadores de esta ciudad departamental tuvieron que luchar bastante en el año 1573 para abatir su orgullo, dispersarlos y adueñarse del territorio; existían los chiriguanos en los alrededores de Potosí y Tomina que se fundaron precisamente para contener sus avances, pues parecían animados á invadir el mismo territorio de Chuquisaca, cuya Audiencia ordenó la creación de nuevos pueblos que sirvieran de baluarte é impedir en lo sucesivo nuevos avances, nuevos atropellos y devastaciones.

La ciudad de Tarija y su territorio debe su fundación á don Luis de la Fuente, mandado allí por el Virrey don Francisco de

(1) Estos 4,000 indios no eran de raza guarani, fueron á radicarse al Paraguay y aprendieron dicho idioma imperfectamente; se llamaban Cerion y victimaron al capitán García.

(2) Los Tapietes hablan el idioma chiriguano con alguna diferencia y los otomacos se cree que fueron antiguos chiriguanos, porque su idioma es algo parecido.

Toledo con decreto de 22 de Enero 1574. En la fecha penetraba don Luis con su ejército al valle de Tarija para reprimir la audacia de los chiriguanos que avanzaban con sus armas hasta los lugares conquistados por los españoles. Fué mucha la sorpresa de don Luis y sus soldados al encontrar en dicho valle una gran cantidad de ganado cerril, el cual constituyó un poderoso auxilio para sus tropas (1).

Antes que llegaran los españoles ó invadieran el territorio de los chiriguanos, éstos eran el flagelo de las tribus limítrofes, cuyos individuos flechaban ó victimaban, y hacían cautivos, sujetándolos á durísima esclavitud. Mas, llegados los blancos, tuvieron que verselas con enemigos superiores a éllos; recelosos de que un día pagaran las exacciones que ejercitaban con los vencidos y se apoderaran de su fértil territorio, no hicieron como los quechuas que se entregaron, cuando podían haber anonadado á los pocos militares que don Francisco Pizarro introdujo á Cajamarca, apoderándose del Emperador Atahuallpa con la matanza de cinco mil indios.

Los chiriguanos más avisados que los quechuas y su emperador, formaron desde luego grandes ejércitos para combatir á los invasores y éstos muchas veces se vieron derrotados por la terrible hueste, otras les devastaban sus sembradíos para hacerlos perecer de necesidad y otras llevaban cautivas á las mujeres después de haber victimado á los varones y otros de menor edad.

La lucha desigual duró siglos y por último fueron conquistados poco á poco por los Misioneros. Estos con la sola Cruz y la predicación reportaron mejores victorias, porque si los blancos se presentaban á los bárbaros con la soberbia de las armas, sembrando la devastación y haciendo correr ríos de sangre, los Misioneros se presentaban con la humildad, sembrando la divina semilla y los conquistaban con la palabra del Evangelio.

Los bárbaros conocieron la diferencia que había de unos á otros y si en los comienzos destruyeron las primeras Misiones, victimando al Sacerdote Misionero (2), cuando comprendieron perfectamente que el Sacerdote se proponía la conquista de sus almas

---

(1) Se cree que el ganado cerril hallado, perteneció á un tal Zárate, que fué constreñido á abandonar su estancia por los chiriguanos que indudablemente lo habrían victimado.

(2) Los indios chiriguanos del valle del Ingre incendiaron la Misión de los PP. Jesuitas, arrancaron del altar al P. Lisardi, quien fué victimado con diez y siete flechazos en la plaza de la Misión, vestido de los ornamentos sacerdotales.

y la defensa de su territorio, se entregaron completamente á disposición del Misionero no para educarse cristianamente, sinó para no perder su independencia. Sólo por medio de los Misioneros hoy el extenso territorio que abarcaba la distancia de más de 200 leguas de Norte á Sur y más de 60 de este á oeste, está todo abierto al comercio y á la civilización. A los Jesuitas fueron poco á poco sucediendo los Franciscanos, fundando Misiones distintas y hoy lo que no está entregado á la autoridad diocesana respectiva, todo se halla en poder de estos últimos, habiendo regado con sus sudores este suelo desde hacen siglos (1).

No queda ninguna duda con respecto al origen paraguayo del indígena chiriguano, como no es dudoso para el igual guarayo, cuyo idioma es hermano de aquel á pesar de no entenderse mucho por las grandes variaciones que ambos han sufrido. Se halla el Paraguay al Sudeste de Bolivia y la región ocupada por la tribu chiriguana al Noroeste de aquél, siendo el Gran Chaco la extensa región que separa ambas Repúblicas Boliviana y Paraguaya. El domicilio del chiriguano en el Gran Chaco es otra circunstancia poderosa que indica la procedencia paraguaya de la tribu.

Resta sólo conocer la ruta que siguieron los chiriguanos en su inmigración á Bolivia, podían haberla verificado en línea recta, atravesando el Gran Chaco, cuya distancia desde la última cordillera al poniente de Parapiti y Charagua hasta el Paraguay apenas alcanzará á cien leguas; mas esta ruta ofrecía el obstáculo insuperable de carecer del primer elemento para la vida, el agua. Que bien lo han demostrado con sus descalabros las varias expediciones, organizadas por el Gobierno Boliviano con el fin de abrir un camino recto al Paraguay arrancando de Isoso (2).

Podían haber emigrado de la tierra de su domicilio y seguido el curso del río Paraguay en su márgen derecha, llegar á Curumbá y luego por las salinas de San José venir á los lugares que hoy ocupan, pero el trayecto es más largo, el agua que se halla, escasa y en grandes distancias y no se encuentra vestigio que hayan

---

(1) El Jesuita P. Pons hizo tentativa de fundar Misiones en el trayecto desde el Pilcomayo hasta Parapiti, con cuyos indios se puso al habla, pero nada pudo hacer, lo verificó en la primera mitad del siglo XVII.

(2) El explorador Francés Thouar después de haber recorrido el camino abierto por los Aranas, tuvo que retroceder por falta de agua y en un rasgo de atrevimiento, se perdió y casi perece con unos cuantos, de hambre y de sed

verificado su emigración por dicha vía, á más de que habrían sido estorbados en su paso por las numerosas aldeas del tránsito.

Preciso es concluir que siguieron las orillas del río Pilcomayo; este caudaloso río arranca desde el interior de la República Boliviana, atraviesa toda la región chiriguana y desemboca en el Paraguay; sus orillas, desde cerca de Azurduy hasta Villa Montes en una extensión recta de más de 50 leguas, están pobladas de indios netamente chiriguanos. Desde Villa Montes á Gonchalla cerca de los Esteros del P. Patiño hay Chorotis y Tapietes que con pequeña diferencia hablan el idioma chiriguano, el trayecto abunda en agua, pozos y frutos y es más corto que el anterior. El Dr. Campos para llegar al Paraguay siguió las orillas de este río, el coronel Rivas, el francés Crevaux y el español Ibarreta siguieron en sus expediciones el curso del río Pilcomayo, fracasaron no por falta de víveres ó de agua, sinó unos por creerse muy seguros de la lealtad de los indios y otros por llevar muy pocos fuerza. Todas estas circunstancias demuestran claramente que los chiriguanos se internaron á Bolivia por las orillas del Pilcomayo, las tribus del tránsito no podían ofrecerles mucha dificultad, porque su número era extraordinario, el sufrimiento en las etapas era tan insignificante que les permitía combatir con vigor y denuedo y por último su actitud era pacífica (1).

Cuando la experiencia les demostró que podían cultivar en los lugares que hoy ocupan por ser las cosechas seguras, allí sentaron sus reales y defendieron el territorio invadido á todo trance, como se ha visto. La región, como se ha visto en el primer capítulo, es por cierto muy fértil; cuando es irrigada por la lluvia hace producir toda clase de cereales, el maíz madura con exuberancia y las cosechas son espléndidas con poco trabajo. Si las chacras se conservan limpias de la hierba con dos escardas y no falta la lluvia, el chiriguano puede contar todo el año alrededor de la tinaja de chicha en compañía de sus amigos.

Mas si la lluvia escasea, generalmente se pierden las cosechas y entonces el chiriguano sufre, busca raíces para su alimentación y vende todo lo que tiene hasta sus calzones ó el tipoy nuevo de su mujer para sostener miserablemente á su pobre familia. En tiempo de cuaresma el indio siembra con mucha anticipación algún trecho, donde hay humedad, como alrededor de una laguna ó á la

(1) El coronel Rivas y el francés Crevaux fueron victimados por los tobas é Ibarreta por otros indios.

4: Nino SF10 Chiriguano

largo de alguna quebrada; á esta clase de cimiteros se les denomina socorro y lo son en la realidad, cuando apenas se encuentra reloso; ¡oh! unas cuantas hojas verdes de calabaza en este tiempo son alimento en la boca del chiriguano. ¡Pobre indio!

Idioma

Por lo anteriormente relatado se comprende fácilmente que los chiriguanos descienden de los guaranies del Paraguay; tiene pues el idioma chiriguano mucha analogía con el guaraní, lo mismo que el idioma guaraní y puede notarse como un hecho que ambos idiomas guaraní y chiriguano guardan con el guaraní la misma relación que existe entre las lenguas castellana, francesa é italiana con respecto á la lengua latina que es madre de aquellas (1). En los siglos pasados la raza y por ende el idioma alcanzaba mucho territorio, pero hoy está muy reducido y puede afirmar sin peligro de error que se conserva tubería en Caipipendi, Figui, Charetí, Tarija Arañita y en las Misiones de Potosí y Tarija; pero en aquellos lugares se halla esparcida en numerosos pueblitos, mientras que en éstos forma pueblos respetables de quinientos, mil y dos mil almas (2).

La pureza del idioma no se halla ya en ningún pueblo, ni en los Misioneros en los primeros por vivir entre blancos y emigrar continuamente á la República Argentina y en las segundas, los Misioneros, por un tercer motivo que es la enseñanza del Castellano que los Misioneros propaginaron á los niños y niñas en las escuelas; de modo que, si la raza no se acaba antes, como se teme, por las enfermedades epidémicas y la vagancia, el idioma se perderá luego y entonces los pocos libros que existen, sólo servirán de monumento histórico para la posteridad que sabrá reconocer el sufrido y la labor de los Misioneros que experimentaron y derramaron sudores entre ellos, los chiriguanos, con el solo fin de civilizarlos cristianamente (3).

---

(1) El idioma chiriguano tiene muy pocas palabras acentuadas, en el guaraní abundan; por ejemplo "abati" maíz "Cumandí" mono, en chiriguano no llevan acento sobre la i, mas lo llevan en el guaraní.

(2) Charetí Guasu se halla situado en la margen izquierda del Parapití, Provincia de Cordillera, forma casi un mismo pueblo con Mendoirai y entre ambos contienen unas ciento diez familias.

(3) Existen una gramática, un diccionario castellano chiriguano, un catecismo con su traducción, obra maestra del P. Corrado, un pequeño "Nene" chiriguano castellano y numerosas plásticas inéditas.

Estadística

La tribu está en completa decadencia y en poco años más no quedará del todo. A principios del siglo XIX ó sea antes de la guerra de la Independencia Sudamericana en las reducciones de Tarija se contaban más de veinte y tres mil almas y sin embargo no se comprendían en dicho número ningunos de los numerosos pueblos existentes entre los dos caudalosos ríos Pilcomayo y Pilaya, como tampoco los indios de Caipipendi, Chaunó, Pipí y otros vecinos al Sur de Lagunillas. En aquel entonces, puede afirmar, que serían los chiriguanos más de doscientos mil, supuesto que según la estadística del P. Lozano, los hombres de mayor edad aptos para la guerra sin contar los mujeres y los niños, serían de veinte y cinco á treinta y cinco mil.

A pesar de que al P. Lozano se refería á los principios del siglo XVIII, poco debía ser la diferencia, porque en los comienzos del siglo XIX no se lamentaba como hoy la plaga de la emigración á la República Argentina que principió al abrirse el territorio al comercio con la fundación de pueblos de cristianos blancos, que los hay en gran número, hasta formaron estensas provincias con los nombres de Aceya, Cordillera y Gran Chaco, sin tampoco era tanta la inmoralidad que hoy reina (1).

Las epidemias, la vagancia y la emigración más que todo, además de la carencia de víveres, están destruyendo esta raza que nunca falta hace y hará más tarde á la agricultura y ganadería de las indicadas provincias. Hoy ya se lamentan los labradores y hacendados de las Misiones en busca de jornaleros, arrendadores de chacras y ganados, elaboradores de quesos, obrajeros de cueros etc., etc. ¿qué será después? (2). La emigración de gente fácil, de gente no indígena es forzosa, sino no para desarrollar los centros Misiones-

(1) Se han dictado nuevas leyes que han sido imposible el engrandecimiento para la Argentina y el Dr. don Justo Pedillo actual Delegado Nacional del Gran Chaco por hoy no permite que la ley se aplique escrita, á nadie de paso.

(2) El proyecto del H. Montero, aprobado por la comisión el año 1900, facilmente será aprobado por el Congreso, pero me parece imposible que los caciques denunciados á los indios que pretendan ir á la Argentina; suponer á los PP. Gobernadores remitir el 25 % de pobladores á las intendencias, donde existirán informe jurado del que se les paga en su pueblo, es obligatorio al Misionero que no podrá cumplir con esta obligación mensualmente, porque los indios serán revoltosos, ó huirán.

ros, como se pretende, porque en este caso más luego se acabará de destruir la tribu, sinó colonizando lo que no está poblado. ¡Qué consiguió el Gobierno con la ausencia de los Misioneros en Villa Montes! Que ya los indios no trabajan para nadie, y sólo lo hacen, cuando quieren de buena gana. Toda la autoridad de una Delegación no fué suficiente para conseguir unos cuantos jornales de sus pobladores y por esto estuvo á apunto de destruirse completamente la obra antigua; en las viñas, y huertas tan bien mantenidas y lozanas en tiempo de lo retrógados Misioneros, imperaba la maleza.

Ya los grandes centros de chiriguanos han desaparecido casi todos y apenas quedan los nombres de los grandes caciques de tales ó cuales parcialidades; en todos los cantones causa admiración la desaparición de esos brazos y apenas se consigue servicio para el combustible. Las Misiones aún van experimentando esta decadencia; en la provincia del Acero habrá unas 5.000 almas, en la de Cordillera unas 8,000, en el Chaco y Provincia O'Connor 5,000, en las Misiones de Tarija hay 4,500 y en las de Potosí 3,905, que forman un total de 26,405 entre hombres y mujeres, chicos y grandes, viejos y jóvenes. Mas, de este número, apenas habrá unos 8.000 jornaleros, ó hombres robustos, aptos para cualquier trabajo y, ¿cuál es la extensión de tierras que está en manos del chiguano por voluntad propia ó ajena? Unas ciento cuarenta leguas de Norte á Sur, más de cuarenta de Este á Oeste; si hoy es difícil el cultivo de estas tierras, mañana será imposible, si hoy es duro pagar cuarenta centavos al jornalero, mañana no se le hallará ni á ochenta centavos.

Grande es la lucha empeñada entre el chiriguano y el blanco; éste lucha para aumentar su fortuna y hacienda á todo trance y quiere dominar y domina efectivamente como más noble y poderoso al chiriguano, aquél lucha por su existencia, mas por ser débil é inferior, se rinde al poder del blanco, hasta que puede; y cuando su espíritu se halla abatido por la fuerza superior que lo domina como á esclavo, desaparece y emigra insensiblemente, adonde se le trata con más humanidad aparente y no cierta y real, pero que el indio en su ignorancia no conoce (1). De aquí procede

(1) El jornalero en la Argentina gana según referencias 25 ó 30 nacionales mensuales sin la alimentación que en tierra extraña sale cara al chiriguano; sin embargo como la ropa y los animales que vende la compañía, no son caros, los jornaleros que hacen economías y no se dedican á la bebida, regresan bien vestidos, trayendo un caballo ó un jumento, ó sinó ropa para sus hijos y mujer.

4: Nino SF10 Chiriguano

que los grandes pueblos antiguos y las mismas Misiones anteriores á la independencia sud-americana unos han desaparecido completamente y otros están por desaparecer.

Con la intromisión de la autoridad política las actuales Misiones correrán la misma suerte, sinó se modifica la ley del ramo, porque, parece que han descendido á la categoría de factorías, de dicha autoridad y de todos los cristianos que continuamente se aproximan en busca de brazos y el proyecto del H. Montero no sólo agravará la situación, sinó que dejará estas amarras sin jornaleros para la industria agrícola y ganadera. Es cierto que el trabajo moraliza al hombre, mas hay que confesar que el indio es perezoso y enemigo de trabajar para los blancos, á quienes considera usurpadores de sus tierras. Van voluntariamente á trabajar, donde son tratados con humanidad, pero, donde se les proporciona pésima alimentación y mucho rigor, van con repugnancia á pesar de las insinuaciones de los Misioneros.

Los caciques que respetan y acatan la orden del Misionero, se abstienen de buscar continuamente jornaleros para los blancos, porque amaron la sola voluntad de obedecer; de aquí proviene que á veces se ocultan en el campo indios y caciques, y cuando llegan á encontrarse, se retiran de la Misión por una temporada larga, dejando á sus familias en la miseria. Los Misioneros lo dan para reunir á los dispersos, pero muchas veces sucede que los sueldos de varios meses se pierden en una noche, ó en pocos días y á pesar de las leyes que existen en Bolivia, nadie se preocupó de la emigración chiriguana. Motivos para que desaparezcan albañiles, carpinteros, maestros y músicos, no faltan en la actualidad, siendo el principal hacer vestido aparentemente lujoso de pié á cabeza, lo que así no se consigue con tanta facilidad, sea porque el dinero lo gastan en otras pequeñeces, sea porque faltan compañías que proporcionen todas las facilidades al jornalero (1).

Como he dicho más arriba hoy por hoy los principales centros de la tribu se han reducido á las Misiones. Por esta razón juzgo conveniente hablar con brevedad de cada una de ellas, de cada una de las que existen en la actualidad, para que el lector se

(1) Hoy son contados los blancos que tratan mal al chiriguano. Cuando suspendí el jornal á 40 centavos, hubo alguna dificultad que ya desapareció; en su misma casa gana bien hoy el indio, sólo le falta la facilidad de conseguir lo que le proporcionan los Argentinos, para que se resigne á no comprar.

[Facing p. 81]

Mujer de la raza de los Tapuí, del río Paraguay, Isaso

forma una idea aunque vaga de los esfuerzos de los Misioneros Franciscanos que son los dignos que hoy pasan años y hasta la vida entera en medio de privaciones y enfermedades, experimentando la soledad y sufriendo una vida triste y penosa para enseñar y reducir á unos indios que poco aprecio hacen de la enseñanza religiosa y civil.

Primeros Misioneros entre los Chiriguanos y precioso hallazgo

El fin primario que se propuso el Serafico San Francisco de Asís con la fundación de la Orden de Menores, fué la reforma de las costumbres en los Naciones del mundo y la enseñanza de la Religión verdadera á los infieles del Universo.

De ambos dejó ejemplos heroicos. San Francisco pues además de haber recorrido y predicado en toda la Italia y otras Naciones del Viejo mundo, personalmente fué á la conquista del Sublime y envió otros á Marruecos para que anunciaran la Religión de Paz á los hijos de Mahoma.

Posteriormente los Franciscanos fueron enviados al vasto imperio Chino y luego á las costas del Japón, donde la Orden contaba con una phlyade de valientes pertenecientes, unos á la primera y otros á la tercera, llamada, Orden de Penitencia.

Hoy varias Ordenes y Congregaciones Religiosas se disputan el honor de haber penetrado los primeros en este nuevo mundo. De ninguna soy partidario, si diré por segunda vez, que probablemente los Franciscanos Juan Pérez y Antonio de Marchena acompañaron á Colón en su primer viaje, como que fueron los consejeros del célebre genovés y los que le pusieron poderosos auxilios morales y materiales para tan árdua empresa.

Pero ¿puede dudarse de que esta gloria, como tantas otras, pertenecen á mi Serafico P. San Francisco? Sí, porque Colón fué un fervoroso terciario franciscano y si se lanzó á lo desconocido, su principal fin fué encontrar el campo de la Religión Católica en las tierras que veía á descubrir y cuando puso pié en la isla de San Salvador, lo primero que hizo fué, plantar la Cruz de la Redención y enseñar á los naturales el modo de venerarla como signo de redentorista.

¡Qué hacen los Misioneros cuando se presentan á los bárbaros? á nombre de quién se presentan á ellos arrostrando todos los peligros imaginables? A nombre de Cristo que nos redimió por medio de la Cruz. Por consiguiente Colón fué un verdadero Misio-

[illegible] y Misioneros Franciscanos, tengo la gloria de los primeros misioneros en este nuevo mundo pertenecen sin disputa á la Orden Franciscana.

Nos volvemos al objeto principal de este párrafo. Tomemos á la vista la Crónica de la Provincia de San Antonio de los Charcas, escrita por el P. Fr. Diego de Mendoza O. F. M. en 1663. En su libro primero, Capítulo 15 y 16 se lee en resumen lo que voy á seguir.

El primer civilizado que penetró á la región de los chiriguanos al Este de Tarija, fué el Padre Nicolás de San Pedro, clérigo presbítero, hijo de Portugueses, natural del Brasil y como tal, versado de la lengua de estos indios; estuvo allá cuatro años. Mas la entrada de este Secular no pudo, ni debe considerarse entre pleitos de Misioneros, porque la llevaron allá motivos muy diferentes á la intrusión religiosa de los chiriguanos, con quienes vivió de una manera sagla correcta, por cuyo mano el Virrey Marqués de Monte Claros le hizo salir.

Sin embargo el Virrey mucho bien estilleo allá en diversos enfermedades de que todos aquos chiriguanos fueron abandonados por la luz del Evangelio y para llevarlos á la práctica, determinó enviar á la región á los Indianos Hijos del Loyola. Estos con el fervor que los caracterizó, acepteron con amplio agrado el ofrecimiento, pusieron por condición, de que no volviera allá el famoso Padre Nicolás de San Pedro que tan mal se había portado la vez primera.

Pero los indios gentiles con insistencia á dicho clérigo y además ninguno de los Padres y Hermanos de la Compañía sabía el idioma de los indios, á quienes se debía evangelizar. Finalmente como los Padres Jesuitas habían puesto por condición sine qua non la exclusión de aquel mal Secular, el Virrey dejó de insistir más allá.

¿Acaso había decretado también llevar adelante su proyecto de hacer civilizar á los chiriguanos? No. Hizo insistencia á nombre de su majestad ante el Superior del Convento de San Francisco de Chuquisaca y sabido el asunto por la comunidad, cinco y siete Religiosos se presentaron espontáneamente para tan Santa Obra.

De los presentados fueron elegidos dos por Real acuerdo á saber, P. Agustín Salvio y Fr. Francisco Gonzales con la promesa de que se cambiarían más religiosos, según la necesidad lo hubiese requerido.

Sin embargo los indios chiriguanos insistieron para que fuera

nombramiento al Licenciado Sinuño de San Payo, porque según se averiguó después por las denuncias del cacique, este hombre extraviado había hecho muchas y variadas promesas á los infelices salvajes.

Se consultó nuevamente en la Audiencia, hubo oposición para el ingreso de dicho Sacerdote, pero prevaleció la opinión contraria y se ordenó en consecuencia que los Misioneros destinados á la civilización de los chiriguanos, llevaran consigo al Licenciado, como se verificó con gran sentimiento de los mismos y de la comunidad Franciscana.

El 2 de Noviembre de 1609, salieron de Chuquisaca los tres compañeros, pasaron por Potosí, donde bautizaron á los tres primeros chiriguanos, pasaron por Tarija y llegaron al pueblo de Atiri, situado cerca del valle de Salinas, el 22 de Diciembre del mismo año.

Esta primera entrada no correspondió á los fines sobrehumanos de nuestros Misioneros, tanto por las intrigas del Licenciado, como por la inconstancia y codicia de los bárbaros, á quienes conocemos perfectamente. Hoy mismo á pesar de estar completamente reducidos en todas Misiones, revelan la misma inconstancia y codicia, lo cual indica que siempre han sido los mismos, poco afectos á los misterios y prácticas de nuestra santa Religión.

Sin embargo la semilla dejada en el campo de Salinas por los primeros Misioneros de San Francisco de Chuquisaca, no cayó en terreno completamente estéril y fué dando sus frutos poco á poco, pues en los años posteriores, otros penetraron á la misma región.

Lo que admira de una manera sorprendente es: haberse hallado en la comarca de Salinas una gruesa y pesada Cruz, colocada en una cueva, situada en la espesura del bosque.

Esta Cruz descansaba sobre tres pirámides de piedras medianas, era de un grueso madero de quina-quina, de quince piés de largo y dos tercias de diámetro, conservaba su corteza natural y había en la misma tres clavos de la misma madera con sus cabezas enlazadas, colocados en los brazos y pié de dicha Cruz; para su traslado al pueblo de la Torre se necesitaron doce hombres.

La Cruz fué hallada por un indio que perseguía á un venado, el cual se refugió en la misma cueva; fué trasladada después á Tarija y colocada en la iglesia de San Francisco.

Ninguno de los indios pudo dar razón cierta de esta preciosa reliquia; sin embargo la tradición de padre á hijo, á nieto, biznieto y tataranieto, etc., entre aquellos chiriguanos, hace constar que

en tiempos muy remotos un hombre más bastante alto, blanco de rostro, de barba larga, de cabello dividido, que vestía de vestidura larga, casi hasta los pies, de túnica y capa ó manto en cuadro, sujeta con aquel madero, predicándoles que Dios había venido al mundo y que había muerto en otro madero como aquel y, viendo que no querían creerle, ni admitir su doctrina, había rezándose en aquella cueva, donde estuvo cuarto tiempo, se había ido más adelante y dejado aquel madero allí.

Cuando los Padres de la Compañía de Jesús fundaron Misiones en el Paraguay, entre los guaraníes hallaron la tradición de haber estado entre ellos el Apóstol Santo Tomé ó Santo Tomás, quien les había enseñado la religión de Cristo, les había predicho que la misma Religión se perdería de entre ellos y que en tiempos lejanos otros, vestidos casi como Él, y con cruz en las manos, les anunciarían la misma Doctrina. Los indios se convencieron haberse verificado la profecía á la llegada de los Padres Jesuitas.

Sabemos por las crónicas é historias cristianas que Dios opera milagros mediante las reliquias de los Santos, y de las cosas que los hayan pertenecido, ó hayan sido tocadas por Ellos. Podemos por consiguiente dar crédito á la venida de un Apóstol, ó de Santo Tomás, primero por aquello del Evangelio: Euntes in mundum universum praedicate Evangelium omni creaturae, segundo por la tradición de los indios guaraníes, chiriguanos y los de Cavinoco de la provincia de Omasuyos Departamento de La Paz, donde se halló otra Cruz y tercero por los milagros operados mediante Ella.

Hemos dicho que se necesitó la fuerza de doce hombres para arrastrar la Cruz, hallada entre los chiriguanos, desde la cueva hasta el pueblo de la Torre. Sin embargo en medio de un incendio que destruyó la iglesia y un cáliz de metal, sin saberlo penetró al templo para salvar la Cruz del incendio y sólo la sacó de entre las llamas que apenas tocaron en el Santo Madero los estragos del fuego.

En una reyerta que hubo entre soldados, Francisco del Cerro salió malamente herido de una estocada mortal: ni médicos, ni cirujanos hallábanse allí presentes y mientras tanto el militar iba desangrándose con peligro de morirse.

Los tiempos de entonces eran de fé viva y como veneraban fervorosamente la Cruz que habían encontrado en la cueva, arrancaron una partecilla del Santo Madero, la redujeron á polvo, la

hubiá en agua el hierro, cual de nuevo la mugre y á los cuatro días se halló completamente sano, sin necesidad de otra medicina.

Los datos y otros hechos portentosos, apoyados por el Santo Madero, podemos deducir, apoyados sólo en la tradición de los indios guaraníes, ser bastante probable que uno de los Apóstoles de Cristo vino á predicar la fé en este país del mundo y ser sólo probable que este Apóstol haya sido Santo Tomás, porque la descripción hecha por los indios guaraníes y chiriguanos corresponde á lo que del mismo apóstol nos dicen las Historias Eclesiásticas.

Misiones del Colegio de Potosí (1)

San Antonio del Paraiti Grande.—Fué fundada esta Misión el 22 de Abril de 1902 á pesar de la lucha encarnizada que le movieron los blancos de la región por la pérdida y odio de tierras, cuando el 22 de Agosto de ese año un tropa convergidos á la cabeza de 22 á 30 nacionales armados y llevados casi todos á la fuerza, pretendió desalojar al Misionero que se mantuvo firme sin oponer la menor resistencia y sin tomar ninguna defensa de hecho contra semejante atropello. Sigue adelante este plantel y progresa también en lo material. Cuenta de 1,479 almas; el pueblo se halla situado en una inmensa pampa y los edificios—Misión, arriba de una pequeña loma; la elevación del pueblo sobre el nivel del mar alcanza á 560 metros—Meridiano de París, 19° 28' latitud Sur, 64°, 37' 45" longitud O. (2).

He aquí como describía su paisaje el año 1908: En esta una posición encantadora y quien llega por primera vez, queda extático; se le presenta á primera vista las playas y el río Paraguay, cuyo curso caprichoso es admirable y cuyas aguas son el juguete de los vientos Sur y Norte, que le hacen cambiar como cada cual á su antojo. Esa inmensa playa con las aguas por lo regular en el medio [illegible] á vientos [illegible] del mundo, [illegible]

(1) El departamento de Potosí no posee indios chiriguanos, así que los Franciscanos de aquel Colegio no podían hacerles catequizar, estableciendo Misiones, pero previo acuerdo con los Misioneros de Sucre y las licencias del Gobierno y autoridad Diocesana, entraron en posesión de su territorio.

(2) Esta Misión principiada por Fr. Francisco del Pilar, fué organizada por P. Narciso Llamedo; destruida por los patriotas se fundó nuevamente el año 1871 y abandonada en 1880 por las persecuciones, ha sido reorganizada.

Una grandiosa corriente de población en el centro é interior dominan á los indios, y sube de punto la pujanza, observándose desde la cara Mirdia entre las cumbres de la Cordillera orientada que se halla á la margen izquierda.

Largo edificio el cuidado existente en Bolivia con buenos edificios, con inmoderadas alturas verde amalgia que parece ser circula á nivel, su extensión lugares y lugares donde una gaviota idea de la mar; dándose verdaderos y jigantescos, los algarrobos y quebrachos que desarrollan, además de otros árboles interiores que los hay en abundancia y que crecen á los orillas del horizonte Pacífico, cuando son agitados por los vientos. Finalmente el cuadro se hace más interesante por los montes despejados y claros, como lo son casi siempre, los que ofrecen una perspectiva y un panorama pintoresco y que deleita encantador.

A la mañana nuevo concepto el hombre edifica grandiosa por la proximidad del río que con sus cuatro bolsas entonces desde muy temprano la colorada amalgiera y un abundante cuadro se ciñe como diminutivamente perfil por encima de los bajos. Aparecen largo en horizonte entre rumor y follaje los primeros horizonte arrojados que anuncian la proximidad del sol, rey del universo quien parece levantarse con desagrado de su amplio lecho, dejándose ver al fin majestuoso sobre el horizonte. Mientras prosigue en su carrera, se agranda y decaía del lugar se retrata cual globo de fuego, pudiéndose contemplar, sin que sus ardientes rayos lastimen la vista de quien le mira (1).

2. Nos Fundamos Notables. Fundación Cuarta.—Esta segunda Misión del grande Paraguay estaba sólida á la anterior hasta Octubre del año 1768 y sus moradores dependientes del mismo conservar tanto en lo material, como en lo espiritual, especialmente en los años de gran calamidad. Desde el 1º de Noviembre de ese año residía allí dos Misioneros que hacen la posible para adelantarla en lo espiritual, con fin los pueblos pueden considerarse como días de fundación real y verdadera, y como un día de Dios, se espera que progresará á pesar del desalientos y de la poca colaboración por parte de los indios en seguir el ejemplo de sus vecinos.

Pues á pesar comprendiendo el bien espiritual que se les ofrecía

(1) Continuación de la Historia de las Misiones de Paraguay por Fr. Bernardino de Nino, página 31.

Tuesa, porque ya con mandatarios niños y niñas para la enseñanza y [illegible], se necesitaban una al tanque! Al principio el Misionero habitó en un antiguo edificio dejado desde el año 1871 y la pequeña Iglesia se bendijo antiguo, pero se ha erigido una nueva casa que tiene una sala y dos salas para dormitorios. Cuenta actual cuenta con nuevo plantel de unos 300 alumnos, pero puede aumentar, porque en el tanque y alrededor de la Misión hay muchos indios.

Su clima es satisfactorio, no pasamos de poco visual, porque pastoso y caro.—Misión con antiguidades en una pampa. Niño en una ahora pudiéndose dominarse, con su sombra la pastoso se alcanza por tener el agua del río bastante cerca y no contarla mucho trabajo acarrearla mediante una compañía bien mucha. El pueblo se eleva 343 metros sobre el nivel del mar, dista de San Antonio 5.000 metros y colinas en la diferencia geográfica (1).

3. San Bernardino de Tes.—Dista de los anteriores una dos y seis leguas y fué fundada el 2 de Mayo 1903 después de haber pasado la guerra de Chiriguaní, cuyos indios fueron completamente dominados á fines de Enero de 1904. Cuenta actualmente unos 110 familias y con una población de 532 almas, mientras que á fines del siglo pasado con habitantes pasaban de mil. Cerca de la casa Misión, á los cinco metros más ó menos, hay una colina de una media legua de superficie que contiene pequeños manantiales de agua cristalina y rica, de donde le viene el nombre de «Tes» bajo de agua; el clima es muy sano, pero la carencia de ríos es continuada y muchas veces tienen que alimentarse de la sala del año arrojándose á manejar, amarga y [illegible] (2).

Los edificios están construídos en una planicie, situada en una pequeña altura. El panorama que mira de Norte á Noroeste es extenso, y alegre, allí no habiéndose se presenta á la vista las sierras de Tarumarca y la cordillera de Urcuiqua, por donde la naturaleza abrió una puerta para dar paso á las aguas del río Pilcomayo que sin tocar y con abrevadero nunca se precipita desde una gran altura, formando en su impetuoso camino un lago de blanca espuma, arrojando al espejo del cielo sus rayos, siguiendo luego su curso rápido por San Antonio, Mariquí, Cuadrado, hasta

Vista de la Mision de Santa Rosa.

está rodeada de campos y colinas muy hermosas á la vista y alegres al corazón, como alegres son sus habitantes que respiran con aire embalsamado. A la lejos [illegible] se perciben las sierras de Aguaragüe al Noriente, las de Iruma y Sauzovata al Poniente y Norueste y las de Salinas al Norte. Sus terrenos es fertilísimo, cuando se irrigado por abundantes lluvias y en sus campos no falta el agua necesaria para los ganados, á pesar de ser escasa y salada la parte que se deslina por la quebrada de Iruma y de la cual se alimentan y beben los Misioneros y pobladores.

Con la alertura de esta Misión desapareció luego el tamaño que antes dominaba en los temporales que pasaban con crecida por estos sitios, porque los aborígenes chiriguanos unidos con los tartas infieles tenían en ellos sus lejanos, tanto que para fundar las Misiones del Pampiti Grande, el P. Francisco Solano el año 1820 tuvo que dar con vuelta inmensa por las Misiones de Tarija y alargar su viaje más de 33 leguas. Hoy en el trajinito de los comerciantes para Santa Cruz y Tarija; la República mucho adelantó en este sentido también, en un punto más, bien adelantado en todo sentido, en el cual el idioma oficial hace progresos rápidos. Su elevación sobre el nivel del mar es de 633 metros (1).

5. San Francisco de Horcotoro. — Esta Misión de Horcotoro (serpiente mariposa) fué fundada el año 1875, diez años antes que la de Santa Rosa, de la cual está dividida por la cordillera de Sauzovata con una distancia de 45 kilómetros hacia el Norueste, elevándose á 765 metros sobre el nivel del mar. Cuenta con una población de 300 y más almas, entre las cuales se computa de 1,700, según la historia de Misiones; pocos son los infieles y pocos también son los mismos que no hablan el idioma castellano, entre los cristianos entre sí. Lo curioso que no sepa expresarse en el mismo y los párvulos lo [illegible] mamado con la leche. ¡Prodigio de la religión católica! esto no se ve, donde no existen Misioneros.

El edificio-Misión se halla colocado arriba de una colina bastante alta, pero no hermoso templo, demasiado grande para los pocos pobladores, el quedó tener pequeñísima ventilación, por cuyo motivo los contagios hacen muchas estragos. La viruela del 1890 arrastró en pos de sí más de trescientas almas, la del 94, cien y la del 98, cuarenta y cinco, porque la mayoría se había salvado en las

(1) Se halla á los grados 20° 38' lat. Sur del meridiano de París y 63° 41' long. O.

años anteriores y año el número negro é indio amarillo virtud é cincuenta personas. El lugar que ocupa la Misión no tiene pastoreos alguno por causa de los vecindos del naciente y poniente que distan pocos metros. En una extensa, embellecida con el edificio Misión, como hechos con algún arte y abundantes árboles frutales, tiene pero terreno de pastoreo para la agricultura y ganadería, porque es completamente bonaso, pero salvo para los pocos pobladores (1).

6. Iguarase, Huacaya, Ivuan y Cuevo.—Además de las Misiones ya descritas, los pueblos con cuyos nombres encabezan este pequeño párrafo, fueron fundados por los Misioneros Franciscanos del Colegio de Potosí. Datan los comienzos por los años 1870, 75 91 y 92, respectivamente y siguen atendidos por los Misioneros de Potosí, mismos Ingre, cedidos á los ignados del Colegio de Sucre, el año 1904.

Sus pobladores son todos de raza blanca, venidos de los departamentos de Tarija, Santa Cruz, Sucre y Cochabamba. En un principio auxiliaron á los Misioneros en la conquista de los alma y civilización de los chiriguanos, distinguiéndose en esto los habitantes de Huacaya é Igüembe, de donde salieron los Misioneros á la cristianización de los indios de Boicovo, Cuevo, Ivu y Parapiti. Hoy dichos conuentos están poblados de blancos y esto prueba evidentemente que la Cruz del Redentor plantada por el Misionero y regada con su sudor, tiene más poder que el cuidado de los Reyes que no pudieron doblegar la frente del chiriguano antes de la independencia Sud americana (2).

7. San José de Xumia.—El territorio de esta Misión de fundación, se halla situado en la margen izquierda del río Pilcomayo á los grados 21° de latitud y 64° 30' de longitud O. del meridiano de París, dista de San Pascual de Huacaya y de Igüembe, en cuyo centro está situado, diez y seis leguas. Quien quisiera saber los pormenores de los acontecimientos para la fundación de esta Misión, lea mi obrita «La continuación de la Historia,» etc., página 164.

---

(1) Esta Misión fue fundada á raíz de una guerra sangrienta que sus pobladores unidos á los tobas y chiriguanos de Cuevo é Ivu, sostuvieron contra los blancos de Igüembe el año 1874 á 75.

(2) Los blancos que auxiliaron á los Misioneros en Boicovo y en Parapiti, recibieron del Supremo Gobierno un lote de terreno de media legua cuadrada.

El lugar es hermoso, hallándose á las márgenes de un gran río, abundante en peces de todos los colores y magnitudes; cinco pueblos pequeños debieran unirse para fundar la Misión, lo que se efectuaría, cambiando los tiempos, porque los indios son como los demás chiriguanos. Los Misioneros de Potosí hicieron todas las diligencias para la fundación de la Misión hasta posesionarse del territorio y recabar la aprobación de los títulos, éstos fueron entregados á los Misioneros de Sucre, juntamente con la capellanía de N. S. del Rosario del Ingre (1).

Cuevo

El pueblo de Cuevo se halla situado en la margen izquierda del torrente ó quebrada homónima. Antes de la guerra del año 1875 y aún posteriormente se le denominó por los chiriguanos que allí vivían, *Yumbiete* que quiere decir: medio campo y ocupa realmente una hermosa llanura, situada casi al medio entre las serranías del poniente y del naciente.

Casi todos los primeros habitantes blancos fueron del departamento de Santa Cruz y es un hecho innegable que el Coronel Víctor Antezana se trasladó á la región de Cuevo-Ibo con algunos nacionales desde Lagunillas y levantó un fortín, donde hoy existe el Cementerio público de Cuevo, y otro, donde se ha erigido el templo de San Buenaventura de la Misión de Yvu, ambas obras que se deben á la constancia y actividad de los Misioneros Franciscanos de la Villa Imperial. Los fortines son posteriores al 1875.

Posteriormente al amparo de los mismos Misioneros y alrededor de la Cruz del Salvador se formó el pueblo que fué quemado totalmente por los indios sublevados de Caruyuqui en 1892, pero los cueveños que se libraron de la muerte, amparándose en la floreciente Misión de Santa Rosa, levantaron nuevamente y en mejores condiciones el nuevo pueblo que hoy sigue progresando.

En la guerra del año 1875 todos los chiriguanos de Cuevo-Ibo y Huacaya unidos á los alevosos cobas y guiados por el gran Cacique Corone que perdió la vida en el torrente de Baccua, frente al pueblo de Igüembe, se levantaron como un solo hombre para anodadar á todos los blancos de la comarca.

(1) Los Misioneros de Sucre á fines del año 1905 se disponían á principiar la fundación de la Misión, cuando la Corte Suprema decretaba que la oposición de Lema pase á los tribunales ordinarios; así ha quedado.

En estas críticas circunstancias el intrépido Subprefecto de la provincia del Acero D. Antonio Menduiña con los nacionales de Monteagudo, San Juan del Piray, Huacareta ó Ingre voló á la región de Igüembe y con dicha gente derrotó á la innumerable y feroz hueste, reduciéndola en seguida á la impotencia con la matanza de Caipipendi.

Cuevo pertenecía por ley desde mucho antes de la Indepencia y perteneció también, desde la derrota de los bárbaros, por derecho de conquista al departamento de Chuquisaca, pero la Representación Cruceña ha reclamado constantemente la región de Cuevo-Ibo como parte integrante del territorio de Santa Cruz.

La Legislatura del presente año ha terminado este asunto tan debatido, apoyándose en la ley del año 1898. Cuevo por consiguiente pertenece ya al departamento de Santa Cruz, porque aquella ley fija como límite interdepartamental la margen izquierda de su quebrada que dista del pueblo un ciento cincuenta, ó doscientos metros.

Aún la Representación Tarijeña ha terciado en este asunto, y ha fijado sus límites en la margen derecha de la quebrada de Camatindi; se ha apoyado para ello en la misma ley y en el hecho de que el territorio está poblado por cristianos de Tarija y ha sido conquistado por los Misioneros Franciscanos del Colegio de dicha ciudad desde antes del 1875. Queda á favor de Tarija aún la región de Caipipendi que perteneció al cantón Huacaya.

Hecho el arreglo interdepartamental definitivo, Sucre pierde, desde Cuevo á la margen derecha del río Parapiti, una zona de doce á catorce leguas y desde la margen derecha de la quebrada Camatindi otra de unas ocho leguas, sin contar la zona incalculable que pierde hacia el oriente. He aquí la ley promulgada:

ELIODORO VILLAZÓN,

Presidente Constitucional de la República

Por cuanto el Congreso Nacional ha sancionado la siguiente Ley—

El Congreso Nacional,

Decreta:

Artículo 1º—La Ley de 10 de Noviembre de 1898, sobre delimitación de fronteras entre los departamentos de Chuquisaca, Santa Cruz y Tarija, queda aclarada en los siguientes términos:

La línea divisoria entre los departamentos de Chuquisaca y Santa Cruz, se trazará partiendo del punto de intersección del meridiano de Cuevo con la quebrada del mismo nombre, para seguir al Occidente hasta la cumbre de la serranía de Incahuasi en una recta sobre el paralelo correspondiente al punto de intersección indicado. Hacia el Oriente la línea divisoria seguirá el mismo paralelo del punto de intersección indicado, hasta el meridiano 64° París, según el mapa del general Pando de 1901, y de este punto, subirá por el mismo meridiano diez y seis kilómetros al Norte, para tomar de allí el paralelo que corre hasta el río Paraguay.

Artículo 2º—Corresponde al departamento de Chuquisaca el territorio comprendido al Sur de la línea así determinada, sin excepción alguna, y al de Santa Cruz, el territorio comprendido al Norte de la misma.

Artículo 3º—Si dentro de esta delimitación el pueblo de Ibo quedase al Norte de la línea divisoria, queda entendido que corresponderá en todo caso al departamento de Chuquisaca.

Artículo 4º—Queda inalterable el artículo 3º de la Ley de 10 de Noviembre de 1898, que se refiere á la delimitación entre los departamentos de Chuquisaca y Tarija.

Artículo 5º—En el Presupuesto Nacional para 1913, se consignará una partida de *cincuenta mil bolivianos* para la inmediata ejecución de esta ley.

Artículo 6º—La presente ley no altera los derechos privados existentes en los territorios objeto de ella.

Comuníquese al Poder Ejecutivo para los fines constitucionales.

Sala de Sesiones del Congreso Nacional.—La Paz, 16 de Octubre de 1912.

Por tanto, la promulgo para que se tenga y cumpla como ley de la República.

Palacio de Gobierno.—La Paz, á 21 de Octubre de 1912.

ELEODORO VILLAZÓN.

Claudio Pinilla,

Ministro de Gobierno y Fomento (1).

Cantón Ibo ó Ivu

Solucionada de una manera amigable la cuestión interdepartamental según el proyecto aprobado en la Cámara de Diputados de este año 1912, y promulgada como ley de la Nación, el departamento de Sucre se dispone á elevar al rango de Cantón la región de Ibo ó Ivu, cuya capital será talvez la Misión de San Buenaventura, situada en el mismo lugar.

Esto supuesto, los límites del nuevo Cantón debieran ser los siguientes, según el acuerdo que ha tomado la Representación Chuquisaqueña: por el Sud la margen izquierda de la quebrada de Vitiacua, por el Norte el paralelo de la quebrada de Cuevo, por el Este la serranía de Aguaragüe hasta tocar con el indicado paralelo, por el Oeste las serranías de Irenta y Suararenta y por el Sur Oeste la quebrada de Chimbe.

En esta delimitación están comprendidos varios pueblos chiriguanos, siendo los más poblados las Misiones de Santa Rosa con más de 1.200 habitantes y la de San Buenaventura de Ivu con 652 almas

Las familias blancas son pocas, pero no son menos de cuarenta, que pueden dar un total de 160 almas por lo menos. Puede ser que con el tiempo esta reducida población aumente en el nuevo Cantón, como aumentó la de Cuevo.

Años se necesitan para que el indio chiriguano pueda tener el gobierno político de un pueblo, á pesar de que en las Misiones, relativamente nuevas, haya músicos, carpinteros, madereros, albañiles, talabarteros, zapateros, sastres y jóvenes que saben escribir bien y leer mejor, pero es distinto saber un arte ó un oficio y distinto tener que administrar la justicia.

---

(1) Esta ley firmada por los HH. Julio Zamora, Julio H. Gutierrez, Julio Calvo, Saul Serrate, Marceliano Montero, Agripino Oropeza, René Rodriguez, Aquiles Jordán y José Gil S., fué aprobada por 53 diputados contra 8. Prevaleció la fuerza numérica contra el derecho. M Padilla y Z Orías votaron en contra.

La experiencia de muchos años de vida misionera y lo que he visto en las Misiones abandonadas desde la guerra de la Independencia, abonan mi opinión de que se necesitan muchos años para que los indios chiriguanos puedan desempeñar ciertos oficios públicos, como son: el de Corregidor y Alcalde parroquial.

Proyecto

La zona Oriental que hoy pertenece á los tres departamentos de Santa Cruz, Tarija y Sucre, está algo amenazada por países extraños, mas puede ser que la República boliviana haga sus arreglos amistosos con las Naciones vecinas.

Estas contiendas son perjudiciales hasta cierto punto, como que impiden la colonización franca del Chaco boliaviano, lo que no sucedería, si todo estuviera en paz en aquellas apartadas regiones.

Hechos los arreglos amistosos y tranquilizado el ánimo de los pobladores, más se colonizaría la región, lo cual aumentaría el número de habitantes. Esto supuesto, opino que en tiempo no lejano el Gobierno de Bolivia pudiera establecer en el Gran Chaco un nuevo Departamento. El Chaco está abierto al comercio y á la civilización en toda su extensión, existen allá nemerosos pueblos y, en estos, casas comerciales; se transita por la región sin peligro alguno y la raza chiriguana recibe al viajero con muestras de cariño y sujeción

El departamento del Gran Chaco podría tener por límites la margen derecha del Río Grande, frente á la antigua Misión de Abapó grado 18° 45 latitud S. del meridiano de Greenwich; todo el Sud y Sud Oeste de la serranía de Incahuasi hasta el río Pilcomayo desde el grado 21° 5' 30" de latitud Sud y desde el grado 63° 55' de longitud O. con todo el oriente hasta tocar el límite del Paraguay. Mapa del Min. de Gobierno de 1906.

La zona del nuevo departamento no sería tan reducida, pues tendría de Sur á Norte, cerca de setenta leguas y de Este á Oeste casi cien, desde el río Paraguay hasta la nueva Yacuiba de fundarse en Caipitanti. Si esta delimitación pareciera al pueblo boliviano algo pequeña, debe tener en cuenta que la zona, es una de las mejores que posee la Nación y por consiguiente tendría el nuevo Departamento vida propia, recuperando Bolivia la novena estrella que falta de su Escudo, desde la pérdida del departamento del Litoral. La ciudad principal pudiera establecerse donde mejor convenga, por ejemplo, en Lagunillas ó en Charagua y debiera haber

allá mil hombres de las tres armas, repartidos en los fortines fundados y de fundarse, para poder hacer frente á cualquier avance de las numerosas tribus y del extranjero. Según el censo de 1900 este nuevo departamento tendría 68,505 habitantes sin contar el aumento de unos 3 y medio por ciento cada año. De estos, 21,405 son chiriguanos, los demás mestizos ó blancos.

Cayuguari

Cayuguari se llama el país habitado por un indio del mismo nombre que fugó de Macharetí con otros por los años 1856 ó 1857; se radicó en la laguna de Cumbarurenta, cuatro leguas al Sudeste de Yrentagüe, y en seguida se retiró 20 leguas más al Este, porque en compañía de tobas, tapietes y otras tribus, cometía un sinnúmero de abigeatos, por los cuales fué constantemente perseguido por los pobladores de Carandaiti, donde hoy está radicado un piquete, destacado de Aguairenta.

La fuga del indio Cayuguari á Cumbarurenta primero y hoy á las 52 leguas de Carandaiti, se debe no á la muerte del capitán Taruncunti, asesinado por los machariteños Barapiche, Arasuque y Yepoima, residentes en Avay, sino á su índole y desacatos cometidos contra su pariente Mandepómi.

La expedición encomendada por el Supremo Gobierno á un inglés que debía penetrar á la comarca Cayuguari por Picuigua (aguada de palomitas) puede darse por fracasada, porque las dos tentativas que hizo, fueron de ningún resultado y tuvo que retroceder para no perecer á consecuencia de la falta absoluta de agua.

Picuigua dista de Cayuguari unas doce leguas. Picuigua es una laguna seca, pero con una perforadora puede obtenerse agua suficiente para la guarnición del fortín que se piensa establecer, toda vez que resulte falsa la noticia de la existencia del lago permanente en Cayuguari, donde hay unas 50 familias.

El Subprefecto del Azero don Ramón Menduiña opina que el fortín debe radicarse en la laguna de Cumbarurenta (lugar de ormosia ó chañar), si resulta con agua permanente. Es probable que las aguas de la extinguida laguna grande de Carandaiti háyanse reunido y siguen reuniéndose en Cumbarurenta. Si el fortín se establece en dicho lugar se halla á los grados 20 45' de latitud y 63 más ó menos de longitud del meridiano de París, según el mapa formado durante la administración del General Pando por Eduar-

do Idiaquez, grabado por Erchad hermanos y con dibujos de Víctor Puig, teniendo al Norte el antiguo fortín Baptista y al Sur los establecidos por la Delegación Trigo, que por estar á gran distancia uno de otro, no pueden auxiliarse mútuamente en caso de un ataque repentino.

Se dijo en las columnas de «La Capital» que el entusiasta Subprefecto Menduiña piensa penetrar á la región ocupada por Cayuguari con unos 50 pobladores de Carandaiti. Cuando en Mayo llegó á este punto, encontró al piquete, y aprovechó de su presencia para preparar la expedición. Con peones que proporcionaron los Conversores de Machareti, hizo abrir 23 leguas de camino hasta salir á los pajonales, desde donde casi nada estorba para proseguir con facilidad, y regresó á su asiento de Montesgudo.

Piensa el señor Menduiña volver á Carandaiti para penetrar ya á Cayuguari en Diciembre ó Enero próximo, es decir, cuando pueda hallarse agua en abundancia en toda la región; antes de esto hará abrir camino nuevo de Carandaiti al Pozo del Burro, que dista tres leguas. Por ignorancia se ha abierto doce leguas de camino por la Laguna Seca, Iguaminanti, estando el Pozo del Burro en línea recta de Carandaiti.

El camino que recorrerá la expedición es el siguiente: Carandaiti punto de partida, al Pozo del Burro tres leguas, al del Aparejo otras tres, al del Zampo con agua permanente siete, á la orilla del bosque cuatro, á Irentagüe (laguna seca) once, á Cumbaruenta Sudeste cuatro, á Picuigua nuevo y á Cayuguari doce, total: 52 leguas de camino.

En llegando la expedición á Cayuguari, se hallaría haber superado la mitad de la región que separa Carandaiti del fuerte Olimpo, con la perspectiva de poder avanzar y superar la incógnita de unos 125 kilómetros, porque es de suponer que los paraguayos deben haber avanzado por el Este y radicádose en los puntos habitables; además es suponible también que de Cayuguari adelante ya no se sufrirá la carencia de agua.

El tiempo dirá si la expedición que intenta el señor Menduiña llega á su término, para poder hacer apreciaciones, entonces, el Supremo Gobierno procurará á todo trance establecer donde mejor convenga una fuerte guarnición militar que pueda contrarrestar los avances de los bárbaros y las sorpresas de la vecina República, para lo cual tendrá que disponer de otros centros militares más que puedan acudir prontamente á la defensa del territorio nacional.

Hoy debe el Gobierno de la nación limitarse á fomentar y patrocinar el proyecto del patriota Menduiña y de los entusiastas carandaiteños, asignándoles tierras de explorarse, para que se radiquen allí familias bolivianas y sepan ellos mismos defender su propiedad y la de la Nación al amparo y protección de una tropa bien disciplinada.

Finalmente, no debiera la Nación olvidarse que bajo la protección del militar debiera elevarse una Cruz y un templo, recomendando el edificio moral á la abnegación del Misionero, el único que pudiera sacrificarse, porque no puedes existir centros incipientes sin la idea religiosa que refrena la inmoralidad, arraiga el derecho de propiedad, aconseja el trabajo, hace respetar lo ajeno, reprime el vicio, al que fácilmente se entrega el hombre en el desierto, y planta la virtud necesaria para todo, no sólo para la bienaventuranza eterna, si que también para vivir en armonía entre sus semejantes.

Si Bolivia se olvida del templo y de la Cruz, el fortín que funde, será como los demás, y acabará por desaparecer sin haber llegado á su ideal de establecer centro de población, donde no lo hay. Lo pasado y lo presente debe servirnos para lo venidero, y no perder tiempo y dinero sin conquistar el elemento moral: sirva pues el fortín de vanguardia para resguardar y ensanchar la obra del Misionero (1).

Itatiqui

El pueblo de infieles chiriguanos, con que encabezo estas pocas líneas, se halla situado á las once leguas de la Misión Franciscana de San Buenaventura de Ivu y á las siete de las Misiones del Parapiti Grande á los grados 19° 43' 18" de latitud S. del meridiano de París y á los 60° 29' 42" de longitud O.

El Colegio de Misiones Franciscanas de Potosí trata de establecer en este lugar una Misión Conversora que dependa de los Padres establecidos en las márgenes del río Parapiti. La idea es eminentemente civilizadora y progresista, porque el lugar se halla situado á lo largo de la carretera que, partiendo de Yacuiba, pasa

(1) Artículo que hice publicar en las columnas de "La Capital," el 16 de Septiembre de 1911.—La exploración se ha realizado, y su jefe militar ha sido el coronel Ovando, pero todavía no ha llegado al lugar denominado Cayuguari. Si prosiguen en la obra comenzada, fácilmente llegarán el año 1913, porque la laguna de Cayuguari dista poco de Piruigua.

por Charagua y termina en la ciudad de Santa Cruz de la Sierra.

En el trayecto desde el villorio de Bayuivo hasta el Parapiti Grande, no se halla otro pueblo que pueda proporcionar comodidades á los viajeros y á los carruajes que transitan á diario, sin poder hoy contar con ningún socorro en su penosa travesía.

El indio de Itatiqui es demasiado pobre y holgazán, es preciso moverlo y sacudirlo para que se utilice y progrese; en su territorio no existe agua, ni lagos artificiales para poder beber él y sus ganados, pero estos últimos pueden obtenerla fácilmente con diques bien construídos, mas falta una persona que lo dirija y lo impela al trabajo.

Con la fundación de una Misión Conversora, el indio tendría la garantía que actualmente no posee; viviría en su pueblo, que se reorganizó no há mucho, con la perspectiva de estar al amparo del Misionero; establecería sus lagos artificiales, y el viajero tendría un asiento dónde descansar y dormir, en casas hospitalarias; sin peligro de ninguna clase tanto en sus bienes, cuanto en su salud corporal.

El Supremo Gobierno se ha preocupado de este adelanto más en la región del Gran Chaco, dictó su decreto para la mensura de los terrenos en la extensión de tres leguas más ó menos que poseían *ab immemorabili*, pero, al practicarse las diligencias de alineación, resultó que otro particular había colocado sus límites, dejando para los indios el pueblo y una pequeña porción de tierras sin sembradíos, y estas muy reducidas. Con la medida tomada por este particular han perdido los indios todos los sembradíos de Igüitiyapi, cerca de los cuales dicho particular acometió la gran empresa de establecer un lago artificial en ese lugar denominado Caspirenta, advirtiendo que la mensura para los indios se practicó en el mismo año 1911, pocos meses antes de darse cumplimiento á la orden del Supremo Gobierno á favor de los naturales.

Para que las buenas intenciones de la Nación y de los Misioneros de Potosí no queden defraudadas, debiera el Supremo Gobierno encomendar á una persona imparcial la comisión de constituirse en el lugar, buscar datos de los indios y otras personas bien intencionadas, y en seguida dar un informe concienzudo para fallar en justicia.

Opino que la fundación de la Misión en Itatiqui se impone para comodidad de los viajeros y carruajes, como se impone la

fundación de otra en Picuigua hácia Isoso ó en el mismo Cayuguari y una tercera á lo largo del río Pilcomayo, cerca del fortín Gumcballi, entre los indios tapietes, que son bastante numerosos.

Sin la Cruz que forma pueblos y civiliza, se fundarán fortines en todo el Chaco, habrá derroche de dinero, pero nunca, á mi ver, habrá aumento de población, porque si de la bayoneta y de la pólvora huyen los civilizados, con más razón huirán, los pueblos salvajes.

Ciertamente hay que garantizar la vida del Misionero, colocando las nuevas Reducciones al alcance de uno á dos fortines, pero nunca en el radio de éstos, porque el Misionero, sólo con la independencia, puede desenvolver su acción benéfica y civilizadora, y el militar sólo en casos apurados debiera acudir al llamamiento del Misionero.

En caso de que estas mis opiniones surtieran efecto, el Supremo Gobierno dispondría de los fondos necesarios para las fundaciones, teniendo en cuenta la gran distancia de los centros poblados, conforme lo hace actualmente con los fortines donde la vida es bastante cara. No yerro si digo, que el progreso sería más rápido y el expendio de dinero insignificante; en cambio, la Nación vería en poco tiempo centros que se multiplicarían, como se han multiplicado desde Yacuiba á Santa Cruz de una manera sorprendente por obra de los misioneros Franciscanos (1).

Misiones del Colegio de Tarija (2)

Describir las glorias de este apostólico Colegio de Franciscanos es tentar un imposible en esta pequeña obra, cuyo fin no se dirige á la descripción de los trabajos de los Misioneros, como hice notar en la introducción, sino á narrar el origen y costumbres de la tribu chiriguana.

---

(1) La idea dominante del día es la fundación de Colonias extranjeras, lo cual es difícil, mientras falten medios de trasporte. Con la fundación de las misiones indicadas y otras que pudieran fundarse en lo sucesivo, la Nación tendría Colonias de elemento homogéneo, dispuesto á luchar y defender el territorio nacional contra cualquier invasión extranjera

(2) Hoy el Colegio de Tarija tiene solamente las Misiones ubicadas en la provincia del Azero, porque Chimeo é Itau más parecen pueblos de blancos que de indios

Tarija puede llamarse la tierra de los Misioneros antes y después de la Independencia; basta viajar medianamente por aquel Departamento y luego se viene en conocimiento que, aquí un templo, allí una casa parroquial, acullá un edificio-Misión, es debido á la constancia, paciencia, abnegación, sufrimiento y angustia del Misionero de Tarija; allí están los templos de San Roque, Carapari, Sella y Tupiza, que son de ayer.

Penetremos al Azero y Cordillera: ¡cuántos recuerdos, aunque destruídos unos y en decadencia otros! Oh! cómo se levanta majestuosa la imagen de Fr. Francisco del Pilar, á cuya heroica paciencia se deben todas las Misiones anteriores á la Independencia! Abapó! qué recuerdo empercedero! Todavía está allí el templo y la casa-Misión, y aún he visto parte de las escuelas, ya casi destruídas; sí ¡estos recuerdos me hicieron derramar lágrimas! Eran recuerdos, de mis hermanos perseguidos entonces y combatidos hoy, por los hombres que desconocen sus méritos y por una autoridad que se dice protectora de los Misioneros. ¡Ah! nó; llamémosla con otro nombre, pero no lo pronunciemos, y sigamos adelante, que los Misioneros saben perdonar como secuaces de Cristo y aunque algo desfallecidos por tantos acontecimientos desagradables, siguen en su tarea, erigiendo nuevos edificios y arreglando los antiguos deteriorados.

1. Machareti. — El P. Jerónimo de la Peña fué el primero en penetrar á Machareti, mas, antes de principiar ningún trabajo, le sobrevino la muerte y recién después de un siglo, esto es, el año 1869, pudo levantarse la cruz de la Redención, alrededor de la cual fueron reuniéndose los pobladores dispersos por la guerra y muerte del Capitán Taruncunti, poco afecto á los Misioneros.

Antes de los diez años la Misión ya fundada, contaba más de tres mil almas, pero hoy se halla bien reducida; alcanzarán sus habitantes á 1,500. La emigración á la República Argentina es una verdadera plaga para este plantel, porque aquí están los principales enganchadores de indios para trabajos afuera del territorio boliviano y es inútil citar leyes, porque hay buenos intérpretes, mientras tanto todos gimen por peones.

Machareti tiene un panorama delicioso y pintoresco; al Norte y al Oriente no puede el ojo humano abarcar la inmensidad de las llanuras, ni tampoco la exuberancia de los bosques y la variedad y capricho de los cerros. El pueblo se halla en una gran llanura, pero ya muy reducido; sus edificios, arriba de una colina alta que todo lo domina; posee un templo hermoso con pinturas y

dorados, una casa-Misión de dos pisos, dos grandes salones con sus respectivos patios para la enseñanza y un tercero para escuela de música, y además otras piezas para talleres (1).

2. Tiotipa.—Esta Misión, dedicada al Patrono universal de la Iglesia el Patriarca San José, principió su existencia desde el 20 de Mayo de 1872, día en que por primera vez se celebró el Santo Sacrificio de la Misa y se plantó en su territorio el Árbol de la Redención; dista de Machareti unos doce kilómetros, con camino bastante accidentado.

Cuenta en la actualidad con una población de 800 almas. El pueblo, tanto de infieles como de neófitos, es bastante aseado, los edificios sin mucho orden, y las piezas que merecen consideración son: su hermoso y elevado templo, ancho y proporcionado con su magnífico coro, altares dorados y baranda bien torneados; además del hermoso mecanismo de armaduras dobles que sostienen el techo. Su casa es nueva, de un solo piso, principió á erigirse en el mes de Agosto ó Julio del año 1910 y se estrenó en Marzo de este año, los demás edificios, ni guardan orden, ni son de valía y dan al conjunto un aspecto bastante triste; pero terminada la renovación de ambos pueblos, se hará el arreglo proyectado de los edificios para la enseñanza y talleres.

Su panorama nada tiene de particular, al poniente, la última serranía de los Andes, al Norte y Sur, unas colinas algo altas atajan á las pocas cuadras y cortan la visual al curioso observador, quien contraído en su deseo de ver y observar, encuentra un pequeño desahogo en el Oriente, donde el horizonte se abre y alegra el corazón; parece hermana mayor de la Misión de San Pascual de Ikoicovo. El clima es regularmente sano, á pesar de hallarse la Misión en una hoya, unas el agua, ó la posición del lugar, entorpecen el entendimiento de sus moradores, conforme notan todos los viajeros (2).

---

(1) Fundada la Misión de Machareti, se cortó la retirada á los belicosos huacayeños, que penetraban el Gran Chaco por el camino del Chorro, dista de Huacaya unas quince leguas y de Ivu unas doce, su altura sobre el nivel del mar es de 771 metros y se halla á los grados 20° 49' 58" de lat. Sur y 63° 13' 44" long. O. del meridiano de Greenwich.

(2) En los años de abundancia acuden á esta Misión varias tribus nómadas y se estacionan sirviendo á los chiriguanos por interés de la comida. Su elevación sobre el nivel del mar alcanza á 715 metros y se halla á los grados 20° 27' 18" lat. Sur y á los 62° 14' 44" O. de del meridiano Greenwich.

[facing p. 103]

Niños de la Misión de Tarairí

3. Tarairí. — Mientras el inmortal Pontífice Pío IX declaraba dogma de fé la concepción inmaculada de María Santísima, Patrona de la Orden Serática, los religiosos de la misma familia pertenecientes al Colegio de Tarija, por caminos desconocidos al entendimiento humano, fundaban la Misión de la Purísima de Tarairí, que fué la primera en la margen izquierda del Pilcomayo, y desde luego, muy arriesgada entre indios que no querían oir de religión ni de moralidad, amén de los peligros que había por parte de otros indios de las montañas, de los tobas y matacos. Dista de Tigüipa cinco leguas y de Camalotí, pueblo de cristianos blancos, tres; el camino es regular, pero hay algunas subidas y bajadas.

Los edificios de esta Misión son coloniales, parece que todo se hizo con sumo cuidado desde el templo hasta los talleres; aquél es elevado y ancho, el techo tiene armaduras dobles como el de Tigüipa, como fué el director de aquéllos, sus altares son tallados y la imagen de la Patrona es preciosa. Los edificios guardan unión, lo cual indica que la construcción se sujetó á un plan, por esto anda hay de superfluo y que no está en comunicación directa; es tan elevado este edificio, que el P. Guardián desde su ventana puede dirigir la elaboración del azúcar, chancaca y molienda y hasta la elaboración de tejas y ladrillos y las respectivas quemas.

El pueblo es grande y se divide en dos, el de los infieles se halla hacia el Sur á un lado, y el de los cristianos al frente del edificio-Misión, todos bien alineados como en toda Misión y todas tienen techo de paja. La población se compone de unos mil doscientos habitantes, quienes dejan mucho que desear, talvez por la proximidad de Villa-Montes, son bastante insubordinados y cualquier cosa, por pequeña que sea, pronto la ordenan á la Delegación del Gran Chaco, que por desgracia, á lo menos en los tiempos pasados, daba demasiado crédito á las mentiras de los indios (1).

4. Aguairenta. — Fué fundada esta Misión el año 1849 y actualmente en la más antigua porque Chiquero y el pueblo de Itau, ya desde muchos tiempos, perdieron de hecho el rango de verdaderas Doctrinas. Para la fundación de Aguairenta se unieron tres caciques de tres parcialidades, pero cada uno quería al Misionero en su pueblo. La distancia que separa la Misión de Aguairenta de la

(1) Esta Misión, por ser la primera al Norte del Pilcomayo, fué el blanco de chiriguanos y tobas que repetidas veces quisieron destruirla; se elevaba sobre el nivel del mar en de 662 metros y se halla colocada á los grados 20° 8' 23'' lat. S. y á los 62° 17' 4'' O. del meridiano de Greenwich.

de Tarairi pues de veinte y dos leguas por un camino bastante llano y ancho.

Según la han descrito con alguna exageración y fines no buenos, Aguairenta es la reina de los planos, la musa de los poetas y la contemplación de los sabios; lo cierto es que su panorama es muy delicioso, como sus vegas llenas de fragancia por los muchos naranjales, contiene abundante agua que hace el terreno fecundo, pero aquella se alcanza á mucha distancia.

Los pobladores se han reducido á pocos y están mezclados con los blancos, casi todos hablan bien el idioma castellano y las costumbres y modo de vestir es igual al de los pobladores mestizos, á pesar de verse todavía uno que otro vestido según la forma antigua (1).

5. San Francisco y San Antonio.—En las misiones denominadas San Antonio y San Francisco del Pilcomayo, el Supremo Gobierno determinó fundar una ciudad bajo la denominación de Villa-Montes; pero desde la entrega que hicieron los Misioneros el año 1906, en vez de progresar han retrocedido aquellas floreciente poblaciones. Se han deteriorado las viñas y huertas, se van arruinando los edificios y la moralidad se fué al despeñadero y allí permanece en estado progresiva. Las escuelas de niños y niñas se han reducido á muy pocos alumnos, y para estos pocos el Erario nacional eroga ciento sesenta bolivianos al mes, mientras que al capellán que debiera vivir allí no señala más que 240 bolivianos anuales.

Todo lo que pertenecía á las dos Misiones, como herramientas, carpintería, edificios, establecimientos azucareros, ganados vacuno, caballar, etc. fué entregado con inventario al Delegado Nacional doctor don Leocadio Trigo y los Misioneros, sin poder disponer ni de una celda que sirviera de dormida al P. Capellán, no tuvieron otro remedio que sacudir hasta el polvo de sus sandalias.

Los pueblos arriba indicados forman una población aproximada de indígenas chiriguanos de 1,500 almas (2).

---

(1) Por decreto de 4 de Enero de 1911, Aguairenta ha sido declarado cuartel de tropas, las que tomaron posesión del lugar desde fines del año 1910, sin embargo, el Gobierno ha dejado la casa-Misión y la huerta para uso y comodidad del P. Capellán; se halla á los 778 metros sobre el nivel del mar y á los grados 21° 46' 10" lat. Sur y á los 62° 48' 35" long. O. del meridiano de Greenwich

(2) El Supremo Gobierno arrendó el edificio misión á la compañía alemana que poco ha progresado, se halla á los 460 metros sobre el nivel del mar y á los grados 21° 16' 15" lat. S y á los 62° 20' 2" long. O. del meridiano de Greenwich.

6. Itas, Chiquiri.—Itas cuenta más de un siglo de existencia y Chiquiri más de medio siglo, en el primero residen dos Misioneros, de los cuales uno atiende en lo espiritual la feligresía de Chiquiri que se halla reducida casi á la nada, indios y cristianos viven en la campiña, éstos son más que aquellos. Itas y Chiquiri fueron Misiones y lo son todavía de derecho, porque la autoridad diocesana no puede recibirlas por falta de clero, mas de hecho ya no son Misiones, Itas está muy poblado de blancos y en Chiquiri si el Misionero reside, lo cual indica que una permanencia fija sería poco menos que inútil, porque faltan pobladores.

7. Yacuiba, Caiza, Caraparí y Camatindi—Los pueblos con cuyos nombres caracterizamos estos pocos rengloncs, pertenecen todos á la raza blanca y constituyen centros poblados, especialmente el primero donde reside la autoridad política de la provincia del Gran Chaco, además de estar allí la oficina aduanera por ser el pueblo más cercano al límite con la República Argentina. Todos ellos son asistidos en lo espiritual por los Misioneros de Tarijá y en algunos tienen residencia fija.

8. Caranda-iti. —Este pueblo de reciente formación ocupa unos renglones exclusivos. Dista de la Misión de Machareti unas ocho leguas por un camino algo accidentado, desierto y falto de agua, puede considerarse como el cantón más grande de la provincia del Azero, pues su territorio muy extenso llega hasta la margen derecha del río Pilcomayo, mientras no se defina la cuestión interdepartamental de Cuevo-Ibo.

El pueblo de Caranda-iti debe su fundación á los feligreses del cantón Igüembe, Huacaya ó Ingre. Después de la guerra de 1875, se pacificaron los indios de Huacaya con la fundación de la Misión de Boicoto y el fortín militar de Huacaya. A los pocos años salieron varios de este lugar y con el alicante de ocupar en recompensa sus leguas de terreno, exploraron Caranda-iti y se radicaron en el lugar, fueron atacados por las tribus especialmente Ava, sufrieron algunas bajas y tuvieron la ventura de ver algunos cautivos entre los salvajes, pero ya en un hecho la fundación del pueblo. Tiene su hermoso templo bendecido á fines de Julio 1908 y sólo hace falta la residencia de un sacerdote que los atienda con esmero espiritualmente, porque Machareti está bastante lejos para esta dilatada feligresía (1).

(1) Los cristianos que exploraron el territorio de Caranda-iti recibieron el terreno prometido; no tiene más agua potable Caranda-iti que la de las lagunas, expuestas á secarse. La conservación de este pueblo debe justamente llamar la atención del Gobierno de Bolivia por el comercio, industria ganadera, tránsito y perspectiva de nuevas exploraciones al Oriente.

Con la breve reseña que acabo de hacer referente á los Misioneros existentes entre los chiriguanos y á los pueblos de blancos edificados en la misma comarca, engrandecidos por los Franciscanos de Tarija y Potosí, doy término á este segundo capítulo, donde se han emitido varias opiniones acerca del origen y procedencia de los chiriguanos á la comarca que ocuparon y con corta diferencia ocupan en la actualidad.

Nada hay de inventado en ello, con la precisión averiguación á diversas personas, en épocas diversas, con la consulta de los múltiples autores, que por estudio, referencia ó de tradición han dejado algo escrito, he tenido en conocimiento de ciertos hechos que confirman los otros más, los otros en otros lugares y he comprobado que no todo debe ser falseado y confirmar los he visto relatar, los presentes á mis lectores. En el capítulo que sigo voy he presentado á ignoro si el tiempo, los vigilios y el cuidado que he quitado á mis ojos, hayan sido bien empleados; sea como se fuere, aquí he tirar el pálido.

Tarija

Por un error en la demarcación de límites con la República Argentina el pueblo de Tarija se halla al Sur del río, cuando debiera estar al Norte y Este, el río colindante precisamente en Bolivia, límite de la zona chiriguana que ha ocupado el invasor sin habitantes desde su inmigración.

Tarija ó Tarigiqui, como pronuncian los chiriguanos, quiere decir: agua de poca adversa, es una región completamente rica, en territorio en plena, los cultivos que se van formando, son ricos, como una flora de cada nombre, el tercero fértil, produce allí la uvija ó guisante, el garbanzo y otros cereales, cuyas plantas vienen invigiadas con agua que es relativamente abundante.

El pueblo que cayó también con el terremoto de 1868, va formándose sucesivamente según los días, ambiente y su perímetro es pequeño. Cuenta ya con un hotel de primera clase, donde se sirve al viajero y al paisano con toda cultura y tranquilidad; con almacenes, donde se encuentra todo artículo; con edificios notables, casas de grandes dimensiones y con un edificio colonia, todo de cinc desde los pasadizos hasta el techo.

La circulación adquirida en comercialmente proveniente por los numerosos mercaderes que la cruzaban continuamente con su crecido fo-

Sajo y frente cancillo, lo cual indica la fertilidad del territorio y la abundancia de agua.

Está situada la ciudadela en el territorio de Tarija, fué por consiguiente fundada por europeos bolivianos, en estancia de la Subprefectura del Gran Chaco y hoy es un pueblo cosmopolita, sus pueblos nuestros extranjeros están radicados allí, sus pueblos otros están continuamente de tránsito; aparte de la importancia que le da la centralizar llegada de los correajes y le dará la proximidad de la línea ferrea.

Difícilmente puede formarse un nuevo pueblo con los mismos motivaciones, en Calpimonti, con lugar al Norte del actual, donde el agua se en menor cantidad. Este lugar situado al Norte del actual y á una distancia del mismo necesario, sería muy á propósito para la estación del ferrocarril. Tarija, porque tiene al frente una extensa llanura, valiosísimo que Agua-Grande está cercanía en el bosque.

Tampoco es fácil situarlo en el Palmar, menos á dicho lugar al Norte, porque el agua se consigue por canalizaciones, al terreno es arena, casi en su totalidad y, por consiguiente, poco á propósito para la agricultura y edificios coloniales.

Si la actual ciudadela es á causa de los aguaceros, en fácil, desaparecerá, como puede desaparecer todo el momento que tiene en la actualidad. La Revista vecina no halla cada que tengan dichos inconvenientes á los pobladores que abandonarían sus huertas, jardines y casas, para las cuales experimentan cariñosos de diversa.

No es posible que los habitantes de Tarija quedasi allí, construyendo el Gobierno Boliviano otra pueblo en Calpimonti ó en el Palmar, porque el abandono en el comercio y acontecimiento dejaría estar, donde se establecerá la aduana, en la cual los correajes continuan con mercaderías y depósitos en carga que los arrieros trasladan á Santa Cruz.

Quitada para la Aduana, se quita el movimiento, sin fata el pueblo está muerto y acontecimiento desaparecerá, porque los mismos extranjeros preferirán pasar á la costa Tarijeña donde encontrarán todo lo necesario para vivir casa, y para demorarse algunos días como.

Todo lo considerará el Supremo Gobierno y el Congreso de Bolivia antes de hacerse acreditar las vías y las extensas fronteras que está llamado, cada que Villa Montes á ser el emporio del comercio y civilización, como mercaderías y relaciones pueden conti-

gen, pero la nueva Villa donde que fué dejada por los Misioneros, no ha dado un paso para el adelanto moral y material.

¿Qué que el mentor é arreglo de límites entre estas repúblicas sea convenientemente á personajes exclusivamente patrióticos y justicieros que sepan salvaguardarlos dictar la cuestión sin herir derechos ajenos? Medios tanto políticos, medios convenientes y medios acaso de naturaleza secreta el estadista nacional que sepa con esta responsabilidad de desarrollar los verdaderos límites.— *Es necesario de este artículo en «Los Propagandistas de Potosí»* (1).

---

(1) *El primer artículo referente á Yacuiba publicado por mí en "La Propaganda" de Potosí fué reproducido por el distinguido joven Dr. don Carlos Paz, redactor de "El Trabajo" en su "Revista Histórica "Bolivia y la Argentina."*

Carlos del Chaco Boliviano me hacen saber que la comisión de fronterizos Argentino Boliviano llegó á Yacuiba y pasó otro del río del Presente "Aguaragüe," colocando el límite entre estas Naciones al Norte de la Ciudadela, conforme estaba antes. Este hecho y el proyecto de fundar un nuevo pueblo en Caipipendi concurren á hacer pensar fundadamente que el asunto Yacuiba está resuelto, concluido y cedido por Bolivia á la República Argentina.

[P. 109]

CAPITULO TERCERO

CARACTERES DE LOS CHIRIGUANOS

INTRODUCCION

A fines del siglo XIX y propiamente el año 1897 todo el mundo católico fué invitado con anticipación para concurrir á la grandiosa exposición de Arte Sacra que tuvo lugar en Turín, bella y grandiosa ciudad italiana en el Piamonte. Hizo oir su voz el Romano Pontífice y los católicos de las cinco partes del globo terráqueo se organizaron al concurso, literario, científico, industrial manufacturado, etc., etc.

Las Misiones no podían dejar de tomar parte en este certámen de competencia, no podían cerrar los oidos á la voz del Supremo Cerarca del mundo; con el fervor de los primeros cristianos, con la humildad de neófitos, dirigidos por los Misioneros de todas las Órdenes y Congregaciones católicas, prepararon un concurso extraordinario. Se vieron en Turín las rarezas y los productos de las Misiones de China, África, Palestina, América del Norte, Colonia Eritrea, Oceanía, Patagonia, América del Sur, etc.

Aunque Bolivia ocupe un lugar bien modesto en los mapas del mundo y se vaya organizando despacio para elevarse á grandísima altura, exhibió sus productos en dicha exposición universal y estuvo representada aún por sus tribus. Allá enviaron todo lo que podía figurar de las Misiones de Guarayos, de las Misiones de Tarija y de las de Potosí. Fué entonces que un fotógrafo italiano, contratado en Tarija, recorrió sus Misiones y las de Potosí, fotografió vistas, panoramas, grupos de chiriguanos, familias, templos, Misioneros etc. (1).

(1) La orden de concurrir vino de la Curia Generalicia de Roma y el M. R. P. Comisario en Bolivia dispuso que el Colegio de Potosí se uniera al de Tarija por ser los habitantes de las misiones de ambos colegios de la misma raza chiriguana.

La ilustración puesta al frente de este capítulo es una de dichas fotografías, representa un grupo de mujeres chiriguanas con sus vestidos y adornos festivos, están en disposición de presentarse en una reunión pública para beber, fué fotografiada en la Misión de Boicovo y llevada con los demás á la Exposición. El grupo de indios jornaleros se reserva para el capítulo que trata de trabajos y faenas, ambos grupos darán á conocer la constitución física de la raza, de la cual compuso su libro el señor del Campano, después de haber terminado la Exposición: talvez dicho señor vería aún á los cuatro chiriguanos que fueron llevados desde las Misiones de Tarija (1).

Físico

Después de haber estudiado el territorio que ocupa una tribu y consignado en el papel lo más característico, en seguida de haber averiguado convenientemente por datos tradicionales ó históricos ó suposiciones muy fundadas el origen y procedencia de la misma, lo primero que se presenta al Etnógrafo y á cualquier observador, es un cuerpo material; sus proporciones grandes, pequeñas ó justas pronto hieren el sentido de la vista: éste, el observador considera mentalmente lo que ve aquél, el Etnógrafo de lo físico comienza su narración y desciende luego al carácter.

Algunos exploradores y viajeros después de haber dado cima á sus trabajos de averiguaciones, han dejado escrito en sus relaciones que los indios chiriguanos han cambiado mucho en su físico desde que los blancos ó los criollos penetraron en su territorio, pero nada más inexacto que lo dicho. Son bien raras las uniones clandestinas de los cristianos con las chiriguanas, mucho más raras las uniones legítimas mediante el matrimonio católico, de donde procede por lo general la propagación y el cambio de razas (2).

Si el señor del Campano afirma que los chiriguanos por el espacio de 40 años se han conservado invariables, fundándose en las fotografías que puso á su disposición el Profesor Mantegazza sacadas el año 1860 y en las que los Misioneros de Potosí y Tarija mandaron el año 1898 á la Exposición de Turín, donde figuraba

(1) Notizie intorno ai Ciriguani. Firenze, 1902.—Es la obra más completa que existe en Italia, en vista de la misma me determiné á escribir la presente aquí donde viven los chiriguanos.

(2) En 20 años de vida misionera he bendecido apenas cuatro matrimonios de cristianos blancos con neófitas chiriguanas.

una calavera recogida por el suscrito en los campos de Curuyuqui y vendida por el P. Giannecchini al museo de Florencia, ¿qué deberán decir algunos Misioneros que han envejecido y van envejeciendo entre estos indios y conocen la raza en los hombres viejos y mozos, en las mujeres ancianas y doncellas, antes y después de haberse introducido con demasía los cristianos blancos?

No existe á mi juicio dicho cambio, porque uno que otro caso aislado, una que otra familia, donde se produjo la mezcla de dos sangres, no pueden aducirse como prueba para decir que lo físico de la raza ha variado mucho. Viajeros y exploradores pasan relativamente con rapidez por una región, poco tiempo pueden dedicar al estudio de una raza, por consiguiente sus relaciones escritas, dignas de todo aprecio, son un tanto exageradas, como lo eran aquéllas de los españoles que conquistaron Méjico y el Perú (1).

Hay comarcas de gran extensión donde la mezcla de las dos razas fué numerosa, mas es de advertir que en esas comarcas el fruto dejó de ser chiriguano, tanto por el idioma castellano que ya habla con perfección, cuanto por el color que es completamente distinto; ya no es su pergamino, como afirma el P. Corrado, sino un cutis hasta cierto punto fino y aterciopelado, de modo que á esta clase de personas que descienden de blancos con chiriguanos les conviene el nombre de mestizos y no chiriguanos y por consiguiente no cambió lo físico de la raza. En las mismas comarcas no son raras las familias que han conservado la sangre pura de chiriguanos, tienen éstos ó los individuos que las forman los caracteres iguales á otros chiriguanos sin ninguna discrepancia notable (2).

Al contrario en los grandes centros chiriguanos, como son casi todas las Misiones y otros contados afuera de éllas, el físico del indígena no ha cambiado absolutamente. Por lo regular su altura no llega á un metro y setenta centímetros en los hombres y raras son las mujeres que llegan á 1.60; el cabello es negro, terso y áspero, muy vigoroso tanto en los hombres, como en las mujeres y un pelo rubio indica rareza ó clandestinidad. La frente es algo pequeña, como también los ojos lánguidos y con dirección al suelo, el rostro es redondo, la nariz chata, la boca ancha, la dentadura blanca como marfil, la barba es corta y los labios algo gruesos.

(1) Guillermo Robertson. Historia de América desde el descubrimiento hasta antes de la Independencia. Los viajeros exageran sus relaciones para llamar más la atención.

(2) Desde la margen izquierda del río Parapití hacia el Norte se va verificando este cambio radical desapareciendo la raza.

Los hombres no llevan barba y cualquiera creería que son barbilampiños, mas la razón principal de no tenerla está en que se la arrancan, conforme va naciendo y para ello poseen unas pinzas de hojalata, mediante las cuales hacen desaparecer todo pelo y hacen bien, porque de otro modo por el dassaco serían con sus barbas luengas verdaderos orangutanes (1).

Tienen pecho hacia adelante, hombros y brazos bastante gruesos, manos de regular tamaño y piés no muy grandes á pesar de que crecen á su talante, pues siempre van descalzos, especialmente las mujeres y ni todos llevan ojotas. Cuando gozan de buena salud, son muy robustos y las mujeres sin ningún inconveniente físico hacen mamar dos párvulos en sus pechos. Siempre que alguna cristiana blanca carece de mamas ó leche, busca por lo regular á una chiriguana para nodriza de su párvulo, esto además de ser muy conveniente por la bondad de la sangre, es también bastante económico. Pero es cierto que las más no quieren hacerse cargo de otros niños afuera de sus hijos, las más de las veces se comprometen con dificultad, ó por fuerza, sucediendo este último cuando los indios están sujetos á un patrón.

El chiriguano al tiempo de nacer tiene un color indefinible, mas, sin que nadie suelte la risa, su color es él de los ratones recién nacidos, conforme va creciendo, va cambiando de color hasta tomar él de un pergamino soleado. Las causas de esta mudanza son los calores tropicales, los vientos y cambios repentinos y el sol abrasador, á cuya acción se exponen con demasiado agrado, sin inconveniente alguno y sin temor, aunque tiernos parvulitos.

De esto se deduce fácilmente que el indio no teme al sol canicular, ni tampoco al calor; trabaja en los días calurosos sin camisa, ni pantalones, ni cosa que se le parezca, se echa de largo á largo recibiendo, muy satisfecho, en su espinazo los rayos de un sol de fuego y nada le acobarda. Pero cuando el viento norte se cambia en sur y por consiguiente arrecia el frío ó caen las heladas, es muy cobarde y es difícil hacerlo trabajar bien y con gusto; en este caso es preferible suspender el trabajo unos cuantos días, no pagar de balde á los jornaleros, ni enojarse sin provecho; mas esto puede hacerse sólo cuando la suspensión no acarrea perjuicio alguno (2).

---

(1) Los tobas llaman al chiriguano: cara de *tigre* por su rostro redondo, y éste se venga de ellos llamándolos: *cara de caballo*, por su rostro largo. En las Misiones usan bigotes y pera los neófitos.

(2) No sólo el indio chiriguano es enemigo del frío, sino aun las demás razas de América, como p. ej., los quichuas, según relata el historiador Robertson.

[facing P. 113]

Niños de escuela de S. Buenaventura de Ivo

Duración de la vida

El chiriguano por lo regular vive bastantes años, poco le perjudica el calor, el frío y la inconstancia del clima, lo mismo que la embriaguez y la lujuria, á cuyos vicios capitales se abandona desde tierna edad. Unos alcanzan y pasan los cien años, juzgando su longevidad por los cabellos; pues éstos no se vuelven blancos sino en muy avanzada edad y he visto indios con la cabeza completamente blanca y otros que de blanca tomó el color de humo, ó cosa ahumada. En el desempeño de mi ministerio he conocido y bautizado á muchos seculares al tiempo de morir y en los pueblos que he recorrido, he conocido varios que pelearon en la guerra de Caraparí y presenciaron la guerra de la Independencia.

Mas hoy el chiriguano ha degenerado mucho; en tiempo algo lejano, ni se conocían los licores, ni la coca, hoy ambos se han generalizado y por los licores y la coca, de los cuales hace mucho abuso, arruina su salud y hace más corta su existencia. Mucha juventud desaparece con el abuso de estas sustancias y por lo regular en las Misiones desaparecen los mejores, los que saben algún arte, ó tienen alguna fortuna; todo lo que ganan, después de comprar su vestido (aunque no siempre) lo invierten en los licores y coca y así abrevian la vida. He visto pueblos en donde de cuarenta ó cincuenta jóvenes de una misma edad apenas hay dos ó tres vivientes que llegarán á cincuenta años; se ve pues que la embriaguez producida por la chicha no es tan perniciosa como la del licor ó alcoholes, para los cuales nunca es demasiado grave cualquier impuesto que les imponga el Supremo Gobierno y ¡ojalá dicho impuesto fuera, más fuerte, más general y no se contentara sólo en que quede escrito! A pesar de esta vida disipada, es muy raro encontrar un indio calvo, lo cual indica mucha robustez (1).

Moral

Presentemente el indio chiriguano nada ó poco se distingue moralmente de la masa común de los hombres, quiero decir que ni todos son buenos, ni todos son perversos, los hay buenos y malos

(1) Conozco muchos pueblos grandes y pequeños de chiriguanos, sólo he hallado tres semi-calvos.

como en todas partes y lugares, de modo que han errado ciertos viajeros que los llaman indios muy malos, como erraron aquéllos que los llamaron muy buenos. Un célebre explorador decía, no ha mucho tiempo: de encontrar más bondad en un indio que en un blanco y basta fijarse con una mediana atención en el rostro de los dos para cerciorarse de la moralidad de ambos; como Misionero no puedo ni debo consignar en estas páginas mi juicio al respecto (1).

Antes que se verificara la conquista efectuada con suavidad por los Misioneros católicos, era sumamente peligroso penetrar en su territorio, aunque fuera de tránsito y no es lejana la época en que era difícil viajar por los campos de Cuevo-Ibo, donde los Misioneros Franciscanos de Potosí fundaron sus Misiones, como las habían fundado los de Tarija en otras regiones; el peligro tenía su razón de existir.

El indio ya conocía al blanco por sus hechos; lo llamaba y lo llama *caray*, que quiere decir astuto, codicioso, opresor y dueño de lo ajeno, si pues miraba con recelo al *caray* y hasta cierto punto no quería relaciones con él, es porque se había formado esta pésima idea, de donde nacía el no querer en su territorio á un mal vecino y le cerraba el paso para que no se aficionara de la fertilidad de la comarca. Estaba muy enterado que después de la exploración viene el conocimiento, de este se origina el deseo de poseer que tarde ó temprano se pone en ejecución, conforme ha sucedido (2).

Terminada la conquista mediante la obra de los Misioneros y mediante la colonización de los habitantes de varios departamentos, el chiriguano tuvo que someterse al derecho del más fuerte; en varias ocasiones quiso levantar su cerviz mediante sublevaciones generales, como la del 1875 y la del 1892 en Curuyuqui de Cuevo-Ibo, pero sucumbieron por la diferencia de las armas y por la buena disposición de los blancos (3).

---

(1) El mismo explorador aprobaba la actitud resuelta de la sublevación de Curuyuqui, bajo el punto de vista que luchaban por su independencia y reivindicación de su territorio.

(2) Giannecchini. Expedición al Alto Paraguay, año 1883.

(3) Martarelli. Adición á la Historia de Misiones del Colegio de Potosí, que trata de la guerra de Curuyuqui y principios de la fundación de la Misión de San Buenaventura de Ivu.

Hoy parece que ya no es fácil una nueva sublevación por ser pocos y por estar el territorio poblado de blancos que se han apoderado de los terrenos á título de conquista y por compra hecha ante el Supremo Gobierno, pero no se resignan los indios á permanecer servidores, habiendo sido dueños de su casa y terruño, su altivez se ve abatida por una fuerza superior y la mayoría sufre resignada su suerte.

Es por cierto un hecho que el chiriguano de hoy, no es el de otros tiempos, no es aquel que luchó con tenacidad contra el soldado del ejército del Inca, contra el español y contra el mismo soldado boliviano. Este cambio se ha verificado, diré nuevamente, por la pérdida del territorio y su independencia y en los esfuerzos repetidos con tesón extraordinario, sólo consiguieron agravar el mal, perder á los seres más queridos y sus haciendas. De á buenas ó de á malas han tenido que sujetarse á las leyes del Gobierno republicano, que ejerce su autoridad suprema aún sobre ellos, en las Misiones, dejándola limitada á los Conversores, en las provincias á los Subprefectos y en los cantones á los corregidores, que por lo general se sirven de un cacique ó alcalde para su reunión al tiempo de ordenar un trabajo de pública utilidad.

Domina entre los chiriguanos el ocio, la inconstancia, la intemperancia, el hurto, el infanticidio, el aborto y aún el suicidio que por lo general lo cometen las mujeres. Se les ve trabajar sólo por necesidad y cuando son acosados por la carestía; entonces sudan para comer, con toda humildad se presentan á la casa del cristiano y se le entregan con toda la familia. Mas si cerca del carai hallan á otro de su raza que puede favorecerlos, aunque sea con desventaja, lo hacen, porque aborrecen al que consideran autor de sus desdichas ó de su cautiverio, por esto siempre que hablan del *carai*, añaden el adjetivo *pochi* malo, perverso, tirano, pícaro, etc.

Aprenden con mucha facilidad todo lo que se les enseña, especialmente la música, para la cual parece que han nacido, pero su inconstancia todo lo arruina, no son fijos en sus ideas, ni les importa mucho cualquier pérdida, aunque sea su honor. La templanza ni por el nombre se conoce, y es gloria la embriaguez, por esto en los años de abundancia, son orgías continuadas en sus pueblos. . El hurto y el abigeato son relativamente recientes, antes no eran frecuentes y la causa serán los malos ejemplos; en ciertas comarcas el ganado de menor edad desaparece á la vista y son tan astutos que no es fácil descubrir un hecho, solamente después de

haber trascurrido algún tiempo, ó por enemistad, algo se llega á saber (1).

Dificultades para reducirlos

Si entre otras tribus los Misioneros han podido fundar Misiones sin consultar las ventajas materiales del indio, entre los chiriguanos no sucedió así. Puedo asegurar que casi todas ellas se han fundado, cuando el indio experimentaba alguna calamidad ó la persecución de los vecinos; así se fundó Santa Rosa, Ivu, Parapiti, etc. El indio no consulta su bien espiritual; cuando admite al Misionero en su tierra, quiere ver las ventajas materiales, por lo mismo, si en otras Misiones, grandes y chicos se bautizan sin distinción, entre estos no sucede lo mismo. Bautizar á un indio adulto que goza de salud completa, es lo mismo que pedir penas al olmo, sólo pide el Sacramento, cuando ve que no hay esperanza de vida y al principio de una Misión aún esto es dificultoso y muchísimos lo rechazan terminantemente. Pudiera enumerar casos que me han ocurrido; hay quien desea condenarse al sólo oir del labio de los Misioneros que los que no reciben el bautismo, no se salvan, y como antes de una fundación nadie lo recibió, desean bajar al lugar de penas, para ver nuevamente á sus deudos ¡Triste y lamentable ignorancia, de la cual unos no quieren salir! (2).

En los casos de calamidad ó persecución, el Misionero es buscado con tesón por los caciques que no descansan hasta conseguir el fin; una prueba actual la tenemos en el cacique del pueblo de Pipi que no há mucho, se presentaba continuamente á la Misión de Ivu para llevarme á fundar Misión en su pueblo y librarse así de la persecución de un vecino, según él relataba. Para ello prometía todo, bondad, docilidad, adhesión, trabajo gratuito y todo lo demás; la religión y el bautismo sólo los reservaba para los niños como en otros pueblos. Mientras el indio está bien y no es estorbado por nadie en su vida perezosa de frecuentes bebidas, no es fácil conseguir de él cosas buenas.

(1) En sus denuncias pacíficas recomiendan mucho silencio, para que la autoridad no manifieste sus nombres por temor que el denunciado se vengue con veneno ó brujerías y, no probándose el delito, la autoridad apenas puede reprender y amonestar.

(2) En Ivu hubo menos dificultad por la proximidad de Santa Rosa y en Parapiti ninguna por las repetidas fundaciones en dicho lugar.

Aún para la educación del niño es preciso halagar al indio con lo material, no se resiste á la entrega de sus hijos, pero quiere que se les dé vestido; por más que tengan, los presenta completamente desnudos, ó con una camisa hecha jirones para que el Misionero los vista pronto y, nótese que, esto no lo pide como un favor, lo pide hasta cierto punto con imperio, dice pues: «*Ropa emeé chupé,*» dale ropa; si el Misionero pide algo por favor, debe corresponderles con cosas materiales; si se olvida, se las piden.

Ya se ha visto que la Misión de Tarairi fué fundada el año 1854, la primera fundación que se practicaba en la margen izquierda del río Pilcomayo, debida al celo del P. José Giannelli. Era próxima la Pascua y el Misionero manifestó á varios caciques que en esos días haría la conmemoración de la muerte de Dios y que ellos también debían concurrir con su pena y aflicción á manifestar su adhesión á las verdades y dogmas de la fé católica, sabía por experiencia que los chiriguanos tienen por los muertos un cariño especial. Efectivamente se reunieron en gran número para escuchar la palabra del Padre Misionero, quien creyó haberlos conquistado á todos, ya en mirarlos tan atentos y silenciosos, ya en verlos llorosos y compungidos. Pero llegó la Pascua, día de alegría y los que habían concurrido á llorar la muerte de Jesucristo, se presentaron nuevamente al Misionero, pidiendo en pago del servicio un vestido nuevo. ¡Figúrese el lector, cómo quedaría el pobre Padre, que nada tenía, al oir semejante petición! (1)

Vicios y consecuencias

Parece y es una verdad digna de lástima que en esta tribu antes tan numerosa, no falten las mozas coquetas, que si se limitasen á coquetear no más, menos mal; lo desgraciado está en que estas pobres para disfrutar de los placeres mundanales y beber hasta el fondo las heces de la corrupción, ó también para no tener el fastidio de la lactancia y de la educación de la prole, acuden á una cosa muy sencilla. Consultan á las ancianas que llevan el nombre de brujas y éstas indican el remedio, consistente en una bebida que extraen de unas plantas ó hierbas, que casi todas las chiriguanas é indios brujos conocen á maravilla.

(1) Corrado, Historia de las Misiones del Colegio Apostólico de Tarija.

Estas desgraciadas mozas, huérfanas por lo regular, terminado el período de la pubertad, toman el venenoso brevaje, sufren bastante, cuando no sucumben, se esterilizan y se entregan á las orgías en tiempo de las bebidas generales, que es lo más inmundo que pueda haber, porque en ellas se ofende la moral con las palabras y cuentos muy licenciosos, con la risa y carcajadas estrepitosas de hombres y mujeres, con la mirada, y por último con los hechos, aunque á conveniente distancia de dichas reuniones.

Estos hechos no se pueden negar, porque están basados en la experiencia de siglos, desgraciadamente se presencian y es muy dificultoso desarraigarlos: no faltan reconvenciones, no faltan castigos, amonestaciones y temores, pero ni alcanza la acción civilizadora, ni aún muchas veces la palabra Evangélica, porque: *animalis homo non percipit quæ Dei sunt*. Podemos decir que la acción del Misionero es de ayer entre los chiriguanos, los cristianos ó neófitos han cambiado mucho, lo mismo relativamente los infieles en toda la comarca, pero todavía falta bastante para que comprendan la fuerza de la Religión y civilización, pues naturalmente la humanidad abandonada, da rienda suelta á las pasiones y difícil es contenerla después en poco tiempo (1).

Hermana de la esterilidad que se procuran las mozas coquetas, es el aborto: no hay mujer que no conozca los mil modos para procurárselo, siempre que no consigan ó no acudan en la pubertad á los remedios para esterilizarse. Llegan al exceso de victimar a las inocentes criaturas por lo general aquellas mozas traicionadas por sus amantes ó abandonadas por aquellos que les habían jurado fidelidad por toda la vida: por esto llegan á odiar no sólo al autor, sino también al fruto de sus entrañas y así procuran deshacerse del inocente, arrojándolo muerto de su seno.

Mas si no consiguen el fin, no trepidan tampoco de cometer otro crímen mayor, el de estrangular al recién nacido, ó cuanto menos enterrarlo vivo. A pesar de que estos casos no son muy frecuentes, tampoco son muy raros y fácilmente se descubren por los parientes, ó vecinos que los denuncian á la autoridad del pueblo, quien tampoco puede poner remedio, porque si toma provi-

(1) Los miéeles de las Misiones se quejan de los neófitos, pero no comprenden que han cambiado los tiempos y la raza también; en otros lugares se cometen asesinatos, lo que no acontece en las Misiones.

deucias, apenas se extienden á razones y consejos que oyen, como quien oye llover.

Entiéndase pues de una vez para siempre que los chiriguanos como toda raza salvaje necesita primero instrucción y luego rigor, porque sin la primera serían siempre ignorantes y sin el segundo menosprociarían la instrucción recibida. El pueblo hebreo acostumbrado á la Religión desde el principio del mundo, recibía amonestaciones, consejos y mandatos de Moisés, á quien se los comunicaba directamente Dios. Cuando prevaricaba el pueblo, era el mismo Dios que le imponía el castigo correspondiente á la culpa; la historia sagrada está llena de tales hechos (1).

Suicidio

El amor es natural en la humanidad, siempre debe haber un objeto amado: el erudito ama sus libros, el mecánico sus instrumentos, el astrónomo su telescopio, el matemático su teodolito, el filósofo sus principios, las esposas de Cristo su bien infinito y los sacerdotes las ciencias y su Autor. Cada cual en su ramo inclina su afección al objeto que más le agrada; aún los indios poseen este privilegio, porque son hombres que vienen del mismo árbol, cuyo tronco está en Adán y Eva (2).

Como consecuencia de lo antedicho el chiriguano no tiene otro objeto amado que su semejante, porque el ocio y la ignorancia no le hacen aspirar á otras cosas; el hombre y la mujer se aman recíprocamente, pero como heredan también el pecado original, están sujetos á sus consecuencias que son muchas. Sucede pues que no es raro el caso de que un hombre traicione á su mujer ó ésta á aquél. ¿Qué proviene de aquí? Si es la mujer que faltó á la fé conyugal, el hombre lo remedia con proporcionarle una buena dosis de palos y separarse de élla definitivamente y si es el hombre, como acontece por lo general, no es fácil á la mujer hacer algo

(1) Con la ley del desafuero se cometió el yerro de conducir preso á un anciano Misionero; de este hecho se seguirán otros y viendo los chiriguanos que ni el Padre se libra de la cárcel, perderán todo temor y serán siempre más criminales; el indio no oye mucho el consejo, más oye lo que duele.

(2) Dicen éllos que los primeros padres de la raza chiriguana son distintos de los progenitores de los cristianos y de los Misioneros que tenemos otro color, riqueza, inteligencia y valentía; añaden que su primer padre se llamaba *Araparigua*.

de muchos casos, entre hiere se ve aprisionada más y más; el marido la martiriza, los otros familiares la desgracian, contra su rival nada puede, idea religiosa no posee para resignarse á su suerte; á todo trance quiere vengarse de cualquier modo, pero es difícil, cree en este caso extremo que todo lo consigue con quitarse la vida, acude á ello, busca su morbil, se lo pasa por el cuello, lo amarra á cualquier pequeña horquetta ó costanera, abandona su cuerpo y como cuelle la vi, en pocos minutos deja de existir (1).

No es raro el suicidio más entre los hombres y los habido algunos durante mi estadía entre los chiriguanos. Los hombres, si son mozos, lo cometen por no poder sufrir el reproche de sus padres por alguna mala acción cometida. Si son más ancianos que sus esposas, es porque no pueden de otro modo remediar la infidelidad de ellas, porque hay casos en que el hombre dominado por su mujer y de un natural algo tímido, no se atreve por tantas circunstancias á desterrar de su casa la mujerzuela, y así todo cree remediarlo con quitarse la existencia: estos accidentes y acontecimientos desagradables suceden en la campiña ó en el bosque.

Pugilato y duelo

Antiguamente esta raza era muy belicosa y constantemente estaba en guerra contra sus comunes enemigos, pero sucedía otras que un pueblo se levantaba contra otro por pequeños motivos. A mediados del siglo XIX hubo una guerra sangrienta entre los pueblos de Ivu y Cirugutaretta contra los de la margen derecha de la quebrada de Cuevo, por opresión que había pretendido hacer el cacique Güiracati (2).

De estas guerras generales se derivan otras particulares que los civilizados llaman lance de honor, duelo; esto no sucede en privado, como acontece entre los civilizados, que salen á un lugar determinado con sus respectivos padrinos; todo es público, á la presencia de mucha gente que concurrió á la bebida. Nos los cuí-

(1) Una mujer de unos 25 años se suicidó en su propia casa en la madrugada de un Domingo á la altura de un metro; lo ejecutó hincándose.

(2) Esta guerra regional sucedió antes de fundarse la Misión de Chimeo; *Güiracati* engañó á las autoridades de Cordillera, quienes acuartelaron gente de los alrededores y del Paraguay para reprimir la audacia de Yaveau, á quien creyeron jefe de revolución.

que que animan á sus soldados á cumplir sus funciones, á reparar con el crimen un desmán ó un acto infundado. Cuando esto sucede, sin ó con razones, se cruzan los combatientes en medio de toda la chusma de espectadores á la presencia de los caciques que los animan con su palabra de mando, mientras los patazos enfurecidos se dan golpes recios.

El pugilato es antiguo, porque entre sus se conocían cuchillos y si los había, los usaban tan allá en las labores de la campiña. Actualmente ha cambiado la escena, á los viejos van sucediendo los jóvenes, éstos van continuamente á los trabajos de la República Argentina, allí aprenden á beber licor puro, á manejar el cuchillo del que se arman para sus trabajos y para defenderse. Basta una pequeña palabra, basta que uno diga: *pelaosa*, pelamos, palabra de desafío, desenvainan sus cuchillos y luego corre la sangre; felizmente se contentan con leves tajos de los que rara vez sigue la muerte, porque no dan el golpe con la punta de la arma, sino con el filo.

Esta manía de ayudar á la República Argentina los tiene en continuos movimientos y por desgracia muchísimos se quedan años y vuelven al fin sin tener casi nada y si se les pregunta, contestan muy fresco: Me lo he tomado todo. La ley del año pasado ha imposibilitado el enganche, varios indios se fueron, pero no hallaron pasa en Villa-Montes, retrocedieron (1).

Amor al hogar

Cuando uno ha faltado de su pueblo alguna temporada larga y vuelve, es recibido con mucho cariño, entra á su casa sin decir palabra y si llega de noche, á la pregunta de: ¿quién es? contesta apenas: *Ch-en, yo soy* y luego los de casa comienzan á llorar, ó dar alaridos de alegría que dura unos cinco minutos y recién le presentan algo de comer y comienzan las preguntas y contestaciones, así lo presenció sin ser visto una noche en Parapiti, la Misión de San Antonio.

No es raro el caso que alguna vez una pequeña ó gran fracción de indios deba abandonar temporalmente su pueblo sea por carestía, sea para evitar la ira ó mala voluntad del cacique. Se alejan entonces con mucha pena, y sabe como salió Agar desterrada con

(1) Si las autoridades de Villa-Montes y Yacuiba siguen atajando á los indios que pretenden irse, la ley esta vez no será en balde.

su hijo Ismael por el Patriarca Abraham, lloran al salir, lloran por el camino, lloran al llegar á la tierra hospitalaria, donde á pesar del buen recibimiento que les ha preparado otra gente, no hallan paz y siempre suspiran por su hogar.

Cuando ya juzgan que en su primitiva morada, pueden las cosas haber cambiado, ó el cacique autor de sus desgracias y destierro ha desaparecido del número de los vivientes, vuelven (1). En Ivu, donde sucedió la guerra de Curayoqui (1892), al fundarse la Misión de San Buenaventura, todos aquellos indios que habían tomado parte en la sublevación, estaban errantes por otros pueblos, volvieron casi en masa y lo primero que hacían al pisar nuevamente su territorio, era llorar. Presenció la llegada de un cacique con su numerosa familia, venían hombres y mujeres cargados de sus ajuares é hijos, llegaban pobres, cubiertos de polvo y sudor (era á fines de Diciembre), extenuados y triste y viendo á sus paisanos y parientes alegres y contentos sujetos al gobierno paternal del Misionero católico, puestas en tierra, en casa ajena, sus cargas, saltaron las lágrimas y alaridos, consolándolo de este modo á todos los poblados y al Misionero (2).

¡Pobres infelices! á pesar de los vicios que dominan su naturaleza corrompida, hay algo de noble en la raza chiriguana. El cariño á su pueblo natal, á su hogar, es grande; para volver hace todo sacrificio y prefiere morir de hambre y sed; nunca abandona su pueblo y hogar, sino es constreñido por la necesidad, temor ó persecución.

Hay a lo largo del camino de Ivu á Parapiti un pueblo llamado Itatiqui, donde ni agua para beber se consigue en su crecanía. Allí la carestía es eterna, allí las cosechas son malas y el agua la mendigan ó la hurtan de las lagunas que distan del pueblo más de cinco kilómetros; hace seis años eran unas 120 familias, perseguidas por algunos blancos, á quienes no querían sujetarse. Quise llevarlas á formar parte de la Misión de San Antonio, pero no fué posible moverlas de aquel lugar.

Prefieren sufrir allí el hambre, la sed, las vejámenes, las persecuciones, pero no abandonan el lugar, quedarían muy contentas,

(1) El indio Cayuguari por un desacato cometido en Macharetí, fugó con una porción de indios amigos y parientes, se estableció al Noreste de Caraballati bastante lejos, y como el cacique á quien ofendió, vive todavía y además aquél principió una vida de abigeatos, nunca regresó á su pueblo.

(2) El P. Corrado refiere un caso análogo en su Historia de las Misiones de Tarija.

si se les pusiera una pequeña Misión, como ayudantes, lo que es algo difícil atendidas las circunstancias especiales del lugar, pues no se abrentaría mucho la educación civil y religiosa de los niños y niñas, cuyos padres y madres están en continuo movimiento. Se les prestando alguna diligencia siquiera para asegurarles el derecho de propiedad que poseen sobre el territorio, de unas tres leguas de longitud por media de latitud, y luego erigir siquiera una capillita, pero creo que las diligencias se quedaron archivadas para los siglos venideros (1).

Antes que se organizaran las Misiones del Paraguay, aquellos indios sufrían mucha miseria, porque el lugar era bastante seco en tiempo de lluvias y no disponían de nada para sembrar en las orillas del río, habiéndose los pocos que había, á disposición de los blancos. El P. Giannecchini pasó por allí el año 1887 como expedicionario al Paraguay y viéndolos tan pobres y reducidos les exhortó á pasarse á alguna Misión, pero contestaron que no era fácil abandonar el lugar donde habían nacido y habían envejecido.

Aptitudes

No se puede negar que la pereza es innata en el indio chiriguano, pero comparado con las tribus de los tobas, matacos y otros, seguro que hacen mucho é demasiado, necesitan de aguijón, necesitan vigilancia, pero no faltando esta, son trabajadores. Los blancos de las comarcas habitadas por dichos indios no conocen á otros jornaleros; con las energías del chiriguano se han erigido todos los pueblos de Cordillera, los del Azero y Gran Chaco; con las mismas se sostienen la agricultura y ganadería de las dichas provincias y año con año se mantienen limpios y abiertos los caminos nacionales de estas regiones, como son los de un cuartel á otro, el de Yacuiba á Santa Cruz y el de Tapiriña. Los jornaleros chiriguanos iniciaron y proseguieron los trabajos del puente

(1) Hoy en vez de Misiones se forman á origen forzoso para colonizar, sin duda llegó la época del nuevo método de colonización, pero nadie ignora que esto cuesta millones á la República, mientras que el costo de una Misión es relativamente nada, el provecho y adelanto incomparables." ¿Qué adelantos hay en Cremona, en Gonchalla y otros puntos? qué edificios de nota y consistencia? ninguno; en una hora los destruye con el fuego el tabú y cualquier otro salvaje. Decía bien don Fernando Gonchalla, Presidente electo: que el mejor y más barato método de colonizar, es el de fundar Misiones.

Amor y mucho trabajo nos en el Internado del Colegio Boscoso pretiano á lugar á Tarija (1).

El Gobierno general de los Misioneros ha conseguido acertado de la docilidad del chiriguano, ha conseguido formar pueblos y grandes centros alrededor de la Cruz, con los cuales los pueblos de los que viven en la ignorancia completa de la Religión, no hay nos que pueda compararse. Los Misioneros han conseguido erigir magníficos templos, grandes establecimientos de conchasa, casas cómodas y aseadas, talleres para artes y oficios, han conseguido implantar la enseñanza de la Religión, la de las letras y escritura y hasta el arte de los acordes sonidos que ellos la crean en los grandes centros del mundo (2).

La historia de los Misioneros de Tarija es gloriosa en sus páginas, puede el lector consultar, cuando quiera, la del Colegio de Potosí en sus dos épocas también; corroja brillantes las sobre el particular y el viajero no puede decir lo contrario cuando contemple el grandioso, sólido y bien ordenado edificio de la Misión de Santa Rosa, el de la Misión de Machareti, el de la antigua é nunca olvidar Misión de Tumiri y el que como por contrato y con cedro, se erigiéndose en la Misión de San Antonio del Paraguay Grande.

Todo esto demuestra que el chiriguano á pesar de su indolencia, su docilidad, y cual blandura y su tanto de rigor á la vez hace lo que el blanco y el Misionero deseen conseguir. Demuestra por último que si tiene sus vicios y defectos, no le faltan algunas virtudes bajo mano; demuestra que hay necesidad de obrar en entendimiento con la enseñanza, con la Misionería, como el carpintero con el cepillo afina una pieza de madera, si quiere hacer un trabajo elegante, ó un herrero con su lima afina su hierro hasta conseguir una llave, una cerraja ó cualquier otro objeto.

---

(1) Con respecto particular compuesta de dos Sacerdotes Jesuitas correspondiente de Concepción, el Subprefecto señor don Ramón Mendoza y otros caballeros y damas del mismo pueblo, están organizando una expedición á los campos de Cuyaguati para fundar allí un fuerte y conquistar el necesario. Parece el señor Subprefecto ahora como carnero, acompañado por el cacique chiriguano Municipal y sus soldados.

(2) En los Misiones de Potosí hay cuatro bandas de música y en las de Tarija dos.

Fisiotipia

Para terminar este breve esplendido y pasar luego á comparar de la religión de los chiriguanos voy á decir de paso, que son muy compañeros con los desgraciados. Si son de alma sobre el rigor de una salud, hacen del todo esfuerzos con algunos para librarlo y hasta no desprendes de lo que pueden para consagrarlo; si alguno enferma, no muy violento; si alguno queda huérfano, todos son sus padres, madres, abuelos y hermanos, lo mismo con tan á cuidado.

No se conoce pues orfandad entre estos indios y el peor infeliz que se pueda hacer á un chiriguano se llamarlo: *Tiari*, huérfano ó *pavendi*, pobre. La familia que toma á cargo el huérfano que quedó sin padre, ni madre, ni parientes cercanos, lo trata mejor que á sus hijos, á fuerza los convierte rigor y los obliga á ciertos trabajos de poca importancia, pero el huérfano canta, trabaja porque quiere y es que le exige la gratitud á sus nuevos padres. Permanece en la casa hospitalaria hasta la edad de la pubertad y después sin agradecimiento alguno se pierde y va á vivir á otra parte, donde se vuelve hospitalario á pero vivaqui, según la crónica que escribe (1).

Con los transeuntes ó viajeros, sean indios, sean blancos, casa de sombre propiso; si es casa hay chicha, se le primero que le presentan, cuando ya tomó asiento, y luego le preparan la comida de que pueden disponer. Hay viajeros que se hospedan en casa de un chiriguano mismo y cuando y como el indio se alcanza con él, le sirve como le sirvió el primer día y al despedirse hasta le hace presentar de regalar á visitarlo. ¿Qué ellos los bárbaros que se llaman salvajes, confundan la conducta de tantos hombres que se llaman civilizados y que muy se deslumbra, cristiano-católicos? Tratan inhumanamente á sus semejantes compañeros con los cuadrúpedos, detienden á los desvalidos, dan malos vivaqui á los infelices, hasta hacen pagar cuchillas en tiempo de necesidad hasta un pedazo de maíz, sintiendo que el indio cuando tiene, vuelve á sabor propósito y nada hace pagar, si el blanco se sirve . á no casa á pedir agua ó chicha que no le falta en tiempo de abundancia (2).

---

(1) Los chiriguanos nunca dan nada si á nadie agradecen, sólo cuando se despiden dicen: *Ayawa, ani vay*. Los ancianos y mujeres presentan algunos pedazos de agradecimiento.

(2) Me vino vender maíz un indiazo y se convierte la Obra, y á su vuelta. Fue el Chaco muy desconocido raro.

[P.126]

CAPITULO CUARTO

RELIGION, DIVINIDADES Y CREENCIAS DE LOS CHIRIGUANOS

INTRODUCCION

Un franciscano ilustre

El grupo que representa la fotografía que he colocado á la vista en este capítulo cuarto, representa á varios personajes ilustres por sus trabajos apostólicos entre los fieles é infieles de la Arquidiócesis de la Plata. Son curas y misioneros que atienden á la salud de las almas y entre ellos á un varón está colocado una alta dignidad, es el Ilmo. Monseñor P. Fr. Sebastián Francisco Pifferi, actual Primado de la Iglesia Boliviana y Arzobispo de la Arquidiócesis de Charcas, cuya sede Arzobispal está en la capital de la República Boliviana Chuquisaca, hoy Sucre.

Este dignísimo hijo de San Francisco de Asís pasó los mejores años de su juventud en la propagación de la fé entre los chiriguanos; sus primeros ensayos los hizo en la Misión de San Francisco Solano del Pilcomayo, hoy Villa Montes, en seguida pasó á regentar la de San José de Tigüipa, después fué elevado á la dignidad de Prefecto de Misiones, largo después de terminado el noviciado fué elegido Consiliario del Colegio de Tarija, en cuyo tiempo le cupo el nombramiento de Comisario general de la República Boliviana y prestó en calidad de tal la Visita Pastoral con un celo verdaderamente extraordinario, experimentando todos los climas y trabajos casi insoportables por más de seis meses sin descanso y finalmente fué elevado á la Silla Arzobispal de Charcas (1).

(1) Monseñor Pifferi primero fué consagrado Obispo Titular de Jerusá y coadjutor del Ilmo. Arzobispo Taborga, quien falleció antes que aquél llegara á Bolivia, se hallaba en Buenos Aires; después de expirar el año del fallecimiento, tomó posesión de la Arquidiócesis.

[facing p. 127]

Arzobispo Franciscano P. Francisco Piffari y compañeros

Tiene ya sus sesenta y dos años, más esto no le ha impedido de visitar personalmente su dilatada Arquidiócesis, terminándola en el breve lapso de tres años. Monseñor Pifferi no se olvidó de sus queridos chiriguanos, ni se había olvidado del idioma que habla con tanta perfección, como pude notarlo por primera vez en la Misión de San Pascual y la segunda en la de San Buenaventura de Ivu.

Vino pues á las misiones con su ilustre comitiva para ver y abrazar nuevamente á sus queridos neófitos que en todas partes le prepararon solémnes recibimientos. Su alegría y la de los antiguos caciques se manifestaba en su rostro, experimentando entre los chiriguanos y sus hermanos los Misioneros verdadera satisfacción.

Más la entrada á Villa Montes fué de lo más triste, aquellos habitantes antes asistidos por P. Pifferi y otros y hoy casi abandonados, al ver nuevamente á su P. Sebastián que en otro tiempo les enjugó las lágrimas, los asistió como verdadero Padre, los curó en sus enfermedades, los visitó enfermos, los vistió desnudos, les dió de comer hambrientos, los bautizó catecúmenos y los enseñó ignorantes un día, no pudieron resistir á la naturaleza y hombres y mujeres á la vista del Pastor, derramaron lágrimas á gritos acordándose del tiempo pasado y experimentando las tristes consecuencias actuales por el abandono en que se encuentran (1).

Antes de dar principio á este capítulo le he consagrado esta pequeña página de introducción, porque el Misionero que hoy está elevado á la dignidad de Primado de la Iglesia Boliviana, enseñó la verdadera religión á los indios que son el objeto del presente libro (2). Creo que el lector amable no hallará desagradable esta corta digresión; antes bien hasta cierto punto la encontrará amena por ser de este modo algo variada la narración, pues no sin razón se dice: *Pulchritudo in varietate* y ahora entro de lleno al objeto del presente capítulo (3).

---

(1) En Ingre le dieron alcance tres Misioneros para invitarle á visitar las Misiones de Potosí y en San Pascual le dieron alcance otros dos para invitarle á visitar las del Colegio de Tarija.

(2) Este ilustre Franciscano falleció en Sucre el 4 de Febrero 1912 á los 64 años y tres meses de edad.

(3) El Ilmo. Monseñor Pifferi á los pocos meses de terminar la Visita de su Arquidiócesis, fué á Roma á dar cuenta al Santo Padre, quién lo nombró Prelado doméstico y Asistente al Solio Pontificio.

Religión

Está fuera de toda duda que los pueblos todos profesan alguna religión.

Este hecho está comprobado por el testimonio de todos los misioneros y confirmado por innumerables viajeros de diferentes nacionalidades y que profesan diferentes credos.

Mas, en cuanto la religión implica un culto externo, la variedad de cultos es tanta, que bien se puede afirmar que cada pueblo tiene su manera especial, propia y peculiar para honrar á sus divinidades.

Los pueblos más adelantados despliegan en su respectivo culto todo el esplendor posible. Tienen templos magníficos, sacerdotes y un ceremonial que, si bien no siempre está conforme con los dictados de la sana razón, tienden, sin embargo, por su naturaleza y su forma á despertar en el hombre los sentimientos de veneración y respeto á un ser superior, representado por algo que hiera los sentidos.

Bajo este punto de vista no sería aventurado afirmar que el culto exterior de los pueblos en general, está en razón directa de su civilización y cultura.

Esto nos explica porque en los pueblos salvajes apenas se puede descubrir un signo, una ceremonia que sea indicio de un culto exterior; pero en realidad existe, aun entre los salvajes, como quiera que, así como no hay pueblo sin Dios, tampoco hay pueblo que de alguna manera no le rinda culto.

Por lo que hace á los chiriguanos he procurado averiguar con especial cuidado, constancia y asiduidad cual es la religión que profesan y qué clase de culto rinden á sus divinidades; pero todos mis esfuerzos han sido inútiles; debido sin duda al estado de ignorancia en que se encuentran, consiguiente á su vida salvaje.

He preguntado á los más ancianos de la tribu respecto á su religión, y solamente he obtenido contestaciones vagas, insuficientes de todo punto para formarse una idea, ni siquiera aproximada, de la religión que profesan. Empero es indudable que los chiriguanos tienen alguna religión, puesto que reconocen un ser superior; admiten la inmortalidad del alma, premios y castigos en la otra vida, y conservan varias tradiciones bíblicas que no tendrían explicación, si no creyeran en un Dios y quizá en el Jehová de la Sagrada Biblia, ó Dios Criador de todas las cosas (1).

---

(1) Los chiriguanos á semejanza de los hebreos cuentan los meses por lunas, y tienen otros usos muy parecidos; y es muy notable que también poseen algunas palabras hebreas.

Los chiriguanos deben tener un código de moral, es decir, la ley natural, aumentada quizá con algunos preceptos tradicionales, entre ellos, puesto que admiten premios para los buenos y castigos para los malos.

La ley en cuanto es imperativa arranca del mismo Dios; pero solamente la religión la sirve de base y ella enseña á los hombres que es un deber ineludible someterse á los preceptos del Supremo legislador so pena de incurrir en las penas, fulminadas por él.

De lo dicho se desprende, como consecuencia lógica, que los chiriguanos profesan alguna religión, aun cuando ésta no sea conocida.

No sucede lo mismo respecto al culto exterior. Los chiriguanos, como todo pueblo salvaje, carecen de templos, de sacerdotes y de un ceremonial que regule las manifestaciones del culto. ¿Arguye esto que carecen también de todo culto exterior? No es fácil dar una respuesta categórica sobre el particular: porque si bien es verdad, como dejo ya consignado, que no he podido descubrir indicio alguno que manifieste la existencia de ese culto; puede esto explicarse, si se toma en cuenta que el salvaje por sus condiciones de aislamiento en medio de los bosques es desconfiado, mira con recelo al blanco; razón más que suficiente para que oculte á las miradas de este sus actos religiosos.

Nadie podría negarnos la exactitud y sólido fundamento de esta observación, como quiera que hombres civilizados, aun entre los mismos católicos se avergüenzan de practicar los actos religiosos por respetos humanos; de donde proviene que ni cumplen con los deberes de la religión, ni se acercan á los templos; y lo que es peor, hacen alarde de una indiferencia religiosa que están muy lejos de sentir.

Convengamos, pues, en que el chiriguano profesa alguna religión como todos los demás pueblos de la tierra.

Esta conclusión será corroborada por lo que vamos á ver en los párrafos siguientes.

Divinidades

Que los chiriguanos tienen algunas divinidades es innegable; pero es muy difícil determinar qué carácter revisten éstas y á qué categoría pertenecen, según el concepto de esos salvajes. Está es la razón por la que es imposible fijar como cosa cierta, si profesan

4: Nino SF10 Chiriguano

el politeismo ó es monoteismo, atendida la diversidad de excelencia, poder y superioridad que atribuyen á sus divinidades.

Lo que voy á consignar derramará alguna luz sobre este asunto, y abrirá la inteligencia al hombre estudioso para sus investigaciones.

De las conversaciones con los verdaderos chiriguanos no se puede llegar á formar un conocimiento del ser supremo que admitían; llamo verdaderos chiriguanos aquellos que casi ningún contacto han tenido con los Misioneros ó con los blancos, hoy es difícil hallar uno de esos; y á pesar de ello, si se les pregunta á los ancianos que viven afuera de las Misiones, ¿quién ha hecho todo lo que vemos? contestan: *¿quiu ndipót* quién será ¿quién nos ha criado? contestan: *¡Ti! ¿Ndicuaá á?* ¡Qué tal! ¿no sabes? y dan una explicación puramente material, como aconteció en una exploración y viaje que hice hacen años en compañía de otros Misioneros hacia el Sur del cantón ó pueblo de Huacaya, donde conversé con un viejo cacique que había tomado parte en la guerra del 1875 contra Igüembo y que después de la pacificación prefirió vivir afuera de la Misión y piensa morir allí, porque está persuadido que los indios que viven en las Misiones, mueren más pronto, como ya murieron, según él, todos sus compañeros de Boicovo, lo cual no es cierto, porque viven allí viejos como él todavía (1).

En el idioma chiriguano hallamos la palabra *Tunpa*, esta palabra quiere decir ser superior ó ser maravilloso. Cuando por primera vez vieron un reloj de salón que con su *tic, tac* de la péndula hace girar las saetas, y da fuerza al martillo para indicar las horas con su campanilla ó cuerda de alambre, cuando vieron por primera vez la máquina fotográfica que reprodujo la imágen de uno ó más de ellos, el reloj y la máquina fueron para los chiriguanos, *Tunpa;* esta palabra aplicaron á ambas cosas y ésta la aplican á cualquier cosa que les causa maravilla ó novedad.

Es el Misionero y los cristianos que han hecho comprender al indio que *Tunpa* quiere decir Dios, hacedor de todas las cosas visibles é invisibles. P. Corrado, uno de los más ilustrados Misioneros Franciscanos que comprendía á fondo el idioma chiriguano, del cual compuso un compendioso y profundo catecismo, en su primera página, en la nota, dice claramente que no puede asegu-

(1) Los indios tenían y tendrán la falsa y errónea idea de que el Bautismo hacía morir á los que lo recibían, porque se administra á hombres y mujeres en peligro próximo de muerte, pues los de mayor edad no quieren bautizarse, cuando gozan de buena salud.

rar que la palabra *Tunpa* quiere decir Dios, y sólo la pone en su catecismo, porque todos los escritores que han tratado de la raza chiriguana dan á la palabra *Tunpa* el significado de Dios.

Este *Tunpa* de que el chiriguano no puede dar una idea clara y que los Misioneros y buenos cristianos explican para designar al verdadero Dios: *Tunpaete vae* (1) es para el indio el principio de todo bien, un ser viviente y material contrario de otra divinidad; él hace llover, él hace madurar las algarrobas, el maíz, las calabazas y todo comestible, él ahuyenta las enfermedades y toda calamidad, á pesar de que todas estas bondades las atribuyen aún á los brujos, hombres de carne y huesos como cualquier otro, teniendo en consecuencia el nombre de *Tunpaete*, por cuya razón dije que para el indio, *Tunpa* es un ser viviente material. Si el Misionero, conforme hizo Colón, anuncia de antemano un eclipse ó la aparición de un cometa, para el indio es un *Tunpa* (2).

Además del *Tunpa* admitían los antiguos y admiten todavía en ciertos lugares otra divinidad más poderosa que la ya anunciada. Esta segunda divinidad es el astuto é impávido zorro, llamándola en la lengua: *Aguara-Tunpa*, zorro Dios; según ellos casi siempre se hallaba en lucha con la primera y aseguran como dogma de fé que hacía lo posible para destruir la obra del verdadero Dios, alguna vez se manifestaba amiga de la raza humana limitada á los chiriguanos, otras enemiga.

Creencia fabulosa sobre el diluvio

Voy á relatar una fábula que confirma la segunda propiedad del *Aguara-Tunpa*, porque dá también una idea del diluvio universal, hoy tan combatido y sobre el cual se emiten tantas opiniones, admisibles unas, y mal ideadas otras. Hela aquí:

Se cuenta que en tiempos muy remotos el *Aguara-Tunpa* se declaró en guerra con el verdadero Dios, criador de la raza chiriguana; la razón de esta enemistad no es sabida, mas parece que lo hacía por sistema ó espíritu de contradicción. Para causar des-

(1) La partícula "Ete" expresa en este idioma el grado superlativo, se pospone á nombre, prenombre, adjetivo y verbo también.

(2) Varias veces he anunciado de antemano los eclipses de luna; el año pasado mucho antes que sea visible, anuncié á los indios la aparición del cometa Halley, bastó para llamarme: *Tunpaete*.

pecho al verdadero Dios el *Aguara-Tunpa* pegó fuego á todos los campos y pastales á mediados ó principios del otoño y juntamente con las hierbas y árboles murieron todos los animales que servían de comida á los chiriguanos, de modo que éstos que no habían principiado las siembras de maíz y otros cereales, como lo practican en la actualidad, se hallaron próximos á perecer (1).

Acudieron en este caso extremo á las orillas de los ríos y llenaron sus riberas para buscar en el agua, lo que ya no encontraban en la tierra; ésta humeaba todavía de la terrible y espantosa quemazón y entonces el *Aguara-Tunpa* que se hallaba próximo á quedar burlado en su intento, ideó otro esfuerzo supremo, hizo caer desde los cielos aguas torrenciales, *Iporu* (2) para perder completamente á la raza chiriguana, anegando á todos los hombres en las aguas.

Habría conseguido destruir á todos los chiriguanos, mas éstos en los casos extremos y talvez por consejo del verdadero Dios, *Tunpacte*, buscaron un mate grande, *Choguao*, colocaron dos seres humanos pequeños, hijos de una misma mujer, macho y hembra *cuimbac*, *cuña* y dejaron que flote la chalanita sobre la superficie de las aguas.

La lluvia siguió cayendo en toda su impetuosidad; aumentáronse las aguas sobre la superficie de la tierra, subieron á grandes alturas, anegaron á todos los chiriguanos, mas los niños del *Choguao* ó mate grande se salvaron de la catástrofe. Luego dejó de llover, se secaron nuevamente las aguas, dejando un lodo completamente hediondo, los niños salieron de su receptáculo que sino habrían muerto de frío y de hambre.

Se comprende fácilmente que los peces y sus especies no perecieron en las aguas del *Iporu*, éstos pues tuvieron que ser por una larga temporada el alimento de los dos seres humanos, mas ¿cómo cocerlos una vez que aún el fuego había desaparecido? Antes que esto sucediera, hubo otro ser compasivo que no permitió la pérdida total de este benéfico elemento, este ser ó esta causa segunda fué el *Cururu*, sapo (3).

---

(1) En época no lejana antes que principie la primavera quemaban los campos en honra de *Aguara-Tunpa*.

(2) I quiere decir agua y su pronunciación es gutural y nasal, *poru* quiere decir prestarse, así que *Iporu* se explica literalmente: se prestó agua.

(3) La palabra *Cururu* no se debe confundir con *Curu* que significa sarna; de curu viene Curuyuqui, sal que cura la sarna, mal escribieron Cururuyuqui los pacificadores de la guerra del 1892.

El *Cururu* pues antes de la inundación completa se internó en la tierra llevando brasas encendidas en su boca y allá á fuerza de soplar no las dejó apagar. Cuando supo que de la superficie de la tierra había desaparecido el elemento líquido, tomó nuevamente en su boca las brasas de fuego, salió al aire libre, buscó á los dos niños, les entregó el fuego y así pudieron asar los peces que con paciencia iban extrayendo del agua dulce y poder así calentar sus intumidos miembros (1).

Los dos hermanitos fueron creciendo en años hasta que tuvieron la edad competente para propagarse, como en efecto lo practicaron hasta multiplicarse nuevamente los chiriguanos que según ellos descienden todos de aquellos dos seres.

Este relato, como he dicho, manifiesta á las claras con pequeña diferencia la idea del diluvio universal, del arca de Noé y del género humano que se salvó en ella; al mismo tiempo indica la maldad del *Aguara-Tunpa* contra Dios y sus criaturas y la nueva multiplicación de la raza á orillas de un río.

Las divinidades primarias, una completamente buena y otra buena y mala á su antojo, no son más que dos; mas la tradición y la historia relativamente contemporánea nos enseñan que en distintas épocas y en regiones diversas, algún indio atrevido amigo del ocio y de lo ajeno con un tanto de locuacidad y promesas extraordinarias, ha conseguido reunir alrededor de su choza nueva, construida de intento afuera del pueblo, á multitud de indios cercanos y de lejos y declararse *Tunpa*, ser extraordinario y maravilloso, otras, alguna mujer embaucadora se ha declarado: *Tunpa ichi*, madre de Dios, lo cual ha tenido poca resonancia, y otras veces finalmente, los caciques, cansados de ser oprimidos en ciertas comarcas por algunos malos cristianos, han llamado *Tunpa* á algún mozo infeliz, pero listo y despejado, para reunir á los indios de otras comarcas á la voz del Dios de carne y hueso y pelear con denuedo en la guerra santa (2).

De este último caso el ilustrado Misionero P. Angélico Mar-

(1) Cuando los chicos molestan al sapo, éste se hincha para recordarles que soplando, no permitió que se apague el fuego, les recuerda que le deben gratitud, así dicen los muy ancianos á los niños.

(2) Los mejicanos al tiempo de ser conquistados por Hernán Cortés, tenían templos é ídolos, á cuyo servicio estaban los sacerdotes; cuando éstos tocaban el tambor sagrado, se encendía el furor de los guerreros; en un combate Cortés perdió sesenta españoles que fueron quemados adelante de los ídolos

tarelli en su apéndice á la historia de Misiones dice lo siguiente en sustancia: El mozo que los caciques eligieron para embaucar á los demás, asumió el nombre *Tunpa* para que sus oráculos fueran creídos y acatados con suma reverencia, se encerró en una choza y desde allá por medio de sus consejeros, (de los cuales uno vive todavía muy adicto al Misionero) daba responsos á los que le pedían, indios ó blancos; estos con toda humildad debían acatar sus consejos y eran maldecidos aquéllos que se declaraban incrédulos, mientras los buenos pasaban á las filas de su bandera.

Creencias en los espíritus

No es extraño que alguien pasando por los pueblos de los chiriguanos oiga cerca ó lejos de sí llorar un hombre ó una mujer y á veces muchos, especialmente de noche: en este último caso causa á los oyentes blancos ó Misioneros tristeza y no sé qué de pavor, porque esos alaridos semejan á los de las almas condenadas y parece que estuvieran llorando sus infortunios y la pérdida de los bienes eternos.

Si se pregunta á los indios acerca de este punto, contestan que la mujer vió en sueños la sombra de su finado marido, éste la de su finada mujer y ambos la de sus hijos, parientes ó abuelos, para los cuales tienen un cariño extralimitado, pudiéndose deducir de esto que en la raza chiriguana se cree confusamente en la inmortalidad del alma, pues que en cuanto al cuerpo ellos mismos ven, que todo se vuelve polvo y tierra.

Algunos exploradores y viajeros han dejado escrito que á las almas se les llama *Añu;* también los indios confirman dichas relaciones, pero no dan el nombre de *Añu* indistintamente á todas las almas, sino tan sólo á aquéllas que tuvieron muerte pésima, como los suicidas y los que mucho tardan en morir. Mas en ningún caso la madre llama *Añu* al alma de su hijo, ni los parientes á sus finados, porque *Añu* significa demonio ó espíritu malo (1).

El verdadero enemigo del *Tunpa* es el *Añu*, demonio, pero es-

(1) Alguna vez he sido llamado para rezar cerca de un enfermo de gravedad, para que muriera más pronto y se libraran de ese espíritu que, según ellos, era malo, pero les hacía comprender que ni rezaba según deseaban, ni el enfermo era malo por tardar en morir.

ta palabra sólo por el uso quiere decir demonio, como *iã* por el mismo uso quiere decir alma. A ambos términos dan hoy los indios el significado que le atribuyo, apoyado aún en la autoridad del P. Corrado, quien en su catecismo explica *Añã* demonio, *Añarenta* lugar de demonios, *Añã inuna* compañero del demonio; *yaneãgüe* nuestra alma, *iãgüe*, su alma. Los indios tienen mucho miedo al demonio y almas endemoniadas; aseguran verlas con frecuencia de noche y, cuando están obligados á caminar en las tinieblas, llevan un tizón de fuego encedido (1).

Una noche estando de Conversor en la Misión de Santa Rosa, mientras se desarrollaba la epidemia de la viruela, me llamaron á catequizar á una pobre y miserable anciana que distaba del pueblo unos dos kilómetros y medio; entre los que me acompañaban, había uno, que, recuerdo bien, y que vive aún y cuyo nombre no olvido, llevaba un tizón encendido que para mí no era necesario por ser la noche bastante clara; preguntado el por qué de tal cosa contestó: *Añã añãguae vatena*, para ahuyentar al demonio. Así lo practican todos, especialmente cuando van solos, lo cual es raro, porque el chiriguano con dificultad sale de noche, por el temor que tiene á los espíritus malos.

De esto puede deducirse aun con muchísima probabilidad: de ser los chiriguanos descendientes de los guaraníes del Paraguay. En aquella región estuvieron en los pasados siglos los Misioneros de la Compañía de Jesús, notorios son sus trabajos apostólicos y los sufrimientos que experimentaron en la reducción de la comarca, por parte de los brujos hasta sufrir el martirio algunos de ellos.

He tenido ocasión de leer una pequeña historia, de la cual hice mención más arriba, escrita por el P. Antonio de la misma compañía y he hallado que los guaraníes creían en los brujos y veían al *Añã*, demonio, en todo tiempo y lugar, les destruía los trigales y otros sembradíos, hacía perjuicios en sus casas y se las quemaba. Aun los guaraníes llaman *Añã* al espíritu malo, que dicho Misionero aplica al demonio (2).

La revelación nos enseña que legiones de ángeles se perdieron por una falta, ó grave pecado de soberbia y pasaron á la categoría

(1) *Añã* en chiriguano quiere decir fantasma, *iã* quiere decir sombra, *cuarasi iã pe*, en la sombra. Los Misioneros deben hacerles comprender el significado verdadero, porque saben los indios que el espíritu malo es un fantasma y el alma de sus finados una sombra, *chemembi iã ahecha*, vi la sombra de mi hijo, dice la madre.

(2) Obra escrita en las Misiones guaraníes del Paraguay.

de condenados ó demonios; la fé, la razón y el sentido común nos enseñan que los hombres perversos que mueren en su perversidad, quedan separados de los buenos, como están separados los malhechores en este mundo, encerrados en un calabozó. Exige la justicia divina un castigo para los perversos, quienes en calidad de condenados, pasan á la categoría de los espíritus perdidos y á semejanza de los demonios, permitiéndolo Dios, pueden aparecer á los que vivimos acá en el mundo para detenernos en el camino de la maldad ó para precavernos de ella.

Bajo este concepto no repugna ni al sentido común admitir la probabilidad de que los chiriguanos ven al *Aña*, demonio ó espíritu malo. La historia sagrada habla de visiones y apariciones, las historias profanas no pueden combatirlas, antes bien relatan innumerables hechos de apariciones demoniacas por medio del espiritismo; no es extraño que tal suceda entre los chiriguanos. Indudablemente es increible que sean tan frecuentes; dicen de ver al demonio á cada momento de noche, donde no hay fuego ó luz que alumbre, pero es una preocupación pueril y propia del temor y miedo en unos y de la ignorancia en otros (1).

Creencia relativa á la Creación

Antes de pasar adelante voy á hacer una relación de lo que me dijo el cacique Anduari de la Misión de San Buenaventura de Ivu, que para mayor abono es brujo, ó curandero de los indios y de varios blancos de una dilatada comarca. Según la relación que va en seguida, el género humano, ó los chiriguanos, fueron destruidos dos veces; ya se ha visto la primera y su restauración, la segunda se verificó del modo siguiente (2).

Dice pues Anduari que el primer hombre chiriguano, llamado *Arapariguá*, sin que sepan los demás, se salvó del diluvio universal, porque como criatura salida directamente de las manos de Dios, y por consiguiente muy querida, fué arrebatado al cielo antes que se inunde la tierra. Habiéndose nuevamente multiplica-

(1) En todas las casas de los verdaderos chiriguanos de noche arde continuamente el fuego con el fin principalísimo de ahuyentar al espíritu malo ó *Aña*.

(2) Anduari hizo su relación en presencia de su mujer y su hija cristiana llamada Candelaria Asúmbai, casada según el matrimonio católico.

[facing P. 137]

Escuela de niñas de S. Buenaventura de Ivo

do los chiriguanos, bajó para disfrutar como antes de los placeres de Baco y Venus, pero muy luego se hizo aborrecer de toda la gente por su altanería y abusos en los bienes y mujeres ajenas, por lo cual estuvo á punto de perecer asesinado por sus mismos vasallos, pero el *Tunpa* vino en su auxilio, lo arrebató nuevamente y lo tuvo en su compañía. Allá *Araparigua* juró venganza y pidió al *Tunpa* la destrucción de toda la raza; sabiendo Dios que su criatura priviligiada no tenía ya parientes cercanos, como mujer, madre, padre ó hijos, accedió á sus deseos y los chiriguanos fueron por segunda vez destruidos (1).

Mas el *Tunpa* no quiso estar por mucho tiempo sin criaturas priviligiadas, bajó otra vez á la tierra, hizo de barro un cuerpo humano con todos los miembros correspondientes al sexo masculino, luego formó otro con los miembros todos del cuerpo femenino, dió vida á ambos, vivieron y los dejó en su desnudez, dándoles en posesión un hermoso lugar.

En este hermoso y pintoresco lugar había árboles frutales de toda especie; bellos á la vista y agradables al paladar eran los frutos que producían. Antes de apartarse de ellos, el *Tunpa* les permitió que disfrutasen libremente de todos los frutos producidos por aquellos árboles, prohibiéndoles de tocar y comer los frutos de uno solo.

Pasados algunos días el varón pasando debajo del árbol prohibido y viendo la belleza de las frutas dijo: ¡por qué no querrá Dios que coma frutas tan hermosas! nada de malo habrá en que las pruebe siquiera y además actualmente no me ve. Cogió pues una y se la puso en la boca para tragarla, pero al tiempo de hacer esta operación, se volvió con la cabeza atrás y la fruta en vez de bajar al estómago, se le quedó en la garganta formando así el *Aseuranti* ó lo que se llama comunmente pomo de Adán (2).

Según la relación la mujer no comió la fruta prohibida, mas á pesar de ello experimentó los efectos de la desobediencia de su marido ó compañero, pues, como éste, se avergonzó de hallarse

(1) Los caciques siguen el ejemplo de *Araparigua* teniendo varias mujeres y abusando de otras con harto sentimiento de sus padres y de las mismas doncellas; es completamente falso que las de esta raza tocadas por el cacique, lo tengan á honor, como afirma el Dr. Leocadio Trigo; ignoro, si sucede con las de otras razas, pero él escribe en general de todas las razas del Chaco.

(2) La mujer ni siquiera tocó las frutas vedadas y la prueba está en que en su garganta no hay estorbo alguno, no hay el *Aseuranti* ó pomo de Adán, así dice el mismo indio.

desnuda y experimentó los movimientos de la concupiscencia que antes al ella, ni el varón tenían ó habían experimentado, siendo la consecuencia de que se unieron matrimonialmente sólo después de haber quebrantado el precepto divino.

El *Tuapa* no tardó en presentarse y ante él ambos tuvieron rubor de verse desnudos y cubrieron su desnudez, acurrucándose sentados en el suelo. El *Tuapa* que todo lo sabía, los reconvino blandamente, afeándoles su pecado, les dió un vestido correspondiente y se despidió de ellos, dejando que se multiplicasen.

El indio como cada cual comprende, atribuye esto á la reorganización de la raza chiriguana, pero todos podemos ver en este relato la creación del hombre, su inocencia primordial, su vida de delicias, la prohibición que le impuso Dios, la desobediencia que fué su pecado y la confusión que le causó la culpa con la consiguiente reprensión (1).

Se ve claro que esta relación con una pequeña diferencia es conforme al relato de Moisés en los primeros capítulos de la Biblia y prueba siempre más que los habitantes de las Américas vinieron y son descendientes del primer hombre, que tantos enemigos de la Religión se esfuerzan en negar, igualmente prueba la unidad de nuestra raza ó especie contra Darwin que quiere hacerla descender por evolución hasta ligarla con el Orangután (2).

Es fácil imaginar que la tradición chiriguana ya relatada se haya alterado un poco y atribuyan á la reconstrucción de la raza, lo que según la Biblia se debe entender de la creación ó formación del primer hombre; han pasado siglos desde el Diluvio universal y aún más desde la creación del primer hombre. La raza chiriguana es ignorante, no tiene libros, no tiene escritura, es descendiente de los guaraníes, vivió siempre apartada de la civilización, nunca pudo ser sojuzgada por los Incas, de modo que no es extraño que dicha tradición relativa á la creación se haya alterado hasta creerla segunda creación, antes bien es de extrañar que hasta

(1) A esta relación falta la promesa de un Salvador, cosa importantísima por cierto, pero debe tenerse en cuenta que es tradición de siglos, el indio es ignorante y sólo mira lo material.

(2) Hernán Cortés visitó en su primera entrada á Méjico al emperador Moctezuma, éste le aseguró que ellos descendían de otros hombres muy antiguos, semejantes á los españoles, á quienes llamaron hermanos.

ahora haya llegado tan clara y con tan pequeñas diferencias. Confieso que al oírla por primera vez no pude menos de sorprenderme y admirarme y conforme la he oído, así la presento á la consideración de mis lectores.

Creencia en la vida futura

Esta creencia ha sufrido muchas más alteraciones que la anterior, sin embargo revela que aún debajo de la ruda é ignorante naturaleza del pobre indio y desgraciado chiriguano está vigente la idea del gran filósofo: *non omnis moriar* que tantos materialistas quieren hacer terminar con la materia, sin duda para ahogar aparentemente los remordimientos del gusano roedor que de vez en cuando asoma y sin querer hace recordar las perversidades perpetradas (1).

Cuando el alma del chiriguano sale del cuerpo, no muere; todos sin darse cuenta, ni sospecharlo siquiera tienen esta idea sobre la inmortalidad del alma, á ello se refiere el luto y sentimientos de pesar, entierro y cosas que colocan en el ataud cuando alguien muere y de lo cual trataré más adelante. Si se les pregunta al respecto, contestan: *Mahanu* ¡cómo será!, no sé. Sin embargo de esta ignorancia, para expresar su pensamiento relativo al alma y su inmortalidad, tres son los lugares que admiten para las almas: *Tanparenta*, *Iboca*, *Cuarasigüi*, Cielo, Purgatorio, Infierno.

Me voy á ocupar de los tres rectificando lo relativo á Iboca, cuya creencia conocí desde el principio de mi residencia entre la raza y cuyo relato se halla circunstanciado en mi pequeño *Neas* impreso el año 1905 para facilitar á los niños chiriguanos el aprendizaje del idioma español ó castellano.

El *Tanparenta* es literalmente el lugar de Dios, ó sea su morada, como el *añarenta* es la morada del diablo. He notado ya que *Tanpa*, es el principio del bien, de toda virtud, de toda cosa buena: *Tecocavi*. Con esta idea que tiene de Dios, el chiriguano concluye naturalmente que Dios sólo admite en su compañía á las personas buenas, virtuosas y limpias de toda maldad: *Mbia hecocavi vaé, cuña hecocavi vaé*, hombre ó mujer de buenas costumbres, ex-

(1) El chiriguano difícilmente comprende lo que es espiritual, por esto sus ideas acerca de la vida futura son puramente materiales; sin la revelación no se comprende este dogma de fé.

cluyendo á los facineroso, matadores y suicidas que se vuelven *Aba*, demonios, ó almas de los muertos (1).

Para que el chiriguano vaya al *Tuapavonde* con tan el fin deseo de visitar á sus parientes, debe sujetarse á cuatro pruebas difíciles que sin auxilio, indicaciones y consejos, serían imposibles, de donde se colige la necesidad del sacrificio de sujetarse á las disposiciones del *Tuapé* y de seguir las sabias enseñanzas de su guía sagáz, que si el pueblo lo necesita para atravesar una región montañosa ó desierta, expuesta á peligros innumerables ¿con cuánta más razón no deberá el hombre temerlo, tratándose de saber por medio de las líneas santas, el camino de la vida eterna? De aquí puede deducir el lector ¿cuán errados andan los secuaces de Lutero, Calvino, etc. que pretenden investigar el verdadero sentido de la Biblia sólo con el dictamen de su conciencia, prescindiendo del magisterio infalible de la Iglesia, establecido por Cristo en la persona de San Pedro y sus legítimos sucesores!

Un antiguo chiriguano había perdido á su mujer á quien amaba de todo corazón, por cuya razón era inconsolable en llanto y pena, dada pues en peligro su vida y estaba próximo á perecer. En esto tan alto compasivo se le presentó y le dijo: ¿por qué llores tanto? porque tienes tanta pena? ¿quieres sin duda la suerte que ha caído á tu mujer? sepas que ella está gozando, está en un lugar de delicias, donde todo es dichas, y nada hay de sufrimiento, donde se bebe á diario y siempre es fiesta, donde no hay pobreza, ni frío, ni calor, ni enfermedades. Vamos pues que veas y dejes de llorar, esto te advierto que antes de llegar, como tales, debes aún tú pasar por cuatro pruebas que superarás fácilmente en mi compañía.

El afligido indio deseoso de ver nuevamente á su llorada esposa, se vistió prontamente de la ropa mejor que tenía, adornó su persona, pintó su rostro con el *Urucu*, bien ceñida, colocó en la garganta el *Bapéi*, collares, asió su lanza y partió en pos del estrella y misterioso conductor (2).

---

(1) *Tuara* significa patrio y lugar, unido con otro nombre cambia la *T* en *K*, por esto se dice: *Tuapavonde*, *Akaravonde*, *Ivonde* etc. ó sea lugar de Dios, lugar del diablo y lugar de agua.

(2) Es natural en la humanidad cuida de asearse y adornarse para poderse presentar decentemente ante un público respetable ó ante personajes de veneración, así deben practicarlo los cristianos cuando van al templo á oir ó celebrar los divinos misterios y sacramentos.

Hicieron la primera jornada sin incidente alguno y dispusieron su alojamiento primero en una vaina y luegoenn fincas, donde crecían perfumados flores y árboles gigantescos que con sus frondosas copas daban abrigo á una infinidad de aves. Allí durmieron muy tranquilos sin que su sueño fuese perturbado por los silbidos de la vecina floresta, y al día siguiente, bien de madrugada reanudaron nuevamente y al terminar la extensa llanura, el conductor dijo al indio: prepárate que ya estamos cerca de la primera prueba. Efectivamente la divisó, era una formidable longura que se levantaba hasta las cuatro y bajaba nuevamente con precipicios; cada vez que se levantaba, formaba un arco que permitía dar un paso precipitado. Advertido por el guía de pasar al galope forzado el caballo al tiempo de alcanzar la gran llanurada, lo efectuaron así y pasaron sólidamente sin incidente (1).

Antes de llegar al término de la segunda jornada se hallaron al frente de otro peligro, era este un ancho paso de agua hirviente que ocupaba completamente el mismo caso el primero y subsiguiente. El paso era fácil pasarlo con un caballo de un metálico, como el agua hirviente se levantaba tanto continuamente á grande altura y bajaba luego con toda fuerza, el paso empero se efectuó por los viajeros con toda felicidad y se alojaron bastante del lugar para que el ruido no les estorbara el descanso y el sueño de la noche.

Al día siguiente antes de la salida del sol emprendieron de nuevo su viaje hasta el Tempestuoso, la clara aurora y la brisa fresca matutina acariciaban en dia hermoso, las arcillas de los bosques con sus dulces y suaves trinos acariciaban aquellas soledades, el jaguar no hostigaron sentirse su desagrado por haber sido turbado el silencio de aquellos bosques por chirigaxo extraños y, otras bestias de la floresta bajas desperezaba, mientras el astro del día asomaba su brillante rostro detrás de la espesa arboleda que dominaba en la región.

Ya el sol resplandecía en el firmamento como los donde días, ya había recorrido la tercera parte del curso natural, cuando se presentó á la vista de ellos la tercera prueba. Consistía dicha en dos montañas gemelas en continuo movimiento, se abrían y cerraban continuamente con terrible estrepito. Alertonado por el

(1) Antes de emprender su viaje el chirigaxo, por orden del ministro gris, robó sin licencia algunos dos caballos ajenos y sombreros para comodidad de ambos.

gale, dice y el indio permanece sin novedad y muy largo. Seguros á la muerte prueba. Esta la formaban unos muchachos tijeras con las puntas hacia abajo que habían perdido por salud sin remedio á cualquier desconocido, pero los chiriguanos permanecen sin novedad y después de esto se hallaron al frente del *Tuquarendi*.

Era esta una inmensa pampa, repleta de flores y hierbas de todos colores y repleta de gente alegre que había continuamente al pueblado frente del chiriguano. El indio vió allí á su mujer á hija rimosamente adornadas, resplandecientes como la luna y las vegil para que no cubriesen su su compañía, sus fotos no la constituyen; solo se regresó el indio, prometiendo portarse bien para almacenarlos pronto (1).

El *Ibiro* de que hice mención, es un cierto modo semejante al purgatorio de los católicos, y con más propiedad semejante al limbo, pues suponen los indios que los almas que van allí, se hallan en tinieblas, lo cual no lo mismo que no ver á Dios y esto solo constituye un gran sufrimiento, otros castigos corporales y morales no los hay, pero las tinieblas son perpétuas (2).

El *Cuarenjiki* Unenhemoto *dilugio del sol*, es para el chiriguano el verdadero infierno donde se experimenta el verdadero fuego eterno representado por el sol, en cuyo comentar inmediatamente el imposible permanecer, como demuestran las ciencias naturales, la cosmología. Según los chiriguanos el *Cuarenjiki* van aquellos indios que quitaron la vida al prójimo, los que se apropiaron de la agena, los que se embriagaron y los que cometen pecados contra natura.

Al decir de un oficiero explorador y etnólogo, que no há mucho recorrió toda la región desde Guachalla hasta el Beni que divide Bolivia con el Perú por el Noroeste, existe entre los chiriguanos la idea ó creencia en la torre de Babel, donde se verificó la confusión de las idiomas. Según esa referencia esos era anteriormente el idioma hablado y según ellos era la quichua. La idea de la creación, del diluvio, de la confusión de las lenguas, el modo de contar los años por lunas y las estaciones por lo que sig-

---

(1) El primero de los chiriguanos que muere, espera en el *Tuquarendi*, al subsiguiente para recoger nuevamente; los enfermos esperan que nuevos otros enfermos para continuar nuevamente en el cielo, donde no experimentan los calores y abundancia de sus compañeros.

(2) En *Ibiro*, situado al Sudoeste del cuerpo Iglesiente, las almas se las ve de noche en continua alegría y bacanales con cantos y bailes, de día todo en silencio sepulcral, así lo relatan ellos.

nilmente y varias palabras chiriguanas semejantes al hebreo, son un argumento poderoso para probar la unidad de la raza humana contra los racionalistas que pretenden demostrar que en América habo hombres desarrollados por el diluvio (1).

Prosa

Verdaderamente llama vuelto la atención de los hombres de ciencia y de los Misioneros, el hecho de que esta raza no tenga un culto exterior. Nace y crece el chiriguano como nace y crecen los lucerpas; no sabes de donde proceden y todas sus ceremonias se reducen á la pura naturaleza, cuando el chiriguano eleva su mente y mirando hacia arriba, discurre sobre el firmamento, cuenta las estrellas y hasta las agrupa por grupos como por principio de astronomía, admira la grandiosidad del sol y de la luna, comprende la beneficencia del mundo criado, pero la totalidad permanece muda y silenciosa ante las obras de la naturaleza ó de la creación. Las cosas visibles no llevan la inteligencia del chiriguano al conocimiento de la Causa de tales efectos y como de Dios tiene una idea bastante vaga, no le presta culto, ni cosa que se le parezca.

Inútil es por consiguiente buscar ídolos en el territorio, como inútiliemo averiguar de templos ó cuestas para sus reuniones religiosas. Las pirguriss por cada que haya averiguado, ni las hay, son muy cobardes y lo necesitan la pena de llamarlas con tal nombre, porque son mas bien una jarrancia del que las prefiere para que vean todos que tienen fermento para beber. Así lo practican en las reuniones generales cuando beben por muchos días y cesan en la plaza; viene el entusiasmo al calor de la bebida, y al ver inmensa multitud, alguien levanta la voz diciendo, mas ó menos, lo siguiente: *Chero Tunpa, iranikio taini, pacu cuai chero chiruroco, chiriadiaua ensiliaiaka chero, tarkaroi ente taini, ava tamaca.* Mi Dios, hazme estar bien, dame larga vida, haz producir mi cosecha, dame alegría, no permitas que muera (2).

El sol es un astro benéfico, nos alumbra, nos calienta en invierno, hace producir el alimento para los animales y los hombres,

---

(1) Las palabras chiriguanas AVA, HAR, NÓO y ¿MANANU?, hombre, él, negro y ¿qué será? tienen semejanzas con las hebraicas AV, OR, NOH y ¿MANANU?, hombre padre, él, negro y ¿qué será esto?

(2) Lo único que desea el chiriguano es vivir siempre, mas ve que es imposible, se contenta con expresar su deseo vehemente, pero no cree que la muerte le venga naturalmente.

es una criatura que Dios ha puesto en el mundo, para que como causa segunda conserve el universo y todas las cosas que están en él, siendo esta la principal virtud que le otorgó el Hacedor de todas las cosas.

El chiriguano comprende la virtud del sol en lo que hiere sus sentidos corporales, así que difícilmente en la antigüedad elevaba su espíritu á la contemplación de otro Ser invisible superior al astro del día, de aquí provenía que según algunos escritores los chiriguanos dirigían alguna plegaria á este rey del cielo, como alguna tribu, tímida y cortesmente se destoca al encuentro de un zorro impávido.

Pero por más que haya averiguado sobre este punto, ninguno me ha dado razón de la tal plegaria, lo único que aseguran, hacían los antiguos, era llamar padre al sol y rogarle no ocultar su rostro. Hoy que el territorio está invadido por los blancos y hasta por gente del viejo mundo, hoy que no hay lugar chiriguano que *no haya sido pisado* por la planta del Misionero, acá fundando Misiones, allá de tránsito, acullá explorando la voluntad de los indios, todo está cambiado y pocos son aquellos que ignoren la existencia del verdadero Dios, pocos son los indios que ignoren ser el sol una obra de Dios, incapaz por consiguiente de recibir un culto exterior, cuando ni á Dios se lo tributan (1).

Genios

Donde domina la ignorancia, es consecuente la superstición; me figuro, pues, que todas las tribus limítrofes á los chiriguanos deben creer en la existencia de los genios ó dueños de ciertos parajes que sin ofender á nadie, son admitidos por algunos de la raza blanca aún, especialmente cuando se trata de tesoros enterrados. No es esto nada extraño, pues antes de la venida de Cristo toda la humanidad, menos los hebreos, creía en ello y hoy también donde no ha penetrado la luz del Evangelio, domina la creencia en los genios aún entre la gente ilustrada, porque sólo el Evangelio disi-

(1) Es muy probable que antiguamente los ancianos al salir el sol se alegraban, como se alegra cualquiera y le tendrían un cariño especial, de donde se arguye por algunos que le dirigían plegarias, pero es natural en el hombre alegrarse cuando el sol aparece.

[facing p. 145]

Música de la Misión de Santa Rosa

pa las tinieblas del alma y destruye el error, consecuencias de las caida del hombre primero.

Los genios tutelares de un lugar llámanse en chiriguano: *Iya*, dueño en sentido literal. Si los chiriguanos pasan por los lugares donde hay algún genio, difícilmente se acercan, y si se pregunta á los mismos, donde pueda haber piedra de cal ó yeso, no lo avisan por temor al *Iya*, quién tomaría venganza con la muerte del chiriguano por cuya causa se descubrió el sitio custodiado por el genio; sí de dicho paraje deben sacar algo que les es útil, lo practican con licencia del *Iya* (1).

Al fundarse la Misión de San Buenaventura el Misionero practicó todas las diligencias para poder hallar la piedra del yeso y de la cal, mas ningún indio se animó á descubrir el sitio donde esta abundaba. Sin embargo por una casualidad, mientras se colocaban los cimientos del templo, se descubrió que muchas piedras que se empleaban, eran de cal hidráulica, cuya veta abundante se halla á los 300 metros del mismo templo á la cima de una colina. La piedra de yeso hasta hoy no se ha podido hallar en las cercanías por la misma razón, pero existen vestigios que indican su presencia, en *Caraparirenta* hay una que otra piedra arrastrada por el agua.

En el cantón Huacaya, en las orillas del Pilcomayo, á las faldas de los cerros del Oriente se asegura que debe haber minas ó yacimientos de oro, un riachuelo arrastra pequeñas pepitas en ciertos lugares determinados; casi todos los blancos de allá dicen que los indios recojen esas pepitas, unos venden y otros hacen trabajar anillos ó aretes para sus mujeres, pero hasta hoy por más diligencias que hayan hecho los blancos para descubrir aquel lugar, nunca han hallado un indio que los conduzca (2).

Entre tantos manantiales que abundan en la Misión de San Buenaventura de Ivu, hay varios de agua caliente sulfurosa; á dichas aguas nadie de los ancianos se acerca y sólo lo hacen los niños y niñas que por haber abrazado la religión católica talvez y por la ense-

(1) Es indudable para el chiriguano la presencia del *Iya* en los yacimientos de petróleo, sacan lo puro necesario de dicho líquido para curar las lastimaduras de sus ganados caballar, vacuno, etc.

(2) Cuentan existir en el bosque en la cima de una pequeña colina dos campanas colgadas de un árbol y en otro paraje un edificio de dos pequeños pisos, poseído por el *Iya*, un niño que deja huellas de sus piés al andar; lo creen como realidades.

fianza del Misionero que les hace comprender que hay que temer solamente á Dios, ningún temor tienen á estas cosas inofensivas; sin embargo cuando muere alguna niña de la escuela, los ancianos afirman que tal sucede por el ningún cuidado, con que se acercan y bañan en dichos manantiales poseídos por el *Iya*.

Lo antedicho manifiesta que el chiriguano antiguo es muy supersticioso y por amor á la vida respeta los lugares donde pueden hallarse los Genios imaginarios; si estos fueran descubiertos y desalojados por culpa de alguien, éste ó moriría luego, ó arrastraría una existencia desgraciada de enfermedades prolongadas hasta terminar con la muerte y por esto es imposible que un verdadero chiriguano manifieste los lugares que, según sus afirmaciones, se hallan poseídos por los genios (1).

Brujos

Otra consecuencia de la ignorancia es la creencia en los brujos, esta creencia sin embargo es mucho más general. La admite el labriego, como el medianamente ilustrado, la admite el hombre en completo estado salvaje, como el que se encamina á penetrar á la civilización, es admitida en América, como en la vieja Europa, en la dilatada Asia, en la desierta África y en la novísima Oceanía. Sin embargo no en todas partes la palabra brujo tiene la misma significación; si en Europa el vulgo ignorante llama brujo al hombre ó mujer que hizo convenio formal con el diablo, entre los chiriguanos y blancos del Gran Chaco es el hombre ó la mujer que acierta á curar enfermedades, ó está en posesión de otros prestigios (2).

Más ¿quién fué el padre de los brujos entre los chiriguanos? *Guaveri* indio, *Ñeé iya ete*, elocuente, hizo la siguiente relación: En una época muy remota se declaró una sequía general que se prolongó con peligro inminente de perderse las sementeras; averiguada la causa por el rey de las aves: *Güiraqué*, Milano, se organizó una comisión al dueño de la lluvia llamado: *Choncho*, para que

(1) A fines del año 1899 un caballero de Sucre principió á ensayar el trabajo en el yacimiento de petróleo de *Mandiyuti* de Cuevo, desgraciadamente murió de bronquitis aguda, pero los indios atribuyeron su muerte al enojo del *Iya*.

(2) Conozco á un indio que cura la ponzoña de la víbora sin usar remedio, sopla y frota la parte picada y sana sin otro remedio, prende las víboras, se las pone en el seno, en los bolsillos, en el sombrero y no le pican; no puedo explicar este fenómeno.

hiciera llover, mas como este, caso ninguno hiciera de la embajada del Rey, vino este personalmente á saber el porque y castigar la desobediencia, si lo hallaba reo. Pero el *choncho* contestó que no dependía de él, sino de otro pájaro llamado: *chena*, con el cual se encaró el rey Milano y como titubeó en decir lo contrario ó en disculparse, hubo fundada sospecha de ser él el autor de tanto mal y como malhechor fué inmediamente traspasado por la lanza del rey Milano.

Esta es una fábula, mas es cierto que al *choncho* le tienen respeto y miedo, si este pequeño pájaro canta en tono enojado, es señal que al chiriguano le irá mal y entonces se le recomienda y dice: *ayuye ndepochi, cheru mi, tome taicó cavi;* no te enojes, que me vaya bien; si canta alegre, el chiriguano será bien recibido por los parientes y amigos y si el *choncho* dice: *To, To*, es señal que donde va, hallará mucha chicha; por lo cual no le hacen mal alguno á este pajarito.

Según la relación de Guarorai, el *choncho* resulta ser el padre de los brujos buenos, especialmente de aquellos que hacen llover y el *chena* es el padre de los brujos malos, ó sea de aquellos que atajan la lluvia. En cualquier calamidad pública en algugunos parajes se reunen todavía los indios alrededor del: *Ipaye*, brujo para que cese la calamidad, si esta sigue á pesar de la promesa del brujo y no sabe culpar á otro con habilidad su impotencia, como hizo el *choncho*, es muerto á palos y quemado sin remisión, pero si puede disculparse con otro *Chena*, éste sufre la pena capital sin que le valgan protestas de inocencia ó ignorancia, ¡tanto es el furor de la muchedumbre exaltada por las arrengas del buen *Ipaye*!

Antes de pasar adelante con los pájaros temidos y respetados, digo de paso que de noche anda y vuela un pájaro blanquecino que llaman: *Teté*; cuando lo verifica, es señal segura para los indios que en alguna casa las mujeres están próximas á cortarse el cabello en señal de luto, es decir que alguien morirá en el pueblo. En cuanto á la lechuza: *Suindu*, las creencias de los chiriguanos son las mismas que tiene el vulgo en Europa y América, siendo pequeña la diferencia entre unos y otros (1).

---

(1) Como se verá, el luto de las mujeres chiriguanas consiste en cortarse el cabello y llevar el trapo más sucio en la cabeza; el luto es siempre íntegro, es decir para cualquier finado usan luto riguroso.

Los brujos buenos representados por el *Chonchu* son muy compasivos y hacen lo posible para que la raza goce de salud, fortuna, buenas cosechas, sin experimentar hambre, ni epidemias, mientras que los brujos malos hacen á la pobre humanidad chiriguana todo mal; éllos atajan la lluvia, éllos mandan las epidemias, éllos el hambre, éllos la muerte. Los brujos malos se llaman: *Mbaecuá.*

El chiriguano pues no muere, porque así está decretado, porque es condición de la naturaleza humana, no muere á consecuencia del pecado del primer hombre; muere porque existen los brujos malos, sin estos la vida del indio sería deliciosa y eterna acá en la tierra, donde lo colocó Dios, según se ha visto al tratar de la creación.

Lo mismo dígase de las enfermedades. Si enferma de un pié, si de la cabeza, si del vientre, ú otra parte del cuerpo, la culpa no la tienen ni la naturaleza humana, ni los elementos, ni las estaciones, ni el cambio repentino de la atmósfera, tan común en la región, sino los brujos malos. Si alguien muere repentinamente, si mueren los ancianos y los jóvenes, si en la tribu se desarrolla la viruela, ú otra epidemia, la culpa es de los brujos malos siempre (1).

Los brujos unos son aptos para la lluvia y sembradíos y otros para las enfermedades. Si en los alrededores de un pueblo chiriguano comienza á propagarse algún contagio ó ya se ha manifestado en el pueblo mismo uno que otro caso, el cacique principal reune en consejo á todos los caciques subalternos, discuten las medidas que conviene poner en práctica para ahuyentar inmediatamente la enfermedad; siendo la primera la de llamar á uno de los brujos de reputación. Desde luego se forma la comisión que debe llevar la plegaria al gran charlatán y por lo regular el encargado principal es el mismo cacique, quien se hace acompañar de uno ó dos subalternos.

A la invitación del cacique que el brujo recibe como un grandísimo honor, y además oyendo las ofertas que le hacen, si consigue tener lejos, ó expulsar la epidemia, no hay zonzo que rechase, pues el brujo en pueblo ajeno es rey por todo el tiempo que permanece; de todo dispone, de hombres y de mujeres, de bienes

(1) Si alguien muere por haber bebido en casa ajena, lo atribuyen á veneno administrado por bruja, la muerte producida por caída, suicidio ó asesinato, no se atribuye al brujo.

y ropas, de comidas y de bebidas; pasa la vida mejor que un gran señor (1).

Por supuesto su llegada es esperada con ansia; todos le rodean para darle la bien venida y muestras de cariño, no hay familia que no lleve lo que pueda, para que cure bien. Gallinas ya cocinadas, huevos ya hervidos, corderos vivos, chicha en abundancia todos son presentes para el gran pícaro. Todo esto lo practican ahora con cualquier brujo aún.

Después de un pequeño descanso, bien comido y mejor refrescado, el brujo abre su ceremonial con infinitas preguntas para descubrir quien trajo la epidemia al pueblo, caso que haya penetrado ya; en este caso se queda y sus conjuros son diarios, generales á todo el pueblo y particulares á cada enfermo, como diré más abajo.

Pero si el mal no ha penetrado, reune á todos los principales, forman sus cigarros de tabaco envuelto con chala, se juntan en forma de rueda, encienden dichos cigarros y fuman á toda dirección, advirtiendo el brujo donde se dirige el humo. Conocido más ó menos el paraje, todos se dirigen allí garrote en mano; el brujo practica una pequeña excavación y extrae el maleficio que ha puesto de antemano sin ser visto, consistente en trapos viejos y sucios, mezclados con pelos y huesós pequeños. Luego quema todo eso á la presencia de los acompañantes, da golpes al suelo con el garrote y los piés siendo imitado por todos (2)

Hecho esto, con aire de triunfo regresan al pueblo y lo recorren todo garroteando las esquinas de la plaza y las casas de los más notables y terminada la función, dirige su discurso á los que le rodean y demás que salieron de sus casas; les recomienda que no teman y que tengan confianza en él, qué ya ahuyentó la enfermedad, de la cual es dueño.

En seguida descansa de sus fatigas unos cuantos días, se despide del cacique y principales, bendecido por los asustados pobladores, volviendo á su pueblo. Cada cual comprende que si la epidemia no penetra, es una casualidad que da mucho renombre al pícaro impostor, y si penetra, la culpa es de los pobladores ó de otro

(1) Quien expone al brujo el objeto de la embajada es el cacique y los compañeros se limitan á decir: *Añete*, así es, como el monacillo ó sacristán dice: *Amen*.

(2) No es raro el caso que los mismos brujos hayan llevado ropas de viruelentos á otro pueblo, para que haya contagio y tengan un pretexto de ganancia y vida regaladísima.

brujo malo. Entonces vuelve y se constituye curandero de todos; en la epidemia de la viruela, el brujo es siempre uno que ha pasado por ella y que como triste señal lleva el rostro y la nariz como una criba.

En los primeros meses de mi llegada á la Misión de Santa Rosa principió á desarrollarse una epidemia: sin darme cuenta de lo que ocurría, se practicaban por el brujo Biringa los conjuros contra la viruela, más como esta enfermedad invadió de lleno el pueblo á fines del año, volvió el mismo y pagó bien sus imposturas, no valiéndole las amenazas que hizo, de hacer perecer los 255 alumnos de escuela, pues éstos y las alumnas enfermaron todos, mas de aquéllos apenas murió uno y de éstas murieron siete (1).

Aún para la lluvia los brujos hacen sus conjuros con su cigarro de chala, dando vuelta á los terrenos sembrados, pero si la sequía es general, los conjuros son públicos en el pueblo frente á la casa del cacique principal. Uno de estos se practicó en los comienzos de la Misión indicada: el Misionero los hizo amonestar para que dejaran, mas como contestaran con insolencia, hizo ú organizó una comisión con escopetas y carabinas viejas; huyeron los tres ó cuatro brujos, pero cayó en poder de la comisión uno de ellos, recibió el castigo de su insolencia y á los pocos minutos un aguacero torrencial refrescaba todo el territorio de la Misión.

En los casos concretos, requerido el brujo por una familia particular, se constituye luego en la casa del enfermo, le hace mil preguntas relativas á la enfermedad, á las casas que ha frecuentado, á los amigos con quienes ha bebido, á los compañeros con quienes ha jugado, á las prendas que ha ganado. Después enciende su cigarro de chala y fuma derramando el humo por el cuerpo del paciente, especialmente por la parte dolorida.

Luego según la menor ó mayor gravedad del mal, según la enfermedad, si requiere golpes ó sacudidas, que es lo más probable, se los proporciona atrozmente como para terminar con la vida del paciente, y si no, se contenta con frotar fuertemente la parte

(1) Las alumnas de la escuela de Santa Rosa el año de la viruela eran 235, las de peligro antes de ser llevadas al lazareto, recibían el Viático; próximas á morir recibían aún la Extrema Unción en el lazareto; contenía éste en Enero de 1904 más de 500 personas.

4: Nino SF10 Chiriguano

dolorida y chuparla con su boca, extrayendo del cuerpo del paciente los gusanos que el pícaro escondió en su paladar (1).

Los hombres brujos en sus curaciones además del cigarro, usan el *Tupicho*. Pero en qué consiste el *tupicho*, difícil es averiguarlo. Hay brujos que se sirven para ello de una piedrita redonda con varios dibujos, conforme ví en la Misión de San Pascual, otros usan un hueso largo también dibujado, como ví en Caipipendi y otros se contentan con las solas palabras. Se ignora la virtud del tupicho, pero los indios le tienen mucho miedo; pudiera referir hechos al respecto.

Curanderas brujas

Es indudable la existencia de mujeres curanderas y brujas á la vez, las cuales, conforme los hombres, se hacen temer en la tribu, porque es más fácil á ellas administrar en bebidas algún veneno lento ó violento; vienen designadas con el nombre de: *Cuña ipaye*, mujer bruja (2).

Por lo regular estas mujeres son las hijas de los brujos, mas esto no prohibe que lo sean también otras, curan á los enfermos ó enfermas con hierbas del campo, con cortezas de árboles y con raíces que extraen de la tierra; son en este caso verdaderas curanderas, como las hay entre los blancos.

Hay otras y estas abundan; puede decirse que cada madre anciana lo es para sus hijas mozas, hacen el oficio de parteras, ayudan á sus hijas y á otras en sus partos, las hay tan diestras que son aceptadas aún por las mujeres que los indios llaman señoras. Durante el tiempo que vivo entre los chiriguanos, apenas habré visto á tres morir de parto.

Sólo es reprobable entre las curanderas el uso del: *Mbayachi*, veneno que administran con mucho disimulo, mezclándolo con la chicha, á las personas que odian, lavando ú ocultando inmediatamente el mate, vaso ó copa en que lo propinaron al paciente.

El *Mbayachi* opera con bastante lentitud, porque generalmen-

---

(1) En muchos casos pueden hallarse gusanos en el cuerpo de estos indios entre la carne y el cutis; yo mismo con el uso de la fenelina he hecho salir varias veces de sus cuerpos gusanos hasta del tamaño de un garbanzo, sin que hubiesen tenido herida alguna.

(2) Conozco varias mujeres que son curanderas y brujas al mismo tiempo, á lo menos como tales las consideran los indios de la tribu.

te la bruja que lo propina, cuida de infundir en la bebida poca cantidad para evitar ser descubierta por los parientes; mas si la persona odiada, careco de ellos ó los tiene en grado muy lejano, ó son de poca valía, le propina una dósis fuerte que lo despacha á la eternidad en pocas horas.

El paciente que tuvo la desdicha de beber el veneno, principia luego á sentir los efectos; dolores de estómago, arcadas y otros efectos conocidos. El veneno lo consume poco á poco y dura en este estado dos ó tres años, arrastrando una existencia penosísima, de la cual participan los de la familia con su tristeza, experimentando todo el peso de la larga enfermedad.

El *Mbayachi* no es más que un veneno y así como puede ser administrado en pueblos cultos, no hay motivo alguno de negar que puedan propinarlo los salvajes, quienes no temen las leyes humanas y divinas, toman la venganza como una cosa santa y difficilmente son descubiertos. (1)

Modo de conseguir el veneno

El modo de proporcionarse el veneno es el siguiente, conforme á lo que dice Guarerai: La mujer bruja sale al campo sin avisar á nadie el fin que lleva, va con su recipiente que por lo general consiste en un cantarito de barro horadado en la parte superior, penetra á la espesura del monte ó bosque, donde nadie pueda descubrirla, se tapa los oídos y narices con algodón, las manos con trapos, y se desnuda completamente para que nada la estorbe en su trabajo.

En seguida espera que alguna víbora salga á su vista y si tarda mucho, la hace aparecer remedando el silbido de la misma. Cuando ya la ve, no se escapa, ni se asusta, antes bien, con toda la calma del mundo, la mata con un palito y mejor con una caña hueca, la cuelga á un arbusto de pequeña altura, luego derrama sobre ella, desde la cabeza, aceite de chicha, el cual se mezcla con el veneno que derramó la víbora, aplica el cantarito á la punta de la cola y recoje el primer veneno (2).

---

(1) Hasta que el indio no toma la venganza de su enemigo, no está contento; cuando lo consiguió dice: *ayepi ma hese*; me vengué de él.

(2) Para que el veneno no se quede en el interior del cuerpo de la víbora, se le corta la punta de la cola, el aceite sirve para aglomerar la ponzoña y facilitar el escurrimiento.

[facing p. 153]

Casa de San Antonio del Parapiti

Si resulta ser muy poco, llama, imitando su silbido, á otra víbora que algunas veces acuden hasta cinco, haciendo con ellas lo que hizo con la primera, hasta conseguir lo suficiente. Emplea en este trabajo cuatro ó cinco días, va muy temprano y regresa tarde y terminada la operación, entierra las víboras muertas, borra el rastro de sus piés, se viste nuevamente, esconde el cantarito en su seno y regresa al pueblo con la mayor frescura, llevando en sus hombros, colgada de su cabeza, una chipa llena de troncos ó raíces de árboles, y si es tiempo de algarrobas, ú otra fruta, estas son las preferidas.

El veneno así preparado es muy pernicioso y para propinarlo en pequeña dosis, basta mojar en él la punta de una paja y lavarla en el mate de chicha que convidan al enemigo. Las mujeres brujas elaboran las mejores chichas, las que llaman: *Copiriru*, chicha recocida, y como el chiriguano es glotón, cae fácilmente en la trampa, so pretexto de reconciliación. El modo que emplean las brujas para conseguir el veneno se ha descubierto, porque alguna vez rompieron los vínculos de amistad con alguna amiga íntima ó el parentesco con alguna hermana, conocedoras del secreto (1).

Esto parece una fábula que por lo mismo no merece se le dé importancia, como no se la da el P. Giannecchini, sin negarla en sus escritos, como afirma el señor del Campano. El veneno existe entre los chiriguanos, no lo extraen del chamico que es una especie de datura, ni lo extraen de otras plantas ó hierbas: los brujos nada manifiestan, los jóvenes lo ignoran y los pocos viejos existentes, sólo relatan lo dicho arriba; sea como fuere, no deja de ser una creencia de la tribu y como tal la he relatado.

Eclipse de luna

En la vigilia de un eclipse de luna me hallaba conversando con el cacique Anduari de la Misión de San Buenaventura de Ivu y quiso el caso que me acordara de este fenómeno próximo á manifestarse en la luna. Los pueblos chiriguanos durante el eclipse son verdaderos infiernos por los gritos, alaridos, silbidos y todo instrumento de guerra que hacen sonar; cuando llegué á las Mi-

(1) Las mujeres brujas dueñas del veneno son conocidas; el que quiere vengarse de un enemigo y no sabe como, acude á las brujas, las paga y lo consigue.

siones, acababa de pasar la guerra de Curuyuqui y oyendo tanto y tan extraordinario alboroto en una noche de eclipse, creí en una nueva sublevación, conforme creyeron los vecinos de Cuevo; éstos se presentaron armados para averiguar la causa de tanto alboroto (1).

Preguntó á Anduari la causa de tanta bulla y me hizo la siguiente relación: El tigre había jurado destruir á los chiriguanos, conforme había hecho el *Aguara-Tunpa*. El Tunpa que todo lo sabe, siempre compasivo con aquéllos, lo manifestó á sus parientes que están en el cielo llamados: *Güirayohusa*, la constelación de las siete cabrillas; estos parientes avisaron luego á los que se hallaban en peligro y se pusieron en guardia escondiéndose.

Sin embargo dos de los chiriguanos más valientes para no estar en continuos temores, se dispusieron á dar fin con los tigres. Salieron al campo, hiciéronse dos espadas largas de madera de soto y así armados averiguaron donde bebían agua los tigres; se escondieron espiando la venida de sus enemigos para victimar al jefe.

No se dejaron esperar mucho, pasaron todos y cuando el conductor inclinó la cabeza para beber en la fuente de su cristalina agua, uno de los chiriguanos la asestó un gran golpe de espada en la cabeza separándola del tronco; con la mayor facilidad los demás huyeron en varias direcciones y la cabeza dando saltos desapareció de su presencia.

Fué perseguida por ambos guerreros, mas la cabeza rogó á la luna que encontró en la travesía y ésta muy compasiva la escondió en su seno y cuando llegaron los guerreros y preguntaron por la cabeza del tigre, contestó con todo sosiego: no saber, ni haber visto nada. Por supuesto no prestaron fé á sus palabras y se alejaron de allí, diciéndola: que un día el tigre le haría ver y saber quién era (2).

Cuando los jóvenes estuvieron lejos, la luna juntó nuevamente la cabeza del tigre al tronco y vivió, pero ya no quiso habitar

---

(1) El profesor italiano Mantegazza asegura que los chiriguanos para silbar fuerte se extraen la tembeta ó el botón que tienen en el labio inferior, esto es inexacto y negado por todos; lo que refiere el renombrado antropólogo, debe ser un caso particular, pues sin el botón ni aún pueden beber.

(2) Desaparecido el jefe de los tigres, se acabaron éstos y tuvieron sosiego, pudiendo los indios salir nuevamente sin miedo á sus tareas de la campiña.

en la tierra por miedo á sus enemigos, prefirió quedarse con su libertadora, vivificadora y bienhechora, mas luego dió á conocer su ferocidad.

Conforme habían predicho los chiriguanos, el tigre muy luego quiso poner en práctica en las alturas de la luna su natural inclinación de matar y comer seres indefensos. Su libertadora apacible, compasiva é indefensa, se prestaba á maravilla para su voracidad y emprendió con ella, mas la luna acudió con gritos á los habitantes de la tierra, á los chiriguanos, llamándolos á la defensa, sino querían quedar eternamente en tinieblas (1).

Los indios á pesar de la mala acción que les había hecho la luna, mas por su conveniencia que por compasión, salieron en masa de sus pueblos y quién con gritos, quién con silbidos y quién con astas de vacas y toros, atemorizaron al *Yagua rogüi*, tigre amarillo, quien por miedo á los chiriguanos, acordándose de lo que le pasó, desistió de su intento y desde entonces toda vez que sucede un eclipse de luna, practican lo mismo. La creencia fabulosa pasa de los viejos á los jóvenes, de los abuelos á los nietos.

En una noche de clara luna dormía tranquilamente el Misionero en la Misión de Ivu y por un eclipse total se oscureció la luna. Era el mes de Junio del año 1909, el Misionero ignoraba el idioma y yo me hallaba ausente, los niños, que poco hablaban el castellano, en su afán de que vea el fenómeno del eclipse aún el Misionero, lo despertaron alborotados diciéndole á gritos: *Tigre come luna* (2).

Concluyo este capítulo cuarto repitiendo que el chiriguano en su religión, divinidades y creencias hace una confusión extraordinaria de seres buenos y malos, reales ó imaginarios, de creencias fabulosas y conformes en la sustancia á ciertos relatos bíblicos. Come, bebe, duerme y vive el indio como cualquier cuadrúpedo, se acuerda solamente del brujo; á este consulta en sus apuros de enfermedad ó carestía y otras calamidades, creyendo que tenga poder para aliviarlo, no existiendo plegaria alguna propiamente dicha.

---

(1) Si el eclipse es total, creen que el tigre se tragó íntegra á la luna, si es parcial es porque no tuvo tiempo de tragársela.

(2) Del eclipse total ó parcial, del sol nada dicen, sin duda es porque sucede muy raras veces; los ancianos apenas tienen una idea oscura de este fenómeno.

[P.156]

CAPITULO QUINTO

ORDENACION POLÍTICA Y AUTORIDADES

INTRODUCCION

La revolución francesa á fines del siglo XVIII colocó los fundamentos de la anarquía actual con el destronamiento y decapitación de los infelices y virtuosos reinantes Luis XVI y María Antonieta. La noble nación cegada por los grandes reformadores que más tarde tuvieron en castigo la suerte de los inocentes reyes, no pretendía, ni nunca pretendió acabar con el principio de autoridad, pero desde allí se declaró abiertamente la guerra contra los tronos y el altar.

Los reyes y emperadores, las altas dignidades, los ministros de estado, los presidentes de las repúblicas y confederaciones uno en pos de otro van experimentando los horrores y cayendo víctimas de aquellos miembros de la sociedad tenebrosa que en muchas partes de Europa echó hondas raíces al amparo de los gobiernos, cuando en su niñez tan sólo se manifestaba intolerante del principio religioso.

Hoy que los crímenes se han multiplicado y se multiplican contra el principio de autoridad, se hacen los mayores esfuerzos para destruir á estos enemigos de la sociedad, de los imperantes y de la Religión. ¡Qué se pretendió en Francia y otros reinos en los siglos pasados! La destrucción de la Religión, la sola que puede contener á las masas, mediante el principio fundamental que reside en el decálogo que Moisés recibiera en el Sinaí (1).

(1) En la masonería se maduran los proyectos de destrucción y los anarquistas son los ejecutores, por esto en Italia y Alemania se vigila á las logias y á los que han dado su nombre, especialmente si pertenecen al ejército.

[facing p. 157]

Grupo de los caciques de la Misión de Ivo

Quien abrahan vienta, mesje bonpenaden; y aunque tarde van comprendiendo los grandes de Europa, de las Americas y del mundo que sólo con la Religión se puede triunfar; de donde proceda que los conservadores de Alemania é Italia que forman el partido de sus respectivas colonias, se dieron con los católicos de aquos países para sostener como el principio religioso y sobre el de autoridad. El rey de Portugal y el príncipe heredilario eran católicos en pleno día; debió el asesino de aquos, al rey liberal, al ateísmo, asesinándose ellamente á la religión de la nación. Quien apartaron un tanto y fué lentamente derrocado, proclamándose en seguida la República, de la cual no está contento el pueblo, á quien cada día el diablo, después de haberle prometido mucho para que le ayudara.

También en Bolivia se difundan ideas demasiado adversas á la Religión católica, sin tener en cuenta que tarde ó temprano vendrá sólo aquel la amparada; sino se pone mengua á la propaganda antireligiosa que las invalida la gente, el parlamento y hasta el mismo presidencial, vendrá, cuptos, la amparada. Tuberla no tiempo de reunionar, de fundar un partido católico que elija representantes católicos de senadores y de Senado y Presidente que sepa hacer respetar la religión del Estado (1).

Comprendamos pues en este católico sentido que sólo la religión católica puede contener el furor de la bestia humana. Fomentemos las órdenes religiosas y Colegios de Propaganda Fide, como en otras naciones limítrofes, dan apoyo decidido á los católicos, como en Alemania y si habrá expulsión de hombres malévolos, si valerla por culpa y pleno las cabezas de los mandatarios, si pueden yertos los cadáveres de los grandes, víctimados por el revólver, á la espada de los hombres traidores.

Principio de autoridad

El principio de autoridad se inserta en la humanidad y pretender desarraigarlo es locura. Desde que hubo hombre en el mundo, conservó el principio de autoridad, como se ha observado en el

(1) El primer Congreso Católico reunido por los Franciscanos y celebrado en Potosí el año 1910, entre las demás iniciativas, decretó la fundación de un partido católico en Bolivia para que haga respetar su credo y la Religión del Estado.

Chiriguano: *Ñuh ñiñi gatuñuhi ñiñi el que dominaba tal;* estando bajo la potestad é mando de los mandón y él lo dominará.

Como hemos visto en la humanidad, por malque, más que por necesidad no las conocemos, dichos principios se los aprendió siempre y en todo lugar. No hay cosíbio por lógicamente que sea, que no reconozca como una necesidad este principio y gobernador desconocido, como quienes los amanzanados, es quienes no imposible. El *Tubichá*, grande é autoridad, dicen los indios ancianos, nacen del número Dios, por este principio con la número letra. La *Gestacíbio*, puesta al principio esta mejíbio, representa é varios cacíquen de la Misión de San Ramón-Cordero, ello el que está con frío y hambre (Andoari), en tomó parte en la subdivisión de Cuayayal (1).

Toda la región está hoy explorada y en poder de los blancos, quienes primero penetraron con permiso de los dueños (el *Gestacíbio*) y después de haberse posesionado, en las tierras dueñas compraron las terrenos como con de la Nación. Parecía algunos creer que el chiriguano aun vive en grandes centros, al saber que antiguamente eran muy numerosos; mas quien interesa por el territorio, luego comprende que cada tribu no compone é la mano de cuatro cincuenta familias y en cada tribu hay un cacíquen que tiene dependencia de otro mayor llamado por ellos: *Tubichá cubichá*, grande de los grandes. En una legua de territorio y sólo nueve tribuchá puede un explorador, pasajero é transeunte encontrar cuatro é cinco tribus chiriguanas é pequeñas distancias. El dicho pueblo grande que los indios en sus viajes, en el de *Mandiyuí* está, el de *Chuvuti* queda en la margen izquierda del *Pilcopiti*. Cuando *Chipipondi*, donde las derecha mostrar como, los indios son numerosos, están vivos en distintos lugares, formando agrupaciones de 15-8 cuatro familias (2).

Atribuciones del cacíquen

Así como en la familia hay la autoridad del padre que la gobierna y, en su defecto, la de la madre que cuida y cuida la buena

(1) Los indios de la *Gestación* son: *Antoyo*, *Aguiari*, *Paticuyo* y *Guaraní* á la derecha del *cacíquen Andoari*; *Chipa* y *Pasiri* á Pizarro á la izquierda.

(2) La bella Misión de Santa Rosa se fundó encontrando en un solo pueblo más de diez pequeñas tribus que voluntariamente con sus caciques se trasladaron al lugar que indicó el Misionero, en Tomiti hay tres tribus pequeñas é muy pero dispersas.

crianza de los hijos, para que crezcan varoniamente y no conozcan desfalecimiento, si aparecen cualquiera entre los semejantes, así también en cada pueblo ó tribu hay un *Tekicho*, grande, á quien llamaré cacique, para que comprendan los lectores que el Grande es persona de autoridad y prestigio. Las atribuciones del cacique son múltiples; cuando una epidemia ha entrado ó está próxima á entrar á la tribu, él es quien busca al brujo para alejarla; si la tribu sufre una sequía, él acude al dueño de la lluvia, otro brujo (1).

Al tiempo de sembrar, mientras los de la tribu duermen ó descansan en sus casas, sale á la plazuela ó al frente de su casa, y guardando, arenga al pueblo, aconsejándolo á sembrar harto maíz, para que haya á su tiempo espejito general con beber el prohibido *Chuyki*, chicha, aspellos y alcohol para comer juntamente con el *Atiroli*, harina y el *Atipii*, maíz tostado. En su prolongado discurso recomienda la unión en el trabajo, para que se termine luego, para primero sembrar la chacra del cacique y en seguida las demás, ayudándose mutuamente. Cuando llegué á los Mizones, tolerá lo practicaban así los soldados del cacique Ollivo-a, cuya figura con su respectiva familia colocaré en otro capítulo.

El cacique dirime también las cuestiones que frecuentemente se suscitan en tiempo de siembras, pero sólo entre dos reinas la cuestión de apropiarse lo ajeno que se halla bien dispuesto y limpio de matorrales; maja las divisiones de familia, amonestando á las esposas y también á los hijos de éstos. Si acaso algún robo, en él también quiere entrar robando entre el cacique de la vecina tribu, más si esto acontece entre los suyos, administra luego la justicia, no sentencia en absoluto y sin aplicación por lo regular (2).

Con frecuencia acontece que por un desacato hecho á una mujer de la tribu, se origina una guerra sangrienta que toma carácter de regional; así sucedió por los años 1850 en la región de Cuevo. El cacique Gitiamati quiso, sin conseguir el fin, relacionarse con la mujer de Yarasa cacique de la margen derecha de la quebrada de Cuevo. El ofendido en venganza dispone de una red de

(1) En cada tribu así hay más que un cacique; muchos caciques dependen de un cacique regional que puede destituir á los subalternos.

(2) En los Mizones hay varios caciques, porque se compone de varias tribus, el Mizonero los gobierna á todos, así que la autoridad de los caciques, es casi nominal.

Güiracoti, se declararon luego las enemistades y cada cacique se dispuso á la guerra.

Güiracoti era inferior á Yaveau en número de soldados y valentía personal, mas con sus embustes consiguió que lo ayuden los indios de Yuti, Choroti y Parapiti Grande, y aun los blancos que habían penetrado en el territorio de Cordillera y vivían en Lagunillas (1).

Tanto número de enemigos sembró el pánico en el campo de Yaveau que se hallaba con muchos otros juntamente con los tobas. La primera batalla fué perdida y tuvo que esconderse con su gente por las faldas y cerro de Ireuta, pero repuesto de la derrota sufrida por la superioridad del número y distinción de armas y razas, persiguió al poco tiempo á sus enemigos, de los que hicieron innumerables bajas y Güiracoti tuvo que abandonar su tribu retirándose á la margen izquierda del río Parapiti para no caer en manos de su rival, ser atravesado por su poderosa flecha y tener la desdicha de que su cabeza separada del tronco, estuviera á la punta de una lanza expuesta al ludibrio de grandes y chicos del campo enemigo.

Es natural entre los hombres que transitan por un pueblo ajeno, acudir á la autoridad política en sus necesidades, como acontece en las Misiones. Mucha gente al transitar por los pueblos de los indios se dirige naturalmente á la casa del cacique, éste recibe á los que considera mayores, con la amabilidad y cortesía que distingue á los indios de la raza chiriguana, por esto han creido algunos exploradores que es propio del cacique recibir y hospedar á los transeuntes y forasteros, pero puedo asegurar que no están en lo cierto.

El chiriguano es naturalmente hospitalario y el forastero recibe acogida en cualquier choza de indio; éste se considera dichoso en recibir á personas grandes, iguales ó inferiores en su choza, que desocupa inmediatamente tratándose de las primeras, acomodándose él en la plaza ó en el corredor y le presta todos los servicios que están á su alcance. La mujer le proporciona agua y le hace la cocina y el hombre la leña, llevando al pasto aún las bestias con las cuales debe proseguir su viaje.

Si el chiriguano dispone de alguna cosa, como huevos, gallinas, etc. nada pide por ellas y se contenta, si el forastero le rega-

(1) Güiracoti hizo comprender á los blancos que Yaveau intentaba sublevarse contra ellos, por esto consiguió que viniera á Cuevo aún el cacique regional del Parapiti, llamado Chituri.

[facing p. 161]

Escuela de mujeres, de S. Antonio del Parapití

la lo que se lo antoja al tiempo de despedirse; cuando dispone de su licor prohibido, lo primero que presenta al huésped, es una copa de esta bebida. Pero hoy la situación va cambiando sus costumbres sencillas por las refinadas del civilizado que le enseñó á vender una gallina hasta el precio de un boliviano; ya no es el de antes, porque no se respetó su casa (1).

Es atribución también del cacique determinar el tiempo en que han de principiar y durar las fiestas ó tomadas públicas; estas se practican generalmente antes y después de la siembra, antes y después de la cosecha. Si la lluvia arrecia y la cosecha anterior fué muy escasa, se apura la siembra para que el maíz madure más pronto y tengan como beber en la Pascua. Durante los demás meses del año el cacique ordena las fiestas públicas, cazas generales de jabalíes, quiriquinchos, avestruces, corzos, chuñas y otros animales silvestres (2).

Subalternos

El cacique de una tribu no es sólo en la administración política, judicial y administrativa. Para una administración más correcta, él como autoridad única y suprema eligo consejeros y ayudantes, se los busca en las personas más aptas de la tribu. Los primeros consejeros son los brujos que pueda haber; son pues estos hombres temidos y por lo mismo respetados de los pobladores que se sirven de ellos en las enfermedades y calamidades tanto públicas, como privadas.

Luego vienen en calidad de consejeros otros hombres á quienes dan el nombre de: *Iyüira iya*, dueño del palo ó del bastón, según el significado de la palabra y que corresponde en castellano á hombre de mando ó autoridad. Son pues los alcaldes á quienes el cacique entrega parte de su autoridad con dependencia absoluta; de modo que, por quejas, ineptitud ú otros motivos, los alcaldes son inmediatamente destituidos y luego nombrados otros. En cada tribu hay un solo alcalde que todo lo hace, porque el cacique está en su pueblo mejor que un emperador, no mueve una paja y pasa el tiempo en un prolongado ocio.

(1) Hoy reciben con respeto y cariño á los amigos y conocidos, porque algunos huéspedes ó transeuntes han atropellado al indígena, exigiendo cosas ó personas á las cuales no tenían derecho.

(2) Cuando y donde el maíz no produce en cantidad, el chiriguano imita al toba y al matacco, así el fruto del chañar, mistól y algarrobo es empleado en la elaboración de la chicha.

Los alcaldes en las tribus se la entienden con el resto de los pobladores; en una busca de peones éllos oyen los sarcasmos y reconvenciones de sus semejantes y muchas veces les desobedecen terminantemente, llegando á insultarlos con: *¿Mburubicha pa nde?* acaso sois cacique? (1).

Abuso de autoridad

Los indios que hoy viven bajo el gobierno paternal de los Misioneros aseguran que anteriormente los caciques cometían miles de abusos: hablando de los caciques aún vivientes, éstos, decían, abusaban de todo lo que pertenecía á los pobres ó indefensos indios, disponían de las doncellas y mujeres ajenas, bajo cualquier pretexto se adueñaban de los caballos, vacas, ovejas, cabras y trapos ó ropas de sus dependientes, y en ciertos casos, como mandatario absoluto, ni la vida estaba segura.

En comprobación de lo último voy á referir lo siguiente: Antes que se reorganicen las Misiones de San Antonio y San Francisco del Parapiti Grande, un indio estranguló á su mismo hijo y lo enterró medianamente en la arena cerca de la orilla, con el fin de que se lo lleve pronto alguna creciente grande, pero antes que esto suceda, se descubrió el hecho, no por denuncia de la mujer, á quién había amenazado de muerte, sino por el revoloteo de los cuervos que principiaron á desgarrar las carnes ya en putrefacción (2).

Avisado el cacique regional, se practicaron las pesquisas para hablar al malhechor y no fué difícil encontrarlo por ser indio conocido; tomado en arresto y conducido ante la autoridad, confesó su crimen. Para evitar otro crimen mayor quiso intervenir la autoridad cantonal, pero el cacique regional le hizo comprender, que la justicia debía ser administrada de un modo ejemplar por él y que en nada debía mezclarse el corregidor, cuyos subalternos eran los blancos.

---

(1) En las Misiones de muchas tribus hay tantos caciques y alcaldes cuantas son las tribus que la componen; en este punto se ha respetado la costumbre de los indios para la mejor y más recta administración.

(2) El asesino de su hijo pertenecía al pueblo de arriba y fué ahorcado en el pueblo de abajo donde residía el cacique regional, y la autoridad del presunto cantón Parapiti.

A estas razones se rindió la autoridad política y dejó que el cacique haga del reo, lo que mejor convenía según sus costumbres bárbaras. Antes que se compliquen los asuntos, el cacique hizo plantar dos palcas medianamente altas, atravesó encima otro madero, reunió á todos los habitantes de ambos pueblos y á su presencia, en pleno día, lo condenó á la horca, y la ejecución fué hecha inmediatamente. El cacique no tiene leyes escritas, todo lo hace por tradición y, castigos como el referido, los aplica para escarmiento de otros, para alejar la maldad de su región, para hacer respetar la vida de los indefensos y buenos y hacerse temer (1).

Separación del mando

La destitución de un cacique es la cosa más llana, cuando los abusos que comete, son insoportables. En épocas anteriores á los tiempos actuales, los indios oprimidos comenzaban á retirarse de su obediencia á otros pueblos; y como, difícilmente pueden estos vivir en tierras ajenas, acababan por hacer recurso al cacique regional y éste á su vez los declaraba libres de tal obediencia, eligiendo á otro más humano de la misma tribu ó que residió algún tiempo en ella. Hoy se ha hecho más fácil por el concurso de la autoridad política de la República, mas hay el inconveniente mayor de que destituido un cacique abusivo y elejido otro por la autoridad política, debe estar sujeto á todas las exigencias de los blancos, en proporcionarles peones, y éstos, que no quieren el yugo del caray, se aburren y emigran.

Un hecho que confirma lo dicho, sucedió en la región de Caipipendi. Al cacique regional Tengua sucedió su hijo Cariti que por faltas graves cometidas ó supuestas, fué destituido y elegido en su lugar el indígena Tarúire de muy buenas cualidades á lo menos en la apariencia. Este, elejido por los blancos, con consentimiento ó á indicación de los indios, tuvo que corresponder á sus bienhechores que lo exaltaron y, en consecuencia, responder á todas las exigencias y pedidos de peones y alguna vez el pobre indio ha tenido que ir á Santa Cruz para servir de garantía á los in-

(1) Cuando un brujo no acierta á cumplir lo prometido, porque el acaso no lo ayudó, pertenece al cacique dar la orden de la sentencia de muerte y hoguera.

felices indios que, bajo pretexto de trabajos en la ciudad, temían ser conducidos al Beni (1).

Este cuidado de Tarúire y el recelo de los indios, se originó de un hecho público sucedido el año 1905, cuando llevaron de allí una partida de indígenas vendidos para los gomales; los rumores del hecho corrieron con la mayor rapidez por todos los periódicos de la República que lo reprobaron, y en aquel tiempo ví grupos enteros de familias que con todo lo que poseían, emigraban á otras tierras.

De esto provino que muchos indios obedecen hoy á Tarúire no por amor y adhesión, sino por temor de un serio castigo que les aplicaría luego la autoridad política; y el cacique ya principia á aburrirse de esta tarea tan odiosa para él que busca estar tranquilo en su casa y gozar de la paz; así me lo ha manifestado repetidas veces y quedaría satisfecho, si nombraran nuevamente á Cariti, á quien los indios guardan las debidas consideraciones.

Sin embargo, es indudable que el cacique de una gran porción de indios como Tarúire saca grandes utilidades de su cacicazgo. Si las molestias son contínuas, el lucro también es regular, porque generalmente el caray que hace un pedido de peones, siempre da su pré al cacique y á los alcaldes, y si aquel los visita en sus casas, le guardan algunas consideraciones por el interés de conseguir peones en lo sucesivo; mucho puede el interés (2).

Sería caso muy raro que un cacique chiriguano no tuviera sucesión, sabiéndose que cada uno vive con varias mujeres, privada y públicamente, en la suya y ajena tribu, y esto no es privilegio solamente de los caciques; aun los subalternos son polígamos. Muchas veces se casan con una viuda para después estar á la vez con su entenada á sabiendas de la madre, que consiente en ello por miedo, por interés de la comida ó de un miserable vestido (3).

---

(1) En el Beni los hombres se venden á Bs. mil y las mujeres á precio inferior; el Barón D. Erland Nordenskiold dió una conferencia en Londres probando que en Bolivia y Perú existe la esclavitud.

(2) Todo lo que reciben de los blancos, lo guardan para comprar licores y poco para su vestido

(3) En las Misiones se persigue el vicio de la poligamia no solo en los indios, sino aún en los caciques; precede sin embargo alguna amonestación para convencerlos y hacerles conocer la fealdad del vicio.

Al fallecimiento del cacique de la tribu, sucede luego el hijo mayor, mas si realmente muere sin sucesión, entra en el mando el pariente más cercano, y á falta de éste, algún cuñado prestigioso, si es querido por la tribu; de lo contrario se elije al que en el pueblo reune en su persona las mejores cualidades y si un indio goza de alguna fortuna en ganado vacuno, lanar y caballar, etc. éste es el elegido, quien es respetado y obedecido por los bienes que posee, de los cuales dispone para los huéspedes y para agazajar á sus subalternos aún (1).

Muy raras veces una mujer toma la dirección y mando de la tribu; esto puede suceder, si el cacique que muere, dejara herederas solamente mujeres, pero con mucha dificultad el chiriguano se deja mandar con una mujer; las otras tribus se reirían de ellos y los tratarían de mujeres; la ley sálica está en vigor entre los chiriguanos (2).

Cacique regional

Además del cacique, á quien los pobladores de una tribu distinguen con el nombre de: *Mburubicha*, grande, hay otra autoridad mayor que llaman: *Tubicha rubicha*, grande de los grandes, ó cacique de los caciques. El gran cacique reside en una tribu más numerosa y manda directamente en ella como los demás caciques, teniendo alcaldes y consejeros.

El gran cacique interviene y es consultado para la sucesión de los caciques subalternos, por esto los hijos de éstos siempre acompañan á sus padres en las visitas que practican y procuran hacerse querer del gran cacique para sucederles en el mando, pero si la tribu no lo quiere y por otra parte las faltas son muy notorias y graves para eliminarlo de los honores, el cacique regional con mucha política se lo hace comprender, añadiéndole que reformando su vida, en día no lejano podrá ser elejido de nuevo.

En caso de una guerra regional contra otra región, el gran cacique llama á parlamento y consulta á todos los caciques, conse-

(1) Cuando el cacique es enteramente pobre, puede considerarse el azote de la tribu y, como rey absoluto, toma de las cosas de sus soldados lo que quiere, para sí y para los huéspedes que lo visitan.

(2) Sin embargo hay casos en que la ley de los Salios se ha suspendido entre los chiriguanos; en Ivu gobernó la mujer *Iguandá sai*, en Aquío, *Parapoti* y del Campano refiere de una tal *Arabisai*.

jeros y brujos para disponer perfectamente las cosas y evitar sorpresas. Estallada la guerra, como es el hombre más valiente, toma la dirección de los combates hasta conducirlos á buen término y, sufriendo una derrota, no se bate en retirada, se prepara nuevamente, anima á sus soldados á combatir con más bríos para tomar la venganza y difícilmente sufre otra derrota. Así sucedió en la guerra regional del gran cacique Güiracoti contra Yaveau, en la cual, derrotado éste por aquél según he relatado, se retiró á las faldas de Irenta y desde allí marchó sobre sus enemigos, causando numerosas bajas y consiguiendo una victoria completa (1).

A Chituri, cacique regional, sucedió su hijo el finado Azari para todo el Parapiti Grande, Itatiqui, Tacuaranti, y Ururigua; á Yaveau obedecían todos los indios de Itiyuru, Curuyuqui, Ivu, Igüipinta y los de Santa Rosa, vivientes en la margen derecha del río de Cuevo; á Güiracoti estaban sujetos todos los vivientes en la margen izquierda del mismo río hasta la margen derecha del Parapiti; del finado Tengua eran súbditos los indios de la margen izquierda del mismo Parapiti hasta Gutierrez; de Machirope eran subalternos, según me aseguró él mismo el año 1901, todos los indios del cantón Ingre, Igüembe y Huacaya desde la margen derecha del Parapiti, hasta la izquierda del Pilcomayo, que abarca una extensión de 24 leguas de Norte á Sur y 15 de E. O. y cuando se trató de fundar una Misión en Yumbía, margen izquierda del Pilcomayo, cantón Igüembe, me insistió, en que no los molestásemos más, porque ni él quería, ni querían los indios (2)

Hoy apenas queda vivo un cacique regional de los antiguos, éste es Mandepónni que debe tener unos 84 años, indio muy robusto y obeso y de una salud férrea. Su autoridad se extiende en todo el Gran Chaco, es respetado y obedecido, hasta cierto punto, por los Tobas, Matacos y Chorotis y demás razas conocidas, es muy bien acogido en las demás regiones por donde pasa, y su autoridad en otras partes no es contradecida, pero tampoco acatada,

---

(1) En la guerra de Curuyuqui hubo un cacique llamado Chaparilla, y otro con el nombre de *Tunpa*, pero como la guerra era contra los blancos, el *Tunpa* tomó la dirección de las operaciones militares.

(2) El cacique regional Tengua murió el año 1900, Machirope el año 1905 y los demás nombrados, á mediados del siglo XIX, menos Chituri. Baringai de Iguembe, sin ser regional, se le tiene como tal, es el indio más viejo que se conoce, á lo menos como cacique.

porque también en la actualidad el elemento chiriguano ha cambiado casi radicalmente su régimen político; hoy es la autoridad política, la que impera, y el cacique es un humilde servidor de cuanto carny acude á él por peones.

La Misión de Machareti existe por empeño de él, y siempre ha sido fiel á los Misioneros. En la guerra de Curuyuqui quiso el *Tunpa* que Mandepónai con su influencia sublevara á los tobas y chiriguanos de su región, como hizo Tengua, pero el gran cacique no se movió, antes bien, fué con su gente á favorecer la Misión de Santa Rosa y los cristianos blancos que se habían refugiado en ella.

En aquel tiempo algunos blancos por odio quizá á los Misioneros de Machareti, quisieron envolver á Mandepónai como cómplice del Tunpa, pero esta calumnia fué desmentida con su plausible procedimiento. El avisó el día en que los sublevados debían quemar la Misión, fué personalmente con sus soldados á Santa Rosa el día 27 de Enero, antes del combate definitivo, y allí le echó en rostro á Tengua su traición á los blancos. Para él es una gloria su adhesión á los Misioneros, y cuando dirige la palabra á los suyos, no deja de hacerles recuerdo que, si gozan de paz, lo deben á él que consintió en la fundación de la Misión; así más ó menos dicen otros caciques ó sus sucesores, por cuyo influjo se han fundado las Misiones (1).

---

(1) Creído en la calumnia contra Mandepónai, el Delegado Chavarría fué con todas sus fuerzas á Machareti para castigar al cacique, mas nada sucedió, porque todo resultó falso.

[P. 168]

CAPITULO SEXTO

PUEBLOS, CASAS y TRABAJOS

INTRODUCCION

La época glacial y horribles neveras con su nueva fauna y flora en la aurora del terreno cuaternario, época misteriosa para ciertos modernos incrédulos, no encierra misterio alguno á los verdaderos creyentes, que ven en ella, ó en su aparición repentina, un castigo á la desobediencia del hombre primero. Peca Adán y la tierra tan hermosa y fecunda hasta entonces, se cubre de nieves y hielo, de abrojos y espinas; antes de su pecado, no necesita abrigo, mas conforme se rebela al Criador, se llena de necesidades. Los descubrimientos geológicos van demostrando la verdad del relato bíblico y poco falta para que los seis períodos de la creación estén conformes con la geología, falta estudiar bien los restos humanos y sus manufacturas, para que dicha ciencia diga: que ésta fué la última criatura de la sexta época genésica y confirme que no le fué anterior, como ha sucedido en cada período, desde el Laurentino (1).

La primera necesidad que tuvo la raza humana, fué el vestido para cubrir sus carnes, evitar la confusión y los fríos de la nieve y del hielo que principiaron con la pérdida del Paraiso, mas el solo vestido no era suficiente para ponerse al abrigo de las tempestades invernales.

De los hijos de Adán el primero fué Caín y el segundo Abel, éste murió á manos de aquél y no fundó ciudad alguna; aquél fundó la primera ciudad y como fué el primero en nacer, representa á los ciudadanos terrenos, como Abel representa á los ciudadanos

(1) Lecoq Lyell y otros incrédulos que hacen befa de los misterios y del Dogma, no han podido explicar la repentina aparición de la época glacial en la aurora del terreno cuaternario y se vieron obligados á escribir y pronunciar la palabra: ¡Misterio!

[facing P. 169]

Pueblo de Chiriguanos

del cielo, porque el hombre, primero nace ciudadano de la tierra y luego se hace ciudadano del cielo mediante la gracia santificante (1).

Pueblos

Consta, pues, en la sagrada escritura, que el hombre desde el principio comenzó á edificar pueblos, y todos los descendientes de los primeros habitadores de la tierra siguen su ejemplo. Creo han comprendido los lectores que los chiriguanos son distintos de los otros indígenas que los rodean; á los tobas y matacos consideran muy inferiores, tan inferiores que desdeñan y desprecian los adornos y plumajes variados que estos usan.

Los chiriguanos también, descendientes de los primeros hombres, aman la sociedad y gustan vivir en compañía, en pueblos más ó menos grandes, en pueblos bien formados, con casas alrededor de la plaza, á diferencia de otras tribus que á pesar de ser sociables, forman pueblos tan pronto, como desaparecen, según la necesidad. Así sucede que donde saben que hay comestible, allí va el toba y las otras razas nómadas, las cuales, si están al amparo de un Misionero, le abandonan, cuando sazonan las algarrobas, el chañar y el mistol (2).

Ambos casos he presenciado, el primero en la Misión de Tigüipa, donde á la orilla derecha de su riachuelo se habían reunido tres tribus el año 1905, formado sus miserables chozas redondas con pocos palitos, con manas cubiertas de hierbas, en donde vivían amontonados hombres y mujeres, viejos y jóvenes y perros cubiertos de sarna. El segundo lo presenció en la Misión de San Antonio del Pilcomayo el año 1900, cuando, maduras ya las algarrobas, desaparecieron 65 familias matacas, huyendo al bosque en busca de vida regalada y para entregarse á las bebidas y deshonestidad con menoscabo de la religión, que varios habían abrazado.

En ambos casos, los ranchos que habían sido formados, quedaron destruidos, sin embargo de que los segundos por ser hechos bajo la dirección del Misionero, eran algo cómodos, nuevos y bien

(1) Henoc fué el primer hijo de Caín, la primera ciudad que éste edificó, se llamó Henoc.

(2) Con Lamec principió la poligamia en el mundo; de Ada primera mujer tuvo á Fael quién vivió en cabañas; parece que las tribus nómadas de América aún, sean descendientes de éste.

cubiertos con paja colorada que es la mejor para la construcción de los ranchos.

El indio chiriguano no lo practica así. El también experimenta de vez en cuando la penuria de víveres, porque el terreno en que vive, hace producir las cosechas, sólo cuando no faltan las lluvias. En las carestías, valla la puerta de su casa con palos ó espinas, deja temporalmente su pueblo y va á lejanas tierras en busca de comestible, lo consigue, y lo lleva á su lugar, pero no emigra en masa, ni forma chozas del momento en paraje ó pueblo ajeno y si tiene, en los lugares donde abunda el comestible, busca á sus parientes, por los cuales es recibido y bien tratado. Permanece allí semanas y hasta meses hasta cansar á sus semejantes, y luego se despide, llevando el poco comestible que se le ofrece, como una cosa preciosa, y lo es en realidad en tiempo de hambruna.

Los pueblos chiriguanos son pequeños, se componen de pocas casas, la mayoría no pasa de veinte ó treinta casas, éstas son grandes y viven en cada una hasta tres familias, pero parientes íntimos, como padre, hijo é hija casados; forman cuadro y están situadas de tal modo que cierran la plazuela. No son hermosas, pero sí limpias, no son grandes, pero tampoco tan estrechas, como las de ciertos pueblos de blancos. Son pobres estos pueblos de los chiriguanos, difícilmente se encuentran en ellos casas con tejas, pero son cómodas, teniendo los techos como se dirá, la pendiente necesaria, que difícilmente admiten goteras (1).

Casas modernas

Nada de particular ofrece á la vista una casa de chiriguanos, pero aún las de los mestizos que se han radicado en su territorio, son de la misma forma y no pocas veces pobres, porque naturalmente como al mestizo le gusta muy poco el trabajo material, por la razón de no ser indio, le es forzoso apelar al brazo de éste, y no siempre está dispuesto el indígena á prestarle tal ó cual servicio, de donde resulta que sus casas son inferiores (2).

---

(1) En la parte superior de la casa hacen una abertura larga y continuada para dar salida al humo, está hecha de tal modo que no permite la entrada del agua en tiempo de lluvias.

(2) Trato aquí de las casas que los mestizos ó blancos erigen en la campiña, donde viven; en los pueblos sus casas son regulares, tienen casi todas techo de teja y hay algunas blanqueadas también.

[facing P. 171]

Casa chiriguana moderna, inconclusa

Casa en idioma chiriguano se llama: *Ho*, que se diferencia de la que llaman: *Tapi*, choza; estas últimas abundan en pueblos grandes y son de la gente holgazana, andariega y aún de los pobres. Debe comprenderse pues que la construcción de una casa chiriguana, no es obra de poca importancia y cuidado, si se considera que el chiriguano es pobre, tan pobre, que apenas dispone de una hacha, una pala y un cuchillo, y no siempre. Por la importancia que doy á esta construcción, muchos que no conocen estas regiones, pueden creer que las casas son muy lindas, pero nada de esto tienen, no salen del rango de cabañas.

Creo indispensable describir el modo de construirlas y el elemento que dispone el chiriguano para llevarlas á cabo. Si el indio posee alguna fortuna en ganado lanar, paga con ovejas á algunos compañeros, para que le ayuden á reunir el maderamen principal, y á falta de esta riqueza, principia sólo á cortar y descortezar en el bosque, eligiendo maderos de buena calidad, rectos y duros á la acción del agua; los principales son regularmente seis horcones que forman el esqueleto de la casa, pero donde el bosque no es elevado y los árboles delgados, se necesitan nueve.

Trasportado el maderamen con el auxilio de sus compañeros y parientes y agazajados con comida y con chicha, se determina el día para la colocación. Se colocan primero los horcones del medio, cavándose dos hoyos bastante hondos: á estos sigue la colocación de los cuatro ó seis laterales, que son mucho más cortos, para que la lluvia no se detenga en el techo y no sea una contínua y abundante gotera. He medido varias casas relativamente nuevas, y ha resultado que su altura desde el suelo hasta la cumbrera, en unas es de 42 %, y en otras de 38, pudiéndose concluir que el término medio es 40 (1).

Esta proporción guardan hoy las casas de los pueblos chiriguanos y no puede ser de otro modo, porque el techo es todo de paja y la lluvia se detendría en él, sino tuviera el suficiente declive. Algunos que por equívoco las construyen sin la anterior proporción, á las primeras lluvias torrenciales, y mucho más á las que siguen, caen en la cuenta del error cometido, pero en balde, por

(1) Las casas chiriguanas son rectangulares, de una sola pieza, la cual, si es muy larga, tiene en medio otro horcón que sostiene la cumbrera, para que no se arquee ni se rompa.

que es ya muy pesado para el indio la necesidad de su improvisada.

Colocado verticalmente el esqueleto de la casa, es casi más fácil hacer lo demás, si se exceptúan las cumbreras del caballete y laterales, cuyas últimas pueden dividirse por mitad para facilitar su traslación, además de ser muy fácil su hallazgo. A la colocación de las cumbreras sigue la de las costaneras y cuadros de refuerzo para dar fortaleza á las paredes, las costaneras se amarran con bejuco ó con cortezas de ceiba espinosa, llamada por los indios *Sacaiv* y por los blancos: Tobocuchi.

Lo más difícil está concluido con la anterior operación; tomas un poco de descanso y luego el dueño en la nueva construcción debe proveerse de suficiente caña hueca, comprometiéndolo para este fin á los indios que poseen caballos; mas si la caña está muy lejos, y tiene dudas por adelantado, cruzar varillas largas de acacia astringente ó sutil y las cañas horizontalmente de 15 en 15 centímetros por encima de las costaneras con las mismas fazas antedichas. Algunos para lizar las cañas, ó varillas, usan cordeles delgados, hechos de las pieles de ovejas, pero esto además de ser más valioso, no es tan duradero como el bejuco (1).

Generalmente, antes de dar principio á las paredes, se cubre la casa con *cupii*, paja colorada y en su defecto con *cupiiberos*, paja para aparejos de ovejas, la cual es de inferior calidad y muy largo con las lluvias, sol y vientos importunos se tiran, mientras que el *cupii* puede durar más de diez años.

Se la consigue, cultivándose cuatro días en el lugar donde abunda, allí mismo la arrancan y reducen á manojos grandecitos, el arranco se hace en varios días, comprometiendo á los indios peseadores de caballerías. Cuando el material está en el pueblo, descansa algunos días á semanas, cuidados ó cargo á los que quieren tomar parte, en seguida á los más fortunos por parentesco ó amistad; éstos van amarrando entre dos cañas horizontales el *cupii* hacia el lado de las raíces, forman bultos largos y angostos, y así disponen, los amarran horizontalmente, empezando desde abajo hacia

(1) Antes que en el territorio chiriguano se radicaran los blancos, la caña hueca era abundante y sin duda, actualmente no se encuentra, y si hay algo, está bajo cultivo y es necesario comprarla.

sirve á lavar la cantarera, donde dejan un largo cogimiento para dar salida al humo viscoso de sus fumas inapetibles (1).

Terminado de colocar el techo, bajan todos, se reunen en la casa del amigo, quien, en premio á pago del servicio prestado, les ofrece una tinaja de chicha que se la bebe entre chistes, y pullas, á veces muy pesadas, especialmente si asisten á pesar por allí doncellas ó mujeres de 30 á más años, las cuales no se quedan calladas; con mano en pecho consuela y amiga, reina la mayor armonía y terminado todo, se despiden del dueño, agradecidísimo con abrazos, y éste les demuestra su agradecimiento por los servicios que le han prestado (2).

La cosecha se practica con más amiga y en tiempo más oportuno. Efectivamente, la cosecha supone para ello el tiempo de lluvias, cuando abunda el agua, y esta por ahora carece la aprovechan de todos, por más económico y fácil. Considerada para la pesca del indio y las tierras de la mujer chirigüana, sería costoso y bastante oneroso trasladar el agua en tinajas desde largas distancias, lo cual se evita en tiempo de lluvias. Entonces en cada aguacero no sólo se practica la cosecha de las paredes de las casas nuevas, sí que también el arreglo de las que se desmoronaron durante el año y en una muy divertida donde bajan, van las mujeres alrededor de sus casas arrojando á cuo el tipoy hasta la cintura con su pala ó machete practicar hoyos en la tierra ablandada, echarle un poco de agua, amasar la tierra, formar con ella bolas grandes é introducirlas entre las cañas ya amarradas.

Las cañas ó las varillas se amarran conforme se va practicando el techo con la diferencia de que para las paredes se colocan en doble cardo, de afuera y de adentro, para que puedan servir de molde á la tierra conjada, la cual viene á quedar como en una bolsa grande, larga y alta alrededor de la casa. Este otro trabajo es practicado por los indios, compromitidos de antemano con el alcalde de la chicha; en segunda días mínimos cubren la tierra bosque-

(1) Aún la paja cubierta es desaparecimiento casi por completo; la desaparición de este accesorio elemento y el de la cada hecha, se debe á la abundancia de ganado vacuno que destruye aún la paja de aquellos.

(2) Los trabajadores sólo exigen la chicha en recompensa, aun si el dueño les hace cocinar alguna ó cualquier en cuido con bastante exclusiva de sí, arroz, es poseen ó cantarral para molos.

[illegible] por la lluvia ó por el agua y aguaba á las maderas en la operación de la formación de las paredes.

Con tal sencillez, en un solo día se levantan las cuatro paredes, quedando todo acondicionado, absolutamente así todas las cosas. Como curiosidad, diremos no existen continuamente hombres y mujeres á disfrutar del fresco de las mañanas y tardes, betelfilando ensiglidamente, mientras, que se pasan más para dormirse en las noches de excesivo calor, especialmente cuando abrieron abundan las hinchazones y otras insectos (1).

Con la sencillez del secreto, la casa está completamente acondicionada, y el indio contento y satisfecho. En las construcciones actuales se tiene cuidado de colocar la puerta, ó la entrada, á una extremidad de la casa que corresponde al oriente, y también tienen dos, una en frente de otra para tener paso al patio que forman con vallado de cañas para mayor comodidad.

Las puertas son de una que consiste como antes, pero verticalmente, con la cortina de cañas ó con cuchillas de piel de oso, conservando estas más duraderas en las puertas. Si el indio puede conseguir una piel de oso, forma un cuerpo de madera de Chogapa ó mohoyana, como llaman los blancos, ó otra madera blanda que cubre en el lugar dejado en la construcción, forma otro con un grueso de la misma madera, envuelve la piel, la clava en este agujero cuidando que no esté muy tirante, porque en cuidado lo haga tiento; conserva dicha piel por detrás con cuchillas del mismo material y así queda preciosa con puerta de lujo, que puede cerrarse hasta algunos bloques, que á pesar de poner pieles, á no matarlos quien los trabaje con puerta cualquiera, ó por la calidad de algunos cuchillas, no se provengan de tal cuchillas (2).

Casas antiguas

Algunos de más bastante habrá conocido quizá que la casa y su cuadro de construcción, ya relatado, se conservan al origen de la casa;

---

(1) En Pamplona, en el término de cinco horas, se origina y construye una casa para ese alumnos; para dicha edificio nada hubiese preparado, tal preparación del día anterior y ejecutado primero por varios los pobladores.

(2) Algunos forman puertas muy bonitas con dos piezas de madera de cuchillas espinosas que labran perfectamente con su cuchillas; ensayan chirigaos para ventana en su casa.

4: Nino SF10 Chiriguano

esta comercio sería un equívoco, porque deben comprender que lo antedicho, es obra del progreso. El método de formar casas, como las actuales, es relativamente nuevo, lo aprendieron de los blancos, especialmente de los habitantes del territorio cruceño, cuyas casas son tinas con corredores, estándose esto, aún en la capital del departamento, aunque sería de mucha más importancia y cayen desaparecidas con los edificios nuevos; mas en Montenegro, Lagunillas, Charagua y otros centros, donde la raza chiriguana tiene mantenido sus modos, las casas están con sus corredores.

Estos, además de dar á las casas un aspecto mejor, además de la utilidad sin discusión, son un grandísimo refuerzo y preservativo para las paredes de la casa, no permitiendo que las lluvias torrenciales desgasten ó deviten los retoques que hacen en todas las casas. Es cierto que muchas casas de blancos en sus pueblos son de adobes, pero cuando el conocerse en de calidad superior, es casi perdurable, porque queda este material más unido y compacto (1).

Las casas antiguas chiriguanas eran de distinta forma y en los pueblos las había designado en grandes y hermosas. Unas se distinguían por su redondez y forma cónica, y otras por ser pequeñas y bajas; estas últimas no tienen importancia alguna y apenas pertenecen al rango de chozas, á pesar de que para el pobre chiriguano, dominado por la pereza, la pequeñez de la vivienda, nada quita á su importancia.

No voy á ocuparme prolijamente del modo, como se construían las casas de forma cónica, sin porque indican conocimiento por parte del constructor, sin porque hacen volar el pensamiento á la China, el África, y al Japón, donde hallamos de iguales formas y nos concurren siempre más de la unidad de la raza humana.

Según hacen referencia los exploradores, los viajeros, las relaciones y libros bien meditados y hasta se observa en las viñetas de las geografías, ilustradas, se conoce que en China, Japón, África, nueva Zelandia, el Río de Australia, no pocos habitantes

(1) Al fundarse una Misión, el primer edificio es la casa Misión, hecha con toda regla; pero en las Misiones de Potosí todos son de materiales y cualquier viajero se queda admirado de su elevación y solidez.

tienen casas de forma cónica. Este método parece el originario de la raza humana, y es muy probable que lo haya usado el hombre en las cinco partes del mundo, pues se halla aún entre los chiriguanos.

Efectivamente, para construir una casa cómoda antes de la conquista, el chiriguano hábil empleaba el siguiente método; se proporcionaba primero un solo horcón de unos cuatro ó cinco metros y lo plantaba aproximadamente á un metro de profundidad (1).

El horcón plantado servía de punto céntrico de la nueva casa; en seguida trazaba un círculo más ó menos redondo sin consultar, ni mucho ni poco, las reglas de la geometría teórica, de la cual ignoraba su paradero y existencia; sin embargo, su razón lo ayudaba bastante. Trazado el círculo y dispuesto de antemano bastantes horquillas, de unos dos metros de altura, las iba colocando en hoyos de cincuenta ó sesenta centímetros de profundidad en la circunferencia, procurando dejar la entrada frente á la plaza.

Ya bien afianzadas las horquillas en el suelo alrededor del horcón, el indio con el auxilio de sus compañeros y parientes se proporciona costaneras, paja, bejuco ó corteza de ceiba, caña hueca ó varillas. Principia luego, después del descanso correspondiente, á colocar primero las costaneras, amarrándolas una con otra, sirviendo de punto de apoyo el horcón central y luego las amarra á las horquillas de la circunferencia una en cada horquilla hasta terminar: antes de principiar se tiene la precaución de chamuscar el bejuco. Lo demás se practica según lo descrito en las casas modernas; mas terminada la colocación del techo y las paredes alrededor, arranca el horcón central que no serviría mas que de estorbo al fuego que constantemente está encendido en el centro de la casa (2).

Todos comprenden que las casas de forma cónica son muy sólidas, cuando se tiene la precaución de escoger buen maderamen y

---

(1) Para cualquier pequeño trabajo, en que el indio debe molestar á sus amigos, nada conseguiría sin el recurso de la bebida; ni el dinero es tan estimado y apreciado como la chicha por el chiriguano.

(2) El bejuco chamuscado es incorruptible, en cualquier tiempo que se haya arrancado, resiste y no es roído por la carcoma; ellos que tanto lo usan, tienen experiencia.

[facing p. 177]

cortarlo en la luna menguante; si las costaneras tienen horquilla hacia abajo, las casas cónicas son mucho más sólidas (1).

Fuego

Tanto en las casas de forma cónica como en las de forma rectangular, antiguas y modernas, ardía y arde noche y día el fuego, que nunca se apaga, pero cuando esto sucede, el modo de encenderlo nuevamente, es prestárselo de los vecinos. Si todos los habitantes de una tribu han emigrado temporalmente á un lugar no lejano, como sucede en el tiempo de las siembras generales, al terminar la cosecha y al restituirse al pueblo, vuelven con su respectivo fuego, conforme he visto repetidas veces. Mas como hoy ha penetrado la civilización y el fósforo se ha generalizado, aún los chiriguanos ahorran un medio, ó diez centavos, para emplearlos en la compra de tan útil combustible, lo que usan con mucha parsimonia, porque en manos de ellos, esto ya es lujo y se dan mucho aire, cuando en una reunión de compañeros, pueden hacer ver y mostrar su caja de fósforos, encendiendo un cigarro de chala.

Cuando hoy acontece que se apague el fuego, donde es difícil conseguirlo de otras casas lejanas, el chiriguano no tiene mucho que pensar; al hombre casi nunca le falta un pedernal, yesca y un pedazo de acero; se sirve de estos utensilios para conseguir nuevo fuego. La yesca es preparada por ellos con el capullo del algodón silvestre ó flor del *samuu*, que reducen como madeja de hilo y la introducen á una asta de vaca que vacían del lado más grueso, ajustándole una tapa de madera que sujetan con un pequeño alambre, ó hilo de pita; por el interior del yesquero pasa á la extremidad, donde practican un pequeño agujero para poder cerrar y tener la tapa fija y sujeta.

El indio que no tiene todo este aparatillo, tampoco piensa mucho; si llega á apagársele el fuego, practica en un madero bien seco un pequeño agujero cónico, en el cual hace girar violentamente *un palito cilíndrico también* seco, que no tarda mucho en calentarse y luego en despedir chispas de fuego, á las cuales aplica luego la yesca que consiste en la médula seca de la agave ó

(1) Una casa de forma cónica entre los antiguos chiriguanos indicaba mucha habilidad en el constructor y lujo en el propietario, por esto la poseían sólo los caciques, ricos y pudientes.

maguey, la cual prendida, enciende cualquier otro combustible (1).

El chiriguano es muy cazador, y ningún animal silvestre, ni ave, escapa de su ojo y mano, en estas correrías muchas veces le falta el fuego. Si está muy lejos del pueblo y se dispone á dormir al sereno en el bosque ó en lo raso, prende su fuego del modo ya descrito para tener un compañero, ahuyentar al tigre, al demonio, fumar su cigarro y preparar su asado.

Trabajos

Aseo

Muchos juzgarán talvez que las casas de los chiriguanos, mal hechas y peor conservadas por el continuo fuego que despide humo y ceniza, sean muy sucias, sin aseo, sin limpieza; pero nada más erróneo. El indio, á pesar de su salvajismo, es limpio y, cabalmente por limpieza, se arranca el pelo del cuerpo y del rostro, se baña diariamente y se peina á menudo, haciendo desaparecer los animalillos que pudiera haber en su vigorosa cabellera. La *Cuña*, mujer chiriguana, piensa continuamente en el aseo de su casa, corredor y suelo frontero, hasta unos cuatro metros en toda la longitud y latitud (2).

Los pueblos chiriguanos llaman la atención de todos los viajeros y exploradores por el aseo que reina en sus casas; éstas á pesar de tener un notable ajuar, están bien dispuestas por el trabajo asíduo de la dueña de casa; los cántaros de boca ancha en los rincones, los de boca angosta, donde debe fermentar la chicha, verticalmente apoyados en las paredes, los platos y las cucharas en las rinconeras de caña hueca, las ollas pequeñas entre los vacíos de los cántaros grandes y éstos, en la abundancia y aún en la carestía, llenos unos de maíz desgranado, otros de alubias y semillas de calabazas y los últimos con lanas y algodones para trabajos de ponchos, frazadas, ó abrigos.

---

(1) Cuando el sapo entregó el fuego á los dos niños que se habían salvado del *Ipora*, diluvio de agua, les enseñó también el modo de no perderlo nunca, frotando los maderos con violencia.

(2) Todos pueden observar que algunos chiriguanos por pereza viven en casas propias muy viejas y deterioradas, donde penetra el sol, la lluvia, el viento y el polvo; á otras que tienen techo nuevo, faltan las paredes, exponiéndose á enfermar de pulmonía, pero en ninguna falta aseo.

Por encima á una altura correspondiente hacen colgar una estera de caña hueca ó palitos bien amarrados unos con otros con corteza de: *Ivi*, ceiba y allí colocan otras menudencias ó cosas pequeñas, cuando no tienen otra cosa que poner, como quesillos, quesos, charqui ó carne seca. La estera se cuelga por lo regular á un lado de la casa en una de las costaneras, mediante cordeles de piel de reses, ú otro material, se coloca allí para no estorbar á los que debieran pasar por debajo (1).

Finalmente colocan en las esquinas de la casa ó donde mejor convenga por encima una cuerda ó más, formando ángulo de una pared á otra y allí cada miembro de familia pone sus vestidos propios y los hombres los arneses de cabalgadura. Hoy los chiriguanos no holgazanes, no son tan pobres y cuando se entra á una casa, se queda admirado de todo el ajuar abundante y bien dispuesto.

Con tal disposición no es difícil á la mujer chiriguana después de haber tomado su baño, aseado su persona y amarrado su cabello, barrer su casa en pocos minutos, barrer lo demás, poner nuevamente cada cosa usada en su lugar, arrimar los catres á las paredes, poner las cobijas en las cuerdas de los rinconeras y preparar nuevamente lo necesario para cocinar (2).

Catres y asientos

El chiriguano por más pobre que sea, busca comodidad para dormir y no duerme en tierra, cuando está en casa, tanto para evitar enfermedades, cuanto para librarse de animales ponzoñosos que abundan, como son la víbora, el escorpión y la tarántula que causan horror al sólo mirarlos. Además, no duermen en tierra, para librarse de la mordedura de otros insectos, como son la vinchuca y el guanaco en regiones determinadas, sin embargo de que

(1) El *Ivi* es una especie de ceiba; *sawa*, pero no tiene puntas como éste; hay otro llamado: *Cuari* ó *Tayipiruru*, es muy derecho, tiene hebras muy fuertes y se corta sólo en las ramas para arrancar la corteza; una cuarta clase de ceiba se llama: *Iriruguam*, es grande y liso, cada clase tiene su lugar de simpatía como todo árbol.

(2) La chiriguana antigua así lo hacía, porque madrugaba mucho, hoy como va entrando la pereza, después de haberlo hecho todo, va á la fuente, se baña, peina y trae agua.

sus catres se llenan de otros animalillos color café, conocidos en todos los rincones habitados por el hombre.

Para evitar cualquier accidente se procura el: *Igüirapempi*, catre, trabajándolo él mismo. Los catres son de caña hueca, de varillas, ó de varas partidas de maguey que llaman: *caruguata guasu*. Para construirlos forma primero un marco rectángular, á este practica cuatro agujeros, 40 cm. más adentro de las extremidades, por ellos introduce otros cuatro palillos verticalmente: son los piés; por encima amarra las cañas ó varillas, que quedan altas, abajo y arriba y hondas en medio y este es el catre. Al tiempo de dormir se contentan con poner en la cabecera algún trapo ó un pedazo de madera.

La particularidad que tienen los catres chiriguanos, es que casi siempre son más cortos que las personas que deben dormir en él, la mayoría mide un metro y 60 centímetros; tendrán esta particularidad talvez, porque duermen acurrucados como los cerdos, para arrimar más la poca ropa ó cobijas que poseen. Hoy los van haciendo más largos y van poseyendo catres, como los usan los blancos; el vacío de estos últimos está cerrado de pieles de reses que amarran primero en su longitud y luego en su latitud á igual distancia, de siete ú ocho centímetros, resultando numerosos cuadritos (1).

Tampoco gusta al chiriguano sentarse en el suelo; cuando está de visita, sería una afrenta hacer sentar al hombre en tierra; sin embargo para tertuliar entre amigos se sientan, donde quieren y se alargan como los perros al sol. Para recibir á las visitas tienen asientos toscos, son de madera y los llaman: *Apica;* los hay de dos plazas y hasta de cuatro con sus respectivas divisorias, los hay para hombres y aún para niños, son de una sola pieza y los trabajan á fuerza de paciencia, excavándolos con el hacha. El árbol debe ser corpulento para que el asiento tenga una pequeña altura, y el ocupante no forme allá una figura ridícula de pulichinela ó pallazo, causando risa á los mirones. También usan bancos y sillas, como las de los blancos; de estas últimas hacen para su uso, para vender á sus compañeros y á los blancos, la madera que buscan para estos trabajos, es la zacharrosa, porque es blanda y se presta para la herramienta, de que dispone el pobre chiriguano que no siempre posee una azuela y un escoplo. Algunos tienen tam-

(1) Los catres que se forman con varillas partidas de la agave, son blandos y preferidos; en la Misión de Ivu casi todos los hacen de este material.

bién hamacas: *Quiha ó inni*, pero son tan viejas y negras por la acción del humo, que causan asco (1).

Las mujeres en su casa se sientan en tierra y la misma costumbre observan, cuando van de visita; el hombre espera que se le diga, donde debe sentarse y siempre recibe el mejor asiento. La mujer no espera, conoce su condición, llega, no saluda, deja en un rincón su atado, si lleva, y luego se acurruca de tal modo que, de lejos y de cerca, muchas mujeres así acurrucadas, se semejan á otras tantas camaretas preparadas para disparar.

Mates

En el ajuar de las casas chiriguanas ocupan un lugar de preferencia los mates, formados de calabazas partidas por el medio verticalmente; este es trabajo del hombre, él las siembra y cuida en su chaco y ya maduras, son trasportadas á la casa, donde se dejan secar á la sombra y al sol también; se necesitan para esto unos tres meses y aún más según la estación. Sin embargo, están observándolos á la larga, si penetra en su película la uña de la mano; cuando la uña no penetra, las calabazas están en sazón; entonces quitan la primera película, las parten, extraen y quitan completamente la pulpa, guardan las semillas para la nueva siembra y estando ya limpias, las dejan secar unos cuantos días.

Las coloca en lugar separado y principia una segunda operación; con su paciencia chiriguana mediante un cuchillo ú otra herramienta, el indio va grabando las figuras que se le ocurren; ramas de árboles, círculos con granitos de arena, cuadrados, figuras de tigres, de palomas, de lagartijas, perros, gallinas, toros, corzuelas, etc. Si todo este grabado fuera trabajo de mujer, tendría un solo nombre: *Sacuarama*; mas como es trabajo de hombre, cada figura tiene el nombre del animal cuadrúpedo, bípedo ó reptil que representa (2).

---

(1) Para juego de los niños cuelgan en el corredor dos cordeles, amarran en las puntas un pedazo de piel de res de 80 cems. de longitud por 30 de latitud, suspendida del suelo unos 60 cems. Llámase: *Sabiuca*, columpio, donde se mecen ó balancean los niños y niñitas de poca edad.

(2) Así dicen: *Machuru haangaño*, figura de lagarto, *Yaimba haangaño*, figura de perro. A la figura del tigre y de la paloma, aún los hombres llaman: *Sacuarama*.

Con este segundo trabajo la obra puede darse por concluida, se emplean días ó semanas según la mayor ó menor cantidad de los mates; tiñe luego con carbón molido todas las figuras caladas, pintan los vacíos con: *Urucú*, achiote, dándoles firmeza con el: *Taragüirisi*, que abunda en todas partes, chamuscándolos luego en la llama del fuego, para que las pinturas nunca pierdan su brillo y lustre, ni se desprenda la pintura de carbón y urucú (1).

Alfarería

Pasaré ahora á considerar el trabajo de las mujeres, limitándome á los de más importancia, como son las vasijas de barro y los tejidos; para aquellas se provee de antemano la chiriguana de la mejor arcilla, que conoce muy bien y trae aún de largas distancias, sino se halla en el territorio propio de la tribu. Naturalmente la alfarera no sólo quiere evitar la pérdida de su trabajo, si que también en cuanto pueda, la de reputación de obrera ó maestra de arte que le proporciona dinero y subsistencia, á pesar de la baratura del precio de las vasijas (2).

Antes de proceder á la elaboración de su tinaja, cántaro ó plato, la alfarera se proporciona un tiesto ó varios según el tamaño de la obra que quiere hacer; si no lo halla en los rincones de su casa por no tener vasijas rotas, lo pide en préstamo á sus vecinas y si éstas no tienen ó no quieren hacerle favor, rompe una de las más inferiores y pequeñas. En las Misiones, ó donde hay hornos para cocer tejas y ladrillos, las alfareras pueden prescindir de él; buscan alrededor de los hornos pedazos de ladrillos ó tejas bien quemados y con esto la materia prima queda completa.

(1) El *Taragüirisi* es una especie de hormiga que abunda en tiempo frío, su longitud no excede de medio centímetro y su grosor de tres; se pasea por las pequeñas ramas de ciertos arbolillos, donde deja su excremento blanquecino overo. Todas las alfareras se proveen en abundancia de este material.

(2) Existen algunos cristianos que en su territorio prohiben á las infelices chiriguanas el que saquen arcilla de alguna vetita buena, por esto y otras tantas razones, como observa el ilustrado P. Pierini, el salvaje ve en el blanco, no á su hermano, sino á su enemigo.

Luego sumerge en agua tanta cantidad de arcilla, cuanta se necesita para la obra proyectada y la deja allá, hasta que esté completamente ablandada y pueda amasarse mejor que la cera. Mientras tanto reduce á finísimo polvo el tiesto, ladrillo ó teja que pudo conseguir, lo cierne en el cedazo más tupido: *Unupe*, que posee, sobre en seguida la arcilla ablandada, procurando que no quede muy dura, echa en ella todo el polvo cernido, lo mezcla de modo que forme unión perfecta con la arcilla y deja la masa así preparada hasta el otro día.

La alfarera después de haber aseado su casa y su persona también, y dado de comer á sus pequeñuelos, se sienta cerca del recipiente que contiene la materia prima, extrae una porción de arcilla y principia á sobarla, la da la forma de un chorizo ó albóndiga gruesa, de ocho ó diez centímetros de diámetro, y con este primer trabajo principia la obra en el trecho más limpio y más plano (1)

Si la obra es de pequeñas dimensiones, termínala pronto; los platos, por ejemplo, los hacen muy luego y pueden elaborarse hasta diez en un día; la vasija para guardar agua puede concluirse en medio día, pero los que ellos llaman: *Yambui*, vasija grande de boca angosta y: *Ñae*, de boca ancha ó cántaro como dicen por acá, no pueden ni deben concluirse en un día, tanto por ser grandes, cuanto porque es preciso trabajar con cuidado y tino (2).

La que apurara la elaboración de las vasijas grandes, nunca las terminaría, porque la arcilla blanda se caería siempre, por esto el procedimiento es lento; hecha pues la base y algo más, suspenden un poco el trabajo, para que se seque con la acción del viento ó brisas; entre tanto va bruñiéndola primero con un marlo de maíz: *Atiigüe*, luego con una concha especial: *Iuta* y finalmente con una piedra especial de unos tres centímetros, que lla-

(1) La masa para la obra se sobe sobre una piel de oveja ó cabra, sobre un tiesto ó sobre un pedazo de madera.

(2) La base de cualquier obra se forma con una porción de arcilla que reducen como una tortilla, á la cual hacen un pequeño borde hacia arriba y á este van pegando el barro de la manera descrita, el bruñido, que dan con el marlo, parece muy insignificante, pero es más que necesario; sin esta operación el cántaro no contendría agua, menos contendría la chicha.

man: *Itaisi*, con la cual las obras quedan perfeccionadas en el bruñimiento (1).

Cuando dejan la obra comenzada, la cubren por arriba con hojas del: *Cussiro*, palma christi y al tiempo de principiarla nuevamente bañan con un trapillo los bordos. Dicho trapo les sirve aún para mojar la obra antes de bruñirla con cualquiera de los arneses antedichos; al terminarse y antes que esté muy oreada, se la bruñe con la: *Itaisi* y estando bien seca, se la quema, si no debe llevar pinturas.

Toda obra pintada de alfarería se llama: *Sacuaraua*. Las pinturas son de color blanco, negro y colorado, el blanco se llama: *Tocuati*, el negro: *Itua* y el colorado: *Itaurucu*: muelen separadamente los tres colores, los disuelven en agua y los aplican con una pluma delgada de gallina, ó de otra ave. Las figuras son variadas, raras las de árboles, animales y hombres; son líneas, grupos de griegas. Sin saberlo ellas mismas, obedecen á un orden general y algunas elaboran obras primorosas, especialmente para guardar el agua.

Para quemarlas, escojen un día en calma y la obra que es grande, es llevada al bosque, porque abunda aquí la leña y también para evitar que se acerquen á mirar las mujeres en cinta, que con su presencia, según dicen, harían romper la vasija; reunen leña alrededor de esta y la encienden, cuidando que no se apague hasta que esté bien quemada; á veces en vez de leña, usan también estiércol seco de ganado vacuno y parece que es muy bueno para la igualdad del cocimiento. Si la vasija es con pinturas, al tiempo de extraerla del fuego, la dejan enfriar un poco y luego aparadamente pasan por encima de las pinturas el excremento del *Tarogüirini*, que se derrite con la fuerza del calor y queda sobre las pinturas como una liga, sin la cual estas desaparecerían al primer uso que se hiciera. En las vasijas el *Tarogüirini* queda como una ligera capa de goma y el blanco del *Tocuati* se vuelve opaco (2).

---

(1) Las operaciones que hacen también con la concha y con la piedra, son para dar finura á las vasijas y cerrar uno que otro poro.

(2) Cuando una vasija tiene una pequeña lesión la calientan al fuego y por dentro y fuera le aplican el *Tarogüirini* y queda perfectamente como antes.

Tejidos

Otro trabajo de importancia de la mujer chiriguana es el tejido del: *Aoya* para su marido, hermano ó hijo y la: *Cutama* para sí. Para ello prepara la lana ó algodón, lo hila al contrario de lo que hilan las mestizas, y las europeas, luego lo blanquea y finalmente lo pinta.

Para tejer plantan dos horquillas delgadas y altas en casa, atraviesan dos palos arriba uno y abajo otro y urden ó disponen los hilos verticalmente y luego se sientan en tierra y van principiando á atravesar hilo por hilo la trama que golpean con un palito de madera de sol, puntiagudo que llaman: *Piuca*; esto dura por cierto mucho tiempo si los hilos son delgados, pero en cambio el trabajo es muy duradero.

Los ponchos: *Aoya*, son de dos clases, unos de lana y otros de algodón; los primero abundan desde la margen derecha del río Parapití hacia el Suey los segundos desde la margen izquierda hacia el Norte, porque en la región primera abundan los rebaños y en la segunda los pintíos de algodón. Antiguamente, antes que los blancos introdujeran ganado vacuno en la comarca, el algodón era cultivado en todas partes y de su producto se vestían en las solemnidades, los hombres con su: *Tiru* y las mujeres con el: *Mandu*, de los cuales me ocuparé en el siguiente capítulo.

La *Cutama*, de que hice mención, ha sido reemplazada con el: *Tipoi* de la misma forma que aquélla, pero de quimón, dril azul, lienzo, merino ó paño tejen también cobijas para sus camas, pero éstas son sin colores y uno que otro hombre posee un tosco telar, como los que usan en Europa con peine, trabajado por ellos mismos (1).

Otros trabajos de las mujeres son el acarreo de la agua, el del maíz y frutos del campo para la cocina y elaboración de la chicha y de la aloja de algarrobas, de lo cual hablaremos más adelante, dando por ahora término á este capítulo.

---

(1) *El Mandu* se sujeta en ambos hombros mediante dos alfileres grandes de plata que corresponde al lujo del vestido; en días ordinarios sujetaban el *Tipoi* con espinas grandes, más estas han sido reemplazadas con agujas, alfileres y broches de metal.

[P.186]

CAPITULO SEPTIMO

VESTIDOS y ADORNOS CHIRIGUANOS

INTRODUCCION

Adán y Eva para cubrir su desnudez, *consuerunt folia ficus et fecerunt sibi perizomata; Genesis cap. III ver. 7.* Cosieron unas hojas de higuera y se hicieron unos delantales. Mas Dios, después de haberlos reprendido y antes de arrojarlos del Paraiso terrenal: *Fecit Adae et uxori ejus tunicas pelliceas et induit eos: Genesis III ver. 21:* hizo á Adan y á su mujer unas túnicas de pieles y los vistió. Es sentencia común de los Expositores de la S. Escritura que las pieles fueron de animales muertos, para que nuestros primeros padres supieran que se habían hecho semejantes á las bestias con su pecado, y que como ellas debían morir, á pesar de haber sido criados semejantes á los Angeles, con todas las propiedades de los Espíritus.

El vestido que debiera hacernos acordar la caída de nuestros primeros padres, sus desgracias, sus sufrimientos, penalidades y su muerte, nuestras penalidades, desgracias y muerte como consecuencia de aquella desobediencia, se usa hoy como un objeto de lujo extraordinario. La humanidad íntegra ha convertido el vestido en objeto de vanidad y no hay nación, ni tribu por abyecta que sea ó se la considere, que no haya abusado ó no abuse del vestido y adornos.

La moda absorbe hoy casi la mitad de las riquezas del mundo, á diario cambia de vestido el bello sexo y desgraciadamente va ridiculizando su persona con mil formas extrañas de vestidos hasta

[facing p. 187]

El cacique Gómeres con su familia

ridiculizarse con el inmoral traje *harém*, rebajándose y queriendo ser igual á las pobres y abyectas musulmanas, sometidas á la esclavitud del Gran Sultán (1)

¡Qué es lo que consiguió Adán con su pecado! la confusión y el ser arrojado del Paraiso para sujetarse á todas las miserias de la vida. Todos hemos heredado la soberbia del primer Adán y este pecado capital nos hace cometer yerros y más yerros, hace que se pierda el principio de la humildad y mire, el que está en altura, con desdén al que le es inferior; sólo la *religión* puede remediar estos males, pero el catolicismo no ha penetrado en todas partes y entre los chiriguanos, en otro tiempo salvajes en toda la extensión del término, es relativamente nuevo, por cuya razón no está desarraigada todavía la soberbia con la cual desprecian á los inferiores, mirándolos con desdén, no hacen uso de sus vestidos y adornos y se esfuerzan en parecerse iguales á los blancos, á quienes consideran superiores (2).

Vestidos

El chiriguano usa cabellera larga y apenas corta aquel pelo que se halla cerca de la frente, ó por adorno, ó para que no le estorbe la vista, porque no lo amarra como las mujeres y como los indios quechuas; lo envuelve alrededor de la cabeza y lo sujeta con una cinta que la teje su mujer, madre ó hermana. Dicha cinta se llama: *Tapiguana*, mide 1.25 ó 1.30 metros de longitud por cinco centímetros más ó menos de ancho, es de algodón ó lana y las hay de varios colores, mas en la actualidad la mayoría, donde no ha penetrado bastante la civilización, lo usan de bayeta colorada, que compran en el comercio, tan activo desde la fundación de Misiones. El chiriguano con su vigorosa cabellera y su *Tapiguana*

(1) Los patrocinadores de la moda dicen que la moralidad puede de la educación; para ellos tanto vale; ir vestidos, como desnudos sin considerar que naturalmente el hombre cubre su desnudez, como sucedió al primer hombre; solo los que han perdido todo principio de moralidad ó muy acostumbrados á vivir entre la lujuria, pueden defenderlo

(2) La sencillez del traje de las católicas americanas, cuando van á la iglesia, es digno de toda alabanza; ¡ojalá que siempre vistieran así y nunca penetrara la moda de los sombreros! en Europa son tan grandes que molestan al espectador en una grande concurrencia, y en los oficios divinos impiden ver las sagradas ceremonias y, por consiguiente, que asistan sin devoción.

se adornan, anda muy coberto y hace alarde de animo como en las fiestas á la presencia de sus compañeros (1).

Para cubrir su cabeza no tienen usan sombrero, éste se tejido por ellos mismos con hojas de palmera: *Ocoendoi*, les traen de los lugares donde abunda: *Ocoendoiti*, arrancan los cogollos más blancos, los traen á sus casas, los cosertan uno por uno en una aguja larga, que hacen de la misma palma, conservándolos uno con otro, los cuelgan allí y la acción del sol los blanquea cada más. Dividen después cada hoja de tres á cuatro cogollos en hojitas no mayores de 2 ½ centímetros y principian á tejer por la coronilla, donde forman una cruz con las mismas hojitas que luego van tejiendo y conforme terminan una, añaden otra y cuando llega el trabajo á las orillas ó aleros, entonces alrededor los puntos, para que no se desdiga la obra, tiran fuerte, cortan las puntas y queda constituido un sombrero redondo.

Otros forman tiras largas de la anchura de un centímetro y las cosen una á otra con hilo de algodón y estos sombreros son además imperfectos y forrados con tela negra ó adornada, los usan los indios de mayor edad, los de importancia, los caciques y brujos (2).

Para el chiriguano la virilidad consiste en una vigorosa cabellera, sin embargo á pesar de estimar tanto el cabello, aparecen además en su cuerpo otros pelos, que los de las pestañas y cejas, cuyas últimas arrancan cuidadosamente, los demás de la cara y cuerpo los arrancan con un: *Tendiendo pelo*, pinzetas; estas consisten en unas pinzitas de hojalata ó una sola partida en medio continuamente y á veces en un cuchillo. Con toda paciencia y poco á poco arrancan ó cortan todos los pelos que aparecen en la barba, permitiéndose de este modo á otros tantos mayores. Otros que no ti-

(1) Un interesado decía, que no tenía objeto la Misión en Tomboi, porque los indios eran cristianos, estoy cierto que no está en lo cierto, porque el explotador que desea conocer las costumbres antiguas de los indios, hoy más que en otra parte, allí puede estudiarlas bien, allí aun donde están, cabello largo, sombrero y flauta, ó cosa.

(2) El apiñiñu siempre con su sombrero, el chiriguano va dejando de usar el pelo largo, ya en pocos lugares se lavada el labio para la tembeta y va reemplazando el sombrero de paja con el de paño por más que valga mucho; desaparecen ya los cascabeles de metales y paulatinamente los de bagalo ó de los blancos.

4: Nino SF10 Chiriguano

tales risas, armonía su pelo con unas planchitas de plata, que llaman: *Mbaiaova* (1).

El antiguo vestido chiriguano era muy sencillo y demasiado inmoral, sucediendo que se vestía entre aquellos indios, donde no ha penetrado la civilización de la Cruz, como Chacobos al norte de Santa Cruz y otros en el Chaco Boliviano. Los niños andan desnudos hasta los diez ó doce años y las niñas hasta los siete, en dicha edad se contentan con cubrir lo más delicado del cuerpo por un resto de pudor que existe entre ellas. De este vestido tan sencillo hacen uso aún los hombres de mayor edad cuando están en el campo, ocupados en su trabajo, ó cuando al pueblo cargados de leña ó comestibles, se ve vestirse en todas partes vestidos á la moda de Adán. En los pueblos los hombres y en todas partes las mujeres visten vaqueta desde la cintura hasta más abajo de las rodillas, porque por trabajo ó por forasteros la *Cotona ó tipoy* que las pueden cubrir hasta los hombros, hacen bajar hasta la cintura, quedando visible lo demás.

Vestido de gala

Vestido de bajo y de gala era para el chiriguano antiguo el: *Ambiroti*, cobertor; este solo nombre abarca el *Guaupi cangao*, sombrero, el: *Ambiroti*, manta ó lana y las: *Guaupi timbias*, calzones. Por ser el cobertor objeto de bajo, no tenían lo usaban, se reducía á las grandes ó cangaos, á las rizas y á las trajes; en todo de piedra cortadas que son de jabalí, pecarí ó cervuna, se cortan con la cortana del: *Cheraqui*, arma astrigante ó cuchillo que contiene mucho tacuas.

Hombres del acto se necesitan para hacer un cobertor completo, como el que se hizo trabajar en la Misión de Santa Rosa por el indio Cachapuri y que llevado á la exposición de Turín, fué adquirido por el mismo de Florencia, juntamente con la calavera que cangi'ra *Cheraqui* y otros objetos, como el: *Tandagua*, especie de quitasol de plumas de avestruz, etc. objetos que los Misioneros de Potosí cambiaron juntamente con los de Turín (2).

(1) Durante mi permanencia en el territorio he visto un sólo indio que tenía barbas tupidas, mas por su desaseo causaba asco; cuando le cortaban, las cortaba con tijeras; hoy los mozos principian á usar bigotes y barba y se afeitan con frecuencia con navaja.

(2) El Misionero que se encargó de llevar todos los objetos á la exposición y conducir á los chiriguanos de ambos sexos, como demuestra el programa, fué el Reverendo P. Fr. Giannecchini.

[facing p. 190]

Aperu o sila chiriguana, cara, bolsa, cinturón

La capa del sombrero se forma de cuatro partes cosidas, lo mismo las alas que la cubren, se cosen con cordillos del mismo material y los ariles de las alas están tenidas hacia arriba; el sombrero tiene una cinta del mismo material, cosida en ambos lados, correspondientes á los cinco para sujetarlo á la garganta, hay en la cinta un fondo ó anillo que sirve para apretar más.

22 *Indicaré* que de el sombrero á todo el conjunto, es una manera perfecta, pero se forma en toda propia del chiriguano, para que no le pueda estorbar el movimiento de los brazos. Su corte no es recto y se alzan muchas partes en el pecho mediante dos cintas de cuero, que se introducen en los ojales de la parte superior. La camisa en la parte de atrás, termina en dos puntas, á los cuales pueden una especie de adornos del mismo cuero, consistente en tiras delgadas y cortas, como un fleco, las mangas son anchas, como todo el conjunto, y se sujetan á la espalda, quedando abiertas el lado del sobaco para que no estorbe el movimiento de los brazos en la caza ó en la guerra, donde lo usan también los grandes. Efectivamente en la fotografía que se tomó en Nueva Rosa, para mandar á la exposición, figuran ahora del abuelo un cazador y un guerrero, vestidos con el cubrir; en medio figura una chiriguana con su corona y adornos de reina del festín, la cual alcanza la chicha á todos los que están divertidos (1).

23 *Tindiri*, calzón, es más de cuero y se forma de cuatro piezas, más ancho desde la cintura hasta el bajo muslo y más angosto desde el muslo hasta terminar, es bastante corto y llega al tobillo, es más bueno que los demás, pero, más apretado y dos cordoncillos para tener ranqui en su mismo calzón, este se sujeta á la cintura con un cinturón ó con dos cordillos que están cosidos en todo la anchura del mismo calzón.

24 chiriguano, vestido, con estas piezas, se considera un grande y lo es ante sus compañeros y los mismos antiguos. Pero desde el principio, desde antes de entonarla, consiguió tenerla después de un año para agradable, como es fil de los cuales considero el bueno que será después que lo lugar cuando algún tiempo. Se comprendería fácilmente que el chiriguano vestido con calzón, no tiene otra cosa en el cuerpo, allí se pegó todo el calzón, etc. y advierte que el arado menos se lava, lo que aumenta la bondadosa.

---

(1) La chicha es lo que sirve á los bailarines en calidad de dueños y patrona del festín, esta fotografía á figura no se produciri en el capítulo que trata de los fiestas porque no pude conseguirla.

El marqués Pandé de Era hasta sus visitas á las P. P. C. C. de la Middle de Santa Rosa para pedir la Middle en su pueblo, se creía antes de verificarlo con su cabeza viejo y ranquinoso, alrededor á los Midaneros y convencido muy cerca de ellos, resultando así inagotable (1).

La figura que pongo al principio de este capítulo será comprender mejor la descripción del *Andironi*. Figuran en ella un viejo y un jóven paredes, una mujer sentada en una silla y una doncella sentada en el suelo; el viejo, vestido con el cubrete, en el marqués Gilbrera de Santa Rosa, la que está sentada en la silla es su mujer, el hombre á su derecha es su hijo Tendrera y la doncella es su hija cristiana, llamada Prima.

El chirigueno que no puede poner su cubrete, se contenta de un pendiente largo, ó de una franela arrollada en su cuerpo que le llega hasta las rodillas, solo hay en este que un pendiente cualquiera con diamantes con unas seis varas de lienzo, que le sirve cubrida dos hábitanas; hoy todo se consigue en las casas comerciales de pequeño coste (2).

Costumbres

Se ha visto en el discurso de las páginas anteriores, que el chirigueno es cazador, guerrero y tocador bruja; conservan en la primera y segunda categoría y cubrirlo la tercera y se comprende fácilmente, porque se necesita conocimiento de hierbas medicinales y todo que sabe, el arte de saber curarse, con disabarse, lo que no es de todos.

Los tres clases parecen no cincuenta con sus bailes que consiga del número; el cincuenta es llamado *Olmar* sin duda por tener sus bailes. Ha esta pasero las de primera y segunda categoría el taburete, la *Sinda*, el pedernal, la yesca y el acero para producir el fuego y los brujas *Ahadra* á estas cuatro las cuarenta de su pendiente que,

(1) Completan el cubrete en por de hacer. Primero que traslumbrar quiere decir: compañero de las cantilas, son mensajeros á los cazadores para no lastimarse los pierdan cuando persiguen á los animales silvestres.

(2) El cubrete se ven hoy en algunas partes para hacer vivir en carnaval, lo mismo puede decirse de otras antigüedades; he colocado en este capítulo el modo de hacerle como el del sombrero, porque su trabajo, del cual aprendió el niño Gandero y vuelve á ver en el número de los cestillos.

[illegible] el *Mincopile*, pieza de bronce, el *Incapile*, piedra redonda, [illegible] para las ceremonias .... [illegible] (1).

Otras que no son manufactura *y* los [illegible], cuando se ejercen en oficio, para amarrar los [illegible] en la cintura, [illegible] Deja que llamar: Chacual, la trajo con [illegible], es de lana *y* pintada de colores varios, [illegible] la pasan, [illegible] algunas [illegible].

Otra de las [illegible] es la: *Chapuro*, [illegible] larga en su explicación literal, la *Chapuro* posee propia del chirigüano, es de cuero curtido de [illegible] ó de [illegible], engrasa en su abertura, que [illegible] con un [illegible], frunces la abertura, como alrededor y [illegible] de la [illegible] hacen poner el cuero algo largo para poderla colgar de una espalda y hacer poner el [illegible] como una [illegible] de [illegible]. La [illegible] en [illegible] como [illegible] para llevar [illegible] en una [illegible], en ella pueden [illegible], [illegible] y [illegible], [illegible], [illegible] y viajeros y [illegible] como se ha dicho, [illegible] se les [illegible].

Finalmente no le falta otra [illegible] para llevar agua; para no [illegible] las [illegible] de una [illegible], posee una [illegible] de calabazas de [illegible] como la de los [illegible]; la [illegible], [illegible] la [illegible] y [illegible], [illegible] en [illegible], la [illegible] en una [illegible] de [illegible], de [illegible] deja una ó dos [illegible] más largas como del [illegible] colocado en la [illegible], donde el [illegible] chirigüano forma un pequeño [illegible], la llena de agua, [illegible] con un [illegible] de [illegible] y durante el viaje [illegible] una [illegible], si [illegible], que puede faltarle, donde tuviese mayor necesidad (2).

Adornos

Hasta dar una rápida ojeada á la humanidad existe para ver que, [illegible] el hombre fué prodigando la bellezas [illegible] de su alma, [illegible] á adornar la fealdad de su cuerpo con vestidos de lujo *y* con [illegible], de oro, plata *y* piedras preciosas. Si [illegible] la historia de la humanidad, la Santa Biblia, el libro más antiguo del mundo, el [illegible] de la [illegible], [illegible] [illegible]

---

(1) *La Hoz* no parece de origen chirigüano, [illegible] si fué introducida por los argentinos ó por los tarijeños, pero me parece que fueron los primeros que la introdujeron, porque es semejante á la del gaucho.

(2) Los indios que están gobernados por los corregidores en la región del Gran Chaco, en sus expediciones hacia el desierto del Paraguay, acostumbran con su respectivo tari á tamaño.

[facing p. 193]

Adornos chiriguanos, etc.

gos que revelan la tendencia del hombre al adorno del cuerpo, cuidándose poco de la belleza del alma. Sólo en el pueblo hebreo se hallan varones extraordinarios y mujeres fuertes que prefieren la belleza del alma á la del cuerpo corruptible y, sólo después de la venida del Redentor, se busca en el mundo católico la humildad del traje y el desprecio de los adornos. Así lo practican las vírgenes en el claustro, las madres verdaderamente cristianas en la casa y en la sociedad, los sacerdotes y monjes que explican la Religión católica y los verdaderos cristianos, que siguen á Cristo pobre. Los demás son semejantes á gentiles y paganos gastando mucha gala, resonancia, mucho lujo y esplendor en servicios y adornos.

Los chiriguanos aunque ocupen un lugar muy ínfimo en este rincón del mundo, aunque poco posean para ostentar y hacer gala de grandeza y bonto, siguen la tendencia común de la humanidad, casi como la bestia su instinto. Sin peligro de errar, si el chiriguano poseyera grandes riquezas, las invertiría fácilmente en sus vicios y en el ornato de su cuerpo.

Cuando el chiriguano quiere hacer una visita de conveniencia, asea su cuerpo, se viste de los mejores vestidos y pinta su rostro con el polvo del achiote. La elaboración de la semilla del achiote se halla descrita en las páginas anteriores, en el tratado de la flora; aquí añado que para que el *Urucu* esté firme en el cutis del indio, es necesario que éste, suavice primero su rostro ó la parte que quiere pintar ó embellecer, con el aceite del palmachristi.

Se ha visto aún que la comarca es cálida y los cambios atmosféricos son muy repentinos; á un extremo calor, sucede un frío sensibilísimo, en estos cambios el cutis del chiriguano se raja. Para evitar este inconveniente, hombres y mujeres se pintan el rostro y los piés con cosmético; además lo usan en las bebidas públicas, en los banquetes y en la elaboración de la chicha para evitar el mucho calor, lo mismo en una convalescencia y después de haber sanado de la viruela (1).

Otro de los cosméticos más usados por hombres y mujeres es la: *Caranapa*, es una hierba anua de hojas anchas y crece su tron-

(1) El polvo del achiote juntamente con el aceite del palmachristi es fresco en el calor y cálido en el frío; las neófitas en las Misiones ya no lo usan, si lo usan, es con parsimonia y como remedio.

co hasta la altura de un metro ó poco más, el color de la misma planta y hojas tienen la parte media entre el rojo y el morado, su flor es gruesa y de la largura de unos 30 centímetros, su color es el mismo de la planta, pero mucho más encendido. La planta es suficiente en todo lugar, pero no muy abundante, la flor es algo pesada, cuando tiene semillas, y como su tronco es delgado y flexible, resulta, que no pudiéndose sostener verticalmente, se inclina hacia el suelo formando un arco, de donde le viene el nombre de: *Curusapa*, ó sea hierba arqueada (1).

Cuando la flor y la semilla están en sazón, las coquetas hacen su cosecha para usarla y, parecen hermosas. La *Curusapa* tiene también su preparación, sin la cual no sería fácil su aplicación. Muelen primero unas cuantas alubias blancas, cernen muy fina esta harina y luego muelen en un mortero la: *Curusapa* con un poco de agua, echan este molido en un lienzo, esprimen sobre la harina de alubias el agua que sale, bañan ó tiñen y hacen secar al sol la masa, extendida sobre un lienzo ó una *Cutama*. La elaboración no es difícil, pero no todos se dedican á ello y para aquellas que la elaboran, es objeto de lucro.

El modo de usarla es el mismo que el del achiote, pero no tiene particularidad alguna, por esto se usa sólo en las fiestas y en el carnaval; las doncellas hermosean su rostro, formando dos círculos de *curusapa* en sus frescas mejillas y pintan las cejas con el achiote. Antiguamente cuando las jóvenes usaban el: *Atiru*, copete, era este, en las fiestas, pintado con la mistura de la *curusapa* después de la untura del palmachristi.

La flor de la: *Guambero*, verdolaga, tiene las mismas propiedades que la *curusapa*, mas es poco usada y se contentan con pegarse en el rostro apenas las hojas y esto en el carnaval, resultando así un juguete de bailarinas. Finalmente tienen los indios un cuarto cosmético que llaman ellos: *Mboiururu*, ó sea: achiote de la víbora, es colorado y aseguran, que es comida de la víbora, de donde le viene el nombre, lo usan estrujándolo en sus mejillas, dándoles un rojo encendido.

Según se ha notado arriba, el antiguo chiriguano: *Aua* y la chiriguana de antaño: *Cuña*, en las fiestas solemnes y en los días

---

(1) En tiempo de carnaval aún las neófitas se pintan la cara, como hacen las blancas, compran misturas que venden los blancos, y los infieles dejan su achiote en los carnavales.

de regocijo general, después de haber hermoseado su rostro y aseado su persona, vestían el *tira* y el *manda*, respectivamente (1).

El *Tira* es una especie de poncho largo, del que se diferencia por las dos aberturas que tiene cerca de las muñecas, en dichas aberturas introduce las manos que quedan libres para los movimientos y, sujetado el *tira*, á las muñecas, nada estorba su anchura al que lo lleva; es hilado y tejido por las mujeres y la materia prima es el algodón. El *tira* se diferencia por el color, unos son negros, otros colorados opacos y los terceros azules; se vuelve del primer color con el barro negro: *Tuttáá*, mezclado con resina de algarrobo: *Piari*, del segundo, con cáscara de sotillo: *Urundeibuen* y del tercero, con el añil silvestre: *Cangái* (2).

El tiru negro, primero se tiñe con cáscara de sotillo y luego lo sumergen en una vasija que contiene el barro negro bien remojado y la resina del algarrobo, después de algún tiempo lo lavan y hacen secar, quedando el color permanente. El colorado opaco se hace con la sola corteza hervida del sotillo. Finalmente para teñir con el añil estrujan dicha hoja y la exponen á los rayos del sol, luego la vuelven á estrujar del mismo modo, después la ponen en una tinaja con agua, donde sumerjen el *tira* que se tiñe de un color azul claro, pero si quieren, que sea igual al del dril, es necesario hacer hervir el añil.

Para teñir todo colorado usan también una especie de cebollas que llaman: *Tunpaipi*, que quiere decir: pié de Dios, literalmente traducido; abunda en los campos, y de otra llamada: *Chapi*, que se halla en las peñas. Todo lo que se ha dicho del *tira*, es aplicable para el *manda* de las mujeres con la sola diferencia, que este es abierto en ambas extremidades y se sujeta á los hombros con dos enormes agujas de plata que llaman: *Ya gasua*, agujas grandes, las cuales también van desaparecidas.

Cuando la mujer está ocupada en los trabajos domésticos y otros, amarra fuertemente su cabello con una cinta: *Apiroá*, de

---

(1) Si el indio vestido de: *tira*, no posee un calzón: *guasapi tindáo*, envuelve su cuerpo desde la cintura con un poncho más delgado que le llega hasta las pantorrillas, es también de algodón y lo tejen las indias; llámase: *Tirapel*, ó sea ferro que calienta, "alias" ibirigu.

(2) Hoy todo se consigue en el comercio y la planta del añil que abunda en ciertos parajes, es descuidada; compran el añil y los demás colores, como compran para su poncho y su tipoi.

algodón ó lana, para que no le estorbe en sus tareas, pero cuando está de fiesta, lava su persona, lava su cabeza, prima su robusta y reluciente cabellera, y la deja suelta ondeando por su cuerpo, hasta donde alcanza (1).

Sobre su *tiru* los hombres ponen la: *Mbeiseru*, es una planchita doble de plata con su ojal en la parte superior, donde colocan un cordón doble de lana, en cuyas extremidades hay flocos del mismo color; este adorno es propio de los hombres, sin embargo hay también mujeres que las usan, pero más pequeñitas. Si se averigua el origen de la *mbeiseru*, hay ningún chiriguano da razón, pero es casi cierto, que la recibieron de los españoles, con quienes casi desde el descubrimiento tuvieron relaciones, como puede desprenderse de la historia de Tarija, cuyos primeros pobladores tuvieron que luchar con denuedo para apoderarse del territorio que ocupaban entonces. Basta ver una *mbeiseru* para caer en cuenta, que ella no es de origen chiriguano; la labor que casi todas tienen, indica, que es obra de civilizados, pero en ella se ven los adornos del huril (2).

Tanto el hombre como la mujer adorna su cuello con perlas: *Itogüi*; collares: *Rini*, no son de perlas como las de los civilizados, pero á pesar de esto el *itogüi* tiene entre los chiriguanos un valor convencional. Por cuatro collares de *itogüi* se dan dos de la mejor que poseían, y los enfermos los dan al brujo, para que los cure y actualmente que casi no se consigue una collera, no es raro, que un enfermo pretenda, la regale al médico, por más que sea su pasaporte para la eternidad, porque nada cual comprende, que después que el enfermo ha sido curado por un brujo de la manera más bárbara, sino sano, está claro que muere.

Los indios menos que no pueden lucir una collera de perlas, se las forman de cuentas: *Yatita*, que abundan en toda la región.

---

(1) Las jóvenes actuales amarran su pelo como las blancas, formando trenzas entre las cuales pasa una cinta que llaman: *Adapa*, ó trenzadera. El pelo amarrado á la antigua quedaba como un bastón, pues no se veía un pelo, ni horizontalmente, todo quedaba cubierto con la cinta: *adapa*.

(2) La: *Mbeiseru* la: *Tempete* con la *adamiche*, las 4 collares y la *adamiche ichi*, antiguamente se cambiaban con un caballo, una vaca, diez ovejas ó quince cabras, pero debe notarse que dichos bienes muebles, valían poco. Una vaca valía cinco ó seis pesos y lo mismo digase de lo demás: viajeros de conciencia hay pagan por una tembeta hasta cuatro bolivianos por ser objeto de ornato.

Los granos son chatos y redondos como un botón pequeño, hacen un agujero en el medio y los ensartan uno por uno, formando, para separarlos, un nudo en el medio; como las conchas son blancas, la collera en el cuello negro del chiriguano se ve muy, muy lindo (1).

Es también propia de los hombres otra collera de perlas: *Ndenicka*, una sarta de cuatro con una grande en el medio: *Ndenicka ichi*, nombre de las perlas, es de valor. La *ndenicka* viene engastada en todo el borde de la tembeta, la cual entonces es de valor y llámase: *Ndenicka-ondoti*, tembeta con perla.

Parece que el explorador y expedicionario Toner no está en lo cierto en asegurar, que estas colleras son de cornalina, malaquita, etc.; los indios no dan nada de donde provienen, talvez con un análisis prolijo pudiera saberse que clase de material contienen y cual es el animalillo, que las produjo naturalmente, como la cornalina. Lo que está fuera de duda, es que los exploradores de hoy, no les dan el valor que pudieran tener siendo verdaderas perlas, el valor antiguo de las perlas entre los mismos indios era como ya he dicho, convencional. No está seguramente en lo cierto el mismo autor en asegurar, que las mujeres chiriguanas usaban collares de conchas; quién las usa las mujeres: *Tapii*, donde he permanecido largo tiempo, pretendiendo ver desde lejos el fuerte Olimpo.

Las collares de las mujeres son abundantes, son de diferentes formas y colores, unas son redondas y negras: *Mbaica*, compuestas de perlas, otras coloradas y cortas: *Mbaicharoki*, perlas cortas y otras largas y negras: *Ndondilla*. No faltan tampoco mujeres que además de los adornos anteriores, ponen en su garganta una sarta de monedas de plata, todas del mismo tamaño; son de diez ó de cinco centavos, pero las hacen iguales. De lo dicho se desprende que las collares que usan las mujeres, son modernas, traídas por los conservantes especialmente holandeses (2).

Las collares modernas son comunes y usadas también por los mestizos, pero no usan las brazaletes que son propios de los indios. Forman una sarta larga de mostacilla azul y la envuelven al-

(1) La collera de concha la usan solamente los hombres; he averiguado con prolijidad y he visto que solo ellos la usan, ya pronto otros cuentos que hablé en un apartado que descubrirá la Historia.

(2) Actualmente no se hallan medios y reales de puro plata, aun los indios chiriguanos forman sus collares con medios y reales de níquel, éstos mejores, pero aquellos eran mejores.

rededor de las muñecas de sus manos, cuidando que cada vuelta esté bien ajustada y arrimada á la primera y así las demás que siguen.

El chiriguano por ser soberbio no se rebaja á usar los adornos de las tribus limítrofes que le son inferiores, pero se amolda fácilmente á usar los vestidos y adornos de razas que le son superiores. No se rebajaba á usar las plumas de aves, á grabarse el rostro y brazos, á usar zarcillos de palo, como los tobas y otros, pero imita y pretende superar á sus superiores los blancos, vistiéndose como ellos, usando el sombrero fino los hombres, la manta de lana y seda las mujeres, el calzado y la bota los jóvenes, el zarcillo extranjero las doncellas. Por esto á las tiernas parvulitas, conforme nacen, les horadan la ternilla de las orejas, para que á su tiempo y aún antes de principiar á caminar, la madre les ponga un par de pendientes, mientras que ninguna de las ancianas que conozco, lleva pendientes en sus orejas; señal segura de que nunca llevaron adornos en ellas, de modo que si las modernas chiriguanas los usan, es por haberlos visto á las señoras y doncellas que vinieron de centros civilizados, ó nacieron acá.

Voy á concluir este capítulo haciendo mención de un adorno de lujo que ha desaparecido por completo, es adorno de mujer y se llama: *Agaú*, corona, y quien la usaba, llamábase: *Cuña agaú rai*, mujer coronada; su oficio de esta en las bebidas públicas y solemnidades, era dirigir la danza de las mujeres, dirigir el canto y dar la bebida á los cantores y bailarinas con sus propias manos. El *agaú* era una faja de varios colores, larga hasta tres metros, se colocaba alrededor de la cabeza, se cruzaba en la parte posterior del cuello, afianzándose con espinas, agujas ó grandes alfileres de plata y ambas extremidades terminaban con flequitos de varios colores; era un adorno de gran domire (1).

He aquí la pobre humanidad sin idea cabal de religión y culto: para el cuerpo todos son afanes y trabajos, mas para el alma ninguna preocupación. Sólo Cristo pudo renovar al género humano y rasgar el velo que ofuscaba su inteligencia y sólo el sacerdote y Misionero católico pueden enseñarle la sana doctrina de la

(1) Para mandar una *agaú* completa á la exposición de Turin, tuve que mandarla hacer en la escuela de niñas de Santa Rosa, en el pueblo no se pudo conseguir una, no había ya entonces.

inmortalidad y otros dogmas, para que con éste conocimiento busque primero el reino de Dios y recibe lo demás por añadidura (1).

Explicación de la ilustración anterior

1. Palitos para conseguir fuego.
2. Asta de toro para tañer.
3. Cola de quiriquincho para tañer.
4. Pincetas para arrancarse el pelo del rostro y otras partes.
5. «Mboivera» ó planchas de plata para adorno.
6-7-8. Tembetas de metal.
9. Tembeta de caña hueca.
10. «Yapicuana» ó cinta para el cabello.
11. «Aguá» ó cinta larga para adorno de la reina en las bebidas de gala.
12. Peine de madera.
13. Porongo para tañer.
14-15. «Sesene» ó flautos chiriguanos.
16. «Igüiramimbi» para tañer.
17. Hacha de piedra.

[P. 200]

CAPITULO OCTAVO

LA FAMILIA CHIRIGUANA

INTRODUCCION

Es completamente absurda la teoría del fundador de la escuela transformista, cuando pretende demostrar y establecer el origen de la raza humana por medio de la evolución. Esta teoría es admisible entre los individuos de una misma especie y entre las especies enlazadas por la intermediaria en el sentido de que, son aptas al perfeccionamiento casi substancial sin excluir la intervención de la divina Providencia que ha creado el primer ser organizado; pero no puede admitirse en el sentido de que, una especie típica inferior pueda pasar á ser especie superior, porque falta la especie intermediaria. Por ejemplo: el bisonte europeo y el americano son hoy dos especies completamente distintas, sin embargo uno y otro presentan transiciones tan imperceptibles con los restos del Il Priscus, ó bisonte de los tiempos anteriores que pueda considerarse como el tronco de aquellos.

La transformación pues es admisible sólo en las especies representativas, las cuales provienen por disposición divina de las preexistentes. Entre el hombre y el mono falta la especie representativa, el anillo de conjunción, por donde aquél no puede ser un mono perfeccionado, como enseña Darwin y todos los de su escuela, porque pertenece el hombre á un género especial de elevada categoría por sus facultades intelectuales. Si los antiguos combatieron la teoría del hombre-mono, es por ser absurda y contra-

ria no sólo á la Religión, sí que sólo á los verdaderos principios teológicos y descubrimientos geológicos (1).

La teoría antelicha se ha extendido ya por todo el mundo y hasta comienza á penetrar en la región de los chiriguanos: ¡quién lo creyera! No lo mostró á un pobre labriego una figura, donde estaba pintada una mujer desnuda que en nada se distinguía de las actuales y un hombre, que sólo se diferenciaba de los demás por tener un rabo bastante largo y el infeliz labriego ya creía en la teoría de Darwin, explicada por un discípulo muy sumiso de este hombre-mono, que se cree á lo menos nieto del ilustrado y progresista orangután ¡perdónen amigo!

Los verdaderos geólogos y zoólogos van demostrando hasta que punto, es indiscutible la doctrina transformista, explicando de un modo natural la procedencia de nuevas formas orgánicas por las especies intermediarias ó representativas y van reconociendo sólo, que la existencia de otros grupos, como los géneros naturales y el hombre por sus facultades intelectuales obedecen á un plan manifiesto de creaciones independientes (2).

La ciencia y la fé no pueden estar entre sí reñidas, porque proceden de un mismo principio, el Creador del universo. La ciencia va demostrando desde fines del siglo XVIII que todo el relato de al creación que hace Moisés en el Génesis hasta el principio de la nueva época, está conforme con los descubrimientos en las capas terrestres y en la astronomía. La ciencia que pretendía deslizar

(1) "Algunos personas sapientísimas que combatimos estas ideas por motivos religiosos y no hay nada de eso, á nuestro modo de ver, tales principios no tienen aquí nada que ver, puesto que no se oponen á que se admita, que Dios pudo haber dotado á la materia bruta de particularidades tales que se convirtiera por sí misma orgánica en mecanismo particular asombroso. Los antiguos escritores aunque muy religiosos, han admitido la generación espontánea, tesis que fué rechazada tan pronto como la verdadera ciencia quedó bien establecida. La cuestión es aquí puramente científica, combatimos esta teoría, porque carece de pruebas directas para ser establecida empírica y razonablemente". Smith. Uomi dei fos. en physique 1ª ed. pag. 594.

(2) La astronomía ha demostrado que igual cosa sucedió en los astros. El sol y las estrellas fueron probablemente materia etérea, luego pasaron al estado de nebulosas y de estas á astros ó soles; del sol se desprendió una porción de nebulosa y formó la tierra; de esta se desprendió otro anillo y formó la luna; actualmente existe uno de estos anillos para devorarse las últimas dudas, en Saturno.

de un solo golpe la relación del Libertador del pueblo hebreo como parte de ignorancia, ya reconocimiento científicamente su importancia y falta poco para el triunfo completo de la fé, falta tan solo el desvanecimiento de los vestiglos como hombres primarios, ó los primeros productos de su inteligencia.

Se ha dicho que existen objetos de la industria humana anteriores á la época de Adán y quién sabe hombres aún, cuyo último no está todavía bien esclarecido, como tampoco la primera. La teoría no ha sido condenada por la Iglesia; ésta se ha limitado á decir que los hombres actuales respiran su origen de Adán, que es el tronco de la humanidad actual. A pesar pues de ser temerario, sin embargo sin faltar á la divina religión ó revelación, puede suponerse que hayan existido hombres anteriores á Adán, pero extinguidos antes que éste sea creado directamente por Dios y aparezca en el mundo. Repito que á pesar de ser absurda y loca la opinión de una existencia prehistórica humana en el sentido mencionado, no está condenada, luego los consiguen de la fé y entre ellos, Draper, vienen en desprecio á la Iglesia católica, como si sus doctrinas y sabia enseñanza fueran diametralmente opuestas á lo que enseña la ciencia en orden á la antigüedad de la tierra, y al tiempo transcurrido desde Adán á nosotros (1).

Familia

El gitanito nos hace conocer el origen del género humano y fuera de este libro, todo es confusión; la fé nos enseña que Dios formó al primer hombre á su imágen y semejanza y muy luego dió le una compañera sacándola de su costado, de donde se deduce que la familia en el mundo, á época histórica, comenzó desde el principio de la humanidad (2).

La escritura no nos dice que sea permitido á los hombres tener muchas compañeras, con hecho de Lamech y Abrahán bígamos y

---

(1) Tomando de á la tierra que millones de años y Bochet 123 millones, puede opinarse que los años del hombre sobre la tierra sean más de ocho mil, porque las palabras gemen, gigante, etc. se indican á no poder que el engendrado cuyo desenvolvimiento sólo con el engendrador.

(2) Los lectores conocen ya la ciencia que nos comunica Andrani referente á la creación del segundo chiriguano y de la segunda chiriguana; aún de esta me nos alguna vez para alegrar el rato de la polígamia en sus interacciones sensuales á los colores.

de Salomón polígamo. Abrahán fué bígamo por ser su princesa estéril y se unió á su esclava sólo para tener sucesión, pero el Redentor prohibió rigurosamente ambas costumbres para la posteridad, poniendo nuevamente en su lugar las cosas, porque la mente de Dios fué que el hombre, no tenga más que una mujer, lo cual se desprende de la misma creación, habiendo hecho una sola pareja, origen de la gran familia humana.

Es muy natural que la raza chiriguana constituya familia; cada tribu ó pueblo es una agrupación de familias, las constituyen los padres y los hijos, pero muchas veces tienen estas por cabeza un abuelo y abuela muy respetados, pero que nada ordenan, ni disponen, antes bien sirven á sus hijos voluntariamente como criados, el primero en el acarreo de la leña, siembras y escardas, y la segunda en todo lo que pueda ocuparse una mujer.

Pueden no existir otra raza como la chiriguana en Bolivia que dé, como ninguna, rienda suelta á las pasiones, especialmente libertinas. Una doncella que comete una acción mala, es la gloria de su madre, quien está contenta con decir que ya su hija es mujer, esto para ellas si un joven hace cosas semejantes y lo sabe su padre, éste pondrá la hazaña de su hijo con decir: *Cuiñabe en*, es hombre. Tal expresión se oye á menudo (1).

De aquí proviene la desmedida corrupción y si la raza toba se distingue por su inclinación al hurto, los chiriguanos se distinguen por su inclinación á la lujuria, como pueden atestiguarlo antiguos y valientes Misioneros ó la talla del P. Corrado y Giannecchini. Considere el lector, vivirá poco el trabajo del Misionero que intente y se dedique á la reducción de un indio, que hace alarde de inmoralidad, pronto que Dios castigó ostensiblemente con dos diluvios, de agua y de fuego, manifestando su justa indignación con espantosos cataclismos: *Ex permanebit spiritus meus in homine, quia caro est.*

Con estas inclinaciones en nada refrenadas, antes bien fomentadas con los sinos excitos corporales y todas las facultades del alma, no es extraño, i existe entre los chiriguanos la tendencia á la bigamia muy frecuente y poligamia por lujo ó señal de grande-

(1) Cuando el Misionero piensa reprender ó castigar el pecado de algún mozo chiriguano, el padre, el abuelo ó el cacique suplican y los mayores palabras para amonestar ó decir, que no merece castigo con: Cuiñabe ene en, ó es hombre.

su. Si no todos tienen muchas mujeres, es, ó porque no les es fácil mantenerlas, ó porque no las hallan fácilmente, porque cada cual quisiera ser patrona única en su casa (1).

Los caciques regionales son polígamos casi todos ellos y casi en cada pueblo de su dependencia tienen una mujer, sin contar las ocho ó diez que tienen en el pueblo donde residen, los caciques pueden, porque poseen la autoridad, aunque nada les dan. Antiguamente la poligamia era mucho más extensa, no lo es en la actualidad, porque la raza se ha reducido mucho y en todas partes si no ha penetrado el Misionero, ha penetrado el cristiano que alguna vez es un reproche de la fabricidad del *Ara* carnal.

Caciques regionales actualmente son muy pocos y estos mismos son siervos sumisos de los blancos que pero les dejan vivir á su antojo, pero en lo que se refiere á moralidad, toleran que vivan, como quieran, sólo el Misionero les hace comprender que tal vida es contraria á la ley divina, pero el chiriguano muchas veces no quiere comprenderla.

Aseguran los grandes que el poseer muchas mujeres, es necesario para la elaboración de la chicha de convidarse á los huéspedes y visitantes. Esta excusa no es satisfactoria, porque el cacique en el pueblo de su residencia es como el rey absoluto y nada más fácil, que ordenar á sus dependientes ó parientes y tener continuamente la bebida apetecida, á más de que cualquiera que la traiga, mande largo al cacique que pide para sí ó sus huéspedes.

Los solteros en su generalidad son bígamos, pero no se vuelven tales desde su juventud, cuando apenas son como el pimpollo, sino á los cuarenta ó cincuenta años; esto sucede cuando la primera mujer es más antigua que él, ó se ha captado la simpatía de otra más moza que lleva á su casa tan largo, que la tiene en pacífica posesión; ordena en seguida á la vieja que la respete. Si esta se calla y consiente, queda trabajando y sirviendo á su rival por el interés de la comida; sino se calla, recibe una buena dosis de palos, es arrojada de casa y no vuelve á entrar en ella. Pero hay mujeres varoniles que no permiten la profanación de su lugar,

(1) En casa del polígamo ó bígamo, la que ordena y dispone como dueña y patrona, es la más anciana, toda vez que previene el pensamiento de su marido; pues como sabe su inconstancia irremediable, para no perder su autoridad en casa, aconseja un segundo y tercer enlace, etc., y entonces el señor de todos ellos impone el respeto debido á la más anciana.

[Facing P 205]

Educación de los niños con el trabajo

donde viven desde niños y tienen hijos de nuestra raza, entonces queda abandonada, porque el hombre se trasladó á la raza de la mujeres (1).

Cuando una madre de familia queda viuda en su edad madura, pasado el año de viudez, si tal mujer respetable, fácilmente puede casarse nuevamente; con nuestra sola nada si tiene algún hijo, siempre una pequeña. El chirigüano se casa con la madre con la esperanza de poder casarse con la criadita, cuando llegue á la edad conveniente. Si al tiempo de casarse con una viuda la criadita es de mayor edad, difícilmente consigue su intento, porque los mismos chiriguanos están ahora de acuerdo á pesar de que no vacilan para no ser engañados nuestras vecinas sirvan de alcahuetas á los tenjes durante de su noviazgo (2).

A pesar de ser tan inclinado á la bajeza sin miramientos á la edad aún en tiera tierna, no dejan de considerar el respeto que profesa el chiriguano á la consanguinidad, en cualquier grado que se la considere. Difícilmente se que un matrimonio con una prima en cuarto grado y procura conservar aun los grados más lejanos. Con nuestra sola nada el padre respeta á sus hijas como cosa suya, siendo completamente falso lo que algunos escribió al respecto, de haberse dado el caso de que un chiriguano á nuestra hija viviendo con sus hijas, ya hubiesen la mujer. En la verdadera gualeva sucedió que se casaron con sus primas, ya que con que sus respectivas la gualeva, pero gualeva sólo las que viven de aquí á pocos años?

Modo de hacer un matrimonio

Muchos autores tienen el indio para contraer un matrimonio entendiendo lo último; debe en primer lugar pasar buscar candidato de mandar y intendar. Cuando ya ha elegido á la que debe ser la prida de sus ojos y tiene bastante valor para pedirla personalmente á sus padres, hace sus visitas de mandar á la familia de la

(1) Antiguamente abundaban las mujeres por causa de las guerras, hoy abundan por la emigración de los indios á la República Argentina.

(2) La necesidad en la imposibilidad de blasonar de los indios necesitamos de su poderoso, empezando la fuga para otra misión y otra pueda conseguir otra, se quita la vida con el cuchillo.

[illegible] visitas sus tardes, hasta que los viejos le preguntan el porqué de sus ausencias. El joven en principio se contenta con sus mentirillas, pero si advierte por el cariño de los preguntones, que hay un hilo de esperanza, vuelve y hace llegar de vez en cuando regalos de caza, quesos, y frutos de su trabajo como gallinas, abejas y pájaros cantores por él.

Si el tanto del joven agrada á los viejos, hacen todo lo posible para que la hija consienta, pero muchas veces el pretendiente lo pierde todo, ó porque los viejos no quieren ó porque aquella lo aborrece; este último caso rarísimo, cuando el novio es algo anciano (1).

Cuando el joven es pudiente, se sirve de una tercera persona, como se hace en todo país, el tercero se presenta también de noche á hablar en siguiera y expone la causa de su visita desde la primera noche y por supuesto que en la primera no queda del todo convencido. Tiene que ir repetidas veces y ninguna tanto no debe faltar los regalos á los futuros suegros. El pretendiente acostumbra llevar también hasta de bota escogida cada mañana á la madrugada, que los viejos intercalaron al aparato, se conviene ó no el matrimonio (2).

Cuando los viejos quieren y á la hija agradan los modales del joven, el asunto se resuelve pronto y el esposo entra á la casa de la esposa sin decir palabra tres ó cuatro noches sin dejarse ver en ella de día. El cuarto ó quinto día revela ambos se presentan al público, sentándose en el umbral de la puerta; entonces se le acercan las compañeras solteras del recién casado y le dirigen mil preguntas bromistas por su suerte; la joven todo lo oye con sonrisa sutil, pero en el primero y último, no volverá á repetirlo.

De la dicha se desprende que no es la joven que busca al hombre para casarse, sino éste; y en provincia de sus deudas, amigos ó conocidos acaso aquella manifiesta en amar al esposo, por más que le quiera de veras. Este amor verdadero hace que muchas veces se haga la desdeñosa, porque sus padres se opusieron al ca-

---

(1) Entre los chirigüanos no se aprecia más que la valentía del hombre y su bondad; la belleza, la riqueza y la nobleza de otro caso son pruebas de ningún valor.

(2) El encargado de las gestiones matrimoniales ó el tercero cada día da cuenta de su cometido al enfermo joven, animándole á tener esperanzas.

lam, vive en otra tribu por una larga temporada en casa de sus deudos con el esposo y vuelve ya contraído de hecho el matrimonio.

En sus orígenes los chiriguanos no acostumbraban á hacer fiestas, sólo después de haber consumado el matrimonio, la madre del recién casado, mientras la ausencia de su hijo en la casa de su esposa, hace fermentar la chicha. Al quinto ó sexto día los llama, se los tiene en casa todo el día, les hace beber en punto, les prepara un pequeño almuerzo con modestísimo carácter para su amor, da á quienes muy valiosos consejos y les despacha al atardecer la noche (1).

Vida y tareas durante el matrimonio

La vida del hombre es una continua lucha, dice el sabio dicho: *Militia est vita hominis super terram*, pero la vida en el matrimonio es doble lucha; quien del estado de soltero pasa al de casado, lo ve tan largo que se acaba la buena luna. El Misionero dedicado á la conversión de los infieles, como el párroco en la administración de una parroquia, pueden dar cuenta exacta, si los sufrimientos de sus feligreses casados son ó no mayores, que los que experimentan sus feligreses solteros.

Consideremos pues para los recién casados chiriguanos una vida nueva. Tan largo que pasó la comida íntima en casa del esposo, salen con frecuencia por el pueblo, van al campo, preparan el maíz, la leña, el agua, hacen fermentar la bebida y cuando está en su punto, convidan á sus parientes y amigos y se alegran durante un día, sin sentir desfallecimiento. Así practican aún los neófitos el mismo día del matrimonio por haber visto que así lo hacen los cristianos blancos (2).

La mujer vuelve los chiriguanos es una verdadera esclava, y el hombre un señor, el trabajo de ésta para la familia se evidencia á la simple vista y recuerda, como á tener la leña necesaria. Además por

(1) En los chiriguanos que el esposo debe vivir en casa del suegro, tan largo que se contrae el matrimonio, de otro modo no entregan á sus hijas; la medida es muy acertada, así se evita muchas veces que el hombre abuse mucho de su autoridad por respeto á los suegros y por temor de ser arrojado.

(2) Este lavatorio se practicaba en casa de los suegros, por lo cual ambos varones ayudaban efectivamente el uno en el acarreo de la leña y la otra, la madre, á su nueva hija en todo lavatorio en servir á los bebedores.

divertido y pueden pasarlo en casa y fuera, en el campo y en la playa, en el mismo pueblo, pues lo dicho del tiempo con mas amigos hablando, contando bromas, cantando canciones: *Kiri-ri*, jugando al mejo y al *Ikiro*, aprendiendo hasta el *Ejeg* ó mismo de su mejor.

Visto al contrario en el campo de la casa, aparece el niño con un: *Mayoro*, especie de red, en el manantial y tras en una hondonada y á largos distancias como 50 litros de agua, prepara la comida, chisporrea la chirlas, nava no nava, lila, lajo pescados, hace ollas, cuida de sus hijos, cría chanchos, gallinas, ovejas y cabras, hace el queso, el tiene vacas, y como si todo esto fuera poco coge, por las tardes se coloca encima de su caballo montado, le monta la cabalgadura y por distancias en hacemado en aquel laberinto á los lomitos que existen sin tener el suelo, no digo de cultivar, sino de cultivarlos con los diversos usos y hacer su cosecha anual; cosa muy fácil para ellos.

Al hombre todo está permitido, puede jugar de palabras y chistes hasta con otros, pero á la mujer no está permitido, al ser casada, lo que hacíalo para ser maltratada, y divertirse. ¡Cuánto mas hay de esta naturaleza! Un gran rey abandonado á sus mujeres con sus cuatro ó cinco proporciones salir el hombre y el desgraciado, mientras el pobre sin tener motivo casualmente está trabajando con otro, participándole lo poco que gana y desgraciado de la primera mujeres (1).

Por último el hombre cuando quiere, puede desquitar á su mujer con toda facilidad; la mujeres cuando desquita en palabras maravillosas llamadas: *Cielo pocki*, mujer mala; *Cielo kongoro*, mujer perdida, horas solamente para comenzar fuego. Con tal desquite mujer aguanta con hasta y resignando, que el pobre se espera la voluntad de otra mala joven.

Cuando con madre va al manantial ó río, lleva consigo á su hija ó hija, se baña y baña con á su parvulita, usada recogida como gruesa de: *Mirio*, especie de pañuelo, cambiando su sombrero y el de su hija. Simpáto y hermoso; el hombre se distrae, mas no lo es el hermanito de la cabeza con la *Mirio*.

---

(1) Cuando el hombre resulta denominado pervertido, es la mujer, quien lo deja, pidiendo otro cero y los hijos la siguen, porque el cariño puede mucho, y recibiendo amor á sus hijos son dichos mamarros muy sonrientes.

Pruebas y alumbramiento

Hallándose la mujer en estado, no abandona sus labores de costumbre y como siempre anda al campo y lleva de allí cargas pesadas de maíz ó otra cosa. Unas para sí, como ya he indicado, otras especie de mal capisto que trabajan los indios con la cortana de la encomienda ó mayoral. Las trabajadas por los chirigüanos son como chigua, son sujetas por la parte de arriba, donde tienen un cordel normalmente, en cuya parte media se coloca una correa ancha, sostiene la mal sujetan el peso con la frente (1)

Próximo el tiempo del alumbramiento carga menor peso, dispone lo necesario que consiste en unas tenazas pedidas y un cilindro nuevo para cocer el maíz que debe comer hervido. Si la silla fuese vieja, ó cruda, el momento estaría sujeta al mal aubero ó epilepsia y si la parturiente consume maíz tostado, se vacarlas las pedidas, ó no darían lecho para alumbrar al niño.

Al tiempo del alumbramiento sólo queda en casa la parturiente, los demás salen al monte salvo, pero dan avisos inmediatamente al tener noticia del alumbramiento para prestar algún auxilio ó no espero y ó la parturiente que sola no podría atender al recién nacido y ó no conoce que haría con su misma vida por los dolores, de los que se acomete con la vista del fruto de sus entrañas que le hace olvidar por un momento los sufrimientos pasados.

Cuando es segunda con menos todo rodeo de tal tamaño. Dejan una vistas, pulsadas ó otra cosa, el cuerpo de la parturiente y la colocan sobre la arena bien abajo, la hacen descansar en una cama que nada ó poco tiene de tal, pero como todo chirigüano es forzoso, aguanta allí como en un lecho mullido.

En todo el mundo el alumbramiento es tenaz muy peligroso y aún así lo es, los chirigüanos también necesitan bastante dolores. Preguntados algunos ancianos sobre el particular, afirmaron que el parto de las antiguas duraba mal cuando quiera días y se maravillan como las actitudes se levantan las pueblos ó las mujeres días calculando ó sus horas acostumbradas, repiten ó antiguos es-

(1) Los chirigüanos hacen descansar todo el peso de la carga, que llevan, en su espina dorsal, etc. que sujeta con la frente. Si el agua está á mucha distancia, hacen lo mismo; aun, llena la tinaja no se hombro cogiendo correspondiente ó no su cabeza, donde colocan una cosa de trapo.

le sobreviene á la muerte de alguno siguiente en los años de la pubertad.

Es por consiguiente un error alemar que las parturas caigan al lago á al río á bañarse después del segundo á tercer día, nacido nacen en el mismo día del alumbramiento, este último si la madre natural lo admite. Quizá pueda darse algún caso extraordinario de que deba cambiar alguna parturia su aspirada del alumbramiento, pero no deja de ser caso extraordinario. Las mulitas van dejando la mamadera de sus abuelas y recibiendo paulatinamente la de las tías, no salen de casa hasta estar completamente sanas y ellas la vestidas el amanecer del día domingo; entonces estrenan un nuevo vestido y se presentan á la puerta de la iglesia para recibir la Bendición *post partum* (1).

Recién á los quince á veinte días, la parturia está completamente sana y se le permite salir de casa, ir á bañarse y pintarse la cara con el *urucu*, cultivado paulatinamente á los trabajos acostumbrados. El parturio es considerado por los chiriguanos como tiniaga de *ayuno*, el cual dura cuatro meses que tienen parte todos los de la familia, más esto no es cierto, ello el marido está en este debe y le prestan dos á tres días (2).

Los Bilmanos practican *Couvaigue* de los mulitas la superstición que reciben en el el *ayuno* del marido, pero cuando tan cadera ya que nuestro vos sirvan, enseñados en sus hijos el abandono de las costumbres de antaño. He conocido una anciana muy apegada á estas prácticas que de todos modos intentaba obligar á su hijo el ayuno, en vista de que ocurrían los accidentes en cada parto de la nueva.

Crianza

Para determinar del recién nacido tienen una especie de red que cuelgan en una coronadal del chiquinchiri; allí es cuando la colocan, cuando duermen, y la cubren con cualquier tela para que no le molestire las moscas. Algunas hermanas de las á algodón son bañadas

---

(1) Si es caso extraordinario, no resulta de ti siguiera extraordinario, á la bendición *post partum* han sido acostumbradas por las mismas mujeres antiguas, y así siguen.

(2) Dicen que el ayuno del padre de la criatura es necesario para que esta no muera, si le sucede dado algunos, cuando haya crecido.

[illegible] por ellas y sus familias: *Iai ó quika*, cuyo término posterior [illegible] literalmente, quietud.

La madre casi nunca deja al recién nacido y para ir á la fuente ó río, aprovecha del tiempo en que duermen, dejándolo al cuidado de alguna persona aunque pequeña; no puede llevarlo todavía en los pliegues de su vestido, porque los tiernos miembros del niño no resisten á tal posición. Sólo cuando han tomado alguna consistencia, anda la madre de un lado á otro del pueblo, al campo, á la fuente, sin dejar al hijo en casa, como las canadrejas ó como los canguros de Australia, que no dejan á sus crías en las cuevas, cuando van afuera, dando saltos como el gerbo.

El sol en la región chiriguana es abrasador y sin embargo los niños expuestos á su acción poco ó nada sienten sus efectos, reciben sus rayos perpendicularmente, de frente, de todos lados y plenamente en el centro y en lo mismo que si estuvieran en la sombra. Lo único que los protege, es el color cobrizo de la raza, porque la experiencia ha demostrado que dicho color se adquiere (1).

Para las madres después del puerperio no hay alimento especial, ni más abundante; se nutre la que da pechos á su pequeñito, cuando y pésimamente, su comida ordinaria es el tacuto, la harina tostada de maíz, el pan del mirasol, las hierbas, las aloinas, las calabazas, otras cosas de esta jaez y raras veces un poco de carne comprada de vez, otra de vaca muerta por enfermedad, falta de pastos ó empachadas por la víbora y finalmente de carne de cana ó de gallina. A pesar de esta pésima alimentación la leche abunda en sus pechos, los niños están casi siempre colgando de ellas y chupando y nunca alcanzan á terminarlos, lo cual indica que son excelentes madrinas.

Las madres mestizas ó de cara blanca que á veces tienen poco ó ningún pecho por enfermedad ó otro accidente, contratan á madres chiriguanas, las pagan bien y las tratan mejor, pero parece que una buena y óptima alimentación continuada, les perjudica,

(1) El color de los recién nacidos es bastante extraño, se parecen á [illegible]; muchos párvulos son completamente blancos, mas no como los europeos, se advierte desde luego la diferencia entre [illegible] y espíritus.

siendo también perjudicial el pecho á ambos recién nacidos, sucumbiendo primero el niño más débil (1).

Mellizos

Los partos múltiples son raros y los de dos párvulos son frecuentes, en aquéllos perecen los recién nacidos muy luego y en éstos uno vive casi siempre y en muchos sobreviven ambos. Cuando los gemelos sobreviven, ó por muerte de la madre queda el recién nacido huérfano, es muy fácil á la abuela tomar el cuidado de uno ó del párvulo huérfano. Por más que la anciana haya rayado ó pasado de los sesenta, consigue con mucha facilidad hacerse bajar la leche; muele semilla de sandía ó la raíz de zarzaparrilla: *Iripocugua*, se lava repetidas veces estrujándose sobre y por encima de los pechos, hace chupar continuamente al niño hambriento por algunos días y al cabo de poco ya obtiene el fin. A veces aún á las jóvenes se les retira la leche, buscan entonces la raíz y el agua del sámolo ó *cipoi*, se lavan los pechos con dicha agua y consiguen dar de mamar nuevamente á sus niños (2).

Gozo y pesar

Para la raza chiriguana es igual el gozo que experimenta en el nacimiento de un varón, como en el de una mujer, porque si aquél ayuda á su padre en las tareas del campo, en la caza y en la pesca, ésta ayuda á su madre en las tareas de casa, pues tanto el padre como el abuelo gusta mucho comer harina, molida por las mu-

---

(1) Naturalmente las chiriguanas se niegan á ser nodrizas de los niños blancos, porque los aborrecen Cuando saben por experiencia las tristes consecuencias, comunicadas por otras, se resisten más y sólo lo hacen, cuando prevalece la fuerza ó el derecho del más fuerte.

(2) En la confirmación administrada por su S. Iltma. en Octubre del año 1909, en la Misión de Ivu, una anciana de unos 60 años presentó á su nieta á quien hacía mamar, vive todavía ella y vive la nieta melliza, aunque no muy robusta.

nos de su hija ó nieta. Penoroso es el dolor que experimentan los viejos por la muerte de cualquiera de los dos. Repetidas veces he presenciado los arranques de dolor de la madre por la muerte de su hijo y el profundo sentimiento del padre por la irreparable pérdida de su idolatrada hija.

El hecho que voy á relatar convencerá mejor á mis lectores. En el mes de julio del año 1909 un perro hidrófobo de la escuela de niñas de la Misión de San Buenaventura de Ivu, mordió levemente á Cecilia Yaguándai y con más rabia á Ana Yarandui y Delina Aragúndai; las dos últimas, menores que la primera, vinieron ante mí para hacerme curar de las heridas, en las cuales apliqué algodón empapado con amoníaco, del cual hice beber cinco gotas. Estas últimas experimentaron una fuerte calentura de cuatro días, pero están vivas. Cecilia no consideró su mordedura de mucha gravedad, ni se presentó, ni supo haber sido mordida, tampoco tuvo calentura fuerte, porque realmente apenas le salió sangre, como refieren sus compañeras.

Llegó el mes de enero, justamente seis meses desde julio, las niñas curadas con el amoníaco vuelven á tener el mismo grado de fiebre y sanas, la otra principia á tener miedo del agua y á reirse de sus compañeras del mismo miedo, tanto que fué objeto de jugarreta; baja al pueblo, desea tomar agua, no puede y se lo avisa á sus parientes; en seguida se le declara un dolor en la muñeca, en la tetilla y espaldilla que con nada pudo curarse, apareció la enfermedad y recibió los sacramentos. La noche antes de morir quiso correrse de casa, aulló sin descanso é intentó pegar y morder á su madre; en suma tuvo una verdadera hidrofobia que la llevó al sepulcro en tres días (1).

Hasta que fué enterrada, ignoré lo sucedido en el mes de julio, mas al ver tanta semejanza con la hidrofobia, averigüé y resultó ser realmente la misma que le dió la muerte. Sus padres como no podían persuadirse que la mordedura produjera efecto después de tanto tiempo, atribuyeron la muerte violenta á maleficio asegurando que esto hizo hacer un joven, que días antes la in-

(1) La niña Cecilia fué mordida por el perro hidrófobo cabalmente en la muñeca de la mano, donde le comenzó el primer dolor á los 6 meses; cuando la rocié con agua bendita, tuvo miedo y se extremeció.

tda pedido por esposa, cuya pregunta no habia aceptado; pero es de advertir que toda muerte, los indios la atribuyen á hechizo.

La desaparicion de esta niña fué muy llorada por parientes y extraños y sus padres que muy mucho la amaban, quemaron todos los vestidos y géneros que poseia, adornado de baleria enterrado con los mejores trajes y abundantes que su padre acababa de traerle de la República Argentina. Poseia la jóven tres juguetes regalados por su padre, los tendieron para no verlos ya, para no acordarse á cada momento de la finada y llorar en seguida.

He referido este hecho, para que sepan mis lectores que los chiriguanos aman indistintamente á sus hijos hombres y mujeres, para que vean el dolor que experimentan y para que se convenzan que en el caso de hidrofobia puede ser buen remedio la medicina que administré á los niños Ana y Delfina, los cuales despues de la última fiebre, están completamente sanos (1).

Hijos deformes

No es fácil averiguar porque los chiriguanos matan á los hijos que nacen deformes; algunos escritores han asegurado que lo hacen para que todos sean valientes guerreros; pero esta razón no satisface, porque no se encuentra mujer deforme y por cierto que éstas no son aptas para la guerra. Juzgo que quitan la vida á los infelices, no para hacerles daño, sino para ejercer con ellos un acto altamente filantrópico, pues mayor sufrimiento tendrian quedando ciegos, tullidos, cojos, mancos, mudos y sordos por todo el curso de la vida (2).

No he visto que otro deforme en la actualidad y todos cuantos existen ó se deben al valor que no han tenido sus padres en vie-

(1) Si algun nuevo Misionero ó otros lectores lo ignoran, sepan que el amoniaco bebido por gotas en agua y puesto en las picaduras de víboras y otros animales ó insectos ponzoñosos, es muy eficaz. En la ignorancia de haber sido picado por una araña sufrí las consecuencias siete meses, y sané luego al aplicarle el amoniaco; para otra picada, usé la tinta de escribir con mucha eficacia, hasta pintar con ella la parte mordida.

(2) Actos filantrópicos parecidos se ejercen aún entre los tobas y otras tribus; para que no sufran mucho y largamente, entierran vivos á los enfermos.

tiene á sus hijos, ó se debe atribuir á enfermedades contraídas en edad bastante avanzada. Como consecuencia del presente capítulo añado que algunos han escrito lo que no saben, haciendo de los chiriguanos otros tantos bárbaros feroces, sin compasión, pero un hecho particular no puede traer consecuencias generales. Verdaderos exploradores afirman constantemente que el indio chiriguano por lo general es hospitalario, quiere á sus parientes en la vida y en la muerte y se admiran de la conducta de los blancos que á la muerte de sus deudos derriban rezan, beben aguardiente y juegan como si fuera una fiesta (1).

---

(1) La conducta de ciertos civilizados no debe el mundo reprobarla, pues en naciones más civilizadas hay los bailes de beneficencia; beben, bailan y hacen otras cosas, mientras los pobres ó enfermos sufren. El católico saca su dinero y lo da ocultamente sin tanta algazara, este es el verdadero modo de socorrer á la humanidad.

(P 216)

CAPITULO NOVENO

HIJOS, PUBERTAD, TEMBETA (1)

INTRODUCCION

Al frente de este capítulo sale lozana una pareja, hombre de jóvenes indios bajoamarillo uniformados con un Misionero Franciscano al lado. Son los indios de San Bernardino de Ivo, cuya fotografía se produjo en la visita pastoral que practicó el reconocido é ilustrado Delegado General M. R. P. Wolfgango Priesser, honor y gloria de la Religión Serática, el día 18 de noviembre de 1906; su secretario el inteligente P. Angel Dondero fué quien se encargó de producir este grupo y los demás en las Misiones de Potosí y Tarija.

Todos los indios son hijos de chiriguanos, cuyos padres se sublevaron el año 1892 en los campos de Cuimpuyú é sentían lugar del hoy: edificio Misión, que entonces no existía, son hijos de padres que llevan tatuajes y de madres que en su pubertad pasaron por rigurosas pruebas, conforme dirá en este capítulo nuestro.

Sus padres declararon guerra á muerte no á la Cruz, sino al blanco, fuera de sus cristianos, porque en él veía á su tirano y verdugo y quiso sacudir el yugo que dominaba al que consideraba su amo; pero es cierto que el indio era su esclavo y menear que mantenía cuan-

(1) Se tratará de la pubertad de las doncellas y de la imposición de la tembeta á los niños, lo cual se efectúa en para antes de su pubertad, para que cuando ésta se manifieste, presente el signo de la virilidad.

[facing p. 219]

Bandeja de S. Buenaventura de Ivo

tantosmente contra el cacay, no supo, ni supo hacer distinción categórica, porque no todos tienen malas entrañas. Si hay algunos malos, verdaderos verdugos de la humanidad, hay también muy buenos y compasivos, de quienes recibieron y reciben favores.

Los padres de estos jóvenes no se habrían llevado á una guerra desmoralizada, si el Supremo Gobierno hubiese decretado pronto la fundación de la Misión que ellos solicitaban, conforme pueda leerse en la historia del Colegio de Potosí; se ve en ella claramente, lo que hicieron los Ivoths para ser regentados por un padre Misionero, porque siempre, la autoridad política, se manifestó humanitaria con los infelices indios.

Pasan ya 19 años desde aquella hecatombe, y todavía las pampas de Curuyuqui, siguen sembradas de huesos humanos, todavía se ven los vestigios de sus fortificaciones, en las cuales contaban como fiesta con armas tan desiguales; todavía se conserva el recuerdo de aquel tenebroso y sombrío pavoroso (1).

Como consecuencia de la guerra, vino el decreto de fundar la Misión y, previsoramente, á los pocos días de la derrota, se practicó la compra y alinderamiento de los terrenos necesarios. Hoy viven tranquilos padres é hijos, algunos de aquellos pasaron á mejor ó peor vida, muchos experimentan el gobierno paternal del Misionero, que no se cansa de alabar; los hijos han aprendido la religión y la practican; han aprendido las letras y leen libros, han aprendido el canto religioso, y varios saben y tocan la música que les han enseñado los Misioneros ¡Es verdaderamente sorprendente el cambio verificado en tan poco tiempo, en indios tan belicosos! es la virtud de la Cruz! nada habrían hecho otros, como nada se ha hecho, si bien, donde no hay Misioneros (2).

Educación de los hijos

En el hombre es natural el amor y cariño para con sus hijos; si los aves, los animales y las mismas fieras de la floresta aman

(1) En la guerra murieron unos 500 entre hombres y mujeres, pero casi todos eran forasteros, los otros conocedores del lugar, se salvaron con la fuga y con escenderse; no gusta se les hable de dicha sublevacion.

(2) En todo sentido, la civilización del Misionero es preferible; la colonización que se quiere implantar hoy, cuesta mucho, progresa poco en lo material y nada en lo moral, á esto me refiero más que al primero.

y cuidado de sus hijos, esta misma inclinación, con mucha más razón, se halla en la misma criatura, hecha á imagen y semejanza de Dios. Ellos mismos no la hallan, porque el hombre, con su razón, ayudado de los conocimientos, procura el bienestar de sus hijos, su alimento, su vestido y su educación, corrigiendo desde la tierna edad las imperfecciones, y endereznando sus malas inclinaciones, como se endereza por el agricultor, los tiernos arbolillos que nacen torcidos.

El hombre civilizado que ha conquistado el deber de padre, el hombre que no es bestia y que por consiguiente sabe que él y todos descienden de un Padre común, Dios, cuida escrupulosamente del cuerpo y del alma de sus hijos; si para ello es necesario el castigo, lo aplica correspondiente á la edad del niño y á la gravedad de la falta. Si todos hicieran lo mismo, no se deplorarían en el mundo tantos homicidios, suicidios y otros crímenes cometidos por la juventud, como deploramos los periódicos católicos, é simplemente citamos los diarios ingleses y modernistas.

Hay niños que dejan de cometer una falta á una simple y sencilla mirada del padre, otros escuchan las palabras y les basta para no cometer el crimen el simple consejo de sus mayores, con estos no hay necesidad de rigor, porque su conciencia se inclina naturalmente y se amolda á la bondad, como se amolda la cera en manos del cerero. Mas, hay otra clase de niños que naturalmente se inclinan al mal, nada les conmueve y cuanto rehusan tras el vicio, como los mosquitos tras la miel; para estos, las buenas palabras hacen ninguna ó poca mella, y con la blandura no se corrigen. De este número es la mayoría, porque la humanidad es propensa al mal; para estos es necesario un poco de rigor, porque donde no se precisa la razón, es fácil que se vicie el tronco; se conoce la conducta que, así Dios con el pueblo hebreo, á quien castigaba en sus rebeldías, como castiga hoy inmoralmente (1).

El verdadero amor de los padres hacia sus hijos se halla vibrado en la Religión Católica, pueda esta patentizar con muchos ejemplos de moralidades que, á pesar de su inmoralidad, enseñaban el catecismo á sus hijos. Fuera del catolicismo no se cultivan los pa-

(1) La historia sagrada, refiere en sus páginas, los terribles castigos que recibían los hebreos por sus inmoralidades; para conseguir la moralidad del individuo y de la sociedad es necesario el principio religioso.

tanto del niño, no conoce un poco materialismo, y quizá no profesa religión alguna, ¿cómo puede educar á sus hijos? qué educación podrá dar, si además de esto es un ignorante? es cuanto á educar está apenas sensitivo, nada moral.

Esto es el cuidado de los chiriguanos. Amen á sus hijos de veras, todo el trabajo del chiriguano sirve ello: el bien corporal del niño, le procura el alimento suficiente, piensa para su vestido, vela para abrigarlo y defenderlo de la inclemencia de las estaciones, de la furia de los vientos, y de la importunidad de las moscas, pero no se preocupa de su moralidad; cruza el niño á su vista con todas las imperfecciones de los cuadrúpedos é insectillos, porque así también crecerá él, el padre.

Cuando los niños, de cualquier sexo, se hallan en pañales, recibe el cuidado de la madre, de la abuela ó de otra que sea muy cercana en el parentesco. El hombre difícilmente cuida de los recién nacidos, tanto porque esto es natural en todos los países del mundo, cuanto porque se rebajaría su dignidad; pero cuando el pérvolo comienza á abrir bien los ojos y tener algo de conocimiento de las cosas exteriores, lo toma en sus brazos con todo el cariño que engendra un niño en su inocencia.

Mas, quiere educar verdaderamente á los hijos de ambos sexos hasta los seis ó siete años, es la madre, ella los lava, ella los baña, los hace dormir, los hace mamar, los lleva de un lado á otro, envolviéndolos en los pliegues de su vestido. En esta tarea, el padre ayuda solícitamente, cuando la mujeré no puede atender por tener otros, ó por estar ocupada en la elaboración de la chicha, alimento de viandas, etc. (1).

Escuela de armas y astrología

A los siete años, y aún antes, el padre tiene un cuidado especial de su hijo varón, quedando las mujeres al cuidado de la madre; trabaja para su hijo el arco y las flechas, correspondientes á la edad; á las fuerzas, y comienza á adiestrarlo, enseñándole el manejo, el modo de asestar y la manera de tirar (2).

(1) Si falta la madre por fallecimiento, ó otro motivo, el hombre se halla en apuro con relación á sus hijos, y pronto busca á una parienta.

(2) El padre lleva á su hijo al bosque, donde principia á cazar pajaritos, y si consigue prender alguno, los lleva con satisfacción á su madre y luego se lo cuenta á sus compañeros.

Hay también hombres que enseñan á los niños el modo de ser ligeros en los combates, y aún el modo de esquivar las flechas enemigas, lo mismo que las balas. El hombre que esto enseña, llámase: *Paranaaiar*, ó sea hombre que rasguña, éste es el terror de los niños en el pueblo, donde reside. El modo que emplea, es correr en pos de los muchachos y ¡ay! de aquel que por flojera ó por descuido se deja alcanzar! En las manos del: *paranaaiar*, sufre el martirio de ser rasguñado en todo el cuerpo con uñas largas, que hace crecer de propósito, además de la reprensión que le da: de hacerse alcanzar por un viejo: en una segunda carrilla, no es fácil que el niño alcanzado, se deje prender (1).

Cuando todos los niños de una tribu han recibido lecciones prácticas de tal sección, ya pueden ser aptos para la guerra, porque la habilidad consiste en saber tirar para ofender y esquivar la flecha enemiga. Los indios, que saben tal estrategia, son llamados: *Guerreros*, por sus compañeros.

En la última guerra de *Curuyuqui* los indios asaltaron la Misión de Santa Rosa, mientras estaba allí el coronel don Tomás Frías, éste tomó de blanco á un indio *guerrero* que parecía jefe de una compañía, perdió unos ocho ó diez balas sin tener el gusto de derribarlo. Casi todos los indios aprenden este modo de guerrear, por esto sus combates duran poco; el de Curuyuqui duró ocho horas, porque estaban resguardados en las trincheras.

Diferentes modos tienen los niños para aprender á ser certeros en tirar las flechas, y ser buenos cazadores y valientes guerreros. En el campo, ó en el bosque, se divierten con provecho, ensayando y tomando por blanco los pajarillos y aún las langostas, cuando las hay y cuando vuelven á su casa, dan prueba de su valentía, clavando la flecha en el montera, en que su madre suele moler el maíz.

Cuando los niños se reunen en el pueblo, aprenden el manejo de la flecha, tirando á una rueda de madera que uno de ellos hace rodar con toda fuerza. Dicha rueda, se hace de una clase de cacto redondo, que crece una cuarta ó poco más, y se llama: *Zipepe;* los niños, armados de flecha, se colocan en fila y el más valiente acertará á clavar la suya en la materia blanda del *zipepe*..

---

(1) Los de mayor edad, se hacen rasgar la pantorrilla por otro del arte, con el diente del: *Acuti*; les sale bastante sangre, y en sanando, aseguran que son muy valientes para correr y resistir el cansancio, mucho más de los que no se hacen rasguñar.

El *ejeye* es simultáneamente escuela de tiro al blanco y juego, de este último tienen otros que voy á nombrar de paso. Tiene el: *Tiono*, trompo, es diferente del de los pueblos de la República, es una pequeña calabaza con un agujero en el medio, en la parte superior; cuando lo hacen girar, produce por el aire, un sonido prolongado, igual al de los terceritos que mugen con mucha sonoridad y de aquí le viene el nombre de: *Tiono*.

Otro juego propio de chicos y grandes, es la pelota, que tiene su tiempo determinado, es cuando hay mala fresca, á principio á hacerse sentir el frío. Le llaman: *Tipo* y lo hacen con chala fresca de chacra, de modo que, terminada la estación del mala fresca, terminan ya el juego de la pelota, y se distraen con otros muchos juegos que tienen (1).

Vida privada

El padre y la madre, se conocen mucho por el bienestar material é corporal de sus hijos, hombres y mujeres, y éstos corresponden al cariño de *Ama*. Sin embargo, no faltan seres de pésimas inclinaciones que olvidan la bondad de sus padres, olvidan los trabajos sufridos por éstos, en cuidarlos en su tierna edad, y los abandonan en la vejez en medio de sus sufrimientos y achaques.

Casi siempre, el padre y la madre, dirigen palabras ásperas á sus hijos, mucho menos los corrigen con castigos corporales; frecuentan los hijos las bebidas pálidas en compañía de sus padres y ¿qué extraño puede parecer que al padre ó hijo, se les vea algunos veces *ebrios* en las calles ó en la plaza del pueblo? Ven á sus padres, en campo ajeno, aprovechando de los primeros frutos, pero el hijo hace lo que vió; oye á su madre cometer mala acción, se acciones mala moralos, provocia alterados en casa, oye los ecos de su madre, ve los maldades de su padre, él, pues, sigue el mismo camino, llegado á la edad competente y sólo entre.

Si la mujer, al tiempo de casarse, es muy joven, como sucede regularmente, son los abuelos quienes cuidan de sus nietos, para que la hija joven, tenga más tiempo de divertirse, pero en princi-

(1) Los mismos no se enumeran, porque no es este el objeto del capítulo y además sería cansar mucho al lector.

gio, para los jóvenes, el matrimonio no es más que una diversión (1).

Imposición del nombre y pubertad

La imposición del nombre, se practica, cuando el niño ó la parvulita comienzan á balbucear y á articular palabras, para que, con la repetición del nombre, se les imprima en la memoria y vayan unos se los llama. Por lo general, son los abuelos para los nietos, y los abuelos para las nietas que tienen privilegio de imponer el nombre; y esto lo hacen, cuando alguna particularidad en el cuerpo de los niños y niñas, como: *Tanyuna*, ojos bellos: *Itanti*, ojos blancos: *Cohanti*, mejor blanca; pero á veces no se tiene en cuenta particularidad alguna, y los bautizan con el nombre de los animales como: *Tapacuaga*, capitano de tigre: *Tatanai*, diente de armadillo: *Tapacuaca*, cabeza de tigre. Generalmente, los nombres de las mujeres, terminan en: *Ira* que quiere decir vaija ó vaca; pues, para el chiriguano, la mujer es cualquier cosa, nacida y destinada á servirse de ella, aunque mujer le parezca (2).

Se acostumbra para los niños de ambos sexos una época crítica, la época de la pubertad, que en muchos es precoz, que, por lo regular, suele acaecer á los seis ó doce años. La vida ó la muerte de los chiriguanos, el bienestar futuro, ó las desgracias, penden de esta época crítica: si se observan, por los que llegan á esa edad todas las prescripciones, registradas en las mientes de los padres de familia, todo lo restante de la vida, será una delicia, y sino, sobrevendrán todas las calamidades.

Cuando en la doncella se manifiestan los primeros síntomas de la pubertad: *Tiwapiti*, sus padres hacen que descanse unos cuantos días, hasta que se retire la que sangra, por poder, denominar enfermedad: *Ilhacoai*. En seguida la colocan en una hamaca, ó cama parecida, y recostada en ella, como un cuerpo sin alma, la

---

(1) Las jóvenes ayudan á sus madres en la crianza de los hijos propios, y en la elaboración de la chicha sabiendo que, el marido otro, paga primero á ella y aún á sus suegros, si pretenden desecharla.

(2) Solo el catolicismo, traído por el Redentor y predicado por los apóstoles, realzó á la mujer; donde no ha penetrado, permanece esclava, como en Africa y otros puntos del globo.

levantada hasta la terminación; dejándola allí por el espacio de cuatro días en rigurosa ayuna y, por supuesto, sin que sirva la leche para beber ó comer, ni para poder tener comercio, porque, si bebiera ó probara algo, la desgracia se manifestaría en el momento.

Al terminar este primero período, que la doncella si ha sido atrevida, la bajan al quinto día, le lavan la cabeza que quema de: *Mitiro* y le ungen el cabello de la peinilla. Mientras tanto se ciñen de la cua, bajan de la pozita, han preparado una cama como cincuenta, formada de cardillos dirigidos de la altura de un metro 30 centímetros más ó menos. Encima van en tipoi ó cesito liviano, allí, ó en chiquero, entra la desgraciada y da principio ó su ayuna rigurosa, que llaman: *Tiwaro*, ó sea acostamiento (1).

Otro día permanece la doncella en su cuarto sin hacer nada, con el rostro hacia la pared, para no ver, ni beber ó comer. No consiste ordinaria en el mate lavado: *Mitiro*, alguna vez, si hay, comer también maní, pero en pequeñísima cantidad, sirve alimentos no picados, ni dulces. Si comiera bastante, no sería apta para alimentar á sus hijos en tranquilidad, porque sus pechos serían dañados por todo la vida; su bebida ordinaria, debe ser el agua natural cristalina. Si bebiera chicha, se quedaría estéril, porque contiene alcohol y acritud, lo cual hacía respondar las vísceras de la concepción, durante el embarazo.

Al terminar los seis días, el ayuno riguroso con más blandura, sus padres han conseguido algodón ó lana, han preparado el huso y la rueda para su pequeño tiempo, dando pasos en pasos de cuarta, ó también cuna, para que el huso gire más fácilmente. Todo entrega la madre á su hija para que principie á trabajar y sepa, que sentó para el trabajo.

La joven recibe los consejos de su madre sin pronunciar palabra, sin hacer observación alguna, menos los consejos y amonestaciones con el mismo silencio y más que su madre, porque oye y calla sin hacer movimiento alguno, sin levantar la vista, sin mover la cabeza. Principia su trabajo largo que se retira la madre, cuando con sus dedos de lana ó el algodón, los pasitos del gal-

(1) Los doncellas en nada estudian este rigurosa entrada de vida, porque antes de que llegaran, las han preparado sus madres, y corren en todo con la ruega.

no que *pueden* nacimiento y principio á tales, cuyo efecto aquellas desde pequeñuelas (1).

Cuando un cuchillo observa, que ya tiene la necesaria para algún trabajo de pequeña entidad, le coloca el mejor y le primero que hace, es el *Magistrum* para su padre y luego otro para su madre, de la cual fueron quedan muy contentos y hasta con enojos se congratulan con ellas por el trabajo de la hija, á quien profesan desde luego simpatía, y respeto, como persona regalada por estar en el disfrute del aymara á voluntad, pero nuchos dicen se contienen en la potestad de otro desvelos (2).

Llamase el primer tam, á la primera hora: *Tam*, el entero á mediodía, es de la más rigurosa, porque los chiquitos de la potestad, deben cumplimentar dos veces, para que sean verdaderos, es decir, que los chirigoyeno no comen que una mejor *Ingua* á su agito para el matrimonio, sino después de estar sientan de la regularidad de su nacimiento, dice, que para los mejiques, es su alivio y salud, llámase en los adultos: *Ingui*, solo, hasta el primero como el segundo, de los galvanos, se llama, como ya he dicho: *Tamafia*.

Después de esto, si el aymara, si el mediodía á entero, son tan rigurosos, con que aun con la desvelo ya mejor, sale de su chiquito á la vida pública, vuelve á los tamos desvelados y á fortunar las bebidas para ser vista y mejorar la salida de los galvanos. Una que otra así lo hace, la mayoría, por consejo de sus padres, permanece y sigue aymarada hasta que con anhelos sean mercaderes, regalos hasta los hombres, y otros aymarados no ello sin salir á la luz, de donde provienen, que nuchos salen pálidos, como el elefante, y los nuevos, cuando salen á la luz, son muy pocos. Pero con la bienvenida de su tam, son el cuidado cuidar y calentar, y con tipo nuchos, con los adornos de collares y brazaletes, y los cuadrilatos de achiote, que, con gracia le han puesto con cuadrados mayores en las mejillas y en los ojos, menos la adornaciones de todo la gente reunida. (3)

---

(1) La domestic que aymara, solo puede trabajar en el sitio, donde se halla encontrado, de modo que no aymara regresa á buscar la cosa á su madre.

(2) Para los aymara mandados por la Iglesia á los mejiques, es una la misma julaiste: Fiesta; no hay otra ceremonia en el aborto.

(3) El lector comprenderá fácilmente que el salir del cuarto, es como una regreso que sale de su casa para trasladarse á la del aymara, por esto salir muy adornada.

[facing p. 225]

Panorama de la Ribera de S. Pablo

Mientras dura el ayuno y retiro, la doncella no sale de día; sus salidas las permite en la noche, pero no es para diversiones, sino para lo poco necesario, y esto lo hace generalmente muy temprano, antes que amanezca, para que no encuentren á no ser personas, para que sepa que debe ser muy diligente, evitar ser sorprendida por el sueño, porque el que debe ser su compañero durante la vida, sorprendiéndola menos temprano, antes de ir al campo ó al bosque, por esto la mujer debe ser madrugadora, para preparar lo necesario, para él, para su marido y para sus hijos que también piden permiso antes al desperezarse.

Cuando sale de noche, no anda la acompaña, pero antes de anochecer, evitan mil consejos y recomendaciones de mantener decencia y con sumo cuidado, de no pisar cosas que puedan perjudicarle, como basura y otras cosas que los murciélagos, ó los espíritus malignos han esparcido alrededor de la casa, especialmente en la puerta y en el trayecto que debe recorrer. La doncella oye y calla y todo lo observa y ejecuta, como y mujer que es necesita consejo, porque la madre ya le fluó la costumbre de tantas supersticiones y la atemorizó con determinados peligros.

El padre pasa varios días ayuno de su hija durante el ayuno, sólo pensaría, que no le falte el alimento y el trabajo, le habla pocas veces, sin embargo la ama como á sus ojos, y ahora. Otras personas no pueden dirigirle la palabra, ni sus padres, en ese tiempo, admiten visitas y prolongadas visitas, además, todos saben también, que aquella casa, ya es sagrada, y se abstienen en la penitencia de frecuentarla (1).

Concluído el tiempo del retiro determinado por sus padres, la niña deja sus vestidos, dará de penitencia, lava su cuerpo, pinta su cabello ya crecido, adorna sus tobillos con el auxilio de sus compañeras, adorna su cuello y garganta con collares de perlas, cobre, ó medias de plata, coloca brazaletes en sus muñecas, anillos en sus dedos, viste su *tipoi* de drill ó de quimón, de varios colores, y sale al pública, para que sea admirada como admiración y algún joven se enamore de ella y la pida por esposa, cuando le parezca, porque ya no es párvula, ya es mujer que puede desempeñar su oficio, ser-

(1) Cuando se quiso reorganizar la Misión de S. Antonio del Parapiti, la hija de un prestigioso indio hacía su ayuno rigurosísimo, se le dijo que podía morir con tanto rigor; apenas se la pudo ver y la pobre murió realmente al poco tiempo.

vir al compañero que la pida y ya en sus contestaciones dejó el: *ú, ú*, propio de los párvulos y adoptó el: *é, é*, propio de las mujeres.

La joven, á pesar de tener apenas trece años, al salir á la pública vida, y á pesar de un pequeño rubor que experimenta al presentarse por primera vez en la sociedad, en calidad de mujer dispuesta y apta para el matrimonio, poco á poco va perdiendo ese recelo, muy natural en las niñas, y adquiere franqueza para contestar bastante claro á las personas que la interrogan, cualesquiera que fuese, manteniéndose siempre en los límites de la moralidad. Lo inmoral, al principio, le causará asombro y rubor talvez, pero luego se acostumbra á ello, porque lo oye en casa, lo oye en las bebidas, en las reuniones y en las tertulias. De mucho oir, empieza á causarle placer que consiente con una risa continuada y fuerte, pues, cuando de día ó de noche, las mujeres ríen mucho y fuerte, regularmente es señal segura, que en la tertulia ó reunión, hay algún galán que dá rienda suelta á su lengua (1).

Aseguran los hombres, que sus mujeres son más valientes para aguantar el hambre y la sed; atribuyen esta valentía al ayuno riguroso que hacen en el tiempo de la pubertad, pero éstas dicen que las neófitas son más valientes que éllas, porque salen mas pronto después del puerperio.

En ninguna de las Misiones las doncellas siguen la costumbre de sus madres al tiempo de la pubertad: cuando se manifiestan los primeros síntomas, lo único que se les concede, son unos tres días de licencia para descanso, y para que su madre le diga, como debe manejarse en circunstancias análogas, para ocultar lo que debe ocultarse; pasada esta corta licencia, vuelven como antes á la escuela, y siguen sus trabajos sin inconveniente alguno (2).

Una sola cosa se nota en las Misiones, que las neófitas llegadas á los 35 años, más ó menos, ya dejan de tener hijos; talvez será porque se casan muy pronto, ó sea á los 16 ó 20 años á mas tardar. Si es cierto que las antiguas chiriguanas eran aptas para el matrimo-

---

(1) Los misioneros que saben el idioma de los indios y se han hallado al principio de una Misión nueva, pueden haberse admirado de la franqueza con que contestan niños y niñas de doce á trece años.

(2) Muchas de estas doncellas, por pudor no avisan su pubertad, ni á sus madres, y las consecuencias son funestas en no pocas; no avisan porque sus compañeras mayores se burlan.

nio luego de salir de su ocultamiento ó ayuno, el enlace que contraían, no era ciertamente ni continuado, ni perpetuo con la misma persona; uno ó dos meses con uno, luego un descanso hasta el alumbramiento, después se juntaban nuevamente con el mismo, ó buscaban á otro, si el primero se aburría de élla, ó ésta de él. Más en las Misiones no sucede así; los que contraen matrimonio, es por toda la vida, porque es enlace católico, y como tal, indisoluble, como lo sería el matrimonio natural de los infieles, pero el chiriguano no lo entiende, pues en principio quiere ser picaflor, posarse en muchas y no pararse en ninguna hasta cierta edad.

En las comarcas, donde el ayuno duraba un año, como en Cuevo, antes que se funde el pueblo de San Juan Bautista y la Misión de Santa Rosa, después del primer mes riguroso, á las doncellas se les hacía comer también carne, alubias y aún se les permitía un poco de chicha tierna, para que no se debilitaran demasiado, ni sucumbieran; si la chicha fuese avinagrada, sería perjudicial para la vida matrimonial posterior, produciría los efectos de que ya hablé.

Finalmente, para concluir con este asunto tan delicado, nótese, que actualmente en muy pocos lugares se observa la costumbre de un ayuno tan riguroso para el sexo femenino; hoy la región está poblada por la raza blanca, ésta va haciendo comprender, que todo es superstición con el ejemplo de sus hijas que, á pesar de no hacer nada de lo dicho, viven perfectamente sanas, contraen el matrimonio, sirven á sus esposos con todo esmero y educan á sus hijos que nacen con toda la perfección de la naturaleza (1).

Imposición de la tembeta

La educación del niño, como se ha visto ya, es obra de ambos genitores, hasta una cierta edad es casi exclusiva de la madre, y, desde los seis ó siete años, exclusiva del padre que lo acostumbra á las tareas del campo, á la caza y aún á la pesca, donde hay ríos caudalosos. En los riachuelos la pesca se ejecuta por las mujeres, y los varones las ayudan para la desviación del agua y compostura de dos bordes en forma de una: \/, abierta para dar paso al agua, trabajo que llaman: *Pariruta*.

(1) En la comarca chiriguana, aún en la conquistada por los Misioneros de Potosí, desde el año 1870, son muchas las doncellas de raza blanca que contraen enlace por haber llegado á la edad competente.

Llega ya para el niño el tiempo de ser hombre y no muchacho, el tiempo de dejar el: *ii*, *ii* de sus contestaciones afirmativas, para adoptar el: *Ta*, propio del: *Cuimbae*, ó sea hombre apto para todo. Su padre, su abuelo, su madre y otros parientes, le hacen comprender que para ello, es necesario mostrar á sus compañeros el distintivo de la tribu, es decir, es necesario hacerse perforar el labio inferior: *Tembe*, y colocar en el horado la: *Tembeta*, que para el chiriguano es señal de su valentía (1).

La *Tembeta*, por lo regular, es una planchita redonda de estaño, con dos orejitas ó prendedores á los lados, que sirven para sostenerse en el labio perforado. El círculo de la tembeta es hueco hasta cerca de la superficie de los prendedores, en él se coloca un poco de cera, y en la cera se fijan los adornos, como coralina, ó piedritas de color azul claro que tienen poco valor; la que lo tiene un poco, es la: *Itogüi*, es una piedrita verde de una sola pieza que ocupa todo el hueco de la *tembeta*; de estas poseo una y su piedra está fija con un clavito del mismo estaño. Las tembetas son aún de caña hueca y de madera, pero nunca de piedra, como pretenden algunos escritores (2).

La *tembeta*, ya descrita, es relativamente nueva; antes que penetren los cristianos y los Misioneros en su territorio, las *tembetas* eran de madera, las cuales tienen la misma forma que las de estaño con todos los adornos, mas, la mayoría usaba una caña hueca, principalmente para trabajar. Esta es un pedacito de caña, cortada en el nudo, más delgada en el hueco para sostenerse en el labio perforado, en estas no hay adorno, ni cera, porque son de los pobres, y de los ricos, sólo cuando trabajan.

La: *Itogüi*, tenía mucho valor entre los indios, valía un caballo, una vaca, un burro, etc. pero como ya dije, era un valor relativo, pues en Tarija, de donde la traían, su valor, era de dos bolivianos. De esto se puede concluir que la: *itogüi*, no se halla en el territorio chiriguano, debe su origen á los incas ó quichuas, pero

---

(1) La *tembeta*, es término compuesto de: *tembe*, labio inferior y: *ta* ó *ita*, piedra, que, explicado literalmente, quiere decir: piedra del labio inferior, donde se coloca.

(2) Si literalmente la tembeta quiere decir piedra del labio, no proviene de ser ella de piedra; el significado literal le viene de la: *itogüi*, que es una piedra, en las de madera también está encastrada la *itogüi*.

son los chiriguanos quienes trabajan las tembetas, á las cuales encastran la: *itogüi*, ó la piedra verde.

Para la perforación del labio, se requiere la plenitud de la luna, para que la herida abierta no dé malos resultados, se ensanche gradualmente y no forme tumor. Los niños aptos para la tembeta, no deben ser menores de siete años, ni mayores de doce, en el primer caso, no aguantarían el dolor, en el segundo, sería difícil la perforación por haberse endurecido el labio.

Cuando pues la luna se halla en su punto máximo, y el niño tiene la edad competente, viene dispuesto poco á poco para la operación. La madre y el padre lo animan con palabras amorosas, estimulando su amor propio, para que sea después estimado y querido de las doncellas. Luego le hacen comprender la necesidad de perforarse el labio, para que todos sepan que pertenece á la noble raza chiriguana y digno de ser un miembro de la misma; finalmente le hacen saber que, sólo con la *tembeta* los grandes de la nación lo respetarán y agasajarán (1).

El chico oye las lindezas que relatan sus padres, como un sordo oye la música; lo que más considera y le embarga todas las facultades, es el dolor que le va á causar la abertura del labio. Sin embargo no puede ocultarse ni perderse, debe sujetarse á la operación, á pesar del miedo que le da. Efectivamente antes del plenilunio el padre pasa con su hijo á la casa del cirujano y le expone el motivo de su visita, suplicándole haga hombre á su párvulo. El médico cirujano lo emplaza para el día siguiente, ú otro, mientras tanto busca á un segundo niño para que sufra la misma operación, porque nunca se admite á uno solo, deben ser dos, cuatro, seis, ocho, ó diez (2).

Al día señalado se presentan los niños, conducidos por sus padres y madres, para la operación; mientras tanto allí se reunen otros curiosos, hombres, mujeres, niños y doncellas, para ver y

---

(1) Las madres cristianas para animar á sus hijos pequeños al sufrimiento y al mismo martirio, les mostraban el cielo, una morada invisible. Las infieles salvajes animan á sus hijos con promesas terrenales, cariño de mujeres; *qui de terra est, de terra loquitur*, efecto de la ignorancia.

(2) En un pueblo de treinta ó cuarenta familias, generalmente como eran antes, no faltaban algunos niños de la misma edad. El número de los niños de horadarse, nunca debe ser impar; superstición y nada más.

presenciar ese acto solemne, al cual, según he averiguado, no precede ningún día de ayuno, siendo por consiguiente infundado lo que dicen al respecto algunos escritores; como es infundado lo demás, referente al operador, en el cual no se requiere la calidad de: *Ipaye*, brujo, para la imposición de la tembeta.

Antes de dar principio á la operación, el cirujano dirije su palabra autoritativa á los que deben ser hombres, recomendándoles valor y fortaleza en el dolor, sin hacer oir sus quejas, ni llorar, porque éstas no son señales de hombre valiente, de hombre que lleva *tembeta*, distintivo de la virilidad, de hombre que debe arrostrar los peligros de una guerra. Por fin, les ordena que es tiempo de dejar el: *á*, *á* en sus contestaciones, y en su lugar manda reemplazarlo con el: *Ta*.

Terminado este breve y elocuente discurso, se extiende por tierra ó encima de un catre el primer niño, quien para darse valor con voz vibrante dice: *Che rani tayicutusu*; sea yo el primero á ser horadado, palabras que son acojidas por la muchedumbre con júbilo y á la vez con maravilla, pues ya comprenden el dolor que va sufrir (1).

Luego el operador busca entre sus enseres el cordel con que toma las medidas exactas, para que el horado quede en medio y arriba de la barba; en seguida prepara el: *Guasupirasa*, que literalmente quiere decir: perforador de la piel curtida de corzuela. Ciertos escritores han creido que el: *guasupirasa*, es una asta de corzuela, fundados en el nombre: guasu, con que principia el nombre del arnés, pero es un equivoco. El guasupirasa es un hierro redondo del tamaño de una aguja costalera, que en quichúa llaman: *Yarguí* (2).

Toma, como he dicho las medidas convenientes con el cordel; hecha mano de su: *guasupirasa* y al verlo, la madre se asusta y llora en silencio y la otra gente mantiene hasta el resuello. Finalmente, por medio de otro practicante, lo hace apretar muy fuerte con los índices de ambas manos en las extremidades de las sienes, en el punto donde arrancan las orejas, y cuando está cierto

(1) El indio chiriguano usa el imperativo también para mandar á sí mismo, es decir que sus verbos tienen aún la primera persona del modo imperativo, lo cual indica mucha arrogancia.

(2) Si fuera una asta de corzo adelgazada, estaría expuesta á romperse y si fuera apenas afilada, el horado sería muy grande y con dificultad se sostendría la primera *tembeta* que debe ser pequeñita, habría muchos otros inconvenientes, que se evitan con el hierro delgado y resistente.

que el niño siente fuertemente el dolor, que le causan en los oidos los dedos del ayudante, introduce con ligereza y arte el hierro bien afilado y con mucha habilidad queda practicado el horado, haciendo pasar el: *Guasupirasa* hasta la punta de la nariz.

Mete en seguida un cañutito de estaño hueco en el hierro operador y lo baja poco á poco, para sacarlo del labio horadado, donde en cambio, queda colocado el cañutito que sale afuera un tanto, en ambos lados del labio; dicho cañuto en chiriguano se llama: *Tembetandi*, ó sea: tembeta blanca.

Generalmente con el método de apretar fuerte las sienes del paciente, consigue el operante, que poco ó nada sienta el dolor del horado, según ellos aseguran y es probable, porque un dolor agudo disminuye ó poco hace sentir otro. Pero también es cierto, que el muchacho, viéndose delante de tantos espectadores y doncellas, hace todo esfuerzo para no gritar, ni llorar, porque no niegan los indios que, muchos algo cobardes, gritan y lloran siquiera un poco (1).

He preguntado á más de un indio, y todos están conformes en asegurar, que del horado no sale gota de sangre. El día en que se practica la imposición de la tembeta, es de ayuno riguroso, y apenas se le permite beber un poco de chicha; otros alimentos tampoco puede masticarlos por algunos días. En unos, algo descuidados, se produce la hinchazón, y en otros no. La hinchazón del labio se evita, según éllos, calentando á la llama ó brasas de fuego las hojas del arbusto: *Urucuna*, y aplicándolas contínuamente alrededor del horado. La cicatrización del labio puede durar un mes, durante el cual el chiriguanito se la pasa en casa, dejándose ver una que otra vez, en las calles y plaza (2).

Mientras tanto, ya el operante, dió las últimas amonestaciones al niño, y este, con todos los consejos de él y de su padre, tiene en movimiento contínuo al cañuto, para que no se pegue á la carne, y en los días siguientes, va poniendo alrededor de él pali-

---

(1) Algunos chicos, demasiado cobardes, cuando sus padres principian á hablarles de tembeta y de la necesidad de hacerse horadar, huyen á otra tribu ante sus parientes, pero éstos los persuaden y vuelven á su pueblo.

(2) Para el chiriguano es un honor grande colocar la *tembeta* á los niños, de modo que nada pide por esta operación honorífica; sin embargo, sus padres del niño, hacen algún pepueño regalo que recibe con satisfacción.

tos del arbusto llamado: *Yacurimbiu*, comida de las pavas. Cuando está ya sano, corta un palito más grande del mismo arbusto y lo coloca solo, quitando la: *tembetandi* y sigue así ensanchando poco á poco el horado hasta que pueda ponerle una *tembeta* de caña hueca que también va tomando varias dimensiones, hasta que le parezca suficiente. Entonces compra una tembeta de lujo y se la pone para no quitarla más, ni de día, ni de noche, pues sería mucha vergüenza para un chiriguano presentarse al público sin su tembeta (1).

Las *tembetas* de caña hueca, cada chiriguano las fábrica, de madera y de estaño, las fabrican los hombres del arte. A pesar de no haber entre ellos herreros, ni hojalateros, y como no se consigue ni estaño, ni plomo, ni cosa semejante, resulta que el material para trabajarlas, lo traen de otras partes, comprándolo de los blancos, con los cuales mantuvieron relaciones desde la fundación de Tarija, de cuya comarca los chiriguanos fueron arrojados.

La tembeta en otras tribus

El uso de la tembeta puede ser otro argumento de la unidad de la raza humana; indudablemente los chiriguanos la usan por tradición de padres á hijos y así sucesivamente hasta llegar á nuestros tiempos. Casi en todo el mundo se halla la *tembeta*, usada por las tribus salvajes; en Africa las mujeres de Noers y Berry colocan en sus labios vidrios y planchitas de marfil respectivamente; entre los Mittoo y los Lobbatk hombres y mujeres usan tembeta en el labio inferior, tienen forma cónica, y además las mujeres usan aros aún en el labio superior (2).

En otras regiones las mujeres son coquetas sólo llevando en su labio superior un aro de madera ó de marfil, lo cual practican los Sciulus. Finalmente, aún los Cornná, explorados, no ha muchó, por el italiano Bottego, llevan en su labio anchos aros de madera que aumentan la anchura del mismo labio.

En la América del Norte, la *tembeta* es usada con preferencia

(1) Si el chiriguano dormido, estuviera sin tembeta, se le saldría la saliva, porque el horado es bastante grande en la mayoría de ellos.

(2) En muchas tribus del mundo, la *tembeta*, es señal de pudor, y las mujeres que la usan, no se presentan al público, sino la tienen puesta en el labio.

por las mujeres, les sirve de adorno y ponen alrededor tantos pedacitos de madera, cuantos años tienen. Las *tembetas* de los Tapíi de Isoso son pequeñas y las de los Chorotis y Tapietes son de madera ó de caña: sin duda hasta hoy les habrá sido difícil conseguir el metal para formar una de lujo (1).

Conforme se sabe por la fé, que el vestido fué dado á la humanidad en castigo de su desobediencia, castigo que se ha convertido en lujo de modas frecuentes y extravagantes, así entre los chiriguanos existe la creencia fabulosa que la *tembeta* que hoy consideran como distintivo de la raza y señal de virilidad, fortaleza y valentía, no fué otra cosa, que un amargo y merecido castigo que un ser maravilloso y de mucho poder, les infligió por la flojera y pereza que los distingue, conforme el lector puede haberse formado un concepto en el discurso de estas líneas. Ellos atribuyen su origen al: *Tunpa*, principio de toda bondad y, al: *Aguara-Tunpa*, consideran como principio de todo mal, conforme se ha visto. Bajo este concepto, quien los castigó, no fué aquél, sino el: *Aguara-Tunpa*. Concluiré este capítulo noveno haciendo la relación de la fábula, en la cual se verá la creencia de los castigos que la humanidad puede merecer de un ser superior.

Cuento fabuloso

Cuentan los indios, que antiguamente no había distinción entre los hombres, todos eran del mismo color y hablaban el mismo idioma. Ya se dijo en las páginas anteriores que los chiriguanos de ciertas regiones, creen que el idioma primitivo era la quichua; ¿de dónde resultó la diversidad de color y la diversidad del lenguaje? He aquí la fábula (2).

Dos hombres antiguos experimentaban la carencia de víveres y la miseria en sus ropas; se hallaban reducidos á sufrimientos extremados y, próximos á perecer. El: *Aguara-Tunpa*, á pesar de

(1) Los Tapietes son ó fueron indios chiriguanos, se quedaron cerca de los Esteros, donde hay regular terreno con colinas y bañados, para poder practicar sus siembras.

(2) Si se pregunta á un chiriguano sobre el origen de todos los hombres, contesta que éllos son distintos de nosotros, éllos han sido hechos feos, miserables, pobres é ignorantes.

su pésima inclinación y aborrecimiento hacia la humanidad, á pesar de sus pocos instintos filantrópicos, se movió á compasión de los infelices, fué á ellos y les dijo: «Quiero remediar y poner fin á vuestras miserias, á vuestras desgracias y necesidades, porque lo puedo: á pesar de que considerás á mi contrario, vuestro buen amigo y á mí, vuestro enemigo, quiero hacerles favor, para que veáis que, cuando quiero, soy más poderoso que vuestro amigo, que no sabe cómo socorrerles en las presentes calamidades.»

¡Ved aquellas armas arrinconadas allí como trastos inútiles! con las mismas podéis poner fin á vuestras desventuras, si sabéis aprovecharlas, como os diré; cada cual escoja las que le parezcan mejor; eran flechas, arcos, escopetas y espadas. El más listo examinó primero y habiendo observado que las escopetas eran de hierro pesado, como las lanzas y espadas, optó por las más livianas, ó sea por las flechas y arcos.

¡Qué partido debía tomar el compañero! eran los únicos arcos y flechas; á pesar suyo quiná, y sin tener mucho que pensar, se resignó á las que quedaban y se posesionó de escopetas, lanzas y espadas; trabajó toda la noche para libertarlas del moho que las había invadido; pero al salir el sol, todo estaba concluido y tuvo la satisfacción de ver relumbrar como nuevas sus armas.

Con estas armas, dijo el: *Agaxeu-Tuapa*, seréis cazadores y os buscaréis la vida; con las mismas os defenderéis de los peligros, de las alimañas y de vuestros enemigos, y volviéndose al de las flechas y arcos añadió: Tú serás siempre más pobre que tu compañero, porque has tenido la ligereza de optar por lo que poco sirve, porque has escojido lo de poco valor: El de las escopetas será siempre superior á tí en todo, en inteligencia, atrevimiento, fortuna, valor y riqueza; su comida será siempre mejor que la tuya, su vestido lo consiguiente y tú disfrutarás de lo de su casa, sólo sirviéndole y ayudándole en sus trabajos, él desde este momento te será superior, como otro ser maravilloso; serás acojido en su casa, como un compañero en desgracia y procurará alguna vez tenerte compasión por el beneficio que hoy recibió (1).

Además que, prosiguió el: *Agaxeu-Tuapa*, que tú no te ol-

(1) Creen realmente en lo que se refiere á este punto de la fábula, es decir de ser éllos inferiores á los blancos, mas no por castigo, sino por destino; verdaderos fatalistas.

vidas nunca del día, en que tu mala suerte te hizo ser inferior á tu compañero, recibe también este botón que te distinguirá de los descendientes, del que te es superior. Le horadó el labio inferior y le impuso la *tembeta*; desde entonces principió la diferencia entre la raza blanca de *arey*, y los chiriguanos, que creen deber su desgracia, al: *Aguaru Tunpa* (1).

He aquí la humanidad dejada á su libre albedrío sin ser alumbrada por la verdadera religión; cree en un cúmulo de mentiras y supersticiones, respeta, ó se atemoriza de una bestia salvaje, dándole el nombre de ser maravilloso, pudiente para hacerle bien ó mal, tiembla á la presencia de un zorro impávido y ladrón sin inteligencia y sin palabra; desfigura el rostro de sus hijos, haciendo consistir la bondad, fortaleza, prestigio y nobleza del individuo en una pieza de estaño, madera ó caña hueca; sujeta á sus tiernas y delicadas doncellas á un ayuno riguroso, á un encierro de meses y hasta de año por la falsa creencia en brujerías, en supuestas enfermedades y maleficios, arruinando la salud de las mismas y exponiéndolas aún á morir (2).

---

(1) Actualmente pocos son los indios que creen en semejante fábula, al zorro consideran un animal de cuatro patas y pícaro como lo es, y los jóvenes oyen relatar sólo por gusto de oir.

(2) Casi todos los chiriguanos actuales tienen una pequeña tintura de la verdadera religión, por esto no se preocupan mucho ya de sus antiguas costumbres de ayuno, ocultamiento é imposición de tembeta y pelo largo.

[P. 236]

CAPITULO DÉCIMO

AGRICULTURA, ANIMALES, COMIDAS

INTRODUCCION

La santa Biblia, al darnos cuenta ó hacernos la relación de la caida del hombre primero, nos pone de manifiesto que Dios, después de haberlo hecho conocer la culpa cometida, le anunció, que había incurrido en la pena de buscarse y proporcionarse el alimento necesario con el trabajo manual y sudor de su frente.

Realmente, la tierra que, hasta entonces había producido espontáneamente en abundancia, todo lo que el hombre podía haber deseado, maldecida por Dios, á consecuencia del pecado de Adán, se llenó de maleza, de abrojos y espinas y no tardó la riente primavera y el abundante otoño en experimentar el sombrío estado de la época glacial; vemos y palpamos que todo se verificó á la letra según la palabra divina, que no se equivoca, ni se engaña (1).

Si queremos una prueba de esto, basta salir ahora de nuestras habitaciones, basta caminar afuera de un pueblo, recién fundado en los bosques de nuestra Nación Boliviana, unos cien ó doscientos metros, y no hallaremos arbolillo por pequeño que sea, que no ostente en sus ramas y hasta en sus hojas la maldición de Dios dada en principio, y el arbolillo que no la manifieste, es peor, porque con su espina arqueada y oculta, lastima la mano del que descuidadamente pretende arrancar una ramita ó una hoja (2).

(1) Algunos quieren explicar los efectos del enfriamiento que produjo el hielo por disecamiento de un mar de la Africa septentrional, de donde proceden hoy los vientos secos, pero como los hielos invadieron la Europa septentrional y la América del Norte, ó todo el hemisferio boreal, es dificil admitir que, tan debil causa, haya podido producir tan extensos efectos.

(2) Alguien diría que la maldición de Dios cundió de lleno en estas comarcas, pero es de fe que cundió en todas partes. Si la comarca se halla así todavía, es debido al poco cultivo.

[facing. p 237]

Grupo de indios trabajadores

¿Por qué tanta maleza y tanta espina en los bosques de América? porque poco se cultiva, no se cultiva, porque falta elemento, falta el jornalero, y Dios dijo que, sin trabajo: *Tribulos et spinas germinabit tibi.* Dejemos á parte el territorio no explorado, y concretemos nuestra consideración en toda la comarca chiriguana, la cual es habitada hoy por blancos y negros, ó sea indios.

El blanco quiere poner en práctica lo que según la fábula predijo el: *Aguara-Tunpa*, cuando les hizo escoger las armas. El blanco quiere ser servido y pasearse en su reluciente y brioso caballo, llevar su arma de fuego en la cintura ó su puñal en la bota y, como gran señor, obligar al chiriguano á que le sirva por la comida ó por su dinero, y así para la agricultura el brazo del blanco, es casi muerto. Hay blancos que se llaman agricultores ó de labranza, porque poseen muchos peones chiriguanos, los mandan y los dirigen, para que trabajen en el campo por interés y lucro propio de éllos.

Puedo decir con todo acierto, que el único jornalero de las cuatro provincias, Azero, Cordillera, O'Connor y Gran Chaco, es el chiriguano que se extiende aún más allá de Santa Cruz de la Sierra, donde también trabaja, conducido por las autoridades ó por los patrones de las tierras que compraron en época remota por una pequeñez (1).

Hoy el chiriguano, muy abatido, en muchas partes sufre resignado lo que, según la fábula, no quiso ayer; en otras va emigrando en lo mejor del tiempo, es decir cuando es necesaria su presencia para las siembras generales, á las cuales deben por fuerza dedicarse los ancianos, si quieren vivir sin morirse de hambre y para poder recibir á los mozos emigrados, cuando vuelven por pocos días á ostentar su ropa nueva, su trabajo de otras comarcas, venderla en seguida por una nada, carnear alguna res propia ó de sus viejos y volverse en seguida sin decir siquiera: Hasta la vista.

Derecho de propiedad

El objeto del presente capítulo es describir el modo de cultivar la tierra, cuando los indios vivían solos en el territorio, antes que penetrén entre éllos los blancos, quienes hoy apenas les dan

(1) Si hay que dar crédito á los indios, en algunos lugares se adquirió terrenos por una leva raida del tiempo de Fernando VII, en otros por tres ó cuatro arrobas de queso y en los últimos por una vaca, un poncho, unas varas de lienzo ó unas cuantas botellas de licor, dadas al cacique.

lugar, de que hagan sus sembradíos, como puedan. Sin embargo, como los tienen continuamente ocupados, la comida y el vestido no faltan para nada en casa del cristiano, donde el indio los consigue para sí, para sus hijos y para su mujer (1).

Fué también el *Agnoro-Tuapa*, quien enseñó al chiriguano el cultivo de las tierras, pues viendo que no había podido remediar su miseria y necesidades con la entrega de las armas y flechas, visitó nuevamente su pobre choza y viéndola fuera y extenuada, le entregó toda clase de semillas, para que las hiciera fructificar, enseñándole el modo de sembrarlas y advirtiéndole también el modo y el tiempo de arrancar la cosecha, cuidando escarda, porque habría quedado mal esto en contrario y ante el mismo indio, aun habiéndose perfeccionado su obra filantrópica, después de tanto criticar al verdadero amigo de la humanidad chiriguana (2).

Cada chiriguano posee un pequeño fundo, suficiente para sí y para su familia; en la zona en que viven los indios, cuale antiguamente había penetrado, de modo que, ninguno les disputaba el derecho de propiedad, como no se les pudiera disputar hoy, porque son dueños *ab immemorabili*; y ningún particular podía haber vendido, lo que pertenecía á la colectividad.

Para adquirir el dominio de un pequeño fundo, el chiriguano escoge de antemano en la región el paraje que más le agrade, el paraje que juzga bastante bien por hallarse á las faldas de lomerías ó cerros, ó por brotarse allí agua en la estación lluviosa. Por su puesto, el sitio que piensa cultivar, no debe tener señales de labranzas anteriores, porque si las hubiese, el dueño ó sus descendientes, aunque bastante lejanos, interpondrían inmediatamente reclamo ante la autoridad competente, el cacique.

Si el fundo es baldío, puede estar seguro de no ser molestado y, antes que termine la estación de lluvia, siembra en él cualquier

(1) Sin quererlo quizá, los blancos han hecho y hacen una obra caritativa con el indio, la de moralizarlo un poco con el trabajo, durante el cual ni se embriaga, ni piensa en bagatelas, etc. Sólo que en algunos lugares se necesita un poco de moderación, para no aburrirlo.

(2) El *Agnoro-Tuapa*, Dios Zorro, no le dijo que las semillas podían comerse desde luego, porque de otro modo los habría perdido inmediatamente, después que hubieran nacido, avió que estando en razón, podía tener alimentos para sí, y su familia.

cosa, que sea visible como la: *Gliricidia-sepium*, cubierta grande que se extiende mucho, lo invade todo y no es soluble fácilmente por la madera. También otro método de adquirir propiedad, es el de romper alrededor del sitio, todos los arbustos, ó finalmente, de hacer con su hacha, tajos en los árboles más grandes.

Nadie puede reclamar un lugar, que es de la comunidad de los indios, donde ningún trabajó, y el que hizo los señales anteriores, queda constituido dueño. Para la estación lluviosa, viene el frío que seca hierbas y hojas de árboles; antes que termine agosto, el indio pega fuego á todo el fondo-suelo que consume las hierbas y los matorrales é inutiliza los árboles de mayor magnitud. Todo lo ceniza que queda, es un abono para el terreno y el fuego destruyó toda semilla de malas hierbas y de abrojo, de modo que, la primera siembra que se practica en el nuevo fundo, casi no tiene malezas, lo cual ahorra trabajo al primeroso chiriguano (1).

Método antiguo en la labranza

También para sembrar en fondos, ya antiguos, usan el mismo método de aplicar el fuego á la madera que queda después de la cosecha, este método viene practicado más por los blancos y mestizos. En cuanto á dar fertilidad al terreno, no se preocupa el chiriguano, porque las jóvenes son vírgenes y el indio apenas hace un grande cuadro la siembra del maíz y, si llueve con regularidad, hasta que se pongo duro el grano, la cosecha es abundante y el agricultor tiene para comer y beber en abundancia la chicha, que quiere.

Antiguamente el: *ava*, no tenía más que una pala de madera y una hacha de piedra que hoy difícilmente se encuentra; con este insignificante aparato se procuraba la vida; el hacha le servía para cortar árboles y arbustos y la pala para arrancar toda hierba y malezas. La pala era semejante á las que usan los pescadores para introducir el pan en el horno, era de madera de sauce y hallábase amarrada á un palo bastante largo, mediante bejucos ó tiras de cuerina de taborochi; el mango era siempre largo, porque el indio

(1) Los indios viejos todavía hacen algo para no tener mucha maleza en la siembra y escardas, pero los nuevos poco se preocupan ya de ello en muchas partes; además el ganado, en dos tiempo, todo lo invade y convierte el punto en poco tiempo; es muy provechoso prohibir los quemazones de los sembrados después de la cosecha.

en sus trabajos agrícolas no sabía, ni sabe doblar el espinazo; dichas palas eran también de la espaldilla de reses, caballos ó asnos (1).

Las siembras regularmente se practicaban en el mes de noviembre, después que el terreno había recibido por lo menos dos aguaceros. Entonces el indio con su pala destruía primero las pocas hierbas que habían nacido y, luego, notificaba á sus amigos y parientes, para que le ayudasen á sembrar en el día señalado. En la siembra general tomaba parte el cacique, ordenando que sus dependientes se ayudasen mutuamente, de modo que en dicho día bien de madrugada se iban al fundo, despertándose unos á otros con gritos, silbidos ó también mediante el: *Hanonuati*, asta de res.

El modo de sembrar es muy sencillo: estando el terreno blando, el sembrador con su pala practica un pequeño hoyo, mediante dos ó tres golpes, luego empuja la pala hacia adelante, echa dos ó tres granos de semilla y los cubre. En seguida, sin moverse, practica otro hoyo á la derecha, horizontalmente al primero, y un tercero á la izquierda, haciendo la misma operación, que en el primero, después da un paso y sigue como antes, hasta concluir; entre muchos concluyen pronto la siembra de un fundo.

No trabaja más el indio que hasta el mediodía y procura acabar la tarea antes de dejarla, para no volver, de modo que á veces prolonga el trabajo hasta las dos de la tarde. Luego el dueño y compañeros dejan, vuelven al pueblo, donde los esperan con comida y chicha en abundancia que aquél mandó hacer, si las cosechas anteriores fueron abundantes (2).

Así seguían antiguamente hasta concluir la siembra de una tribu: un día en el fundo propio y otro en el del compañero y aún el cacique practicaba lo mismo: hoy es difícil conseguir esto, porque no son unidos ya. Sin embargo en tiempo de carestía, si alguien prepara chicha, para los que quieran ayudarle en la siembra ó escarda, dejan ó rehusan el dinero por unos cuantos mates ó

(1) El barón don Erland Nordenskiold, además de los cántaros de varias regiones de Bolivia, mandó al museo de Suecia cántaros trabajados por chiriguanos, palas de madera y hachas de piedra.

(2) En todo caso, si faltaba la chicha, por la carestía anterior y la aloja de algarrobas, necesariamente debía la mujer de casa esperar á los sembradores con comida, mezclada con algo de carne y bastante ají.

vasos del apetecido licor; hasta los blancos consiguen peones con más facilidad de este modo.

Labranza moderna y semillas

Hoy la siembra con pala va desapareciendo y, si ésta es necesaria para la escarda, ha sido sustituida con la de hierro; mucho se ha generalizado el arado, el yugo y bueyes, y en las Misiones amansan novillos de 2 ½ años, aún los niños de doce años. Practican primero la siembra para la Misión, luego para sí y sus padres y finalmente ayudan, á los que no tienen hijos; el Misionero les proporciona los novillos, las rejas y aún las sogas, donde son muy pobres.

Los neófitos de las Misiones de Potosí, en la mayor parte de días, han aprendido perfectamente este nuevo método de labranza y, son tan adelantados, que hacen competencia y superan aún á muchos labriegos mestizos. Los mayores enseñan á los menores, los padres á sus hijos y éstos como aquéllos trabajan arado y yugo de maderas escojidas con toda la perfección, que requieren estos aperos; cosa satisfacción ver en una chacra 40 ó 50 yuntas de bueyes, dirigidas y arreadas por mozos y niños, que ayer eran como sus abuelos! Los mismos blancos practican sus sembradíos en grande escala, ayudados por estos chiriguanos, recibiendo en cambio un jornal doble (1).

Hoy me parece que no debe haber otro país, donde más abundan las diferentes clases de maíz, éste es el elemento principal, la comida diaria, no sólo de la tribu chiriguana, sino de todos los que habitan la mayor parte de Bolivia. Por acá, principalmente, el año que no hay cosecha, se resiente de su falta, blancos y negros, ó sea mestizos y chiriguanos.

Once son las calidades de maíz que siembran los indios y sus vecinos de raza blanca, los mestizos tarijeños y cruceños. El maíz que tiene más uso para la comida chiriguana, se llama: *Abati hendi coi*, ó *abati igu coi*, maíz relumbrante ó amarillo; el grano de esta calidad es realmente de un color amarillo encendido y

(1) El peón yuntero no tiene obligación de llevar yunta, es el blanco que lo espera con la yunta amarrada. Si el peón lleva la suya, gana hasta el triple de jornal, porque resultan justamente tres valientes peones, dos bueyes y el hombre que los dirige; no es mucho pues pagarle el triple.

de *Ñ* hacen harina tostada y harina para la elaboración de la chicha. La segunda calidad que tiene bastante uso, es el: *Abatiadi*, ó sea maíz blanco, éste se usa para tostado y sólo para harina tostada; igual uso que éste, tiene el: *Abati ouvoni*, cuyo grano es semejante por su color y forma á los dientes ó semillas de los granadas. Largo es bastante apreciado el: *Abati hontoro oui*, ó sea maíz claro (1).

Sembraban los indios sólo el: *Abatiádi*, ó sea maíz negro, pero no es muy apreciado y cuando de este maíz hacen chicha, su color es de chocolate con leche. Si la cosecha anterior fué escasa, ó casi nula, los indios á las primeras harinas y, otros en lugares húmedos, que por antonomasia, llaman: *Marcioti*, sembraban el: *Abatiai*, maíz chico, la planta no se levanta de la tierra más de un metro, su numerosa es de un jeme más ó menos y su fruto se aprovecha muy largo; de éste sembraban poco para no perder la semilla. Casi igual á éste, es el que llaman: *Marcedo*, colombiano chico; tiene el mismo color del de la primera calidad, pero no es abundante, su numerosa cuenta de ocho rayas cortas.

La última clase pero tiene de particular; llámase: *Cachiardá*, que en idioma quiere decir cempo y lo es realmente, el grano en su terminación es bastante pequeño, más no lo es en su principio y en medio, es muy blando, contiene bastante sustancia y lo usan para tostado. Tiene además el: *Abati gorgóto*, largo pueno el: *Abati chaco*, que usan para la harina tostada y finalmente tiene el: *Naiapiai*, gris, muy excelente para tostado, por su blandura (2).

El maíz es comida muy usual para el indio chiriguano y lo usan de distintas maneras, pero en la abundancia se usan de comer la misma cosa, como los Interos, que en el desierto, se hallan cuando de comer el maíz. Revuelven á éste inmediatamente con el: *Intiua*, compango.

El primero: *Abati tiua*, es la *Cocinada*, *abrón*; también hay otras clases de abrón, ó *cocinada*; todos se comen con sal ó sin

(1) El *Abati hontoro oui*, es conocido por los criollos tarijeños con el nombre de maíz pisangalla, otros lo llaman aperlado, ó maíz azucar, porque tiene color de perla y es más dulce que el de otras clases.

(2) Parece que antiguamente estos indios no poseían el *Abati gorgóto*, es muy probable que fué introducido después de la conquista, ó tan largo que tuvieron relaciones con los blancos.

ella, con harina de maíz, con tostada ó sin ella. Hállase aquí: *Cocoande kéipio*, abejón de grano amarillo; *Cocoande ocoapa*, que literalmente quiere decir: abejón de ojo amarillo; *Cocoande ñó*, abejón negro, *Cocoande pácopa*, que literalmente quiere decir: abejón doble de las *kéiudes*, porque es trepador; *Cocoandeñó*, abejón blanco; *Cocoande pióo*, abejón largo con grano colorado; *Cocoande qui*, abejón pequeño: éste no es pájaro por su grano, sino por su planta y en la que los labradores, llaman pavito amarillo; *Cocoandeoci*, abejón agrio; *Cocoande guaso*, abejón grande; lo es por la planta que es muy grande; hay otra llamada: *Gláiro cupia*, porque es semejante á los huevos de pajarillos, y, por último, hay la: *Saiapicot*, que es igual al maíz gris ocoro (1).

El chiriguano practica la siembra de la clase de jatías que tiene, ó puede conseguir de sus vecinos ó compadres, cuando le llegan á faltar; porque sólo del maíz, que perdió ellaur tostado y no hervido, practica la siembra de varias clases. Toda lababia es buena para el indio, porque el uso que hace de ella, es hervirla y comerla, cuando debajo de la cenisa calienta con sus cuchillos, ó practicando un hoyo en la tierra, calentarla y colocar allí los cuchillos, para que se curen.

Si con frecuencia falta la ababia al chiriguano para mezclar con el maíz, difícilmente le llega á faltar la calabaza que usa con poco cuidado y, tanta fortaleza posee para la siembra; hasta también la siembra dé este mencionado con mucha facilidad, tanto que á ello se dedican los ancianos y los niños, porque no se necesitan cuidados plenos en su fondo para conservar su abundancia.

No conocen dos clases de calabazas, pero ellas están son sumidas, las otras sirven para usos. Las calabazas conocidas son dichas: *Andei*, *Gláiodaso guaso*, *Gláiodaso oci*, *Gláiodaso oci guaso*, *pipoiógua*; esta última tiene el interior que es comible, y el exterior bueno para usos domésticos, para guardar en su cámara dura cualquier objeto. Las calabazas que sirven para usos son: *Ñó*, usan cocinadas; *Ñó guaso*, usan cocinadas; *Ñóapa*, usan

(1) La *Cocoande guaso* ó abejón grande es la preferida por el chiriguano y tiene mucha razón, es bien comestible, la menos dañosa á la salud, además de ser la semilla que más resistencia tiene para la siembra, es muy abundante, pues pueden hacerse hasta cuatro cosechas.

calabazas: *Ñi guaro*, mate grande; *Ñi-vai*, mate chico; *Ñi guaro*, mate largo; *Ñi guaí*, mate torcido (1).

Las calabazas se cultivan hervidas, asadas y en caldo, la semilla es muy apetecida para comerla asada, juntamente con la harina del maíz, con tostada ó con alubias. También hay otra clase de calabaza que llaman: *Ñiñudaro ni guiro*, ó sea grano de la calabaza, le usan ají y sal, mezclarse hacen con la alubia cocinada en aceite con toda la calabaza, que llaman: *Ñapiríguo*.

Si el chiriguano estuviese sembrar un poco de maíz, porotos y calabazas, está contento y dejan de sembrar otras semillas en la siguiente cosecha. Pocos son los que siembran el: *Yiti*, camote, la: *Mandioquapi*, mandioca, la: *Tacuaí*, caña dulce, y el *Mandoví*, maní. Todos siembran las semillas y sembrar, sembrar plantas higueras y tunas, ó ocupé, y, pocos los que cultivan naranjas, porque este indio tiene para paciencia en esperar la ingratitud de ciertas plantas que requieren mucho cuidado y, son muy tardías en hacer producir su fruto (2).

El ocupé es muy abundante en esta zona, se cría hasta tres ó cuatro metros, su fruto es muy apetecido, como todos comemos, su cultivo es ninguno, basta arrancar un guío de la planta principal, enterrarlo por mitad y hace nacer un dulce fruto desde el segundo año; es la planta que más aprecia el chiriguano.

Se cultiva la higuera mas, para la cual poco cuidado se requiere también, la llaman: *Ivo*, como al ocupé llaman: *Naiví*, y ambas plantas parecen originarias, porque son propias de higuera silvestre, y el nombre indica que siempre las han poseído. Requiere la higuera más cultivo que el ocupé, pero es relativamente insignificante, arrancan un guío, la plantan durante la estación lluviosa y la dejan crecer á sus anchas sin quitarle retoño alguno (3).

Prestándola cualquiera de los siembros, todo el afán del chiriguano es, que produzca: además valorizándose el fruto del cir-

---

(1) En el número de las calabazas no cabe el indio, lo que sirve á los dos sexos para bebedor del chicha de agua, porque es calabaza maravillosa.

(2) En el idioma chiriguano no existen los nombres de sandía y melón, lo cual indica que estos frutos fueron introducidos por los blancos, de quienes los conocieron los indios.

(3) Los blancos que viven entre los indios, se ocupan de otros cultivos más lucrativos, pero plantan higueras y ocupé y caña, es provechoso para el chiriguano que vende ambos frutos, recibiendo del blanco dinero, carne o chanqui.

lo, ó de los brujos, dueños de la lluvia, para que no falte la humedad necesaria, y él, con sus manos, procura que lo sembrado esté bien limpio de toda maleza.

Empleo del fruto sazonado

Si el tiempo es favorable, y el indio ha tenido cuidado del sembradío, el premio de su poco sudor no se deja esperar mucho, á los tres meses justos, ó antes también, ya puede comenzar á saborear el: *Abatiqui*, maíz tierno, que los mestizos llaman choclo; los primeros se comen asados y casi nunca hervidos, porque dicen que de este modo son insípidos. Dicen además que, el choclo asado, debe ser poco cocido, para que no pierda la propiedad de engordar, y si se asa debajo de la ceniza con toda la chala, es dulce casi como el azúcar. ¡Qué bien saben, querido lector, mis indios lo que es bueno para el cuerpo y, cómo conocen el modo de engordar y lo que más agrada al paladar! buenos gastrónomos son á pesar de su pobreza! parece que pertenezcan á los abdominales que describe el Padre Saj.

Cuando el choclo está algo más en sazón, lo comen con más gusto, y entonces elaboran también muy bonitamente las: *Simbicuai*, humitas. El procedimiento es muy sencillo; en vez de cuchillo ó cuchara para arrancar los granos, la chiriguana joven ó vieja, hermosa ó fea, con buena ó mala dentadura, se sirve de ella y en vez de mortero y batán para moler, se sirve con toda limpieza de sus muelas, y, por supuesto, que en la masticación viene el choclo bien condimentado con la limpia y blanca saliva de las viejas ó jóvenes. Luego envuelven el mascado en chalas verdes, lo amarran, ponen debajo de la ceniza y estando cocido lo comen como una vianda muy delicada y, nótese que, si la humita chiriguana, nó se hace así, resulta desabrida por falta de salsa y sal, cosas que se remedian con el procedimiento antedicho (1).

La estación del maíz fresco dura unos tres meses, porque el chiriguano, acostumbrado á comidas pesadas, lo come en calidad de fresco, aunque esté muy sazonado. Terminada la estación del choclo, la mujer recoge unas cuantas mazorcas del: *abatindi ó sa-*

(1) Los blancos, aquí y en otras partes, hacen humitas, moliendo el choclo en un mortero, y mezclándole queso, cuajada, carne y otros ingredientes; pero el indio sigue su antiguo método sin mezclarle más que la saliva.

impino, las desgrana, se sienta cerca del fuego, donde tiene colocado su tiesto ó vasija de barro, allí echa el maíz que tuesta, meneándolo con un palillo ó con el marlo del mismo maíz, teniendo cuidado que no esté muy cocido, para que no pierda la sustancia. Muy poco comen el maíz hervido: *Atiruro*, y aún el tostado: *Atipii*, debe ir acompañado con su: *Intina*, companage que debe ser cosa no usual (1).

No es fácil que el indio en la abundancia, se resigne á comer el maíz siempre del mismo modo, tanto porque se cansa, cuanto porque hay también ancianos, á quienes faltan muelas y poco pueden comer el maíz tostado. Para evitar ambas cosas, la inteligencia chiriguana ha encontrado varios modos de preparar las viandas de maíz, además de las ya indicadas. Saborea con satisfacción el: *Aticúi*, harina; para hacerla, la india, después de haber estado acurrucada largo tiempo cerca del fuego, toma su batán, echa una cantidad de tostado en el mortero y muele, luego cierne lo molido en un cedazo tupido de palmera y vuelve á moler todo lo cernido para que el *aticúi*, que los blancos llaman pito, sea bastante sabroso.

Con la misma facilidad con que prepara el *aticúi*, hace también el: *Muinti*, que es el séptimo modo de comer el maíz. Para el efecto, mete en agua una pequeña cantidad de granos y los deja remojar una noche, á la madrugada saca y coloca en un cedazo, para que escurra toda el agua, va en seguida moliéndolos poco á poco, y una vez terminado, lo cierne y tuesta como hizo con la harina. Del resíduo del molido del *muinti* llamado: *Abaticure*, denominado arrocillo por los blancos, prepara el: *Achi;* para hacerlo, muele nuevamente el arrocillo, echa en el molido sal y ají y lo tuesta.

El modo noveno de aprovechar el maíz, es un poco más complicado, es frecuente, pero no usual; llámase: *Muintimimo*. Para hacerlo se remojan los granos y se muelen á la madrugada, luego se cierne en un cedazo fino, se prepara en seguida un plato, que tenga á propósito, pequeños agujeros, se coloca en él la harina molida, la cual viene cubierta con el afrecho; se coloca finalmente el plato sobre una olla de agua hirviente, cierra sus bordes con ar-

(1) Para su companage se sirve de las alubias, calabazas, carne, pescado, empanizado, hormigas grandes: *Isaú*, chicharras, lagartos, gusanos, sebo derretido, miel, hojas de calabazas, hierbas del monte, como el: *Mandío* y langostas, cuya aparición alguna vez lo alegra, porque tiene ya para su asado.

gamasa de ceniza, para que no salga el vapor, y deja que este lo cueza con su fuerza (1).

Con poca frecuencia el indio toma caldo de maíz molido: *Hapi*, no habiendo carne, usa para su caldo las alubias y las calabazas; si no tuviera ni éstas, prefiere el: *Cagüii rai*, que prepara con remojar y moler el maíz, separarlo el afrecho y cocerlo. También lo mascan á veces, hácenlo fermentar y comen, cuando está en su punto; cualquiera que ve esta última comida, no deja de tener asco, pero para ellos es manjar muy excelente.

El duodécimo y último modo de comer el maíz es el: *Mayape*, pan. La preparación es igual á la de los hebreos, cuando comían pan ázimo, pero los chiriguanos le ponen sal y ají; después de amasado, lo tapan con ceniza y fuego y dejan que esté bien cocido, cuando llega á su punto, lo sacan, lo lavan con agua, hasta que desaparezca la ceniza que se le pegó, y, bien lavado, tiene el color propio del pan que convida á grandes y chicos á saborearlo; es lo que más agrada al indio, y las mujeres lo trabajan con frecuencia en la abundancia, su olor y sabor es muy agradable, sobre todo recién hecho.

"Cangüi"—Chicha

Toda la habilidad de una esposa consiste en saber elaborar bien la chicha, el apetitoso *cangüi* del chiriguano, que es capaz de caminar cien y más kilómetros para beberla, donde fué convidado con todas las reglas de la diplomacia indígena. El *cangüi* es su café, su caldo, su vino, su comida, su bebida, su todo; es en cierto modo su dios, y estoy seguro, que muchos renunciarían el cielo por la chicha, porque casi nada saben de lo que es cielo, y, por el contrario, saben que la chicha, es cosa dulce que alegra el corazón, hace conversar y hace cantar, por esto, toda mujer chiriguana debe poner especial cuidado desde antes de su pubertad, en aprender bien el método de elaborarla. Helo aquí (2).

---

(1) Para ver si está en su punto, golpea con sus dedos por encima del afrecho y si suena como el pan cocido, señal que es tiempo de quitarlo de la olla, arroja el afrecho, come lo que quiere y guarda lo demás.

(2) El método de elaborar la chicha, á la que los blancos llaman de arrope, es algo distinto, mas los indios chiriguanos no la usan, y recién la conocen.

Prepara y muele la cantidad de maíz, correspondiente á las vasijas que quiere llenar, después cierne en un cedazo especial que tiene ojos grandes: *Unapeni;* de este primer trabajo siempre queda una especie de granza ó arrocillo que llaman: *Abticuve*, el cual después de remojado y cernido, es molido nuevamente, luego lo asan un poco en tiestos, lo mascan y guardan en una vasija por espacio de cuatro á seis horas, á este se le llama: *Timisúú*, cosa mascada.

Mientras tanto ha hecho acopio de agua, ha colocado el cántaro en el fuego que está próximo á hervir; antes del hervor, aparta la leña encendida para paralizar su acción, hecha en el cántaro la harina seca que molió primero, y la mezcla con el agua caliente, evitando que se coagule. En seguida saca una pequeña cantidad de esta mezcla en una vasija pequeña, en la cual introduce todo el *Timisúú*, cuya mezcla llaman: *Umapirai;* practicado todo esto, con un mate menea continuamente, elevando el líquido hasta cierto altura, y haciéndolo caer en la vasija, para que tome la dulzura correspondiente. Cuando la mezcla se ha hecho bien dulce, la echa toda á las ollas que están en el fuego, las hace hervir, meneando todo continuamente por el espacio de 24 horas (1).

A las 24 horas, ya todo está cocido, quita el fuego, saca el líquido espeso, colocándolo en otras vasijas de boca ancha. Se sientan entonces las mujeres chicas y grandes y principian á mascar hasta el fin, (esta operación puede durar unas dos horas); luego, entre varias, le echan agua, cuelan todo el ingrediente en un cedazo muy tupido: *Cungüi ubogua* y una vez terminado, envasan el líquido clarificado en otras vasijas de boca angosta. La tapa de estas vasijas es una timaja pequeña, ó una calabaza y para que esté herméticamente cerrada, la embarran con arganasa de arcilla, así la fermentación se opera sin inconveniente y en pocos días. Al concluirse la fermentación, quitan con cuidado el barro y la tapa y aparece el: *Cungüi*; cubierto con buena dosis de aceite: señal segura de estar la chicha perfectamente elaborada (2).

Antes de principiar la tomada, la dueña recoje y saca el acei-

---

(1) Si no se hiciera caer el líquido desde una altura determinada, en la vasija, quedaría sin dulce alguno, la espátula con que menea el líquido un día y una noche, se llama: *Mbacpiraraca.*

(2) Cuando el tiempo es caluroso, la fermentación de la chicha se opera en tres días, mas en tiempo frío, son necesarios seis ó siete.

[facing p. 249]

Escuela de muchachos

te y llena las tinajas para los bebedores; en cada una derrama unas cuantas gotas del mismo aceite. Si no tuviera este cuidado, se juntaría todo el aceite en una sola tinaja y la que elaboró la chicha, se privaría de las alabanzas de todos los moscones ó moscardones. Cuando la chiriguana quiere que la chicha sea mejor, cuando quiere la: *Copiriru*, chicha recocida, después de haberla colado, como se ha dicho, la hace hervir nuevamente y luego de estar fría, la envasa.

Nótese: que las chiriguanas que se disponen á elaborar la chicha, lo primero que practican, es untarse el rostro y pantorrillas con el aceite del palmachristi, encima ponen la pintura del achiote y dan principio al trabajo. Dicen éllas, que mediante este cosmético, sienten menos la acción del fuego, pero sea lo que fuere, es lo cierto que ver á esas mujeres, así pintadas en una casa, con fuego bastante, y humo en abundancia, es lo mismo que ver las furias del infierno; la semejanza no se aleja mucho.

En otro capítulo se verá, que la abundancia de chicha se elabora en las fiestas que se celebran después de la cosecha, mas es de notar aquí, que para estas bebidas generales, se preparan comidas y el gran hotel queda abierto á todos en la plaza, donde se reunen pueblenos y forasteros, hombres y mujeres en bandos separados, porque no ha llegado acá la civilización europea de las escuelas mixtas, bailes mixtos, refrescos mixtos, baños mixtos, etc., etc. que son verdaderas cloacas de prostitución. (1)

Cazadores

Para que en las bebidas públicas haya abundante comida, los hombres luego después de haber terminado las tareas de leña, toman su arco, flechas y caballo, si tienen, y van á cazar. Los lugares son á propósito, unos cazan: *Taitetu*, jabalíes, otros persiguen al: *Yandu*, avestruz, muchos van en busca de: *Picasuguasu*, palomas grandes, *Yeruti*, tórtolas; *Picúi*, palomitas. Cazan también: *Gua-*

(1) Realmente los hombres en las tomadas públicas beben, separados de las mujeres á conveniente distancia, sus conversaciones son crasas, mas no se traspasan los límites, porque la mujer va acompañada de su marido.

su, corzuelas; *Sariama*, chuñas; *Ayara*, loros; *Tatu*, quiriquinchos (1).

Los cazadores tardan en volver unos quince ó veinte días, mas conforme van consiguiendo caza, la parten, la limpian y hacen secar al sol, para que no se corrompa, porque no llevan sal, pues no la poseen para hacer la cecina ó el charqui.

Casi todos los chiriguanos son cazadores y la infinidad de perros que mantienen en sus casas, todos tienen su habilidad para perseguir al jabalí, al quiriquincho, al avestruz, á la chuña ó á la corzuela. Dichos perros son casi como los lobos del viejo mundo, orejas puntiagudas y cola retorcida, son tan flacos que parecen arpas, tan malos con los mestizos y blancos, que parece han aprendido á aborrecerlos, como los aborrecen sus dueños y son tan apegados á éstos, que no los dejan nunca. Van con ellos por todas partes; no es raro ver á un indio que va al campo, seguido ó precedido de ocho ó diez perros, que están cayéndose de flacos y, sinembargo, si descubren una corzuela ó una chuña, no la dejan escapar. Caminar solo de noche por un pueblo de chiriguanos, es exponerse á ser comido vivo por estos tigres hambrientos que se reunen al ladrido del primero.

A pesar de que todos los indios son cazadores, no todos pueden ó van á cazar; unos quedan en el pueblo para ayudar á las mujeres á colocar los cántaros en la plaza y otros no van, porque disponen de otros comestibles para sus amigos. Unos poseen cabras y ovejas, otros hasta gallinas y ganado vacuno, éstos se glorían en poder presentar á sus huéspedes en la plaza pública un caldo de gallina, de cordero ó de cabrito, ó un suculento asado de ternero, pues no hay duda que cualquiera prefiere la carne fresca al charqui, ó cecina de animales silvestres.

Animales

De lo poco dicho, referente á animales, se deduce que el chiriguano posee algunos y son: el caballo, el asno, el mulo, la vaca, la oveja, la cabra, la gallina, y el perro; todos se llaman como en

---

(1) Los armadillos son de varias clases; la carne del: *Tatura-púa*, armadillo boleado, no es buena, porque se alimenta hasta de cadáveres, la carne de los demás es mejor que la del chancho; no es dañosa, como la de este último.

castellano, menos la gallina: *Uru* y el perro: *Yáimba*. Puede ser que estos dos últimos sean originarios, ó sea que siempre los hayan tenido los chiriguanos por el nombre propio de la lengua; más si se reflexiona un poco, asoma á nuestra mente una duda. La gallina, según mi parecer, se llama por los chiriguanos: *Uru*, porque tiene alguna semejanza con el gallinazo que llaman: *Urugüi* y es una especie de cuervo. El perro en chiriguano llámase: *Yáimba* sin duda por ser muy fiel al amo: *Ya* pues, realmente quiere decir: dueño amo, ó *Imba*, bestia, de modo que resultaría ser el perro una bestia especial que, más que otras, ama al dueño ó amo, y digo así porque otras tribus vecinas de los chiriguanos que se hallan en completo salvajismo, no poseen un perro, de donde pudiera deducirse que lo adquirieron, cuando entraron los españoles en su territorio (1).

Otros comestibles

Después de una digresión, vuelvo con la relación á los comestibles para concluir ya el capítulo. El indio en todo halla bondad y dulzura para sus muelas. Del pescado es muy deseoso, mas no todas las tribus lo tienen cerca, éstas, cuando saben que en las orillas de los grandes ríos hay en abundancia, caminan hasta ciento cincuenta kilómetros para hacer el cambalache: llevan maíz ó harina y la cambian por pescado. Los que viven en las orillas de los ríos, son valientes pescadores, sin distinción de sexo; pescan con anzuelo, permaneciendo horas entre el agua, pero advierten con mucho tacto, cuando el pez ha hecho penetrar el cebo en su estómago; otros pescan con redes, que las hay de todo tamaño, según he visto en el curso del río Parapiti, como también en el Pilcomayo, cerca del Pirapo hacia el poniente (2).

Otros forman unas canastas grandes de caña hueca, abiertas en un solo punto, las colocan en el río y los peces entran sin poder salir, estas canastas se llaman: *Pari*; en lo largo de los ríos he visto aún dos hileras de piedras que sobresalen al agua y acaban

(1) Para que mi opinión fuera completa, y más verdadera, la palabra: *Imba*, debiera tener la *h*; sin embargo no la doy más, que como opinión. El sentido literal de la palabra: Yáimba: sería: bestia del dueño.

(2) Los indios que traen pescado á sus tribus, hacen comercio, vendiéndolos á 10 y 20 centavos cada uno, comen y regalan también á amigos y parientes.

en ángulo, donde forma el agua una pequeña cascada; allí, en el ángulo, colocan una red grande ú otros aparatos y cogen muchos peces; á este aparato llaman *ñilos*: *Itapure;* hasta el carancho se coloca en el ángulo y hace su desayuno de pescado fresco.

Finalmente, en las cascadas de ocho ó diez metros de altura, plantan muy cerca una red grande que recibe todos los peces de pequeña y mediana magnitud, pues los grandes suben y bajan con facilidad, mientras aquéllos caen en la red; en los parajes, donde los peces son pequeños, desvían el curso del riachuelo, y así consiguen prender todos los que quedan sin su elemento.

Son también, comida muy sabrosa, las chicharras, las hormigas, los lagartos, las langostas y unos gusanos verdes que, al sólo nombrarlos, causan asco. Si muere una res y ha principiado la putrefacción, el chiriguano la encuentra excelente, dársela, es un grandízimo regalo y, ese día, es para él, un carnaval, tampoco averigua, si la res murió con ponzoña de víbora ó cascabel ó con mal de rabia (1).

No sé, si por abusión, ó por ser descendientes de los julíos, esta tribu no comía antes la carne de cerdo; á pesar de apetecer y buscar la del jabalí ó del pecari, no tocaba la del puerco doméstico, pero hoy casi todos la comen, si se exceptúan algunas mujeres.

En tiempo de hambruna ó carestía de víveres, el chiriguano sufre, pero busca su comida en la tierra, es una comida muy dañosa que produce varias enfermedades, como la consunción y la disentería. Busca la patata del aro serpentino, la extrae, practicando un hoyo, lo calden, echa allí las patatas, cubre con ceniza y brasas, dejándolas una noche; al día siguiente come él y su familia, pero les produce fuertes dolores de vientre que los obliga á echarse con la barriga al suelo, hasta que se calme la dolencia, la misma patata cruda, es eficaz para matar gusanos en las maturas de las bestias.

Otro alimento, en las carestías, es la: *Caraguata*, es una especie de aloé con hojas sin líquido aceitoso, el comestible son las raíces que tienen sabor de mandioca; se trabaja mucho para arrancarlas de la tierra, donde están muy prendidas, y la sustancia ha-

(1) Cuando los indios llevan á su casa carne de reses muertas y bastante, en estado de putrefacción, la hacen hervir en ollas y botan el agua y de este modo mucho pierde de su mal olor.

rinosa es bastante poca; para comerla, se asa en las brasas ó debajo de la ceniza. Cuando es tiempo de frutas y arrecia la pobreza, se alimentan los chiriguanos con vainillas de algarrobo: *Hibope*, con chañar: *Cambaru*, con mistol: *Yuu*, con tusca: *Hibopenc*, con algarrobos agrios: *Hibope tuyi*, con frutas de nopal: *Saini*, de la higuera: *Ico*, higuerilla: *Cuicatina*, del cardo: *Tapiacaru*, y de la ulala: *Sanongüina* (1).

Indudablemete, los chiriguanos, á pesar de ser superiores á otras tribus nómadas, que los rodean ó les son límitrofes, son muy desgraciados y pobres, pero en cambio, su vida es tranquila, no molestan á nadie, ni quieren ser molestados. Cuando el indio chiriguano tiene comida, es el ser más feliz de la tierra, su felicidad salvaje, hoy pudiera ser envidiada por todos los imperantes y grandes del mundo que viven sin saber, si mañana amanecerán, en vista de tantos peligros anárquicos, de que están rodeados, de tantas bombas y dinamita que hacen explotar las sectas tenebrosas, de tantos atentados que suceden, y son relatados por los diarios, de tantas muertes que acontecen. ¡Oh! esta clase de salvajismo no ha penetrado entre estos salvajes, por esto duermen tranquilos sin temor, en el pueblo, en la campiña, en el bosque y son más felices que otros; los que buscan la felicidad en esta tierra, bien pudieran envidiar la de estos indios.

---

(1) Casi en toda la comarca abundan las frutas indicadas y otras muchas, pero en la región de Ivu las hay en más abundancia; actualmente los años están muy cambiados, no llueve con la regularidad del tiempo pasado y las cosechas son algo seguras sólo al pié de las serranías.

[P. 254]

CAPITULO ONCE

FIESTAS, CANTOS, CARNAVAL

INTRODUCCION

Dios concedió al hombre el uso de la palabra mediante las articulaciones de la lengua, para rendirle con ella el justo homenaje y para expresar los pensamientos de amistad, cortesía, ciencia y progreso; concedióle la inteligencia para conocer el bien y adherirse á él, ver el mal y alejarse de él. Todo ser racional por más ignorante que sea, se diferencia característicamente del irracional por la inteligencia que admitirá graduación en el sentido de que, en unos se halla más desarrollada que en otros; que unos la cultivan más que otros, pero no puede admitirse la evolución, como la quieren los darwinistas, porque entre los brutos y el hombre no hay anillo de conjunción, nunca el bruto puede perfeccionarse hasta llegar á ser animal racional, animal inteligente. Por más que al mono le quiten el rabo ó las orejas de bruto y le pasen la navaja por todo el cuerpo para raparle el pelo que Dios le dió en lugar de vestido, falta la especie intermediaria para que de bestia pase á ser criatura inteligente, pues la inteligencia es la nota característica de la especie humana (1).

Sin embargo hay en el hombre tendencias al animal bruto, tendencias de que tanto habla Darwin: se desliza en acciones de que se avergonzaría el mismo bruto, si pudiera. Las acciones bru-

(1) En el mundo sideral hay una especie de evolución; la materia, dice Herschel, de ponderable pasó á nebulosas, de éstas, á estrellas nebulosas, luego á estrellas ó soles, etc.

[facing P. 255]

Patio de las escuelas de muchachas

tales que debieran desaparecer en los países civilizados, se cometen con más arte y finura, porque la civilización en tales regiones ya es puramente material, porque no se ha cultivado el corazón. A tal civilización es preferible el salvajismo, hasta cierto punto, que esto es natural y fácil de vencerse con la enseñanza de una sana doctrina que sólo puede darla el catolicismo.

¿Cuáles eran las ocupaciones de los hombres en Roma y otras ciudades antes de abrazar el cristianismo? cuáles son las ocupaciones de las gentes en los países, donde va reinando el anarquismo, consecuencia de la escuela laica? La historia de los pueblos antiguos nos lo dice, y la moderna también. ¿Qué hacía el imperio romano, cuando después de tanta lucha para consolidar sus dominios, llegó á su apogeo? pasaba el tiempo en fiestas que eran verdaderas orgías, días horripilantes, en los cuales corría la sangre humana, como agua. ¿Qué se hace en los reinos del viejo y nuevo mundo, donde el cristiano es modernista? se pasa el tiempo en teatros, donde se prostituyen las almas, se bebe en las fondas y bodegas hasta descender más abajo de la categoría del animal irracional, se pasa el tiempo en las plazas de toros, regocijándose en la lucha de tres animales feroces (1).

Si la civilización se entiende así, mejor es que los salvajes no la conozcan, ni sepan de civilización europea ó americana, donde aquélla va tomando la delantera; mejor que hagan sus fiestas como acostumbran, que, al fin y á la postre, de dos males hay que elegir el menor; yo sostengo que las fiestas de los salvajes, por ejemplo, de los chiriguanos, son menos escandalosas que las de ciertas regiones, las de ciertas gentes que, sin ir lejos, están cerca de los que nada saben de civilización, cuya moral, comparada con la de estos infelices, queda bien abajo por su refinamiento (2).

En el decurso de este capítulo conocerán mis lectores que poco puedo errar, en lo que afirmé anteriormente y aprenderán también, que aún los chiriguanos tienen fiestas que llaman: *Arete*, las

(1) En la enseñanza moderna, se ha suprimido la idea de Dios, que se adquiere mediante el catecismo ó libro parecido; de esta supresión proviene el anarquismo que no respeta autoridad legitimamente constituída. En ciertos juegos se observan tres bestias, el toro con su fuerza bruta, el torero con su habilidad, y los espectadores con su fiereza.

(2) Algunos modernos hacen consistir la civilización en la educación puramente material sin cuidar los anhelos del corazón; para ellos lo mismo da que el hombre vista, ó vaya desnudo.

cuales no se celebran para Santos, ni emperadores ó reyes, ni se celebran desordenadamente, ni se hacen destripar por un toro, como acaeció alguna vez á los mestizos ó á los españoles, mucho menos se celebran para entregarse abiertamente á la lujuria; se celebran tan sólo para beber y llenarse, y para disfrutar del trabajo que les costó la siembra del maíz, para tener unos días de regocijo general, beber, en suma, como buenos hermanos (1).

Antes de la fiesta

Antes que la cruz blanca penetrara á la región, era casi desconocido el ganado vacuno y el poco que poseían los indios, era manso, ni se les ha el alma á desear el maíz como ahora; así que fácilmente el chiriguano practicaba su siembra y su escarda en menos de un mes, dejando lo demás á Dios, digo mal, al brujo bueno, al sol y á la lluvia. Hoy sino pone vallado á su sembradío, muy largo alcanza la cosecha los cerdos de los cristianos y de los indios y hasta para ello un pequeño desvelo. Aunque haya buenas cercas, hay mujeres y valientes toros ó novillos, que con sus astas son cópatas de abrir portones de hierro, hacen caminos á todas sus anchas, é quienes en seguida llaman con mucho cariño, mediante sus prolongados mugidos (2).

La cosecha, marca para el chiriguano, una época del año que llama: *Mbaepica*, que literalmente se explica por cosa ó cosas secas, y cada cual comprende que corresponde al otoño, en cuya estación los árboles y todo arbusto se despojan de su belleza y vestidos. Hombres y mujeres se ocupan entonces en levantar lo que les ha producido la tierra, el producto del maíz es guardado en el mismo fondo, en una especie de cesta de palo llamado: *Ibatia*, casa de maíz y, según la necesidad, la mujer lo traslada poco á poco al patido para la comida diaria y para la elaboración de la chicha (3).

---

(1) En las bebidas generales se lamenta algo de inmoralidad en las palabras y alguna vez miden sus fuerzas y valentía con el pugilato.

(2) El ganado dócil se vuelve aún bravío; si uno solo se atreve á quererlo botar del sembradío sin auxilio de buenos perros, viene acometido.

(3) Si la cosecha de calabazas es poco abundante, las colocan encima del maíz en el mismo troje, sino hacen otro; la cosecha de alubias se traslada inmediatamente á la tribu ó pueblo.

Después de esto, el chiriguano pasa el tiempo en el ocio, bebiendo hoy acá, mañana allá, visitando á unos, jugando con otros, gozando, en suma, de su casi ningún trabajo, mejor que el más grande mandatario del mundo. La cosecha se practica entre Mayo y Junio, y después de ella, principian las libaciones en honor del dios vientre. Como el deseo de beber es extraordinario, antes de hacer la libación general, las familias aisladamente, van principiando á elaborar una pequeña cantidad de chicha para beberla entre pocos amigos y parientes.

Toca al cacique de la tribu dar la orden de la tomada general, y esta, no se deja esperar por mucho tiempo; veinte ó treinta días antes que tenga lugar, hace colocar una vasija grande al frente de su casa, he ahí la señal. Luego por la noche, ó cuando mejor lo juzga, dirige un largo discurso á sus súbditos, exhortándolos á preparar lo necesario para el: *Aréte*, hace remarcar con su discurso que el maíz es para beberlo, una vez que lo han conseguido por la bondad del brujo, dueño de la lluvia. Añade, que es muy conveniente no perder la antigua costumbre de beber y hacer una gran fiesta para manifestar la amistad y cortesía á los vecinos que habitan otras tribus. Recalca en su discurso la necesidad de elaborar buena y abundante bebida, y la de preparar mucha salvajina, para que los que deben intervenir como convidados, puedan disfrutar de estas y otros manjares domésticos á su plena satisfacción y, sea esta, grande honra para los pobladores.

No creo que alguien dude del efecto completamente satisfactorio, que produce el discurso del cacique en el cerebro del chiriguano que no desea más que beber, cantar y bailar, de modo que, después de dicha perorata, se dibuja en el semblante de todos la alegría y todos suspiran por la llegada del día feliz de poderse reunir como buenos amigos (1).

Al día siguiente ya comienza el movimiento y, lo primero, es ir al campo ó fundo para proveerse de abundante maíz, para que la chicha no llegue á faltar. Ya las mujeres empiezan á moler noche y día, mientras que los hombres traen la leña: los mismos,

(1) Los caciques son muy felices en sus peroratas para fiestas, mas cuando se trata de trabajo, no lo son tanto, al trabajo no se inclina fácilmente la humanidad; cuando una cosecha fué abundantísima, difícilmente siembran al año siguiente y sólo se contentan con muy poca cosa.

cuando la bóla es suficiente, en número considerable, van á usar para tener curar y poder convidar á sus amigos.

Cuando el cacique ve, que todo ha principiado bien, se dispone él á ir á los pueblos vecinos á rogar á sus habitantes, para que le honren con su presencia el día determinado, advirtiendo que la primera invitación es al cacique ó al brujo, *en* honor del cual se prepara la fiesta y bebida. El que va á convidar llámase: *Pacamaneco ení*, que da de beber y el convidado llámase: *Ticua ení*, ó sea: que toma. Llegado pues el invitante á la casa del que va á ser convidado, le expone el objeto de su visita, rogándole al mismo tiempo se digne aceptar él y toda su gente, cuya aceptación tendrá él con los suyos, como un grande honor (1).

El convidado no se lo hace decir dos veces, acepta desde luego, y hace notar que él debía ser el primero en dar este buen ejemplo, pero que las circunstancias y los muchos trabajos no se lo han permitido, mas no por esto se dejará de hacer, y entonces él también tendrá el honor de recibirlo con toda la gente. Terminado este acto de diplomacia y etiqueta chiriguana, que no han dejado todavía, el invitante se despide satisfecho de su viaje, del buen recibimiento, de la aceptación, y, más que todo, de haberle ganado la delantera al amigo, quien con su gente, pueblos las fiestas, le dice públicamente con estas palabras: *ocamane ení peri*, en tonces vergüenza, *ancoite cagapi ení*, pero nos vengaremos, es decir: no tardaremos en convidaros á nuestro pueblo para alegrarnos allí también (2).

Fiesta

La víspera del *aceto* todo se halla acudo y preparado en el pueblo, todos han colocado afuera, á una distancia convenientemente de cada casa, al frente de la misma, las vasijas repletas de chicha ya fermentada, y otra en casa que pueda fermentar al poco tiempo, para que ni se avinagre, ni llegue á faltar. Nunca he tenido la curiosidad de contar las vasijas en estas tomadas generales, que no son muy frecuentes, sólo sé, que cada familia llena tres cántaros y se-

(1) Para interesar más la voluntad del invitado, el invitante hace notar en su visita diplomática la antigua costumbre de las libaciones generales, que es preciso mantener viva, á todo trance.

(2) Si el invitado no aceptara su concurrencia y la de su gente, sería una afrenta muy grave que originaría indudablemente una guerra.

gún ellos puede medirse en limpio la cantidad, ó número de cabezas, que están allí listas para hacer fango y resistencia heróica en la batalla contra sus dueños y otros enemigos. Presenció una en un pueblo de unas 350 familias, y la fiesta se prolongó más más de una semana.

La gente convidada se dispone también y se va acercando al lugar del *arete*, antes, cuando, han adornado su cuerpo. Las mujeres redondean su cepeta, pintan su pelaire y visten su ropa mejor, conforme practican todos, adornando su cuello con las collares, sus brazos con brazaletes, su pecho con la *Sinicora*, y toda su persona, con el *Mondo* ó con el *Tiro*. No faltan mujeres que adornan su cabeza con el *Ayoá*, corona que hacen de hojas, ó de lata, adornada de lana ó algodón pintado con colgandijos hasta las rodillas; en suma, se adornan del mejor modo (1).

La entrada de los forasteros es á la madrugada del mismo día. Antes que esto se verifique, ya se han levantado los habitantes para hacer el recibimiento. Los invitados, después de levantados, atean nuevamente sus personas y adornos, el principal: *arete oví*, sale á caballo, lo que efectúan los demás jiaraos y principales á galope como una tropa de locos, silbando y gritando á más no poder; siguen los de á pié, corriendo del mismo modo, van luego las mujeres jóvenes, también corriendo, y por último, las madres y ancianas con más calma (2).

Todos y todas se reunen al frente de la casa del cacique *parao-arete oví*, quien da á todos la bien venida, les agradece por la honra que le dispensan, y luego se verifica una escena bien curiosa y para los indios muy celebrada. El cacique invitante tiene dispuesto en frente de su casa una vasija grande llena de chicha que sale afuera de tiempo en tiempo sin motivo. Para hacer, antes de principiar la bienvenida, todos dan un salto, pasando de un lado á otro de la vasija; este salto, en algunas partes, llaman: *Tiempiñiaraqui* y en otras: *Ypapiro*. Como he dicho, todos, hombres y mujeres, especialmente los mozos y mozas solteras, saltan; sólo lo hacen los ancianos y otros, particularmente algunos mozos, tropiezan por la risa y su cordón angosto, van al suelo, y este contra-

(1) Nadie entra al pueblo, donde está preparado la fiesta; la vispera, duermen todos á una distancia no muy lejana.

(2) Los primeros y los primeros entran al pueblo del cacique, haciendo una algazara de mil demonios, en la cual los acompañan los perros amarrados.

tiempo como mondas libertad. Mientras esto sucede, ya llegan los más atrevidos y osados, y se da principio á la danza.

Nada de particular hay en el principio, sólo es de notar que, como la bebida se ha hecho en honor de una persona particular, ésta es servida primero y continuadamente; de todos y de todas tiene que reunir, de otro modo sería un insulto, de modo que el invitado era poco tiempo pasar el vivente como un hombre insignificado y ya en nuestro principio á constituirse espagnante, como así también en mantenerse igualmente, todos los de la comisión (1).

Siguiendo bebida sucesiva silvestrina, con una sonrisa y apacible tertulia por algunas horas, los grandes, sentados en bancos ó sillas, los inferiores, parados unos y sentados otros en el suelo, separados todos de los conjuros, y estos diferentes; tanto ya unos en otro puesto, parecen tantos mentiras. Cuando la reunión es muy concurrida, la perspectiva es muy agradable, porque, quien nunca la ha visto, se admira por la variedad de vestidos, por los ornatos y comodidades con que embellecen su rostro y pies, y evidentemente las vistas que algunos viajeros se detienen bastante tiempo para contemplar esta centenaria reunión de los que se llaman salvajes de Bolivia (2).

Baile y canto

Cuando ya están bastante ergotizados, dan principio el baile y el canto del *Agrícola*. No reproducimos aquí las palabras cantadas, porque no se sabe el verdadero significado, pudiera explicarlas por exaggeradas y analogía con otras semejantes, como hizo el P. Giannovelli, cuyas palabras transcribe en su obra el italiano del Cinquemani, pero no dice sabe el significado. Las notas del *Agrícola*, son sencillas y entonadas aquí, para que la banda que quiera, tenga una pieza cómoda para una plaza de Capital: *cómo*

Las músicas para banda fué puesta por un maestro de los Misiones de Potosí el año 1908 y entonada este año por el Misionero P. Fr. Domingo F. Regini.

---

(1) En los bailes extraordinarios, es raro la familia que hace elaborar la *Cocoa*, ó chicha recordada, porque esta embriaga mucho, mientras la concurrencia de los invitados y postulados.

(2) ¿Existirá en nuestra singular fotografía de tales reuniones? Lo que se pondrá en nuestra Revista en aquellos mismos, para en aquel tiempo si chicha habrá, pero que beberán los que formaban la rueda ó la reunión del baile.

Misión del Ayurio

La actual *Ará* baile y *Ará* canto está á la orden del instante, quiero antes hacer un pequeño discurso el maestro que lleva en sus manos el: *Yendaqua*, una especie de pergamo ó quizaná, formado de plumas de avestruz, amarradas al rededor de una cuña bastante larga y dorada; todas las plumas están con la inclinación natural hacia afuera (1). Véase la figura en la página 51.

Terminado el discurso, que el maestro y doncellas escuchan como en secreto de Vivaum Santo y en un templo, se da principio al canto y al baile. Lleva el compás el maestro con su *yendaqua*, los hombres bailan marcando los pies desde la rodilla, dando golpes en el suelo sin moverse del lugar que ocupan y las mujeres otro de los hombros con un cante en la mano, llena á su de chicha. Dan las mujeres un paso atrás y otro adelante y, sin salir en el mismo lugar, continúan á compás alrededor de los hombres con una formalidad y exactitud de ademanes y pendidos de la otra mano, de dos en dos.

Cuando más grande es el número de doncellas, tanto más rico es el canto; como de *Ilhas* no hay como estar, porque cantan demasiado fuerte los hombres, pero á lo lejos, al que está acostumbrado á estos cantos, parecen relativamente agradables, sin embargo de saber al que oye por primera vez ó ignora lo que cantan, le parecen mil cosas por los ademanes. He aquí los versos del *Ayurio*:

Ayurio, eio—Mbaeiaoe, aoe—Eiaua gaiado—Iaiberagüe—Yaoe chéiaoe—Yaoe cheique—Iaoe paro—¡Eh! ¡Eh!—Saiaá aiá—Cuaoe heiaiaá pinto—Heei aoaa—Iparaoa tapiti—Cha aoaá iaiberagüe—Iaiberá, hai.eipa—¡Eh! ¡Eh! (2).

Con estos pocos versos pueden los chiriguanos cantar todo el día, como efectivamente lo hacen, pero con descanso. Para terminar todos juntos el canto y, descansar y beber un largo rato, dan los hombres con compás un gran golpe con el pié en el suelo

---

(1) El *Yendaqua* que se halla en el museo de Florencia, fué comprado en la Misión de San Buenaventura de Ivo por el R. P. Prefecto Fr. Remualdo d'Anbergi, infatigable Misionero de Pocoti.

(2) Quizá conviene y quieran los lectores saber el sentido aproximativo del: *Ayurio*; lo pongo puesto en esta nota: *Cantemos, compadezcat—siguiendo cantando—con mujeres mujeres—y bailando—estamos aquí todos—cantando y bailando—Si y me gusta este canto—El sapo y la rana verde se parecen—y el compás hace fuerza—cuando cantando—dejo y me espero* ¡Eh! Eh!

y un grito descompasado y todo se suspende con una sonora y prolongada risotada especial de las mujeres bailarinas.

Sin retirarse del círculo, donde se baila y canta, el dueño de la fiesta hace servir á los danzantes abundante bebida que éstos toman á satisfacción para principiar nuevamente el: *Ayarise* como hicieron antes, siempre á la orden del *Purumuncua ené* y bajo la dirección del maestro, que no abandona su *Yandugua* (1).

El baile y canto del *ayarise* sigue así hasta las nueve ó diez del día, luego se prepara el banquete en la pública plaza, donde escogen el lugar más limpio. Allá se sientan hombres y mujeres en lugar separado y en seguida sacan de las casas la comida, que ya tienen preparada en platos, donde hay caldo mezclado con carne bien aderezado con sal y ají. Mientras tanto, unos dos entusiastas del pueblo están reuniendo á toda la gente, gritando como desaforados y haciendo conocer su grande regocijo. El dueño de la fiesta ha dispuesto de antemano, que el convite de la mañana se verifique en un punto y por la tarde en otro y, de este modo, no sólo hay tiempo para preparar, si que también hay comida para todos los días para forasteros y los que no lo son.

Por la tarde, á las cuatro, más ó menos, vuelven á comer con más entusiasmo que antes, porque la alegría es mayor y entonces, *ex abundantia musti os loquitur*, ya se comprende; pero reina mucha amistad y concordia; luego cantan un poco más aislalamente y al ponerse el sol hay descanso general (2).

Mbapa páure

Este baile es parecido á una cuadrilla; las parejas lo ejecutan dando vueltas por las calles del pueblo, tanto de día como de noche. Según los indios de Ivu cuentan, el: *Mbapa páure*, no es general de la raza chiriguana, sino particular de algunas regiones, y su antigüedad no pasa de cien años. Dicen aún que tuvo origen

(1) El maestro del: *ayarise* es uno y posee siempre su *yandugua;* mas esto no prohibe que haya otros que lo posean; en un baile puede haber hasta diez y sirven de quitasol, cuando el calor es muy sofocante; el indio Guarerai de Ivu tenía seis y los prestaba en las fiestas solemnes del pueblo.

(2) Desde la oración de la tarde hasta las dos de la madrugada hay silencio completo, á esa hora principia nuevamente el canto, el baile y la bebida, hoy que poco obedecen la voz del cacique, no tienen horario.

al pié de la serranía de *Itácua* en la provincia de Cordillera y se extendió en aquel entonces hasta Menbirñi y Choreti Guasu.

Cuando tuvo lugar la guerra del cacique Yaveñu, los indios de Güiracoti, viviendo en la margen izquierda de la quebrada de Cuevo, fugaron á la margen izquierda del río Parapiti, donde permanecieron y aprendieron este nuevo baile y canto. Al tiempo pues de volver á sus tierras, cuando Yaveñu perdonó y olvidó la afrenta recibida, por haberse vengado en demasía, trajeron la novedad y principiaron á introducirla en sus pueblos.

Alguien fué á enseñarla en los pueblos situados atrás del cerro Aguaragüe y los pueblos, situados en la margen derecha del río de Cuevo, intentaron introducirla, pero viendo las funestas consecuencias que resultaban de ello, se abstuvieron hasta hoy, de modo que es un hecho que el *Mbapa páure* se halla reducido á los pequeños pueblos de Caraguatarenta, Ñagua y Caraguatagüe y es también cierto que no se lo oye y ve en los grandes pueblos de Santa Rosa ó Ivu que distan pocos kilómetros (1).

Música del Mbapa páure

Es otra pieza de música puesta en partitura para banda por el R. P. Domingo F. Regini; es mucho más sencilla que el *ayarise*, pero llama mucho la atención el baile y el canto, porque no se saben en todos los pueblos de chiriguanos. Es una especie de carnaval que dura un tiempo largo, pero clausurado dicho tiempo, nadie se vuelve á acordar del *Mbapa páure* hasta que pasa el año. He aquí las palabras del canto: *Tavia, Tavia—Ererosige mbapa páure—Tirisoti, tirisoti—Ancua chopi—Chopi nano saravigé—¡Eh! ¡Eh!—Uetepeso, güeremeso—Yagua tairari, yagua tairari—Yurumbopi—Yémanta—¡Eh! ¡Eh!* (2).

La fiesta del *Ayarise* es anual y se oye siempre que los indios tengan bebida; así en las fiestas generales no se termina en

(1) En los pueblos, en donde se canta el: *Mbapa páure*, hay desarreglos matrimoniales, porque el baile es entre hombre y mujer, prendidos de la mano, lo cual no sucede en el: *Ayarise*, por esto, ó por evitar dichos desarreglos, muchos caciques no permitieron se introduzca en su jurisdicción.

(2) Explicación: —Cantemos el *mbapa paure*, como canta el mirlo, cantemos hasta quedar con la boca torcida y no nos cansemos, aunque nos dé dolor de pecho, desafiemos aún al tigre, y que se nos ensanche la boca. ¡Eh! Eh!

un día, dura mucho hasta terminar la chicha envasada en las vasijas de afuera; al concluirse esta, acuden á los cántaros de adentro que están de reserva, como los cuerpos en una guerra. Después de ocho ó diez días puede darse por terminada la fiesta y entonces el *aeau eaé* con todos sus soldados se despide del: *paramuncau eaé* con miles de agradecimientos, encomiando el orden que se ha mantenido, la alegría que ha reinado y la abundancia de comida y bebida preparada. Al concluir sus encomios convida á su vez al amigo y á toda la gente para cosa semejante en su tribu determinando el mes y día desde luego.

Así termina la fiesta de los chiriguanos, quedando contentos y satisfechos. Pero es repugnante verlos beber sin descanso; las cercanías de esos parajes parecen inundadas por la lluvia, sus personas despiden humor desagradable, sus rostros quedan como hinchados, sus ojos afuera de la órbita, su labio con la tembeta, caído como el del borrego, y acercarse á uno de éstos ó donde beben, es lo mismo que acercarse á una cloaca, ¡tanta es la fetidez! Pero el chiriguano queda muy contento y se gloría del estado de cerdo en que se halla diciendo: *Asagüipo*, estoy ébrio, y cuando convalece de su embriaguez, confirma la bondad de su estado, ¡pobre bestia! (1).

Mas, se encuentran por desgracia peores bestias que los chiriguanos y son algunos civilizados que profesan la doctrina de Epicuro, éstos, no contentos con embriagarse y comer más que la bestia, arrojan para volver á hartarse, y además, en sus bailes y reuniones, hacen una mezcla diabólica de ambos sexos. Si parece que la civilización anda de cuatro patas y vá cediendo el lugar al salvajismo y, debe preferirse no penetre entre los salvajes cierta civilización moderna que pervierte á los sencillos, cuyas costumbres son naturales y no ejecutan sus acciones con el refinamiento de los civilizados.

Sin ir muy lejos, penetremos á una gran aldea que no quiero nombrar, busquemos un barrio que tiene su nombre, entremos á una de las tantas chicherías que hay allá ¡qué espectáculo! sillas revueltas, mujeres tendidas de largo á largo, sin darse cuenta de

(1) Anteriormente la embriaguez del chiriguano casi nunca era completa, hoy, con el uso del licor, pierde con frecuencia el conocimiento, ¡ojalá se eliminara esta bebida perjudicial! los indios de las Misiones no se glorían ya en su embriaguez, avisan de haberse embriagado, pero no como una acción honrosa.

su estado, hombres de lera yacen sobre bancas, sino en el suelo, con su vestido desabrochado, choco sombrero debajo de las mesas, levas botadas, como trapos, bastones de puño arrinconados en desorden, puñuelos acá, mantas allá, botines por el suelo, botas mezcladas con los cristales; en suma, un desorden completo, efectos de la embriaguez, consecuencia de la bebida, producto de la civilización material, de la enseñanza laica, de la escuela sin Dios.

Tanta porquería y escándalo, tanto desorden y abyección no se ven en el *Arete* de los chiriguanos, como se ven en las tabernas de ciertos países, donde no se bebe, por pretexto de fiesta, se bebe por beber, como se mata por matar; no, el chiriguano está muy lejos de todo esto. Si algo se va introduciendo, es efecto del roce que el bárbaro ha principiado á tener con el hombre civilizado.

Profundos pensadores modernos han reconocido esta verdad á pesar de haber permanecido poco tiempo entre éstos y otros indios en completo estado salvaje; dejemos empero esta relación que apena el espíritu y volvamos á reanudar la historia.

Lo demás del año lo pasan en diversiones, juego de naipes y dado, en cazar palomas y salvajina, en ir por pescado, ó en pescar donde hay ríos caudalosos, en organizar bebidas particulares, hoy en un barrio, mañana en otro, hoy en casa de Mengano, mañana en la de Fulano, pasado mañana en casa de Sempronio, hasta que llegue nuevamente la siembra.

De la casa, que está á veces por aplastarlo, poco se preocupa el indio, su casa está más ventilada que una criva, llueve más por dentro que por fuera, duerme allí casi como un sapo, duerme sobre la tierra húmeda, ó encima de un miserable catre, colocado sobre el barro ó sobre el agua, y su sueño es como el del lirón (1).

Hospitalidad

El chiriguano es muy hospitalario y difícilmente se hallará otra raza que lo iguale, recibe y sirve á todos en su casa, tanto á blancos, como á los de ínfima condición, por ejemplo á los tobas y, con más razón, á los de su raza. Se visitan de un pueblo á otro y en el primer encuentro, ó en la primera vista dicen inme-

(1) Este modo de vivir en la humedad en sus casas ó afuera de ellas, es causa de muchas enfermedades cutáneas, fiebres y tumores.

diatamente según la edad de la persona á quien ve: *¿Ndempuatma pa tuti?* buenos días tío, si es de mañana: *¿Ndecuaruma pa?*, buenas tardes: *¿Ndepintuma pa?*, buenas noches. El sentido literal de los tres saludos es otro, el primero quiere decir: ¿has llegado al día, te has levantado sano y vigoroso? el segundo: ¿has llegado á la tarde? y el tercero: ¿has llegado á la noche? El que recibe el saludo contesta: *Ampuatma, cheruaruma, ó chepintuma* respectivamente. La 2ª *t* de la palabra tuti se pronuncia doble (1).

Si el visitante es persona conocida, el visitado luego dice: *¿Nde pa eo?* tu sois? y el otro contesta: *Cheeo*, yo soy y luego sigue: *¿Imiño pa ne?* vives? *Imiño ai*, vivo, y entra á la casa de su tío, abuelo, cuñado ó lo que sea, pues parece que el chiriguano tiene parientes en todas partes, y los tendría en todo el mundo, si en todo el mundo hubiese chiriguanos.

Muchas veces es el cacique, quien recibe á los forasteros, si éstos lo buscan, como naturalmente sucede; pero cualquier indio á cuya casa se arrima, luego le dice con una cortesía: *Eyi*, ven, si está en pié, y: *Eyiñeyi*, baja, si está montado. En seguida le presenta el mejor asiento que posee, principia la conversación; mientras tanto la patrona de casa pone á su disposición una tinaja de chicha con el mate ó vaso respectivo y, ayudada por sus hijas, prepara la mejor comida. El capitán ó cacique de Tiasía me preparó un mate de maíz hervido con sal, arivivi ó ají muy picante y huevos bien hervidos y desmenuzados en pequeños trozos.

Noté la mucha limpieza de la vianda y enseres, y luego, como ya dije en otra parte, conversé largamente con el indio, bastante locuaz y franco, acerca de varios puntos de religión, y, en conclusión me hizo saber: que él no iría á la Misión de Boicovo, ni á otras, porque el rezo y el bautismo hacen morir; que yo y mis compañeros esa noche no habíamos hecho llover, para no mojarnos y: que no es Dios quien creó al hombre, y preguntado quien fué, contestó con naturalidad y asombro: *¿Nlicuai á pa?* no sabes? (2).

---

(1) En otros lugares el saludo es distinto, dicen: *Catupiri* ó *Aguyeti*, cosas buenas, prosperidad; pero el otro me parece más conforme al saludo universal, como se hace en todas partes.

(2) En otra parte no puse todo lo que había dicho el cacique, referente á la idea que tienen del Misionero, á quien consideran muy poderoso con los elementos de la naturaleza; las ideas de dicho indio, relativas á la creación del hombre, son muy bajas é inmorales; otros más ilustrados no lo dicen así.

[facing p. 267]

Carnaval Chiriguano

Carnaval Chiriguano "La lucha del Toro con el Tigre"

Prolongada ó corta que sea la visita, el huésped al tiempo de despedirse agradece al dueño de casa, diciendo: *Ayirobia catu ndereé*, mucho te lo agradezco y se marcha diciendo: *Aha ye ma*, me voy y el dueño de casa contesta: *Tunpa reño eguata*, camina ó ve te con Dios, pero antes se hace prometer de volverlo á visitar, cuando le parezca bien.

Carnaval

Si pregunto á los indios de Ivu, quien introdujo el carnaval entre ellos, unos contestan que fué un Sub-Prefecto de Lagunillas que vino y erigió un pequeño fuerte acá y otro en Cuevo; otros aseguran que fué un blanco que conocí y no nombro y yo concluyo que fueron ambos. Aquél les diría que el carnaval era fiesta de regocijo y éste les enseñó la manera de hacerlo, como hoy lo hacen, según iré diciendo. Si pregunto á otros indios, contestan que lo han aprendido de los blancos, de donde se deduce, que esta locura general, no es de éllos, la hacen, porque les gusta todo lo que huele á matar el tiempo, bebiendo y bailando. La misma palabra Carnaval indica que no es fiesta chiriguana, luego no se puede confundir con el: *Mbapa pánre*, que es algo parecido por su inmoralidad; es éste más antiguo y no se halla en todas las tribus, además de tener su tiempo determinado, desde los fríos recios hasta mediados del mes de Julio, más ó menos (1).

Sin ser pues de origen chiriguano, el carnaval es festejado acá muy mucho, tanto, que lleva nombre de *Arete*, fiesta por antonomasia y todas las antiguas que van desapareciendo, cédenle el lugar. Para los días que dura este resíduo del paganismo, el chiriguano trabaja casi todo el año con la pereza que le acompaña, por ello ayuda gustoso á los blancos, recibiendo en cambio dinero para comprar ropa y vestirse él, su mujer ó hijos, en cuyos días todos y todas están de gran parada, luciendo lujosos vestidos de toda forma y color, vestidos que por cierto no se atreven á poner-

(1) Los blancos de Cordillera con su jefe fundaron dichos fortines después que los sublevados que atacaron Igüembe, fueron derrotados, no concurrieron para auxiliar al Sub-Prefecto del Azero, D. Antonio Menduiña, quien había requerido ser ayudado; se batió valerosamente sólo, ayudado de sus soldados del Azero.

se durante los demás días del año, ni para el *agurise*, ni para el *Mbaya piure*.

En tales circunstancias casi no hay diferencia de blancos y negros, los hombres bien vestidos, y las mujeres aún infieles con trajes adornados con gasas, sombreros de lujo y cintas de varios colores, los niños cubren su rostro con máscaras que han trabajado de antemano, entallando la madera del toborochi, los mozos prefieren lucirse en su caballo, caminando á todo galope, y otros, como los ancianos, se divierten con mirar á los danzantes y: *Agüeros*, á los cuales todo se permite, por ser carnaval.

En calidad de preparativo á la gran fiesta, ó porque se bebe y divierte, festejan los días de compadre y comadre y el sábado de quincuagésima todo el día, las máscaras y danzantes ensayan sus bailes que llaman: *Atica*. Al día siguiente de ocho á nueve practican la entrada del carnaval, danzando al son los de tambores y flautas de caña hueca, y él que se llama dueño de la fiesta, es un disfrazado con máscara que representa á un viejo con barba blanca, montado por lo regular en un burro: el así disfrazado, dirige la fiesta, pronuncia sus discursos en cada esquina de la plaza, recomendando armonía y alegría (1).

Si no hay pareja, las mujeres bailan entre sí, pero luego se presenta un hombre, danza con este prendido de la mano, y muchas parejas danzan bastante aglomeradas; su módo de bailar, es levantar, al toque de la música, primero un pié y después otro. El zapateo, que así llaman á este baile, dura hasta el Domingo ó Sábado de Tentación sin descanso, y al día siguiente, que es el último, principian los juegos. A las diez, varios jóvenes enmascarados, se desnudan, dejando cubierto lo puro necesario, se embarran de lodo completamente, se acercan furtivamente al grupo de bailarines, y por todas direcciones atropellan, estrujándose con los mejores vestidos y poniendo, en consecuencia, la confusión entre todos; este juego se llama de los chanchos; y bien que los imitan (2).

---

(1) El principal disfrazado tiene subalternos, quienes también pronuncian sus cortos ó largos discursos; preguntados los máscaras dicen: que su pueblo ó región es Matomorocho.

(2) Antes de este juego los disfrazados derraman sobre los danzantes cáscaras de alubias y granza de maíz que salió en la elaboración de la chicha; esto es para que haya abundancia al año siguiente.

Los juegos de la tarde son muy variados; concluído, y aún antes que concluya el de los cerdos, salen dos negritos con su cigarro de chala en la boca y un cordel en la mano, llevando á un disfrazado en figura de toro, á quien sirve de defensa y protección una mujer de todo lujo vestida que sostiene una bandera colgante de una caña hueca; los negritos son dueños del toro y llevan aún perros, y cuando el toro se halla debajo de la bandera, poco es molestado.

Al mismo tiempo, como salido del bosque, se presenta otro disfrazado pintado de tigre, y principia la lucha con el toro; si éste lleva la peor parte luego, los máscaras que hacen el papel de perros, se lanzan á la defensa y lo corren, lo mismo hacen los que están montados: una que otra vez el tigre prende algún perrito y lo hace gritar, lo mismo desmonta á algún jinete. Después de un tiempo más ó menos largo, muere el toro ó el tigre en la lucha; generalmente sobrevive aquél, porque á éste lo matan entre todos, entre perros y vaqueros. Entonces se presentan los disfrazados que ejecutan el papel de matanceros, compran el toro de los negritos con moneda de piedra ó de huesos y, lo carnean.

Inmediatamente los danzantes forman un círculo grande prendiéndose de ambas manos y bailan así tres veces, otras tantas se acurrucan y otras tres pasan por debajo de los brazos extendidos de una pareja del mismo círculo y, otras tantas aún, se arriman unos á otros formando un gran montón con el rostro hacia afuera, con las manos prendidas unos de otros y cruzadas, permaneciendo así hasta que otra pareja dance alrededor sin prenderse de la mano, antes bien, procurando el hombre no hacerse alcanzar de la mujer, que si esto sucede, se esconde luego entremedio de los demás, hasta que pase la compañera, saliendo nuevamente á danzar hasta dar tres vueltas, teniendo las mismas precauciones que en la primera (1).

Por último todo el círculo danzando, da tres vueltas al pueblo, bailando, prendidos de las manos, en las esquinas de la plaza y al frente de las casas, donde se bailó en los días anteriores. En

(1) El círculo se compone de todas las parejas que concurrieron á solemnizar la fiesta, se forma de un hombre y una mujer con ambos brazos extendidos y prendidos de las manos; el círculo ocupa mucho espacio, según la multitud de las parejas.

la primera vuelta se reunen todos los enmascarados, forman su círculo y el principal pronuncia su discurso, luego los de mayor edad forman un asiento con sus bastones cruzados, hacen sentar allí un chico, lo levantan unos dos metros, forman en su cabeza un reparo con cañas cruzadas y todos los demás hacen llover sobre él una prolongada descarga de cañazos ó golpes con caña hueca sin herirle y luego lo bajan, ejecutan esto tres veces y en distintos parajes (1)

En la segunda vuelta todos los *Agüeros*, máscaras, término de los mestizos, de casa en casa piden avío y reciben cualquier cosa, aún cáscaras de alubias y sandías, y en la tercera, que es la despedida, comienza el llanto de chicos y grandes enmascarados, cargados de avío, y de harapos: estos llorones materialmente hacen llorar á los ancianos y otros, porque unos se acuerdan de sus finados que no asisten á esta alegría que pasa, y otros piensan que no han de ver talvez otro carnaval. Pregunté á un anciano, que realmente lloraba, y me dió la anterior contestación. Al terminar la última vuelta con los tambores destemplados en señal de aflicción, todos, jinetes, bailarines y agüeros, salen afuera del pueblo y llegan á un paraje, donde arrojan las máscaras, y en seguida van al río, ó al manantial, á lavarse un poco las manos y el rostro (2).

Pascua

A los cuarenta días tiene el chiriguano otra fiesta, es la de la Pascua de Resurrección que introdujeron los blancos: los indios ancianos la llaman hermosa por sér de sosiego, como al carnaval llaman de mucho ruído. Nada tiene de particular, dura tres días,

---

(1) En el carnaval, durante los tres días, hay mujeres que se visten de hombre, y hombres que se visten de mujer, pero ambos se cubren bien el rostro para no ser conocidos, también esto se lo enseñó un blanco.

(2) Todos los juegos anteriores, en Ivu, fueron enseñados por el mismo blanco, de que hice mención, y en el principio los enseñó prácticamente, causando asombro, particularmente en las mujeres y ancianos, muchos de dichos juegos son inmorales, especialmente los círculos y el grupo apiñado.

unos tocan con el violín, y hombres y mujeres cantan el: *Alleluja;* las parejas van prendidas de las manos, cuando caminan por las calles; si ambas son mujeres, caminan con los brazos en el cuello una de otra. Cantan por las calles, dentro de las casas y al frente de ellas; en este último caso es señal de estimación para una familia. Las palabras son pocas: *Osi ma Pascua, alleluja*, hego la Pascua, alleluja: *Ucuera yema Yandeya, alleluja.* Nuestro Amo resucitó, alleluja (1).

---

(1) El canto del Aleluya principia así: Santísima Trinidad, osi ma pascua Aleluya; aleluya, aleluya, aleluya, aleluya, aleluya, aleluya, etc. Ucuera yema—Yandeya, Jesucristo; aleluya, aleluya, aleluya, aleluya, aleluya, aleluya, etc. La s de Osi se pronuncia como si fuera doble.

[P. 272]

CAPITULO DOCE

GUERRA OFENSIVA y DEFENSIVA

INTRODUCCION

No hay pueblo ó nación en el mundo que no haya experimentado los horrores de una guerra más ó menos sangrienta, más ó menos prolongada, más ó menos desastrosa. Arde Troya, y Eneas, el iniciador del imperio romano, aprovecha la confusión, se sirve de las mismas tinieblas, como de escudo, y se salva.

Los Israelitas conquistaron la tierra santa, mas para conseguir la posesión total de la región, fué necesario regarla con sangre humana, la que principió á derramarse á torrentes desde que asumió el mando Josué, sucesor de Moisés, para suspenderse, por un intervalo, á la muerte de David, cuando su hijo Salomón se sentó en el trono de Jerusalén. La sangre de conquistados y conquistadores dió por resultado la pacífica posesión al más sabio de los reyes, pero á su muerte se descompuso nuevamente todo (1).

El imperio romano se abrió campo en el mundo conocido, con la lanza, la catapulta y la flecha, haciendo correr como ríos la sangre de los invadidos é invasores, vino la paz octaviana, sobrevino la molicie, la pereza y la fruición del oro, acumulado allá en la nueva Babilonia y luego comenzó nuevamente la lucha. Los bárbaros educados por sus señores al manejo de las armas, se lanzaron como fieras sobre sus dominadores, y con poca resistencia dominaron temporalmente á sus señores.

---

(1) En el milagro de Josué se suspendió sólo el movimiento de rotación sobre el eje de la tierra y se anuló el efecto de la fuerza centrífuga que en el Ecuador es un poco más de 3 milímetros por segundo; no se suspendió el de translación que es muy grande: 30'4 kilómetros por segundo.

[facing p. 273]

Arcos, flechas, etc.

Por esto, hasta que los espartanos cumplieron la ley de Licurgo: de no hacer guerra dos veces á sus enemigos derrotados, fueron insuperables, mas cuando Agesisho se olvidó de ella, fueron afrentosamente derrotados por los Tebanos, capitaneados por Epaminondas en Leuctra y Mantinea, á pesar de la muerte gloriosa de este gran renombrado general, acabando en Mantinea la dominación espartana y tebana para pasar á los macedonios (1).

La historia nos dice que los chiriguanos no fueron los primeros habitantes de la región que ocupan al presente. Otros salvajes vivieron aquí, que cedieron el territorio por el derecho ó la razón del más fuerte. Sojuzgados por el número y la valentía de los invasores, unos emigraron para perecer y otros quedaron en calidad de vasallos en su misma tierra y poco á poco se acabaron, quedando los chiriguanos completamente dueños de las tierras.

Con el tiempo los incas quisieron conquistar éste extenso territorio, dejando innumerables huellas de su tesón, pero tuvieron que abandonar este noble pensamiento, contentándose con llamarlos con desprecio sumo: Chiriguanos ó Chirihuanos, estiércol frío. Pero por belicoso ó invencible que se muestre y sea un pueblo ó una nación, le llega la hora de sucumbir; lo que no consiguieron los Incas, ni las armas de los españoles acá, lo han conseguido la paciencia del Misionero y la tenacidad del blanco cruceño y tarijeño. Hoy el temido chiriguano se halla humillado é inclina su frente altanera; se ha reducido á la nada y el que no vive en las Misiones, es vasallo del blanco que lo ha dominado completamente; es disposición de la Providencia, que humilla á los soberbios y dispone que experimenten, aunque con mucha más blandura, lo que hicieron experimentar á los invadidos. Parece que en la últitima guerra de Curuyuqui, el chiriguano ha comprendido su inferioridad, pero no se puede negar, que esta raza ha sido de las más belicosas que han existido acá (2).

No voy á considerar al chiriguano en guerra con los Incas, ni con los españoles, ni con los blancos que ocupan la región; lo voy á considerar en guerra consigo mismo, ó sea con los habitantes de

(1) La dominación Tebana duró cuando su general y la macedónica principió con el grande Filipo, y terminó en la muerte de Alejandro, acaecida en temprana edad.

(2) Los incas quisieron conquistar á los chiriguanos para suavizar sus costumbres. Los chiriguanos trataron á los Tapíi con mucho rigor; según referencias de los indígenas del Parapiti, los hacían engordar para comerlos después.

otros pueblos limítrofes. Delicado hasta el exceso, el indio se dispone á la guerra por cualquier pretexto por pequeño que se lo considere; el rapto de una mujer, su pretendida violación, el hurto de ganado ó cualquiera otra ofrenda, bastan para que el orgullo del indígena ataque la venganza y la ejecute sin pérdida de tiempo.

Entre los indios de Ivu se conserva todavía vivo el recuerdo de las cuatro ó cinco guerras que el cacique regional Yaveán de Cuevo y alyscrucias llevó á Yuti, donde, entre las mujeres degolladas, figura la que fué del indio Cairama, que vive aún en la Misión de Santa Rosa; á Chureti, donde victimó en retirada á algunos blancos; á Itau y Carapari, de donde trajo, como despojo, un pequeño cañón, y á Parapiti, donde fué derrotado, dejando en el campo de batalla, á la margen izquierda del río, unas 200 víctimas. Ya se ha visto en las páginas anteriores que la causa que motivó esta prolongada y sangrienta guerra fué la pretensión del cacique Güiracoti respecto á la mujer de Yaveán, que se vengó de él con demasía (1).

Habiendo comprendido más lectores que el chiriguano es muy belicoso, estarán persuadidos de otra verdad, la de estar preparado á tomar las armas á cualquier evento, de donde se deduce otro hecho que en cada casa se disponía de tantos arcos, cuantas eran las personas, aptas para la guerra, además de disponer de tantas otras docenas de flechas; porque era ley, que en guerra, cada guerrero, debía llevar lo menos una docena.

Ofensiva y armas

Cuando una tribu se disponía á dar el asalto á otra, si preveía su duraba, más de lo acostumbrado, y el cacique juzgaba urgente más preparativos, comisionaba en su calidad de jefe supremo ó capitán general á los subalternos llamados: *Quereuba*, diestros, para que inspeccionaran todo el armamento dispuesto y si el informe de estos jefes no era satisfactorio, se daba orden general de completar y subsanar á la brevedad posible todas las faltas.

Las arcos y las flechas se elaboraban en la plaza pública, ó afuera de cada casa, la madera que debía servir para los arcos era distinta de la de las flechas, los arcos de guerra medían más ó menos

(1) El cacique Yaveán llevó la guerra de exterminio á todos los pueblos indicados, porque todos lucharon á favor de Güiracoti, más nada pudo contra Chituri, cacique del Parapiti.

un metro y medio y, para atirantarlo, usaban un cordel torcido, hecho con cuero de corzuela, liviano y fuerte; la madera que usan aún hoy para los arcos de cazadores llámase: *Iyüirapitiragua*.

Las flechas se preparan de distintas maderas, pero las más comunes son de: *Orci*, guayancansillo, *Yaguuii*, tola ó *Iyüirane*, madera hedionda; esta última es muy ponzoñosa y la tribu que la usa, debe ser muy enemiga de la contraria, porque quien queda herido con dichas flechas, difícilmente sana y la herida es una continua supuración de maleza que lo consume lentamente casi sin esperanza de poderse aliviar y gozar nuevamente con sus compañeros.

Toda flecha termina en punta y en ambos lados tiene sus tajos al revés, de modo que, cuando penetra en las carnes, es dificultoso el extraerla, y quien ignora el modo de arrancarla, produce una herida, mayor de la que hizo la flecha al penetrar. La flecha viene introducida en una cañita hueca, de un metro de altura, adonde la sujetan fuertemente con cordelillo de corteza de Toborochi y el cordel queda cubierto con una pequeña cantidad de cera (1).

Los guerreros de caballería, además de tener arco y flechas, manejan la lanza: es un pedazo de cuchillo ó de hierro, amarrado á la punta de un palo, advirtiendo, que cada guerrero, según dicen, no puede llevar más de una docena de flechas, porque pesan. Para infundir terror y espanto en el asalto que dan al pueblo enemigo, usan el: *Iyüiramimbi*, instrumento de madera, el: *Sraeme*, y el: *Huacanauti*, asta de vaca (2).

Mientras los unos preparan los arcos y flechas, los hombres más valientes no se quedan ociosos, como tampoco las mujeres; éstas preparan el avío necesario y aún la chicha para celebrar el triunfo, si lo consiguen, y aquéllos dan valor á los más cobardes, haciendo ver sus habilidades de *guerembi*, en calles y plaza, animando á todos, haciéndoles conocer que el triunfo pende de ellos y que es necesario triunfar á todo trance, sino quieren sujetarse á la dura condición de vencidos, perdiéndolo todo, mujer, hijos, hogar y haberes.

---

(1) A la extremidad de la caña, muchos, con el mismo cordel y cera, amarran una pluma de halcón ó de carcancho, no por adorno, sino para que el tiro sea más certero; las plumas de dichas aves son de mayor resistencia que otras.

(2) El primero es redondo y cuesta mucho perforarlo y el segundo es largo, ambos de buena madera y graban en ellos figuras y signos; los cuelgan del cuello mediante un lacito, la madera es como ébano.

Cuando ya las armas están todas dispuestas, los de caballería ensillan sus caballos, disponiendo al lado derecho aún las flechas, de modo que puedan con facilidad servirse de ellas en caso de apuro, porque es propio de la caballería atropellar al enemigo y sembrar en el campo la confusión con gritos, toque de los *ipáiramdahi*, *kaucanauti* y *paranqua*. Luego, todos, infantes, jinetes y *guerreros*, visten unos el coleto, otros coraza de garabatá, colocan en el cuerpo de la mano izquierda una cinta de piel de corzuela, para que no se lastimen al tirar la flecha, y, por último, todos se tiznan la cara y los brazos con carbón molido, mojado en agua; ¡considere el lector, si este ejército de demonios no espantaría aún á los muertos!

Marcha é inspección

Por fin se despiden de sus familias, recomendando tener mucho cuidado de no alejarse de la población, el cacique da sus instrucciones á los hombres que quedan de guarnición, las mujeres dicen una vez más á sus maridos, que luchen como valientes, que traigan las cabezas de los enemigos para tomar chicha en sus cascos, y luego, con todo orden principia el desfile del ejército hacia el lugar del combate. Aseguran que el cacique no lleva armas y su presencia sólo sirve para dar órdenes que ejecutan puntualmente sin pérdida de tiempo (1).

El combate nunca se traba de día, ni muy de noche, sinó á la madrugada: por esto, antes de salir los combatientes, calculan la distancia y el tiempo que pueden emplear para recorrerla. Para no ser vistos ni oídos, caminan por el bosque, si lo hay, y procuran llegar de noche á una cierta distancia del pueblo enemigo; á las cuatro ó cinco cuadras hacen su campamento y esperan la madrugada para poder gozar del triunfo, del saqueo y otras cosas consecuentes, con la luz del día, ó poder batirse en retirada y en orden en caso de derrota (2).

---

(1) Si el cacique se viere acometido ó rodeado por los enemigos, sus soldados, especialmente de caballería, acudirían pronto y con denuedo en su defensa.

(2) Nadie del pueblo descubre la cercanía del enemigo, porque los indios no salen de su pueblo después de las 24 horas y los jinetes invasores con sus caballos se quedan á una distancia conveniente, para que los caballos no hagan sospechar sorpresa con sus relinchos.

Mas, antes de que se trabe el combate, uno ó dos de los más valientes salen del campamento por orden del cacique, para que vayan á explorar el campo ó pueblo enemigo. Los exploradores, con toda precaución, penetran al pueblo enemigo, imitando al silbido del mono por un lado, el canto del: *Tocorocate*, lado, por otro, y por último el del: *Surucucuro*. Si nadie advierte la presencia de los exploradores, á su tiempo el combate es terrible; mas si ellos son descubiertos, dan la señal de alarma y pronto se principia la pelea, en la cual los invasores luchan á cuerpo desnudo y pueden fácilmente quedar victoriosos, cochamando al enemigo en su formidable empuje (1).

Los exploradores, no siendo descubiertos, alrededor con mucha cautela el pueblo, vuelven sin tardanza al campamento y dan cuenta al cacique del estado en que se halla el enemigo y todos escuchan con mucho interés la relación; el cacique agradece el valor, la intrepidez y valentía de *Ñaso* y recomienda nuevamente á todos cuidado y valor en la próxima acometida. Los guerreros silencio y todos duermen sin dormir, hablando cada grupo en voz muy baja, para que nadie advierta su presencia.

Antes que llegue la hora del combate, el cacique y los guerreros ordenan los preparativos, los jinetes ensillan sus caballos y dan alcance á los soldados de infantería, éstos sitúanse el arco y sujetan su carcaj con la piedra de piel de oso, amarran sus delantales ó cubiertas á la cintura para cubrir lo más delicado de la persona, ponense sobre la cabeza: *Aga*, banda de cortezas de árbol, sobre el: *Tiro*, arremangado hasta la cintura, y todos, ponense de *ocotoro*, de gallo ó cinta de cada alrededor de la cabeza para conocerse entre ellos en lo recio del combate, no hablan nuevamente y resuelven en caso de ser vencidos uno á cada por el enemigo.

Combate y saqueo

Finalmente se colocan los infantes al centro, los jinetes á ambos lados y los guerreros adelante, porque deben ser siempre los primeros en herir. Disparan sus flechas, saliendo de frente al

(1) De esto deducen y creen los blancos que los indios se disponen á la guerra contra ellos, cuando en su pueblo ó en su caso de campo oyen el: *Tocorocate*, lado.

[illegible] cuerpo, [illegible] en cuanto, [illegible] el ejército invasor y, llegados á cuatro tiros cortos del pueblo, cruzaban á galope infantes y jinetes, corrían los caminos, persiguen, [illegible] á [illegible], [illegible] con algunos de indios todos los combatientes y [illegible] la confusión en algarabía. Los habitantes, sin pérdida de tiempo, tomaban las armas y salían á combatir con denuedo; las mujeres, los niños y los pocos ancianos la confusión y carros desparecidos á [illegible], si pueden. Mientras tanto el combate es rudo y sanguinario de todos lados, los invasores hallan con todo por la victoria y los invadidos por la defensa propia, de sus mujeres, hijos y haberes, cuya suerte atormentan por una flecha, atravesados por una lanza, aquellos [illegible] heridos y arrastrados por su largo cabello y éstos pisoteados por los caballos de los jinetes que cargan sobre los infieles sin piedad y miserablemente (1).

En pocos minutos la plazuela y las calles se llenan de cadáveres y heridos, algunos de la caballería detienen á los fugitivos niños y mujeres é impiden la huida de los defensores, que no miércoles quisieran abandonar la lucha desigual. Antes que aparezca el astro del día, terminan el combate; si el número de los defensores es ya muy inferior, el enemigo invasor hace cesar la batalla y ordena la victimación de los pocos sobrevivientes, sin cuidarse de los que ya hayan.

Luego prestan á los casas, rompen todo lo que hallan de barro, rompen todos los cantijas de barro, derraman todo la chicha sin tomar parte por temor de algún envenenamiento, y por último, á vista de los ancianos y niños prisioneros, prenden fuego al pueblo que arde hasta reducirse á cenizas.

Tan luego que la victoria se declara por los invasores, el capitán ordena que uno de los jinetes lleve la feliz nueva al pueblo, para que se regocijen y aquellos las mujeres la fermentación de la chicha. Mientras tanto acabado el saqueo y reducidas las casas á cenizas, se reparten entre todas las mujeres, los ancianos y los niños y los llevan triunfalmente al pueblo; algunos hombres han convenido de sus víctimas algunos cabezas de los hombres, muertos en el combate, los que servirán de trofeo de guerra.

---

(1) Los pueblos chiriguanos antiguos se compusieron de cincuenta ó cincuenta familias, de modo que, el combate, no podía durar muchos horas, pues los invadidos eran además sorprendidos.

Después de la victoria

Las victorias son recibidas con extraordinario regocijo y luego todos los cráneos se fijan primero en las cabezas que van á los postes de las lanzas, las insultan y escarnecen con mucha crueldad, las cargan de algún detal que hay en el pueblo ó en la plaza, y allí permanecen para juguete de los chicos, quienes arman sus diversiones, hasta después servir de blanco para aprender el manejo de la flecha y ser buenos tiradores, y cuando no han cansado de verlas allí, las bajan, ataban con cordeles y las arrastran por las calles, llamando la atención de todos con sus gritos y juegos, sus, pues, muy inhumanos, y sus padres ven con placer, lo que hacen sus hijos (1).

Los de mayor edad, hombres y mujeres rodean á los patos prisioneros y los insultan hasta el cansancio, los reprimenan por la guerra, á la cual dieron motivo sus maridos, escarnecen sus vos más la memoria de los flechas que no supieron defender su pueblo, llamándolos hombres de ningún valor, aptos hacer para el oficio de mujer, aptos hacer para elaborar la chicha, y concluían ya de beber, principia el festín con la bebida, el baile y el canto, con el cual celebran su espléndida victoria.

Los prisioneros permanecen mudos, no levantan la cabeza, no pronuncian palabra y hasta se niegan á tomar alimento, si se lo ofrecen; sólo un pueblo negro á los acciones brutales de los vencedores que acabarían con su vida, si tal cosa intentaran. La última guerra de Curuyuqui es todavía una prueba viva de lo dicho, pero felizmente nuestros desgraciados tuvieron amparo en un desdichado con la presencia del misionero (2).

Durante los días de regocijo y después entretienen un juego de dados y apuestan á los prisioneros que para nada les sirven, en cuyo número entran las mujeres de edad, los niños y párvulos menores de siete años y con que otra cosa, que no hace falta á su casa. Cuando están cansados de ellos, hacen cualquiera, ó los venden por una cosa de nada, por una oveja, una cabra, un sem-

---

(1) Después de la guerra, ó durante la de Curuyuqui, llevaron el pueblo la cabeza del indio Chabuco y practicaron, más ó menos, lo relatado, con poca diferencia.

(2) Cuando los indefensos doncellas comprendieron la intención de sus amos, huyeron burlando la vigilancia de aquellos brutos, entraron á la escuela como último refugio, y aprendieron la Religión.

brero; la venta ó el cambalache no se efectua en el pueblo de los vencedores, sino en otros más lejanos, acontece entonces que muchos inocentes niños y niñas hallan allí á sus parientes que pagarían aún más de lo que se pide.

Defensiva

Pero no siempre el ejército invasor consigue una victoria, como la que acabo de referir, á veces lleva la peor parte y entonces sucede todo al revés; lloran al recibir la noticia los que quedaron en el pueblo, vuelven los derrotados y lloran todos por la sufrida derrota y muchos por la muerte de sus seres queridos. Sin perder tiempo se preparan á la defensa, porque saben perfectamente, que los invadidos tomarán prontamente la venganza del agravio recibido, presentándose á ellos como invasores.

Entonces las precauciones son muchas é iguales para ambos ejércitos, el pueblo que espera la venganza, dispone que todos los inhábiles para el combate se pongan en salvo con los pocos haberes á una cierta distancia de la población, y, si fuera posible, en lugar oculto; se colocan centinelas de día y de noche y cualquier ruído, cualquiera polvareda, cualquier indicio es inmediatamente denunciado al cacique y á los *gurombi* (1).

Cuando un pueblo está preparado á la defensa, el combate en las inmediaciones es atroz, y si el número de combatientes es igual, los invasores llevan la peor parte. Sin declararse vencidos, después de pocas horas abandonan el campo y se baten en retirada, hasta que desaparezca todo peligro y vuelven á sus casas, ni derrotados, ni triunfantes.

Mientras los hombres combaten ó van á la lucha, las mujeres levantan sus plegarias al sol, echan al aire arena ó ceniza en dirección del enemigo y en tono demasiado triste, derramando lágrimas sinceras que hacen conmover á cualquiera, dicen en alta voz: *Tiumini, chera cuaraxi, tuquáichó pochi, tiumini, tiumiuto, tumuno pochi*, que sean derrotados, mi padre sol, los pérfidos enemigos, que sean derrotados, derrotadísimos, que mueran los malvados. Mientras dura la guerra, es ley, que las mujeres y sus hijas no deben sentarse acurrucadas, sino con las piernas tendidas

(1) Colocan centinelas en todas las alturas; así hicieron el año 1892 ambos ejércitos, el de Curuyuqui en Ivu, y los sitiados alrededor de la Misión de Santa Rosa.

hácia adelante, para que sus padres y maridos que se hallan en campaña, no experimenten cansancio alguno (1).

Durante la guerra de Curuyuqui, la Misión de Santa Rosa fué invadida por los sublevados que, á pesar de la multitud y esfuerzos, no pudieron penetrar al pueblo que intentaron incendiar. Entonces y después presenciaron los Misioneros escenas dolorosas de mujéres que, llorando á lágrima viva, levantaban sus gritos y esparcían ceniza para ofuscar la vista de los enemigos. Recuerdos amargos se conservan todavía de aquella hecatombe, de los cuales se ríen hoy algunos, pero se lloraba entonces; siempre que oigo esas tristes relaciones, se me arrasan los ojos en lágrimas (2).

Paces

Cada vez que termina una guerra entre chiriguanos, los que llevaron la peor parte son los primeros en reanudar las relaciones amistosas; lo hacen poco á poco y sirven para ello maravillosamente las mujeres, las mismas que con su lengua contribuyeron inconsideradamente en promover las hostilidades. Los vencedores admiten fácilmente las proposiciones de paz y luego comienzan nuevamente las visitas, en las cuales, si cae la tertulia sobre la guerra última, esquivan los vencidos, ó sea; escusan el engaño sufrido por algún facineroso; pero de vez en cuando deben aguantar callados los reproches de una que otra mujer atrevida que no faltan en los pueblos (3).

Cuando la guerra es regional por intervenir en ella varias tribus, sujetas á un mismo cacique, como aconteció en la de Yaveáu

(1) El italiano del Campano, apoyado en los escritos del P. Giannecchini, Misionero del Colegio de Tarija, escribe en su obra, que antes que principie el combate y durante él, mujeres y doncellas salen á la plaza, bailan y cantan en alta voz el: *Aré, aré*. Este canto y el baile debe ser originario de los tobas que pululaban entonces en la región del Gran Chaco, porque en la región de Ivu y otras, apenas conocen el nombre del *Aré, aré*, y ni todos están en ese conocimiento, como está probado, que en ningún combate habido al Norte, Sur y Poniente de Ivu, se ha bailado y cantado el *Aré, aré*

(2) Los sublevados de Curuyuqui atacaron primero el pueblo de Cuevo, cuyos habitantes la víspera se habían guarecido en Santa Rosa; á los pocos días atacaron la Misión, de donde se concluye, que el odio era contra los blancos, y por concomitancia contra los indios que los amparaban en su pueblo y contra el Misionero que los llevó.

(3) Alguna joven, alumna de la Misión de Santa Rosa, reprochaba al capitán de Ivu que pedía Misión en su pueblo, después de haber querido victimar al Misionero; pero ya he dicho que la guerra era directamente contra los blancos.

contra Güiracoti, ambas regiones procuran tener igual número de combatientes de infantería, caballería y *guerembu*, de otro modo difícilmente la parte más débil presenta el combate; Güiracoti presentó batalla ayudado por los blancos y parapiteños, mas cuando se vió con poca gente, huyó de Yaveáu que lo perseguía con todos los suyos (1).

Terminada la campaña regional, los mismos caciques con intervención de otros que no tomaron parte en la contienda, procuran restablecer la paz, porque si el chiriguano es bastante belicoso y arrogante, otro tanto es pacífico y desea vivir tranquilo en su hogar. De modo que fácilmente se acepta la paz por ambas partes, la que viene sellada con fiesta general, primero en el pueblo del cacique derrotado, y luego en el del cacique victorioso. A estas fiestas concurren todos los grandes y notables de ambas regiones y de los que han intervenido en los arreglos amistosos y ya no se vuelve á hablar de la época borrascosa, sino para amatenatizar al que, según ellos, tuvo la culpa de tanta zozobra; á las palalabras de las mujeres se da poca importancia (2).

Luego cada cacique regional recomienda á los suyos de no perturbar nuevamente la tranquilidad pública, éstos á su vez peroran de noche á sus subalternos las ventajas de la paz y ambos caciques se dan la mano, prometiendo de arreglar amigablemente en lo sucesivo cualquiera contienda, que pudiera suscitarse entre ambas regiones, pero alguna vez sucede lo contrario, porque el victorioso difícilmente cede, se juzga superior é ignora, que vale más una transacción.

Finalmente cada cual vuelve á su pueblo satisfecho, se ordena en seguida el arreglo de las casas destruídas; llega el tiempo de las siembras generales y todos acuden al trabajo con tranquilidad para tener nuevamente abundancia y con la esperanza fundada de disfrutar á su tiempo del poco sudor derramado, con provecho propio y de la familia.

---

(1) El cacique Yaveáu en su primera derrota se repuso y se preparó convenientemente á una arremetida general y decisiva á las faldas de la serranía de Irenta, situada á la distancia de una legua de la Misión de Santa Rosa.

(2) Como la guerra de Curuyuqui fué contra los blancos y como éstos triunfantes los persiguieron á muerte, no pudo haber convite luego, pero con el tiempo se reanudaron las relaciones amistosas entre los indios de Ivu y Santa Rosa y siguen hasta hoy en perfecta armonía, porque viven al amparo del Misionero que los iveños habian pedido antes.

CAPITULO TRECE

ENFERMEDADES, FÁRMACOS, MUERTE y LUTO

INTRODUCCION

Basta un momento de reflexión para que el hombre comprenda, que en la tierra no está su verdadera felicidad; el que puede gloriarse de ser feliz en este mundo, encuentra muchos pesares: deseos no satisfechos, órdenes no ejecutadas, proyectos no acatados; la ejecución de mandatos sin exactitud constituyen espinas para el corazón del hombre que pudiera llamarse dichoso. Quisiera que todo vaya y camine á medida de sus deseos y cuando esto no consigue, sufre y, si no expresa su sufrimiento, sufre mucho más aún (1).

Decía el filósofo Foción, que quien tiene ménos deseos que satisfacer, es el hombre más feliz de la tierra, esta es una verdad basada en la experiencia, más no es la verdadera felicidad, es parte de ella. porque la felicidad completa no se consigue acá.

El verdadero chiriguano vestido á la antigua y la mujer con su tipoy serían los más felices de la tierra, pero como son hijos del primer hombre, han heredado también ellos la aflicción, el dolor y la muerte; estas tres cosas casi siempre son consecuencia de las enfermedades y estas provienen de la vida desarreglada que ya he descrito, como provienen aún de las bebidas y comidas.

El chiriguano ningún cuidado tiene de su persona, á pesar de que ama la vida que deseara fuese eterna, por más que camine arrastrándose. Sus manjares son nada higiénicos, se alimenta

(1) Es un grande alivio para el hombre poder comunicar sus sufrimientos á un amigo sincero, mas esto es difícil se encuentre, porque quien tiene un amigo, tiene un tesoro, y el tesoro es raro.

[facing P. 285]

Grupo de indios Chorotis.

muchas veces y con demasiada gula de carnes corrompidas, las legumbres y el mismo maíz que tuesta, nunca llegan á perfecto cocimiento, el agua que bebe no siempre es clara, ni siempre exenta de microbios y pequeños gusanos que están á la vista, la misma chicha que se elabora con tanto esmero y se prepara con tanto cuidado, la beben aún agria y por último el abrigo es insignificante. En los grandes calores se echa por el suelo, recibiendo en sus espaldas los ardientes rayos del sol, en los cambios repentinos atmosféricos poco se abriga y si se moja por la lluvia ó por baño voluntario de agua fría ó calentada por el sol, deja secar su ropa en el cuerpo; de donde dimanan las enfermedades que luego enumeraré, enfermedades que siente, lo hacen infeliz y luego lo llevan al sepulcro.

El arco iris que Dios dió á Noé, como señal de no inundar nuevamente la humanidad con las aguas de un nuevo diluvio, es para el chiriguano triste presentimiento; si este fenómeno tan natural aparece en un pueblo y tiene su principio al frente ó arriba de una casa, al desaparecer, no cesó, ni se volvió á la nada, sino que se ocultó en el vientre de uno de sus habitantes, que al tiempo enferma y muere hidrópico, de donde procede que esta enfermedad para ellos rara, es efecto del arco iris (1).

Enfermedades y fármacos

Las enfermedades más comunes entre los chiriguanos son las fiebres intermitentes que son endémicas, la tísis ó consunción, la enfermedad de la vista, la tos convulsiva, la diarrea, la disentería, la roña ó sarna y los tumores acompañados con una especie de lepra que les cubre mucha parte del cuerpo. Las intermitentes se desarrollan con las primeras lluvias y siguen, hasta que termine el tiempo de las frutas y maíz fresco, estas fiebres no son mortales, pero el que es atacado, lleva una existencia bastante afligida. Sus remedios son de vegetales, hacen hervir la corteza del quebracho ó del algarrobo y beben dicha agua, pero no siempre

(1) Otro fenómeno natural es el torbellino que se levanta continuamente hasta el cielo en estas interminables llanuras, llevando tras sí toda la basura que halla en su curso, se llama: *Cusumino* y produce según ellos los dolores en los piés, rodillas, y huesos; cuando el remolino principia en un pueblo, procuran cortarlo con cuchillo.

produce efectos saludables. Si en las intermitentes se les administra una pequeña dosis de quinina, los sana al momento (1).

La sarna, los tumores y las lepras no producen la muerte; el alimento del chiriguano es casi siempre sin sal, poco cuidado tienen ellos en escogerlo, la carne hedionda no les produce asco, el agua no siempre es clara, se bañan á cualquier hora, después del baño no secan su cuerpo; si llueve, dejan que la ropa mojada, se seque en su persona; de esto y otras causas vienen tantas enfermedades cutáneas que no los dejan dormir. La sarna la curan con el salitre que hay en las quebradas secas, lo llaman: *Curuyuqui*, ó sea, sal apta para curar la sarna, pero este remedio no siempre produce su efecto; ataca la sarna principalmente á los de menor edad y los párvulos lactantes contagian á sus madres. Las lepras se curan con mucha eficacia mediante la boñiga caliente y basta aplicarla dos ó tres veces para que se caigan á los tres días sin otro remedio, pero poco se resignan á usar este remedio repugnante y eficaz.

La viruela y el sarampión son epidemias que aparecen de tiempo en tiempo, por esto no las coloco en el número de enfermedades endémicas como las primeras. El chiriguano huye de la viruela como el hidrófobo del agua, por experiencia sabe que quien es atacado, difícilmente se libra de una muerte horrorosa; cuando penetra en un pueblo, siembra el espanto y la desolación, los enfermos se resiguan ya á morir y los sanos huyen azorados á otras tribus. Parece que no es fácil atacar directamente la viruela y hasta ahora la sola vacuna produce los mejores efectos (2).

El año 1909 fué diezmado por la viruela el pueblo de Cuevo que dista de Ivu unos ocho kilómetros, vacuné á todos los pobladores de Ivu y á los que no lo eran, mas no prendió á todos la vacuna, como suele acontecer, sin embargo pocos enfermaron y murieron apenas dos. El remedio que administré luego de declararse la fiebre precursora, fué el vinagre de vino bastante fuerte; la enfermedad hizo su curso tan sólo en aquellos que no bebieron el

(1) Sanan con pequeña dosis, talvez porque su cuerpo no está acostumbrado á los remedios de botica, otro remedio eficaz para las intermitentes es el café amargo ó con un poco de azucar.

(2) Los Misioneros, cuando grasa la viruela, acuden donde es requerido su ministerio, como médicos y como sacerdotes, hasta hoy ninguno se ha contagiado, talvez por estar vacunados ó por tener otra sangre.

vinagre, ó no pudieron retenerlo en el estómago. Administré una copita cada seis horas en tres veces y fué bastante para que este terrible mal, que tantas muertes causara en Cuevo, pasase casi desapercibido en la Misión de San Buenaventura (1).

El sarampión ataca por lo regular á los niños, como la diarrea, y por ser muy tiernos es difícil curarlos, por cuya razón casi todos sucumben; el limón y el vinagre son remedios eficaces para ambos males, en muchos casos he administrado la manzanilla con buenos resultados. La diarrea en los párvulos proviene de la escasez, entonces las madres se alimentan con cosas muy cálidas, como la fruta ó patata del aro serpentino, las algarrobas y otras del monte, de donde proviene, qué los párvulos beben la leche muy cálida que les daña el vientre, y les produce inflamación (2).

La disentería es propia de los de mayor edad y se manifiesta uno que otro caso aún en los niños. La causa de esta enfermedad es la pésima alimentación en el tiempo de escasez, cuando comen raíces y frutas silvestres. Existe en el lugar un remedio muy eficaz, los blancos lo llaman meloncillo y los indios: *Aurantimbucu;* es un arbusto espinoso con puntas largas, de dónde le viene el nombre; al tiempo de brotar ó en la primavera, tiene sus puntas algo moradas y sus raíces constituyen el remedio, se las hace hervir y al enfermo se le da á beber de dicha agua por una semana. El mal de ojos ataca indistintamente á todos, grandes y chicos y es tan fuerte que varios pierden completamente la vista, ó se quedan con un solo ojo; en las misiones se cura con el albayalde ó acetato de plomo y basta aplicarlo dos ó tres veces para quedar completamente sano.

También la tos convulsiva, tos-ferina ó coqueluche es otra enfermedad que persigue á los párvulos hasta la edad de diez años, causando muchas defunciones. Se manifiesta en los meses de frío y aún en tiempo de agua, ataca alguna vez á los grandes, entre los cuales no causa defunciones. Hay en los cerros una flor amarilla que se llama por acá: *Vira-vira;* la tisana de estas flores produce saludables efectos, pero no tiene fuerza para curar radicalmente.

---

(1) En la Misión de Santa Rosa enfermaron y murieron más personas, pero el uso del vinagre que principió á administrarse después, hizo parar la mortandad

(2) Hay cerca, ó alrededor de las lagunas una hierba llamada: pazote y por los indios y blancos: *pdico*, la tisana de esta hierba es eficaz para la viruela y para el sarampión.

máximo si no se tiene la precaución de abrigar al niño después de beber la pócima (1).

La consunción ó tísis ataca á hombres y mujeres y se manifiesta en ambos sexos con dolor de estómago, este dolor puede considerarse el principio del mal que regularmente se manifiesta después de los cuarenta años, mas en ciertos lugares lleva al sepulcro á las personas que no alcanzan los veinte años.

En la Misión de Santa Rosa esta sola enfermedad en menos de diez años hizo sucumbir más de setenta doncellas de escuela, en aquel entonces esta mortandad la atribuía al agua pésima del lugar, pero como se la halla en otros parajes de agua excelente, otra debe ser la causa; para los de menor edad ó púberes no debe ser la continuidad del fuego, porque en las escuelas no lo hay.

Para la tísis el chiriguano no tiene fármaco y quien es atacado, se resigna á la muerte, porque si todo lo atribuye á maleficio, en ésta cree en él y en el veneno, por esto el enfermo se hace curar del brujo, quien para arrancar el mal, sin conseguirlo, usa maneras atroces y hasta inmorales, tratándose de mujeres (2).

Otras enfermedades y fármacos

Conforme hay enfermedades, hay médicos y medicinas entre los chiriguanos, aquéllos no han cursado otra universidad que la experiencia, aprendiendo de ésta á preparar fármacos no sólo de las plantas y hierbas, si que también de los minerales y aún de los excrementos de animales. Los médicos recibieron la laurea de individuos que saben menos que ellos, y se diferencian aún por su nombre de los brujos malos, éstos se llaman: *Mbaccuá*, aquéllos: *Ipuyc*, y las medicinas ó fármacos llámanse: *Mori*.

El aceite que necesariamente sale de la elaboración de la chicha, es muy bueno para curar el dolor de cabeza, la sal molida y mezclada á la orina de los párvulos, se bebe y es un buen calmante en los dolores de vientre. La humedad y el frío producen encogimiento en los nervios, que hacen sufrir dolores atroces á más

(1) Más eficaz en la tos-ferina es el uso del petróleo, se unta al niño desde la frente hasta el vientre, haciéndole beber algunas gotas; en 1910 sanaron casi todos los que curé con el petróleo.

(2) El Misionero compra remedios de botica para curar á los indios, dichos remedios casi siempre son repugnantes, si el enfermo no lo bebe en presencia de aquél, lo derrama luego, más fé tiene en el brujo.

de uno; para curar este desarreglo, arrancan un gajo de ulala: *Ñancagüina*, lo mondan de sus espinas, lo asan y bien caliente, lo aplican en las partes doloridas y sanan. Para curar la disentería usan otro, queman el maíz amarillo, lo muelen juntamente con la semilla de sandía y hacen beber á los atacados por la enfermedad (1).

Cuando un enfermo sufre el dolor de costado, pide la cáscara del armadillo boleado, la hace moler y bebe, al mismo tiempo lo que queda, hace calentar al fuego, lo aplica al dolor y cesa como por encanto. Si el sarampión sale en los labios, les aplica el brujo ó médico y estruja la garrapata que estuvo prendida en la carne de algún perro y así desaparece. A veces se manifiestan tumores ó hinchazón en la garganta y en las rodillas que se hacen desaparecer mediante la aplicación de la hierba llamada: *Urucuna*, se calienta al fuego en una ollita y se aplica; también es buena la otra hierba llamada: *Yandurimbiu*. Enfermam también con vómito de sangre ó hemorragia (2).

La: *Cuaupaya* sirve para el dolor de estómago y la raiz hervida del soto sana los dolores que produce en los piés la tierra caliente y húmeda. La: *Guaya* es una especie de bejuco que abunda en Ivu, se calienta, se aplica á la hinchazón del costado y sana; la raiz de la: *Guaya* se come por los indios, mas si los perros comen el excremento del indio ó la misma patata, mueren á los pocos minutos, así sucede aún á los zorros. Entre los indios no es tan frecuente el mal de papera, á pesar de haber en lugares determinados; aseguran, que les viene á los que duermen en el sol. Se curan de él con la: *Tutía*, es una fruta amarilla parecida á una pequeña manzana y abunda en las pampas. La enfermedad de ojos la curan con la corteza del algarrobillo, la muelen y hacen gotear el agua adentro del ojo; la caraguata pequeña cura la diarrea (3).

La: *Cintiro* es una hierba de un metro de altura, es de dos clases, una tiene flores coloradas, se la usa para adornar altares y los indios usan la hierba y flores para curar la sarna; es remedio más

(1) El meloncillo es remedio que me indicaron los blancos, es más eficaz, pero el chiriguano ó no le tiene fé, ó por flojera no lo usa.

(2) Se cura la hemorragia bebiendo de hora en hora una mezcla en partes iguales de agua, vinagre de vino y miel de abeja; se alivian pronto con este remedio.

(3) La papera incipiente se cura aún amarrando en un trapo alrededor de la garganta la sangre del gallinazo, carcancho ó bandurria; el agua mineral de Ivu contiene germen de papera.

eficaz que el salitre, pues que con este vuelve á brotar; la que tiene flores amarillas en Ivu es abundantísima y se la emplea para curar la intermitente; *cáuiro* quiere decir hierba amarga. Para curar las lepras de que hice mención, usan también la grasa de víbora y la: *Iuái* que literalmente quiere decir diente del agua, es una hierbita que crece arriba del agua y es pequeña; para curar la coqueluche usan también el nido vacío de las avispas amarillas, lo queman ó hacen hervir en agua y, una vez colado, dan á beber el agua tibia á los enfermos.

El: *Tingui* es un árbol grande; con su corteza amarrada al vientre se cura la hidropesía incipiente que en idioma se llama: *Ipunga.* La raíz hervida del mistol y la grasa del tapir cura la gonorrea; con la grasa de gallina, de escarabajo y chicharra se cura el dolor de oidos; basta hacer penetrar en ellos unas cuantas gotas. Para curar el envenenamiento usan la raíz del chirimoyo del monte: *Aratícu*, para la mordedura de víbora la hierba llamada: *uruuru*, guaje, el tabaco y su nicotina y para las heridas producidas por un perro hidrófobo, usan la cera derritida aplicada á la herida; si ésta fué producida con arma en una riña, se cura, aplicándole las plumas quemadas de gallina. Finalmente si en las mujeres la matriz sale de su lugar, viene reducida á sus límites, dando á la paciente la concha molida y bebida en agua.

Estos y muchos otros son los fármacos que usan los chiriguanos; de los demás no hago la enumeración, porque en mis averiguaciones he venido á conocer que va unida la superstición, que los médicos brujos inoculan á los enfermos (1).

Muerte y funeral

Cuando un chiriguano enferma de muerte, principian á reunirse todos los parientes más cercanos y conforme la enfermedad va adelante, los parientes lejanos, amigos y vecinos hacen con frecuencia sus visitas, mientras los cercanos no se apartan ya de la casa, donde muy luego reinará la muerte. Si el enfermo es un hombre casado, la mujer está contínuamente á su cabecera, lo sostiene en sus rodillas, le mece el vigoroso cabello y le hace caricias por su rostro, mientras lágrimas furtivas y silenciosas se deslizan

(1) No es extraño que los indios crean en los brujos, porque aún los blancos se dejan embaucar con estos impostores que los hay aún entre los cristianos.

[facing p. 291]

Casas de indios Chorotis.

en abundancia por las mejillas, que casi todas van á parar en las espaldas ó pecho del moribundo, de lo cual este recibe un lenitivo á sus dolores, porque comprende el pesar que experimenta su esposa y la falta que hará á élla y á sus hijos, si los tiene (1).

Al acercarse la agonía el enfermo recomienda, que lo lloren lo más que se pueda, recomendaciones que hace antes de perder el uso de la palabra. Dicha recomendación no se dirije á la que dentro de poco va á quedar viuda, se dirige á los parientes y amigos, porque la viuda sabe, que debe llorar la ausencia de aquél que fué su compañero (2).

Sobreviene la agonía, principia el estertor de la muerte, palidece sobremanera el rostro, se alelgaza la nariz, se hacen secos los labios y la lengua, se vuelven vidriosos los ojos, se paralizan los párpados y pestañas del enfermo, éste con sus manos principia á cojer de sus cobijas, no se sabe que, mira á un lado y otro y permanece insensible á los objetos que le rodean; se halla próximo á desaparecer. Luego los circunstantes comprenden la proximidad del desenlace fatal; en la imposibilidad de prestar auxilio, al que lucha, al que está por quedar yerto, principian á dar alaridos precursores de la muerte.

Esta no se deja esperar mucho ya, el agonizante da un último suspiro y principia á boquear, hasta que se queda del todo con la boca abierta, lo que observado por la viuda, da un grito que es la señal de que, ya murió su esposo. Entonces principia ya formalmente el funeral, visten al finado de la mejor ropa, lo peinan con todo esmero, le pintan el rostro y los piés con el aceite del palmachristi y achiote, le doblan las rodillas, colocan allí las manos cruzadas y así lo amarran, para que con comodidad entre el día del entierro en la vasija de barro, dispuesta de antemano, donde lo colocarán al tiempo de ser sepultado.

Ya principia el funeral que consiste en llorar lo más fuerte, que se pueda, hombres y mujeres y derramar lágrimas verdaderas ó falsas. Mientras se llora, se cava también la sepultura, que á

(1) Cuando la mujer ha pasado de los cuarenta años de edad, derrama lágrimas verdaderas, porque ya el indio la había tomado por esposa hasta morir y con la muerte de aquél, todo lo pierde; ya será pobre.

(2) Si el moribundo cree morir envenenado, antes de perder el uso de la palabra, encarga á los parientes más cercanos tomar la venganza después de los días de luto, si el supuesto enemigo es conocido.

lo sumo es de dos metros de profundidad; el llanto dura toda la noche sin descanso, lo cual va acompañado de ayuno riguroso, porque mientras el finado está visible, sería una profanación tomar alimento. Si en casa hay párvulos, son trasladados por sus vecinos, ó por algún pariente que los atienden con toda humanidad en todo, pues los infelices al ver tanta confusión quedan como lelos y van en pos del primero que les muestra cariño; para remojarse la boca, los que asisten al funeral y, para llorar sin descanso, beben un poco de chicha tierna, si hay, sino se contentan con un poco de agua (1).

Al día siguiente, cavada ya la sepultura, colocan al finado primero en la vasija: *Yumbái*, meten allí una timajita de chicha, un poco de harina tostada, un pedernal, un eslavón, la yesca, chala y tabaco, un loro vivo ó una gallina, el arco y la flecha y otras cosas que pertenecieron al finado y cierran con otra timaja, y si el muerto es un lactante, meten en su sepultura una timajita de la leche de la madre. Todas estas cosas son necesarias para el viaje á la otra vida y claramente indican que los chiriguanos tienen una idea, aunque material, de la inmortalidad del alma.

Cerrada ya la caja mortuoria, mediante cuerdas la bajan al hoyo y mientras tanto se redoblan los alaridos, hasta que desaparece debajo de la tierra; el cadáver es colocado con el rostro hacia el Naciente, porque todos desean que el finado alcance la gloria, el paraiso que se manifiesta por la claridad del sol; así colocado, el finado ó su alma, no estará andando en busca de la felicidad, correrá hacia el sol como el acero ó hierro hacia el imán.

Luto

Terminado el entierro, en ese día se llora íntegro al extinto y hasta que llega la noche, entonces cada cual vuelve á su hogar, permaneciendo á llorar sólo los parientes más cercanos. El ayuno, ya mencionado, dura tres días y en el primero, que sigue al entierro, todas las mujeres parientes se cortan la cabellera y la depositan sobre la sepultura. Al tiempo de cortársela miran al naciente, los cabellos permanecen sobre la sepultura algún tiempo y luego los quitan y si los queman, no es sobre la sepultura, sino afuera, pero prefieren no quemarlos, porque experimentarían ca-

(1) Los que no pueden derramar lágrimas por no sentir la muerte del finado, estrujan ají en sus ojos y con este, que llaman remedio, las lágrimas caen en abundancia

lor en la cabeza. Si observan ó sienten algún ruido, que sale del hoyo, calientan una piedra, la ponen encima y cesa el ruido (1).

También sobre la sepultura colocan la tembeta, la bodoq, las armas que pertenecieron al finado, como la lanza ó algún sable, arcos y flechas, para que no las vaya buscando y cuando por alguna circunstancia dejan la casa sola, colocan sobre el hoyo el batán del mortero y con esto el finado no se mueve de su lugar. Las almas de los que hacen mala muerte, como por ejemplo, los suicidas, andan continuamente, no hallan descanso, van gritando á horas determinadas y son, según creencia, demonios ó compañeros de dotor.

Los deudos más cercanos del difunto sienten sinceramente la desaparición del finado, como lo prueban las lágrimas y la pena que manifiestan en el rostro. Si en vez de un hombre es una mujer la que desaparece del número de los vivientes, el viudo siente igual pena; si la extinta deja chicos de menor edad, es verdaderamente desgarrador el cuadro que presenta la casa, donde el nuevo sol no halla á la madre que tan tiernamente cuidaba á los pequeñuelos (2).

Estos la buscan en vano mudos y azorados y no puede distraerlos de su pensamiento ni siquiera la ternura de una tía, que debe tragarse las lágrimas en silencio. Cuando oye que los huérfanos buscan y preguntan por la autora de sus días, contesta á las pobres criaturas con pena, y aún con fuerza: que pronto volverá ó de un pueblo cercano, ó de la chacra y mientras esto las lágrimas corren por sus mejillas, desmintiendo con esto su afectada serenidad; pero los inocentes no las comprenden, siguen con sus preguntas, miran á la tía aterrados y hasta se asustan. ¡Triste cuadro!

Cuando es una mujer, la que deja en viudez á su esposo con hijos, naturalmente poco tiempo puede transcurrir en procurarse otra mujer, que sirva de madre á los huérfanos y tenga cuidado de la casa, porque el hombre no puede ocuparse en cosas que son propias de la mujer. Por una corta temporada suplica á sus parientes cercanos, para que atiendan á tales cuidados, pero pronto se cansan, ó vuelven á las atenciones de la casa propia. Luego el viudo busca á otra de una manera privada y sin lastimar el senti-

(1) Si el finado es un cacique, lloran todos hasta el amanecer y después se reunen cada noche por el espacio de unos ocho días.

(2) Los niños exigen volver y se les permite pasado el entierro; los acompaña una tía, especialmente materna, si la tienen, la cual se queda en casa una temporada, sino tiene propios.

mienta de las cosas, que naturalmente comprendo los apetecen del viudo, quien, si tiene madre ó una hermana soltera, no da paso alguno y procura abstenerse de pasar á segundas nupcias, lo más que puede, pero antes que expire el año, de todos modos ya buscó otra nueva compañera que alegre sus días y haga más halagüeña la vida (1).

Si es una mujer, luego queda viuda, es ley de la raza, que debe llevar luto por el espacio de un año sin que le sea permitido por ningún pretexto acortar este tiempo. Después de haber llorado á su finado marido un día completo y después de haber peinado el cabello, conforme se ha dicho, se corta el cabello y lo deposita en la sepultura, dando permanente bastante tiempo que no vuelve determinado. Si la mujer perdida que la viuda pueda ofrecer á su finado esposo, y, le haya tenido á su cuidado, es ley que debe observar; de otro modo incurriría en el desprecio de los pobladores que estudiarlos su conducta, luego perdería su reputación, los parientes del finado se revestirían sobremanera, le quitarían los niños que mucho aman, y difícilmente se casaría nuevamente.

Una viuda cuidosa y la que no lo es también, en señal de luto hasta el trapo más sucio y roto que halla en casa y se lo coloca en la cabeza, lo lleva todo el tiempo que dura la viudez. Quien llega por primera vez á un pueblo chiriguano, estrella este atuendo y luego pregunta por su significado, porque nunca deja de faltar alguna que lleva luto por su marido, por su hijo ó por su hermano, cuando no es por su padre ó madre. Finalmente la viuda está condenada á llorar día y noche por el espacio de un largo año y quien no llora como es debido, incurre en la indignación de los deudos del extinto. Retornando de Mixiourro en Santa Rosa, murió el cacique Yaritéi, cada mañana con cirrosis maligna, la viuda lo lloró tanto y tan fuerte en principio que muy luego se volvió ciega; sin embargo los deudos no quejaron de su prematuramente, acusándola de poco cariño (2).

---

(1) El viudo procura casarse con una hermana de la finada, ó una pariente cercana, para que tenga cariño á los huérfanos; cuando una extraña es tirana, ó es arrojada, ó de los niños cuidan otras parientes de la finada, ó del mismo viudo; mucho sufren los chiriguanos el sufrimiento de los huérfanos.

(2) El llanto durante el luto se practica por la mujer cuatro veces al día; á la salida del sol, al mediodía, á la entrada del sol y á la media noche más ó menos; muy triste es en esta última hora.

Si alguna vez desvanecido marchan al entierro, muy largo la vida, ó quiere su fuerza el enfermo, su levanta y principia á dar un ala vida que dura algunos minutos. También cuando en la casa del finado llega de lejos uno de los parientes, se sabala á saludo, pregunta por la sepultura, va allí y acompañando con el cuerpo hasta la pared, llora por algunos minutos y revida que esto terminan, saluda á los vecinos y principia la bebida en voz baja.

Tocan el cuerpo, como el modo de llorar á con muertos en igual en todas las tribus, sin embargo hay algunas pequeñas diferencias, como entrada con el mismo idioma.

Duelo de una viuda

Al terminar el año de luto, la viuda permanece en su silencio, hasta que uno de los parientes del finado la visita con todo respeto como persona de conocimiento, por haber llorado mucho y, con pena, del enfermo; le dice que ya es suficiente, que puede salir y presentarse nuevamente en las bebidas públicas, pero dicha viuda la revidan dos ó tres días antes de alguna bebida general. La viuda se hace cargo mucho y pondera una vez más los visitados y

(1) Si el finado es un niño dice: ¡Chiemmmmm ayai! niñito querido! y si es un hijo ó una hija: ¡Chiempi ay ayai! hijo ó hija querida!

grandeza del marido perdido con la muerte, maldice á los brujos malos y á los venenos, convierte finalmente en dejar el luto, salir de casa y tomar parte en la fiesta próxima (1).

Durante el año ya el cabello habrá á crecer siquiera unos treinta centímetros, arroja pues el trapo de la cabeza, se peina con todo esmero, cubre el cuadrúpedo conocido en su rostro y en sus pies, adorna el cuello y los brazos con las collanas y brazaletes, se viste del mejor tipoy y sale acompañada de alguna amiga. En esta primera salida no toma parte en el baile ni en el canto, para que conozcan que todavía siente la ausencia de su esposo y todos respetan su silencio; ello en lo sucesivo continúa nuevamente la vida pública, como los demás, es decir que canta y baila como antes.

A los pocos meses si alguien la solicita nuevamente para esposa, fácilmente consiente, si tuviera ella en jóvenes y tiene hijos pequeños, porque puede el lector imaginar el sufrimiento de una viuda, obligada á ir en busca de alimento para sí y sus pequeñuelos. ¡Oh! cuántas veces lágrimas silenciosas han corrido por mi rostro al ver las iguales de viudas y huérfanos que en las carretías de víveres, no sabiendo á quien pedir socorro, acudían al Misionero ó al superior de ellos en demanda de auxilio! ¡cómo negarlo! ello en corazón de hombre podría haberlo hecho.

Si el Misionero penetra á los selvas, va á los bárbaros á nombre de Cristo, les enseña á conocerle y amarle y, cómo el divino Maestro, es compasivo con los afligidos y los que sufren. Como El, no cierra el oído, al que pide por caridad, divide lo que tiene, con el hambriento, vista al desnudo y cuando no alcanza á más, tiene palabras de unción para consolar al triste. Esta es la vida del Misionero que á costa de trabajo y sudor, va transformando los lugares y los corazones de los habitantes de esta región, donde por él penetró la civilización. ¡Oh! cómo el Supremo Gobierno y los habitantes de Bolivia debieran apreciarlo justamente por la obra de civilización moral y política! Mas si lo desconocen los hombres, mayor será el premio eterno (2)

---

(1) Las viudas durante el año de luto están continuamente recluidas en su domicilio, salen solamente cuando la necesidad las obliga, van á la fuente por agua y al campo por alimento.

(2) En Europa la obra de los Misioneros es muy apreciada, algunos gobiernos les exceptúan del servicio militar y les dan pasaje libre en los buques y ferrocarriles; esto hacen los enemigos del cristianismo. El Convento de la Misión de San Buenaventura de Roma está eximido del servicio militar por el Gobierno Italiano.

CAPITULO CATORCE

INFIELES y NEÓFITOS DE LAS MISIONES

INTRODUCCION

Las contínuas revueltas de los chiriguanos contra la raza blanca demuestran claramente la aversión de ellos hacia el elemento cristiano que consideran como la causa eficiente de sus desdichas y de la pérdida casi total del territorio, en el cual en tiempo no lejano se consideraban dueños legítimos y reyes absolutos. Está claro como el sol del mediodía, que el cristiano con la paciencia y constancia de un anacoreta y poniendo en peligro su vida en muchas circunstancias, se adueñó poco á poco de la extensa comarca; hoy no hay rincón, donde no esté viviendo una que otra familia cristiana. En muchos parajes la tribu chiriguana ha desaparecido por completo, sea por las epidemias, como por la libertad perdida, en algunas partes existe algún núcleo bastante considerable, sujeto al patrón, ó por el terruño que cultiva, ó por la deuda que contrajo (1).

Los indios colocados en la zona izquierda del río Pilcomayo una sola cosa tenían en mira al negarse resueltamente á la fundación de una Misión conversora, sólo consideraban, que tras del Misionero vendrían los que ellos consideraban invasores, sólo comprendían que detrás ó alrededor de la Cruz que con mucha intrepidez plantó el P. Giannelli á mediados del siglo XIX, se agruparían los cristianos blancos. Pero ¿por qué los indios de Tarairí

(1) Los caciques de la guerra de Curuyuqui, en su ignorancia, creyeron recuperar el territorio perdido y en revancha adueñarse de gran parte de la República.

son todavía dueños de su terruño!, por el Misionero, á quien en su ignorancia una fracción quiso alejar, cuando principió la destrucción de las florecientes Misiones de San Francisco y San Antonio, donde hace seis años se pretende erigir una nueva Londres sin principiar todavía casi nada, antes bien con notabilísimo deterioro del edificio y huertas que tan ordenadas y vigurosas dejaron los Franciscanos de Tarija (1).

Los taraireños fueron los primeros en ver en su territorio á un Padre Franciscano, y son los últimos en comprender las ventajas materiales que les reporta la Misión. Los de Tigüipa, Machareti, Boicovo, Cuevo, Ivu y últimamente los dos Parapití, llamados San Antonio y San Francisco, cayeron en la cuenta, que solamente el Misionero podría hacer valer sus derechos territoriales ante el Supremo Gobierno y ampararlos contra la mala voluntad de algunos blancos que, por demasiado tiranos, dieron lugar á la revuelta de Curuyuqui, en la cual el indio quedó completamente humillado, creyendo exterminar á todos los blancos (2).

Se ha visto en el decurso de estas páginas que el indio es formidable al principio del combate, pero si no se le declara luego la victoria, se acobarda y huye. El combate de ocho horas en Curuyuqui y con armas tan desiguales puede considerarse como un prodigio, porque puesto el chiriguano lejos de su pueblo, tuvo que resignarse á vencer ó morir antes que caer prisionero.

Infieles

El indio adulto ningún aprecio hace de la Religión, cualquiera que ella fuese; por cierto que contribuye á esto mucho, la ignorancia primero, y luego, más que todo, la soberbia y la pereza, porque rehuye del que quiere instruirlo, unos concurren á la instrucción mensual, pero casi todos son semejantes á los que describe el real Salmista: que tienen ojos para no ver, oídos para no

(1) Establecida la Misión de Tarairí, mediante la palabra persuasiva del Misionero, fué atacada por las tribus limítrofes y por los belicosos huacayeños, que se hallan á la distancia de unos cien kilómetros. Las Misiones chiriguanas se fundaron donde no había núcleo de blancos.

(2) Por insinuación del Misionero, los indios de Itatiqui fueron amparados en su pequeño territorio por la Prefectura de Santa Cruz, ante la cual se tramitaba una diligencia de compra; hoy han sido amparados por el Supremo Gobierno, quien dictó el auto de mensura y alinderamiento; pero apenas les ha dejado poco más de media legua, á pesar de poseer, desde tiempo inmemorial, tres leguas y media.

oir, y lengua para no hablar, para no cantar las alabanzas y para no adorar á su Criador (1).

No es fácil que el chirigtuano pida la fundación de una Misión Conversora, porque no quiere que nadie estorbe su paz y tranquilidad en su terruño; considera la Misión como un yugo insoportable para sí y para sus hijos. Es casi inútil, es casi perder tiempo, hablar al indio de lo sobrenatural para que doblegue su frente y acepte la Misión; ni comprende, ni quiere comprender, porque *animalis homo non percipit ea quae Dei sunt.* Sólo cuando se ve perseguido en su persona, familia y bienes, sólo para no caer totalmente en la esclavitud, sólo para librarse de los vejámenes que recibe del prójimo, pide con mucha instancia la Misión hasta conseguir el fin deseado; es también éste uno de los medios de que se sirve Dios para conseguir la redención y salvación de un sinnúmero de almas (2).

Aún en este caso, el adulto propone las bases del convenio; pide la libertad de seguir con sus costumbres de bárbaro, sin que se le obligue á recibir el bautismo, y por consiguiente á entrar al templo para oir la misa y hacer otras cosas propias del culto católico, porque su cabellera y la tembeta afearía la casa de Dios y ellos experimentarían rubor sumo al verse confundidos entre chicos, mozos y blancos. La ventaja que reporta la religión, es la educación de la juventud y el bautismo de los párvulos que, en cantidad numerosa, vuelan al cielo por ser muchos los que mueren regenerados con el santo bautismo.

Con tal que no se le hable de religión, ó de recibir el bautismo, por lo demás el Misionero puede hacer del indio adulto todo lo que quiere, hasta que sea un poco previsor en manifestar desde los principios el modo como se debe vivir en la Misión; el que libre y espontáneamente dió su nombre, obedece en todo, con tal que haya energía y cuidado de reprimir luego algún desarreglo ó alguna desobediencia.

Si es requerido por su trabajo personal, no se niega fácilmente, á lo menos en los primeros años, aunque no se le señale salario

(1) Parece que el demonio de la lujuria los tiene ciegos, sordos y mudos en lo referente á la Religión y culto y les aleja el Espíritu de Dios.

(2) En Pipi hay bastantes familias chiriguanas; para librarse de vejámanes, pedían Misión: En Caipipendi son más todavía, les hablé repitidas veces, porque poseen territorio propio, pero todavía no se animan á pedir la fundación de una Misión, la razón es clara, no son muy perseguidos.

ó no se le dé nada, pues comprende que el Misionero ordena la erección de un edificio, no por especulación, sino por el adelanto moral y civil de sus hijos. Si el Misionero establece, como lo está, que durante la noche dejen de cantar, lo cumplen, á pesar de que á veces hay necesidad de recordárselo con un poco de acritud, advirtiendo que las palabras son de poco provecho.

En suma el indio adulto infiel, cuidado con esmero, es bastante sumiso en cumplir las órdenes del P. Misionero y, aún en su crápula y embriaguez, es pacífico y humilde. Si bien es verdad, que nada quiere saber de la religión mientras viva, para no aprender el rezo y cumplir con lo que la religión manda, hoy, sin embargo, casi todos piden ó reciben el bautismo al tiempo de morir; ya han desaparecido casi por completo las dificultades que antes presentábanse con respecto á los enfermos que estaban de peligro; que de referirlas, sería interminable (1).

Si un indio ó un cacique al fundarse la Misión tenía dos ó más mujeres, poco á poco el Misionero las hace despedir, para que quede con una sola. Esto cuesta algún trabajo, pero con la persuasión y las amenazas se llega al fin deseado, porque es una de las condiciones que plantea el Ministro de Dios, cuando es requerido por los indios para establecer la Misión; así lo practiqué en en San Antonio del Parapiti y aceptaron todas las condiciones de muy buena gana.

El chiriguano adulto no se bautiza, mientras goce de una salud lozana, sólo lo hace al tiempo de morir y cuando está casi cierto de no poder vivir más. Antes era aún dificultoso poder bautizar á los párvulos, porque estaban persuadidos de ser el bautismo causa de la muerte, porque en su ignorancia no comprendían que, los que recibían el bautismo en una grave enfermedad, morían por la violencia del mal.

El Misionero, con su larga experiencia, conoce fácilmente, quién está en peligro de morir, difícilmente se equivoca, porque las enfermedades peligrosas del chiriguano son conocidas, la hidropesía, la viruela, la disentería y la consunción son las principales. Bautiza pues, precisamente á los que no pueden vivir, por-

(1). Más dificultoso es bautizar á las ancianas, éstas aconsejan al mismo enfermo á negarse á aceptar el bautismo, otras le insinúan aceptar por fines temporales; para estos casos es muy necesario saber el idioma.

que costaría mucho después, hacer que cumplan lo que manda la Religión; de ésto precisamente proviene, que el indio crea infundadamente, que el bautismo ocasiona la muerte (1).

Cuando algún bautizado, en peligro de vida, vive, no es fácil que cumpla lo que la religión ordena, y sólo á instancias del Misionero se resuelve por fin, pero entra á la iglesia ocultamente, busca los rincones ó la sacristía, para que nadie lo vea, y en el cambio de Conversores aprovecha la ignorancia del que és nuevo en la Misión, para no concurrir á las prácticas religiosas. Y luego ¿qué clase de cristianos son éstos? están en la iglesia como opas, son casi inhábiles para aprender el rezo, sea porque es difícil, sea porque no tienen voluntad de aprenderlo; en el templo poco se diferencian del bruto, en sus casas se portan como infieles, entre los cuales viven; juegan, cantan y beben ni más ni menos como uno de ellos (2).

En alguna Misión ya antigua no sucede todo esto, hay indios con tembeta y cabello largo, hay mujeres ancianas con su tipoy que van á misa y cumplen con las demás obligaciones de la Iglesia Católica, pero casi todos son mudos, es decir, que no articulan aquellos una palabra de oración. Alguien dirá, y yo también digo: que con el tiempo pudiera suceder lo contrario, pero este tiempo difícilmente ha de llegar, porque el infiel, en las Misiones chiriguanas, al morir no deja secuaces, pues sus hijos se bautizan casi todos, ellos se hacen viejos y mueren sin ser reemplazados.

Unos se bautizan para contentar al Misionero y, para que la familia no sufra alguna reprensión; pero varias veces ha sucedido que, como el moribundo no pensaba hacerse cristiano, los parientes llamaban apuradamente, cuando ya aquél había espirado ó apenas daba señales de vida; y por último otros reciben y admiten el ser cristianos, para que el Misionero les permita ó tolere que el cadáver sea enterrado en su propia casa y esto es lo primero que pide el enfermo después de ser catequizado, para lo cual se tropieza con muchas dificultades. Cuando se insinúa al enfermo el arre-

(1) Algunos experimentan tanto pesar de ser cristianos adultos, que intentan quitarse la vida; sucede cuando su voluntad es semi plena en alguna enfermedad peligrosa.

(2) No se debe extrañar mucho la conducta de los indios que sobreviven al ser bautizados por una grave enfermedad, porque los pobres nunca en su vida vieron iglesia, nunca supieron, lo que son obligaciones de rezar y adorar á un Ser Supremo del cual, en su infidelidad, no tenían idea exacta y apenas remota.

4: Nino SF10 Chiriguano

pentimiento, ó niega completamente el ser culpable delante de Dios, ó no aborrece sus acciones pasadas. Todas estas dificultades se presentan al principio de una Misión; con los años todo cambia, y apenas hay una que otra, que se supera fácilmente (1).

Para el indio infiel, la embriaguez es un acto muy honroso, una acción que indica grandeza, amistad y benevolencia, y se gloría de ella, diciendo claramente y muy satisfecho: *Asagüipo ma*, me he embriagado. Lo dicen á cualquiera y se presentan ante cualquiera en ese estado; sin embargo corregidos y amonestados por el Misionero, si no se ocultan, cuando éste inspecciona por el pueblo, á lo menos evitan presentarse á la casa-Misión.

Por lo que atañe á lo material, el indio en las Misiones es libre más que otros, que están afuera, no levanta una mano sin ser pagado; trabaja en la erección de edificios, como casa, iglesia, salones para la enseñanza de letras, música, artes y oficios, construye vallados, y á pesar de que todo queda á beneficio de ellos y sus hijos, se les paga. Sólo tienen la tarea de la siembra y escarda, pero al fin y á la postre el Misionero les proporciona yuntas, rejas y hasta sogas y el producto queda ó se invierte en comprar mercaderías; nada, pues, hacen de balde (2).

Son completamente libres de trabajar en sus sementeras ó para los blancos; pero deben dar aviso al Misionero ó al cacique; sin embargo no lo cumplen siempre, sólo si alguien los requiere para trabajos y no tienen gana, contestan: ó que el Misionero no les permite, ó que hable primero con el mismo; pero basta que éste se interponga y ruegue y, el indio pone en juego todas las dificultades; y si el Misionero principia á oirlas todas, poco á poco nadie le obedece; debe mostrarse enérgico, saber conocer y distinguir las verdaderas necesidades ó razones de los embustes y trampas para no dejarse engañar. Cobrar en las Misiones chiriguanas el 20 % de su trabajo, como dice el Reglamento de Misio-

---

(1) Al fundarse una Misión se ordena dar aviso de los enfermos, para que el Misionero pueda cumplir con la caridad de Cristo, de hacerles conocer la verdad, el premio y el castigo que se espera en la eternidad, justamente pues reprende á los que ocultan á los enfermos; cuando éstos niegan de una manera clara el ser bautizados y el Misionero no alcanza á convencerlos del error, los deja; algunos casos se han dado.

(2) Las mercaderías que los Misioneros hacen venir de Tarija y otras partes, se distribuyen gratis á los alumnos y alumnas, y se venden al costo de almacén á los de mayor edad.

[facing p. 303]

La escuela de San Francisco Solano, trabajando a la sombra del sarzo o troje

nes, creyendo talvez que los Misioneros los hacían trabajar de balde, ó les arrebataban toda la ganancia; es casi un imposible (1).

En lo que menos piensa el chiriguano es en su casa; mucha dificultad encuentra para hacer una que le sea cómoda; si la principia, la termina muy tarde y con gran dificultad, si se arruina, poco se preocupa en el arreglo; llueve, se llena de agua, se vuelve un barrial, pero él y la familia están allí durmiendo y roncando á gusto como lirones. Para que sus pueblos se renueven, casi siempre hay que amenazar y prometer rigor y aplicarlo alguna vez, para que nó suceda lo de la fábula de las ranas.

Para beber, el indio se halla siempre en buena disposición; si para ello es necesario amontonar leña y traerla de distancias considerables, nadie se acobarda, cada cual sacude la pereza natural con mucho entusiasmo. Hombres y mujeres se vuelven entonces muy activos por diez ó quince días para beber á su tiempo seis ó más, durante los cuales sus rostros se vuelven repugnantes, tanto por los cosméticos con que creen adornarse, cuanto por el estado de mediana ó completa embriaguez, en que se hallan. Luego hablan muchas cosas y, entonces, finalmente, se acuerdan de cobrarse unos á otros, de donde provienen las riñas y para cortarlas debe intervenir el Misionero con rigor y también para poner término á la holgazanería. Si el indio tuvo abundante cosecha de maíz y se prohibe en todo ó en parte la bebida, las organizan en la campiña, donde siembran, y entonces, suceden cosas peores.

La chicha por sí no produce mucho estrago en sus estómagos y fácilmente resisten muchos días sin producirles más que una mediana embriaguez; lo malo está, en que se va generalizando escandalosamente el abuso del alcohol que los embriaga muy luego y demasiado hasta quedar sin darse cuenta de nada, ni de su existencia. Vigila el Misionero para el cumplimiento del reglamento, pero parece que pertenezcan á la secta de los secretos y avisan sólo, cuando todo se concluyó, ó para cobrar algún agravio.

Neófitos

Los hijos de los infieles, ó los neófitos, crecen como sus padres y peores todavía, no distinguen de ellos por una civilización para-

(1) El 20 por ciento no se cobra en ninguna Misión; sólo en Parapiti trabajan los hombres medio día semanalmente, pero es costumbre impuesta por los señores Curas anteriores á la fundación, porque no tenían recurso alguno; los Misioneros aprovechan esta costumbre para sembradíos y edificios que son para ellos mismos

mente material; de parte del Misionero hay un esmero especial para la educación, sus padres se los entregan, ó mejor dicho, el Misionero los reclama desde la edad de siete años y los presentan sin resistencia alguna, pero si pueden ocultarlos, no se excusan, haciéndolos crecer en el bosque (1).

Cuando ya entraron á la escuela, aprenden los niños desde las primeras letras hasta la escritura, si tienen alcances; los más inteligentes aprenden aún la música y los más capaces, albañilería, sastrería, carpintería, zapatería y tahabartería. La escuela es diaria, mañana y tarde, y todos concurren á ella desde la edad indicada hasta tomar estado ó contraer matrimonio, que generalmente lo hacen á los 18 ó 20 años. Los niños se ausentan de la escuela, sólo con la licencia, pero no faltan de aquellos que, cuando pueden, burlan la vigilancia del maestro, como sucede aún en los grandes centros.

Sobrado tiempo tienen los niños para aprender lectura, escritura, todo lo que deben creer y practicar para manifestar con obras buenas sus creencias religiosas. No ignoran, lo que manda nuestra Santa Madre Iglesia, ven los buenos ejemplos de fervorosos cristianos y las maldades de otros también y, como la humanidad está más inclinada al mal, que al bien, las tiernas plantas, no bien cimentadas en las prácticas de la Religión, fácilmente se adhieren, á lo que es contrario á la ley divina y á nuestra santa madre Iglesia (2).

Crece la juventud bajo el esmerado cuidado del Misionero, quien con el ejemplo y la palabra infunde en sus corazones toda bondad y amor á las cosas santas y morales, más, hace evitar en lo posible el contacto con los ancianos, procurando que nada vean, especialmente de noche, no permitiéndoles dormir en sus casas, sino en caso de enfermedad y dolencias, pero no es fácil evitarlo todo, porque los niños tres veces al día bajan al pueblo para tomar el alimento en sus casas y los jueves y fiestas se les da asue-

(1) Nadie debe extrañar, si algo dejan que desear y procuran ocultar á sus hijos, porque debe considerarse, lo que fueron y es un placer para el infiel ver crecer á su hijo, como el mismo fué.

(2) En las Misiones los niños saben el rezo mucho mejor que en otros centros, porque en cada Misión hay dos establecimientos de enseñanza, uno para varones, otro para niñas.

to, que emplean en cazar pájaros, ó traer leña y algo de comestible (1).

Lo que más arruina á los jóvenes neófitos, son algunos blancos de los vecinos cantones, que tienen el oficio de vender licores y coca que aún introducen furtivamente á las Misiones en épocas de regocijo, durante las cuales aún los de la raza hacen el mismo oficio, porque han visto, que es un comercio de mucho lucro.

Además muchos emigran temporalmente á los establecimientos de la República Argentina, donde bajo pretexto de ganar mucho con poco trabajo, llevan una vida demasiado libre, beben el licor como agua, y se acostumbran á la embriaguez; luego lo primero que compran, es un puñal disforme, aprenden su manejo como los gáuchos, pelean, se lastiman, se matan aún y cuando regresan á la Misión, llevan apenas un poco de ropa negra para si, algo ó nada para su mujer, á quien proporcionan una paliza soberana en la primera ocasión por motivo pequeño ó sin él también y después, en la primera bebida, molestan á la gente tranquila, trastornan el orden público y siempre ó casi siempre hay que lamentar derramamiento de sangre. Agréguese á todo esto que ya comienza allí á inocularse el virus de la irreligión y como no están bien cimentados en los dogmas de la fé católica, resulta, que los que no se manejan como infieles ó indiferentes, son protestantes en las haciendas de la República Argentina, y católicos en la Misión.

No hay duda; el progreso moral, religioso y civil es obra del tiempo, no es obra de cuarenta ó cincuenta años, como algunos creen. Para implantar una reforma social entre gente civilizada, ¿cuánto cuesta? Cuánto costó para que la Iglesia se estableciera en el imperio romano? más de 300 años luchó la verdad con el error, aquélla fué perseguida, fué encerrada en las catacumbas, se bañó con la sangre de millones de mártires de la fé católica, pero al fin triunfó y se elevó radiante sobre las ruinas del error que había reinado por tantos siglos.

En las Misiones no se trata de implantar una reforma social, se trata de edificar, de arrancar al indio del bosque, de hacerlo salir de la barbarie y comenzar á enseñarle á ser hombre, á considerarse más noble que el bruto, se trata de quitarle la superstición,

(1) Las niñas reciben una educacion más esmerada bajo la no interrumpida vigilancia y cuidado de preceptoras que les enseñan, además de la religión teorico-práctica, todas las labores de su sexo, desde el hilado hasta el bordado en seda y oro; los ternos de casullas para las solemnidades son obras de dichas niñas.

en que nació, para que crea las máximas de la verdadera fé, luego, ¡cuánto sacrificio no cuesta al Misionero, que pasa los mejores años y aun la vida íntegra, para realizar este grandioso proyecto sin ninguna recompensa terrena, antes bien, con marcado desprecio de los que debieran apreciar su obra altamente civilizadora! (1).

Ya se ha notado arriba que á los niños además de escribir, se enseña la música, artes y oficios, no es verdad, pues, lo que dice Campos: que el Misionero quiere hacer del chiriguano un anacoreta. Le sobraría al Misionero, si sus neófitos practicaran la Religión, como todo fiel cristiano y como los habitantes de la República, que cumplen las leyes de la Nación. Por esto después de haber aprendido lo que deben hacer, practicar y lo dicho anteriormente, ayudan á sus padres en las tareas de la campiña, otros prestan servicios á los blancos por día, por semana ó por mes (2).

El pobre Misionero sepultado aquí y alejado de los centros de civilización, se esmera en hacer florecer aún materialmente su pueblo, enseña todo lo que sabe, cuando le alcanza el tiempo, procura hacerlos instruir en lo demás afuera de las Misiones, en las capitales. Los hermosos edificios, los grandiosos templos, las músicas bien organizadas son obra de los neófitos bajo la dirección inmediata del Misionero, pero ¡cuántos desengaños! Cuando menos lo piensa, desaparecen los músicos uno en pos de otro, se huyen los herreros y demás oficiales unos por temporada y otros se quedan en tierra extraña y lejana luengos años, abandonando mujer é hijos. Es soportable el sufrimiento material que se experimenta en las Misiones, pero no tanto el moral, sin embargo en todo hay resignación, porque Dios así lo permite, y eso se enseña continuamente (3).

---

(1) El P. Prefecto Fr. Romualdo d'Ambrogi se halla en las Misiones de Potosí desde el año 1872, casi todas las Misiones son fundadas por él; ningún hijo de Bolivia puede gloriarse de haber trabajado como él para la Nación que no lo ha visto nacer, si otros trabajan, son bien remunerados, y los Misioneros no.

(2) Aquí pudiera hacer la reseña de una pléyade de los Misioneros de Tarija que se sacrificaron para civilizar á los chiriguanos; contra ellos se ensañó la ira de Campos en vez de agradecerles, como debía haber hecho en calidad de Delegado Nacional; en otras partes habrían sido condecorados los Misioneros.

(3) Es casi necesario después de una temporada larga en las Misiones un descanso, para retemplar el espíritu, porque el arco siempre tirante, se rompe, dice el Evangelista S. Juan.

No hay viajero que no quede admirado al considerar el progreso de las Misiones, al considerar las hermosas obras de los indios, cuando piensan que años atrás eran bosques impenetrables ó colinas desnudas, el lugar que ocupan el grandioso templo y los edificios. Al decir de un ilustrado inglés, por supuesto protestante en Religión, son las Misiones católicas entre los chiriguanos, como oásis en el desierto, y verlas en lontananza, no sé que pasa en el corazón; hasta yo no sé, que experimento, cuando por razón de algún viaje, me acerco nuevamente y las veo en lontananza.

Método

El método establecido desde el principio de la primera fundación, es inmejorable, como que mira al adelanto moral y civil, y ha dado resultados prácticos, especialmente en algunas Misiones que, á pesar de los pocos años de existencia, hablan medianamente bien el idioma nacional casi todos ¡No es esto un casi prodigio, realizado con una raza, cuyo idioma ninguna analogía guarda con las lenguas cultas? no es esto extraordinario, si se los compara con los quichuas y aimaráes que hacen siglos, viven en medio de gente civilizada sin dar un paso adelante en la civilización y aprendizaje del idioma? Ignoro como ciertos hombres, elevados á la dignidad de Delegados Nacionales, sin consideración quizá y examen serio, puedan criticar el método de los Misioneros, viendo que con él han adelantado tanto y conociendo que otras razas permanecen en la apatía y dan lástima al considerar su estado de ignorancia primitiva (1).

Quizá muchos sentirán la franqueza de estas pocas líneas, pero es la pura verdad, que los quichuas y aimaráes por su ignorancia y desaseo llaman la atención de todo pasajero que venga de ultramar. De ello se echa la culpa á los curas, pero ¿qué pueden hacer los Ministros del Altar, reducidos á la miseria con la supresión de congruas y hostilizados hasta en su ministerio con el

(1) Algún Delegado Nacional por estar prevenido contra los Misioneros, criticó con acritud á los Misioneros que predican en el idioma de los indios, con esto dió á conocer una vez más su ignorancia, porque dice S. Pablo: *Si ergo nesciero virtutem vocis, ero cui loquor barbarus et qui loquitur mihi, barbarus.*

[Facing P.308]

Interior de la Iglesia de S. Pascual

desafuero, matrimonio civil, abolición de fiestas y bailes y lucinación de cementerios! No pretende hacer recaer la falta en los sacerdotes, mientras los que debieran, no establecen escuelas prácticas para ello, erogan cuantiosas sumas para delegaciones, quizá perjudiciales, sin pensar mucho en civilizar con la verdadera enseñanza, que principia en Dios, á los infelices que son los que llenan las arcas del erario público.

Según el método implantado, las Misiones progresan y progresarían más, si el chiriguano no fuera tan inconstante. Ni en sus pueblos, ni en los cantones vecinos falta trabajo para ellos, antes bien son jornaleros, los que no se encuentran: estos prefieren ir lejos, donde quizá ganan menos que acá, gastando la poca ganancia en cosas que no sirven y les son perjudiciales (1).

Si se pregunta la razón de este procedimiento, tan extraño á ellos mismos, contestan que en su pueblo no pueden nunca tener guardados diez ó quince bolivianos, porque los gastan luego en nimiedades para sí y su familia, mientras que en la República Argentina guardan su dinero en casa del amo, y al tiempo de venirse compran sus vestidos y aún animales, aperos, carruaje y otros enseres. En esto hay algo de verdad, mas, como no es completamente cierto, que aquí el dinero no les dura, tampoco es completamente cierto, que de la Argentina traen ropa y otras cosas. Los que tienen un poco de cuidado y no son perezosos, se visten muy bien aquí, como los viciosos en la Argentina se dejan dominar de la pereza y vuelven desnudos, como se fueron; llegan, venden ó gastan, si algo tienen, y se van definitivamente á vivir á sus anchas (2).

El método de enseñanza como se practica, obtiene resultados prodigiosos en las niñas que además de las letras y cuanto, aprenden en la escuela los trabajos propios de su sexo, desde el hilado hasta el bordado en seda y oro; ciertas escuelas de niñas de las Misiones, por ejemplo, la de S. Antonio del Parapití y la de S. José de Tigüipa causan verdadera admiración á los visitantes, amén por

(1) Hay neófitos que permanecen en las haciendas de la República Argentina ocho ó diez años, todo se lo beben y al querer regresar apenas traen un cuchillo y un ponchito negro que poco cuesta.

(2) Los indios chiriguanos llaman criollos á los gauchos ó naturales de la República Argentina, igual nombre dan á los de su raza, que se radican allí por muchos años.

el trabajo de mano que en ellas se ejecuta y aquella niña que el idioma castellano que desde la primera hasta la última habían con bastante perfección, porque desde el principio, no les prohibió de una manera absoluta, aun entre ellas, en la escuela, la lengua de sus padres.

Según este informe en pocos años más será que los chiriguanos de las Misiones han pertenecido á la raza, porque paso á paso las madres enseñarán á sus hijos el idioma castellano, como ya he visto que lo hacen en la Misión de San Pascual de Baicuru, y si tuviera la moralidad deje algo que desear, más después quizá mediante la predicación, los consejos del Misionero y el ejemplo de los buenos, todo se corregirá. *Semper est verbum Dei;* no cae en terreno completamente estéril (1).

Casi desde el principio se quitó á los niños de escuela el uso del tipoy, obligándoles á vestir conforme visten las mujeres de los vecinos pueblos; hoy están muy acostumbrados á dichos trajes y no lo cambian por nada del mundo en las Misiones, ello aquellas que se hayan y hasta recurgen practicamente de la M. para no ser reconocidas, visten normalmente el tipoy como las infieles. Mediante la constancia de la religión católica, el aprendizaje del idioma nacional y el cambio de vestido se opera continuamente la transformación, hasta que paso á paso desaparecerá la distinción de razas, mediante la unión de aquellas.

Lo que hicieron los Misioneros para el vestido de las niñas, hacen igualmente para el de los niños, procurando que sea decente. Para unos y para otros mientras frecuentan la escuela, el Misionero de cada Misión proporciona los géneros, habiéndolos venir de algunos capital de departamento y distribuyéndolos gratuitamente dos y hasta tres veces al año, ó cuando viene la necesidad de cada vez. De este modo, después de estar vestidos, ellos mismos trabajan para seguir vistiéndose conforme y mejor de cuando estaban en la escuela, pues unos usan también bañiera y botas, varias son las mujeres que adornan del traje ordinario, usan corpiño, sombrero, bañiera y alfombrita en la iglesia (2).

---

(1) La Misión de S. Pascual de Baicuru está tan adelantada en todo, que se van haciendo los gestiones para que sea elevada al rango de Parroquia. En el idioma, en el traje y en el trato poco se distinguen de los blancos.

(2) En las Misiones del Parapití Grande es donde visten con más lujo, especialmente las mujeres que hasta poseen sillas para viajar y montar en caballería.

Para conseguir los recursos necesarios para la enseñanza, medicinas, libros y vestidos, pensaba los hombres que los Ministerios de la Nación ó las Congregaciones se preocupan de ellos? No, aquí dan y, si siempre, á lo menos entre, á uno de los Misioneros residentes en cada Misión setenta y cinco centavos diarios y con esta cantidad hay lo precisamente, á lo menos por lo pronto, de quien á todo trance que el Misionero sea funcionario público, cuando en día Segundo á Bolivia contrae ser compromiso con la Nación y, el Misionero perpetuadores á las labranzas, no á enseñarles la Religión y se preocupa á nombre de Arcadiados, á Quien necesita como Ministrar evangelizando (1).

Si el Supremo Gobierno de Bolivia hiciera más eficaces su protección y proporcionara todo lo necesario para edificios, enseñanza y vestidos, el progreso sería más rápido, porque el Misionero dispondría de más tiempo para la enseñanza y se libraría de la detención de los indios que hablan y escriben, trabajando de convencimiento y cooperación por la razón de que, no es en la imperiosa necesidad de estudiar los medios para buscar recursos y alimentar su misión moral y materialmente.

Nada debiera importar al Misionero el régimen político administrativo por ser dominado por Dios á la conquista de los alma, mediante la palabra evangélica, como en las cuevas de la Asia y en los desiertos de la Africa. Mas como en Bolivia él es tutor nato de los indígenas en virtud del Reglamento de Misiones, advierte como el chiriguano adulto no pide la fundación de la Misión con el fuero de convertirse y hacerse cristiano, sino por libertar de la tiranía de algunos hombres diligentes, el Misionero, por esto régimen, adonde de otros como que atiende con la actividad que la encuentra, según lo demuestran los edificios, cuadras y constituye cuerpos para mantener el orden público y para que fácilmente pueda gobernar su villa á los indígenas, sino sólo á los cristianos, Jefes y ayudantes intervienen directamente en la elección secreta por votación, del que debe gobernarlos por un año ó por tiempo indeterminado (2).

---

(1) El Reglamento de 1907 fué promovido por todos los Misioneros, porque la idea que domina en él es material, nada determina respecto á la enseñanza y da amplia autoridad á los encargados de la Religión.

(2) Para comprobarlo mejor esto al régimen moral, en los Misiones de Potosí, se practica anualmente la elección del Gobernador de los indígenas por voto secreto y luego recibe su nombramiento en papel de oficio.

Se dijo que el Reglamento de Misiones del año 1901 fué casi una copia del de 1871, por esto se reformó en 1905, alegando que con aquél los indios eran llegados á ser ciudadanos, capaces de gobernarse á sí mismos; quizá esto sea cierto con relación á otras tribus, pero en cuanto á los chiriguanos de las Misiones de Tarija y Potosí, no es verídico, porque gobiernan su casa, ni más ni menos que si fueran independientes y el Reglamento actual ni les ha quitado, ni les ha añadido; siguen como antes amables y respetuosos con los Misioneros y, si se quiere, se muestran más cariñosos que antes. Si todos los pobladores de las Misiones chiriguanas fueran cristianos, todos sabrían algo del idioma nacional y podría el Supremo Gobierno recibir grandes y arreglados centros, donde entretanto á cosa cumplida, aptas sólo para la agricultura, á chacras denominadas ará y arañi. Creo no ha llegado todavía el tiempo de una entrega colectiva, porque hay muchos infieles todavía (1).

CONCLUSION

En conclusión, sólo por última vez que la Nación y los Institutos tienen abierto el comercio y á la industria la existencia comercial descrita en el primer capítulo de la obra. Esto se debe á los Misioneros Franciscanos, cuya labor data desde el año 1849; ellos afrontaron todos los peligros, ellos expusieron su vida en los bosques, en los caudalosos ríos, en la cima de los cerros. Ellos sufrieron la sed, el hambre, el cansancio, el frío y el calor, ellos soportaron con resignación la calumnia y la persecución de la gente malcontenta que nunca deja de tramar por blanco de su lucha y lengua inmunda.

La obra está realizada; entre indios penetrados entre los chiriguanos sin peligro de ser victimados, hay toda la comarca está con pueblos más ó menos grandes, hay capitales de provincias, centros y vice-centros; el comerciante transita por los pueblos chiriguanos, durmiendo en casa de ellos muy estimados y, los mismos blancos diseminados en la región, están con toda garantía. Es un verdadero prodigio debido á la Religión de Jesucristo, predicada por los Misioneros, es una prueba más de que, la Cruz edifica. Nen-

(1) A raíz del nuevo reglamento vigente se sintió una tempestad en los Misiones que hizo dudar de su existencia, los pobladores tenían entonces, y tenían mucha pena de verse nuevamente en poder de sus opresores, é alejados del suelo que los vió nacer, porque á la esclavitud no se resignan; prefieren emigrar.

[facing p. 312]

Grupo de indios Matacos.

sible es que el elemento indígena vaya desapareciendo por las causas enumeradas anteriormente en el discurso de estas líneas (1).

Termino dando gracias á la Divina Providencia que realizó acá la civilización de la raza, sirviéndose para el efecto de sujetos sencillos y humildes, como son los hijos de Francisco de Asís, que vinieron á este nuevo mundo á raíz de su descubrimiento.

A los lectores que me han seguido con su benevolencia y á los que critiquen caritativamente mi pobre escrito, doy mis sinceras gracias y ruego á la vez se dignen perdonar las faltas que hallaren. *Laus Deo.*

FIN DE LA OBRA

(1) Si permanecen las Misiones actuales, y se fundan nuevas en los centros que todavía quedan, la raza puede durar un tiempo más largo. Lo mismo, si en vez de fortines, el Gobierno con menos gasto fundara Misiones en los lugares que se van explorando en la actualidad, se obtendrían brazos útiles para el comercio y para la agricultura, sin destruir á la pobre humanidad.

4: Nino SF10 Chiriguano

[P. 313]

APÉNDICE

El tiempo y el lugar no me permiten en la actualidad trazar un mapa de toda la región que llevo descrita en el primer capítulo de ésta Etnografía; tampoco me permiten escribir claramente de otras tribus que pueblan el Oriente del Chaco Boliviano, que recién está explorándose (1).

Si el Supremo Gobierno y los amigos que me han favorecido en esta primera edición, siguen dispensándome su decidido apoyo, pienso volver á la región, hacer mejores estudios, proporcionarme datos ciertos relativos á las demás tribus, producir vistas y panoramas mediante máquinas fotográficas, y en seguida dar á luz una segunda edición más esmerada.

Sin embargo, como por el nombramiento de *Socio Corresponsal* de la Sociedad Geográfica de esta ciudad de La Paz, voy haciendo estudios que corresponden á esta ciencia, colocaré en estas páginas el grado geográfico aproximativo, que ocupan las tribus conocidas, que pueblan la extensa zona del Chaco Boliviano.

Los indios chiriguanos son numerosos desde el grado 18° 50' hasta el 22° de latitud S. del meridiano de París y desde el grado 65° hasta el 66° 50' de longitud O. Sin embargo se hallan pequeños grupos en el grado 17° 30' de latitud y otros grupos en el grado 22° 35' hacia el Sur de la actual Yacuiba (2).

(1) Creí indispensable un mapa para la "Guía del Chaco", lo tracé últimamente, va á editarse luego por cuenta del Supremo Gobierno; quizá consiga el tiraje de otros mil ejemplares para la presente.

(2) Sigo el Meridiano de París en la ubicación de las tribus, porque en el cuerpo de la obra me servido del mismo para indicar el paraje que ocupan los indios Cayuguari.

El lector que me ha acompañado hasta estas líneas, tiene una idea bastante clara de la raza chiriguana, de su idioma, costumbres y creencias, por consiguiente nada tengo que añadir, respecto de ellos, porque sería repetir lo dicho. De los demás diré algo, para que los bolivianos y extranjeros conozcan á los indios con quienes deberán tratar.

Tapúi ó Isoseños

Los indios Tapúi alcanzan á unos dos mil entre chicos y grandes, ocupan ambas márgenes del río Parapiti en el grado 19° y 19° 30' de latitud y en el 62° 30' á 63° de longitud del meridiano de París.

Fueron esclavos de los chiriguanos, vivieron anteriormente en las inmediaciones del territorio que ocupa hoy la ciudad de Santa Cruz de la Sierra, de donde tuvieron que emigrar á la llegada de los españoles que fundaron dicha ciudad.

Estos indios hablan el idioma chiriguano con pequeñas diferencias de pronunciación y tienen algunos términos peculiares, pero se comprenden perfectamente.

Son completamente mansos, van continuamente á las haciendas de la República Argentina, saben casi todos el idioma castellano, especialmente los varones, visten con decencia y ayudan á los industriales que se han radicado allí, y que son dueños de los terrenos.

Antiguamente los isoseños ó tapúi eran muy pobres y perezosos, mas hoy han mejorado de condición por haberse radicado entre ellos los cristianos blancos de Santa Cruz, á los cuales prestan importantes servicios en la ganadería y en la agricultura, pero esta última está muy reducida, porque en el tiempo mejor la región principal de Isoso se inunda con las continuas avenidas del río Parapiti.

Siráeuas ó Empelotos

Estos seres humanos se llaman Siráeuas, porque abren en la tierra profundidades á manera de cuevas con una espátula de madera y descansan en ellas; se llaman Empelotos, porque hombres y mujeres andan desnudos.

Rara vez se dejan ver y esto por casualidad; son pocos, pueden alcanzar á 1,500, no se conoce el idioma que hablan, de modo que están en completo estado salvaje.

Su residencia es la espesura del bosque y á poca distancia de Isoso en el grado 19° hasta el 20° de latitud, y en el 65° 50' hasta el 64° 10' de longitud.

Nada se sabe del origen de estos infelices indios, porque huyen de los civilizados; tampoco permiten que éstos ocupen la región que éllos habitan, porque matan á traición de noche y aún de día, si son superiores en número.

Quizá, en tiempos lejanos puedan reducirse con la colonización del territorio, porque es de suponer que sigan el curso seco del río Parapiti para poder vivir, á lo menos en tiempo de invierno, cuando se termina el agua de los lagos.

Yanaíguas ó Ñanaíguas

No es verdad, que los Ñanaíguas son chiriguanos de orígen, si así fuera, hablarían todos algo del idioma. Son raros los que lo entienden y rarísimos los que lo hablan, éstos lo han aprendido con el trato que tienen, tanto con los chiriguanos, cuanto con algunos blancos, á quienes han principiado á prestar sus servicios.

Su territorio está ubicado entre el río Parapiti y la quebrada de Cuevo, desde el grado 20° hasta el 20° 32' de latitud, y desde el 63° hasta el 65° 40' de longitud.

No son numerosos, pero bastante inofensivos y pacíficos, por cuya razón es fácil reducirlos y creo no está lejano el día. En la región de éstos y otros indios, se van hoy practicando algunas exploraciones, que necesariamente darán por resultado el trato y consecuente civilización, supuesta la mansedumbre de los indígenas.

Los chiriguanos han puesto dicho nombre á estos indios. Los llaman Yanaíguas por ser habitantes del bosque y, es un nombre de desprecio, porque, según el chiriguano, sólo las alimañas viven en el bosque.

Como he dicho, estos indios no son como los anteriores, que huyen de la gente civilizada, trabajan ya con los blancos, pero no más de medio día, á semejanza de los tobas y matacos, mas no con la tenacidad de éstos. Muchas veces se los ve en la margen derecha del río Parapiti en tropillas de 15 ó 20 en busca de agua, y no huyen al ver algún transeúnte (1)

(1) La región, en que han principiado á prestar sus servicios á los industriales blancos, es la margen derecha del río Parapiti á medio camino entre los cantones Isoso y Parapiti.

Indios Cayuguari

La región habitada por estos indios está en actual exploración. La idea que puedo llamar colosal por el bien, que reportará á la Nación, partió del señor Sub-Prefecto del Azero don Ramón Menduiña que heredó el espíritu patriótico de su finado padre, don Antonio.

Este señor entusiasmó á los habitantes del pueblo de Carandaiti y correspondieron á los deseos del señor Sub-Prefecto con la abertura de 22 leguas de camino, en cuyo trabajo se ocuparon los indios que proporcionó el P. Conversor de la Misión de Macharetí en mayo y junio de 1911 (1).

Sin embargo la expedición ha sido encomendada hoy al Teniente Coronel Orando que ha llegado hasta la laguna de Picuígua, pero falta conocer lo principal, ó sea el rancherío de los indios Cayuguari, donde puede estar ubicada una laguna de aguas permanentes, en cuyas márgenes pudiera establecerse un fortín con una fuerte guarnición.

El camino desde Carandaiti á la región céntrica de Cayuguari está trazado en el cuerpo de esta obra, el grado geográfico que ocupa, está más ó menos indicado según el mapa del General don José Manuel Pando y la índole y carácter de los indios también: de modo que no es necesario repetirlo en estas líneas.

Conviene que los exploradores vayan y se presenten en actitud pacífica á estos indios belicosos y vayan también prevenidos para cualquier ataque, porque estos indios poseen la valentía del chiriguano y la alevosía del toba.

En esta región, más que en otros lugares, conviene la fundación de una Misión Conversora para formar un núcleo de población y reducir con blandura á estos habitantes del bosque.

La tribu de los indios tobas es bastante numerosa, puebla la margen izquierda del río Pilcomayo desde el grado 21° 34' de latitud hacia el Sudeste y en el 65° 39' de longitud.

---

(1) Ultimamente se ha extendido por el Supremo Gobierno el nombramiento de Capitán de las tribus de Irentagüe en favor del indio Abacatu que en años pasados causó mucho daño á los colonos de Carandaiti en compañía de los indios Cayaguari; hoy presta servicio á la expedición de la Región, situada al Este de Carandaiti, mas hago constar que dicha región, como Carandaiti, pertenecen á la provincia del Azero y no á la del Gran Chaco, como erróneamente se ha puesto en el nombramiento de dicho Capitán indígena.

Tobas

La tribu de los indios tobas colinda por el O. con la raza chiriguana, con la cual está completamente relacionada. Estos indios prestan mucho servicio á los cristianos blancos y por consiguiente á los pocos habitantes de Villa Montes, raras veces pasan á la margen derecha del río, que pertenece á los matacos ó noctenes, como se ha dicho en otro lugar.

El indio toba es muy robusto, lo mismo la mujer; ambos llevan pelo corto y se pintan todo el cuerpo, especialmente cuando deben marchar á la guerra. Algunos hombres y, casi todas las mujeres, se pintan el rostro hasta la garganta de una manera indeleble.

Con una espina, paja brava, ó una aguja, rayan su cutis, forman sobre él diferentes figuras y, en seguida, pasan por encima de las mismas, ceniza, carbón molido, ó el zumo de algunas raíces especiales que dejan secar durante algunos días, hasta que haya penetrado bien debajo de las epidermis; luego toman su baño, lavan el rostro, desaparecen las manchas y quedan de una manera estable las figuras. Imitan en esto á los turcos, á quienes por cierto no conocen.

Otro distintivo de la raza toba son las orejas horadadas, donde colocan dos piezas de madera, que sirven de zarcillos. Son tan pesadas y gruesas estas piezas, que con el tiempo dilatan y alargan la ternilla, hasta hacerla tocar en los hombros, por cuya razón son mucho más repugnantes todos los que llevan dichos zarcillos.

Mas, como ya tienen mucho roce con los blancos, van dejando este distintivo, lo mismo que el primero, conforme va desapareciendo la tembeta chiriguana. Sin embargo las tribus que se hallan apartadas del trato con los blancos y chiriguanos, siguen en su mayoría con ambos distintivos y van casi completamente desnudos los hombres.

En tiempos no lejanos el toba fué muy feroz, mas hoy ha modificado un poco su ferocidad; sin embargo su altivez y alevosía siguen en el mismo ser y nunca es conveniente fiarse de este forzudo habitante del bosque.

El blanco que trate con él, debe estar siempre prevenido, tratarle como inferior, unir al rigor moderado, la blandura, remunerar su trabajo sin rayar en liberalidad y no usar de medios violentos, cuando al medio día arroja de sí la herramienta con que estuvo desempeñando su oficio.

El coronel Rivas y el explorador Crevaux perecieron en sus expediciones por la demasiada confianza. Este último demasiado bondadoso, cometió el error de desembarcar en un toldarío de tobas; su gente dejó las armas en las embarcaciones, y en la arremetida que hicieron los indios, apenas se salvó uno, para llevar la fatal noticia, donde convenía.

El toba es celoso de su mujer y ésta de su marido, ni el uno ni la otra permiten deslices en este asunto; si tal acontece, la venganza es segura, el mancebo ó la mancebe fácilmente mueren envenenados; por lo que atañe á las doncellas, son bastante libres antes de matrimoniarse.

Pero, si éstas se disponen á contraer enlace, el joven toba debe merecer su mano, necesario es que sea hábil cazador, valiente guerrero, y pierda muchas noches el sueño, tocando el «pimpin» delante de la casa de la novia. Si los padres de ésta forman buen concepto del novio, se la entregan luego sin otros preliminares, de lo contrario puede resignarse á buscar otra.

Son frecuentes los asaltos de los tobas á las casas de los blancos, donde hurtan todo lo que pueden, victimando á los hombres de mayor edad y haciendo cautivas á las mujeres, niños y doncellas, no tanto por usar de ellas, cuanto para tener lucro en el rescate.

Mas por lo general los asaltos son para hurtar ganado vacuno, caballar y mular, aquél para comer y éstos para cabalgar, pues el toba es muy jinete y tiene necesidad de lo ajeno para sus guerras y asaltos.

No usan sillas, ni bridas, y dirigen las caballerías con los golpes de sus manos; si son perseguidos, corren como el viento, van parados sobre el lomo del animal, de lado, y aun con el cuerpo debajo de la barriga para evitar algún tiro certero. En el cabalgar son superiores á todas las tribus, comprendida la tribu chiriguana á la cual sin embargo respetan.

Matan á los párvulos defectuosos y, por filantropía, á los enfermos de enfermedades prolongadas y, á los viejos que enfermos de muerte, entierran vivos, para que no sufran tanto (1).

---

(1) No es extraño si se considera que los aimarás de la Altiplanicie por ley de higiene estrangulan á los moribundos, para que no huela mal al trasladarlos al cementerio público que se halla á grandes distancias.

[facing p. 319]

Grupo de Indios Tribus.

Matacos ó Noctenes

También esta tribu es muy numerosa, vive en la margen derecha del río Pilcomayo, ocupa la parte opuesta á la zona, ocupada por los tobas, con los cuales conservan relaciones de amistad, que se alternan de vez en cuando, especialmente en el tiempo en que maduran las algarrobas y otras frutas.

Una porción de estos indios hizo parte en tiempos pasados de la Misión de San Antonio del Pilcomayo, donde hoy está radicada la Delegación del Chaco, ocupando los edificios de la Misión. Pero por ser inconstantes al igual, ó quizá más que los tobas, poco fruto pudo reportar la Religión y el Estado de tales indios.

Estos indios son muy numerosos y en pequeñas fracciones alcanzan hasta las orillas del Bermejo; su idioma es completamente distinto del de las otras tribus y difícilmente se mezclan, á pesar de mantener relaciones amistosas con los tobas, de los cuales se consideran inferiores.

Su fisonomía es demasiado lánguida, se les lee la tristeza en el rostro y son muy desgraciados; sin embargo en guerra, en celos y en estado de beodez son feroces, se hieren y se matan. Por estas consecuencias las mujeres se abstienen de beber, hasta la embriaguez, para evitar los desórdenes de sus maridos y esconder las armas en caso de alborotos que suceden con frecuencia (1).

Son indios más pacíficos que los tobas, son poco guerreros, no atropellan las casas de los blancos, pero aprovechan, cuando pueden, de los ganados de éstos, especialmente si se declara la hambruna con la carencia de frutas silvestres.

No trabajan, no siembran, ni hacen cosa semejante, sólo son medianos pescadores y casi nada cazadores. Para vivir hacen grandes provisiones de chañar, algarrobas y frutas de mistol y, con algunas semillas de calabazas, puestas debajo de la tierra, tienen cosechas extraordinarias, si el año es medianamente lluvioso.

Arman sus orgías en tiempo de las algarrobas, del chañar y del mistol y entonces suceden las riñas y asesinatos entre los varones; crímenes que se quedan sin castigo de la autoridad, que no la hay. Pero si el que pereció, tuvo parientes, éstos toman la venganza.

---

(1) En las bebidas son iguales á los tobas, elaboran la aloja de las frutas del algarrobo, la cual es embriagadora casi como el aguardiente, elaboran también aloja de otras frutas silvestres; no hacen chicha, porque casi no siembran maíz.

No se toman la molestia de formar casas ó cosa parecida. Forman una especie de hornos; para ello doblan algunas ramas de árboles pequeños, los sujetan en tierra, cubren dichas ramas con paja ó hierba y debajo duermen á montones en compañía de sus perros.

Esta es la razón de tanta sarna que los mata, y los hace parecer tan asquerosos, pues son además nada partidarios del baño diario, como los chiriguanos y, cuando lo hacen, se revuelcan por la arena del río ó por la ceniza de sus horno-casas.

Para el matrimonio no toman consentimiento de sus padres, ni tampoco tienen ceremonias. ¡Se aman dos jóvenes, hombre y mujer! se apartan del rancherío común, van al bosque, están algunas semanas y vuelven ya casados á vivir con los suegros ó á formar otro horno como el de sus mayores.

Fácilmente los jóvenes se divorcian, pero son más constantes que los chiriguanos en la vida matrimonial. Sin embargo las mujeres son muy celosas y no consienten fácilmente á sus maridos con otras; por esto los complacen bastante con el trabajo de traer mucha fruta del bosque y hacerles caricias.

Hombres y mujeres se cortan el cabello, algunas se tiznan el rostro y se horadan la ternilla de las orejas, donde colocan un pedazo de madera, como los tobas, pero no es distintivo de la raza.

Tienen una idea vaga de seres superiores, á quienes temen sin prestarles culto; el más listo se hace brujo y explota la pobreza de sus compañeros, especialmente hoy que ganan de los blancos, á quienes prestan importantes servicios.

De la región que ocupan, pasan con frecuencia á la República Argentina, trabajan, se visten, aprenden algo de castellano, una pequeña tintura de civilización y vuelven á sus tierras á vivir como antes.

Chorotis

La zona situada al Sudeste del territorio toba, es ocupada por los indios Chorotis que tienen idioma propio. Ocupan el grado geográfico 22° 30' de latitud y el 64° 10' de longitud en la margen izquierda del río Pilcomayo.

Son bastante numerosos y pacíficos y no son aleveosos, como sus vecinos los tobas. Sin embargo se hacen respetar por todas las tribus limítrofes; si se pudiera establecer en dicho grado una Misión Conversora, estaría hecha la conquista de todo el territo-

rio boliviano hasta el grado 24° sin necesidad de tantos fortines que ocasionan gastos inmensos á la Nación y no forman centros de comercio y civilización.

El P. Giannelli en años pasados visitó á los indios chorotis, fué recibido con muestras de cariño y aprecio y halló entre ellos buenas disposiciones de civilizarse, pero en aquel entonces era mucha la mies para pocos obreros evangélicos.

Los chorotis no son tan holgazanes y salvajes, como las demás tribus; se dedican al cultivo de algunas semillas y á la cría de ganados, aunque en pequeña escala. Sin embargo son también cazadores y, ocupando las orillas del Pilcomayo, aprovechan de los frutos que les lleva el río; especialmente en las grandes avenidas.

Indudablemente por estar muy cercanos á los tobas, se agujerean la tornilla de las orejas, donde colocan piezas de madera y también se tiznan el rostro.

En las expediciones al Paraguay nunca se han mostrado hostiles á los blancos y militares, antes bien han prestado importantes servicios y éstos salvaron la vida del señor Tonrar y compañeros, cuando se apartaron de la expedición. De modo que sería muy provechoso reducirlos á vida civilizada.

Guisnáis

Estos indios ocupan la margen occidental del Pilcomayo al frente de los indios chorotis y al Sudoeste de la región, ocupada por los Matacos. El grado geográfico de su territorio con pequeñísima diferencia, es el mismo del de los chorotis, pues están separados de éstos, sólo por el lecho del río.

Es una fracción de los matacos, hablan la lengua de éstos con muy poca diferencia, las costumbres son casi idénticas y su número es bastante reducido. Son de índole pacífica como los chorotis y, á semejanza de éstos, practican amuletos de calabazas y otras legumbres. También se dedican á la cría de animales domésticos, como vacas, caballos, ovejas, cabras y gallinas.

Aún los guisnáis salen con frecuencia á los trabajos de la República Argentina, de donde traen algunas armas también, para usarlas particularmente en el bosque, matando aves, jabalíes, ciervos y otros cuadrúpedos.

Tienen ideas religiosas más que otras tribus y parece que sus tatarabuelos hubieran pertenecido á alguna antigua Misión de la Argentina, porque, más que otros, reconocen una verdadera divi-

nidad. Sin embargo por la mucha ignorancia confunden las ideas y por el mucho temor reconocen en los brujos un poder que no tienen.

Las tribus que llevo descritas son amigas y aliadas de los chiriguanos y, cuando éstos, tienen abundante cosecha de maíz, aquéllas se aproximan á los pueblos de sus amigos: según las tribus, forman sus hornos, donde encontrarse, á la márgen de algún riachuelo, ó de alguna quebrada.

Se quedan allí, ayudan al chiriguano en la cosecha, le sirven para el acarreo de la leña, para la limpieza de la casa, para todo uso doméstico y en cambio aprovechan de un poco de maíz para sí y su familia. Al tiempo de retirarse al bosque se van con algunas libras ó arrobas de maíz según las cosechas que haya tenido el chiriguano.

En las Misiones de Tarija están siendo con mucha frecuencia, porque están más cercanas á su territorio. Los caciques salvajes entonces se presentan al cacique chiriguano para anunciar su llegada y la presencia de la tribu que representa y, dado á su vez, lo lleva ante el P. Convertor para obtener las licencias necesarias.

En estas circunstancias ninguna de las tribus se pierde, porque comprende que para comer es necesario trabajar, no pesa de ser alejado largo del territorio ajeno, donde halló tanta abundancia. Tampoco se permite muchos meses de estadía, porque son capaces de permanecer hasta terminar todo el maíz y dejar escarta la casa del chiriguano.

Varias veces he visto estas tribus en estado de emigración temporiera y, cuando lástima ver tanta pobreza, abandono, suciedad, ignorancia y estrechez. Pueden observarse largas hileras de hornos en comunicación una con otra, llenos de hombres, mujeres, niños y perros, y vivir allí, peor que los animales inmundos en la basura.

Tapietes (1)

La tribu de los Tapietes es más numerosa que su vecina, la de los Chorotes, ocupa la misma margen izquierda del río Pilco-

(1) Con la palabra peruanica del Ministerio Católico servirían de elemento intermediario con los indios tobas y tapietes, con los cuales colindan por el Oeste y Sudeste respectivamente.

Estos indígenas han examinado varias bajas á los soldados de los fortines bolivianos y últimamente también á los argentinos, esto indica, que no hay que ser muy confiados con ellos, especialmente cuando se prevee, que emprenden algunas venganza.

mayo desde el grado 22° 55' de latitud hasta internarse en el territorio que pretende la República del Paraguay y desde el grado 22° 10' hacia el Este.

Se radicaron allí desde tiempo inmemorial, cuando los chiriguanos emigraron del Paraguay; resulta pues, que en su origen, fueron chiriguanos; así lo demuestran el idioma, su inclinación al trabajo, su afición á la siembra, sus costumbres y el lugar que escogieron.

Por estar muy apartados de los centros civilizados, adquirieron costumbres salvajes y actualmente usan un vestido muy sencillo, cubriendo apenas lo más delicado del cuerpo, lo cual antes ni esto hacían, á lo menos los varones.

El idioma que hablan, es chiriguano, pero hay diferencia de términos y pronunciación por el trato que tienen con los tobas, matacos y chorotis, con los cuales sin embargo, no se mezclan y hasta tienen hostilidades no pocas veces.

Estos mismos han destruido varias veces los fortines bolivianos y victimado á los militares, pero al fin que tuvieron y tendrán en ahuyentar al blanco, á quien jamás tuvieron; como que una Misión Guaraunera daría buenos resultados entre ellos, para no ahuyentar al blanco por siempre.

Se dedican á la siembra, á la caza, á la pesca y á la cría de ganados; raras veces salen en caza á los pueblos de los chiriguanos y reducidos á los de los blancos, á los que poco perjudican.

MISCELANEA

En el párrafo «La Zona de la Etnografía Chiriguana» se ha hecho la descripción de la gastronomía de la región del Chaco boliviano que se limita allí: gravadillo de monte. Sus raíces son medicinales y los que se dan allí son de sublimes, las emplean para curar la tisis.

Existe un arbolillo, llamado por los chiriguanos «Yuranti» cabuyo, angina larga, y por los blancos «cuatro lados», colorado. Crece á lo menos cuatro á cuatro metros, cuando hasta, sus puntas son morados algo obscuro; sus raíces se ponen á hervir por el espacio de una hora y medio y el agua destilada es remedio eficaz para curar la diarrea.

El colegio Franciscano de Potosí, el R. P. Prefecto de Misiones y los P. P. Guaraunos del mismo colegio fueron defensores

á mi insinuación de ayudarme en la edición de la Etnografía Chiriguana: por esto agradezco de verdadero corazón á todos y á cada uno.

El mismo agradecimiento manifiesto en estas páginas á un grupo de caballeros de la ciudad de Sucre que, entusiasmados por el doctor don Tomás Arana, concurrieron á la edición con la suscripción de diez bolivianos por ejemplar.

Finalmente merecen especiales gracias dos señoritas de la ciudad de Sucre y otra de la de Oruro que por deferencia especial al autor, le favorecieron con limosnas extraordinarias, sin imponerle obligación alguna.

Los litografiados de la Etnografía Chiriguana unos han sido reproducidos de la «Anthropologie Bolivienne» del doctor Arthur Chervin, otros de la otra del señor del Campano y, los demás, de fotografías que pudo conseguir de algunos fotógrafos franciscanos, *dilettanti*.

Algunas del primer autor y todas las del segundo, fueron reproducidas del album que se conserva en las Misiones de Potosí y en el colegio Franciscano de Tarija.

Si el autor de la Etnografía hubiera dispuesto de tiempo necesario y contado con algún cooperador, le habría sido fácil, facilísimo hacer producir, por máquinas fotográficas, vistas importantísimas, paisajes hermosos, panoramas encantadores, palmares espesos y elevados, playas inmensas de ríos caudalosos y otras innumerables bellezas que existen en la región. En una segunda edición podría hacer todo esto, si el Supremo Gobierno proporcionara los fondos necesarios para que haga una gira científica por todo ello, acompañado de algún fotógrafo.

PREFACE

As I mentioned in the preface to the First Part of this work, the expenses of publication have been defrayed by Consul-General Axel Axson Johnson, Esq., of Stockholm, to whom I have taken the liberty of dedicating this, the second part of my book, as a small token of my appreciation of the interest and kindness he has shown towards my South American researches. I also mentioned in the earlier preface that Consul-General Johnson has in every way tried to further Swedish researches in S. America, above all by granting free passages to all the Swedish explorers visiting that continent on board his comfortable and stately ships.

This work is based on collections made by me in S. America, as well as on the study of material in museums and of books (See Part I). I would remind my readers that these researches have been carried out with the support of Swedish patrons of research-work, notably Arvid Hermansen, Esq., and Mrs. Ina Smitt.

I have to thank several of my friends and colleagues for valuable communications, which I have made use of in one way or another in the present work. These are: Mr. Kaj Birket-Smith of the National Museum, Copenhagen (M. C.), Dr. G. Friederici, Dr. R. Karsten, Prof. Dr. Th. Koch-Grünberg, Director of the Ethnological Museum, Stuttgart, Dr. F. Krause, Ethnological Museum, Leipzig, Dr. J. P. B. de Josselin de Jong, Royal Ethnographical Museum, Leiden, Licentiate Sven Lunde, Prof. Dr. Max Schmidt, Ethnological Museum, Berlin, (M. J. V. B.) and Dr. Max Uhle. Every possible courtesy has been shown me by the Riksmuseum,

Stockholm, through Prof. C. V. Hartman, Dr. G. Lindblom, and last but not least by its skilled attendant A. Tirnblom. The objects described here which belong to the Riksmuseum on Stockholm, are marked R. M. with the number of their inventory, those belonging to the Museum at Gothenburg are marked G. M.

In the last named museum there are, inter alia, collections made by Lieutenant O. Liljenskiöld and Mr. Otto Thulin. The latter has supplied me with a number of valuable oral particulars which are reproduced in the following.

I am also greatly indebted to Dr. Lars Wählin, Head Librarian of the Stadsbiblioteket at Gothenburg, for procuring rare books for me to consult and for translations of Latin quotations. As the works of Italian authors occasionally caused me some trouble, since I cannot read Italian fluently, Consul-General E. Corvin was good enough to help me when in difficulties.

The illustrations to this volume are chiefly due to Mr. A. Hjalm and Miss A. Davidsson. Some of the stereotype-plates were kindly lent me by Mr. K. O. Bonnier, the publisher of my popular works. Most of the illustrations, however, were made by the Optia Company of this town from pictures not previously published.

The translation into English of my Swedish manuscript was carried out by two translators and revised by Dr. G. E. Fahlbom.

Introduction.

C
CC
114

In Part I of this work I sought by a new method to analyse the material culture of two Indian tribes the Choroti and Ashluslay. In the introduction to the aforesaid work I explained the method employed. In Part 2 I have sought by the same method to make an ethno-geographical analysis of the civilization of two other Indian tribes. These are the Chiriguano and Chané, who dwell in the southernmost part of Bolivia and northernmost Argentina. The Chiriguano are Guarani Indians, while the Chané are Guaranized Arawaks[1]). They thus belong to two of the most important tribal groups in all America. Their civilisation is already well known, thanks to the missionaries who have worked and still work among them. Their works are referred to in the bibliography. The most important are those by CORRADO and NINO. DEL CAMPANA wrote a monograph on the Chiriguano based on information supplied by missionaries. We also find mention of the Chiriguano in many older works. The information they give us of their manners and customs is unfortunately scanty. It is, indeed, only in LIZÁRRAGA, CHOMÉ, VIEDMA, LOZANO and one or two of the LITTERAE ANNUEA that we find any useful matter.

C

SERRANO Y SANZ wrote an excellent work on the post-Columbian history of the Chiriguano. OUTES has written about their pottery. LEHMANN-NITSCHE has dealt with their physical anthropology. Works on their languages have been published by several missionaries. I visited these

Indians in the years 1908, 1909 and 1913, and spent in all 4 to 5 months studying them. In my book »Indianlif» I gave a popular account of them as I got to know them during the Hermanarck expedition in 1908 and 1909. In my last book of travel »Forskningar och äventyr i Sydamerika» there is some information about the Chiriguano. I have brought home to Sweden from the Chiriguano and Chané about 1500 articles which are now in the Riksmuseum at Stockholm and in the Gothenburg Museum. In the Geographical Review I wrote a short article on the migrations of the Chiriguano Indians.

C
Ce
[126]

C
Ce
12
114

A close study of the Chiriguano and Chané civilization by the ethno-geographical method affords points of especial interest, since their mode of life is rather well known, and we are able to trace their history back to the beginning of the 16th century. I have also collected archaeological material from their region. At first I was minded to give an account of this, too, in the present work. I decided, however, that it would be better here only to mention individual finds by the way, and to leave the archaeological material for another publication in which I shall be able also to publish certain archaeological finds made in other parts of Bolivia. This for purely practical reasons.

C
Ce
121

I will here endeavour to make clear how the Guarani-speaking Chiriguano's and the Guaranized Chanés' civilization are composed, what culture-elements they have got from the Whites and from the Mountain civilization in the west, what each brought to the common stock and what they possibly obtained from other quarters.

In this analysis of Chiriguano and Chané manners and customs, I do not intend properly to examine the question as to whence these Indians came to their present abodes. Broadly speaking we know that already. Respecting the Chiriguano migrations there are historical documents extant which evidently show that it was not until the beginning of the 16th century that these Indians conquered

C

the tracts they now occupy.[7]) [8]) They drove out or subjugated the original population, which consisted chiefly of Chané Indians. They made slaves of a great number of them and ravished a great number of women.

The Chané are, as was mentioned, Arawaks and all indications point to their having come from the north or north-east, where they have large numbers of kinsfolk. It will be found that the present investigation confirms this. A matter of particular interest in this connection is to notice how two peoples belonging to the most important groups of tribes in all America made adaptations in their mode of life when they had emigrated to places with strange natural conditions. Again, it is worthy of note how their civilization was transformed and the influence of the Bronze-age civilization in the west and afterwards under the influence of the Whites. Further we shall see what they have, under their new conditions, been able to preserve of their original civilization. We shall gain insight into the way in which the civilization of two Indian tribes was transformed under the influence of other peoples and new natural conditions.

As in Part I, I deal chiefly with the «material» side of these Indians' life. Or rather, everything in their life which

[7]) NORDENSKIOLD (13).

[8]) MEANS, basing his opinion on GARCILASSO and MONTESINOS, has assumed that the Chiriguano invaded the Inca Realm earlier than the beginning of the 16th century. But even if his assumption is correct, these inroads led to no desolidation there. This is evident from the accounts of the invasion in the 16th century, when the Chiriguano supplanted, what was everywhere an original stock. Nor do we know whether by Chiriguano the Incas did not mean barbaric tribes of the Chaco in general, and not any particular tribe. In these parts Chiriguano probably corresponded to the signification that Chunchos had in the district of Cuzco, where it meant all sorts of barbaric Indian tribes east of the Andes. The Chiriguano that GARCILASSO DE LA VEGA AND MONTESINOS speak of need by no means have been Guarani Indians. I have already pointed out (NORDENSKIOLD 13) that GARCILASSO's description of the Chiriguano is absolutely irresponsible.

Schwabenstiftung E-5,5(1909-1910, 1913) 1920

Chaco SF9

can be kept in a museum or for which one may find — given favourable circumstances — archæological comparative material. Besides weapons, ornaments etc there is thus included also burial customs, tatooing, dancing-masks, etc.

The reader will find that I have endeavoured to make this part more graphic than Part I. From the maps of bibliography it will be seen regarding what regions I have had access to literature; it can also, in some measure, be seen whether the blanks on the maps are due to those particular tribes never having been closely studied.

The maps of distributions in this work are fewer in number than in Part I. This is because we find the Chiriguano and Chané, or one of these tribes, on twenty-nine maps in Part I. Part I is largely preparatory to Part II. Parts I and 2 together contain 45 maps showing the distribution of culture-elements occuring among the Chané and (or) Chiriguano.

All who are interested in the ethnography of S. America will, I venture to think, find the maps worth close study and will see that from them various deductions can be made not only respecting the Chiriguano and Chané Indians but also as to the ethnography of S. America in general. In some measure I have, indeed, endeavoured to do this myself.

The land of the Chiriguano and Chané the Indians stretches from near Sta Cruz de la Sierra to near Rio Bermejo. Southwards of Sta Cruz the territory inhabited by the Chiriguano is continuous. The Chané, on the other hand, live in several different quarters, some at the river Itiyuro in the Argentine, some at Caipipendi near the Rio Pilcomayo, some at the Lower Rio Parapiti, and others near Itau south of the Rio Pilcomayo. The neighbours of the Chiriguano and Chané are the Mataco-Vejos, Mestizos, and Whites to the south, the Matacu, Toba, Tapiete, (Yanaygua) and Tsirakua to the east, to the north Mestizos and Whites, and to the west Quichua, Mestizos, and Whites.

Some Chavuti live near Vacuiba. In nearly all of the Chiriguano territory there are Mestizos and Whites. There are also several large missionary stations in their territory. Some few Chiriguano live in the village of [illegible] Rosa to the north of [illegible] Cruz de la Sierra. Some Chiriguano who sought refuge in central Chaco after their last rebellion, live there still. They are the only tribe of Chiriguano-Indians who are quite independent of the Whites.

C 161 162 131 [illegible]

The country which is inhabited by the Chiriguano and partly by the Chané is a border land between the Andine mountains and the great plain of the Chaco. It is in the valleys between the outermost mountain ridges towards the Chaco and on the plain to the east of them that the Chiriguano and the Chané live. The land of the Chiriguano and Chané-Indians is not a real country of primeval forests. There are some great forests, but on the whole it is sparsely wooded, in places even very poorly wooded. The supply of water is the governing condition for settlement in the land of these Indians. It may be said that wherever there is access to water there the country is inhabited, at any rate as regards the region north of the Rio Grande, one of the great rivers that run through their territory. There need not be a great supply of water for the Indians to find the country inhabitable. All that is necessary is sufficient drinking-water for man and beast, as at Itatique and in the Caipipendi valley near Rio Parapiti.

C Ce 131 133 361 362

The biggest rivers running through the territory of the Chiriguano and the Chané are the Rio Grande, the Rio Parapiti and above all the Rio Pilcomayo. The Rio Grande may now almost be considered the boundary river of these tribes towards the north, and is of but little importance to them. The Rio Parapiti is a strange river. While well supplied with water in the mountains it is almost shrinks to nothing in the plains during the dry season. During the rains it is very full of water and may be dangerous to land. Fish are plentiful only in the Rio Pilcomayo, and we

C Ce 133 Ce [326]

SF10 Chiriguano SF19
Chane SF8

c ce 133 226 shall see that the methods of fishing differ somewhat in the different rivers. At the Rio Pilcomayo the Indians must always have found a good supply of food. As many Chiriguano live by very insignificant streams they never have the opportunity of fishing. The Chané all live in places c ce where they are able to procure fish during some part [361] of the year at least.

c ce 224 Big game is scarce in the land of the Chiriguano and Chané. Nor are these Indians keen huntsmen. One seldom sees game that has been killed by them in their huts. c ce The great flocks of fat pigeons that settle in their fields are [223] for the most part left unmolested.

c ce 241 243 As we shall see in the following the Chiriguano and Chané live mostly by tilling the ground. Owing to the comparative dryness of their land maize is cultivated more than anything else. It is the ease with which this plant can be grown here, that makes the land of the Chiriguano and Chané a good land to dwell in.

c ce 222 The fruit of the carob-tree (algarrobo) is the most important wild fruit. Probably no careful study has ever been made of the climatic conditions of the Chiriguano and c ce 132 Chané country. It is situated in the tropics, north of the tropic of Capricorn and the traveller there of course suffers more from heat than cold. In May and June especially, however, when there is a strong south wind, it is agreeable to have a well built house, warm clothes and a snug bed. The rains begin in December and leave off in April or May. ce It sometimes happens that there is little or no rain and then [244] the crops are a failure. They are often destroyed by grasshoppers.

Dwellings.

Like all other Indians I visited south of Sta Cruz de la Sierra in Bolivia, the Chiriguano and Chané live in villages. Some of these villages are rather large and inhabited by several hundred people. Frequently a number of villages are situated quite close to each other. As a rule, the huts stand around an open space which is sometimes planted with trees to give shelter. These «squares» serve as meeting-places and playgrounds. C cc 361

The huts are square. They are built of reeds or wooden laths, and thatched with grass. They are very often plastered with earth. C cc 362

There are no huts here of the original Indian shape. The real Chiriguano (Chané?) huts were very large; as many as a hundred people lived in the same house, the whole C cc [592] [361]

village consisting of only a few big huts.[1]) These plainly correspond to the great family-houses known to us from Brazil, but which in Bolivia I have only seen among the Chacobo, a Pano tribe on the Lago Rojo-Aguado. Cummins[2]) gives no exact information about the huts. He says they stood in a circle around an open place. In the middle of the square there was a special hut for strangers. According to Nino[3]) the Chiriguano formerly had round houses. He gives a rather lengthy description of these, but does not tell us the source of his information. Nino describes at length how the Chiriguano now build their houses.

C
Ce
342
177

As early as the time of Viedma[4]) — end of the 18th century — they seem to have forsaken their original type of house and built themselves smaller huts. Since the dwelling-houses here retain no traces of their original shape, it is useless to make comparisons with other Indian huts. There is hardly anything in Indian culture which so quickly changes under the influence of the Whites as the houses. The acquisition of iron tools makes it possible to put up quickly properly built houses. An Indian tribe need consequently not have been long in contact with the Whites before they alter the style of their huts. This is not the case, to be sure, with all the tribes, for many, such as those in the interior of the Chaco, tenaciously preserve the primitive type of hut which, though small and inconvenient, affords greater protection from cold than the roomier dwellings of the Whites.

[3]) P. 174.

[4]) P. 181. «Son casas son unos pequeños ranchos hechos de caña.»

the earth-plastering of huts is here an original Indian idea. I have attempted to indicate on a map the distribution of huts with earth-plastered walls, but I refrain from publishing it because, in the majority of cases, I cannot ascertain whether the Indians learned from the Whites to plaster their huts. Huts with earth-plastered walls are found among the Indians around Rosaina in Guiana[1]) and among the Ijca[2]) in Colombia. The Indians at Mojos[3]) used to have such huts, and OUTES[4]) mentions them from the Cainguá etc. Earth-plastered mortico huts are also common in the Mizque valley in Bolivia.

The Chané on the Rio Itiyuro, but not those on the Rio Parapiti, and the Chiriguano have maize-barns on piles.[5]) Occasionally the barn and dwelling-house are combined in such wise that the people live on the ground-floor and store their maize on the floor above. During my travels I have only seen barns on piles among the Matacco-Guinnay (one only), Matacco Vejos, and the Chacobo (one only). Some Quichua huts between the Rio Chapáre and Cochabamba are built on piles. I scarcely think these are original, however.

JOHANNES LEHMANN has written a treatise on pile-buildings all over the world. He mentions there their occurrence among several tribes in northern S. America, which are shown on the map below. The village on piles from La Plata mentioned by LEHMANN after HERBELI is, of course, not Indian; nor are the barns from the Argentine

[2]) BOLLERMANN (4). P. 15.
[3]) MARBAN P. 133: CASTELAU, P. 318.
[4]) OUTES y BRUCH (5) P. 65.
[5]) Already LOZANO (P. 109) speaks of the maize-barns of the Chiriguano: «No duermen en el bohio, sino fuera, las capillas seguras con unas pirsas de maiz junto al bohio (pirsa es un cercado como de diez varas de hondo, rodeado de cañas, donde se encierra el maiz)».

Ec. 343 114 171 362 Pampas in which the corn is stored to protect it from harm.

The above-mentioned village and barns I have, therefore, left out of my map. Paters Schmidt[1] mentions pile-buildings from other tribes too.

Frederici[2] has also collected numerous statements referring to the occurrence of pile-dwellings in S. America from the works of older writers.

Ec. 171 362 114 343 The table 1 and map 1 which follow show the distribution of pile-buildings in S. America according to Lehmann, Frederici and Paters Schmidt, together with some additions and corrections.

On the accompanying map I have merely indicated those which seem certainly to be of Indian origin. Those mentioned at the end of the 15th century, as well as those from the 16th are so undoubtedly. I am convinced that the pile-buildings of the Chaná and Chiriguano are genuinely Indian, as nowhere in this region do the Whites possess such barns. Their geographical distribution leads us to presume their genuinely Indian origin, as also that they are a culture-element which came to these Indians from the swamps of Mojos, and that they here are an Arawak culture-element too. The use of pile-buildings on hard ground is quite comprehensible to me, as they offer great advantages, whether used for barns or dwelling-houses. The idea must have come, however, from some marshy tract or from a sea-coast where the inhabitants were dependent on ebb and flood tides. In the cases where a people employ pile-buildings on hard ground which is not liable to floods, it is due, as a rule, to conservative ideas — the mode of building to which they were accustomed in their former dwelling-places has become indispensable.

The notion that the pile-buildings employed as barns are here of different origin from those used as dwelling-houses, is unlikely. There is nothing in the geographical distribution to support this idea.

Outside their barns the Chirignano and Chané have ladders consisting of logs in which steps have been hewn.

The Chiriguano and Chaco make use of platform beds as well as hammocks. The bedsteads are made of thick sticks, the underlay being covered with cane or long sticks. The most civilised Chiriguano also have bedsteads in which the underlay is made of plaited things — this having been learned from the Whites. I had always held that the platform bed was a culture-element which the Indians have obtained from the Whites. KARL V. D. STEINEN[9]) seems also to be of this opinion. This is not, however, correct, for the platform bed is a genuine Indian culture-element, which is worth closer study. Platform beds are mentioned as early as 1549 by PALOMINO[9]) from Chequimayo in N. Peru among quite uninvited Indians, and there is not the least reason to suppose that the platform bed

in a culture-element so constant as to a few years to have spread from the Willow in Peru to the interior of the country. When the distribution of the platform bed is closely studied, it will be found that it is evidently a very old culture-element which remains in places where the hammock has not penetrated or has been found impractical. In the land of the Chiriguano and Chaná Indians it is often too cold to sleep in hammocks. A platform bed in therefore preferred by them, especially when they have clothes to put under and over them. Hammocks are few and are mostly used to recline upon during the day. I have endeavoured on the map to show the geographical distribution of the platform bed. The summary does not, however, pretend to be complete. Its aim is mainly to draw attention to a culture-element which has often been overlooked, and which gives one the impression of being older than the hammock by which it has been relegated to certain tracts, particularly on the eastern slopes of the Andes, where it is rather cold to sleep in hammocks, and rather uncomfortable to sleep on the ground, as is the custom up on the high falls or further to the south.

In the regions I visited it was only the Sirionos, Huanyam and Huari who had hammocks of palm-fibre or bast. The other tribes who employ this form of bed have hammocks of cotton. The Chané hammocks are of cotton or caraguata[7][8]. The Chiriguano have hammocks of cotton, occasionally of wool. IM THURN and K. v. D. STEINEN had already pointed out that, while cotton hammocks appear to be a Carib culture-element, the palm-fibre hammock is of Arawak origin. PATER SCHMIDT then thoroughly investigated the distribution of hammocks of various materials, confirming the theories of IM THURN and K. v. D. STEINEN and showing, moreover, that the Guarani peoples, as a rule, have cotton hammocks.

---

[7]) Da net-technique.

[8]) Annua de la Compañía de Jesus. P. CIV The author speaks of two kind of hammocks from these Indians. Probably one of them were of Caraguatá. I am not quiet sure if he speaks of the Chané or the Chiriguano or of both «hacen muy grandes palos y de ellos cuelgan sus hamacas, que son unas mantas grandes ó trajiles de algodon ó hechas de red.»

283

RUTH HAEBLER, a pupil of MAX SCHMIDT, has endeavoured to shew that this is not correct. After examining a number of hammocks in German museums, she arrived at the conclusion that, in the majority of these, both palm-fibre and cotton had been used — palmfibre for the warp and cotton for the woof — and that the notion that the Arawaks have hammocks of palm-fibre only, while Caribs have only cotton hammocks, is wrong. For the rest, hammocks of mixed materials are also mentioned by PATER SCHMIDT, who thus devoted attention to this matter when he was investigating hammocks. ROTH, too, mentions from Guiana hammocks of bast with a woof of cotton. The fact really is that all the hammocks described as having a bast warp and cotton woof are from the Upper Xingú or from Guiana tracts, where there dwell Arawaks, Caribs and Tupi. If we study the appended map and table, which are based on very extensive material, we shall find that, within an immense region about the Amazon, the Indians use hammocks of palm-fibre exclusively, and that in the rest of S. America it is more especially the least civilized tribes, e. g. Siriono, Huari, Waika and others, who use bast or palm-fibre hammocks exclusively. On the coast of Brazil, the more civilized Tupi had cotton hammocks, while the less civilized tribes used palm-fibre. I would consequently account for the distribution of hammocks of different materials in the following way: — Originally the Indians in the whole of tropical S. America had hammocks of palm-fibre or bast exclusively. When the art of cultivating cotton spread from the west, many tribes began to use cotton hammocks or, in some districts, hammocks of palm-fibre with a cotton woof. Where cotton-growing remained unknown, or was inconsiderable, as among the Arawaks of N W Brazil, hammocks made entirely of palm-fibre were still used.

Which tribes spread the knowledge of cotton growing? Certainly not the Arawaks, who within large tracts

C
Ce
[249]

C
Ce
352
249
*171
283

do not even spin. It must, above all, have been the Tupi - Guarani. They are known for their manufacture of cotton hammocks. The Omagua who dwell (have dwelt?) in a tract where they and the Cocama are the only Tupi Indians, use hammocks both of palm-fibre and of cotton. All the neighbouring tribes have nothing but palm-fibre hammocks. Some Tupi at the Upper Xingú use palm-fibre hammocks with a woof of cotton. RUTH HAEBLER mentions two hammocks of bast from the Cainguá. Otherwise, the Tupi tribes use cotton hammocks, as has been pointed out by PATER SCHMIDT. The Caribs, too, have undoubtedly contributed to the spread of cotton-growing and the use of cotton hammocks, for it is very evident that in Guiana especially, they have used, and still use, cotton in their hammocks far more than the Arawaks. The distribution of cotton hammocks in S. America cannot be properly understood except in connection with the general history of the cultivation of cotton. It is highly probable that it was from the western area of civilization in S. America that the knowledge of cotton-growing spread over a

C
Ce
[174]

considerable part of the continent. It is very likely that, in post-Columbian times, the practice of growing cotton has spread to a good many tribes who formerly were ignorant of it. We must remember that cotton has been grown at such mission-stations as in Mojos on a very large scale.

C
Ce
352
249
*171

It must also be remembered that the history of the cultivation of cotton is of especial interest, because the cotton bush is one of the few cultivated plants that in pre-Columbian time were common to both the Old and New World. Consequently, it would be very interesting if we could prove that cotton was first used in S. America within the old culture areas, and there only after the Indians had reached a comparatively high state of civilization.

C
Ce
352
*171
[554]

It is not quite right to say that the hammock was not used within the culture-area of the west. It was used — not as a bed, but as a litter for persons of rank. This is

171*
[554]

corroborated by the accounts of PEDRO PIZARRO and XERES, who were eyewitnesses of the conquest of the Inca empire. In the high mountain country it is natural that hammocks should not be used as beds. In such parts they would be too cold. It is harder to make out why hammocks were not used in the coastal regions of Peru.

Evidently the hammock in S. America is so old a culture-element that it is impossible to decide whence it came to the Chané and Chiriguano. The latter certainly, and most likely the former too, used hammocks when they settled in their present territory. The technique employed in most Chané and all Chiriguano hammocks is the same as, with small variations, is mostly used wherever hammocks occur.

It is possible that some tribes about the river Amazon preferred palm-fibre hammocks to cotton ones, because the former are cooler. Possibly, too, in these regions of moist heat, hammocks of palm-fibre are less liable to rot and to be attacked by insects than those of cotton.

I here append a map (3) showing the distribution of hammocks of different material after PATER SCHMIDT, with certain additions, as will be seen from table 3.

The seat so characteristic of the Indians in great parts of S. America is a rather uncommon piece of furniture in the huts of the Chiriguano and Chané (Fig. 3). Its distribution in S. America has been investigated by PATER SCHMIDT[1]) and SAVILLE[2]) wherefore I beg to refer to their works. In my own sphere of work I saw seats among the Quichua mestizoes at Calilegua, among the Mojo, Huari, Baure and Huanyam. The seat as a culture-element has its southern boundary here. It occurred, though rarely, among the Incas, where seats seem to have been the special privilege of the chiefs[3]). Most likely it is a culture-element which the Chané

received from their kinsfolk at Mojos, or they may even have brought it with them when they migrated to their present abode. Nowadays the Chiriguano and Chané commonly use chairs of the type they have learned from the whites. They are made by themselves in the missions.

I have a rush mat from the Chané. Both the Chiriguano and the Chané have skin mats. I have already spoken of such mats in Part I of this work. The skin mat is naturally a southern culture-element.

C
Ce
353
C

[415]

The Chiriguano and Chané keep their belongings either hung from the ceiling or else on the floor. Clothes and other fragile things are often kept in large earthen vessels — a method of keeping one's belongings which I have not seen anywhere else. COBO[1]) says that the Incas kept their clothes in a similar way.

C
Ce
353
* 171

It is very common among the Chiriguano and Chané to fix wooden hooks in the roof of their huts on which to hang their belongings (fig. 4). Elsewhere I have only seen these hooks among the Churápa. In the Gothenburg Museum there is a collection by LILJEWALCH and THULIN of hooks made by Indian tribes on the Roraima. The only mention of them that I am aware of in literature on the subject is from the Araucanians.[2]) Small articles of this kind are, of course, easily overlooked, wherefore it is not at present possible to draw a map of their distribution. This is to be regretted, as the distribution of such small objects would offer points of great interest. It seems to me not unlikely that the wooden hook is an Andine culture-element. Within my sphere of work the hook does not occur among other Indians than those mentioned here.

C
Ce
353
415

Small articles are kept by the Chiriguano and Chané in cloth and leather bags, wooden boxes, baskets, armadillo scales, the scrotum of bulls, and in calabashes with or without lids.

237
R 171

Except among the Chiriguano and the Chané, I have only seen the scales of the armadillo used as boxes among the Mataco, and there only as a curiosity. They are, however, known from the Guyaquí[1]), from the Indians of Roraima[2]) and from Indians in N. W. Brazil[3]). The sewn baskets of armadillo scales which are sold in the curiosity-shops of Buenos Aires probably hail from Paraguay, and it is not impossible that here, too, we have to do with an original Indian idea.

Ce
237

Vegetable food is of great importance to the majority of Indians. This is most specially so with the Chiriguano and Chané. To the former, as well as to those of the latter tribe who dwell on the Rio Bijuro, maize is of extraordinary importance. The Chiriguano and Chané belong to WISSLER's «maize-area» or «area of intensive agriculture». WISSLER divides S. America into three great food areas: area of intensive agriculture, manioc area, and guanaco area. Another division would be more correct, viz. —

C Ce [243]

S 22

1) Area of intensive agriculture.
2) Area of manioc and fishing.
3) Area of wild seeds and fishing. El Gran Chaco.
4) Guanaco area.

There will, of course, be in addition a number of small areas with special conditions of life, as in the extreme south of S. America.

The Chiriguano grow 11 kinds of maize[1]), 11 varieties of beans[2]), 12 kinds of calabashes[3]), of which 5 are edible, sweet potatoes, manihoca, sugar-cane, maní, urucu, tobacco,

water-melons, melons, figs, tuna[1]), oranges, cotton, millet, and reeds for arrow-shafts.

C ce 241 [245] C ce [244] C ce [177] [262]

Bananas are not cultivated. Among the Chané at the Rio Parapiti the sweet-potato is the most important cultivated plant. Of the plants mentioned, the sugar-cane, the melon, the watermelon, the fig, the orange and the millet are not American. All those cultivated plants which have been introduced by Europeans are of slight importance to the Indians. I have never seen mandioca cultivated, but I have heard that it is to be met with in the fields of these Indians. As a staple food of the people it is of no importance here.

C ce 412 177

Iron spades bought from the Whites are the tools employed nowadays. Very occasionally one still sees wooden spades. In Part I I have published a map of the geographical distribution of the spade.

The spade in S. America is evidently a western element of culture, i. e. the idea of fitting on a more or less broad blade to the lower part of the digging-stick is plainly derived from the western area of civilization.

Whence the Chiriguano got the idea of the shapely handles I do not know. They are too shapely for the art to have been derived from the Whites. They have obviously a long evolution behind them, and it is very probable that they had their origin in the Mountain area of civilization.

Hoes with iron blades occur. The Indians have got them from the Whites. I have not seen any primitive hoes, although we are here on the border of the area of distribution of the genuine American hoe[2]).

The Chiriguano and Chané use a small implement for removing the corn from the corn-cobs which I have described in Part I. P. 32.

C ce [114]

[1]) Opuntia.

[2]) It is incorrect to affirm, as Wissler does, (P. 17) that the hoe was unknown in S. America. Incas had hoes and they are found still among the Quichua.

NF10 Chiriguano NF10
Chané NF10

IV.

Hunting Equipment.

The Chiriguano and the Chané are not keen huntsmen. They are rarely seen out hunting. Their hunting-weapons are the bow and arrow, the pellet-bow, clubs, slings, and snares, all of their own manufacture. The Chiriguano have bird-nets too, and formerly they had the bola as well. The Chiriguano and the Chané have no weapons exclusively used in warfare. Formerly they had lances[1]).

The bow and arrow are going quite out of use among these Indians except for fishing and as a weapon for boys. The degenerate type of bow now seen among the Chané and Chiriguano is certainly not original. According to LIZARRAGA[2]) the Chiriguano used to have bows of a man's height. It is of great interest to learn from LIZÁRRAGA that the Chiriguano used to protect their left wrist with a small piece of wood to prevent the skin being grazed by the bow-string. Something similar occurs among the Ashluslay (see Part I. P. 42).

Their arrows are very like those used by the Choroti and Ashluslay. The arrow shafts are of the same kind of reed[3]). At the Rio Parapiti this plant, which grows abundantly beside the Rio Pilcomayo is cultivated by the Indians. On the Rio Parapiti there is a place called Ouivarenda, which means «where there is chuchio.» This plant, the *Gynarium* sp. whose seed-stalks so many Indian tribes use

SF13 Chiriguano SF13
Chaco SF8

for arrow shafts has been completely destroyed by cattle along the Rio Paraguay. Formerly the Chané made the shafts for their arrows of schuchies.

The arrow points are made of hard wood and sometimes of iron. Arrows with several tips are used for fishing and sometimes also for shooting birds. Arrow-tips made of cactus spikes are used by some Chiriguano for fishing. Some characteristic types of arrows are depicted here (fig. 6). Some arrows are feathered to guide the flight. The feathers are fixed in the way that Métraux calls «Peruvian cemented feathering». The feathers are quite small as on Chaco arrows generally. Arrows with thickened heads (bird arrows) are very common. Some of them have the shape we see depicted here (fig. 6 E). This type does not occur among any of the other tribes I got to know during my travels, but they are common among several peoples living in the east, e. g. the Caingua, Guató, and Botoró, and in the northern part of S. America, among the Trio, Goahibo and others. They have most likely been introduced here by the Chiriguano. It is not probable that they have come from the Arawaks for, as a rule, they do not use blunt bird-arrows. In Part I I have published a map (No. 3) showing the distribution of the bird-arrow in S. America. Later on I will deal with arrows particularly used for fishing. The Chiriguano and Chané sometimes use a special kind of bast to bind round the arrow where the point is inserted in the shaft. The same kind of bast is not met with among the Chorotí and Ashluslay or among the other Chaco tribes I have got to know. It occurs, however, among the Caingua.

In part I I have already published a map showing the distribution of the sling in S. America. I have nothing to add to this which cannot be seen in the subjoined drawings (fig. 7).

The pellet-bow is rather common among the Chiriguano and also among the Chané. It is chiefly used by boys and youths. I wish here to make a few additions to what I have said about the pellet-bow in Part I.

E — Chiriguano. R. M. E. 6ss.

In a weighty article E. von Rosen (3) has criticised my opinion that the pellet-bow was possibly brought from India to S. America by Portuguese sailors in post-Columbian times. He is quite correct in the statement that the thick part in the middle of the bow is not for strength-

Fig. 3. Slings.

ening but is merely for better grip. This holds concerning both the Asiatic pellet-bows and some of the American. This contrivance is practical but not indispensable. It is certainly not little toy-bows alone that have not got it. It is quite wanting on the pellet-bows of the Chorotí, Ashluslay, Tapiete, Mataco and Vorazáes. Presuming that the pellet-bow in S. America is of Asiatic origin, it is evident that the Indians who first learnt the use of the pellet-bow

5:Nordenskiöld E-5,4 (1908-1909, 1913) 1920

Chane SF8

C
Ce
411
177
171*
114

from the Portuguese have kept its Asiatic shape, while the tribes that received it later have made pellet-bows more like their usual bows.

Von Rosen puts forward the supposition that the S. American pellet-bow may be an imitation of the European crossbow. This is supported by the fact that the pellet-rests on some S. American pellet-bows (fig. 8) and the pellet-rests on some European crossbows are very similar. This similarity is extremely noteworthy. Still, I deem it unlikely that Indians should have hit on the use of pellet-bows because they had seen Portuguese crossbows — especially as I am not aware that the Portuguese in S. America used bullets for their crossbows. In any case the pellet-bow in S. America would be a post-Columbian culture-element.

C
[192]

It is quite true that some Indians, e. g. the Choroti and Ashluslay have their own words for pellet-bow. But it is a common thing for some Indian tribes to have coined words to denote objects introduced by Europeans. On the other hand, it never happens that the Indians that still speak their own language lack native words for objects which are plainly pre-Columbian with them. It is therefore of primary importance for the settlement of the question as to whether the pellet-bow was introduced in post-Columbian times to note the fact that several tribes lack native words for the pellet-bow, calling it »bodoque».[1])

C
Ce
177
411
171*

The Chané call it »boroque». I am not acquainted with any Chiriguano name for it. A circumstance that speaks in favour of the pellet-bow being a post-Columbian culture-element is the fact that these bows are unknown in Peru, in Central America, and in Mexico, that is to say, in the cultural zones proper. There are not many of the elaborate culture-elements in S. America that have been unknown to

the most civilized tribes and only known to the tribes east of the Andes. This applies especially to those cultural elements that are of little or no importance in the struggle for existence. The pellet-bow is the only weapon of any importance which, as far as is known, was unknown in all the seats of higher civilization in America. If the pellet-bow is an original American invention, it must have been invented by a comparatively uncivilized tribe.

C
Ce
411
*171

The pellet-bow is nowhere in S. America of any great importance as a hunting weapon. The heavy hand of necessity has never spurred the Indians into making an invention of this kind.

C
Ce
411
*171
114

FRIEDERICI has pointed out to me in a letter that in MARTYR »De orbe novo» there is a statement about bows from the coast of Venezuela used by boys for shooting with pellets of clay or wax. This is plainly the same statement as GOMARA's that I quoted in Part I. MARTYR's statement is in the Eighth Decade, where he complains, that his memory was beginning to fail him. I believe there must be some misapprehension on MARTYR's part, and that the pellets in question were arrows with thickened heads of wax or wood. MARTYR cannot refer to pellets thrown by hand, as he plainly speaks of bows. It is not likely that wax pellets were used for clay pellet-bows, but, on the other hand, it is not at all unusual that arrows used in play should have thickened wax heads. Arrows of this kind have been brought from the Ijca in Colombia by BOLINDER. The pellet-bow is mentioned neither by missionaries nor by any modern authors as occurring in Venezuela or any other part of northern S. America. It is extremely unlikely that this desirable toy weapon should have existed there at the beginning of the 15th century and then entirely vanished. Such an isolated occurrence would be most peculiar and unusual.

C
Ce
223 At least three kinds of bird snares are used. One is a snare fixed onto a long rod (fig. 10).

It is used in the following way: A tame parrot is tied to a thick bush in which the hunter is concealed. When the wild parrots, which have been decoyed by the confined parrot, settle in the bush, they are snared by the Indian hidden there. I have seen similar rod-snares among the Chané and
C
Ce the Tapiete. According to GUMILLA[1]) snares of this kind
* [171] were used for quail-hunting on the Llanos de Casanàre, in Chìre and Tocaria, at Neyva and Vaguè and at the Rio Tercero between Buenos Aires and Tucumau.

C According to GUMILLA, HERRERA[2]) speaks of these snares
Ce being used in hunting parrots in Cuba. According to
223 MARTIUS[3]) Indian boys in Brazil used these snares. Unfor-
* 171 tunately he does not mention in what tribe or tribes he saw them. De PAULA SOUZA[4]) speaks of the same kind of snare from the Caingang, VASCONCELLOS[5]) from Indians on the Brazilian coast, and AMBROSETTI from the Cainguá[6]).

Another bird snare found among the Chané is the one depicted here (fig. 12). Snares constructed on the same or a similar principle I have seen among the Choroti. KOCH-GRÜNBERG[7]) depicts similar snares, in use among the Indians by the Rio Caiarý in northwestern Brazil, and AMBROSETTI from the Cainguá[8]). It is certain that similar snares are found among many other Indians, though they have not been studied particularly. As I have already mentioned in the first part of this book I will in time describe what I have collected in the way of snares and traps during

my travels. Though rather an extensive collection, it is quite insufficient for comparative researches.

The bird-nets used for hunting, occasionally found among (4) the Chiriguano, are of great interest (fig. 13 and map 4). I have not seen hunting nets elsewhere. Bird-nets are mentioned by several writers from the Alakaluf. These Indians and the Chonos were also acquainted with seal-nets. The statements in literature about these nets are to be found in COOPER'S[1]) excellent work. CREVAUX speaks of hunting nets from (4S) the Miraña[2]). UHLE[3]) mentions finds of the kind in Atacama. JOYCE[4]) speaks of nets that were used for hunting deer and birds on the coast of Peru. He depicts a very interesting earthenware vessel found at Trujillo representing a deer-hunt in which the huntsmen used the throwing stick and the hunting net. COBO[5]) speaks of bird-nets from the Inca. PALOMINO[6]) mentions nets used for deer-hunting from Chuquimayo in northern Peru. Hunting-nets are also mentioned by ORTIGUERA[7]) and by the author of Jornada de Omagua y Dorado[8]) from the Aruaquinos on the Amazon. From what OVIEDO Y VALDES[9]) says, the Indians also used hunting nets on the Rio Orinoco. GOMARA[10]) mentions nets from Cumaná in which ant-eaters were caught.

SUAREZ DE CEPEDA[1]) in his most interesting treatise on the Colima-Indians in Columbia, tells us that they tried to catch comets, which they imagined to be birds, with nets which they placed in their fields. This seems to prove that these Indians knew the use of bird nets. CASTELLANOS[2]) states that the Indians in the valley of the Patia (in southern Columbia) tried to catch the Spaniards' horses with nets. Most all of these authors who speak of the hunting net belong to the sixteenth century. This should give those who are doing work like mine some food for reflection. It proves how perfectly indispensable this old literature is as a means of learning the ethnology of the S. American Indians. *How imperfect a map of this kind would have been without the old literature!* One may ask why hunting nets are so scarce now. This is apparently owing to the fact that in most places where hunting nets have been in use the Indians have lost their original civilization. The above authors not having given us a detailed description of the nets, we do not know if they resemble those used by the Chiriguano. We are not even always told what was caught in these hunting nets.

The deer-nets used on the Peruvian coast were of course considerably larger than the nets used here. Their shape also was quite different. The Chiriguano nets are clap-nets and are used in the following way. The net is spread on the ground at a spot where there are plenty of pigeons. The pigeons are decoyed with maize to settle between the two halves of the net. A string runs from the net to a fowler

used by the Colima Indians to catch the »Comet-bird» were obviously also fixed nets.

We cannot prove that the different kinds of hunting-nets are of the same origin. Judging by the general distribution of the hunting-net in S. America, it is, however, likely that the Chiriguano learnt their use from the western culture zone. As has already been mentioned, COBO says that bird-nets occurred among the Inca.

411

I have not seen the fishspear among the Chiriguano. ERIC VON ROSEN[1]), however, depicts one from this tribe which is preserved in the Riksmuseum in Stockholm. Something like it from these Indians is mentioned by ACOSTA[2]).

The Guarayú[3]) spear eels with two single-pointed spears of »chonta». According to EDER[4]) the Mojo used fish-spears with three points. They did their spearing by torchlight and fixed the torches in the prow of their canoes. According to FREIREISS[5]) the Coroados had double-pointed fish-spears. KOCH-GRÜNBERG[6]) mentions triple-pointed fish-gigs from the Huhúteni and other Indians in northwestern Brazil. The Indians in the northwest of Brazil also fish by torchlight. The Indians at Lago Titicaca[7]) use triple-point-

C
Ce ed poles *that are used both as fish spears and to punt their*
226 *rafts along.*
411 It is not unlikely at all that it is the multi-pointed pole
*171 which has suggested the fish spear. These poles are multi-pointed in order that they may be used in swamps, to punt their canoes along. It was natural that the Indians should try with these poles to have a thrust at any fish they might see. Then, if they migrated to a district where many-pointed poles were no longer needed, these poles lived on as fishspears.

C As I have already mentioned the Chiriguano shoot fish
226 with a bow and arrow. For this purpose they sometimes,
411 though not always, use many-pointed arrows. I have seen two different types which are depicted here (fig. 15). One has two wooden points, the other which was used at Rio Parapiti for shooting small fish, has many points of cactus spikes. Two or three-pointed arrows used for shooting fish are spread in South America chiefly in the water region of the Amazon, as indicated on map 5 and table 4.

Ce I have not visited any Chané who live where they are
226 able to use this method of fishing. Among the arrows in
411 my collection there are no multipointed ones that came from them.

As seen from map 5 and table 4, the many-pointed fish-arrow seems to be a cultural element that came to the Chiriguano from the north part of S. America, most likely from Mojos. I have seen the harpoon arrow neither among the Chiriguano nor the Chané.

I have not seen these Indians fish with poison. At the Upper Rio Pilcomayo, however, I heard in 1913 that the Chiriguano know how to poison the water with a certain kind of bark as a means of catching fish. A great number of plants are used by S. American Indians for this purpose, particularly in the basin of the Amazon.[1]) On the map and table, I have endeavoured in some measure to elucidate the distribution of this fishing-method. Curiously enough KARL V. D. STEINEN did not see this method of fishing among the Indians tribes at the upper Rio Xingú.[2]) I have neither seen it myself nor heard of it among the Indians in El Gran Chaco. Nor does MAX SCHMIDT mention fishing with poison from the Guató.

The Chiriguano and the Chané fish with dip-nets both C Ee 226
in the Rio Parapiti and in the Rio Pilcomayo. Those used in the Rio Parapiti are small and the meshes fine, as only small fish occur there. They seem to be dwarfed specimens of the big nets used in the Rio Pilcomayo. I know too little about the distribution of different types of nets in S. America to try to show their geographical distribution. Dip-nets like those used by the Chiriguano and Chané I Ee have only seen among the Choroti, Ashluslay, Mataco, [171]* Toba and Tapiete.

On the Upper Rio Pilcomayo the Chiriguano build great C
dams of stone in which they catch fish when the fish are 226
making their way up the river. Such damming contrivances are also mentioned by CORNEJO[2]) from the Chiriguano

[1]) After FRIEDERICI. Communicated by letters.
[2]). P. 66.

C 226 who dwelt on the Upper Rio Bermejo beyond Centa. The Figure 14 shows us the construction of one of these dams. Nordenskiöld speaks of a large kind of trap, the «pari», used by the Chirignanos. I have not come across any of them in my travels. The Coingangs[1] call big traps «pari», as do also the Apiacá[2].

Ce 226 I have seen the Chané at Rio Itiyuro fishing with calabashes and also employing the method of making dams.[3] Fishing with calabashes proceeds as follows: A number of leafy boughs are stuck into the bottom of the stream to form a shadow and in front of each one of them a calabash containing some ground maize offal from the chicha brewing is placed. The fish enter the calabash, which is emptied now and then by the women. I have not seen this method of fishing in any other place.

C Ce 226 [177] The Chirignanos and Chané also fish with hooks which they now get from the Whites. They use neither floats nor sinkers.

C Ce 226 177 Among present-day Indians I have seen an original fishhook from the Tambopata-Guarayo. That the fishhook in S. America is of pre-Columbian origin is known by the numerous finds of fish-hooks on the coast of Peru and Chili made by Uhle and others. Among the Chirignano the fish-hook is certainly also a pre-Columbian cultural element. This is apparent from the fact that they, as well as the Tupí Indians on the coast of Brazil, call the fish-hook «Pinda», which word is plainly identical with the Quichua or Incan name for fish-hook, «Pinta». From this it appears that the Chirignano and Chané probably learned the use of fish-hooks from the western region of civilization.

C Ce 226 177 It is also known that the first Conquistadores brought fish-hooks for barter, so it is most likely that many Indian

tribes have learnt this method of fishing from the whites. As mentioned above, I consider the fish-hook I found among the Tambequita - Guayaqui[1]) to be of original Indian type. Something similar is also mentioned by FRITZEROTA from the Mainas[2]). Fish-hooks of bone occur among the Indians at the Rio Napo. The Uitoto use hooks of wood or palm-spikes.[3]) In rivers where the piranhas (Serrosalmo) occurs, fishing with hooks of an inferior material is almost impossible, as these voracious fish bite through a hook with their sharp teeth as easily as they would a line.

Fig. 13. Dam of stone from the Upper Rio. Pilcomayo.

[2]) cf. different kinds.

plenty of fish in the Pilcomayo, there is a great trade in dried fish in that part of the country. The Indians tramp long distances in order to fish or get fish by barter.[1] In places where the fish are so small that they rarely exceed the length of a finger, as in Rio Bijuro, the fishing, done by women and children, still forms no small part of the diet of the people[2]. It is not surprising that the Chiriguano and Chané are eager fishermen, for no doubt both tribes come from well-watered tracts of the country where fish is abundant.

VI.

Domestic Animals.

Apart from the dog, the Chiriguano and Chané keep only European domestic animals. There is now no genuinely Indian breed of dogs here. Cattle-breeding is of some importance in certain parts, especially in the Caiyipendi valley. Milking the cows is not understood. Some of these Indians keep large numbers of sheep and the women spin the wool and weave woollen stuffs. It is not known if they had wool in the pre-Columbian period, as it has not been ascertained whether these Indians kept llamas or not. Poultry are of great importance to the Chiriguano and Chané. The Indians in South-America were exceedingly quick to learn the art of poultry-keeping, thus, when CABOT touched the south coast of Brazil in 1526, he got plenty of hens from the Indians by barter.[1] The Chiriguano and Chané have but few horses. They are not nearly such good equestrians as, for instance the Toba.

I have in my collection a riding whip stock made by the Chané. DES. CAMPANA depicts a very primitive saddle from the Chiriguano. I have seen similar saddles among the Toba Indians.

When these Indians acquired the European domestic animals, the chase must have lost in importance for them. They obtained their meat in another way. The possession of cattle compelled them to enclose their tilled ground, or to have it far removed from the pastures.

Tools.

C
412
[114]

With the exception of bone awls the Chiriguano Indians of to-day have no genuinely Indian tools. Bone awls which I have already dealt with in part I very rarely occur among the Chiriguano. I omitted to mention this in the German edition of Part I.

VIII.

Fire-making.

C
372

Once only have I seen a Chiriguano Indian making fire by wood friction. He had forgotten his matches. Flint-and-steel are also seldom seen among these Indians now-a-days. In my collection there is a cotton-plaiting, in a wooden pocket from the Chiriguano. The Indians use such for tinder when striking fire with flint and steel. The idea of this was of course obtained from the Whites.

The Chiriguano and the Chané have large wooden mortars with long wooden pestles. Hand-mills of stone or any other material are never used. The geographical distribution of the mortar has already been dealt with in the first volume (map 10). Evidently the wooden mortar has come to the Chiriguano and Chané from the east. It is a northern and eastern element of S. American culture. Among the Chiriguano one sometimes sees mortars hollowed out in stumps of trees. It is obvious that the Whites did not introduce the mortar here from the fact that it was mentioned by such early author as SCHMIDEL from the Syeberis in North Chaco.

that they fanned the flour. They had no proper sieves. As we have seen from the table, the Chaco tribes have no basket-sieves, but use bag-nets instead.

Mandioca-graters do not occur among the Chiriguano and the Chané.

Ee 252 415 273

Of course the Chiriguano and the Chané cook their food in earthern ware. Maize-beer »Chicha», their chief food, is boiled in large vessels. It is only with great difficulty that these can be moved from one place to another[1]). Some of the Chiriguano occasionally allow the maize-beer to ferment in hollow stumps of the bottle-tree.

Ee 252 415

The steam cooking-pot shown here (fig. 16) is of very great interest. It is used by the Chané and Chiriguano in cooking a certain dish of maize, the »huintimimmo».[2])

I have seen this contrivance b[illegible]g used as shown by the illustration, but I have, unfortunately, not tasted the maize-dish that was cooked in it.

Ee 252 415 *171

In literature dealing with other parts of S. America I have only found this steam cooking pot mentioned by ULLRICH[3]) from the Rio Grande do Sul (Munizip Pelotas).

He there found pieces of »Siebtöpfen» and says that they were used on the top of a cooking-pot. ULLRICH[3]) tells us that these steam-cooking-pots were used by the

Ee [172] [437]

[1]) When fragments of very large and heavy earthenware vessels are found in archæological excavations one may, as a rule, presume that they originate from a permanently settled tribe. It may be assumed with perfect certainty that these very large vessels were made at the spot where they are found. Small earthen pots may, however, have been bartered from some other tribe. This is naturally of a certain interest if we wish to distinguish between native and imported pottery found in archæological excavations. — Some of the Chiriguano at the Rio Parapiti make only the big common clay vessels themselves and get the small, painted pots by barter from other Chiriguano Indians.

[2]) CORRADO when speaking of different dishes of maize says that *»el huintimimmo*, especie de torta muy tierna hecha con harina de maiz humedecida y blandamente dispuesta en una tortera agujereada y cocida con baho del agua caliente.» P. 42.

small Indian tribes in the woods north of the Rio Camaquam at the end of the decade 1870—80. The perforated top bowl contained maize, the pot under it boiling water. C Ce 252 415

I cannot at present tell whence the Chiriguano and the Chané got this cultural element. Besides among these Indians, I have also seen steam-cooking-pots of the same kind among the Mataco-Vejos, who live close to the Chané at the Rio Itiyuro. 171*

The Chiriguano and the Chané have special bowls for roasting maize (fig. 16). I have only seen bowls of the same shape among the Mataco-Vejos. The roasting of maize is commonly practised among the majority of Indians who grow this plant, which is of such great importance to many tribes.

The Chiriguano and the Chané do not know of the babracot. They only use the wooden spit. It is often cleft, as is also the case among the Choroti and the Ashluslay. As the kinsmen of the Chané in Northern Bolivia and the kinsmen of the Chiriguano on the coast of Brazil use the babracot, the question arises: »Why is it not used here?» I suppose this is because the hunting is of no great importance, the fishing not very good, and the fish caught small or, at least, rarely of any size. C Ce 252 171* Ce [22]

Pit-ovens are unknown here. When chicha is being made, great pot-spades are used. They are either wooden (fig. 17 A) or made of the hafted shoulderblade of some large mammal. I suppose all Indians who cook their food use something to stir it with. Usually, however, only a plain stick is used. Pot spades of the kind shown here are in use among the Mataco-Vejos, who live near the Chané on the Rio Itiyuro and the Guató[1]) on the upper Rio Paraguay. It is not unlikely at all that the latter have had them from the Chané, for we know from accounts of very early discoverers, that some of the Chané settled on the upper Ce 442 252 [273] Ce [171]* Ce [175] [361]

177

Nowadays the Chiriguano and Chané for the most part eat their food with metal spoons which they have got from the Whites. They have, however, wooden spoons as well. They generally eat from earthenware bowls of their own make. They seldom have wooden bowls. I have already treated of the distribution of the wooden bowl and the wooden spoon. (Part 1 map 12 and 13.) They are features of western civilization. Calabash bowls are universally used by the Chiriguano and Chané as drinking vessels, particularly for chicha.

C
415
177

Silver bowls — »Cagua» — are occasionally seen at the Chiriguano festivals. These bowls, which are shaped like cloven calabashes, are often furnished with small ears and are made by mestizo smiths to suit the Indian taste.

C
Ce
415
[439]

There is in my collection a calabash bowl that has been turned into a ladle by means of a handle. It is from the Chané at the Rio Itiyuro. I have also procured some bowls made of the fruit of the calabash tree from the Chiriguano. The Indians get them from Sta Cruz de la Sierra, for, as far as I know, the calabash-tree is not cultivated within their own area.

Narcotics.

c
ce
276

The Chiriguano and Chané are not great smokers like the Choroti and Ashluslay. They are most addicted to the cigarette, and seldom smoke a pipe. Only a few of the former who live on the territory adjoining the Quichua chew coca, which, so far as I know, they do not cultivate themselves. It is a well known fact that the habit of chewing coca is a western culture-element.

c
ce
* [171]

I have given an account in Part I of the geographical distribution of the tobacco-pipe (map 14).

The type of pipe depicted here, on which the bowl is fixed near the middle of the stem and which, by the by, is very convenient to handle, seems to me to have a south-westerly distribution in S. America.[1]) During my archaeological excavations at Caipipendi I found similar pipes of burnt clay. The front stem of these latter pipes has no hole for the finger. This hole is a little refinement which I have seen nowhere except among the Chiriguano. Quite simple pipes are also found among the Chiriguano, consisting of a bowl with a straight stem behind and no front stem. From the Chané I have one single pipe. This is evidently quite modern. In drawing Map 14 in Part I. I have not taken this pipe into account, as its origin is somewhat uncertain.

XI.

Dress.

The Chiriguano and the Chané men of the present day wear European clothes which they buy at the stores, get at the missions, or, more often still, when working at the sugar factories in northern Argentine. The native garments, the loin-cloth (chiripa) (fig. 19) and the ponchoshirt are still occasionally seen. The loin-cloth is a rectangular piece of cloth which is passed between the legs and kept in place back and front by being tucked into the belt. The geographical distribution of the loin-cloth in S. America it is almost useless to endeavour to show on the map, as in many places it would not be possible to say if it was native Indian or not. Among the tribes visited by me, with the exception of the Chiriguano and the Chané, I have only seen it among the Tapiete. I have a piece of cloth from the Tsirakua that may have been a chiripa. I found a doll in a mound in Mojos which most likely represents a man with a chiripa. That it is a very old cultural element is obvious from the fact that the curious mummies found by UHLE[1]) at Arica and belonging to the oldest culture periods there, wore the chiripa. In the museum at Gothenburg[2]) we have a mummy of the kind, found by SKOTTSBERG at Arica, which wears a chiripa. This chiripa is not woven, but is netted.

and from the Ashluslay, Guarayú-Pauserna, Siriono, Guarayú (mission) Gorocotoques, Mojo, Carios-Tupinambá, Quichua, Paressi-Kabiši, Chiquitos, Guarani in Paraguay, Xarayes, Guayaná and Payaguá, Occasionally they occur among the Mataco as well. BARBOSA RODRIGUES mentions the tipoy from the Tembé. Judging by LANGE's photographs the Ararandeuara girls seem to wear small tipoys in ordinary hammock technique.

Those from the Quichua do not, however, correspond to others whose style we know, for the former used to be open on one side and only seem to have been sewn up under the influence of European ideas of modesty. Consequently I was rash in concluding that the tipoy was an original feature of western civilization, as I did in the first part of this book. Most likely it is of quite a different origin.

When the Chiriguano and Chané women used the tipoy as a garment, they did not, as we shall see below, get the idea from the mountains or from the Whites. It is, however, certain that the Whites and at an earlier date the Mountain-culture Indians may have influenced them to make the tipoy longer and more »seemly». Contact with other people wearing clothes has made it fashionable to be clothed.

My attempts to investigate the distribution of the tipoy in northern S. America has caused me a lot of trouble. Descriptions of Indian apparel by early authors are, unfortunately, not as detailed as might be desired. OVIEDO mentions a woman's dress »saya» from the region of Lake Maracaibo, woven without seam »sin costura», which may have been a tipoy.

In a narrative of PEDRO TEXEIRA's journey up the Amazon[1]) we read that almost every tribe goes naked, the men completely, the women above the waist, covering the rest

of the body with a garment resembling a »pampanilla». This may mean the tipoy, but also something else[1]).

C
Ce
291
854
*171
482

As MAX SCHMIDT[2]) has pointed out, the Paressi make their tipoys and their bearing-bands (to carry the children) in exactly the same way. The bearing-bands used by these Indians are identical with the tipoys in both shape and material. They differ from the latter only in being somewhat longer in proportion to their width. STADEN[3]) speaks of the »typpoy» as a garment. In an anonymous early description, also from the coast of Brazil, printed in PURCHAS[4]), the bearing-band is called »tupiya». The same word is thus used by the Guarani-speaking Indians on the coast of Brazil both for the bearing-band and the female dress. In some parts the same article has, indeed, been used both as a bearing-band for children and a woman's garment. According to BARBOSA RODRIGUES[5]) it would seem to be so among the Tembé Indians. The bearing-band does not occur among the Chiriguano and Chané; they carry the child cradled in the tipoy.

Ce
Ce
291
482
*171

I do not consider it too bold to assume that the tipoy and the bearing-band have the same origin, and that the one has suggested the other. In all likelihood, the bearing-

[1]) It is obvious from the following quotation from OVIEDO (T. 2, P. 271), where he tells of the female apparel of the Bubores living near Lake Maracaibo that the »Pampanilla» also might mean a small piece of cloth covering the genitals. »y las mugeres una pampanilla ó pedaço de algodon texido tan ancho como un palmo colgando delante de sus vergüenças».

The word »tipoy» has also been used with another meaning, viz., for a band used to support an injured arm.[1]) A band or sling of the kind has exactly the same shape as an Indian bearing-band. Only once can I remember having seen an Indian with his arm in a sling like this. He was a Pauserna man.

»Tipoya» can also be interpreted »a kind of hammock».[2])

C
Ce
352
854
482
*171

The question is if the hammock has not also been suggested by the bearing-band. In the first place we must remember that Indians also in different parts where the hammock is unknown, are careful not to put their babies on the ground. Thus, the Yuracáre and the Chimáne who have no hammocks, use cradles of bark-cloth in which they suspend their babies. When the Mosetene woman goes to work in the fields with her baby, she puts it into a bearing-bag which she hangs up in a tree. COMINGES[3]) mentions that he saw among the Guaná Indians, who seldom use hammocks, a child which the mother had placed in a bag slung like a hammock. So it does not seem so very unreasonable to suppose that Indian women tried to use the bearing-band in the same way when the child had to be

Both men and women among the Chiriguano and Chaná have sandals which, however, they seldom wear. In Part I of this work I have given an account of the geographical distribution of sandals in S. America. Obviously sandals are a cultural element which the Chiriguano and Chaná have got from the area of civilisation in the west.

A pair of sandals with fastenings differing from the usual kind are depicted here. A sandal with very similar binding but of another shape is described and depicted by Baron von Rosen[1]) in his recent, splendid work.

The Chiriguano and Chaná wear girdles which as a rule are woven, though they are sometimes made of leather. As I pointed out in Part I, the woven girdle belongs to the western cultural elements and the leather belts to the southern. The leather girdles worn by the Chiriguano and Chaná are provided with pockets and sometimes ornamented with cipos, and are consequently imitations of the gauchos' cinturon worn by the Argentine gauchos. Nino[2]) is of the same opinion, and he points out that they are called «bosa» (from the Spanish word «bolsa»[3]) owing to their being provided with a pocket.

As already mentioned in Part I the woven «head-band» or frontlet also belongs to the dress of the Chiriguano and Chaná-men. The frontlet is certainly a western culture-element.

Chiriguano and Chaná shirts and ceremonial tipoys are of native make and are often dyed blue with indigo. The frontlets are blue or red. Chiriguano and Chaná women wear a kind of hair-band with tassels which they must likely learned to make in the missions.

301

All Chiriguano and Chané men of the older generation and, in a few of the Chiriguano villages, the younger men and boys also wear a so-called *tembeta* or lip-button in the under-lip. The custom of boring the lips is wide-spread in S. America. DALL, DENIS, NETTO, UHLE and VERNEAU-RIVET have drawn up summary tables to which I beg to refer, at the same time making some additions based on notes I have made from the literature on the subject to which I have had access.

C
Ce

171 *

The tembeta of the Chiriguano and Chané Indians is made, as a rule, of tin and in shape reminds one of a cap with a peak at both the front and back. (fig. 25)

S:Nordenskiöld E-5,1(1908-1909, 1913) 1920
SF10 Chiriguano SF10
Chane SF8

C Ce 301 The back is somewhat concave enabling it to rest conveniently on the chin-bone. The front is round and flat and does not project beyond the lip. The metal is hollowed at the front and filled with wax, in which are fastened green or blue stones or glass beads of the same colours. In a grave at Caipipendi I found a tembeta of wood of the shape here described, in which a round piece of green glazed earthenware is inserted. For every-day use both the Chiriguano and Chané sometimes have lip-buttons of wood which Ce are shaped like flat wooden cylinders. The Chané usually [175] have smaller lip-buttons than the Chiriguano. CHOMÉ[1]) mentions lip-buttons of resin among the latter Indians from the 18th century.

C Ce 301 *171 I make no attempt here to show on the map the distribution of lip-boring in S. America.[2]) As was mentioned, it is very considerable. The idea of inserting stones or beads fastened with wax in the tembeta is almost confined to the Chiriguano and Chané.

C Ce [177] [114] It might almost be suspected that they got this idea from the Whites, who now have an extensive manufacture of metal tembetas in order to sell to the Indians. This is not the case, however, for SCHMIDEL writes of the Karkhokhies (Gorocotoques)[3]) who dwelt in N. W. Chaco: — »Pero sus mujeres tienen un canutillo asegurado à los C Ce 301 labios en el que meten ellas una piedra verde ó gris«. Of what material this »canutillo« was, we are not informed. *171 In Chili[4]) a tembeta of stone has been found with a cavity 175 in which possibly another stone or the like had been set.

The metal tembeta is here probably, though not neces-

[175]

sarily, post-Columbian. CASTILLO[1]) mentions silver tembetas from Mojos as early as the 17th century, and in Ecuador a tembeta of gold has been found.[2]) CHOMÉ[3]) writes of the Chiriguano: »Les hommes se percent la lévre inferieure, ils y attachent un petit cylindre d'étain, ou d'argent ou de resine transparente.» It is not impossible that the Indians of this part, viz. the Chané, had lip-buttons of silver in pre-Columbian times.

The highly specialized type of tembeta which I have here likened to a cap with both front and back peak, is not now found in use in S. America elsewhere than among the Indians here dealt with and some few Tapiete who learned its use from the Chiriguano.

Similar tembetas of stone have been found at the Rio Negro in Patagonia[4]), in San Juan[5]) in Argentine, in central Chili[6]), at Tiahuanaco[7]); at Parana-Mini[8]), Minas Geraes[9]) and Pernambuco[10]). Here may also be included a tembeta of gold described by RIVET and VERNEAU from Chordeleg in Ecuador. This type of tembeta is also found in Mexico and in western N. America. This lip-button is best characterized by saying that, when inserted in the lip, it looks like a round disc.

The type of lip-button most closely resembling those described here, have a more or less spike shape when seen from the side. While the Chiriguano tembeta projects either not at all or very slightly beyond the lip, in the spike-shaped

tembeta one sees a point projecting slantwise more or less beyond the lip in a downward direction. The cross-piece which prevents the lip-button from slipping out does not broaden into a flat disc approximately following the shape of the chin. Length, shape and material may vary considerably.

C
Ce
301
287

The oldest type of lip ornament probably consisted of feathers, etc., fixed in a hole in the underlip. To keep this hole extended, it was ordinarily filled by a wooden plug or the like. This consisted, like the everyday tembeta of the Chiriguano and Chané, of a plain wooden cylinder. This shape was subsequently changed and more ornamental material substituted for the wood. Some tribes merely made the wooden plug bigger and bigger, e. g. the Suyá[1]), Botokuds[2]) and Lengua.[3]) As a rule it was, no doubt, not very hard to make the wooden plug stay in the hole. *When it was exchanged for more ornamental material such as resin, and, above all, stone, it became necessary to give the tembeta such a shape as would prevent it slipping through the hole.* The Chiriguano Indian wooden tembeta is merely cylindrical; the heavy metal tembeta is cap-shaped.

C
Ce
301
*171

The Huari tembetas of wood are likewise cylindrical. The upper part of the smoother tembeta of resin is made thicker, so that it cannot slip through the hole.

The Chiriguano and Chané evidently have a very specialized form of tembeta which would appear to be fairly late. Its distribution over the continent of America does not, however, support this view. The type is found in Mexico and N. America as well as in S. America. The question arises whether we may not, in this case, imagine a parallel evolution. Wherever the attempt has been made to make tembetas of heavier material than wood, *it has been found necessary to make them more or less T-shaped.* It is in

fact, the only possible shape. It was quite natural that both in N. and S. America the tendency was to shape the tembeta in such wise that it should lie conveniently on the chin-bone.

C
Ce
301
171 *

The most highly specialized type of tembeta is found along the Rio Araguaya among the Karajá and Kayapó.[1]) There are in those parts a number of different types of lip-button, and it is natural to ask whether such a variation of tembeta types was not formerly common in other parts. In other districts where the Indians still wear tembetas there is no similar variation in type. One sees only two or three different types. Nor it is likely that type-variations of stone tembetas have been much greater than is indicated by the material hitherto collected. The distribution of stone tembetas, on the other hand, may have considerably exceeded what we know at present.

KRAUSE[1]) has pointed out how different kinds of tembetas are worn at different ages among the Karajá. The Chiriguano when merely boys wear the wooden plug. LERY[2]) says that the Tupinambá boys had bone tembetas of conical shape. When they were full-grown (attained puberty?) they received tembetas of stone which, in part at least, had a shape similar to that of the Chiriguano and Chané tembetas. Very likely the narrower, spike- shaped tembetas which DEBENEDETTI[3]) described from San Juan were for boys' wear, while those which resembled the Chiriguano and Chané tembetas were for grown-ups.

C
Ce
554
301

A writer as early as VAAS DE CAMINHA[4]) mentions various kinds of tembetas among the Indians whom CABRAL met with when he came to the coast of Brazil.

Ce
301
171 *

It is evident that the spike-shaped tembetas belong to an older era of civilization than those of capshape. The

SF10 Chiriguano SF10
Chane SF8

former have in S. America a much wider distribution than the latter. When both types existed together, as was the case among the Tupinambá, the boys had to be content with spike-shaped variety, while the men had the cap-shaped. For the latter kind a specially valuable material was employed, viz. a rare kind of green stone.

In all likelihood it was from the Andine area of civilization that the cap-shaped tembeta spread to Patagonia to the Chané, Chiriguano and Tupinambá. This must have happened before the time of the Incas. At the time of the conquest the Incas had no tembetas. The discovery of tembetas of this type at Tiahuanaco supports the notion that we have here to do with a culture-element which spread south and east during the Tiahuanaco period.

Should an attempt be made to draw a diagram showing the evolution of tembeta-types, I imagine it would be pretty much as follows (fig. 27).

Out of the small cylindrical wooden plug which still occurs everywhere for the purpose of keeping the lip-button hole open, and to extend the same, three types have been specialized:

(1) The exaggeratedly large, flat, round wooden disc;
(2) The more or less spike-shaped lip-button;
(3) The flat cap-shaped tembeta.

Of these (1) is most likely the oldest, (2) next and (3) the most recent.

If the cap-shaped tembeta in this part of America comes from the Andine area of civilization, the Chiriguano have probably taken it westwards again. The Chané generally have quite small tembetas, this being the reason why they are scornfully called by the Chiriguano »uñareta» (women). It is probable that they learned the use of this ornament from the Chiriguano. Of the Chaco tribes visited by me it is only the guaranized Tapiete who have tembetas.

The Chiriguano and Chané men never pierce their ears.

[177]

Formerly the chiefs wore ear-rings with pendants of green stones. Among these Indians the only women with pierced ears are a few of the younger ones who have learned from the Whites the custom of wearing ear-rings. These ornaments are also obtained from the Whites. Oddly enough, the barbarous custom of piercing the ear is thus here an idea obtained by the Indians from the Whites. Neither men nor women pierce the nasal septum.

Toilet-Articles, Tattooing etc.

C
Ce
575
*171
174

The Chiriguano and the Chané are careful of their personal appearance. They are cleanly people, much cleaner than their neighbours. If these tribes had emigrated from the cold Bolivian mountains into their present territory, part of which is very poorly watered, they certainly would not bathe once, or even several times a day, as they do, but would be as dirty as the Quichua and the Aymara, who are, incredibly filthy. Their Chaco neighbours, too, the Mataco are also extremely dirty. In the parts I have explored it is only in Mojos that we find Indians as cleanly as the Chiriguano and Chané, these being the Mojo and the Baure, kindred tribes of the Chané. On the other hand the Guarani Indians in North Bolivia, the Guarayú, are less clean, even if they are among the »clean ones». The Guarani in Paraguay are, however, said to be very cleanly. The cleanliness of the Chiriguano and the Chané is a positive proof that they migrated to the territory now inhabited by them from warmer and well-watered parts, where bathing was pleasant and easily accessible. The Chiriguano and the Chané have not learnt to bathe from the Mestizos or the Whites, whose habits are anything but clean in these parts. Cleanliness is certainly not a virtue suddenly acquired by any people, but may indeed be regarded as a race-peculiarity. A map of S. American cleanliness would most certainly enlighten us on several points of interest with regard to the origin of the tribes. Now, when I read that the Mundrucú are very dirty I am sceptical of their being Guarani-Indians, and consider it much more likely that they are naturalized Guarani of a different origin. I shall not venture to give a map of S. American cleanliness

C
Ce

Aymara SF5

here. In order to do so, it would be necessary for me to have seen much more of S. American Indians than is the case. I will, however, here try to give the tribes I know a *certificate of cleanliness*. I mark the dirtiest, the Aymara, with o and Mojo, the cleanest, with 5. At the same time I will give them a certificate of orderliness, i. e. point out to what extent they keep their huts tidy and their belongings clean and neat. These 'certificates' are also of considerable interest as a means of understanding the cultural development and relations of the tribes.

Ce 515 171 * 174 128 A [515]

I consider that a distinction should be made between the Chané who live on the Rio Itiyuro and those living on the Rio Parapiti. The former are poorer and characteristically enough less cleanly than the latter. It is of a certain interest to see that skill in arts does not always go hand in hand with tidiness and cleanliness.

Ce 515 184

The more or less high standard of Indian art, at least among present-day tribes in E. Bolivia, is dependent on whether they have been influenced to a greater or less degree by pre-Columbian civilization in western S. America.

There are still many of the old Chiriguano, who wear long hair. Young men and youths with long hair are only

5:Nordenskiöld E-5,4 (1908-1909, 1913) 1920
SF10 Chiriguano SF10
Chane SF8

seen in the villages about the upper Rio Pilcomayo. When the hair is long it is not worn hanging down the back, as is the custom with other Indians wearing long hair. It is wound round the head, »put up», and kept in place with a frontlet. I have not seen any other Indians do their hair in this way. The women also have long hair, usually parted down the middle and braided. Braiding may have been introduced in post-Columbian times, though this is uncertain, as it was also common in the culture-area of the west. C 302

The Chiriguano and Chané use combs, but no brushes. In Part I I have already dealt with different kinds of combs met with in the districts through which I have travelled. The Chiriguano only have plain wooden combs which are sometimes rather prettily carved. This type of comb is probably derived from the mountain civilization, as I have already pointed out in Part I. Ee 302 412 Ee [177]

The Chané have »stick-combs», »Stäbchenkämme» and now and again, though rarely, plain wooden ones too. These constructed combs are, as a rule, one-sided, in contradistinction to the doublesided ones of the Choroti and the Ashluslay. Thus we see that the Chané type of comb is unlike the one found in old tombs in the Puna de Jujuy, and which now occurs among the Quichua and the Aymara, the Choroti and the Ashluslay. Chiriguano and Chané combs are used exclusively for cleaning the hair and are never worn as ornaments. Ce 412 171* Ee [302 301]

The use of the pincer or tweezer as a toilet article certainly came to the Chiriguano and Chané from the civilized zone in the west. They are of metal and are used for removing hair from the body. Nowadays pincers are usually made of the metal from some old tin can, but sometimes of silver. These pincers of silver also serve as breast ornaments for the men, and are called »boivéra». They have to a great extent lost their original use, and are now simply used as ornaments. They have even sometimes been hammered together so that they can no longer be used as pincers. C Ce 302 412 [177] C Ce 301 412 177

cers. They have become bigger and bigger. (fig. 26) These silver trinkets are not made any more by the Indians themselves, and it is likely that the majority of, or all the silver ornaments now found among the Indians have been made by white silversmiths.[1]) The shape is always Indian, but

[1]) NINO is also of the opinion that the »bolvéra» is not of Indian make. P. 196.

the ornamental design not always so (fig. 26). It is difficult to decide whether the idea of the pincer as a mere breast ornament is due only to the influence of non-Indian smiths or not. Most likely the pincer was turned into mere ornament by the makers, who presumably used it as an article of barter and then increased its size in order to make it more and more coveted by the Indians. At last the makers themselves may even have been quite ignorant of its original use. Consequently we cannot be wrong in considering the »boivéra» an original Indian element of culture which has been transformed under the influence of

Fig. 27. Figure tattooed on the arm of a old Chiriguano Indian. ? Caipipendi. 1/1.

the Whites. There is no doubt that the pincer is a cultural element derived from the old culture zone in the west. They are, as we know, quite common in collections from that part. The Chiriguano also sometimes use a piece of split reed for removing hair.

Tattooing occurs here, but is very rarely seen. I have only seen two Chiriguano women and one old Chiriguano man with tattooing on their arms. The old man had the figure depicted here (fig. 27) tattooed on his arm. If I understood him rightly, it used in old times to be quite common for the Chiriguano-men to be tattooed in the same way. I have seen no tattooed Chané men or Chané women. I have already given an account of the distribution of tattooing in S. America in the first part of this book.

Painting the face with «urucu» is rather general here. The custom of painting the face prevails or has prevailed among most tribes in S. America and the red colour of Bixa Orellana (Urucu) is greatly appreciated where it can be had.

The «Genipa» is not used. It is possible that the genipa will not grow as far south as the Chiriguano and the Chané land.

XIV.

Stained Teeth.

It was already related by VIEDMA[1]) that the Chiriguano stain their teeth. I have seen Chiriguano women in the Caipipendi valley stain their teeth a blackish blue with the leaves of a plant called »tajú». LASCH has made a study of the custom of staining the teeth among S. American Indians. He speaks of this custom from Cumaná, quoting GOMARA, according to which author the women stained their teeth at the death of their husbands.[2]) He further mentions that this custom prevails among the Miraña,[3]) the Piro,[4]) the Goajiro[5]) and the Arawaks[6]) in Guiana. To this I can, as shown by the map and table below, make several additions.

302
171 *
[125]

[1]) P. 181.

[2]) I have looked through all available editions of GOMARA in order to find this statement, but in vain. What I have been able to find about stained teeth in GOMARA P. 203—206 I give here. [114]

»Préciance de tener muy negros los dientes, y llaman mujer al que los tiene blancos, como en Curiana . . . . Hacen negros los dientes con zumo ó polvo de hojas de árbol, que llaman ahi los cuales . . . . . a los quince anos, cuando comienzan á levantar la cresta toman estas yerbas en la boca, y traenlas hasta ennegrecer los dientes como el carbon; dura despues la negrura toda la vida.»

[3]) From MARTIUS.

[4]) » RAIMONDI.

[5]) » WAITZ.

[6]) » MARTIUS (1). He writes. T. 1, P. 691, »Schwärzung der Zähne, die GOMARA, Cap. 73, von den alten Cumanesen angiebt soll hier auch vorgekommen sein.» This statement seems so vague, that I have not indicated it on the map. As far as I know it is not confirmed by other authors writing on the same Indians.

Near Cuzco, not marked on the map. Possibly identical with Pino (7n).

Bolivar, who has observed that the Ipca's teeth are stained black by their chewing coca and lime,[1] has advanced the opinion that the staining of teeth among the Cunungoto may not have been purposely done, but caused by the lime that was chewed with coca. I believe that Bolivar may be right in this supposition. As early a writer as Rivero Blanco[2], who lived in many years in Comaná, considered that the lime chewed with coca was the cause of blackened teeth.

In N. Peru[3], where lime is chewed with coca, the Indians have black teeth. In the rest of Peru, where coca is chewed with the ashes of quinoa-hasks and other plants, the Indians' teeth do not get black from coca chewing. This corroborates the assumption of Bolivar that the teeth of the Cunungoto were blackened by the lime they chew-

---

[1] (4) P. 100.

[2] P. 50.

[3] «Without doubt the lime destroys the teeth and consequently the Peruvian «coqueros» have disgustingly black and carious rows of teeth.» Pennes Vol. 1, P. 233.

ed with coca. The teeth of the Pueo were also blackened by coca-chewing. Most likely this holds good of the Cuzco too. We ought, therefore, to distinguish between two [illegible], one where the Indians get black teeth by chewing coca-leaves with lime, and another where they purposely stain their teeth blue or black. The latter must be renewed after a time, the former, which is the result of coca-chewing with lime, lasts for life.

It is difficult to explain the geographical distribution of the custom of staining the teeth. Perhaps the unintentional staining of the teeth is the original one, and has given rise to the intentional staining. One might suppose that the Indians who saw the white, black teeth of the coca-chewers wanted to appropriate the fashion, though they were not coca-chewers themselves, and consequently they stained their teeth dark.

That coca-chewers in Cusco considered it elegant to have black teeth is obvious from what Bueno says: «They contemptuously call the Spaniards women and children» because the latter like to have white teeth.» «Women» is not exactly a title of honour among Indians.

One might imagine that staining the teeth was once fashionable within the civilized area of the Andes and that the custom has lived on in the border land after it dropped out of fashion in the place from which it originated. Staining the teeth is not a General custom, so it must have been only when the Chiriguano Indians reached their present place of abode that they learnt the custom.

It may also be assumed that the coca used to be chewed with lime all over the old civilized western area. If this is so, we ought to be able to prove it archaeologically, but, as far as I know, none of the skulls found in Peru or Bolivia have had teeth blackened and destroyed by using lime with the coca.

It is, however, a striking fact that intentional blackening of the teeth does not occur far from the Andine region

Schoolcraft E-G, 1 (1848-1849, 1852) 1850
SF10 Chirigumo SF10

of civilization. This, at any rate, appears from the quotations here given; nor is it likely that blackening of the teeth in early post-Columbian times had a much greater distribution than is here indicated. I venture to affirm this, since blackening of the teeth is one of those practices which would strike all travellers even from the time of the Conquest. Respecting such practices as have interested older writers we ought to be able to make very exact maps of their post-Columbian geographical distribution.

Ornaments and Knick-knacks.

C
Ce
301
177

Nowadays the Chiriguano and the Chané have but few personal adornaments. This is perhaps to a certain extent owing to their long intercourse with Whites. Feather-ornaments, pierced teeth, and such things are not seen. I have already described the »boivéra». The embellishments on these silver ornaments, especially the Swastika are, I think, not genuine Indian. In South America I know of the Swastika on pottery from the Mizque valley[1]), from Tiahuanaco[2]) and from Ica[3]) and Cajamarca[4]) in Peru. An ornament which most certainly originates from the civilized mountain region is the »topu» or breast-pin, which is peculiar to this region. An embellished one of silver is shown here (fig. 29 a). It was most likely made by a Mestiz smith. Necklaces worn by Chiriguano and Chané women are most often of glass beads, but one now and then sees ornaments of pieces of shells, turquoise and, other green and blue stones, black seeds and coral. The stones are said originally to have been found in the ground, especially in the Tarija valley.

Carrying-implements.

In Part I have already mentioned that the Chiriguano and Chané use carrying-nets, and never baskets, when carrying burdens on long journeys, when bringing home the produce of their fields, or when bearing water long distances. The method is for the band of the carrying-net to be fastened around the forehead, the burden resting on the back. If the water is near the village, they often bear the pitcher on their shoulders and, now and then, at the mission-stations, on their heads. In contradistinction to the negroes, however, the Indians are never seen carrying burdens on their heads while on journeys. C Ce 482 415

In Part I there is a map (25) showing the geographical distribution of the carrying-net. As has been proved by the excavations of UHLE[1]) at Arica, the carrying net must be a very old culture element in S. America. C Ce [171]*

Calabashes are sometimes put inside a net (fig. 30) in order that they may be carried more easily. A calabash in a net is, of course, easily hung up on a hook in the roof of the hut. C Ce [353]

Earthen vessels are sometimes hung up in the same way. These have then more or less the shape of calabashes. BOMAN[2]) depicts an earthen vessel hung up in this way from Calama.

In my collection of earthen vessels there is one from the Chiriguano, and another from the Chané, which are intended to be carried by a string running round the vessel [171]*

through the ears. These are reminiscent of the type of vessel employed by the Choroti and Ashluslay for carrying, and which I have traced to the Incan «aryballes». I did not mention these vessels in Part I, as they are not typical vessels of the Chiriguano and Chané. Among the numerous pitchers used for carrying I have only seen these two specimens. I know nothing of their origin, why they were made, or if they were merely acquired from one of the tribes who always use such vessels for bearing water. The latter is, however, unlikely.

Rafts.

C
501

As far as I have seen, the Chiriguano now never use canoes or rafts. PEDRO DE SEGURA,[1]) however, mentions rafts from these Indians at the end of the sixteenth century. Nowhere else in the literature have I found any confirmation of their being used by these Indians, so I refrain from giving an account of the distribution of different kinds of rafts among the South-American Indians, and refer my readers to FRIEDERICI'S[2]) excellent work on Indian canoes and rafts. I have found rafts in common use among the Chimáne and other tribes in North Bolivia.

XVIII.

Games.

C
Ce
524
C
Ce
[177]

I have found a greater number of games among the Chiriguano and Chané than are known to any other tribes in S. America. In the first part of this book I pointed out that games of chance were known only in the west of S. America and that the »tsúka» or the »chunquanti» game is one that has come to the Indians in Chaco from the civilized area in the west. I also mentioned having found it among the Chiriguano and Chané. It is not necessary to repeat the description of the game here, as it occurs in Part I of this work.

The Chiriguano and Chané have another dice game called »chukareta» which is played with a heap of sticks. These sticks are convex on one side and flat or concave on the other. It is played in the following manner.

First you place a stick (máma) so that it points towards the person who is to throw. We assume it has been placed with the convex side up. If two or more sticks fall crossed with the convex side up and without being touched above by any stick with the flat or concave side up, they go to the throwers. If the máma had been placed with the flat or concave side up, only the sticks with the flat or concave side up would have counted. The players throw alternately and each of them places the máma as he pleases. The one wins who gets most sticks. When only four sticks are

[1]) With the exception of the chunquanti-game I here repeat the description of Chiriguano and Chané games so as to group them in one place, though I have given them before. There are already several descriptions, but as they are only in Swedish they are regarded by many explorers as non-existent.

5:Nordenskiöld E-5 (1908-1909, 1913) 1920
SF10 Chiriguano SF10
Chane SF8

C
Ce
524

left, no máma is put out and the players decide if the convex or flat (concave) side is to count.

C
Ce
524
177

Other games of chance that are common here have most likely been borrowed from the Whites. »Taba», the well known national game of the Gauchos, is played, the astragalus of a cow being thrown, and it depends on which side of the bone turns up whether you win or lose.

The European game of dice goes by the name of »daro», here from the Spanish »dado». The Chiriguano and Chané have dice of their own make. They are made of bone or burnt clay. In Tihüipa I wrote down the rules of this

Fig. 31. Rules for the game of »daro». Chiriguano. Tihüipa.

game shown in Fig. 31. All other combinations are = 0. The first to get ten marks, has won. The marks are made on the ground. It is plain that these dice are an imitation of European dice. Those at the top of the illustration correspond to our one, the next to our five; then comes two, then six, then three and next four. They seem to have made their own rules for this game or else they are a re-hash of those of the Whites. There is no doubt that card playing has come from the Whites. The cards they use are bought in stores.

C
Ce
526

Of the games of skill occurring here I have in the first part of this book described in detail a bat and ball game (map 28) and a game with maize leaf balls (map 29).

5:Nordenskiöld E-5 (1908-1909, 1913) 1920
SF10 Chiriguano SF10
Chane SF8

The bat and ball game »táca» (a kind of hockey), is played by the Chiriguano boys. I have not seen this game among the Chané. We also saw in Part I that the game is played by many tribes in the Chaco and by the Araucanians. Besides playing with long, bent sticks the Chiriguano also play with a kind of racket The balls are always of wood. I have not seen rackets elsewhere. In part I we saw that the game with maize leaf balls is especially met with in the northeastern part of S. America.

C
Ce
526
C
[857]

We find a most interesting ball game among the Chané which is not known by the Choroti and Ashluslay. It is played with india-rubber balls (Map 9). All the way from the Chané in El Gran Chaco to the West Indies and Mexico the game is characterized by the players not being allowed to touch the ball with their hands but having to catch and butt it with their heads, shoulders, hips or feet. In the Journal of the Royal Danish Geographical Society I have given an account of the distribution in South America of games with india-rubber balls. I here repeat in part what I wrote there, as the Danish language is not likely to be known any better than the Swedish. I can also add something to what I wrote there.

Ce
526
171*

As the conformity of the rules of the game all the way from Mexico to the Chané is of the greatest anthropogeographical interest, I reproduce many of them here word for word as given by several authors. The game is mentioned from the Chané in Litterae Annuae of 1605. The author of this description says of these Indians that they played at ball using their heads instead of bats, and that they were quite as clever as the Spaniards were with their hands and bats.[1])

This game »tóki» is still played by the Chané at Rio Parapiti, where I have seen boys playing at ball with their heads.

Ce
526
[857]

heads. The game is mentioned in one of the Chané-Indian tales, published in my book »Indianlif». From this tale we see how difficult it used to be for the Chané to get india-rubber for their balls. It had to be fetched from the north, as there are no rubber-yielding trees at Rio Parapiti.

Ce
526
539

»Aguaratunpa» (the Fox[1])-demon) had captured »Ururutti», the white Condor, who offers everything imaginable to get back his liberty.

»I will fill a house with bowls of silver »Cagua» and give it you, if you will release me,» says the white Condor.

»I have all the silver I want», Aguaratunpa answers, »and I capture you in order to kill you. But if you can get me the white india-rubber ball »toki» to play with, I will release you», says Aguaratunpa.

Ururutti now flies and fetches the white india-rubber ball. Then Aguararatunpa and the others play the game, catching and butting the ball with their heads. The white Condor, however, catches the ball and flies off with it and so Aguaratunpa sends another bird »Tavatan» to fetch the black india-rubber ball.[2])

C
Ce
526
*171

The game is mentioned from the Itatines east of Sta. Cruz de la Sierra in Litterae Annuae of 1589. The ball was made of the resin from a certain kind of tree and yet it was so light that it bounced at the slightest touch more easily than any leather ball. They did not, however, strike this ball with their hands or feet, but with their heads and, if need were, with their elbows, giving and taking it with the utmost skill. The winner was awarded a great prize.[3])

[1]) NORDENSKIÖLD. (8) P. 244.

C
526

I have not seen the Chiriguano play this game. I have, however, heard that they used to play it and called the game »bondi». The ball, which was of solid india-rubber, might not be touched with the hands but had to be caught and struck with the head. It might not touch the ground.

Co
526

Both earlier and later authors mention games with india-rubber balls among the Chiquito Indians in south Bolivia.[1]) These Indians hit the ball with their heads. At Rio Guaporé I saw rubber-workers, who spoke Chiquito, playing this game. They were very clever at striking the ball with their heads. Even low balls that only just cleared the ground, were caught in the same way, the players throwing themselves on their faces. They danced while playing. This game is also known to the Churápa, a Chiquito-Indian tribe, near Sta. Cruz de la Sierra, who called it »taurosh».[2]) EDER speaks of games with india-rubber balls in Mojos.[3]) The ball was kicked or caught and butted with the head. The balls that were used were either solid and heavy or light and hollow.

C
Ce
526
*171

I saw the small tribe of Huari Indians[4]) near the Upper Rio Guaporé playing with hollow india-rubber balls. There also the balls had to be caught and butted with the head.

When ROOSEVELT on his celebrated journey through Matto Grosso came to the Paressi Indians, he was astonished to see them play »football with their heads», a mode

[1]) FERNANDEZ. »Juntanse muchos en la plaza con buen orden, echan al ayre una pelota, y luego, no con los manos, sino con la cabeza, la rebaten con maravillosa destreza, arrojandose aún en tierra para cogerla». D'ORBIGNY (2) Partie Historique, Tome 2. P. 394—395; NORDENSKIÖLD (8) P. 180.

of playing that he thought was as yet undescribed.[1]) They used a light, hollow rubber ball of their own make. It was round, and about 8 inches in diameter.

Before ROOSEVELT[2]) MAX SCHMIDT[3]) speaks about this game in Matto Grosse among the Paressi-Kabiši. There they played with india-rubber balls made of the milky juice from the mangave. The ball might not be touched with the hands during the game, but had to be caught and butted with the forehead, even if it was on the ground. To make this possible a mound of sand might be made under the ball. The balls are 9—11 cm. in diameter. MAX SCHMIDT gives us a splendid photograph of some Paressi-Kabiši lads amusing themselves with this strange ball-game.

KARL VON DEN STEINEN mentions india-rubber balls among the Auetö-Indians at Rio Xingú,[4]) but without

[1]) ROOSEVELT, P. 185—86. »The game is not only native to them, but I have never heard or read of its being played by any other tribe or people.»

[2]) Page 185. »The players are divided into two sides, and stationed much as in Association football, and the ball is placed on the ground to be put in play as in football. Then a player runs forward, throws himself flat on the ground, and butts the ball towards the opposite side This first butt, when the ball is on the ground never lifts it much and it rolls and bounds towards the opponents. One or two of the latter run toward it one throws himself flat on his face and butts the ball back. Usually this but lifts it, and it flies back in a curve well up in the air; and an opposite player, rushing toward it, catches it on his head with such a swing of his brawny neck, and such precision and address that the ball bounds back through the air as a football soars after a drop-kick. If the ball flies off to one side or the other it is brought back, and again put in play. Often it will be sent to and from a dozen times, from head to head, until finally it rises with such a sweep that it passes far over the heads of the opposite players and descends behind them. Then shrill rolling cries of good-humoured triumph arise from the victors; and the game instantly begins again with fresh zest.»

giving the rules of the game. I saw the Cavina-Indians at Rio Beni use india-rubber balls. They were hollow and the rubber was thin and there was shot inside them so that they could be used as rattles. I only saw them thrown with the hands. Indian boys in the Mainas mission[1]) at Rio Marañon also had india-rubber balls of their own making. BARRERE mentions balls of the kind from Amazonas without saying how they were used.[2]) IM THURN[3]) speaks of these balls in British Guiana.

GUMILLA[4]) tells us that the Otomaco-Indians at the Orinoco river played with balls made of a kind of juice that they called «caucho» and which bounced to a man's height at the slightest touch. The ball might only be caught and hit with the right shoulder. If it touched any other part of the body the player lost one point. In this way the balls were butted from shoulder to shoulder up to 10 or 12 times without touching the ground. It struck GUMILLA as stranger still that when the ball was rolling on the ground they could put it in play again by throwing themselves on their faces and pressing their bodies to the ground.[5])

1) OVIEDO. T. 1, Lib. 9, Chap. 2, P. 169.

«E las pelotas son de unos rayços de árboles é de hierras é çumos é mezcla de cosas, que toda junta esta mistura parece algo çerapez negra. Juntas estas y otras materias, cuçeñlo todo é hacen una pasta; é redondiçelo e hacen la pelota, tamaña como una de las de viento en España, é mayores é menores: la qual mistura hace una tez negra, é no se pega á las manos; é despues que está enxuta tiernase algo esponçiosa, no por que tenga agujero ni vacuo alguno, como la esponja, pero alijeresçesse, y es como loba y algo pesada.

Estas pelotas saltan mucho mas que las de viento sin comparaçion, porque de solo señalla de la mano en tierra, suben mucho mas para arriba, é dan un salto é otro é otro y muchos, disminuyendo en el saltar por el viçinan, como lo hacen las pelotas de viento é muy mejor. Mas como son maçizas, son algo pesadas; é si los dieran con la mano abierta ó con el puño çerrado, en pocos golpes abririan la mano ó la desconçertarian. Y á esta causa le dan con el hombro y con el cobdo y con la cabeça, y con la cadera lo mas continuo ó con la rodilla; y con tanta presteza y soltura, que es mucho de ver su agilidad, porque aunque vaya la pelota quasi á par del suelo, se arrojan de tal manera desde tres ó quatro passos apartados, tendidos en el ayre, y le dan con la cadera para la rechaçar. Y de qualquier lado á manera que la pelota vaya en el ayre (é no rastrando), es bien tocada; porque ellos no tienen por mala ninguna pelota (si mal jugada), porque haya dado dos, ni tres, ni muchos saltos, con tanto que al herir, le den en el ayre. No hacen chaças, sino pónense tantos á un cabo como á otro, partido el terreno ó compás del juego, y los de acellá la sueltan é sirven una vez, echándola en el ayre, esperando que le toque primero qualquiera de los contrarios; y en dándole aquel, luego salçede el que antes pasó de los unos ó de los otros, y no çessan con toda la diligençia possible á ellos, para herir la pelota. Y la contençion es que los deste cabo la hagan passar del otro punto adelante de los contrarios, é aquellos la passen de los limites ó punto destos otros; y no çessan hasta que la pelota va rastrando, que ya por no aver oydo el jugador á tiempo, ó no haçe hoto, ó está tan lenta que no la alcança, é ella se muere ó se para de por sí. Y este vençimiento se cuenta por una raya, é tornan á servir para otra los que fueron servidos en la passada, é á tantas rayas, quantas primero se aquedaron en la postura, vá el preçio que entre las partes se completa».

the chiefs sat on beautifully carved seats or so called »duhu«. OVIEDO's description makes it quite clear that they used india-rubber balls. Trees yielding india-rubber, however, seem to be unknown in Haiti, so perhaps the Indians got them while trading with the tribes on the South American Continent.

OVIEDO says how well these balls bounced. If one is but dropped on the ground it bounces higher than a ball of feathers would, and it keeps on bouncing again and again. They played in the same way in Haiti as they did at the Orinoco, not throwing the balls with their hands but catching and striking them with their shoulders, elbows, heads, hips or knees. The balls were solid.

I have shown on map 9 the distribution of rubber balls in South-America. In most places it is, as we have seen, played in such wise that the balls are not allowed to be touched with the hands, but have to be caught and struck with some other part of the body. Judging by the distribution of the game I should not consider it unlikely that it has been spread in South America by the Arawaks. The Indians in Haiti were Arawaks, as also the Paressi-Kabiší and Chané. The Otomaco had Arawakan civilization. It is interesting to learn from the Chané tale that the balls were brought from a distance. It is possible that the same thing was done in Haiti.

As early a writer as GUMILLA states that a ball-game like the one he describes from the Otomaco-Indians, was played in Mexico. Thus he quotes P. ROXAS (Historia Cinaloá, lib. 8, cap. fol. 475.) who mentions similar games among the Acaxees-Indians in Sierra de Topia.[1]) There is

[1]) T. 1, P. 191. The publisher of EDER's work also had his attention drawn to the similarity between the ball-games in Mexico and in Mojos. (P. 344).

»Eundem frequentabant olim veteres Mexicani, et Chiriguro tenbe hodiedum exercent Tamaretnes. Insulæ S. Dominici incolæ ac ac hoc eodem ludo jam olim oblectarunt, testante Oviedo, et plum rerum va-

a striking similarity between «tlaxtli», the Mexican ball game, and the one which is played in the West Indies and South America when you take into consideration the different standard of civilization of these peoples. You cannot expect to get the same elaborate rules of a game from a tribe of low culture as from one of a much higher standard. The balls used for tlaxtli were of india-rubber. In Mexico too they played in such wise that the ball was not touched with the hand but with the hip.[7]) The same game was also played by the Maya.[8])

C
Ce
526
171*

One sometimes sees Chané and Chiriguano women playing a game like nine-pins which is called «tarapia» by the former and «tocorôre» by the latter. They played it as follows at Tibtipa. Two rows of maize grains were laid out, two grains on each other like miniature nine-pins at a distance of 4 or 5 feet. Two persons took turns in playing, trying to knock down each others maize nine-pins with a stone ball. The one who first knocked down all the other players nine-pins won the game.

C
Ce
526

At Rio Parapiti the players had three nine-pins each. There was a distance of one fathom between the ninepins of the two players. Every nine-pin consisted of an empty maize cob and the distance between them was the span of a hand. (the greater[9]). They used a ball of burnt clay, hollow, with small rattling marbles inside.

I saw a quoits-game «parama» played by the Chiriguano at Caipipendi. It is a game for two. A button or something of the kind is put on a stone as a target and the play-

C
524

rarum permistione conducunt. Quia divinat, nidumum hoc tantis nationum, tot per regionis sparsarum, in re non minimi utique momenti, conspiratio.»

[7]) Joyce (1), P. 156. «The players wore special gauntlets but the most coloured variety of the game was that in which they were not allowed the use of their hands at all, but struck the ball with their hips.»

[8]) Joyce (2) P. 301.

[9]) The maximum distance between the thumb and little finger.

C 524 ers throw round pieces of pottsherd or flat round stones at it. The button has to be knocked down and the one who has got nearest to it wins a point. The game goes on till one of the players has five or more points according to agreement.

C 524 «Sinki» is another game that I have seen Chané boys play at Rio Parapiti. It is played by two boys with miniature arrow-darts (Fig. 35). First one boy throws his dart into the ground and then the other, who tries to get as near it as possible. If he gets within the span of a hand (the greatest or nearer still to his opponent's arrow he wins a point, and a mark is made on the ground. He is the winner, who first has six marks while the other player has none. In reckoning the points only those count which one player has above the other.

«Sinisinshua» is a game that is only played by small Chané boys at Rio Parapiti. It is played by two boys with a stick apiece. (Fig. 34). One of them throws his stick so that the point strikes the ground and rebounds as far as possible. Then the other boy throws. The one who has thrown farthest gets a point. He wins who first has eight points while the other has none, that is to say, he must have eight points more than the other boy.

C 524 «Sipiyo» is a game for boys which I have seen played by the Chiriguano in Vuadsia at Rio Pilcomayo. The boys form two sides 1, 2, 3, 4 and 5, 6, 7, 8. No. 4, let us say, begins by throwing a discus made of a flat cactus from which the spikes have been removed. The discus is hurled with great speed. The opposing team tries to hit it with their arrows. If this happens No. 4 has to walk out and have a shot at the discus which has been placed in a furrow with its edges facing the shooter. If he hits it he may return with his arrow. If he misses he forfeits his arrow and No. 3 succeeds him. No. 2 comes in if No. 3 misses, and No. 1 in the same way. Should he miss too, then 5, 6 etc. shoot till one of them hits the mark. The arrows

4 [1c, Fig. 33 - Ao] 5 [1c, Fig. 32 - Ao]

that have not hit the mark are out of the game. If one hits the discus thrown by No. 4, it has to be thrown by No. 3 and then in the turn of 4, 3 etc. to try and hit it. The player who loses all his arrows is out of the game. The last one who has any arrows left has won, or rather his side. The arrows used for this game are decorated in order that each player may know his own.

Thus we find two games of chance[1] and eight games of skill among the Chané and Chiriguano. Nothing like this number of games is known from any other Indians in South America. The following table shows on their distribution within the territory that I have explored.

In no other tribe among whom I have travelled have I found any quite original game unknown to the Chiriguano or Chané. Very few are known from other parts of South America.

I have already said that games of chance must have come to the Chiriguano and Chané from the civilized area of the west. Games with maize-leaf balls and india-rubber balls are northern culture-elements. But and ball games are southern culture-elements. Quoits-games most likely hail from the civilized parts of the west. I found discs that may have been used for such games at Caipipendi and also in the old settlements in the San Francisco valley in the province of Jujuy in Argentine. Quoits-games are common among the Quichua. — I cannot tell where the Indians here dealt with learned to play with marbles, or to play »ipépe» and »kuirahuahua» — I have found nothing about such games in the literature. The game of »kiuki» may possibly be a northern culture element. Hand-darts like those used by the Chané are mentioned by KOCH-GRÜNBERG from southern Guiana. In BOLLINGER'S collection in the Gothenburg museum there is a hand-dart of the kind from the Chimila in Columbia.

The reason why we find such a number of games among the Chiriguano and Chané is that the latter tribe is an Arawak tribe and that they have been strongly influenced by western civilisation. They know not only the Arawak games, but several games that were of importance in the civilized parts of the west.

XIX.

Playthings.

C
Ce
524

I will now pass on to speak of the playthings of the Chiriguano and Chané children, leaving out such as are merely imitations of things used by the elders. They include dolls, buzz-discs, hoops and whips, humming-tops, »bullroarers», and »rifles».

C
Ce
524
*171

I have collected dolls from the following tribes: — Chiriguano, (clay), Chané (wax, cloth, clay), Choroti (unburnt clay, bone), Toba (ditto), Tapiete (unburnt clay,) Mataco (unburnt clay,) Yuracáre (wax), Chimáne (wood), Guarayú-Mission (wood or cloth).

Except among the Chiriguano[1]) and Chané[2]) I have only seen the humming-top among the Quichua[3]) and the Chimáne[4]). Koch-Grünberg[5]) mentions it from N. W. Brazil and from the Roraima-Indians[6]) and Krause[7]) from the Karajá. At present I deem it impossible to say whether we have here a genuinely Indian culture-element or not.

The same is true of the buzz-disc. Its distribution may be seen from the table 12 which I only publish in order to arouse interest in these apparently insignificant objects. It is necessarily very incomplete.

It is doubtful whether the »rifle» (Fig. 34) is genuinely Indian.

XX.

Musical instruments.

C
Ce
534 The Chiriguano and Chané have the following musical instruments: drums, flutes, whistles, and trumpets. Among the latter tribe I have also seen the panpipe and the musical bow. The panpipe may possibly occur among the Chiriguano too.

I have already, in Part I, dealt with the drum, the whistles, and the musical bow. The two former, I concluded, were Peruvian, the latter a post-Columbian culture-element.

C
Ce
[197] When studying Indian musical instruments we must bear in mind that, in post-Columbian times, they have learnt a good deal from Whites and negroes.

C
Ce
[197] [212] At the mission stations the Indians are always instructed by the missionaries in music. At the Bolivian mission-stations it is not unusual to come across Indians who very well understand musical notation, though unable to read or write. At the Chiriguano mission stations there are full-blown musical bands.

C
[192] A large drum is called by the Chiriguano «angúahuasi», a ordinary drum «angúa» or «angúarai». Like the Guarani Indians in Paraguay the Chiriguano call a mortar «angúa». The Mataco sometimes make drums by stretching a skin over a wooden mortar. So too, if we are to be guided by the name, the Chiriguano drums must originally have appeared.

The long wooden-whistle (fig. 35 A) is very common among the Chiriguano and Chané, and often of great size; the round wooden whistle is more rare. Both are often elaborately carved.

Flutes of several kinds are found among the Chiriguano and Chané, and they are here depicted. They are always made of reeds and never of bone (fig. 36).

C
Ce
534
177
*171

Some of the Chiriguano and Chané flutes are not genuinely Indian. This is evidently the case with side-blown flutes with six carefully fitted holes. The like are not found among outlying tribes, nor, what is very important, have they been found in old excavations on the coast of Peru. No such flute is found among the 26 flutes depicted by MEAD from the coast of Peru. Nor are flutes of this kind found among the Choroti and Ashluslay. All the old Peruvian flutes are blown from the end, and the holes seem to be placed very arbitrarily. I have in my collections side-blown flutes from the Yuracáre, Chimáne, Itonama, Cavina, and Tapiete as well as from the Chiriguano and Chané. They are also found among the Cainguá. Everywhere they have six holes.[1]) They are never found among absolutely outlying tribes. Endblown flutes are undoubtedly pre-Columbian. All the flutes from the Peruvian coast described by MEAD are end-blown flutes. Three of them are made of reed, one of a calabash, the others of bone. Various kinds of end-blown flutes are very widely distributed in S. America. I have such flutes from the Chiriguano, Chané, Mataco, Toba, Tapiete, Ashluslay, Choroti. Yuracáre, and Huari.

---

[1]) A flute of this kind is called by the Chané »kéna». Speaking of the Quichua musical instruments COBO says (IV. P. 228) »Quena — quena es una caña sola como flauta para cantos endechas.» The Cavina call a dance at which they play with flutes and drums »kena-kena». (NORDENSKIÖLD (11) P. 460.) CHERVIN, when mentioning the Quichua musical instruments, says that they, and especially the mestizoes, have their small flutes which they call »quena»... (P. 178). I presume that the Chané took over from the mestizoes not only the side-blown flute but also its name »quena» which the latter in their turn had obtained from the Quichua language. How the Quichua came to apply the word »quena» to a musical instrument which was originally unknown to them, I do not know.

SF10 Chiriguano SF10
Chane SF8

As I said in Part I the flutes in different parts of S. America are too little known for me to venture to express any opinion as to the source whence the Chiriguano and Chané got the end-blown flute.

C
Ce
534
171*
177

Both the Chiriguano and Chané possess trumpets made of cowhorn. From the former I also have an old trumpet made from a calabash (Fig. 37 B) which I acquired at Caipipendi. I do not know whether this was ever provided with a mouthpiece. The Chané Indians have on their cowhorns mouthpieces of reed with lips (See Fig. 50. Part I). I have not seen these mouthpieces among the Chiriguano; they blow the cowhorns from the end without a mouthpiece. Most likely the Indians learned from the Whites to use mouthpieces of the aforementioned type.

[237]

Trumpets are very wide-spread in S. America, and it is interesting to notice the distribution of trumpets blown from the side and those blown from the end. The pre-Columbian date of the latter is certain, while that of the former is very doubtful. Map 10 indicates the distribution of these two types of trumpet.

C
Ce

171*

Thus we see that side-blown trumpets occur especially in the basin of the Amazon,[1]) in the region where negro influence has been and is very great, and I do not think it impossible that the Indians have learnt to use such trumpets from the negroes. When negro slaves were brought to S. America, they naturally introduced many African ideas. Runaway slaves frequently sought refuge among the Indians. In Matto Grosso, for instance, it is probable that negroes had been in touch with Indians who had not yet seen Whites. From them the Indians would be able to learn a good deal.

When making a trumpet of an antelope horn or the tusk of an elephant, it is quite natural to make a hole in the

[text continues on p. 122]

[1]) From civilized Indians at Tupiza in Bolivia CHERVIN mentions side-blown trumpets which, it is quite certain, were introduced by the Whites at a late date.

side of the horn or tusk, as the point is not hollow; the same holds good, though to a less extent, of a cowhorn. It is therefore to be expected that the side-blown trumpet should be found in Africa and, further, that the negroes, on coming to America, should still make such trumpets, although of other materials. It is only in accord with the laws of conservatism.[1]) The Bush negroes of Surinam still have side-blown trumpets (Fig. 37 E, F) which, though of wood and tin-plate, are plainly copies of the trumpets used by their forefathers in Africa.

S
534
174

In pre-Columbian times there were in S. America no suitable horns for making trumpets. Trumpets were made of other materials, the most primitive being probably large seashells. To make a trumpet of a large shell one only needs to knock off the point. It becomes an end-blown trumpet. The pre-Columbian date of end-blown trumpets is proved by numerous finds on the coast of Peru *where, on the other hand, a side-blown trumpet has never been found.*[2])

Thus there are no archaeological proofs that the side-blown trumpet in S. America is pre-Columbian. A fact which is against the idea that sideblown trumpets were brought to S. America by negroes is their considerable distribution and above all that a trumpet-like musical

[1]) Professor von Luschan (P. 191.) says about the side-blown trumpets from Benin. »Dem Beispiele von Hornmotiv, und Sacus folgend, bezeichne ich als Querhörner solche horntörmige Blasinstrumente, die nicht an der Spitze angeblasen werden, sondern an einem seitlich angebrachten Loch. Dabei wird man zur Erklärung einer solchen uns so nahelegt, [illegible] Herstellung wohl [illegible] annehmen müssen, dass die ältesten Blasinstrumente aus Tierhörner hergestellt wurden, und dass es ganz ungleich einfacher war, etwa ein Antilopen- oder Ziegenhorn von der Seite her anzuschneiden als von der Spitze an abzutragen oder auszubohren. An der so gewonnenen Form hat man dann wohl festgehalten auch wenn man die Blasköhrer aus Elfenbein oder Holz oder gar aus Metall herstellte.«

[2]) In the literature to which I have access none such are mentioned.

SiNordenskiöld E-4,4 (1908-1909, 1913) 1920
SF10 Chiriguano
South American Indians 53

534
174

instrument was found at the upper Rio Xingú which was evidently blown from the side.[1]) We must remember, however, that a period of 400 years has elapsed since the first negroes arrived here. As early as ORELLANA's time the Indians had learnt from the Whites or the negroes to make stringed musical instruments.

Another fact against the African origin of the side-blown trumpet is, perhaps, the occurrence of considerably divergent types among different tribes. This may be because the Indians had a great variety of end-blown trumpets first and afterwards made side-blown trumpets on their pattern. Granting the introduction of side-blown trumpets by negroes in S. America their wide distribution is very likely due to their having been a coveted culture-element, and a culture-element independent of the external circumstances under which the tribes live.

The non-occurrence of the side-blown trumpet within the western area of civilization speaks for its post-Columbian origin in America. As far as I know, it was also unknown within the Central American and Mexican areas of civilization. Side-blown trumpets are not mentioned from N. America.[2]) It is highly improbable that a culture-element of this kind—independent as it is of natural condi-

[1]) We may, perhaps, find an explanation of this in the following quotation from KARL V. D. STEINEN:

«In unserer Ueberraschung fanden wir auch eine eiserne Meisselspitze und bei einem Kinde ein Schnürchen blaue Perlen vor. Wir konnten nicht gewiss feststellen, auf welchen Wege sie hierher gelangt waren; ich deutete ihre Beschreibung und Antonio's unklare Angaben so, dass sie von einem Stamm des unteren Paranatinga, den der Grossvater auf einem Streifzuge besucht hätte, mitgebracht worden seien.» (2) P. 173.

[2]) It is of great theoretical interest that N. American Indians did not use the horns of the bison for trumpets, though they were very suitable. They had end-blown trumpets of large shells and of wood «We learn from historical sources that some varieties of shell, including the conch, were employed by the natives of the E., S., and S. W. for trumpets . . . Handbook Part 2, P. 540.

South American Indians S3

S 534 174 tions — should have occurred within the Amazon basin, and not within the areas of civilization in the west and north-west, if it really were pre-Columbian.

S 174 437 534 By means of far-reaching trade connections it is certain that European and, possibly, African ideas were spread far and wide at the beginning of the Conquest period. *Within a large part of America the continuity between the tribes was at that time, still undisturbed.* When the Whites had completed the conquest of all the great highways — the navigable rivers — trade among the Indians ceased or was at least diminished. The wide extent of inter-Indian trade already appears from the fact that the Indians of the upper Amazon in the seventeenth century obtained axes and knives of iron from Guiana[1]). This proves that Indian trade was carried on over immense distances. Thanks to this trade there were also spread, of course, many purely Indian ideas. Where large tracts are occupied by Indians, trade is still very lively, as in Guiana, along the upper Orinoco and in the Chaco. Only a short time ago Indians appear to have carried on a trade in weapons between Guiana and Rio Negro.[2])

S 174 534 177 In what I have now said I do not consider that I have proved finally that the side-blown trumpet in S America is an African culture-element. I have however demonstrated that is highly possible, and that the question deserves attention.

C Ce 534 174 177 The information I give below, which is based on the literature on the subject and on Museum specimens to which *I have had access, indicates my knowledge of the occurrence* of trumpets in S. America. Thus it verifies Map 10. The end-blown trumpet may have been obtained by the Chiriguano and Chané from the western area of civilisation. In this case the original trumpets must have been of some

other material than the cowhorns introduced by the Whites, e.g. of calabashes, like the old trumpet from Caipipendi. Mouthpieces with lips were presumably, as I said, introduced by the Whites. CORNEGES[1]) relates the following little episode which is significant as showing how the Indians learn the use of musical instruments from the Whites. »Á su vista se me occurió la idea de fabricarles un clarinete, lo que hice en pocos minutos con una caña tacuara, del que se arrancaron notas muy agudas parecidos á las que produce la dulzaina; lo que alegró tanto á la concurrencia que hasta los viejos me metian cañas por los ojos para que les hiciese gaitas, en cuya operación me pasé el resto de la tarde y parte de la noche.«

The panpipe is very rare here. It consists of four reeds which I have not seen bound together. In the following table and in the accompanying map 11 I have endeavoured, on the basis of the investigations of PATER SCHMIDT, some other writers, and of myself, to indicate the distribution of the panpipe in S. America. The map does not enlighten us as to whether the Chané got the panpipe from the area of civilization in the west, or if it came to them from Indians in N. E. Bolivia. The latter seems the likeliest supposition, as it only occurs within the northern part of the Chané country. It is not a culture-element from Guarani Indians. It is interesting to notice that the panpipe has by no means so great a distribution at it might have. In the Chaco there is abundance of material for panpipes, but they are unknown there. In the wealth of old literature dealing with the Indians on the coast of Brazil, I have found no hints of the panpipe. Oddly enough the panpipe is also unknown among the Indians of the Roraima region. Nor is the panpipe known to the Cainguá Indians. Very possibly the distribution of the panpipe has been considerably extended in post-Columbian times. The well-known (povesti-

Dancing Masks.

A Chané Indian on the Rio Bityuro told me that mask dances were introduced among the Indians by the Whites. PADRE BERNARDINO OF NINO was also told by the Chiriguano that the celebration of the carnival came to them from the Whites, and he plainly considers that we here have to do with a custom which is not of Indian origin. This is certainly wrong. The fixed date of the festival came to the Indians from the Whites, but the manner of celebration is manifestly derived from an old Indian custom which corresponds to similar masquerades described from Brazil by KOCH-GRÜNBERG. This appears from NINO's own account of the celebration of the carnival.

The ceremony is at least partly a feast of fruitfulness. The mask dancers throw the husks of beans and the offal from chicha-brewing at the other dancers in order to secure a good harvest. Just as in northwestern Brazil, some at least of the Chiriguano-dancers appear disguised as animals which they imitate. NINO says that towards the end of the festival the old people weep because they will no wish the fruit, who cannot share in the pleasure. The ceremony is ended by the participators going out of the village and throwing their masks into the river or some other water-course and there washing their faces and hands. Sometimes they bore the masks, as is done in northwestern Brazil.

BAYRAYU, a most reliable old Chané Indian, assured me that when he was a boy he had seen masks on the Rio

Ce 177 527 532 535 [115]

Parapiti different from those now in use. He was of the opinion that masks were used before the Whites came to their country. On these occasions fruit-shell anklet-rattles were worn and also dance ornaments of parrot feathers. Obviously it is quite certain that masquerades are an original Indian custom here as well as in other parts of S. America, and have been celebrated at a time of year when the Whites have a festival of a somewhat similar character, externally at least. In the same way the Quichua kept their old feasts on the festival day of the Church of Rome.[1]) This is most certainly still the case among both the Aymara and the Quichua, whose masquerades on the great Roman Catholic festival days are anything but Christian in character, and would certainly form material for extremely interesting studies on the primitive religious conceptions of these Indians.

C Ce 532 171 Ce [114]

Judging by what an authority like BATRAVU says, it is doubtful if the type of mask now used, viz. faces of wood or calabash, is Indian. It must, however, be remembered that BATRAVU only speaks of what occurs among the Chané on the lower Rio Parapiti. Wooden masks, representing a human face, are however not unknown to other Indians. SERMONAI, DE LA GRANGE found a mask of this kind in a grave in the desert of Atacama.[2]) Masks of wood and stone have been found in the Diaguita territory.[3]) The Ijca have wooden masks[4]) as also the Araucanians[5]) The Indians on the Rio Xingú have wooden masks which, however, are rather different from those that occur among the Chiriguano and the Chané. The latter are more like those of the Araucanians and the Ijca. (Fig. 59). A/A

Generally speaking, dance-masks are very widely dis-

tributed in S. America. They are only used on particular occasions, and then as a rule destroyed. It is therefore likely that such masks still exist among various tribes where they have been overlooked. Dance-masks are also mentioned in old narratives by ACOSTA and COBO. It is likely, too, that some of the »idolos» mentioned by other old authors were dance-masks.[3])

In the western culture zone many masked mummies have been found. During the Inca period it was still the custom to put masks over the faces of the dead. SARMIENTO speaks of mummies of Inca rulers wearing masks.[4]) The custom of masking the dead is not known east of the Andes.

UHLE[5]) found at Pisagua in northern Chile masks of Vicuña skin, that he believes were used by the Indian when hunting Vicuñas. At San Rosario in Llusa-Valley (Dept. Arica) he found a rock-drawing showing masked hunters shooting at 4 or 5 fleeing Vicuñas. Masks of the facial parts of human skulls have been found at S. Mateo on the Oroya railway in Peru. These are now preserved in the ethnographical museum at Rome.[6])

There is yet a fourth kind of mask. It is the one used by the Aymara and the Quichua on the heights of the Andes as a protection during a snowstorm. They are knitted of wool.

As far as I know, masks did not occur among the Tupi Indians on the Brazilian coast. Consequently I deem it probable that the Chiriguano only learnt the use of the

dance masks from the Chané. Where the latter learnt their use it is at present impossible to say.

The map 12 and table 15 show us the distribution of the mask in S. America.

The places at which burial masks have been found are indicated in the map by squares. In making out this list I have followed PATER SCHMIDT, to whose statements I am able to make a few additions. The fact of the Ona and Yahgan Indians having masks seems to prove that their use is very ancient in S. America. At a ceremony of exorcism among the Mataco I saw some men with pieces of cloth hanging over their faces. I take this to be the most primitive kind of mask.

Pottery.

C
Ce
323

The earthenware vessels of the Chiriguano and Chané are made in the usual way by building up layers of strips of clay[1]). Stones, mussel-shells and empty corn-cobs are used for smoothing the vessels. The last mentioned leave characteristic marks. It looks as if some comb-shaped instrument had been employed. These marks diminish the smoothness of the vessel, so that it slips out of the hand less easily. Corn-cobs are therefore more especially used in the making of cooking-pots and large utensils. Judging by the pottery which I collected on my journeys, the practice of using corn-cobs in this way would seem to be derived from the mountain civilisation. I have seen vessels marked in this way found at Ojo de Agua in the most northern part of Argentina, where they revealed the fact that the Indians that used these vessels had maize. On the other hand, they are lacking on the pottery which I found in my excavations at Caipipendi and in the whole of N. E. Bolivia. They are also lacking in Misiones in Argentina.

415
[531]

The Chiriguano, as well as the Chané at Rio Itiyuro, have elaborate pottery of richly varied shapes and often beautifully ornamented. The Chané at Rio Parapiti have plainer pottery. The development of the ceramic art in the various tribes I got to know has differed greatly. The Chima and the Tamboputa-Guarayo who are pretty certainly identical with them, are the only Indians I visited who have no earthenware vessels. The pottery of some tribes is a work of art, while others only make the most necessary household utensils. This is not necessarily connected with the tribe's state of civilization generally. Thus in several respects the Yuracáre stand as high as the Chiriguano but the former have very poor pottery; the latter highly developed pottery. If such peoples were studied archaeologically, the former would yield hardly any remains while the latter would yield many beautiful specimens. Wrong conclusions might then be easily drawn as to the stage of civilization of the two tribes.

C
Ce
*171
415
323

Below will be found indicated how many different types of earthen vessels are found among the tribes I visited. It will be seen that the Chiriguano and Chané (Rio Itiyuro) have by far the largest number of shapes of earthen vessels.*) This is simply due to their having experienced such

C
Ce
[114]
[126]

*) On entering a Chiriguano or a Chané hut, one sees a lot of earthen vessels of which the majority are unpainted. All the vessels of various shape and ornamentation which I have collected are from several hundred Chiriguano and Chané huts. It is a selection out of many thousand vessels which I have made and it shows how pottery varies within the tribes. In most Indian huts there will be found but a small number of different types. Unless we bear in mind that the collection is a selection, it leaves the impression that the pottery of these Indians is of much more varied shape than is really the case. What I remark here of my collection of pottery holds good of nearly all collections in ethnographical museums. When we see a cupboard full of various articles from an Indian tribe, we must not think that all these things are used by every family in the tribe. It is properly a collection of all the different objects used by a large number of individuals.

		Huari.
		Huanyam.
		Cavina.

I am unable here to give an account of all the different shapes of earthen vessels found among the Chiriguano and Chané. Some of them have been depicted by OUTES but there are many more. Those depicted here should, however, give some idea of the variations in these Indians' pottery. Some types are local and thus characteristic of certain villages; others are certainly individual. Thus I have seen different women in the same village turn out very different vessels. Some women are noted for making specially fine earthenware. They are celebrated for their pottery far outside their own village.

C
Ce
[554]

The Chiriguano and Chané use earthen vessels for boiling and roasting their food, as receptacles for food and other things, for carrying water, for the serving of food, for the burial of the dead and to whirl the spindle on when spinning. (Only the Chané on the Rio Parapiti.)

C
Ce
415
Ce
[283]

We see that a large number of the earthen vessels here are provided with ears or handles. In Part I of this work I claim to have proved that the ear is a culture-element derived from the Andine area of civilization.

*171

Occasionally one finds Chiriguano and Chané vessels provided with holes under the edge in the same manner as is usual in calabashes. Strings are then passed through these holes by which to hang the vessels up. This invention was here probably earlier than the ear. Thus, during my excavations at Caipipendi, I found a vessel with these string-holes, while handles and ears were lacking on the pottery found there. The distribution of such string-holes I have endeavoured to indicate on the map, and in the table below.

Such string-holes were known within the old western area of civilization, though they were not in general use. In S. E. S. America they seem to have been the precursors of real handles. Thus MAYNTEHUSEN[1]) writes with regard to the shape of the vessels, from the Upper Parana that they are usually without handles. In place of these there is often a boring through the rim of the vessel, or two outside plugs on opposite sides of it. These plugs were sometimes pierced to allow of a string being introduced. An enlargement of this hole in the plug, large enough for a finger to go through, appears to have developed into the ring-shaped handle which occurs quite sporadically.

The Indians probably got the idea of providing their earthen vessels with string holes from their custom of making string-holes in calabashes. This invention is here evidently older than the real handles or ears. This holds good, pretty certainly, not only for the Chiriguano district, but for large parts of S. E. S. America. It would be interesting to examine the collections of the great museums and then draw a map showing the distribution of earthenware with string-holes. The map published here is probably very incomplete. Its main purpose is to create interest in the distribution of this invention.

Among the many types of earthen vessel used by the Chiriguano and Chané here are several which are highly reminiscent of types we are acquainted with from the Mountain civilization, e. g. double pitchers. (Fig. 41.8) They do not occur in N. E. Bolivia. DEBENEDETTI[1]) has pointed out the similarity between the pottery which he

[1]) (1)

SF10 Chiriguano SF10
Chaco SF8

found at Tilcara and that of the Chiriguano. I here reproduce from the work of DEBENEDETTI some types of earthenware to which we find answering types among the Chiriguano. (See fig. 48). It must be borne in mind that the Chiriguano country at Cuyambeyo approaches the Humahuaca valley.[7]) The Humahuaca and Chiriguano were allied in the first encounters with the Spaniards.[8])

C
Ce
415
171°
C
[648]

In Part I I have already pointed out the similarity between Chorotí and Ashéninka water-pitchers and the Incan *aryballos*.

The question arises whether or not all water-pitchers with a narrow neck which can be grasped by the hand are derived from the Mountain civilization. They are not found, as far as I have been able to find, in all N. E. Bolivia, nor in the whole of eastern S. America except by Indians that have been very much influenced by the Whites. The Chiriguano word for water-pitcher is *siro*, which is strongly reminiscent of the Quichua name *siuro* for the same kind of earthen vessel.

Pitchers with a bulging neck (fig. 41,1) are common among the Chiriguano and the Chané at Río Itiyuro. I am acquainted with them from my archaeological excavations at Caipipendi. They are mentioned by ARMOCHAYTE[9]) from Tucuman. The type occurs, moreover, within the western area of civilization whence it surely must have come.[9])

Handles shaped like animals or human faces do not occur on the pottery of the Chiriguano and Chané.

The Chiriguano and Chané do not make feet to their vessels as is common on the earthenware from the Mounds in Mojos.

[252]

Only a few vessels are provided with ~~spouts~~ lips in rims which here seem to be an idea obtained by the Indians from the Whites.

Bowls with holes in the bottom which are used for steaming have already been mentioned in the foregoing. This applies also to bowls for the roasting of maize.

The Chané on the Rio Parapiti have small plates which they sometimes use in spinning. I have not seen the like elsewhere. Occasionally one sees, among the most civilized Chiriguano and Chané, fire-pans for holding hot water. (Fig. 43.a). They must have obtained the idea from the Whites.

C
Ca
[111]

C
Ca
323

The Chiriguano and Chané understand the art of painting earthenware before burning.[1]) I have already, in Part I, endeavoured to show the geographical distribution of this invention. Whether it was known to the Chané and Chiriguano before they settled in this tract cannot be decided. The pottery I found in the archaeological excavations at Caipipendi is unpainted.

C
Ca
[189]

The Chané at Rio Itiyuro sometimes paint the edge of earthen vessels after burning with resin of palo santo. This is never seen among the Chiriguano and the Chané at Rio Parapiti. As such painting is common among several tribes in the Chaco, it is possible that the Chané at Rio Itiyuro get the idea from there. The Chiriguano and the Chané at Rio Itiyuro often varnish the painted vessels after burning with a kind of gum called by the Chiriguano — staragüirúi.

The Chiriguano and Chané also ornament their earthenware by finger-impressions. This method of ornamentation has an eastern extension in S. America. A map showing its distribution is published in Part I.

The ornamentation painted on earthenware is seen in the illustrations. The Chané at Rio Parapiti usually have very plain ornamentation.

C
Ca
[257]

[1]) For this purpose brushes of Aputi hair are used. (See also Wagner p. 60.

[Section corrected. See errata sheet p. 245.]

SvNordenskiöld E-S,Y (1908-1909, 1913) 1920
SF10 Chiriguano SF10
Chane SF8

Maps of the geographical distribution of various kinds of ornamentation can scarcely be drawn up at present with the exception of a few very characteristic specimens, e. g. the spiral. This is found on earthen vessels from the Chané on the Rio Itiyuro, and from the Chiriguano, but not from the Chané on the Rio Parapiti.

C
Ce
323
E
Ce
[184]

The colours used by the Chiriguano and the Chané on the Rio Itiyuro are black, red, brown and white. The white is caolin, the red, brown and black are obtained by pulverizing schists of these colours. The Chiriguano sometimes mix Urucu with oil. Vessels are probably painted with this mixture only after burning.

C
Ce
[386]

Pottery is undoubtedly the chief art practised by the Chiriguano and Chané. We may, indeed, assert that it is the only one that is still of very great importance to these Indians. It is an interesting fact that, though these tribes have been in close contact with missionaries and other Whites for nearly 400 years, and though their country has been flooded with European goods, their pottery has been influenced very little by foreign culture. It is still genuine Indian. This holds good not only of its shape, but to an equally great extent of its ornamentation. It shows how conservative the Indian is towards anything that cannot make easier for him the struggle for life. A cultivated plant can spread in a few years over a large part of a continent, whereas one will not take the trouble to adopt a foreign ornamentation or foreign types of household furniture. This does not imply that the pottery of the Chiriguano and Chané now has the appearance that it had 400 years ago. It has changed, as the Indians themselves told me, but the change has chiefly consisted in ringing the changes on old Indian patterns. How and how much it has changed, can only be proved archaeologically. Unfortunately, I do not possess the archaeological material. What I found in the country of these Indians probably goes very much further back in time than 400 years, and has very little in common with

177

the ceramics of the tribes here dealt with. The ceramic art we find among the Chiriguano and Chané is, as we saw, strongly influenced by the culture-zone in the west. There is a great similarity, as I said, to the pottery that has been found in the Humahuaca Valley. It is especially the finely painted pottery which, in shape and ornamentation, recalls the pottery of the culture-zone in the west. The simple cooking-pots ornamented with finger-impressions more closely resemble what is found in the old Guarani territory in Misiones. The main difference is that the pots used by the Chiriguano and Chané are provided with ears (handles), which as a rule are lacking in the pottery from Misiones. The ear, as I mentioned, is a western culture-element. I think the explanation may be, that when the Chiriguano conquered the districts they now occupy, their own women generally or always made earthenware with finger-impressed ornamentation. As we know, the immigrant Chiriguanos

C
[727]

carried off masses of women, personally from Chané for the most part, but probably also from other tribes. The women abducted from the parts bordering on the old kingdom of the Incas were no doubt skilful potters, and afterwards taught their art to their daughters. It is this that now continues in the finer pottery, especially in the vessels used at great drinking-bouts.

It is very evident, as we see, that the Chiriguano and Chané pottery has been strongly under the influence of the culture-area in the west. It would be of great interest to show how far it has also been influenced by the Arawak pottery at Mojos. This cannot, however, be conclusively proved. Not even among the Chané at Rio Parapiti can any such influence be traced. This is probably because it is so long since the Chané migrated to their present district.

Ce
[184]

It may be asked how it is that the Chané at Rio Parapiti have pottery which is plainly less influenced by the mountain civilisation than that of the Chiriguano and the

[184]

Chané at Rio Itiyuro. This may be owing to their poverty.[7] Maize-beer does not flow so abundantly there as it does among the Chiriguano and the Chané at Rio Itiyuro. The finely painted vessels are intended for festivals, and it is especially on those occasions that one sees double pitchers and other types reminiscent of mountain-culture pottery. The Chané at Rio Parapiti dwell rather remotely, at a considerable distance from the culture-area in the west. Their calabashes, too, are more plainly ornamented than those of the Chiriguano and the other Chané. This may be due partly to poverty and partly to their isolated habitation.

---

[7] I regret that I did not study the question of the supply in different places of good clay suitable for earthenware. Where the clay has to be brought from afar, it is unlikely that the pottery will be highly developed.

XXIII.

Various kinds of handicraft besides pottery.

Knitting-technique.

C
Ce
286

Respecting the occurrence of different kinds of knitting technique among the Chiriguano and Chané I have little to add beyond what was mentioned in the English edition of Part I of this work.

C
Ce
286
352
*171

The hammock-netting is the usual technique which gives the so-called barred hammocks (See Part I) which are widely distributed in all S. America north of El Gran Chaco. They are found almost universally where hammocks occur. Occasionally one sees among the Chiriguano and Chané bags knitted in the technique which in Part I I denoted by No 5. These bags are never made by themselves, but are obtained from the Mataco, Tapiete, or some other Chaco tribe. During my archaeological excavations at Iglesiabe I found a piece of pottery with impressions of knitting evidently done in this technique.

C
Ce
284
286
283

The carrying-nets and most dip-nets of the Chiriguano and Chané are made with reef-knots. The Chiriguano have also dip-nets knitted with sheet-knots. For carrying-nets and dip-nets they Chiriguano and Chané generally use ciraguatá bast. »Yuchan» is seldom used?)

Spinning.

C
Ce
283

Regarding the spinning of the Chiriguano and Chané there is little to add beyond what I mentioned in Part I.

---

*) Chaláis (Guaiqueu.

Schmidt-Schiffel E-8,V (1908-1908, 1912) 1920
SF10 Chiriguano SF10
Chané SF8

Their spindles are of the Bakairi type with a knob. (See Part. I map XII). The spindle discs are sometimes of stone. The Chané at Rio Parapiti sometimes use when spinning a small earthen plate made for the purpose, on which the spindle is whirled.

C
Ce
283

The preparing of leather.

The Chorotti and Ashluslay have no knowledge of tanning, where as the Chiriguano, Chané, Toba and Tapiete have. They use the bark of Piptadenia and other trees.

These Indians have, in all likelihood, learnt the art of tanning from the Whites who, in these tracts, are more skilled in leatherwork than in any other trade. Tanning seems to be unknown to all Indians in S. America who are either untouched or but slightly influenced by White civilisation.

C
Ce
281
177
171*

The carving and ornamentation of calabashes.

The Chiriguano Indians, as well as the Chané make very great use of calabashes. They are used as receptacles for water and maize-beer; as boxes, humming-tops, bowls and, above all, as drinking-vessels. At festivals maize-beer is handed round in elaborately ornamented calabashes.

C
Ce
415
322

Sometimes the calabashes are provided with lids. These are so made that lid and box are of the same fruit. Now and then star-shaped lids occurs. Lids with a shutting arrangement of the type shown in Fig. 30 A are characteristic of these Indians.

I published in Part I a map showing the distribution of calabashes with lids. From this map we see that these are probably a culture-element which the Indians east of the Andes received from the western area of civilization.

I scarcely think, at any rate, that the star-shaped lids can be cut out so as to fit tight on the box, save with a metal tool. It could hardly be done with a stone or bone implement.

Schwabenkiller E-4,5(1906-1908, 1913) 1801
SF10 Chiriguano SF10
Class SF8

C
Ce
531
*171

The Chiriguano and Chané calabashes are ornamented with engraved, burnt-in and painted figures. The distribution of engraved ornamentation cannot, at present be as certained. As I maintained in Part I, pyrograving seems to be a culture-element of western origin. The art of painting calabashes with urucu mixed with oil is unknown to the Chouoti and Ashluslay, as also to the other Indians whom I got to know personally, with the exception of the Panserna.

C
Ce
[415]

Fig. 30. A. Calabash with lid. Chané, Rio Parapiti. R. M. P. 35. 1/4
B. " " " Chiriguano. R. M. E. 508. 1/4

In the absence of sufficient comparative material from the Andine culture-area, I will not here seek to establish whence the Chiriguano and Chané got the ornamentation which adorns their calabashes, nor in what measure it has been independently elaborated by them. A calabash with engraved animal figures is reproduced here.

C
Ce
415
531
184

The Chané who dwell at Rio Parapiti have but little ornamentation on their calabashes, and that little is plain.

Schwabenkiffel E-6 (1909-1909. 1913) 1914
IF10 Chiriguano IF10
Chané IF9

C
C
915
531
189

This contrasts with the Chiriguano and the Chané at Rio Itiyuro and is certainly owing to the poverty of the first-mentioned.

C
C
915
482

Sometimes the Chiriguano and Chané calabashes are surrounded by a net for greater convenience of carrying. I have already dealt with these in the foregoing.

C
C
915
189
[531]
[171]

The stoppers of calabash-bottles are generally pieces of empty corn-cobs. These are now and then used also as stoppers for earthen-vessels. The Choroti and Ashluslay, as a rule, make use of WAX, which material is little used by the Chiriguano and Chané.

C
915
531
532

Fig. 51. Calabash. Chiriguano. R. M. 913. 1/4.

Basket-work.

In contrast to what is the case among the Chorotti and Ashluslay, a good deal of basket-work is found among the Chiriguano and Chané, though less than among the tribes of N. E. Bolivia — this being due to the lack of suitable basket-making material.

There is unfortunately no complete work[1]) on different types of baskets and different kinds of basket-technique embracing the whole of S. America. Such a work cannot

Fig. 50 Sieve. Chané, Río Pilcomayo. G. M. P. 1:1. 1/2

be accomplished without access to a number of the great museum-collections. It is not, of course, from the Chaco nor, as a rule, from the west, that the Chiriguano and Chané received their basket-types and various kinds of basket-technique, but from the north. Baskets of grass, built up spirally, which seem to be very characteristic of the western area of civilization, are not found here at all[2]) Neither the

[1]) Mason had far too little material from S. America at his disposal.

[2]) This technique, the so-called »Coiled basketry» has a much wider distribution than is indicated on Wissler's map. Very rarely one sees these baskets among the Matacco. They are very common at Arica on the coast of Chile.

Chiriguano nor Chaná have carrying-baskets. They have carrying-nets instead.

In Part I I related how, in the year 1909, I came with some Guarayú Indians to the Chaná and Chiriguano country. As there was no palm with parapinnate leaves, they were unable to make themselves new carrying-baskets instead of their old ones which were worn out. Should their tribe, for any reason, be compelled to emigrate to the Chiriguano and Chaná country, they must alter their type of carrying-basket. It is quite possible that something similar has befallen the Chiriguano and Chaná. They did not find suitable material for basket-making and so they learnt from the original inhabitants to make and use carrying-nets. Of the carrying-nets used by neighbouring tribes, those used by the Chiriguano and Chaná most resemble those found among the Yuracáre.

In N. E. Bolivia, where palms abound, the Indians often make baskets for occasional use of a single palm-leaf. The whole basket then consists of one palm-leaf. Max Schmidt has given a minute description of such baskets. They occur among the Chaná on the lower Río Paraguáy and, more rarely, among the Chiriguano. It is, at present, impossible to define the distribution of such baskets, since the majority of explorers have paid them no attention. There is a considerable difference of make in different places. In my collections I possess such baskets from the Chimiáne, Iziáma, Cayúna, Mosetyan, Bororóro, Paumóna, Chorípa, Yuracáre, Sirióno, Guarayú and Chacobo, as well as from the Chaná and Chiriguano. It can be said that, practically speaking, they were used by all the Indians whose acquaintance I made on my travels excepting the Chuvetí, Ashluslay, Toba, Tapiete, Mataco, Quichua and Aymara.

The «Urupé» is a type of basket which I have already dealt with in the foregoing, and I beg to refer to what I said there.

SF10 Chiriguano SF10
Chané SF8

A basket-making technique sometimes seen among the Chiriguano is the one reproduced in Fig. 54. Otherwise I only know it from the Yuracáre and Atsahuaca. We are also acquainted with it from the Araucanians[1]), and from several tribes in N. W. Brazil.[2]) The THULIN-LILJEWALCH collection in the Gothenburg Museum has several baskets in this technique from Indians at Roraima in Guiana.

C
285
171*

Fig. 54. The technique of a basket plaited like R. M. E. 307. 176. 342.

The Chiriguano and Chané (at Rio Parapiti) possess baskets with overlapping lids. This type of lid seems to have a northern extension in S. America. The baskets I have seen from the western area of civilization, are from excavations on the coast of Peru. They have lids which are opened like the lid of an ordinary cigar-box. The distribution of baskets with lids may be seen from the map 14 and from the table below. Such baskets are not mentioned by MAX SCHMIDT from Guató, nor from the tribes on the upper Rio Xingú.

completed, it is opened by drawing out the string B, a piece of cloth being thus obtained which nowhere needs hemming. If the string B is allowed to remain and is woven into the cloth, the ring-shape is retained and it can also be used as a tipoy. (Fig. 22). This is a particularly ingenious way of setting up the warp. I have looms warped in this wise from the Chané, Chiriguano, Mataco, Yuracáre and Chacobo. In BOLINDER's collection there is a loom from the Ijca Indians on which the warp is also set up in this way. The string B is, however, replaced by a stick. There are also looms on which the warp is set up as depicted in the schematic illustration (Fig. 55.2) i. e. the completed work must be in the shape of a ring, unless the threads are cut off. I have looms warped thus from the Guarayú (Pauserna) and the Itonama Indians. Here belongs also the loom described by MAX SCHMIDT from Paressi-Kabisi, as also a loom from N. W. Brazil described by KOCH-GRÜNBERG.

C
Ce
286
*171

There are unfortunately too few descriptions of looms from the S. American Indians to render it possible to draw up satisfactory maps of the distribution of different types. The map 15 here appended is intended to show the distribution of looms on which the warp is set up in such wise that the completed work forms a ring, or can form one if it is desired. According to information kindly supplied by MAX SCHMIDT, there are no looms on which the warp is set up in such wise that the completed work is ring-shaped in the extensive collections from pre-Columbian Peru at the Museum of Ethnology in Berlin. When writing Part I of this work, I thought, like MAX SCHMIDT, that looms whose completed product is ring-shaped were an Arawak culture-element. In order to prove this, a larger material of looms is needed than has hitherto been collected. It is, however, likely that this kind of loom is now only found in northern S. America and, farther south, only east of the Andes. Looms warped so that the completed work must form a ring appear to have a more easterly distribution than those

The loom only occurring among the Chiriguano is a band-loom which is depicted here, This loom is much more akin to the usual Peruvian loom and must be regarded as a western culture-element. (See fig. 55,4.) East of the Andes the Peruvian loom is unknown except among the Mataco.[2])

Appertaining to the loom outfit of the Chiriguano and Chané are weaving-implements of bone and wood (fig. 56).

The large fabrics woven by the Chiriguano and Chané are not adorned with figures. On the other hand, it is not rare to see ribbons with woven human figures and other ornaments (fig. 57). The Chané on the Rio Parapiti are said to have learnt these ornaments from a Quichua woman who had immigrated to these parts. The Chiriguano girls are never seen to wear the ornaments they have learnt to embroider at the mission schools. These are flowers and the like, generally European ones, which interest the Indians very little, and are too strange for their fancy. This does not prevent the work they do at the mission schools being excellently done. At the mission schools the Indian girls also sew and crochet lace. But they never make these things once they have left school.

[527]

We know from several writers[1]) that the Chiriguano used to keep the heads of their beaten enemies as trophies According to what a Chané Indian named Batirayu told me, the Chané used to bring home the heads of slain enemies. At festivals these were put up on the «square» in the villages. Thanks to FRIEDERICI we have a fine work on scalping in America to which I beg to refer. It is, at present, impossible to say whence the Chiriguano and Chané obtained this custom.

Symbols of authority and dignity.

C 622 3c1 243

According to CORRADO[1]) the Chiriguano chief was distinguished by a tuft of hair on his head the »yattira» and earrings of green stones. At feasts the chief carried a pole with a bunch of ostrich feathers at the end of it, the »yandugua», and a carved stick the »iguirape». I have only seen the »yandugua». Among the Chané I have seen plain sticks that formed some kind of symbol of authority for the chiefs.

Ce 622

C Ce 554 171

I have neither seen nor heard of any symbols of authority among any other Indians than the Chané, Chiriguano, Quichua and Aymara, and also, at the missions, among the Guarayos, Mosetene and Cavina. Among the Aymara and Quichua the staff, usually silver mounted, is a symbol of authority carried by Indian officials in the villages. It is the same at the missions among the tribes mentioned and also among the Chiriguano. LOZANO[2]) states that the Spaniards at the end of the seventeenth century solemnly presented a staff to a Chiriguano chief, Cambichuri, as a symbol of authority. CREVAUX[3]) relates from his visit to the Oyampi that the chief carried a staff in his hand, for all over Guiana the staff is »le signe de commandement». KOCH-GRÜNBERG[4]) speaks of the staff as a symbol of authority for chiefs in northwest Brazil. GILIJ[5]) says that the

staff was introduced at the missionary stations as a symbol of authority for chiefs. In the same way white men had introduced the staff as a symbol of authority among the Araucanians.[1]) The half civilized Ijca[2]) use the staff as a symbol of authority for medicinemen.

According to RESTREPO[3]) the Chibcha chiefs had staffs of guayacán. MARTIUS[4]) tells us that the chief of the Tupi-Indians carried a tall staff »pocacaba». He also tells us that POMBAL in order to flatter conquered chiefs ordered Malacca canes with big knobs and tassels to be distributed among them. The Incas do not seem to have used the staff as a symbol of authority.

C
Ce
[177]

It is obvious from what I have said that the staff, as a symbol of authority, was introduced here by the Whites, while on the other hand the Chiriguano most likely got the »yandugua», from the Incas. One of the Inca symbols of authority was a parasol of ostrich-feathers. Thus BETANZOS[5]) [6]) tells us about Inca Urco, a son of Viracocha that he was borne in a litter on the shoulders of chiefs. When he went into the market-square, he sat on a golden stool and had a parasol made of ostrich-feathers dyed red.

Dr. MAX UHLE has been kind enough to inform me that he possesses a japanned wooden drinking-cup, possibly from Carabuco near Lago Titicaca. It dates from the period of conquest. On the cup is depicted an Inca with all his tokens of honour, down to the parasol.

Urn-Burial.

C
Ce
764

C
Ce
764
765
*171

The Chiriguano and Chané bury their dead in urns. The geographical distribution of interment in urns has been treated by several authors, particularly by PREUSS, BOMAX, OUTES, TORRES and PATER SCHMIDT. We can distinguish between two different methods of urn-burial in America. In one case the whole body has been stuffed into the urn, in the second the urn was only used for after-interment of the fleshless, and not unfrequently, painted bones. This secondary burial of the bones naturally requires smaller urns than those needed when the whole body is put into them. In some places children have been deposited in urns and adults in another manner.

It is natural that the conceptions on which direct or secondary urn-burial are based must be very different. The secondary burial of the bones in baskets instead of urns is of course more in conformity with this latter mortuary custom than immediate burying in urns. Secondary interment in baskets and in urns can also occur in the same cemetery. The basket is a substitute for the urn or vice versa[1]).

The essential thing in the secondary burial of the bones is their preservation which is considered most important. The direct interment in urns resembles burial in stone vaults and the like. The whole body is to be preserved, not only the bones. This should be kept in mind when we study the distribution of different kinds of urn-graves. EHRENREICH[2])

and above all BOMAN have assumed that urn-burial of adults is a Guarani custom. The latter supports this statement by the fact that this mode of burial is supposed to be very uncommon in the western zone of civilization and that it was chiefly used by the Guarani-Tupi tribes.

As this mode of burial is characteristic of the Indians I am treating of here, I will take up the question for closer examination and endeavour to make a map of the distribution of differents modes of urn-burial in S. America. Some finds of burial-urns, lately made by UHLE, makes the origin of direct urn-burial a subject which ought to be brought up for discussion again. I will here endeavour to show that direct urn-burial is chiefly an element of western culture, which most likely spread to the Tupi-Guarani tribes at a comparatively late period.

The Tupi-Indians on the coast of Brazil had this form of burial. This was, however, not the commonest mode of interment there. Direct burial in the earth was more usual as pointed out by TORRES.[1])

LERY,[2]) YVES D'EVREUX,[3]) CLAUDE D'ABBEVILLE[4]) PERO DE MAGALHAES[5]) and NOBREGA[6]) only mention burial directly in the ground. Of these LERY is one of the greatest authors of the 16th century who has written about the Tupi-Indians on the coast of Brazil. THEVET,[7]) VASCONCELLOS,[8]) the author of *Principio e origem dos indios do Brazil*,[9])

and (MANOEL TRISTÃO[5]) mention urn-burial. The first two also speak of other methods of burial. SOARES DE SOUZA, who has given such an excellent description of the customs and habits of the Indians on the Brazilian coast describes in detail the Tupinambá-Indians' mode of burial. According to him grown up people are buried in underground vaults and only the children of the chiefs in urns. For the chiefs they apparently dug good-sized underground vaults where the remains were protected from pressure or contact with the earth.[6])

Thus the Tupí-Indians on the coast of Brazil buried their dead in dug-out vaults or in great urns. As I have already pointed out the difference between these modes of interment is not very great. In the vault, and still more so in the urn, the body was protected from the earth. It is told of the Quichua that after the Roman Catholic priests had introduced burial in the earth (without coffins) these Indians unearthed their dead in the cemeteries and took them to their own burial ground in order that the earth might not press upon them. Something similar is related by JARQUE[7]) from the Guarani-Indians in Paraguay. That urn-burial is not practised by the Mundrucú and Apiacá, who are Guarani Indians, is a known fact. The Oyampi, and the Omagua other Guarani tribes, practises secondary urn-burial.

RUIZ DE MONTOYA mentions urn-burial among the

Guarani in Paraguay. According to TECHO[1]) the dead were deposited in the ground. Earthenware bowls were inverted over the faces of the dead. Direct urn-burial is the typical mode of interment among the Chiriguano and Chané.

Coming to the Andine culture zone we find that urn-burial of adults has had a very wide distribution. Urn-burials of this kind have been found in the Argentine at Carmen in Valle de Lerma, in the province of Salta, at San Pedro in the province of Jujuy, at Pampa Grande and other places and on the coast of Peru at Ica, Ancon and Cañete. At Ica urn-burials seem to have been quite usual. UHLE, who made a careful examination of them assigns them to the later Ica period[2]). UHLE has also found urn-burial at Ancon from the period previous to the Inca.

Urn-burial of adults also occurs in several places on the coast of Equador. This mortuary custom has also been usual at the Rio Ucayali and at the Upper Amazon where it occurs alternately with secondary urn-burial. A combination of these two different kinds of urn-burial was practised by at least two tribes the Cocama and Passé. The dead body as a whole was first deposited in a large earthenware vessel and then when the flesh had decayed the bones were put in a smaller urn. Direct urn-burial seems to have reached some tribes near the Rio

1) «Believing the souls are buried with the bodies, cover the faces of the dead with concave dishes» P. 670 I regret not to have had the opportunity of verifying this quotation from the original Latin edition.

2) (4), P. 365. Da hingegen sind die in der späteren Ica Zeit üblichen Bestattungen in Gestalt eiförmiger Mumienbündel, die in grosse irdene Töpfe gesetzt wurden, wohl als eine Fortbildung des ursprünglichen Proto-Naura Typus zu betrachten. Erst die Inca brachten an der Küste wieder einen neuen Mumienotypus auf, den man in Gräbern der mittelperuanischen Küste vielfach findet: regellos in allerhand Tücher eingeschlagene einfach gefaltete Körper.»

In a letter to me of the 27 September 1919 UHLE writes: «Natürlich gab es Unmassen von Urnengräber im Thale von Ica (letzte Zeit, zusammenfallend mit der Incaischen.)»

Branco from the Upper Amazon River. It is not known if direct or secondary urn-burial was practised in the Cauca-Valley.

In northern Argentine in the region of the Diaguita it has been quite a usual custom to bury children in prettily painted urns, whereas grown up people were buried in the earth. As I have already pointed out urn-burial of adults has not been uncommon in the Argentine. At Pampa Grande AMBROSETTI found face-urns containing skeletons of children above an urn with the skeleton of an adult. I used to incline to the belief that the last mentioned burial-urn belonged to an older cultural period than the infant burial-urns, because they were not found on the same level. This was most likely premature. Presumably all the burial-urns at this place are coeval, as AMBROSETTI[7]) assumes, in the same way as the skeleton found by BOMAN[8]) at Arroyo del Medio is presumably coeval with the infant burial-urns which he found above it.

At Pampa Grande adults have most likely been placed deeper down in the earth than the children. The same rough earthenware used for the big urns has also been employed for some of the infant burial-urns.

UHLE[9]) has endevaoured to make clear the relative ages of the cemeteries found in North Argentine and he comes to the conclusion, after having revised AMBROSETTI'S[10]) archaeological work from La Paya, that burial-urns of the Santa Maria type or of a type related to it went out of use during the Inca period or perhaps before it.

He points out that AMBROSETTI at Pampa Grande found no objects from the times of the Inca. So it is obvious that urn-burial began in a pre-Incan period both on the coast of Peru and in the Diaguita territory. *It follows from*

*(7)1

that I have said that it is not correct to describe urn-burial of adults as typical of the Tupi-Guarani Indians in particular. It is most likely a western cultural element which first spread eastwards to the east coast of S. America and then was carried back from east to west by the Chiriguano.

As has been already mentioned inhumation of adults in underground vaults as also in urns has been performed with the object of protecting the deceased from the weight of the earth. Interment in underground sepulchres has been extremely common throughout the whole of the western culture zone. Secondary burial of the bones in urns, baskets or some other receptacle must, as already mentioned, be based on quite a different conception. This mortuary custom as far as I know is not known from the western culture-zone.

The following table and map show the distribution of different kinds of urn-burial in S. America. On examining an urntomb it is not always easy to determine what kind of burial has been employed. Thus it has happened during my excavations that I have found urns in which the remains of the skeleton consisted of tiny fragments of bone. Some accounts of direct urn-burial of adults must probably be deemed very doubtful.

Resumé.

C
Ce
121
177

In the foregoing pages I have attempted to analyse the material culture of the Chiriguano and Chané, and have tried to show from where they have derived the cultural elements existent among them. Finally I will see to what extent conclusions can be drawn from what has been said above, as to the changes the material culture of these Indian tribes has undergone under the influence of an entirely strange culture — that of the Whites — and of a kindred culture — that of the bronze age in the west. Furthermore, we will see what the Chiriguano and Chané have kept of the culture they had before they migrated to the districts they now inhabit, in what measure they have adapted themselves to their new natural surroundings, and what they presumably have learnt from their neighbours the Choroti, Toba, Mataco and Tapiete.

C
Ce
128
177

I have shown in tabular form the cultural elements the Chiriguano and Chané received from the Whites, those they received from the Mountain culture, and those that derive from the north and the east. This third table embraces such cultural elements as the Chiriguano and Chané took with them when they migrated to their present habitat. In the tables I have mentioned, as the reader will see, in the case of each cultural element whether its distribution in the region examined is favoured by natural surroundings, whether in its distribution it is in general independent of such surroundings, whether it is of great importance in the struggle for existence, whether its manufacture calls for technical skill, whether it is man's or woman's work, whether it is used by men or women or both, or only by children, whether it may be looked upon as still frequently used or as disappearing, and whether it can be regarded as a

Chane SF8

luxury or as a necessity. The tables thus reveal, for instance, whether these Indians have received chiefly articles of luxury from a certain source, whether what they received was mainly what women manufacture, and so forth. C Ce 128 177

Among the Chiriguano and Chané we naturally find a number of cultural elements with regard to whose origin we are quite ignorant. Without doubt many of these have a large distribution, but it is simply unknown. Others again have a distribution of such a nature that it yields us no conclusions regarding their origins. The Chiriguano and Chané have no cultural elements of any importance that are not known from one or several other Indian tribes. There are, of course, minor peculiarities in shape and ornamentation that characterize all the belongings of these Indians when compared with similar articles from other tribes, but I know of no striking invention of any description to the sole credit of these tribes C Ce 128 171*

A. *The influence of the Whites on the culture of Chiriguano and Chané*

The cultural elements the Chiriguano and Chané certainly or presumably derived from the Whites, are given in the table 20. It includes such elements as they manufacture themselves, but are indebted to the Whites for the idea; cultivated plants and domestic animals which were not introduced among them until post-Columbian times. C Ce 177

If we examine the table 20 we shall find that it embraces 31 cultural elements. It omits a few cultivated plants obtained by the Chiriguano and Chané from the Whites which are not, and never were, of any importance whatever, likewise a few domestic animals that are rarely seen. It includes three cultivated plants and four kinds of domestic animals. Of the remaining cultural elements, 17 are man's or boy's work, and only four woman's work. The majority

are chiefly used by the men. It is clear that the latter learnt more from the Whites than the women, for they came into contact with them to a far greater extent. Hence many of the men, but few of the women, learnt to speak Spanish.

C
Ce
291
177

All the Chiriguano and Chané men now clothe themselves more or less like the Whites, that is to say in shirt and trousers. Few have coats. You rarely see anyone with boots, and never anyone with stockings. Practically all the Chiriguano and Chané women still wear the tipoy. It is usually made of cloth bought from the Whites. But in some villages the women still have a predominance of home-woven tipoys. The clothes worn by the men, and which are of the same cut as those of the Whites, are not their own make, but are obtained ready-made in exchange for manual labour. The cloth for the women's tipoys, too, which they make up themselves, is as a rule earned in similar wise by the men. The Indians now obtain the implements for all these things from the Whites.

C
Ce
241
177

The agriculture of the Chiriguano and Chané has been very little affected by the Whites. As the banana cannot be cultivated here with any success, the Indians have not been able appreciably to improve their conditions of life by extensive planting of the cultivated plants introduced by the Whites. For some of the Chiriguano and Chané Indians, cattle-breeding has become of considerable importance.

Ce
177
[233]

Seventeen of the cultural elements included in the tables may be regarded as articles of luxury. These are games, musical instruments, etc.

The domestic industry of these Indians has been very little influenced in its development by the Whites, a fact on which I laid stress in speaking of their pottery, which has remained in a wonderful manner untouched by 400 years of intercourse with missionaries and others. I here repeat that even the instruction given in the mission schools in embroidery, lace-making and the like, has but very slightly affected the native domestic industry of the In-

Ce
177

dians. A handicraft the Chiriguano and Chané have learnt from the Whites, is tanning.

C
Ce
177
342

The dwelling-places of these two tribes have been greatly changed under the influence of the Whites. I have noticed the same phenomenon in several other tracts. The Yamaica, a small Peruvian tribe that I visited in 1904, a few years after its discovery, had already given up the old type of hut and built huts on the pattern of the houses of the Whites. The Huanyam, a small tribe near the Rio Guaporé in Brazil, which had not long been under the influence of the Whites (or more correctly, the negroes), now builds huts on the model of the houses they see at the rubber barracks. Several similar examples could be recorded. Everywhere it is the introduction of the white man's implements, so excellent in comparison with the stone axes, that has brought about the revolution.

C
Ce
177

The negative influence of the Whites has of course been very great here. The primitive tools have disappeared, a number of implements and ornaments have become rare or have vanished, a quantity of domestic industry has become superfluous, since readymade things have been purchasable from the Whites. The Indian domestic industry is gradually disappearing, but is not transformed under the influence of the Whites.

A race like the Chiriguano or Chané, when it falls under the influence of a culture, such as the Whites', which is very strange to them, very soon, as a rule, utilizes for its own ends such elements as smooth for them the struggle for existence. We know, for instance, with what incredible rapidity the culture of the banana spread among the Indians soon after the Discovery of America, and that in many places it rapidly became one of their most important cultivated plants. And I have already mentioned that, a few years after its introduction, poultry-keeping spread far and wide among the Indians in S. Brazil.

C
Ce

In the matter of ornaments and adornments the Indian

[431]
[522]

is conservative, which may partly be connected with the fact that for him, as KARSTEN has pointed out, colours and ornaments have a great magical importance. When the Chiriguano and Chané obtain by barter glass-beads for their labrets, these must be blue, like the turquoises they were wont to fasten in them.

C
Ce
177

When they come across anything in the culture of the Whites that approximates to their own conception of the ideal, the Indians have no difficulty in adapting it to their own use. We know that the dance mask is an Indian practice: it is therefore quite natural for the Indians to have embraced the carnival of the Whites with great interest and have added to it their own dances, in which they appear with masks on.

B. *The influence of the bronze age culture on that of the Chiriguano and Chané.*

C
Ce
[128]

In the table 21 I have put together the cultural elements that the Chiriguano and Chané have very probably obtained from the culture zone in the west. We can see at a glance that this influence has been very considerable. The positive influence has been greater even than from the Whites.

If we look into the table we shall find that the Chiriguano and Chané have especially learnt from the culture zone in the west such things as are connected in some way with festivals. Here belong the men's festal attire, several adornments worn by men and women, the feather parasol, the finer sorts of pottery, the ornamentation of calabashes with pyrograving, several musical instruments, games, etc. When we know with what interest the Indians have embraced the festivals of the Catholic Church, wherever they have had an opportunity of doing so, it can easily be understood that the tribes that were neighbours of the Incas, also imitated their festivals.

C
Ce
[747]

Schwedenkiste E-4,4 (1908-1909, 1912) 1920
SF10 Chiriguano SF10
Chane SF8

The influence of the Mountain culture has extended considerably further east than the territory of the Chiriguano and Chané. In the First Part of this work I showed what a great influence this culture had on the Choroti, Ashluslay, Lengua, Mbayá, and other tribes. The Guarani-Tupí Indians in the most easterly part of S. America have even been influenced by it. The influence of the Mountain culture east of the Andes has probably been considerable not only under the Incas, but also at earlier epochs. But this is difficult to substantiate, with the paucity of distribution maps at present drawn up. I would ascribe to it certain cultural elements such as urn-burial and the shape of the labret among the Chiriguano. If this assumption is correct, these cultural elements must first have been conveyed eastward from the culture zone in the west, and then have been brought westward again by the migrations of the Chiriguano Indians. Both are here evidently original to Chiriguano and not to Chané.

C
Ce
177

The influence of the bronze age culture on tribes with a lower civilization must have been quite different from that of the Whites. And yet the culture of the more highly civilised Indians consisted of the same elements as that of the more primitive Indians. The Chané and Chiriguano have therefore not only learnt the use of a number of things from the bronze age culture, but have also learnt to make them themselves. Among these more primitive Indians domestic industry has evidently progressed under the influence of the Mountain culture, but is perishing under the influence of the Whites.

As I pointed out in Part 1, the bronze age culture in the west was a great attraction for the Indians east of the Andes. It was in order to pillage the rich districts in the west that the Chiriguano migrated to those parts at the beginning of the 16th century. It must have been in order to facilitate the establishment of intercourse with the opulent culture of the bronze age that the Arawaks (i. e., the

179

Chaná) wandered south along the Andes to parts where no dense primeval forests hampered communications. This is always on the presumption that they were not forced southward by other tribes, which may possibly have been the case.

The question may naturally suggest itself, 'How was it possible for the Chiriguano, if they did not establish themselves in their present habitat until the beginning of the 16th century, to have learnt so much from the bronze age culture in the west, which began to decay a few years later?' They did not do so by direct intercourse with this culture, but learnt it from the original inhabitants of those districts, who were for a long time under the influence of that culture. The Chiriguano conquerors were presumably very few in number, compared with the original inhabitants, who most likely had long been under the influence of the bronze age culture. The conquerors adopted the culture of the original inhabitants, these the language of the conquerors.

The pottery of the Chiriguano and Chaná is evidently an offshoot of the Mountain culture, their textile industry has been strongly influenced by it. The most important domestic industries of these Indians are woman's work, and it is probable that kidnapped women have here been the intermediary agents of culture. When the Chiriguano conquered the parts they now occupy, they did so, to a great extent at least, from the Chaná.[1] They then kidnapped a great number of women from these Indians. After being admitted into the tribe, the women taught their skill to their offspring. Being culturally much above their husbands, they would no doubt have a great influence on them.

C
[127]

[1] See [illegible] p.[illegible]

C. *Cultural Elements which the Chané and Chiriguano have got from the Matacos, Toba, and other tribes in the Gran Chaco.*

C
CE
177

The Chané and Chiriguano have presumably not learnt much from their neighbours the Chorotí, Toba, Mataco, and Tapiete, whose chief domestic industry is the caraguatá work, in which they have developed an astonishing skill. As we saw in Part I of this work, they have various different kinds of knitting, sewing, and plaiting. The Chiriguano and Chané, on the other hand, do very little caraguatá work, and the technique of their knitting is without much variety. I consider it likely that they learnt from the Chaco Indians the use of the bowstring made of shreds of hide, landing-nets of the type used here, the wooden needle with the line for stringing fish, the skin rug, the forked wooden spit, the use of the resin of palo santo for painting earthen vessels, and possibly the bat and ball game.

It is clear that more civilized Indians like the Chiriguano and Chané, when they come in contact with more primitive Indians, like the Mataco, Tapiete, and Chorotí, do not imitate their ornaments, clothes, etc. I have already pointed this out in Part I. We must bear in mind that the Mataco sometimes work as servants for the Chané, and the Tapiete for the Chiriguano.[1] These more cultured tribes would be more inclined to recognise the warlike Toba Indians as their likes.[2]

C
CE

[2] Nordenskiöld (§).

D. *Northern and Eastern Cultural Elements that occur among the Chiriguano and Chané.*

C
Ce
M

The Chiriguano and Chané have a number of cultural elements that closely reveal their connection with their kinsmen in northern and eastern S. America. The area of their distribution stretches like a wedge from the more tropical northern Bolivia between the Andes and El Gran Chaco proper. Several of these cultural elements, moreover, have a distribution that induces us to assume that they reached the region examined with the Arawaks, i. e. the Chané. One such is, for instance, the india-rubber ball game. Several of them, such as the hammock and the seat, were familiar to both Chiriguano and Chané before they migrated to their present habitat. Those cultural elements that we may with more or less certainty assume to have been known to the Chiriguano or the Chané, or to both, at the time of their immigration, I have collocated in the table (*22*). Of course these Indians have several other cultural elements with a similar origin, though this cannot be proved from the material at our disposal.

In Table *22* there is scarcely any reference to clothing and adornments, owing to the fact that the Chiriguano and Chané have learnt much in this respect from the civilization of the bronze age and from the Whites. It is a characteristic trait for the Indian women to have clung to an older type of garment, — the tipoy.

C
Ce
M
M

Most of the cultural elements the Chané and Chiriguano have kept from the time of their migration to these parts, are useful articles, such as household furniture and fishing tackle. But some of these things are of minor importance here, since their existence is not necessitated by external conditions: they are evidently suited to other natural conditions than those that obtain in these parts.

One can conceive that several of the cultural elements included in Table *22* did not reach the Chané and Chiri-

guano until they had settled in their present territory, let us say by trade or other connections with the tribes living in N. E. Bolivia. I will not assert that this is impossible, but I am of opinion that it cannot apply to most of these cultural elements. In any case it does not apply to such cultural elements as rubber balls, certain kinds of basket work of palm-leaves, and hammocks, which clearly overstepped the natural confines as a result of emigration. The rubber for the balls must be procured from the north, and suitable palm-leaves for basket-work is not to be found locally. The hammock is not the kind of bed best suited to this part of the continent.

Mandioca is now cultivated only as a rarity by the Chiriguano and Chané. It is highly probable that, before they settled in their present habitat, this plant was of considerable importance to them. Neither the Chiriguano nor the Chané depended so largely on maize before they came to the parts they now inhabit. Here they have an excellent soil for growing maize.

C
Ce
177
226

Fish and game are now certainly of less importance to these Indians than they used to be. I mentioned earlier that the Chiriguano and Chané now make the impression of fishermen without water to fish in. A method of fishing which is of no little importance to the kinsmen of these Indians, is fishing with poison. In these parts it is rare, but occurs, at least among the Chiriguano.

C

»Chuchio» (*Gynerium* sp.) was formerly the plant that yielded at least the material for the arrows of the Chané Indians. As it has now been uprooted, its place is taken by another growth of grass, *Arundo donax*. It was not until post-Columbian times that this reed, which is used by the Chiriguano, Chané, and all the Chaco tribes for the shafts of their arrows and for other purposes, was introduced into S. America, where now, not least in El Gran Chaco, it has an exceedingly widespread distribution. (I ought to have pointed this out in the First Part of the pre-

sent work.) It follows that these Indians used other material for their arrows in pre-Columbian days. The Choroti and Ashluslay probably had wooden shafts to their arrows, as Chuchio does not, and probably never did grow in their country. Before *Arundo donax* grew in the Chaco it must have been difficult in many places to find material for flutes, etc. Even in the country of the Chiriguano and Chané there were reeds only in certain parts, so that the introduction of *Arundo donax* may have been of importance for other things than the material for arrows.

C
Ce
177
285

The difficulty of getting suitable material for basket-making has resulted in the baskets being of less importance to the Indians of the district under examination than to the Arawaks and Guarani-tribes elsewhere. Presumably the Chiriguano and Chané used to have carrying-baskets, which were supplanted by carrying-nets of Caraguatá or Yuchan.

C
Ce
174
[343]
[515]

Pile-barns are probably a reminiscence from a time when the Chané lived in swampy parts.

I have already pointed out that the great cleanliness of the Chané and Chiriguano shows that they immigrated to their present habitat from warmer, well-watered parts.

C
Ce
177

There are not many cultural elements of which we can say with absolute certainty that they were brought by the Chiriguano, and not by the Chané. Such are, however, urn-burials and »tembeta» of the kind now in use. This is not precluded by the fact that these cultural elements were originally western. Finger-mark ornamention, the wooden mortar, and certain bird-arrows, spindles of the Bakaïri type with a little knob on the top of the stick, are also cultural elements with such a distribution that we can assume that they were originally more intimately connected with the Chiriguano than with the Chané. Further comparative investigations, and access to an extensive quantity of the necessary material will doubtless enable us, from a study of the minor details in the external form of

the various objects, to prove that some ideas are to be traced to the Chané, others to the Chiriguano.[1]) For the purpose of such studies, we require access to the collections of all the great museums, and probably much more material.

There are of course among the Chiriguano and Chané many cultural elements of which we cannot say whence these Indians obtained them. These are such cultural elements of which the distribution is very imperfectly known, as well as some old ones whose distribution does not reveal from where they came originally. I do not consider it worth while tabulating all these cultural elements specially. They are mentioned in the foregoing, though occasionally only *en passant*.

[1]) This calls for a number of special studies of different cultural elements, such as Frödin's, and my own on the spindle.

102

To this bibliography several maps have been added which ought to prove useful from many points of view. *The maps indicate the territories concerning which the authors quoted in parts 1 and 2 made their investigations.*

The first map shows the literature from 1498—1600, the second from 1600—1700, the third from 1700—1800, the fourth from 1800—1900 and the fifth from 1900—1920. We find a separate map of the archæological literature. Several important works are unfortunately missing which I have not been able to study. It is difficult and expensive work to collect the literature on the S. American Indians. Not the least difficult of access are certain works printed in S. America during the 19th century. For my ethno-geographical studies I have of course read a number of books without finding anything to quote from them and consequently they are not mentioned here. I desired especially to show the merits and demerits of the maps of the distribution of the cultural elements here published. The maps of the authors' names show us the districts from which I have no material at all and those from which I only have the material of older authors, or only of modern writers.

Some authors have not travelled in the territories they have written about, but have drawn from the works of several other authors. The most remarkable existant work of this kind is COOPER's excellent work on all that has been written about the Indian tribes in southernmost S. America. If there were many such compilations, it would not be difficult to draw up maps of the distribution of the various cultural elements.

From the map that indicates about which districts the archeological treatises are written, we can see, even though

some names are missing, what immense territories in S. America are still entirely unexplored archeologically.

The bibliography includes some authors whose names will not be found in the maps, i. e. FRIEDERICI and PATER SCHMIDT, great as their services to the ethnography of S. America have been. This is because they have written comprehensive works dealing with the ethnography of the whole continent, and not with any particular part of it.

When I have quoted from several works by the same author, these are numbered 1, 2, 3, etc. in the bibliography. The same work has the same number in the First and Second Parts of my own book.

The Land of the Chané and Chiriguano Indians

Just as I have tried to give a picture of the life of the Choroti and Ashluslay Indians, I shall also try to describe the Chané and Chiriguano Indians and my various visits among them. These Indians are considerably more advanced than the "savages" of the Chaco. For the most part they live in a state of dependence on the whites, and their old unique culture is disappearing more and more.

The Chiriguano are now also to a very considerable extent Christians. For more than 300 years, first the Jesuits and then the Franciscans have tried, with varying results, to convert them to the one soul-saving Christian faith. Even now there are several mission stations among the Chiriguano, but none among the Chané.

In the Chané and Chiriguano we meet people with a higher culture, people who are entirely different from the Indians about whom we have read in the preceding chapters. Comparisons between the two types of culture that we come across in the Chaco are, naturally, of interest.

What will perhaps surprise the reader most is the fact that the two primitive cultures are able to exist side by side, and have doubtless done so for centuries, without fusing, indeed, without learning from each other, and this even though there are no natural boundaries here.

/148 cont./

114 133 [622] In May, 1908, as was said, I visited the Chané chief Vocapoy on the Rio Itiyuro in Argentina near the /149/ Bolivian border. This is one of the rivers that tries in vain to escape the wilderness of the Chaco. It rises in the most remote sources in the virgin forests of the Andes and disappears in the xerophytic forests of the Chaco.

123 648 Vocapoy was at odds with the whites who had usurped his land and would not accept his idea that they were merely his tenants. He asked my advice as to how he could persuade the whites to recognize the Indians' right to the land. I suggested

361

Fig. 74. Vocapoy's village on the Rio Itiyuro.

123 648 [125 823] that he appeal to the great chief of the whites, the President of the Republic, and assumed the position of land surveyor for the Indians. I roved with the Indians through their territory and drew a little sketch which Vocapoy was to take along to the President. The Indians said my sketch was not good, and they themselves drew a map of the country.

Ce 123 648

/150/ Unfortunately, I do not know whether Vocapoy undertook the long journey to the village of the great chief, but, as a result of the surveying, I won the confidence of the Indians.

Ce 142 302 291

Fig. 75. Chané Indian.
Rio Itiyuro.

Ce 123 648 C 114 797 T 114 101

When I left the Choroti and the Ashluslay at the end of July, 1908, I proceeded by way of Yacuiba to San Francisco on the /151/ Rio Pilcomayo. San Francisco was a mission station which the Franciscans had had among the Chiriguano, but which /Fig. 76 appears here/ has now been abandoned. Not far from it live the Tapiete Indians among whom I spent a week in August, 1908.

C /151 cont./
123 In Tihuĩpa I opened a regular /152/ small produce
439 store for a few days. Indian men and women, especially the latter, crowded around the shop counter. It was a

Ce
142
291

Fig. 76. Chané Indian.
Rio Parapiti.

C
123 peculiar shop. If an Indian woman came there with money
439 in order to buy something, she was politely sent away by
[439] the clerk, but if she came with an attractive old clay vessel, she became the happy owner of corals, fire-red ribbons,

/152 cont./
earrings with real "diamonds," rings with "sapphires," or other 123
fine things, which she could then show off at the next drinking bout. 439
There are always two villages in these mission stations, 437
one for the heathens, one for the Christians. I myself always felt 361
more comfortable in the former, and this not only because more 797
fine, old things were to be collected there, but also because the people there were friendlier, more tactful, and more polite in their behavior. The mission children were importunate and impudent.

Near Machareti there is a large basin-shaped valley through 133
which flows a little brook that probably swells to a roaring river after a violent tropical rain and disappears in the wilderness of the Chaco. Quite near the mission it leaves the handsomely dissected [135]
mountains, where small petroleum springs trickle out everywhere in the crevices of the cliffs. Then it flows through a hilly landscape that gradually turns into the vast flat area of the Chaco. The vegetation in these regions is not very luxuriant. The wood- 137
land, when such is present, is sparse, low, shrubby, and monoto- 241
nous. The fields seem to produce abundant harvests, the droughts seldom too long. These regions are often devastated by huge 731
swarms of locusts. I have seen these destructive animals cover the 136
woodlands like large, reddish-brown clouds.

From Machareti we went by way of Itatiqui, a very interesting 114
Chiriguano village in an arid region, to the Rio Parapiti.

The latter comes from Pomabamba and Sauzes, from the 133
/153/ mountains of the Quichua /Quechua/ Indians. After it has left these, in the rainy season, it is a roaring stream overflowing its banks. In the dry season it carries little water. The Rio Parapiti also ends in the Chaco. During the rainy season it is lost in the swamps; in the dry season it disappears in the fine sand. If the Rio Parapiti parades on the maps, as the southernmost tributary of the Amazon River, this is only empty boasting on its part. The woodlands along the Rio Parapiti consist mostly of 137
bushes and low, fine-leaved trees, caraguata, and cacti.

/153 cont./

In the dry season the wind heaps large dunes along the banks of the river. After it has left the mountains, it does not receive a tributary. The Rio Parapiti is very wide, but never deep. During the driest period its bed is transformed into a sand desert where the wind plays with the fine river sand. When it storms, the sand is swept across the bottom of the river. If one wishes to cross it on such days, one may perhaps not get his feet wet, but he must shield his eyes. C 133 132

The Rio Parapiti is rich in fish, but the fish are tiny. The banks are quite fertile, but inasmuch as they are flooded during the rainy season, the harvests are easily lost. Often in the dry season everything is wasted by the scorching droughts. The locusts, too, hawk about in these regions and leave behind in their own unappetizing bodies a poor substitute for what they have destroyed. C 13

On the Rio Parapiti, high up in the mountains, live the Quichua Indians, then come the Chiriguano, beyond them, near the river, the Tapiete, also called Yanaygua, then the Chané, and finally, in the unknown wilderness, the Tsirakua Indians. C 101

My first visit on the Rio Parapiti was paid to Father Carmelo, who had a small mission station there among the Chiriguano. I became very fond of this monk; /154/ he had such confidence-inspiring friendliness. He is one of the missionaries who are needed here, people who desire and are able to sacrifice themselves for others, who show an equally great friendship toward all. C 114 797

I now continued along the Rio Parapiti to Isiporenda on the north bank of the river. The Tapiete live opposite Isiporendo. I shall later describe a visit that I made to them. C 114 T [31]

At Isiporenda I met the first Chané, or, as they are called here, Tapuy. I then visited most of their villages. I made the acquaintance especially of some of their storytellers, of whom Batirayu, the nephew of the last great chief, Aringui, became my good friend. Ce 114 [101 538 123]

From the lower Rio Parapiti I proceeded by way of Charagua, a village inhabited almost exclusively by whites, to the Caipipendi valley, where I stayed with the Chiriguano chief Taruiri. C 114

/154 cont./

One might be surprised that a person would want to live in this treeless valley, where one finds only salty, dirty water, but in the Caipipendi valley one need not drink water, for here the maize yields magnificent harvests and there is never a shortage of maize beer. The inhabitants of the Caipipendi valley are wealthy, and if there is famine in other regions, the Indians come from afar to these kinsmen, in order to barter their valuables for maize.

For the collector, too, it is a magnificent valley. We found silver ornaments, silver bowls, finely carved musical instruments, and many other rare articles in this ethnographer's paradise. Stone axes, ruins, diggings /Grabfelder/ of various peoples prove that the Caipipendi valley has long been highly prized by the Indians.

The water has cut deeply into this valley. In the rainy season it probably rains there too.

From Caipipendi I returned over the mountains, through a /155/ valley famous for its hot springs and its beauty, to Charagua, to continue then along the Andes in the direction of Santa Cruz de la Sierra.

It was October, 1908. Not quite a year later, in July, 1909, I again visited the Chaco, after extensive river journeys far beyond, on the border of Brazil. In another book I shall describe these journeys on large, navigable rivers and through virgin forests whose luxuriant green is overpowering.

From Santa Cruz de la Sierra I returned, as was said, to the Chaco in July, 1909. I then traveled first of all by way of the Rio Grande to the Rio Parapiti, chiefly to visit my friend Batirayu.

The Rio Grande is the southernmost tributary of the Amazon River. It comes from the highest mountains of the Andes and flows past Sucre, a city that has long contended with the city of La Paz for the rank of capital of Bolivia. When it emerges from the mountains, it is a roaring, mighty river. Farther down it has an extremely changeable, very little known course. North of Santa Cruz de la Sierra the Rio Grande receives the Rio

/155 cont./ C
Piray and finally unites with the Rio Mamoré. A few Chiriguano 133
live along this river, and savage Tsirakua and Siriono also [101]
rove about in the forests along it. C

Between the Rio Grande and the Rio Parapiti there is a 133
region with an extreme scarcity of water and largely covered 137
with completely impenetrable underbrush and low scrub forest 312
full of caraguata and cacti. This monotonous, dismal vegetation is interrupted here and there by hills and grassy plains. C

Besides the savage Tsirakua Indians who make these thickets 136
unsafe, one finds another curiosity here, namely the guanaco C
(Auchenia). It is altogether strange to find an animal like the [132]
guanaco, which one thinks of only in connection with the cold plateaus of the Andes or the /156/ pampas of Patagonia, often afflicted with frost, in this bush which is frequently scorched by droughts. It would be interesting to be able to determine whether this guanaco of the tropical forest is really the same as the one known from the colder regions. Intelligent whites with whom I have discussed this and who have seen both regard them, however, as the same species.

Ce
Having returned to the Rio Parapiti, I looked up Batirayu, 115
with whom I had already become intimately acquainted in 1908 and who also speaks excellent Spanish.

With no other Indians with whom I became acquainted did I become as close as with Batirayu. He understood that I was collecting the old mementos out of an interest in his tribe. Batirayu did his best to explain to me the religious conceptions of his tribe. In the evening we used to sit in his room with a cigarette, and he told about olden times, sorcerers, chiefs, Ce
and spirits. Occasionally an old chief, Bóyra, also came, and [122]
from him I heard many charming Chané legends. We would sit until far into the night and chat by a flickering light that I had with me in order to take notes. Ce

One would be very much mistaken if he were to believe that 115
the conversations with these men were merely an interesting 123
study. I felt comfortable with these fine, tactful, yes, why not, cultured human beings. It was genuinely refreshing after coming
from the often vulgar, empty whites.

/156 cont./ Ce 115

from the often vulgar, empty whites. Batirayu, however, is also an exceptional man, the makings of a great man, who is condemned to idleness.

C Ce 197 171 648 Ce 101

Batirayu is a Chané. These Indians now speak the same language as the Chiriguano, namely, Guarani. Most of their customs and usages correspond to those of the Chiriguano, by whom they were probably subjugated. According to their origin, however, they are Arowaken /Arawak/ and hence the most southerly dwellers of this group, which had, and still has, a wide distribution in South America and on the Antilles.

C Ce 128 171 771

/157/ If I describe the Chané and the Chiriguano together here, it is because their material culture is so similar. Nevertheless, I have indicated in which tribe I made this or that observation; this is especially true for the religious domain, in which the Chané, at least on the Rio Parapiti, have kept many old conceptions which are unknown to the Chiriguano.

Ce 197 554 273

Batirayu told me that a few of the Chané still knew some words of the old language of the tribe. He said that especially at the drinking bouts, when they are intoxicated, they give themselves airs by speaking the old Chané language, which otherwise has the character of a secret language.

Ce 124 197 114 M Ce C, 192 197

In the company of Batirayu I set out for the village of "Huirapembe" where the Indians who knew Chané best were supposed to be found. It was not easy to draw their secrets out of them. Actually, only the youngest ones, who knew the least, were willing to tell me something (1). One old woman who was

1.

	Chané	Chiriguano	Mojo
Water	úne	y	une
Maize	sopóro	ahuãti	seponi
Fire	yucu	tãta	yucu
Dog	tamúco	yaúmba	tamucu
Chicha (good)	liqui	cángui	itico
Rat	cóvo	angúya	cozo.

/157 cont./ One old woman who was Ce
supposed to know Chané very well said she would teach me after 124
she had reached the realm of the dead. Since the Indians in 197
this happy place are not bothered by whites, and not by eth- 123
nographers either, the promise of the old woman was not very
friendly, Ce

The Chané use their old language for many expressions 195
that are abusive, for example, karitimisóyti, which they trans- 197
late as son of a w---e. An invitation to coitus is called Ce
pocône. There are also songs in their /158/ old language, for [533]
example, siparakinánoyé, siparakinánoyé, siparakinánoyé,
tonéya, tonéya, tonéya, which they did not know how to translate. C

From the Rio Parapiti I again visited the Chiriguano chief 114
Taruiri in the Caipipendi valley, where I sought to buy as many 126
old ornaments and other valuables as possible. Besides Taruiri
I also visited another chief, Yumbay, an old worthy who was
always embracing me and saying: "I am Yumbay." /Fig. 77 C
appears here./ "Yes, the great, mighty Yumbay," I chimed in, [123]
which made the poor reduced fellow feel very flattered.

From the Caipipendi valley I went by way of Pipi to the C
mission at Ivu. This lies in an arid, lonely region with little 797
water, near several huge mountains, and the life there must be 164
dreadful. When smallpox was very prevalent in the region, [114]
Father Bernardino successfully prevented the disease from spread- [133]
ing into the mission by vaccinating all the Indians living at the [312]
place. Father Bernardino is a truly unselfish human being, a
genuine missionary. As a result of the vaccination, no one in
Ivu died of smallpox, whereas the sinister disease raged fright-
fully among the whites a few miles from the station. It almost C
served them right. If anyone died of smallpox, the corpse was [764]
laid on a table decorated with paper flowers and a crucifix.
Around this the other swine would get drunk and /159/ continue C
to drink obligos (1) until they were finally lying on the table. [273]

1. If a person drinks obligo with another, the C
latter must drink up. [576]

/159 cont./

In the village of Cuevo alone 60 out of 200 persons died within a short time. I visited the 140. They were as gay as ever. Spirits and beer were consumed in quantities. 114 [65] [275]

Father Bernardino was never given credit for this work, but rather the medicine men, who had bewitched the sickness so that it would not come to Ivu. The white colonists, too, occasionally had the medicine men come in order to /Fig. 78 appears here/ drive away the sickness. They did not believe in the vaccine either. 797 756

With Ivu as the starting point, I made a trip into the 114

415
531

Fig. 77. Clay vessel made by the wife of the Chiriguano chief Maringay. 1/6.

Igüembe valley, in order to visit the Chiriguano chief Maringay. 114 It was a charming ride on horseback up on the high crests and down into deep valleys, through an often grandiose, colorful landscape. These valleys are poor in forests. Only in a well-protected ravine in which a brook trickles forth is the vegetation luxuriant. [133] [137]

I soon became very good friends with old Maringay. The old man was conservative, clung to the old customs, and felt that the Indians should be on good terms with the whites, but should preserve their old habits and customs unchanged. His village was extraordinarily interesting and very rich in old, fine things. 123 157 172 643 000

/159 cont./ 601

things. The ceramics /160/ which I found there belong among 323
the very best that I saw among these Indians (Figs. 77 and 78).

From Maringay I returned to Ivu by way of the mission station 361
of Santa Rosa. It has a wonderful location. Like an old fortress, 797
it is built on a narrow hill. Below it, in long rows, lie the [114]
grayish-brown Chiriguano huts surrounded by low woods of [342]
Mimosaceae, cacti, small algarrobas, and other fine-leaved [137]
trees. This woodland is seldom so dense than one cannot easily
get out of it without a bush knife. When I was in Santa Rosa, 132

415
531

Fig. 78. Clay vessel made by the wife of the Chiriguano chief Maringay. 1/7.

it was the dry season and everything was burned up. Here too, 132
however, rain probably entices the green out of the dry earth.
Sometimes the rain is so long in coming, however, that the [731]
Indians do not get any maize and that means -- hunger.

From Santa Rosa one looks far out over the mountains and 133
across the great plain of Boyuovis, over the country that was 648
the native land of the Chiriguano, where, at Curuyuqui, they
fought their last battle with the Christians, who assume the
right to rob all weaker peoples.

After my excursion to Maringay I left the land of the 114
Chiriguano and Chané and paid my second visit, already
described in this book, to the Chorotí and Ashluslay.

/160 cont./ Ee 13

The region settled by the Chiriguano and Chané Indians is really very extensive. It is varied in nature, from luxuriant virgin forests to extremely arid valleys and plains poor in vegetation. It is in part very mountainous, but the Chiriguano and Chané are not mountain people. They stay down in the valleys and do not climb up to the peaks and plateaus, like the Quichua Indians. Ee 136

Animal life in these regions is poor, in fact, very poor. A hunting people could never live there. Now and then a roebuck, a wild pig, a few ostriches, that is all one sees in the way of big game. Bird life, too, is very poor. /161/ Ee [133] The number of lakes is very small, and they are no larger than what we would call pools in Europe. On the Rio Parapiti one sees quite a large number of white egrets (1), famous for

1. Ardea.

Ee [262] their valuable feathers. With regard to wood fowl, only the chicken called "pavas" (2) contributes to the diet. Occasionally

2. Penelope.

one sees a large-billed "toucan" (3). Sleek pigeons, fattened

3. Rhamphastus.

on maize, often live in masses in the fields of the Indians. Ee In the Rio Pilcomayo there is a great abundance of fish; in the little rivers the fish are small and poor. The Indians who [243] live in these regions have to be farmers, and they are maize [262] farmers to the highest degree. For them maize is food, [273] drink, pleasure, everything!

I have no adventures to report from among these Indians. Everyone may travel unharmed among them. The greatest sorrow of the ethnographer is that he is unable to collect all the interesting and old things that he sees there. One cannot take everything home.

/161 cont./

In the wilderness of the Chaco there still lives a Chiriguano chief, Cayuhuari, in whose village no white man has been. It is said to lie on a big lake. Large herds of horses and cows graze there, and the maize granaries are always full. The Indians are rich there, because no whites are there. At least so it is said.

Cayuhuari, who has lived in the Chaco since the uprising in 1890, has an abducted white woman as a daughter-in-law. It is said that, with the Toba, he visited the sugar factories of northern Argentina. He had his daughter-in-law with him. The owners of the factory offered to rescue her from the Indians. "I do not want to leave them," she said. "With them I have my children." This answer honors her.

The manners and customs of the Chiriguano Indians have been described by several authors (4), mostly missionaries. /162/

4. We find most of the literature cited by Domenico del Campana: "Notizie," etc., loc. cit. /"Notizie intorno ai Ciriguani (Notes on the Chiriguano)," Arch. per L'Antr. e la Etn. Firenze, 1902. Page 61./

so that we know more about them than about the Chorotí and the Ashluslay.

A part of what I have reported about these Indians is not new, though seen in a new light. Nevertheless, various things, especially concerning religion, differ from the descriptions of the various missionaries. What I have gathered here is from the Chané, and the missionaries know the Chiriguano best.

What I do not like in the various descriptions of the Indians by the missionaries is that they seem to be striving to paint their shortcomings in colors that are all too faint, so that their own "civilizing work" may seem as important as possible. The missionaries seem to me to be unable to describe the religion of the Indians objectively.

6: Nordenskiöld--15 E-6 (1908-1909) 1911 1910 Chiriguano SF/10
S-Am. Indians 57

/162 cont./

When I read how the missionaries describe their own conquest of the land of the Chiriguano Indian, it does not please me to hear only about the courage of the former and the brutality of the latter. I do not deny that the missionaries were brave, but I admire more the love of freedom and the courage of the Chiriguano Indian. If it became too difficult for the monks, soldiers almost always came to their aid. The Indians yielded to the missionaries not only as a result of the "religion of love," but as a result of bullet and lead. The path to the one soul-saving church was not infrequently soaked with blood.

/163/ Chapter Ten

From the Land of the Chaco and Chiriguano Indians

Indians as Geographers

S
913

Is there a single habitable place on the South American continent which has not been discovered by the Indians?

I venture to answer "no" to this question. We find Indians on the highest peaks of the Andes, there are Indians in the dry scrub forests of the northern Chaco, Indians roam about in the deep virgin forests of eastern Bolivia, the inhospitable islands around Tierra del Fuego are inhabited by Indians, in former times many Indians lived on the pampas of Argentina.

What a vast period of time these people required to discover every brook, every pool, every cliff, every grove on the South American continent. For four hundred years the white man with all his resources has sought to explore South America, and yet much more than one usually believes is still unexplored. He is acquainted with all the large rivers and main routes in the interior of South America, but there are still vast regions that the foot of a white man has never trod. The Indians know every country, or at least have known it.

G. Hodenhofer--16 E-5 (1908-1909) 1912 5710 Chiquano
Chaco SP 8
S-Am. Indians S3

/163 cont./

The time it took to discover this continent and become adapted to the varying climate, the varying flora and fauna, has undoubtedly been very, very /164/ long. This is also proved by the hundreds of Indian languages known in South America.

The area that every Indian knows, as a rule, is not large, but he knows it in detail. As I have already mentioned, I undertook a roving expedition of about 250 kilometers in the forests with the Ashluslay Indians. This was in their own country, and they knew it perfectly. Single individuals, as a result of trade, know something about the country of friendly neighboring tribes.

I always asked the Indians what tribes they had heard of and asked them to list them. They did so willingly, but they simply did not mention those tribes which they thought I did not know about. They did not wish to extend the white man's knowledge of the country unnecessarily. This is the reason why it is often so difficult to find a guide among the Indians. Anyone who leads the white man into a village unknown to him is a miserable traitor deserving death. The Chorotí always say that there are no human beings in the interior of their country, from the Río Pilcomayo on, where there has never been any white. The Ashluslay Indians were greatly astonished when I described to them the characteristic possessions of the Tobokua Indians and told them about the Yanoygua /Tapiete/. Then the white man knew about those tribes was completely incomprehensible to them.

The knowledge of the Indians about the continent that they inhabit is not very comprehensive. No Indian south of Santa Cruz de la Sierra, for example, is acquainted with those living north of this city. Strangely enough, the Río Paraguay is known to the Chaná Indians. They did not know the tribes there. A great chief lives there, they said. They asked me whether I had been sent by this chief to collect all the objects of ancient times, so that they would not be lost. It was to this great chief in Paraguay that an old storyteller was

C 829 /164 cont./
referring when he addressed a farewell speech to /165/ me, which began as follows: "Now you can tell your great chief that you saw us and our poverty..."

C 823 The sense of direction of the Indians has been discussed a great deal. The Indian undoubtedly has a very highly developed gift of observation, but his sense of direction is not so considerable. I wandered with the Guarayú Indians in eastern Bolivia for about 250 kilometers in deep, large forests which they did not know, and in which we often had to cut a path,

C 823

C 142 301 302

Fig. 79. Old Chiriguano with large lip-plug. Tihuiba.

C 823 step by step, with the bush knife. When the sun was covered with clouds, they often led me astray, as I could see by my compass. For a white man transplanted directly from city life into the wilderness, the Indian's intimate acquaintance with nature is remarkable. If one is accustomed to this life himself, he looks at the matter differently.

Chane SF8
S-Am. Indians 53

/166/

S
804
823
484

The distance from one place to another is expressed by all Indians by showing how far the sun must go before one arrives. If it is far, the Indian tells how many overnight camps one must pitch to reach there. Among us, too, of course, in different regions there are different ideas about long and short routes. What we call far in the city is often called short in the country. For the Indian, routes that seem short to the white man are, as a rule, long. The Indians of the virgin forest lack the marching ability that we find among the highland Indians.

S
Ce
103

The Indian has given a name to every hill, every plain, every glen. The Chané say that long ago, when all peoples fished on the banks of the Parapiti River, a great spirit (añatunpa) came on horseback and gave the various places names. This river is to be called Parapiti (where there is killing), this place Amboró, etc., said Añatunpa. Of the names of Chané villages, there are to be mentioned: Hŭirayŭasa (birds meet), Aguarăti (white fox), Aguarătimi (little white fox), Yŏvi (green water, Ouivarénda (where there is chuchio) (1), and so

1. Arundo saccharoides.

S
Ce
[824]
[411]

forth. The last-named plant, the flower stalk of which is used by many Indian tribes of South America as an arrow shaft, has now been destroyed by the cattle herds on the Rio Parapiti. The Chané, who formerly made their arrow shafts out of chuchio, now plant a type of reed which they use for arrow shafts, as do the other Chaco Indians. Other places are named after chiefs, such as Tamachindi, Tamané, and Corópa. They call one village Yahuanau. Formerly there was a swamp there, on whose banks small black creatures (yahuanau) were wont to sun themselves. Many Chané place names are untranslatable; I know of one that is indecent. A few Indian place names are undoubtedly very old, for they refer to plants, lakes, or swamps that no longer exist. In the /167/ Caipipendi valley on the Parapiti there

6: Nordenskiöld--19 E-5 (1908-1909) 1912 SF10 Chiriguano SF 10
Chane SF 8
S-Am. 51
S-Am. Indians 53

/167 cont./

is a village called Tapiirenda. The valley is now inhabited exclusively by Chiriguano, and none of them remembers that, as the name of the place indicates, Tapii (Chané) lived there.

The place names of the Indians of higher standing are retained by the whites, even if they have become the masters of the country. Thus, almost all the places inhabited by them in Chiriguano territory have Guarani names, such as Charagua (name of the cliffs peculiarly carved out by the water), Carandaiti (where palms grow). The place names of the lower tribes, on the other hand, are not kept by the whites. Thus, no white knows the Mataco or Choroti names of the various places on the Rio Pilcomayo. The settlements of the whites are named after saints, Bolivian statesman, and explorers. If a tribe, for example, the Choroti, becomes extinct, there is nothing left of its language in the place names. Investigators of place names should not overlook this.

Through association with the whites, the geographical knowledge of the Indians has been extended considerably. They go farther and farther away to seek work, and they see countries which they had never heard of before.

The Indian as Historian

If we wanted to write the history of the Choroti and Ashluslay, we could not go back very far in time. It is only in the last decades that we see them mentioned more specifically in the literature. On the other hand, we already know about the Chiriguano, from their battles with the great ruler, Inca Yupanqui, from the period before the discovery of America. Garcilasso de la Vega (1) reports on his attempts

1. Garcilasso de la Vega, The Royal Commentaries of the Yncas. Vol. I-II. Hakluyt Society. London, 1869 and 1871.

/167 cont./

to conquer the land. His description of the Chiriguano as a cannibalistic race of extremely low standing /168/ surely originated in his own imagination. The tradition about these battles has been preserved in the mountain valleys.

The territory of the Chiriguano, in spite of the centuries-long valiant defense, was conquered, step by step, in the Spanish era. As recently as 1890 part of them made a last attempt at rebellion, but they were defeated, as has been mentioned, in the battle at Curuyuqui, on the plain of Boyuovis. About 5,000 Indians had gathered there and for a whole day fought the whites in an unequal battle against fire-arms. The battle had begun in the morning and it had not yet ended in the evening when it grew dark. The situation was becoming extremely unpleasant for the whites, since their ammunition was almost gone. Unfortunately, however, the morale of the Indians was broken. They abandoned their entrenchments in the quiet of the night.

Another very important chapter in the history of these Indians is the long and persistent effort of the missionaries to conquer the land of the Indians in a comparatively peaceful manner. This is treated in detail in the literature.

Here, however, I do not wish to speak of the history of these Indians as we know it through the literature, but of the Indian as historian.

If one talks to the Indians, they do not know much about their own history; their tradition does not go back very far. The Chané on the Rio Parapiti told me they had first lived on the upper Rio Parapiti (1), but were driven away from there by a great chief. Some remained where they are now living, others set out through the Chaco to the Rio Paraguay, which river,

1. This is confirmed by Viedma: Descripcion geografica y estadistica de la Provincia de Santa Cruz de la Sierra. Coleccion Pedro de Angelis. Buenos Aires, 1836. Vol. III. Pages 180-181.

Ce 173 648 [131]
Ce [113]
Ce [167]

/168 cont./ Ce 173 648 169 [1017] c

as has been said, /169/ is not unfamiliar to the Indians. On the Rio Paraguay Arowaken /Arawak/ are also found.

The Chiriguano first lived on the lower Rio Parapiti and were driven away from there by the Chané. This is Figs. 80 and 81 appear here/ possibly "official history," for more probably the Chiriguano drove the Chané out of the fertile valleys of the upper Rio Parapiti. 173 648 131

Batirayu told me everything that he knew about the history of the Chané Indians on the Rio Parapiti. The last great /170/ chief was Batirayu's uncle, Aringui. He led many Indians of his tribe to Argentina to work. His predecessor was Yámbáe. Before him Ochoápi was invested with the position of chief. In his time the whites began to push into the country. This chief is described as an important man who sought to introduce the manners and customs of the whites among his Indians. Ochoápi is known for his extensive journeys and his persecution of sorcerers. He was said to have been in Buenos Aires. Before him Chótchori had the position of chief. In his time the whites had not yet come as far as the lower Rio Parapiti. Here the tradition comes to an end. The chiefs mentioned here were of the same family /Geschlecht/, but the rule does not pass from father to son. Ce 173 622 648 Ce [177]

I could relate a bit of history about the Chané on the Rio Itiyuro, but I do not wish to be boring with too many names. There, too, tradition does not go back far, three generations, that is all. Ce 173

In the legends of these Indians, several of which I have given below, we learn nothing about the history of these peoples. No historical events seem to have been recast into legends there. They have entirely different themes.

It is really quite strange that among these Indian tribes their history, the names of the chiefs, have been forgotten, whereas the legends have undoubtedly been preserved, though in altered form, from generation to generation for centuries. It is chiefly the wide geographical distribution of the legends that speaks for their great age.

b = opening for the head. a = armholes.

/170 cont./ Ce 173

The legendary figures and their experiences stimulate the imagination, are preserved and retold. The historical personalities and events are forgotten.

If one looks in Chané and Chiriguano houses, one finds many things preserved which are now no longer in use, /171/ but which they value as mementos of earlier times and often do not want to give up. For example, one sees handsome round pipes, "huiramimbi" (Ill. 80), which have undoubtedly been handed down from generation to generation. They were formerly used in connection with expeditions of war. Old Maringay had kept all kinds of things from olden times. It gave me great pleasure to rummage about in the old man's storage places. I wanted to buy something from him, but felt embarrassed to offer him money for his mementos.

Ce 523 [276] [72] c 523 123 126

I once found a bundle of fine, old, completely smoke-blackened arrow-points stuck into the walls. "Would you not like to sell them to me?" I asked my old friend hesitatingly. "You shall have three as presents," said Maringay. After this refusal I let him keep his cherished things.

Once I rode away from Vocopay's village in order to look up an old Chané who had an attractive old costume. After some hesitation he showed it to me. He had carefully wrapped it in other material. Like an enthusiastic museum official taking out an old gem, he unwrapped it carefully. One unmistakably saw how dear it was to him. Although I offered him a very high price, he did not want to sell it.

Ce 523 123 126 c

The fact that these Indians love their old keepsakes shows that they have a certain degree of culture. This is true only of the old people, however. The young ones are no longer like that; they sell everything without hesitation. What do they care about a worn-out old festival costume if they can get a red, fluttering scarf and trousers with jacket in exchange! The triumphal march of trousers across the world has also reached these valleys and plains.

Ce 523 178 c Ce [177]

The Chiriguano and Chané no longer carry on regular war with other Indian tribes. Occasionally, however, the Chané on the Rio Parapiti make raids on the Tsirakua Indians.

Ce 721 c [721]

/171 cont./ 000 C 648

on the Rio Parapiti make raids on the Tsirakua Indians. The Ashluslay also maintain, as my interpreter told me, that /172/ the Toba chief Taycolique, during his invasion of their territory in 1909, had several Chiriguano with him. Ce 727

Batirayu said that in former times the Chané brought home the heads of their slain enemies and set them up on the plazas of the villages during festivals. Ce 415 531

/173/ Chapter Eleven

From the Land of the Chané and Chiriguano Indians

Everyday Life in the Chané and Chiriguano Huts

Ee 361 184 114

As a rule, I felt very comfortable in the huts of the Chané and Chiriguano. The life in these villages is exactly the same. If one describes one village, he has described almost all of them.

Ee 361 [162]

Like all the other Indians whom I visited south of Santa Cruz de la Sierra in Bolivia, these Indians live in villages. Some of these villages are quite large and inhabited by several hundred persons. Often many villages lie close together. The huts, as a rule, lie around a market place on which sweetsop trees are occasionally planted for shelter in the rainy season. The market places serve as playgrounds and meeting places. The huts, in contrast to the round Choroti and Ashluslay huts, are square, and their doors, facing the village, are set in the gable. They are made of cane or wooden slats, with roofs of grass. Not infrequently they are plastered with earth.

Ee [137]

Ee 342

/173 cont./ C Ce

Under the influence of the whites, however, the Chané and Chiriguano are gradually changing their huts, and many Indians are already building huts that are identical with theirs. 342 177

No hut here has its original Indian form. The genuine Chiriguano huts (the original Chané huts are not known) were very large; up to 100 persons lived in one house, and the entire /174/ village consisted of only a few large huts (1). These C 342 178 361 592 171

1. Annua de la Compañia de Jesus. -- Tucuman y Perú -- 1596. Relaciones geográficas de Indias. Madrid, 1885. Vol. II. Page CIV. C [113]

evidently correspond to the large family houses well known in Brazil, which I saw in Bolivia only among the Chacobo, a Pano tribe from Lago Rojo-Aguado.

Even in Viedma's (2) time, at the end of the eighteenth

2. Viedma: loc. cit.

century, /Fig. 83 appears here/ however, they seem to have given up the original type of house and built smaller huts.

In many villages there belongs to each hut one or more maize granaries (Fig. 84a), in which maize, gourds, etc. are /175/ stored. These granaries are built on piles and are perhaps a reminder of the time when the Chiriguano and Chané lived in swampy regions. To each granary there belongs, as a rule, a ladder (Fig. 84b). Sometimes the granaries and the dwellings are built together into one house. /Fig. 84a appears here./ I saw such huts in the vicinity of Machareti and at Yatavéri, not far from Ivu. Not infrequently the granaries stand in the fields, far from the dwellings. C Ce 343 Ee [361] [174] C Ce 342 343

These villages are neat and clean. Huts and market place are swept daily and the refuse is burned. C Ce 364

The space in the huts is not too cramped. /176/ In each house, as a rule, there lives only one family, which, aside from the rest of the family members, sometimes consists of the husbands Ee 592

C /176 cont./
Ce of the daughters, who, during the betrothal and at the beginning
592 of the marriage, live with the mother-in-law. In front of
C the hut is the large hearth (Ill. 83) where the maize beer,
Ce and sometimes also the food, is cooked. /Fig. 84b appears
592 here./ Inside the hut there is likewise a hearth where cooking
354 is done and where one seeks warmth on cold nights and days.

C
Ce
415

roasting bowls, there are handsomely painted vessels which are brought out for the festivals, and there is the treasure pot, in which the housewife keeps all the valuables and souvenirs of the family. In it, if the home is "well-to-do," lie clothing,

Ce
[556]

/179 cont./
ornaments, bowls of silver and necklaces of turquoise and chrysocolla, and many other things.

It is quiet very early in the villages. People do not talk all night, as in a Chorotí or Ashluslay village. The young men and the unmarried young girls do not rove about in order to lie together. The virtuous Chané and Chiriguano girls are guarded by their mothers, do not seek adventure, and do not admit gentlemen callers. There are no nocturnal meals, as among the Chorotí and Ashluslay. In these villages people sleep at night, that is, if they

Fig. 88. Tobacco pipe. Chiriguano. Caipipendi. 1/2.

Fig. 89. Spade handle. Chiriguano. Ca. 1/15.

are not busy brewing maize for a festival.

Very early in the morning one is awakened in almost all villages by songs of lament. There is always someone who has lost a relative and mourns him loudly. If someone has died in the village, it is uncomfortable in the village for a person who likes to sleep late.

/180/ The women get up at the earliest hour in the morning, the men somewhat later, and the daily work begins. The first thing that the women do is to fetch water and take a bath, a truly refreshing bath.

They carry the water jugs in various ways. On the Río Itiyuro the Chané women carry them on the shoulder, on the Río Parapití in a carrying net (Fig. 87). The latter custom is also

/180 cont./ Ee
the most common among the Chiriguano. Only those women who live with the whites and have adapted their manners and customs carry jugs on their heads. 512 482 [177]

Division of Labor between the Sexes

Ee

Here too, as among the Chorotí and Ashluslay Indians, each sex, as a rule, has its specific work, as we see from the following table: 462 171

Table showing the division of labor between men and women among the Chané and Chiriguano.

	Men	Women		Men	Women
Fishing . . .	+	+ (1)	Gathering wild fruits and tubers		+

1. On the Rio Parapiti the Chané women gathered the material for the roof, that is, long grass.

2. Only in the case of Maringay.

3. Not important, actually only on the Rio Parapiti.

Ee [198] If one compares this table with the one on page 94 /omitted in the translation/, one finds that heavy wood-carrying and the building of houses has been almost entirely transferred from the women to the men among the higher-standing Chané and Chiriguano. Strangely enough, certain industries, for example, the production of clay vessels, are women's work in almost every primitive Indian tribe. Similarly, the calabashes are decorated everywhere by the men, who also do all woodworking. The reason that the women too fish here is because a number of these Indians live on rivers with little water, in which only small fish live, and in catching them the courage and strength of the fisher are not put to any test.

Branches of Subsistence

Fishing and hunting do not play an important role among the Chané and Chiriguano. As I have mentioned before, they are farmers, primarily maize farmers. These Indians live so exclusively on maize that for them all other food plays a subordinate role. The Indians living on the Río Parapití are an exception; they plant more sweet potatoes than maize, and these yield an excellent harvest in their country.

/182/ The following plants are grown by the Chané and Chiriguano:

Sweet potatoes.
Maize.
Squash (*Cucurbita pepo* Lin.).
Calabash fruits.
Beans of different varieties.
Cotton.
Urucú.
Tobacco.
Tuna (for example, at Tatevéri). Opuntia.
Millet.
Mandioca (rare).
Reed for arrow shafts (on the Río Parapití).

In the plantings of these Indians I saw neither ordinary potatoes nor bananas. The sweet potatoes, according to Batireyu's statements, were introduced at a late period by the whites. Tobacco-raising is insignificant. The Chané and Chiriguano are not great smokers. They mostly smoke cigarettes in maize leaves, seldom pipes (Fig. 88). Among them one need not give his pipe to a neighbor for further smoking.

It is strange how the use of tobacco differs among the Indian tribes. The Aymara and Quichua /Quechua/, who chew coca, very seldom smoke. They have no taste for it. The Chacobo and Atsahuaca, two tribes with whom I became acquainted on my travels, smoked just as little. When I offered a Chacobo a

When I offered a Chacobo a

/182 cont./ Chacobo a-

cigarette, he took only a few puffs, kept the smoke in his mouth for a few seconds, and then threw the cigarette away. Nevertheless, the Chacobo plant tobacco, but use it exclusively as a remedy. If a Chacobo gets a "bore," a fly larva, "Dermatomyia," under his skin, he covers the fly larva's entry spot with tobacco powder and is then able to squeeze out the dead larva in a few hours. The Chawni and Ashluslay are passionate smokers. /183/ For them smoking is one of the greatest enjoyments of life. These contrasts are quite strange.

The Chiriguano and the Chaná have extensive plantings which, in contrast to the clearings of the Chawni and Ashluslay in the wilderness, are well tended. In former times they used spades made of hard wood with attractive handles (Fig. 89), but these have now gone out of use and have been entirely supplanted by iron spades. Not infrequently the fields lie far from the villages, as, for example, in the Caipipendi valley. This is due to the fact that water is not available throughout the year everywhere in the vicinity of the plantings.

As has been mentioned, the produce obtained is stored in granaries built on piles (Fig. 94), so that it will be at least somewhat protected from rats, moisture, etc. These granaries are seen everywhere, except among the Chaná on the Río Paraguay.

The fields are fenced in with fences built brush-shaped, which are often difficult to climb over. There is no fertilization of the fields. On the other hand, a field that has been exhausted is left to lie fallow.

The time of sowing is determined by the position of the Pleiades, "yuhu." When this passes across the horizon very early in the morning, it is sowing time. When the rainy season begins, everything must be sowed.

The men clear and sow. Everyone helps with the harvest, men, women, and children. Among the Chaná in the Izozo valley the men sowed the maize, that is, they took care of the larger plantings, whereas the women were gardeners and planted gourds, beans, etc.

/183 cont./

The Chaná and the Chinguano are not great hunters. Perhaps in former times there was more hunting. Their hunting weapons consist of bow and arrow. For hunting wild pigs they use clubs, for which hunt the beleadore /bela/, "churima," was formerly used. Snares and bird nets are also found. In former times the hunters wore /184/ a cuirasse of leather cut in imitation of a European cut, obviously copied from the Spaniards (1). This

1. Vindma already mentions this cuirasse, p. 101.

was not permitted to hang in the house. Formerly, also among the Chaná on the Río Paraná, no meat could be cooked in the house; rather, this had to be done a short distance away. Boys are, of course, eager hunters of small birds. Like the men, they sometimes use clay-projectile bows.

There are hunting dogs specially trained for hunting wild pigs. In a Chaná village on the Río Dolores I saw how all the dogs had a red cross painted on their heads, so that they would not be bitten by a mad dog running about in the vicinity. It was truly amusing to see how these heathen Chaná protected their dogs against rabies with the sign of the cross.

Gerónyo told me that Chaná men, when they go hunting, are not permitted to sleep with their wives the night before.

Fishing is carried on differently in the various rivers.

In the Río Dolores women and children almost exclusively do the fishing. There are only small fish there too. I saw three methods of fishing there. Angling, fishing with calabashes, and fishing by damming up pools. The fishhooks consist of bone needles obtained from the whites. Floats and sinkers are not used.

Fishing with calabashes is done in the following way. Several bunches of leaves, which give shade, are stuck in the bottom of the river, and in front of each of these is placed a calabash (Fig. 9) with sour, ground maize (residue from beer brewing). The fish gather in the calabashes, which are taken out from time to time by the women. The latter creep toward the calabash, quickly place a hand over the opening, lift /185/ it up, and then empty the contents into pots along the river bank.

/186 cont./ Ee 226

Another method of fishing often used in the aforementioned river is to dam up longish pools in the sand, in which fish gather. After the water is emptied out of the pools, the fish are caught. Sometimes the pool is made to terminate in a channel closed off with a scoop net /Kencher/, from which the fish cannot escape. Ee

All the fishing that I saw on the Rio Itiyuro was done during the dry season, on hot, sunny days. [132]

On the upper Rio Pilcomayo the Chiriguano fish with fishhooks obtained from the whites, with nets similar to the dip nets of the Chaneé, though smaller, and by shooting the fish with bow and arrow. The arrows used for fishing have two or more points. C 226 [199] [411]

Fig. 90. Fishing with calabash. Rio Itiyuro.

C Ee 226

On the Rio Parapiti I saw Chaoé and Chiriguano fishing with a net of the type illustrated here (Fig. 91). In shooting fish, the Chiriguano there use arrows with many fine points. C [411]

In these last-named rivers the men always fish in deeper water with nets and with bow and arrow, whereas the women are content to catch small fish where the water is dammed when the river is half dry. Ee

Not infrequently the Indians undertake long journeys in order to fish. Thus, the Chaoé sometimes during the /186/ dry season visit the swamps "Madrejones" in which the Rio Parapiti disappears. 226 184 [133]

/186 cont./

It is strange that peoples who fish so much are acquainted with so little fishing gear. In my description of the Choroti and Ashluslay, we have already become familiar with this deficiency. C Ce 226

On the Rio Pilcomayo, Moberg and the author once wanted to give the Indians the benefit of our fishing experience and constructed a weir of which we were not a little proud. We set it out, firmly convinced that in the morning it would be full of fish. All we caught was wood and refuse of all sorts, and I cannot deny that the Indians ridiculed us a bit. Ce 226 123 C Ce 226

The reason for the poverty of these Indians with regard to fishing gear is not a lack of ideas, but a different one. There are, quite simply, few fishing methods suitable for these waters. Setting out a net at night is not feasible, for if a palometa fish gets into the net it immediately cuts it in two with its knife-sharp teeth. Fishing with a hook where there are such fish is also not enticing, for they bite off the hooks as easily as the lines, if these are not made of good material. In these tropical waters the fishing gear also rots more quickly than among us and thus should not be left in the water all night. C Ce 226

The Chiriguano and Chané have no vessels. On the other hand, they are extraordinary waders, and to wade in the rivers here during the rainy period is not exactly a small matter. If, however, one has the assistance of one of these Indians, one can cross if it is possible at all. C Ce 484 501

As an oddity I might mention that during my entire journey I never saw a native white or mestizo fishing. In Bolivia it is not refined to eat fresh fish. On the Rio Pilcomayo /187/ the officers of the military post almost never ate the delicious, fresh, salmon-like fish from the river, but preferred canned salmon from Alaska. Since this is very old by the time it reaches Bolivia, it tastes dreadful. Fishing with a hook is also the only method of fishing that the Indians learned from the whites. C Ce [226] [177]

As for domestic animals, the dog is the only one that the Chiriguano and Chané did not get from the whites. These dogs now seem to me to have a strong mixture of foreign blood. They always have names, for example, tirupotchi (old garment). /Fig. 91 appears here/ chapikáyu (yellow eyebrows). As a rule, Ce 231 [177] [552]

C Ce 231 /187 cont./ the Chiriguano and Chané have fewer horses, cows, donkeys, sheep, and goats than the Choroti and Ashluslay. On the other hand, they have more chickens and pigs. Sometimes one sees ducks, guinea fowl, and turkeys. In certain regions, as, for example, in the Caipipendi valley, where the Indians are wealthy, they also have much livestock. The whites, unfortunately, try in every way to cheat them out of what they have. Thus, it is not uncommon for a white man or a white woman to come into a village with a few kegs of spirits and to leave it with a couple of the best cows of the Indians. The whites are richer, the Indians poorer.

C Ce [184] [556] Ee [439]

C 227

Fig. 91. Net. Chiriguano. Rio Parapiti. Ca. 1/12.

C Ce 231 171 The menagerie of tamed wild animals which one sees in the villages of the more primitive Indians is not to be found among /188/ these Indians. A parrot that talks a little Guarani, however, is not unusual in the huts.

Preparation of Food

C Ce 252 The dirt that we come across in the preparation of food and eating among the Choroti and Ashluslay is not found /Fig. 92a appears here/ among the Chané and Chiriguano. On the other hand, the dishes are terribly monotonous. They consist of maize in every possible form, cooked maize, roasted maize, maize bread baked in ashes, maize flour porridge, and /189/ steamed maize flour. The latter is prepared in an apparatus illustrated here (Fig. 92).

Ee [262]

/189 cont./

Meat is cooked with maize as a soup or roasted. Before it is placed in the pot, it is washed clean. Fish are roasted over the fire in clamps /Klammern/ or in maize leaves. The small fish which I saw prepared in this way are taken out only when they are eaten. If there are many fish, they are dried for future use.

Especially in times of famine, various /Fig. 92b appears here/ wild plants are also eaten. Salt, which is now bought from the whites, is used for food. In former times it was fetched from the rock-salt pits on the San Luis, on the way from the city of Tarija to the Chaco, or salt was made from saliferous earth, "yukin." The earth mixed with salt was placed in a bowl of water, sank to the bottom, and the salt water was used.

Fig. 92a. Steaming apparatus. Chané. Rio Itiyuro.

Women and men eat separately. At home the men usually eat first and then the women and children. The Indians want to be left alone when they are eating. It is therefore extremely ill-mannered to speak to them during this important activity.

/190/ As far as I saw, they do not eat out of a common dish, but each one eats out of his bowl. After meals they rinse their mouths and wash their hands by spitting the rinse water over their fingers.

/190 cont./

It seemed to me that true mealtimes were observed here, the first of which was in the morning, the second in the middle of the day, and the third at sundown.

If they have an abundance of food in the house, they also invite in the neighboring households. A visiting Indian is very hospitably received. He need not leave without having received maize beer or food. In the Chané villages on the Rio Parapiti the Indians always served me a bowl of sweet potatoes when I visited them.

Fig. 92b. Upper clay-vessel. The speciman illustrated here is from the Mataco-Vejos, who learned how to use it from the Chané. 1/4.

The Chané do not eat donkeys, mules, horses, dogs, foxes, vultures, or monkeys. On the other hand, puma and jaguar are regarded as edible.

Even if the women in the villages are not cooking, brewing, or tending their little ones, they are nevertheless always busy. At least one almost never sees the older ones among them without an occupation. They spin, make clay vessels, weave. I learned to appreciate these women; I admired their loving care of the children, their industry, their maintenance of the home, their skill, and their tame.

/190 cont./

Games

Ea 524 [177]

Sometimes one sees the men playing. The most common game is now tabe, which is played with the ankle bone of a cow and which these Indians learned in the sugar factories. Dice games, too, are not uncommon there. The rules for these seem to be their own, or rather seem to be copied from the whites.

"Daro," as the Chiriguano call the dice game after the Spanish, is played by two persons with /191/ dice made by them themselves. In Tiluliga I noted down the following rules for this game (Fig. 93).

All other combinations are = 0. The first one to have ten strokes wins. The strokes are marked on the floor.

As for their own games of chance, they have two. The first is the same as the one we became acquainted with on page 73 /untranslated/ in connection with the Choroti and Ashluslay. The Chiriguano call this game "chicarly," the Chané "chunquiori" (1).

Fig. 93. Rule for the game of "daro." Chiriguano. Tiluliga.

Ea [113]

1. Cf. Erland Nordenskiöld: Zeitschr. f. Ethn., 1910, Nos. 3 and 4.

The other game known to the Chiriguano and Chané I did not see among any other Indians. They call it mikaeta and play it with a pile of little sticks which are convex on one side and flat or concave on the other (Fig. 95).

First a stick (mikma) is placed in such a way that it points to the one who is supposed to throw (Fig. 96). Let us assume that it is placed so that the convex side is up. If two or more sticks fall on one another crosswise with the convex side up and without being touched on the upper side by a stick with the flat side up, they go to the thrower. If the mikma had been placed so that the flat side was up, only those which formed a cross with the flat side up would have counted.

C
Ce
524

/191 cont./

The players take turns throwing, and each one places the máma to suit himself. The one who gets the most sticks wins.

If only four sticks are left, no máma is put down any more, but the players decide whether the convex or flat (concave) ones are to count.

/192/ Sometimes one sees the women playing ninepins, called

Ce
524
516

Fig. 94. Chané boys playing chunquanti on the Rio Itiyuro.

C
Ce
524

"itarapóa" by the Chiriguano in Tihuĩpa, "tocoróre" by the Chané on the Rio Parapiti.

In Tihuĩpa it was played in the following manner. Two rows of maize kernels, two with one on top of the other in each case, were set up four to five feet apart as pins. Two persons played alternately, trying to knock down the maize pins of the other with a stone ball. The first to knock down all the maize pins of the other was the winner.

/192 cont./ C Ce 524

On the Rio Pilcomayo three pins were used on each side. The distance between the pins of the opponent was three ells. Each pin consisted of a shelled ear of maize, and the distance between them was supposed to be a hand span (1). The balls Ee [804] [323]

1. Longest distance between thumb and little finger.

used are made of fired clay and are hollow, with small, rattling pellets inside (Fig. 99). /Plate 17 appears here./

C Ce 524

Fig. 95.
Little sticks for the tshűcareta game. 2/9.

/193/ The Life of the Indian Children C Ce 855

If one speaks of the life in the villages, one must not forget the children. The children play, but also help the adults. They are reared like the Choroti and Ashluslay children. They spend their lives in happy freedom, without thrashings and harsh words.

The Chiriguano and Chané children have a number of games and toys which one never sees the children of the whites in Bolivia use, and all of which seem to me to be genuinely Indian. Ee 524

First of all, the Indian children play the games of the adults that I have already mentioned. Of the Choroti and Ashluslay games, they are familiar with the hockey-like game of ball, which the Chiriguano call "tsca." I did not see it played among the Chané. As goals they use pits, and sometimes they hit the Ee 857 526 [171]

[text continues on p. 47] ball with rackets.

Plate 17. Palm forest not far from the Rio Pilcomayo

/193 cont./

balls with rackets. This is a boys' game here. An extraordinarily attractive and difficult game is "tóki," which I saw played by the boys of the Chané on the Rio Parapiti. It is played by two, four, six, or more persons in two divisions. The balls of solid rubber are first tossed into the air by one of the players and then tossed with the head to the opponents' side from where it is sup-

Fig. 96. Máma is set out. Tshúcareta game. Tshuípa. Chiriguano

posed to be hit back again with the head. Touching the ball with the hand is forbidden. The side that has missed the ball five or ten times, according to what has been agreed upon, loses.

The game of tóki is mentioned in one of the legends of the Chané Indians. In this legend we see how difficult it was in former times for the Chané to obtain rubber for the balls: /194/ it had to be brought from afar because there is no rubber in the Chaco.

Now they get the rubber balls from Santa Cruz de la Sierra. I saw "tóki" played only by boys. In olden times it was played not only by the men, but also by the gods. It is known particularly

/194 cont./ 3 It is known particularly from the Chiquito Indians (1).

1. Erbauliche und angenehme Geschichten /Edifying and Pleasant Tales/. Vienna. 1729. Page 55.

Fig. 97. The sticks are thrown. Tshicaeta game.

D'Orbigny (2) also mentions this charming game of the Chiquito.

2. D'Orbigny: Voyage. Partie historique. Vol. 2, pages 586-588.

On the Rio Guapuré I saw Chiquitano-speaking /195/ rubber workers playing the game, and they were extraordinarily adept at hitting the ball with their heads. Lying on their stomachs, they even caught low balls, which almost touched the ground, in the same manner.

2[i.e. The game of Téki -- Analyst]

V 626 /195 cont./

Games with rubber balls seem to have become familiar to the Spaniards at a very late date. This is evident from the astonishment /Fig. 97 appears here/ with which Gumilla (1) mentions them.

V 613

1. Gumilla: El Orinoco Ilustrado, Madrid, 1745. Page 190.

C 524 S16

Fig. 98. The players look to see how the sticks have fallen.

V 626 314

He says that the balls and the manner of playing with them are remarkable. The ball is large and made from a wood sap called caucho; with a light blow it flies as high as a man is tall.

Gumilla says that the Indians on the Orinoco /196/ played with the right shoulder. If the ball hit another part of the body, the player lost a point. He admired their playing, for they threw the ball ten, twelve times and more, without its touching the ground.

/196 cont./

Another nice game is "sóuki," which the Chané boys on the Rio Parapiti played (Fig. 102). It is played by two /Fig. 98 appears here/ boys with maize-cob arrows. First one boy throws his arrow to the ground, then the other, who tries to come as close as possible Ce 524

Fig. 98.
Split ball for the uocoóre game. 1/2. Chané. Rio Parapiti.

to him. If he comes a hand span or closer to the arrow of the opponent, he wins a point, that is to say, he gets a stroke. The one who has six points first, if the other has none, wins. Each one plays with up to three arrows. The points are counted in such a way

C 526

Fig. 100. Playing stick. 1/16. Tihulpa. Chiriguano.

Fig. 101. Racket. 1/16. Tihulpa. Chiriguano.

that only what one has over the other one is of value. Ce 524

/197/ "Huirahuahua" is a game (Fig. 103) played only by the younger Chané boys on the Rio Parapiti. It is played by two boys with one stick apiece. One of them throws his stick so that the point strikes the ground and bounds back as far as possible. Then the second one throws. The one who has thrown farther gets a stroke on the ground. The one who first gets eight strokes while the other stands at zero wins.

C 524 /197 cont./

I saw the "parama" game played by the Chiriguano in the Caipipendi valley. It is played by two. A button or the like is placed on a stone as a goal, whereupon they throw small round stones made of clay shards. The button is supposed to be struck down, and the one /Figs. 100 and 101 appear here/ who comes closest to it wins a stroke. The game goes on until one of them has five or more strokes, according to agreement.

C Ce 524 The Chané and Chiriguano children also have a number of toys which are illustrated here (Figs. 104-105). One of these, "mumdu" (Fig. 104), is strange. With it /198/ a buzzing tone is produced if the threads are first twisted and then stretched.

Ce 524

Fig. 102. Maize-cob arrow. 1/2.
"Sóuki." Chané. Rio Parapiti.

Fig. 103. Little stick for the huirahuahua game. 1/2. Chané. Rio Parapiti.

Now I have no doubt properly bored my readers with Indian games and toys. Perhaps I have dwelt too long on this subject, so little studied in South America, which interested me keenly on my journey. As among the Choroti and Ashluslay, I liked playing with the boys. This is also a way of coming closer to the Indians, of winning their confidence.

Ee [123]

Ee 85 [797 177]

Like the Choroti and Ashluslay children, the children of the Chané and Chiriguano are seldom bored; like the former, they are well-behaved and good children. It is usually very lively on the playgrounds in the villages. This is true of the heathen. The children who have fallen into the hands of the monks look melancholy and reserved; they have already been given a taste of what the children of the white men learn, training and the beginning of civilization. "You shall..." "You shall not..."

/198 cont./

The games and toys are of great interest from the anthropogeographical point of view. We do not find the majority of them outside the Chaco and the adjacent regions of South America. On the other hand, we find them in North America. Consequently I have /199/ /Ill. 104 appears here/ /200/ come to the conclusion (1)

1. See also Erland Nordenskiöld: Zeitschr. f. Ethnologie, 1910. Nos. 3 and 4.

that the games and toys are vestiges from a time when the cultural exchange between North and South America was greater than now, or, more correctly, that traces of a cultural stream coming from the north extended down as far as Argentina. A peculiar similarity also exists between the types of tobacco pipes that one finds in southern South America and in /Fig. 105 appears here/ North America. The striped pottery which I found in my excavations in eastern Bolivia, in Moxos, also points to influences from the north.

custom of cutting the hair short, however, is becoming more prevalent, in order to be just as elegant as the whites. When they travel over stony or thorny ground, they wear sandals on their feet, like the women.

These Indians do not often paint themselves ordinarily.

Co [142 291 302]

Fig. 106. Chané women from the Río Parapití, clothed in "tiru."

Sometimes one sees a woman who has painted her face red. The whites maintain that it means she is anxious to get married, or, if married, lascivious. I do not venture to say, however, that this is true. /Fig. 108 appears here./ The women also commonly paint a red line here or there on the face, or they simply paint a flower on each cheek. The men, too, sometimes paint the face and body red. As a great rarity I saw a couple of Chiriguano women who were tattooed on the arms (Fig. 108). In the Caipipendi valley the Chiriguano women have disgusting habit of blackening their otherwise white and sound teeth. Viedma says that the Chiriguano men were in the habit of painting their teeth blue.

Cleanliness

C
Ca
615

The Chané and Chiriguano are very clean. As has been said, they start the day with a bath and then often bathe several times in the course of the day. This cleanliness is strange among tribes who often live in regions such as, for example, the Caipipendi valley, where a great shortage of water prevails. During the dry season they can never take a bath there, but the

C

A and B = men. C and D = women.

C
Ca
615

women at least wash their bodies thoroughly every morning.

C
Ca
174
515

/204/ The contrast which is evident here in the need for cleanliness on the part of the various tribes may be explained, in my opinion, by their migrations. The Chorotí, Ashluslay,

Ec 284 175 515

/284 cont./

and Mexico, who will in part down in far climate, seem to me, like the Fueginos and Patagonians, to have immigrated to the Chaco from the cold pampas to the south where walking was extremely unpleasant, whereas the Chiriguano and Chaco come from the north, out of the warm, humid, virgin forests, from the great rivers, where bathing was always pleasant and refreshing. Now, where /Fig. 109 appears here/ they live under the same climatic conditions, the former have preserved their dirt, the latter their cleanliness.

Chapter Twelve

On the Life of the Chané and Chiriguano Indians (Continuation)

From the Womb to the Grave

C Ca 843 Ca [123] Ea 899 Ca 846 Ea [171] Ca 846 262 Ca [125] C 846 262 Ea 171 846 Ea [173]

The Chané and Chiriguano women work hard even during pregnancy, until they are to give birth. In Vocapoy's village there was a pregnant woman to whom I gave a pigeon that I shot. Vocapoy thereupon told me in great excitement that a pregnant woman must not eat pigeons. When a Chané or Chiriguano child comes into the world, it undoubtedly does not cause its mother much pain. These women are healthy and give birth easily, as do all Indian women who lead a healthy life and have never worn tight-fitting clothing. They also do not lie in childbed; instead, that must be done by the papa of the little one. Here, too, we come across this strange custom, the "couvade," which is known from so many Indian tribes. The husband is supposed to lie down for several days and observe a diet. Among the Chané on the Rio Parapiti he is permitted to eat only cooked maize and maize soup during the first few days, and later sweet potatoes as well. For several days he may not eat meat. For example, if he eats the meat of a goat, he will die, bleating as it does. The Chiriguano Indian Taco told me that he got his fat stomach because he did not observe this important custom. "I should have lain for five days and stayed on a diet," he said.

The custom of the couvade, as it well known, is very widespread in South America. Among the tribes with whom I am familiar it definitely occurs, aside from the /207/ Chiriguano and Chané, among the Choroti, Gûarayó, and Chacobo. K. v.d. Steinen (1), who describes this custom in detail from the Rio Xingu,

1. Karl v. d. Steinen: Unter den Naturvölkern Zentralbrasiliens /Among the Primitive Peoples of Central Brazil/. Berlin, 1894.

/207 cont./

says it is probably known to all Brazilian tribes. On the other hand, the custom of the couvade seems to be unknown to the Quichua /Quechua/ and Aymara, that is to say, to the mountain culture in Bolivia and Peru. This is one of the many contrasts between the Indians of the mountains and of the virgin forest.

The Gûarayû Indians of northeastern Bolivia told me that if a man goes hunting immediately after his wife's confinement and, for example, shoots a parrot, he might kill his child. That is, during the first days of life the soul of the child follows the father.

Illegitimate children are very rarely born among the Chané and Chiriguano. I believe, perhaps I am mistaken, that the women of these Indians are chaste before they marry. On the Rio Itiyuro, among about 500 Chané, there was only one child born to an unmarried woman. Deformed children are very rarely born. Thus, from what I saw and what Batirayu said, in the entire Parapiti Valley, among 1500-2,000 Chané, there is no one who was born blind, none cross-eyed, no idiot, and only one with deformed extremities, and four deaf mutes. I did not observe any Indians with a serious stutter.

I do not know whether among these Indians, too, deformed children are immediately killed, but this is probably the case. Nor do I know whether abortion occurs. It is certain, however, that these healthy women seldom bear children who are not well formed. Nevertheless, in the Parapiti valley, as was said, there was a boy with deformed extremities. One hip bone was too short and one arm was also crippled. This boy was treated by all with extraordinary kindness, /208/ and loud approval was expressed when I gave him a few small presents.

When the child begins to walk, it is given a name. This is not given by the father or mother, but by its grandparents. Among the Chané on the Rio Parapiti I wrote down a few names. If it is a boy, he is called, for example, yatéurembi (lip of the tick), huásucaca (guanaco), tátunambi (armadillo ear), yánducúpe (ostrich back), vacainyáca (cow head), aguárachivi (fox urine), derésa paravéte (your poor eyes); if it is a girl, for example, árasaypoti (guava blossom) (1). A great many of the names are

1. Psidium guayava.

Ce 551 /208 cont./

untranslatable. Not infrequently a nickname is added to this name. Thus, for example, the Chané chief Boyra (Boy-snake) was called yûruhuasu, which means big-mouth. Indeed, old Boyra was a talker who had a great weakness for everything that was a bit indecent.

Ee 862 163 Ee 849

Mothers nurse for an unusually long time, and it is several years, as a rule, before they have another child. Perhaps the woman also aborts the fruit of her womb occasionally, like the Choroti woman, so that the family will not become too burdened.

E 163

In the mission station in Ivu I tried to gather statistics about the number of surviving children in 127 Chiriguano marriages and found that in ten marriages there were no children, in 27 one, in 35 two, in 29 three, in 13 four, in 9 five, and in 4 six. These figures, however, are quite uncertain. Nevertheless they show that here, as among many other Indian tribes, there is a sort of two-children system.

C 849 114 C [113]

Corrado (2) maintains with certainty that infanticide occurs

2. Corrado: El Colegio Franciscano De Traija y sus misiones. Quaracci, 1884. Pages 526-527.

among the Chiriguano. It is done in desperate cases among us, too, and therefore the example cited by Corrado means nothing. The question is: does /209/ infanticide and abortion occur as an institution accepted by the tribe, as among the Choroti? /Fig. 110 appears here./

C 847 Ee 868 857

The Chané and Chiriguano children, as has been mentioned, are brought up in freedom. They spend their childhood playing. Gradually the child begins to help its parents in small matters, for example, in carrying water and wood, tying up /210/ the domestic animals, fishing, etc. The girls learn spinning, weaving, making clay vessels, brewing maize beer, etc. from their mothers. They learn everything by imitation. The boys pursue small birds around the village and in this way learn the use of weapons. The children accompany their parents to fish and to till. The boy

C
Ce /210 cont./

858 accompanies his father on the hunt and feels extraordinarily
857 proud and clever if he is allowed to go home with the "common" hunting booty. The children see and learn. It is fun for them to help father and mother.

When a girl has her first menstruation, she is put in a compartment in the hut, a sort of closet. Her hair is cut short, and she may not come out until it has grown medium long again. Accompanied by her mother she may go out and attend to her needs, for example, bathe, etc. Between the first and second menstruation she must stay on a diet. She may eat cooked maize and meal. The Chané call this custom "yimundia."

In a Chané village, Aguariti, I saw a girl who was sitting in such a closet. She was spinning. I peered into the closet, which was probably wrong of me, for on the next day girl and closet had disappeared.

P. Chomé (1) already mentions this custom in connection

1. P. Chomé, p. 320. The same priest also speaks of the custom of the couvade among these Indians, p. 321. Lettres édifiantes /Edifying Letters/. Vol. XXIV.

When the girl emerges from this imprisonment, she is marriageable.

/211/ When the Chané boy is about 10-12 years old, his lower lip is pierced by a man particularly experienced in this. A small piece of wood is stuck in the hole. The boy must lie down for a day. His grandfather comes and tears deep wounds in his body, so that he will become brave in battle and a capable hunter. In the morning, when it is still quite cold, he takes him to bathe, so that he will become a proper man.

For one day the father may not consume anything, so that the boy will not become loquacious. This shows that the Indians do not like prattlers.

When the boy grows older, he receives in place of the small piece of wood a larger one, and when he becomes a man he may parade around with a large plug, "tembeta," in his lower lip (Fig. 79). This is supposed to be of wood in which pieces of turquoise and chrysocolla are set. Among the Chané and most of the Chiriguano only the old men now have the tembeta.

/211 cont./

Chiriguano only the old men now have the tembetá. The Chiriguano chief Maringay, who still respects old customs, has the lower lip of all boys pierced. Maringay is one of the old ones who say contemptuously: The "ava," the man, who does not wear a tembetá looks like a "cuña" (woman). To call men the insulting word "woman" is to insult them in Chiriguano fashion. The ones who are "ava" say of the Chaná, who have small tembetás, "cuñareta" (women).

Nowadays most of the tembetás are made out of tin and pieces of glass by the whites in mountainous region. Among those who have made them is the Italian Pablo Piotti. His work has even managed to get into European museums, without ever having lodged in an Indian chin. In former times the Chiriguano also had tembetás made of transparent resin (1).

1. P. Chomé: Lettres édifiantes. Vol. XXIV, p. 317.

If the Chaná or Chiriguano boy wishes to marry, he sends the parents of the girl all kinds of hunting booty. Vocapoy /212/ told me that he places wood in front of their houses. If the wood is used, it means consent, if he finds the wood untouched, he is rejected. If he has been successful with the wood, he asks the mother of the girl for her. She then answers that she cannot know whether he will be a good husband who can provide food for his wife. In order to demonstrate this, he must serve his future mother-in-law for about a year. Thus, marriage is a sort of purchase.

The Chaná and Chiriguano men go courting nowadays in the same way that they did 200 years ago (1).

1. P. Chomé, op. cit., 319.

The night before the wedding, the young man sleeps with his girl. The wedding is celebrated with a drinking bout, with no other ceremonies than much drinking of maize beer. The newlyweds receive good wishes. As a rule, the young people go on living for a while in the house of the mother-in-law.

Ee /212 cont./

581 Marriages seem to me to be happy as a rule. In the village of the Chané chief Vocapoy, I had an opportunity to see several newly married couples. The happiness of the honeymoon month seemed to me unfeigned, and the young wives worked industriously for their husbands. Nevertheless, among the Indians, as among other peoples, there are women of different character. There were some who worked all day long for their homes, and others who seemed to live only to amuse themselves.

Ce 582 Sibling marriages are forbidden, whereas male and female cousins may marry (at least among the Chané).

Ee [171] This, on the other hand, as has been mentioned, is not permitted among either the Choroti or the Mataco.

Ee 595 Among the Chané and Chiriguano there are some who have several wives. This is true, however, not for the young men, but for the older ones, especially the chiefs. Vocapoy had four wives, who lived in different villages. /213/ Taco is said to have seven, Maringay has two, who live together. Old Mandepora (Fig. 111) is also said to have a larger /Fig. 111 appears here/ number. These older exalted gentlemen often abandon their wives and acquire new, young, and pretty ones.

[643] Ee [586]

Ee 582 Except for these cases, the difference in age between the spouses does not, as a rule, seem to be more than a few years.

C 577 177 797 831 /214/ If one talks to the missionaries about the moral conditions among the Indians, especially among the Chiriguano, they paint them in black colors. The moral conduct of the Christian Indians is, I am afraid, very bad, but in the valleys where the white man has not corrupted the Indians I never saw an instance of promiscuous love, as among the Choroti. Maringay's village is typical of the old customs, and nowhere have I seen as strict morality as prevailed there. In these purely heathen villages no girls was ever offered to the members of the expedition, whereas this did happen at the mission stations.

C [837]

C 577 831 175 The following opinion is given by the Jesuit priest Ignace Chomé in a letter of 1735 (1), at a time when they were still

1. Chomé, op. cit., p. 318.

/214 cont./

577 entirely untouched by the civilization of the whites, an opinion
831 which I shall reproduce here verbatim:
175

"Ce qui m'a fort surpris, c'est que dans la licence où ils vivent, je n'ai jamais remarqué qu'il échappat à aucun homme la moindre action indécente à l'egard des femmes, et jamais je n'ai oui sortir de leur bouche aucune parole tant soit peu déshonnête

643
291
415
142
352
516

Fig. 111. The Chiriguano chief Mandepora.

577 /What surprised me very much is that in the freedom in which
831 they live I never noticed the slightest indecent behavior on the
175 part of any man with regard to women, and never did I hear from their lips any word that was the least bit immodest/."

/214 cont./

581 This Jesuit priest describes the marriages of the Chiriguano, however, as very loose.

581 With marriage, life begins in earnest for these Indians.
273 It consists of work and drinking maize beer. I have already described their work somewhat; I shall discuss their drinking bouts below.

165 The life of the Indian men and women passes more quickly

142
291
516

Fig. 112. Old woman. Rio Itiyuro.
Her grandsons were about 18 years old and younger.

165 than that of whites. The age of the Indian is very difficult to determine when one has no definite figures to go by. Maringay told me that he was the oldest of his tribe, that none of his contemporaries was living any more. The whites said that Maringay was over 100 years old. This is exaggerated, however. As a newly married /215/ youth 16-20 years old, Maringay visited

C 165 /215 cont./
President Belzu in Sucre. The latter governed between 1848-1855; thus, 100-year-old Maringay is obviously not more than about 80. An 80-year-old Indian is therefore the oldest of his tribe.
C 145 Among the Indians one almost always sees /Fig. 112 appears here/ that the one who has grown-up grandchildren is very frail and senile and stands at the brink of the grave. Indian men and women
C mature very rapidly, but also age quickly. At 50 the Indian is an
[114] old man, at 70 a so-called centenarian. Im Thurn (1) likewise

1. Im Thurn, op. cit., p. 190.

believes that the Indians do not grow old. /216/ He thinks that
C they seldom reach an age older than 40 or 50.
142 Maringay's hair was slightly gray. There are some Indian men and women whose hair is almost whitish yellow, but they are
C [145] rare (Fig. 112). I never saw a bald Indian. When they are older,
[144] their faces are deeply furrowed. Not infrequently they become blind in old age, less often deaf.

Ee Among the Choroti and Ashluslay the appearance of old
142 people is often frightening; they are dirty, emaciated, and
515 bleary-eyed. This is not the case among the Chané and Chiriguano. These Indians know how to grow old in beauty, and even the old people keep themselves nice and clean.

Ee If the Chané or Chiriguano Indian becomes seriously ill,
756 the medicine man is sent for, as among other Indians.

The Chiriguano and Chané distinguish between two kinds of medicine men, whom they call "ipáye" or "ipáyepótchi." The
Ee former are good and lift the spell; the latter are able to lift the
[758] spell and to bewitch.

C I once jokingly asked a Chiriguano whether Father
756 Bernardino in Ivu was an "ipáye" or an "ipáyepótchi." The Indian
797 answered dutifully, an "ipáye." The position of the missionary among the Indians is that of medicine man; he assumes their power and their influence.

Ee In the preceding I said that the whites in the vicinity of
756 Ivu sent for an Indian medicine man to drive away smallpox.
177

Ea /316 cont./
754 They also sometimes believe that they are bewitched by the
177 Indian. A colonist, Gutierrez, flagged an Indian. The latter bewitched him, so that he became ill. Inside his stomach it sounded like the croaking of a frog.

Ea The medicine men try to discover the bewitcher with smoke.
755 I did not see how this was done. The bewitcher, if he or she is
754 discovered, is killed.

000 /317/ In the following I shall speak about the connection of the medicine men with the great spirits.

Ea There seems to be no difference in the appearance and
755 the method of the medicine men among the Chaneti and
756 Ashluslay and among the Chané and Chiriguano. It is the same
FU sucking out of foreign objects that have entered the body through
Ea bewitchment. Among the lower the medicine men are more
[177] secretive than among the former. Perhaps their contact with the whites has had the effect that they themselves are beginning to doubt their art.

Ea There is a difference, however, in the common remedies.
757 The first-named Indian tribes obtain their remedies, as a rule,
[171] from the vegetable kingdom. They boil decoctions of certain
Ea plants. The Chané and Chiriguano, on the other hand, except
[237] for certain plants, use animal remedies. Thus, on the Rio
Ca Itiyuro, the Chané use the fat of herons for swellings, wild pig
757 fat for fever, jaguar fat for pains in the bones, and toucan beaks
237 for female hemorrhages. The Chané on the Rio Parapiti use the fat of the ostrich for chest pains, of the iguana lizard for conjunctivitis, of the chicken for everything, and maize beer for colds. I saw fat applied exclusively for external use.

Ca The Chané Indian is remarkable with regard to aseptic
752 treatment. I saw several times how they treat wounds in accordance with a most modern method, namely, with boiled water. This is different from the whites' use of pig excrement and the fresh urine of human beings, along with salt, for the same purpose. The reason that these Indians are familiar with such a modern
Ca method is undoubtedly their great cleanliness. They are used to
[515] washing themselves constantly. They probably hit upon the idea

G. Nordenskiöld--70 E-5 (1908-1909) 1912 SF10 Chiriguano SF10
Chane SP8

/217 cont./

of boiling the water because they wanted to kill the macroscopic animals in it. The Chané sometimes use fresh leaves to bandage wounds.

If, in spite of the medicine man's efforts, the /218/ spell cannot be lifted and the Chané or Chiriguano Indian dies, he or she is buried under the hut in a large clay vessel. Before the dying one is quite dead, or immediately after death, he is flexed so that the knees come under the chin and the arms are laid crosswise over the chest. On the Rio Parapiti there lived for many years a Chané Indian who had been flexed in this way, but who, before he was stuffed into the grave urn, was saved by a white man. The deceased, dressed, with a water calabash at his knee, is set into the vessel. The water is supposed to be taken along by the deceased when he wanders about on the mountains, the Chané chief Vocapoy told me. The vessel is buried in the hut, and another vessel is put upside down over it as a lid.

At Tatarenda, near Yacuiba, I heard that the hut is burned down after the burial. This, however, is not the usual thing. On the contrary, the hut is abandoned for a time after the burial and then moved into again later on. This is what happened, for example, in a Chané village on the Rio Itiyuro, where I was shortly after a burial.

The large maize-beer vessels (Fig. 113) are used as coffins. If there is a shortage of vessels, burial often takes place in another way. In a Chané village, Copéri, on the Rio Parapiti, a child was buried in a skin under the hut shortly before my arrival.

These Indians spend their lives on the graves of their dead relatives, and often the hut is so full that a later burial in old pots becomes necessary.

"The Christian carries his dead far from his house. We Indians, who feel a great love for them, keep them in our houses." That is approximately what Vocapoy once said to me when the conversation turned to this strange method of burial.

/218 cont./

766 754 825 If a Chiriguano is killed by a jaguar, he is /219/ buried with his head downward, so that he will not go about as such an animal. This notion of a jaguar who was a human being is widespread, especially among the Quichua /Quechua/, where this

764 415

Fig. 113. Chiriguano grave.
Caipipendi.

766 754 825 strange animal, as has been mentioned, is called uturunco (cf. p. 12 /untranslated/). If a fox howls at night near the village, someone will die.

763 825

Ec /219 cont./
765
302
[587]

If her husband dies, the wife is supposed to cut her hair short. /220/ If she loved him very much, she does it twice. It is not until her hair has grown long again that she may enter into another marriage. If her father or mother dies, she cuts her hair short; if her child, her brother, or brother-in-law dies, she cuts it moderately short. Long hair means that it reaches to the shoulder. My question as to whether the men also cut their hair in mourning was answered with laughter. They content themselves with shortening only the longest. The men may not marry until about a year after the death of the wife.

C
765
301

If the woman is in mourning, she wears no ornaments. When I was with Maringoy, his daughter-in-law had lost her little child. Though all the other women in the village wore many necklaces, she did not have a single ornament. She also did not take part in any festivity.

Ea
764
177

The Indians whom the missionaries baptize do not always like having to bury their dead in a cemetery. They at least want the dead to have water with them in the grave.

One does not free oneself so easily from the old, inherited ideas, in order to exchange them for new ones. /Fl. 18 appears here./

/221/ Chapter Thirteen

000 On the Life of the Chaná and Chiriguano Indians (Continuation)

Ugly Words, Homosexuality, Suicide, Sense of Modesty, etc.

In the language of the whites there are, as is well known, a number of words that may not be used in polite society. Persons of the same sex may mention certain parts of the body only by their baby names, whereas persons of different sex, as a rule, do not speak of them at all to one another. One word may be regarded as ugly, whereas another word for the same thing may be used at will. The reason why a word is forbidden is undoubtedly often difficult to determine.

Ea [109]

2. Koch-Grünberg op. cit., Vol. I, p. 120 /Zwei Jahre unter den Indianern (Two Years among the Indians), Berlin, 1903/.

Ea [124]

not that even the women among the Indians on the Xingu and Rio Negro speak of sexual parts quite openly, as of something natural. The same is true among the Indians with whom I became acquainted. When I inquired about words touching on the most intimate things, even the women, indeed, the young girls, answered in the most natural manner.

Ea 75 134 138

There are words, however, which are prohibited. Such words among the Chaco are "tomoichi," which is an abusive word, "uvishi," which designates homosexual intercourse, "hufir," which means anus, and "ufui" among the Chané /111/ and Chiriguano, which has the same meaning as uvishi. There, too, the unnatural in sexual life is so shameful that it is not proper to speak of it.

c 134 138

There are also Indians who never want to speak about such things. This was true, for example, of a Chiriguano whom I had with me on my first trip on the Rio Pilcomayo. He even pretended that he had never heard such things mentioned. When I asked him about homosexuality among his countrymen, he feigned stupidity and said more or less: "Is that what the whites do?"

c [128]

Ca 531 131 [531]

Among the Indians, as among ourselves, there are nevertheless some who take pleasure in telling obscene stories. Such a one was the old Chané Bíyes, he who had the abusive name yáubuanu, big-mouth. The more disagreeable the things he related, the more old Bíyes enjoyed himself. Sometimes he told such things that even my friend Beizeyu, who used to interpret, was quite embarrassed. The old Chiriguano Tombéi was also one who could tell all kinds of obscene stories.

Ca [118]

c [531] [131]

59
57

/[illegible] man./

Bilyre told how the fox-god, Aguaretunpa, and the iguana lizard, Tiyubuam, had a homosexual relationship. Bilyre's story was so extraordinarily realistic that I cannot possibly reproduce it here. He also told how the fox married a wood fowl (?), "Ilibe-Ilibe," who was also a man.

I. Passage./

Aguara (the fox) once came to the hut of the wood fowl.

"How are you, brother?" said the fox.

"Fine, come sit down, brother," said the wood fowl.

The fox sat down. The wood fowl had hung up many moles, "[illegible]," which he had caught.

"Do you want to eat moles?" said the wood fowl.

"Yes," said the fox and ate one. He then asked for another, and another, etc.

/[illegible]/ Finally he asked if he might take two along for his children. The wood fowl gave them to him. The fox, who had no children, devoured these too.

"Do you have a wife?" said the fox.

"No, I live here with my sister," said the wood fowl.

The fox then departed. When he came to a "supua" plant, he hung his penis up, took down a fruit, and put it at the place where his penis had been. The supua looks like a vulva. The fox then took his testicles out and plugged the hole. Then he came to a house where several women lived.

"Do you want to make siru (women's attire), necklace, and hair band with me for a horse?" said the fox.

"Where do you have your horse?" said the women.

"I shall come with it tomorrow," said the fox. Then he was given siru, necklace, and hair band, put all this on, and set out by a different route for the house of the wood fowl. When he arrived there, no one was at home. So he lay down in the hammock. After a while the wood fowl came home.

"Where do you come from?" said the wood fowl.

"From my father," answered the fox. The fox now cooked two moles and ate them. Then he cooked two more and ate these too. Thereupon he cooked two more and ate them.

Ce 539 [83]

/223 cont./

In the evening the fox asked the sister of the wood fowl: "Where do you want to lie?" "Here," she said.

"Then I shall lie down beside you," said the fox. A little farther away the wood fowl lay down. When the sister had fallen asleep, the fox stretched out his hand and took hold of the wood fowl. The latter came and lay down beside the fox.

"Are you married?" said the wood fowl.

/224/ "No, my mama did not want to marry me off," answered the fox.... (1)

1. Omitted as being too realistic.

The fox now slept two nights with the wood fowl and became pregnant. After a time the fox gave birth.

One day several birds came by there. "Give me a bow and arrow, I want to shoot," said the fox. "You cannot shoot, after all you are not a man," said the wood fowl.

"I am a man," said the fox; he took a bow and arrow and departed. When he came to the "supua," he took down his penis and put it on again.

Ce 838 [735] a [838] Ce [762]

I was told about a Chané Indian from Yecundai on the Rio Parapiti who was in the habit of wandering about in strange villages as a sponger. The Indians finally got tired of him, and once when he was completely drunk several Chiriguano Indians in the Caipipendi valley abused him. After this insult he betook himself to the lower Rio Parapiti. When news of what had happened to him in Caipipendi reached there, he hung himself in despair over this disgrace.

Ce 838 Ce [681] [762] [684]

Strangely enough, it is not regarded as a disgrace among these Indians to be the active one in a homosexual relationship, but the passive one is deeply despised. He is regarded as a woman. This is the reason why some inconsiderate whites punish incorrigible Indians with -- an enema. An Indian thus mollified disappears forever. It is assumed that he commits suicide. An Indian punishes his unfaithful wife by means of "tévi" and then leaves her. I saw Chané boys playing "tévi."

widespread among the Indians of America. The conception that this is a disgrace is by no means as marked everywhere as it is among the Indians mentioned here.

Ec 838 171 c

/225/ Among the Chané and Chiriguano I did not hear anything about onanism. Among the Choroti, on the other hand, it is said to be practiced by the men who are ignored by the women at a dance.

Ec 833 171 [839]

Perversions in the relationship between men and women, which were common in ancient Peru, do not seem to occur here. The primitive mammal position in coitus is said to be common among the Chaco tribes.

M 132 124

Mataco gave me a root which they used as an aphrodisiac.

Ec 125 773 839

The relationship between human beings and animals is so intimately intertwined in the legends of the Indians that one cannot always determine whether they mean the one or the other. The legends that describe love affairs between human beings and animals are not descriptions of bestiality, which seems to be unknown among these Indians.

Ec 834 171

The sense of modesty has developed very differently among these peoples. It seems to me to depend very much on the mode of dress. None of these Indian men or women of whom I have spoken here regards it as improper, insofar as they have not been completely corrupted or civilized, to expose the upper part of the body. The Chiriguano and Chané women are much more ashamed than the Choroti and Ashluslay when they expose the sexual parts. The latter were very reluctant to undress completely in order to be photographed. I did not even dare propose such a thing to the former.

Ec [126]

C
Ce
834
171

/225 cont./

Nevertheless, if in the evening one sat beside the fire in the hut and was acquainted with the family, they seemed to be quite free and easy. The Choroti and Ashluslay men are very shameless. The men among the Chané and Chiriguano, on the other hand, less so. It is very common for the Chiriguano and Chané women, conversing in a group, to pass water standing up and to let the urine run down their legs, which may be regarded as less than clean. The men, on the other hand, always step aside in order to relieve themselves.

C
Ce
[514]

C
Ce
833
171
834

/226/ As has been mentioned, the sexual act among the Ashluslay often takes place in the presence of onlookers. At the Choroti /Fig. 114 appears here/ dances one had to be careful in the darkness not to stumble over the loving couples. One never sees anything like that among the Chiriguano or Chané. Since many /227/ are lying in the same hut, however, one sees even among them what one always sees if one has overnight guests. This is not the least reason why the sexual life has no secrets even for small children.

C
Ce
834
177
577

Apparently life with the whites heightens the sense of modesty. The Indian women are even embarrassed to expose their breasts. Morality declines in proportion as the sense of modesty grows.

This should be taken into consideration by all those who sew clothing for naked heathen children.

C
Ce
121

Many of my readers may perhaps feel that this chapter should not have been included in my book. Nevertheless, it seems to me proper to say something about deviations in the sexual sphere. It contributes to an understanding of the people whom I am describing here. I have, of course, not been able to speak about all the realism that came out in the conversations around the camp fire (1).

1. If our daily papers, which are meant for the public, write about all kinds of things, one need not be too prudish in a travel account.

Ee 831 Ee 838

/227 cont./

The Indians regard the natural aspect of sexual life very differently from the way we view it as a rule. We do not find among these people all the corruption which is in civilized society, but various things are to be found here already. As far as homosexuality in particular is concerned, conditions among primitive peoples, as is known, show that the cause of the evil lies much deeper than in our hypercivilization.

/228/

Chapter Fourteen

On the Life of the Chané and Chiriguano Indians (Continuation)

Chiefs and Laws

Ee 622 613 [111] Ee 643 Ee

The chiefs have an entirely different position among the Chané and Chiriguano than among the Ashluslay and Choroti. They have considerable power. Among the chiefs there are the great chiefs, who rule over several villages, and the village chiefs, who have command over only one village or a part of one. Among the great chiefs whom I met, the noteworthy ones are the old woman Vuâyruyi, the chief over the Chané villages on the Rio Itiyuro, Taruiri, who rules over most of the Caipipendi valley, Mandepora (Fig. 111), who in former times had considerable power in and around Machareti, and Maringay in the Iguembe valley.

622 293 643 [301] [302] Ee

Nowadays the chiefs have no symbol of their office other than silver-mounted sticks. According to Corrado, they formerly wore a large tuft of hair on the head, "yattira," as well as green stones which hung at their ears. At the festivals and dances they had the right to use the "yandugua," a rod decorated with a bunch of ostrich feathers, and "iguirape," a staff carved with peculiar figures. Of these I was able to acquire only a yandugua. I did not even see the rest.

622 555 643

The office of chief seems to be hereditary as a rule. Capability and the art of using words well are required, however.

Ce /229/
622
173
643

Vocapoy gave me his family tree, which I reproduce here because it is very instructive, and I venture to believe that it may interest the reader to study an Indian family tree.

Vocapoy's Family Tree

Fe
643

Thus we find that the real chief on the Rio Itiyuro is a woman. I visited old Vuáyruyi. She received me with great dignity, lying in her hammock. Since the woman is old and weak, Vocapoy governs and tries, as best he can, to protect his people against the whites, who have completely appropriated their land. I asked Vocapoy why Vuáyruyi, as a woman, became chief. "Her father, Hinu Parawa, taught her to speak," said Vocapoy. Thus, these Indians regard it as most important to have command of the language in order to rule. These people are able to value intelligence more than strength. No one becomes chief who is not an older man. The husband of Vuáyruyi was not a chief, but only "prince consort." The village chiefs also belong to the family /Geschlechte/ of Hinu Parava.

Ce
[622]

C
643

Taruiri, too, is not the actual chief, but is substituting for a younger relative, who, as a result of his /230/ constant drunkenness, is regarded as unfit. Taruiri rules in the Caipipendi valley, where his territory is still free, but will probably soon be usurped by the whites. In Ivu there is a Chiriguano chief who is also a medicine man. This is the only example of theocracy that I found.

C
[759]

Ee 622 643 354

/230 cont./

The chiefs' families form a sort of aristocracy among the Chiriguano and Chané. Several times I heard Indians boast about their good family connections. A Chiriguano who accompanied me for some time as an interpreter was eager to impress upon me that he was related to the most famous high chiefs.

Just as the author of this book is customarily introduced as the son of Adolf Nordenskiöld, so the Indians were wont to introduce in similar fashion the sons of their "great men."

I even discovered a bit of deception in connection with the family tree. A Chané claimed direct descent from the great Hinu Parava, which, however, is said to be untrue.

If one wishes to find beautiful things from olden times among these Indians, one must first look for them in the chiefs' families. They keep the old treasures.

Ee [177]

More and more the white authorities are beginning to appoint the chiefs. Thus, in one region one can find a chief supported by the whites and a legitimate one.

Ee 622 423 122 643

The chiefs have great power, and, as far as I could see, they are always obeyed, in contrast to conditions among the Choroti and Ashluslay. They own the land (at least in certain regions), not for themselves, but for the tribe. If one needs porters in a Chané or Chiriguano village, one gets them from the chief, and no Indian will refuse to carry out the orders of the chief.

Ce 622 643

Although the chief has such great influence, /231/ he nevertheless works in the same way as the other Indians. Vocapoy himself, for example, carried home the heavy wood for cooking the maize beer, and his wife had to cook and sweep, like the other women. Following the example of the whites, however, a few of the most civilized and wealthy Indians, such as Taco, now have servants from their own tribe, but this was not done originally. On the other hand, as I have mentioned elsewhere, it is not unusual for the Mataco-Vejos and the Tapiete to work for the Chiriguano and Chané.

Ee [359] [177]

Ee 177 464

Ce 622 643 431 123

When we came home to Vocapoy's village from hunting and shared our booty with the chief /Fig. 115 appears here/, his wife accepted everything, but then went around to the houses and gave her neighbors everything that she had received.

Ce 565 556 621

/231 cont./

One cannot speak here of rich and poor in the same village, though there is the beginning of a nobility. On the other hand, there are rich and poor villages. There are relatively wealthy individual Indians, but they, like Taco, live like the whites.

Ce 622 701 642 643

The chief is the judge and in former times was the leader of the fighting men.

Ce 682

Vocapoy told me murder was punished by sentencing the murderer to work up to half a year for the family of the one slain. A thief gets up to 50 lashes and is sent to another village so that he will not be killed. According to Vocapoy, it is the duty of the chief to prevent blood revenge by sending away the offenders so that they will not be murdered. The murder of father, mother, or child is, according to his assertions, unknown in his region.

Ce 692 643 681 C 531 415 Ce 682

According to Batirayu, whose statements are more reliable than those of /232/ Vocapoy, the high chief of the Chané on the Rio Parapiti deals with no offenses other than murder, seduction of another woman, and bewitchment. Murder with poisoned chicha, "bád-dyási," occurred in former times among the Chané. Murderer and bewitcher were burned. The seducer of a woman was deprived of all his possessions. For the rest, theft and other offenses were settled by means of duels. If a person stole something, the injured one and the thief called their relatives together, and they fought on the open plaza in the village.

Fig. 115. Calabash. Chiriguano. Itapenbia. 1/6.

Ce 684 Ce 685 681

Ce 177 Ce 643 622 721

The administrative authorities of the whites are now intervening more and more in the legal affairs of the Indians.

In war with other tribes the chief gives the orders, as they did in the uprisings of the Indians against the whites.

Ce 423 622 643

According to Vocapoy, the chief owns the land for the tribe. Batirayu said the land rights are arranged so that everyone plants what he wishes. Land that has been cultivated has its owner, even if it has lain fallow for years.

000
Ce /232 cont./
423 even if it has lain fallow for years. Thus, fallow land is also
428 inherited.

Ce Otherwise inheritance is considerably curtailed by the
422 fact that the deceased takes part of his treasures along with him
428 into the grave.

764 As among the Ashluslay and Choroti, the right of owner-
Ce ship is well developed here too, and the women own what they
424 use and make. As among the aforementioned tribes, generosity is
171 very great here too, even though, thanks to our "civilization" and to
Ce the mission, it is less conspicuous.
425

177 Chiriguano social life -- we are not familiar with the
C original Chané social life -- was much more tightly organized
174 than the social life of the Choroti and Ashluslay. The Chiriguano
648 were a conquering people who probably subjugated the Chané and fought bravely and successfully against the Inca, and also resisted the invasion of the whites for a long time. If, instead of the /233/ many chiefs, there had been but a single one, the conquest of the land of the Chiriguano would quite certainly have cost the lives of twice as many whites as now. Unfortunately, in the battles of the whites against the Indians, there were almost always a few chiefs fighting on the side of the enemy against their own tribes. In the last uprising, decided by the battle at Curuyuqui, the whites had an auxiliary force of a couple of thousand Indians, with whom they fought against the fellow-tribesmen of the latter.

C Ce Just as everything changes in the life of the Indians when
177 the whites conquer their land, so also are social relations altered. By the time Vocapoy, Maringay, Mandepora, and a few others are lying in clay vessels under the huts, the end will have come; then the Indians will have no laws other than those of the whites, no authorities other than the latter's administrators. The Chané
Ce on the Rio Parapiti, as was said, no longer have a high chief.
643 Batirayu was offered this position, but he does not wish to be the
177 servant of the whites; he is too proud for that. "It is not as it was in olden times," said Batirayu to the eccentric white man who sought understanding and the confidence of the Indians.

/234/

Chapter Fifteen

Drinking Bouts among the Chané and Chiriguano

Ee 178 527 273 538] [805]

If a Chané or Chiriguano tells a legend, he often begins it thus: "A long time ago there was once a great drinking bout." If he reports something that happened, some illness of a relative or the like, he will say: "It was before or after the festival." Indeed, at these festivals one hears and sees most of what has remained of the old culture of these Indians. This is when the most beautiful clay vessels appear, this is when one sees costumes from olden times, this is when the stone ornaments are taken out of the treasure jars.

Ee 273 415 527 531

Among us a housewife is proud if she can show her guests beautiful tablecloths and fine porcelain. The Chané and Chiriguano women think the same way. At festivals each woman wants the maize beer at her house to be brought out in clay vessels more beautiful than those of her neighbors and to be served in calabashes that are more elegantly decorated than those of anyone else.

Ee 531 [527] [323] [462]

That is why, before each festival, the women are occupied with making clay vessels and the men with the decoration of calabashes. In the Chané and Chiriguano villages one sees magnificent collections of clay vessels. A few women in particular know how to paint these with superior skill and elegance. One almost never sees three jugs that are entirely alike. Each one tries to appear at the festival with something original, to paint something new and pretty. As far as linear /235/ ornamentation is concerned, they know how to vary the old ornamentation, but they do not know how or do not want to free themselves from them and open up new paths. The /Fig. 116 appears here/ Indian woman is conservative in her art and is able /236/ to free herself from the models of her mother's or grandmother's time only if she takes her motifs directly from nature and paints animals. By no means all the women in the villages are artists. There are some whom nature has endowed with the gift of art, and some true bunglers. Who can paint clay vessels as one of the wives of

Ee
556
531

struggle for existence is hard, they do not have much time for artistic work. If art is to flourish in the Indian home, joy and mirth must prevail.

Ee 531 177

/236 cont./

The younger generation, I fear, will prefer German porcelain and enamelware, and with that the Chiriguano and Chané art will become part of the many fine and beautiful things that will disappear before the brutal civilization of the white man. In many villages one is already obliged to rummage around in the corners of the huts if one wishes to find vessels painted with a sure hand and natural taste. The worst thing, however, is that the whites are beginning to take pleasure in the clay vessels of the Indians. This brings about mass production. For the whites everything is good enough, it need be neither beautiful nor well done. They do not want the tasteful and simple, but the garnish and strange, "curiosidades," as the Creole says. Our museums must beware of these curiosities, for they give a mistaken idea of what is truly Indian.

Ee 273

The women brew beer for the festival. This is supposed to be made with maize (preferably yellow or white), and only the poor Chané on the Rio Parapiti must often content themselves with beer made out of sweet potatoes. If algarroba is available, beer is also brewed from this fruit. "It is good and intoxicates so nicely," say the Indians.

Ee 527 261 433

/237/ If the maize harvest is abundant, there is joy in the villages; then there is food and drink in every hut. If the maize crop has failed, there is no joy, stomachs are empty, and it is quiet on the festival plaza. If the granaries are full of maize, the Indian is proud and does not care about whites, suppression, and trouble. If the barn is empty, he is subservient and morose.

Ee 273

After the women have fetched the maize from the granaries and the men have brought wood and the women water, /Fig. 117 appears here/ the brewing commences. First the maize is pounded in large mortars. Day and night one hears the busy women pounding. The pounded maize is sifted and then mixed with water in huge clay vessels and boiled. Then a portion is taken out, chewed, and mixed well with saliva. This is then poured into the rest and, after it has been strained, must ferment in large open vessels with a little heat. The pots are stirred with large wooden spatulas

C
Ce
273
[412]
[237]

The pots are stirred with large
/237 cont./ wooden spatulas
(Fig. 118a) or with shoulderblades provided with handles (Fig. 118b). It is the pride of every woman to brew good beer, "cangui," and much beer. Indeed, they are /238/ indefatigably busy. One sees them working all day, and even at night they are busy cooking and grinding. No family may refrain from making cangui.

The use of saliva may perhaps seem unsanitary. At first I thought this too, but soon I was so hardened that the cangui prepared with saliva-yeast in Indian fashion tasted better to me

Ce
273
415

Fig. 117. Cooking maize beer. Chané. Rio Itiyuro.

C
Ce
273

than that brewed by the whites in a civilized way.

Connoisseurs, not only Indians, are said to be of the same opinion as I. It is important, however, that the cangui be drunk cold; it is unpalatable lukewarm. When it has stood for a long time, it is somewhat intoxicating, but not as much so as algarroba beer.

C
Ce
273
574
576

There is a great deal of ceremony connected with cangui drinking. In front, on benches and stools (Fig. 85), sit the men, and behind them, on the ground, the women. The older ladies are given the best places. The hostess brings in the cangui in her

Ec /238 cont./
273 finest clay vessels, "yambuy," and places these in front of her
574 guests (Figs. 77 and 78). The person before whom a vessel with
576 cangui is placed must serve. This applies to the chiefs as well. Even I served at Indian social gatherings. It is not unusual for the men to serve the women and vice versa. The cangui is poured into decorated calabashes which are passed in turn. Everyone must drink up. A person who refuses is impolite and ill-bred. It is not appropriate for a person to pour for himself. If one wishes to be polite to the server, he first drains his bowl, then fills it himself, and offers it to him. If one drinks everything offered, he is a friend of the Indians. If one refuses, the Indians become mistrustful of him. An old Chané once said to me: "You are a nice Christian, even in the morning you drink maize beer with us." When Moberg returned home from the hunt laden with booty, the young and pretty women crowded around the happy huntsman and welcomed him with a calabash of maize beer. /239/ What were the hardships of the hunt /Fig. 118 appears
e here/ compared to those of drinking, for the women whose bowl
Ce he left untouched would never forget the insult. If one has
[754] enemies, the drinking of cangui can be dangerous, for who knows if someone has not put a bit of his own excrement or hair in the beer, so that one will be bewitched and die. Such things happen
C in these villages.
Ce

At the festivals, evidences of Indian humor often come to
522 light. One joke, for example, is to act as though one were hand-
527 ing around cangui in a calabash turned upside down, another is to
C ask someone to play the flute on a misshapen reed.
Ce

Dance masks are now worn by the Chiriguano and Chané
535 only during the carnival, the great drinking festival of the
532 Christians. Those that I saw had the form of human faces (Fig. 119).
177
541

Very different opinions prevail among the Indians about
Ce whether or not the masks here are of Indian origin. Vocapoy
532 said the idea for them had originally come from the whites.
177 Batirayu, on the other hand, maintained that as a boy on the Rio
535 Parapiti he saw among the Chané some of the present masks, which
Ce
[796]

Ce /239 cont./

535 were used at their great festivals. In his opinion, the Chané used
532 masks before the whites came to the country. /240/ In addition
177 in those days they had around their legs
796 rattles made out of fruits and on their
[539] heads feather ornaments of parrot feathers.
[237]

Ee The Chiriguano and Chané
532 always destroy the masks after the
177 carnival. They are either burned
541 or thrown into the river. The Chané
535 call the masks "añañya."

C It is strange what a great
Ce role the carnival now plays as a
541 festival among the Indians. This
177 undoubtedly comes from the fact
[464] that the whites distribute great quantities of spirits there and that the Indians who work for them are given a few days off at that time.

Ee Guests often come from a great
527 distance to the festivals. They appear
273 there in their finest clothing and orna-
292 ments, freshly painted and nicely
574 combed. Most of the old costumes
301 and ornaments, however, have already disappeared. Nevertheless one still sees women in home-woven clothing
C with necklaces of chrysocolla and
Ce turquoise. I never saw used, however,
[178] the silver diadem and the silver
C pins which belong to the festive attire.
912 One often sees the men's blue
237 costumes (Fig. 81) with silver chest ornaments preserved in the huts by the old people, but they are not used for the festivals.

A B

Fig. 118. Soup spatulas. Chiriguano.
A = Tihuipa. 1/8.
B = Caipipendi. 1/6.

Ce Among the Chané in the Itiyuro
535 valley I saw the Indians dance at a cangui festival. Around a "yambuy"
527 of cangui stood a few old men in twos, singing a monotonous song
273
533

Ce
527
533
535
273

/240 cont./
and beating time with their feet. The women walked slowly up and down in time with the song, outside the circle of men.

Ee
291
177

Among the Chané and Chiriguano the attire of the white man is replacing everything old and beautiful, and of my many old friends among the chiefs of these Indians only Maringay scorns the rags of the whites.

c
ce
273
177
527

Liquor is being introduced more and more among these Indians, and the ceremonial, pleasant maize-beer festivals are turning into crude drinking bouts.

/242/

Chapter Sixteen

On the Life of the Chané and Chiriguano Indians (Continuation)

Art and Industry

The Chiriguano and Chané are tribes whose art-industry is on a very high level. If one visits one of the huts of the white settlers in these regions, one will not see many products of native industry, not much of their own culture. I know of absolutely nothing that these people are capable of doing which can compare with the pottery and the weaving technique of the Indians. One thing is certain, the more "civilized" the Indians become, the less they accomplish in the way of art and industry. They do not learn much more from the whites than how to make and drink liquor. Indian art-industry is gradually disappearing here, the more the Indians come in contact with the whites, but it is not transformed. It remains largely purely Indian until its final destruction. One industry, however, is now in the hands of the whites, namely, the metal industry. The silver ornaments which, for example, the Chiriguano and Chané use are made by the smiths in the villages of the mountain regions. The half-white or Quichua /Quechua/ Indian population which we come across in the mountains west of the land of the Chiriguano and Chané Indians is quite skilled artistically. The weaving technique in particular is very highly developed there. The Chiriguano and Chané undoubtedly learned a great deal from the west.

Thus we find the serfre pipe[2] (Fig. 120) characteristic of the Chiriguano in collections from the coast of Peru (1); /Plate

1. Serfre also occur among the Lengua, Ashluslay, Chiriguano, Chané, Churápa, and Turacáre.

/243 cont./ (Fig. 130) is typically Peruvian in form, as is the silver hair remover, of which, however, I have no specimen. The festive costume of the man (Fig. 81) also seems to me to have a Peruvian cut. It is possible, however, that the influence of Peru did not manifest itself among the Chiriguano until after the conquest of the plateau by the Spanish.

Boman (1) has proved that the Chiriguano, or more correctly the Gûarani tribe to which these Indians belong, formerly extended much farther south than they do now. He found there the grave urns so characteristic of them.

Fig. 120. Serére pipe. Chiriguano. 1/4.

C Ce 171 Ce [323]

The material culture of the Chané Indians does not, in general, differ very much from the culture of the Chiriguano. The Chané, on the other hand, who are more isolated on the Rio Parapiti, have a completely independent pottery which we do not find again among the Chiriguano. If we compare the remaining products of Chané and Chiriguano industry, we do not find any greater differences than we find in the various Chiriguano villages themselves.

C [534] 534 - C [184]

C 323 184

For example, if one collects clay vessels in the Iguembe valley and in the Caipipendi valley, both of which valleys are occupied by Chiriguano, one inevitably finds that the pottery, though strongly related in ornamentation and form, nevertheless /244/ also varies locally. I have already spoken of the individual variations (p. 85).

Ca /244 cont./

28 Of the various industries, pottery stands particularly high
[323] among the Chiriguano and Chané (see the illustrations). They
[53[] are also skilled weavers and decorators of calabashes. Basketry
[184] occurs, but chiefly in the northern part of their region. Feather
Ca work is no longer done at the present time. Only ropes and fish
[439] nets, and on the Rio Parapiti hammocks and carrying nets, are made with caraguata bast. The bags of this material, so characteristic of the Chaco tribes, are never made by the Chiriguano and Chané, but are occasionally acquired by trade between the tribes.

Ca 323 Among the Chané on the Rio Itiyuso I followed the making

C 415 531

Fig. 121. Clay vessel. Chiriguano. Caipipendi valley. 1/4.

Ca 323 of pots. The clay is ground and mixed with pounded, fired potsherds, so that the vessel does not fall apart during the firing.
Ca The clay vessels are built up out of rolls in customary Indian
[413] fashion. For smoothing a mussel shell or a maize cob without
[80+] kernels, as well as a narrow little bamboo stick, is used. The maize cobs make parallel, fine scratches (1). The bamboo stick

Ca [172]

1. From similar scratches on clay vessels which one finds in archaeological diggings, one can see that the makers of the clay vessels had maize. I have seen this, for

/264 cont./

323
[172]

1. (cont.)
example, on clay vessels from Ojo de Agua in Quebrada del Toro in northern Argentina.

[516]

Fig. 122. Firing clay vessels. Chand. Río Itiyuro.

[413] [404] is also used for measuring during the manufacturing process in order to obtain the proper proportions. /265/ After that the vessel is dried in the shade for a day before it is fired. As a rule, one works on only one or two vessels at the same time.

Ca 323 531 Ca [237] [413]

/265 cont./

The coarser vessels, as well as all cooking vessels, are decorated with only finger imprints and clay loops put on them. The finer vessels are subsequently painted (see Pl. 19 /see p. 93/). /266/ With a brush made of agouti hairs (1) the decorations are

1. Dasyproctа.

Ca [316]

painted in white, dark brown, and black. The white pigment is a kind of earth (kaolin); the others are made out of slate and sandstone. They paint freehand and compose the decorations from memory, not from models. Wood, maize cobs, and cow excrement are heaped around the vessel. The fuel is lighted and must burn with a vigorous fire for a quarter of an hour or, if the vessel is large, even longer (Fig. 122).

Ca 323

Ca [354] [824]

If the vessel has been painted, it is varnished with resin, "tacuiruti," which is collected from a Mimosoideae, and with resin from the palo santo (see p. 93 /untranslated; Palosanto is identified there as Bulnesia Sarmienti/). The former gives a yellowish polish; the latter looks like greenish-black glass.

Ca [789]

When a pot is made, it is baptized before it has cooled, so that water will boil rapidly in it.

C 531 323 386

In Mariguay's village individual vessels were painted with a mixture of urucú or some other color and a vegetable fat. I was unable to see how this latter was prepared.

Ea 286

The Chiriguano and Chané women are skillful weavers. The material for the Indian weaving is, as a rule, cotton and sometimes sheep wool.

Ea [439] [177]

Since large quantities of cloth are imported by the whites, native weaving is disappearing more and more. Thus, I did not see any looms among the Chané in the Itiyuro valley, and native woven goods were very rare.

Ea 286 531 [797]

As a rule, all the weaving of these Indians is without ornamentation, or else this is very simple. The girls in the missions learn from the monks how to embroider all kinds of flowers, such as roses, violets, etc. They do this superbly.

Ee
286
531
[797]

/246 cont./

Strangely enough, after they leave the sewing class, the Indian women cease to use these decorations. It would be better if the missionaries taught the Indian children /247/ decorations connected with their imaginative life. The results of their work would then be entirely different.

Ce
286
532
177

A couple of generations ago a few Chané women learned from a Quichua woman how to weave decorations which

C
286
531

Fig. 123. Loom. Chiriguano.
Tihuīpa.

Ce
286
532
[171]

one still sees on various Chané fabrics. They were stylized animals and human beings. Plant ornamentation does not make much impression on the Indian women. Animal and human figures stimulate their imagination, and they teach them to their children.

Ee /247 cont./

531 The Chiriguano and Chané men are clever in the deco-
322 ration of calabashes (Fig. 126), carve attractive pipes (Fig.
281 120), and know how to tan leather, which they probably learned
177c from the whites.

Ee Among these Indians one does not see much in the way
532 of plastic representations of animal and human figures. The
C clay /248/ vessels sometimes have animal shapes. The
[126] Chané women on the Rio Parapiti fashioned lumpy little dolls
[437] out of wax for their children (Fig. 105). Some of the clay vessels are painted with animal figures. A vessel from the Rio

Ee 285 →

Ee
532 Itiyuro, which I acquired through barter, is adorned with tree figures. Occasionally one sees clay vessels in the shape of fruits.

Ee I saw drawings representing human beings and animals
[353] on the walls in a few Chané huts and on a few Chiriguano calabashes from the Caipipendi valley.

Ee As for basket work, the sieves are so popular among the
285 whites that through trade they are being distributed far beyond
[439] the Chiriguano and Chané region. Otherwise the Chané and Chiriguano make few baskets. We find basket work in quantities only among the Indians where the matching-leaved palms begin, and that is at Santa Cruz de la Sierra.

Ee /248 cont./
439
177

When we present a collection from the Chiriguano and Chané, we must not forget that, through trade between the tribes, they have obtained many things from the Mataco, Toba, Choroti, and Tapiete; otherwise we would have a mistaken conception of the
Ee great difference /249/ between the material culture of the Chaco tribes named here and the Chiriguano and Chané.
171

If we compare the material culture of the Choroti and Chané
Ee with that of the Choroti and Ashluslay likewise described here,
[285] we must remember the following. The Chiriguano and Chané produce basket work -- the
c Choroti and Ashluslay never.
Ce The former know how to paint
[323] clay vessels before firing,
Ee which is unknown to the latter.
[286] The Chiriguano and Chané never make bags out of
c
[415] →
[531]

Fig. 126.
Decorated calabash bowl.
Chiriguano. Yacuiba. 1/5.

caraguata, etc. If, moreover, we compare all the products made by the Chané and Chiriguano with those of the Choroti and Ashluslay, we find that most of them are entirely differ-
c ent. The Chaco Indians probably learned how to make certain
[177] things, such as the serére (Fig. 120) and huiramimbi pipes (Figs. 36 /omitted in the translation/ and 80), from the Chiriguano,
Ee but this is relatively insignificant.
177

We see here how two cultures can exist side by side for hundreds of years without mingling.

Ee If we follow the Rio Pilcomayo down toward the mountains,
101 we first come across the Quichua /Quechua/ culture, then come the Chiriguano and Chané, and after that the Chaquensic /Chaco/ culture which embraces equally the Mataco, Toba, Choroti, and Ashluslay, as well as the Lengua and other tribes in the Paraguay Chaco. These three cultures are entirely different.

Chapter Seventeen

On the Life of the Chané and Chiriguano Indians (Continuation)

Legend and Religion

Ee 538 Once there was an old Indian who used to sit beside the fire in his hut in the evening and tell about olden days, about animals, human beings, and spirits. The young people gathered around him, listening. The old man went on and on telling stories. He told them with his mouth, eyes, hands, and feet.

One young person after another, however, soon left the circle of listeners and lay down to sleep. Finally the old man was sitting alone beside the dying fire and talking to himself about the adventures of the fox-god and the armadillo-god.

To me this old man represents the old traditions, a culture that is disappearing. The young people listen for a while, but it is soon too much for them. They have new interests. They have begun dancing the great dance which the Christians call civilization, where the dancing is usually around the golden calf.

Ee [123] I also sat there as a listener and had the legends explained to me. I believe the old people liked me because I showed such great interest in their old recollections. If I now retell them, I hope the reader will be lenient with me and my old friends, with me because I cannot tell a story as well as the old people, and with the old people because they love everything that is a bit frivolous.

/251/ The legends give us insight into the Indians' ideas of the life beyond and of the spirits. In part through them and in part through the explanations which the Indians have given me, we can understand their religion. We shall hear about the destruction of the world and the theft of fire, about the visit in the realm of the dead, and, above all, about the adventures of the spirits; we shall hear how they deceived one another and human beings, hear of their combats and their vices.

Ce /251 cont./

There is very little moral teaching in these legends. The
538 characters in them are often "tunpa," that is, they have super-
natural power, that is all.

Ce As a result of contact with the whites, the legends are not
[177] free of foreign elements. Most of them, however, are purely
Indian.

Ce
539 1. The Destruction of the World and the Theft of Fire.

Ce
[115] Told by the Chané Indian Batirayu from the Rio Parapiti.

In the old days there was once a very poor man who wandered about in the forests and had no permanent residence. When he came into the villages, he was driven away and the dogs sicked on him. When the man saw that he was not wanted in any village, he made himself a hut, "tocay" (1). All kinds of beautiful birds

Ce
[343]
[223]

1. Tocay is a hut in which a hunter hides in order to catch birds from there with a snare or arrow.

came to the hut, and most of them soon became so tame that he could catch them. The man thought: "If I go to a village with these magnificent birds, perhaps I shall be accepted." So he took the birds and went into the villages. Everybody thought the birds were beautiful, but they did not want to let him settle down anywhere. The man went back to his hut. One day Añatunpa (2) came to him in the shape of a beautiful bird. What

Ce
[776]

2. The great spirit (see p. 108).

a strange bird that is, thought the man. /252/ Añatunpa said he had come to help him and gave him a pair of wings.

"When you come to a village, you must move the wings and then it will thunder," said Añatunpa. "If they will not let you settle down in spite of this, then lift the wings."

/252 cont./

539 The man went to a village where a great drinking bout was being held. No one wanted to admit him. He moved his wings and it thundered. It was believed that it was the medicine men who were thundering, and no one paid any attention to him. Again he moved his wings and it thundered. It was still believed that the medicine men were thundering, and no one paid any attention to him. When he finally saw that he was not going to be permitted to live there, but would be driven away, he lifted his wings, which he had kept hidden. Then came a storm which swept everyone away, except two boys and a girl.

They, now alone, wanted to cook, but they had no fire. They had squash and maize, but could not roast them. Then an old man, the sun, came to them with a firebrand. He roasted a squash and ate it, but, when he went away, he took the fire with him. He did not want to give them any of it. When the old man came the next time, they decided to steal the fire from him. When he was roasting a squash at the firebrand which he had brought along, one of the boys beat it with a cudgel, so that the sparks flew. The old man quickly gathered them up. Nevertheless they found a tiny little spark under half a squash that had been lying on the ground. They now lighted a fire. Huapi (the weaver bird?) told them they should guard the fire well so that it would never go out. He also told them that if the fire went out they should make fire by friction with the "tatay" (1).

[372] 1. Fire-making implement of wooden sticks.

The younger brother now took his sister as his wife. The older one had no wife. They put a squash into a small hammock and rocked it. The squash grew into /253/ a girl who soon grew into a woman. The older brother took her as his wife. All the Chané came from these two couples.

/253 cont./

539
[115]

2. The Destruction of the World and the Theft of Fire.

Told by the Chané chief Vocapoya.

A young man went into the forest, and in a pool he saw the image of a beautiful girl whom he followed. He stayed with her for a while, for a month, and his mother already believed he was dead and cut off her hair. She thought he had been bitten by a snake or the like. One day, however, the son came home and said that he had found a pretty girl whom he had married. Then the mother told him to fetch her and brewed a great quantity of maize beer, in order to celebrate her arrival.

The young man came with his wife, and she was pretty and well-dressed. During the festival she changed and became very ugly. Her sister-in-law made a remark about this, and she became angry and left her and went back to where she had come from, saying she would have her revenge. She said, however, that first a boy and a girl should be set in a large clay vessel. A brother and a sister, together with seeds of maize, squash, and beans, were set in a clay vessel, and the jar was tightly covered. When this had been done, it began to rain dreadfully, and the houses and everything were covered with water. The jar, however, floated on top. All the human beings and animals drowned in the rising water. For a long time the clay vessel floated about, and the boy and the girl were already beginning to grow up. Then the water fell, but when they wanted to climb out, the ground was still marshy, and they had to wait until it was dry.

When they came out of the clay vessel they sowed maize, squash, and beans with the seed they had with them. These ripened in half a month. They had no fire. At some /254/ distance they saw fire. It was "Tosté" (1), a marsh bird, who cries

1. Another Chané told me that the frog had stolen fire from the black vulture.

along the river banks, who had fire. When they came closer to the fire, however, it disappeared.

Ce /254 cont./
539 The frog promised to steal fire for them. He hopped to Tosté's campfire and, trembling with cold, sat down beside it in order to warm himself. From time to time he raked the coals closer to himself, as though to warm himself better, and, when no one was looking, he stuffed a little firebrand into his mouth and hopped away.

Having come back to the boy and the girl, he made a fire, and since then the Chané Indians have had fire. The sister and the brother, who had now grown up, married, and she became pregnant. They built themselves a hut. The girl had children. When these children grew up, they married one another. From their children came all the Chané. The chiefs are descended from the children of the oldest boy.

It may seem strange that I found two entirely different legends that deal with the same subject among the same people. This is to be explained by the fact that the Chané are a dispersed tribe which no longer has its own, independent culture.

Ce [177] The first version is probably their own, whereas they have borrowed the other from the Chiriguano. Domenico del Campana (2)

2. Domenico del Campana: op. cit., p. 22.

Ce mentions that the latter have a river legend in which two children are saved in a clay vessel in a similar way.

539 The Choroti and the Mataco say that the world was destroyed
[171] by fire, the Chané on the Rio Parapiti that it was destroyed by
Ce storm, and the Chiriguano and Chané on the Rio Itiyuro that it
[184] was destroyed by water.

The first-mentioned live in regions where there were great /255/ pampas fires, on the Rio Parapiti there are often violent storms, and the Chiriguano probably came from regions where great floods are common.

It is certain that these legends of world destruction are intimately connected with the character of the country in which they originated, as Ehrenreich (1), Im Thurn (2), and others have shown.

1. Ehrenreich: op. cit., pp. 30-31.

Ee /255 cont./
539
[113]

2. Im Thurn: Among the Indians of Guyana. London, 1883, op. cit., p. 375.

Ee
[171]

Ehrenreich says that such an anthropomorphic conception of the sun, as here in the first legend, is unusual in South America.

Ce

Visits in Aguararenta (the Village of the Foxes)

539
775

Batirayu told me the following about the beliefs of the Chané Indians with regard to life in the world beyond and in the realm of the dead. Aguararenta (aguara = fox, tenta = village) is a village where the dead, ãna, live. It lies in the east. At night the dead there have human form; during the day they go about as foxes, rats, and other animals, or they go into a tree trunk. Every night there are great drinking bouts in Aguararenta. All the Chané, children, women, and men, go there. Bewitchers (ipáyepótchi) and murderers also go to this village. No one is punished in the Chané realm of the dead.

Ce
[787]

The living have also visited Aguararenta and have told what they saw there. I shall give a couple of these stories here. They give us a good insight into the Indians' conceptions about the realm beyond.

The Girl Who Followed Her Husband to Aguararenta.

Ce
[115]

Told by a Chané Indian in Aguaraei (white fox) on the Rio Parapiti.

A girl wanted to marry a man, but he died. She had been very fond of him. In the morning, /256/ on the day after his death, while it was still dark, she was standing in front of the house of her parents and was pounding in the mortar. Then somebody came and seized the pestle.

"Who are you?" she asked.

"It is I," he said. It was her dead husband. "Do you want to come along?"

/256 cont./

539
775

"Yes," she said, for she loved him very much.

He now set out in the direction of the rising sun. His face was covered, so that no one would see it. She walked behind him. They walked through the forest, they walked over the pampas and again through the forest. During the day he slept and at night he was awake.

When the father found that his daughter was missing, he went to look for her. He followed her footprints. In front of these were the footprints of a fox. "Añá took my daughter," said the father. Finally he found her dead by the wayside. He brought her to life again, however, and took her home. When they crossed the pampas, they saw a fox roaming about. The next day she died. Her father wept. Then the white condor, "Ururuti," came and said he should not mourn. Ururuti took him on his back and flew with him to Aguararenta.

In Aguararenta people slept during the day and were awake at night. When the father got there, they were drinking maize beer. Ururuti took him to the house of his son-in-law. He spoke to his daughter, but she did not answer him. She did not look like a human being. Again he spoke to her, but he received no answer. He then went to Ururuti, who took him home. Neither he nor his wife mourned their dead daughter.

On the following day the father died.

Version 2. Told by Batirayu. There was a woman whose husband had died. During the night he came to her in the shape of a man and slept with her. He begged her to come with him to his village, Aguararenta. She followed him. When they were not far from the village, they heard singing /257/ and dancing. She went with her husband to the market place, where a great drinking bout was taking place. There she saw many dead people whom she knew. The dead, however, were afraid of her and stayed far away from her. She stayed there until it was morning. Then all the huts disappeared, and she found herself on a plain full of fox tracks. Her husband turned into a rat (angúya). She stayed there all day, sitting on the trunk of an algarroba. When it became dark, the people came again and a big drinking bout took place there.

Ce /257 cont./
539 In the morning the dead said: "chéahata húirasécuera (I shall go
775 around as a tree trunk), chéahata augúyara (I shall go around as a rat), chéahata kárakárara (I shall go around as a vulture), chéahata águarára (I shall go around as a fox), chéahata ándirára (I shall go around as a bat)," etc. She returned home. Her husband said he would come to get her. After three days she was dead. She had followed her husband to Aguararenta.

C 787 The Chiriguano chief Maringay told me of a man who had
775 fallen asleep by the wayside. During the night his dead wife came to him, and he slept with her. When he awoke, she was gone. He regarded as real what he had experienced in his sleep. Among
C Ce 787 the Chané and Chiriguano the belief in a future life is based on
775 dreams, as among other Indians. In a dream they meet a dead person, in a dream they visit the realm of the dead. It is incorrect, however, to say that the Indians believe in a life after death. He knows that there is such, for living persons have seen the dead, have made love with them, have drunk maize beer with them, have seen them change into foxes, rats, tree trunks, etc.

Legends about Spirits and Animals.

Ce 775 "The dead are añá," said Batirayu. Among these there are a number who are tunpa (best translated as "great") and have superhuman powers.

The greatest among the añatunpas is Yamándutunpa. /258/ Others among the great ones are Mariutunpa and Tipaytunpa. Ce Chiquéritunpa, who appears in a few of the legends given here, [787] is the one who produces thunder. Chiquéritunpa howls at night when there is going to be war. These añatunpa intervene in the lives Ce of human beings; the sorcerers in particular are connected with 775 them. Thus, Batirayu told how the añatunpa came at night to 787 Tsuhuandico, a great sorcerer now deceased, and drank maize 756 beer with him. They told him when it would rain, when someone would fall ill, whether there would be a crop failure, etc. Batirayu also said that Angúya, a kinsman of Aringui, the last great chief,

/258 cont./

756 used to offer the añatunpa tobacco when they were with Tsuhuandico.
[787] The añatunpa drank only very little maize beer. When they came,
[775] one did not see them, but heard what sounded like the clang of spurs.

These sorcerers have tremendous power; they can bewitch,
[754] for sickness and death are based on bewitchment. Among the
[761] Chané, Tambápui is the greatest sorcerer. He is the grandson of Tsuhuandico and the son of Yapandáy, who likewise was a great "ipáye."

539 Yamándutunpa, Mariutunpa, and Tipaytunpa never appear in
776 the legends. The greatest role is played there by Aguaratunpa
[775] (the fox-god) and Tatutunpa (the armadillo-god). Aguaratunpa has tembeta (see p. 63). They have human passions, and the story of the fox-god in particular is a description of all kinds of artifices and crimes. The armadillo-god is somewhat better and also has a higher standing.

776 Vocapoy told me that he had known an old man who saw a tunpa in the mountains. He was a handbreadth tall and well-dressed. Water ran from his body.

775 Batirayu believed stubbornly and firmly in the existence of the aña and añatunpa, in their connection with the sorcerers, and in their power. He was firmly convinced that Aguararenta exists.
776 /Pl. 20 appears here./ /259/ He was skeptical about the truth of the
539 legends concerning the adventures and experiences of Aguaratunpa and Tatutunpa, which I shall give below.

[771] In the religion of these Indians, therefore, there is first of all a grain of truth in which they believe. To this are added adventures and deeds of the spirits, which they relate at the campfires and which at least the more intelligent ones, the thinkers among them, regard as legends.

I shall give these legends below.

776 The idea of a great, almighty god is foreign to the Chané.
777 At present, of course, they all know something, directly or indirectly, about Christianity, as a result of which the idea of a great god is beginning to come in. Vocapoy, who was no Christian, once told me that the Chané believed in a great god, Tunpa.

302

Plate 20. Storyteller.
Chané. Rio Parapiti.

/259 cont./

776 Batirayu said he does not believe in a god such as the
177 Christians describe. He was surprised that the Christians oppressed the poor and committed so many bad deeds, since they taught that sinners were punished in hell. "How can one know what it is like in heaven, since no one who was there has come back to earth," said Batirayu.

"And so they say we shall be given wings," he said and laughed scornfully.

776 According to the missionaries, the Chané believe in a
114 supreme being (1), Tunpahétte-vae, the real god. The name alone
797

1. Cf. Domenico del Campana: op. cit., p. 39.

sounds suspicious. I am very skeptical about the assumption that this is original. When I talked to the missionaries about the religion of the Indians, I was astonished at their ignorance. They scorn the ideas of the Indians and do not regard it as worth the trouble to become more familiar with them. They never succeed in freeing themselves from the Catholic idea that the Indians, who, like us, are descended from Adam and Eve and to whom Saint /260/ Thomas preached, do not know anything about their "original faith."

776 Two of the tunpa who appear here in the legends have animal
539 names, Aguaratunpa (fox-god) and Tatutunpa (armadillo-god). We find in the legends an intimate connection between human beings and animals.

[825] Batirayu said: "All animals were human beings."

539 The Creation of the World, How the Fox-God, Aguaratunpa, Found the Algarroba Tree and How he Caught the White Condor, Ururuti.

[115] Told by two Chané Indians on the Rio Parapiti.

It is said that in the beginning there was a tunpa. He made the earth with the sky and all the stars, the sun, and the moon. It is said that this earth did not bear anything, that it was completely

/260 cont./

539 barren. Then Tunpa, in order to feed the poor, put all kinds of fruits into it, such as the caraguata and the mangira. It is said that there was an algarroba there, the mother of all trees. On this tree there were all kinds of fruits. This tree multiplied throughout the world. Thereupon Tunpa came, took the mother tree with him, and left the thoom here. It is said that Tunpa created our forefathers and also the forefathers of the whites. To the Ava (1) and Chané Tunpa gave a wooden spade and a long

1. Ava = Chiriguano.

carved stick called "carimpa," arrow and bow, a sheep, a goat, a hen, and a dog, so that they would breed all these animals and so that they would subsist with these tools. To the whites he gave guns, a horse, a mare, and a cow and all kinds of iron tools, so that they would work with these (2).

[171]

2. This is undoubtedly a modern addition to the legend. We find the same thing in a Mataco legend given here.

It is said that the little viscacha (3), "Tacumbo- /261/ cumba,"

3. Lagostomus.

watches over these trees which remained from the mother tree. She watched over these trees very well; she did not permit a single seed to be carried away. She had tasted the blossoms, but found them bitter until they yielded fruit. When they were ripe, she sowed the seeds. When these had again ripened, she sowed them again. In the following year they had all yielded ripe fruit.

Aguaratunpa came to the house of Tacumbocumba. The latter was an old woman. She offered Aguaratunpa some of these fruits which she had watched over, and he found them very good. He asked what they were called. She replied that these fruits are called "mä."

/261 cont./

539 When she offered him the fruits, she sat down next to Aguaratunpa, so that he would not take along a single seed kernel. Aguaratunpa hid one of the smallest seeds in a hollow tooth. When he had finished eating, the old woman handed him water to rinse out his mouth, so that not a single seed would remain behind. She examined Aguaratunpa's mouth with her fingers, but could not find a single kernel. Aguaratunpa again asked the woman what the tree was called and took his leave. Saying the name of the tree, he went on his way. Not far from there Aguaratunpa fell, forgot the name of the tree, and went back to the old woman to ask. Thereupon he set out on his way. Again he fell, again he forgot the name, and again he went back to the old woman to ask. Then she said: "You took some seed along," and so she examined his mouth once more, but could not find anything. Then Aguaratunpa went on until he came to an open plain. There he sowed the algarroba seed that he had with him. Then he roamed about widely. After a few years he came back and found a large algarroba plant already. Again he roamed about widely. When he came back, the algarroba was in bloom. He took a blossom and chewed it. It was bitter. Again Aguaratunpa roamed the earth. When he came back to his algarroba, he found it full of ripe fruit. He picked up one /262/ that had dropped on the ground, and he tasted it. It was sweet and good. He now looked for someone who would guard the tree for him. First he asked a beetle, "Nyśkira," but it did not want to. Then he asked "Hüiran," a small black bird, but it did not want to either. Then he asked another beetle, "Tikitikiru" (1), and it promised him that it would

1. Probably a Cerambycide.

guard the tree. "If someone comes who wants to steal your algarroba fruit, I shall sing: "Tikitikiru, tikitikiru, ko mä séramátata, tiki, tiki," it said. Aguaratunpa had not gone far when he heard: "Tikitikiru, tikitikiru, ko mä séramátata, tiki, tiki." Aguaratunpa hastened back. "The flea (Tuśta), the tick (Yaśu), and the leaf-cutting ant (Isśu) were here, and they stole

/262 cont./

539 fruit from your algarroba," said Tikitikiru. The tick had a large carrying net with him for carrying the fruit, and the leaf-cutting ant climbed up the tree to bite it off. Aguaratunpa hurried after them. First he caught up with the ant. He stepped on its middle. That is why all ants are so narrow around the waist. Then he picked up the tick and stepped directly on it, so that it became quite flat. Finally he took the flea and stepped on it, but he slipped so that he crushed it sideways. That is why all fleas are small and pinched together. Tikitikiru now left the algarroba to Aguaratunpa to guard himself. He hung up his hammock and lay down to rest. On a branch he saw one more fruit which the thieves had left behind. Aguaratunpa now called the wind, which shook the branch on which the algarroba fruit was hanging, so that it fell down. The fruit fell directly into Aguaratunpa's eye. The fox-god was now dead.

Soon all the vultures came to pick at Aguaratunpa. They sent the hummingbird "Chinu," in order to fetch their great chief, the white condor, Ururuti, so that he would eat of Aguaratunpa.

/263/ "Watch out, he is not dead, he is only playing dead in order to catch our great chief," said one of the vultures, "Kara-kara."

"Certainly he is dead," said the fly "Mbēru" and crawled in under the tail of the fox-god and out from a nostril, in through the other one and thus out again under the tail.

"He is not dead," said Kara-kara.

"He is dead," said the fly and laid eggs in Aguaratunpa's eyes, so that they were full of worms. When the white condor came, he approached Aguaratunpa in order to eat.

"Watch out, he is not dead," said the vulture.

"He is dead," said the fly and again crawled in under Aguaratunpa's tail and out through the one nostril, in through the other one and then out again under the tail.

The white condor now started eating Aguaratunpa. The latter now leaped up, took him captive, and bound him with a chain of silver.

"I will give you a herd of horses if you grant me my freedom, said the white condor.

Ca 539 /263 cont./

"I have so many horses that I do not need any more," said Aguaratunpa.

"I will give you large fields if you grant me my freedom," said the white condor.

"I have so many fields that I do not need any more," said Aguaratunpa.

"I will give you my two daughters as wives and a house in which you can live, if you grant me my freedom," said the white condor.

"I do not need your daughters, for I have wives in all the villages," said Aguaratunpa.

C 415 531

Fig. 127. Clay vessels.
Chiriguano. Caipipendi. 1/5.

C. 539

"I will fill a whole house with silver bowls, 'cagua,' and give it to you, if you grant me my freedom," said the white condor.

/264/ "I have as much silver as I need," said Aguaratunpa, "and I caught you in order to kill you. But if you can make me a present of the white rubber ball, 'toki,' so that I can play with it, I shall give you your freedom," said Aguaratunpa.

Tied to a long silver chain, Ururuti flew to fetch the white rubber ball. When Aguaratunpa received it, he gave the white condor his freedom. The ostrich, "Yándu," and the bat, "Andira," played ball. One would throw the ball, catch it with his head, and hit it toward the other one, who in turn caught it with his head and hit it back (cf. p. 45). When the ball was flying through the air, the white condor caught it and disappeared. Aguaratunpa now sent a bird, "Tavatan," to fetch the black rubber ball, and the whole village played. Aguaratunpa played with the ostrich. In the middle

6: Nordenskiöld--116 E-5 (1908-1909) 1912 SF10 Chiriguano
Chané SF8

539 /264 cont./
of the game he substituted a stone for the ball and threw it. The ostrich caught it with his head and fell down dead. When he came to life again, he had a flattened head, as do all ostriches now. The bat disappeared with the black rubber ball.

Now the story is over.

Tatutunpa's and Aguaratunpa's Marriage.

[115] Legend told by the Chané Indian Agiera on the Río Parapití.

It is said that there was once a great chief, Chiquéri, and there were also Tatutunpa and Aguaratunpa. They all lived far, far away from here. The great chief lived farthest of all. He had Tatutunpa come, in order to give him his daughter as a wife. Tatutunpa knew many tricks, and Aguaratunpa also knew many tricks.

/265/ Tatutunpa started on his way. He went very slowly and waited at many places. Where he made fire, tall grass grew. Two or three days after Tatutunpa had left his house, Aguaratunpa came and asked where Tatutunpa had gone. He was told that Tatutunpa had gone to the great chief. Aguaratunpa now followed him and met him not far from there. Before they arrived, they found a plant called "ihuahuasy" (1) by the wayside. Aguaratunpa

1. Cf. p. 51 /omitted in the translation/, it is said there that, according to Hermann, the Ashluslay know how to make a poisonous fruit, called ihuahuasy by the Chiriguano, edible by boiling it.

told Tatutunpa he should break off the fruits so that they could eat them. He went into the forest under the plant. Before Tatutunpa could touch even one of the fruits, Aguaratunpa shook the plant so that all the fruits fell on Tatutunpa. The latter, who was young and handsome, now became one-eyed and old. Aguaratunpa was the younger and handsomer of the two.

/285 cont./

539 They now continued on their way to the great chief. Tetumupa had a necklace which, before they arrived, Aguaretumpa had cowed from him.

The great chief thought that Tetumupa, who was old and ugly, was Aguaretumpa, and the latter Tetumupa. He gave the former his most beautiful daughter as a wife, and to the latter he gave his ugliest one, who was also one-eyed, as he was.

Aguaretumpa began to work in order to clear the field and sow. While he worked, he tied up his long hair. When he came from work, he was quite dirty. Tetumupa did nothing. He lay all day beside his wife and played on a round wooden pipe (Fig. 80). When his mother-in-law saw that he was not working, she said: "This man does not think of his family at all."

When he heard this and knew that Aguaretumpa had already worked a great deal, he asked his wife whether her father did not have an old field which he could cultivate. The mother-in-law then said to her daughter: "Why does that man ask /286/ for a field, he who is so lazy. It would be better if Aguaretumpa, who works, asked for one."

Tetumupa, with his stick and his wife, went to the old field of the chief. He went out into the large, uncultivated field, dug up a little earth, picked up a clump of earth, and threw it into the air. The clump of earth fell to the ground and crumbled into many pieces. "This earth is no good," he said, and he asked his wife if there were not a large plain somewhere that he could cultivate. She said there was a large plain. They betook themselves there and went out into the middle of the plain. Tetumupa dug up a little earth, again threw a clump of earth into the air; this did not break in two, but fell down whole. He said to his wife that this earth would be very good to cultivate. They went home.

The next morning old Tetutupa set out with his spade for the plain where he had dug a little, and he stuck it into the ground. In a very short time the entire big plain was cleared by the spade alone. Tetumupa then called the wind, which came with great strength and blew away all the worthless stuff. Only the very finest remained standing. Thereupon he called the whirlwind,

/286 cont./

539 which swept the field entirely clean. Tatutunpa asked the parrots for seed, but they came with useless seed kernels which were all broken in two. When he saw that these seeds were worthless, he asked the ducks and pigeons and the very tiny pigeons to come with all kinds of seeds, and this they did. They even did the sowing themselves. When the sowing was finished, Tatutunpa set out for home on the path that led to his house. He had not gone far when he turned around in order to look at his field. He saw that the plants were already starting to sprout. Again he went a short distance and again turned around to look at his field. The plants were already big. Again he went on and again he turned around. Then he found his field already in bloom. Near his house /287/ Tatutunpa turned around again to look at his field and found that everything that he had sowed was already bearing ripe fruit.

For Aguaratunpa, who had worked so industriously, nothing was yet ripe or in bloom.

The next day Tatutunpa said to his wife: "Let us go to look at our field." They went to the field and the wife saw that all the fruits were ripe. Tatutunpa bade her light a fire in order to roast maize and all the other produce. He told her she should dig out an ear of maize, two beans, and a squash, but nothing more. Not even this were they able to eat up.

After that they went home and told the old woman that she should come with them and harvest everything she wished to eat. The old woman did not believe them, but thought they had been stealing. She could not believe that they had anything to harvest, since they had not worked. "I would rather go to my other daughter, who has worked hard," said the old woman.

Aguaratunpa now set out for Tatutunpa's field and stole squash which he brought to his own planting. With sticks and thorns he fastened the squash to the half-grown squash stalks. At dusk he returned home and told his wife that she should ask her mother to harvest squash in his field. The daughter went to her mother and said: "Let us go to the field to gather squash." Delighted, the

/267 cont./

539 old woman set out, for she had seen how much they worked and she believed her daughter. They went, but did not find any more squash than they were able to gather in a winnow.

The next day Tatutunpa's wife again asked her mother to come with her to the field. The old woman did not believe her at all, but when the old man, her husband, saw that they were so stubborn, he ordered her to go. Angrily the old woman /268/ set out. Tatutunpa walked in front of her, playing on his pipe. When they came to the field, the old woman saw that it was full of all kinds of produce, maize, squash, beans, and calabashes. The old woman became truly delighted; she could scarcely restrain her joy.

When they came to the ridge of the field, she saw a huge calabash and told her daughter that she wanted this for herself. While they were talking, the calabash fell on the old woman; she fell down and could scarcely move because of the heavy calabash pressing on her. The daughter came to help her and tried to lift the calabash, but she could not. She called her husband to come and help her. He, however, stayed away a long time, and it was only when the old woman was near death that he came, lifted up the calabash, and fastened it to its old place. He lifted up the half-dead old woman.

After a while, when she had recovered, they again looked at the field. The old woman wanted to break off an ear of maize. Tatutunpa told her she should take care of his field and break off only the ear. Then she harvested two ears of maize and two of all the other products, without destroying anything. Everything she had harvested immediately put forth ripe fruits again. Laden with produce, she went home. She told her husband that Tatutunpa already had a large field. "So that is Tatutunpa whom we sent for," said the old man. "Aguaratunpa deceived us."

The next day Tatutunpa said to his wife: "Let us go to our field." They went there. He dug a hole in which he made a fire. When the hole was really warm, really red, he took a very large calabash and crawled into it. He asked his wife to plug up the calabash, place it in the warm pit, and to turn over the calabash when he whistled, so that he could get out. The woman

/268 cont./

539 did as he had said. When he whistled, she turned the calabash over and Tatutunpa came /269/ out, handsome and young, adorned with all his old ornaments.

After a while Tatutunpa again warmed the pit, and his wife crawled into the calabash. He covered it and threw it into the pit. When she whistled, he turned the calabash over. She came out of it young and beautiful.

They returned home and took a little quebracho stick along, in order to make fire with it. When they reached home, the old woman was busy brewing maize beer.

"It is going to be very cold during the night and therefore I brought this little stick along, so we would have something to warm ourselves with," said Tatutunpa. Aguaratunpa had taken home a great deal of "tartago" wood, but it did not last the whole night. In the middle of the night the wood was used up. He went to the hearth of his mother-in-law, who was cooking maize beer. When the old woman saw that a fox was creeping up to her fire, she stuck a piece of wood in Aguaratunpa's behind. With the wood in his behind, he ran away, forever changed into a fox.

The Origin of Work.

[115] Told by the Chané Indian Batirayu.

Tatutunpa had a magic spade. If one set it in the field at night, the field was completely dug up in the morning. One day Aguaratunpa, in the company of his two brothers, came to Tatutunpa. "Let's play for your spade," he said. "When lightning flashes, let's look into the lightning, and the one who does not blink will win the spade." Tatutunpa agreed to this.

Aguaratunpa now borrowed the eyes of the grasshopper "Tu-ku," who has no eyelids; Tatutunpa and Aguaratunpa sat down and stared at the sky. When lightning flashed, Tatutunpa blinked, but not Aguaratunpa, who had the eyes of the grasshopper. He won the spade. When he departed, however, he did not take the

/269 cont./

539 spade /270/ that dug by itself, but an ordinary wood spade.

"If I take the spade with the hollow handle, even sluggards can grow maize, but with the one here one has to work to provide maize for his family," said Aguaratunpa to his brothers.

Aguaratunpa gave the borrowed eyes back to the grasshopper.

How Aguaratunpa Sent His Brother to the Vault of Heaven.

Told by the Chané Indian Batirayu.

Aguaratunpa lived with his brother. He had two little parrots in a basket. One day they flew to a field where they ate maize. When they came home, one of them had maize meal around its beak. "Where did you get that?" asked Aguaratunpa. "From a field far back yonder where the sun sets," said the parrots.

The next day Aguaratunpa sent the parrots away. He followed them to where they flew. When he reached there, he broke off some maize. Then the owner of the field came and saw that someone had stolen maize. Aguaratunpa hid, but the owner found him, for when he tried to break off the maize, he cut his hands and feet and left behind traces of blood everywhere.

The owner said to Aguaratunpa: "Why did you steal my maize, if you had asked me for it, I would have given it to you." He broke off many ears of maize and loaded them on Aguaratunpa, who brought them home. He put them beside the door.

When he woke up the next morning, the little pile had turned into a big one which reached to the roof.

Aguaratunpa's brother asked him where he had obtained the maize. "It is far away," said Aguaratunpa. "There is no road, and you cannot find your way there."

/271/ Nevertheless, the brother set out and came to the field where he found "anday" (1), from which he ate. This had

[262]

1. Squash of a tasty variety.

Ce 539 /271 cont./

been poisoned, and he died. Aguaratunpa found him dead. He said he wanted to bring him to life again. Aguaratunpa took a plant, "ihuahuasu." With this he beat him. He leaped over him, first directly over his body, then from head to tail.

The brother came to life again and said: "I slept a long time." -- "You did not sleep, you were dead," said Aguaratunpa. The latter sent his brother to heaven (2). When it thunders,

2. Ara = vault of heaven, universe.

Aguaratunpa's brother is going for a walk.

C 539 [115] About the Son of Tatutunpa and How He Rescued His Mother.

Told by the Chiriguano Indian Yambási on the Rio Grande.

In a house there was a girl, Inómu, who had never had a husband. In front of the house there was a great drinking bout. Aguaratunpa, Tatutunpa, and Dyori were there. The parents of the girl took her along and set her on the ground where people were busy drinking maize beer. Aguaratunpa thought that Inómu was very pretty. Tatutunpa thought so too. "I shall make the girl pregnant," he said and started to dig. Aguaratunpa stood in front. Tatutunpa dug himself into the earth and up under the girl (3).

3. Modified.

When Tatutunpa was finished, he crawled out again and told Aguaratunpa what he had done.

"I want to try too," said Aguaratunpa and crawled into the passageway. He had not gone far when he got stuck. Tatutunpa seized him by the tail and pulled him out.

/272/

539 When the girl reached home, a bird, "Araqua" /jacu/, cried that she was pregnant. The next day she grew big. She was in an advanced state of pregnancy. Her mother was provoked. She said she wanted to go far away to the father and give birth. Inómu went to the cave of Tatutunpa and dropped the child in it, without giving it milk. The child cried daily, and the mother looked after it, but when she came, it crawled into the cave. One day "Yahuéte" came, the jaguar with two heads, one of which was dry, tore her eyes out, and led her away alive.

The grandfather now went out to catch little Tatutunpa by placing in front of the cave a net, in which he was caught. He led him home. There he grew rapidly and began to become big. He was brought up on honey. One day little Tatutunpa demanded bow and arrow. His grandfather made him an arrow with a blunt point of wax. With that he went out and hunted. When he hit the trunk, all the pigeons fell down dead. There was a great quantity. When Tatutunpa came home, his grandfather asked him how he was able to kill so many pigeons, and then he told how it happened. In the same way he killed many birds. One day he saw five araqua birds on a tree. Tatutunpa shot at the tree, but only four fell down. The fifth said: "You would do better to look for your mother than to shoot birds."

When Tatutunpa reached home, he asked his grandfather to make him a club out of "huirapucu" (1). He hit it against a

737]

1. Huirapucu is a soft wood (Salix Humboldtiana).

thick tree trunk, but was obliged to hit twice in order to get the trunk off. Tatutunpa told his grandfather it was worthless and demanded a club made of "urundey" (2). He hit it against a thick

2. "Urundey" is red quebracho or something similar.

tree trunk and struck off the trunk with one blow. "This one is good," said Tatutunpa.

/273/

539 Accompanied by Dyori, Tatutunpa set out on his way. Along the way he killed a tapir. Dyori (1) divided it into four

[171] 1. Dyori is always described as the insatiable one. He corresponds to Móconomóco in the legends of the Mojo.

parts and devoured it. He even licked the blood from the ground.

Tatutunpa found his mother blind in the woods. She begged him to kill the jaguars who were keeping her captive. "They come to the watering place in order to drink," she said.

Tatutunpa made himself a little shelter in which he hid. Dyori hid behind him. First came "Embaracaya" (2) with her booty.

2. A large wildcat.

With one blow Tatutunpa shattered her head and threw her and her booty to Dyori, who devoured everything. In the same way he killed "Yahuapinta" (3) and the other felines. He threw them

[136] 3. Puma (Felix concolor).

to Dyori, who devoured them all. Finally there came Yahuéte, who had two heads. He asked Inómu for water. Yahuéte was carrying a tapir that he had killed. Inómu directed him to the watering place.

"No, give me water here, there is someone hiding at the spring," said Yahuéte.

"No, there is no one there, and how should I, I who am blind, be able to fetch water, I would fall," said Inómu.

Yahuéte went to the drinking place. When he reached there, Tatutunpa hurled his club, in order to kill him, but struck only the dried head, and Yahuéte leaped away. Tatutunpa followed him. When Yahuéte saw that he was being pursued, he hid under the "tiru" (women's attire mentioned on p. 52) of the moon.

"Where is Yahuéte?" asked Tatutunpa.

"I do not know," answered the woman (that is, the moon). That was the first lie.

C 539 /273 cont./

"He is hidden under your 'tiru,'" said Tatutunpa and went on.

The moon called after him. "Yahuéte is devouring me."

/274/ Tatutunpa went back to help her. She then said it was not true. Tatutunpa went on again. She now called again: "Yahuéte is devouring me." When Tatutunpa came back, she said it was not true. Tatutunpa went on again. Again the moon cried that Yahuéte wanted to devour her. But Tatutunpa did not go back again. Now Yahuéte was really on the point of devouring her.

When Tatutunpa returned to his mother, he said he would see to it that she would be able to see again. He made eyes out of pigeon droppings and clay and set them in her empty eye sockets. Inómu rubbed her eyes, opened them, and was able to see again. Tatutunpa now led his mother home.

Ce 539 [114]

Batirayu told me the same legend with a long introduction which is missing in Yambási's story. I shall give this introduction here.

Ee [171]

Once there was a great drinking bout. Many birds were gathered together there. The chief ordered Aguaratunpa to fetch a girl, Inómu, who was in a neighboring village, so that she might also drink with them. Aguaratunpa departed. When he came to the house of the girl, he met her father.

"Good day, Uncle," said Aguaratunpa.

"Sit down," said the father.

"No, I have come to fetch my niece," said Aguaratunpa. He now asked whether the girl would go with him, which she agreed to do. The girl made herself pretty, put on her necklace, dressed herself in her best "tiru," and followed Aguaratunpa.

When they had gone part way, the girl said: "Why should I go with you who are so ugly," and so she turned back. When Aguaratunpa arrived, the chief asked how it had gone. He now told how the girl had turned back.

"Urapua" (the black vulture) offered to fetch the girl. Urapua set out. When he came to the house of the girl, he said:

/275/ "Good day, Uncle."

"Sit down," said the father.

/275 cont./

539 "No, I have come to fetch my niece, I want her to help me drink maize beer," said Urapua. He asked the girl whether she would come along. She agreed and made ready. When they had gone half way, the girl said: "Why should I go with you who are so ugly." She returned home.

When Urapua arrived, the chief asked him how he had fared. He said that the girl had turned back.

"Tiu" offered to go. When he came to the house of the girl, he said:

"Good day, Uncle."

"Sit down," said the father.

"No, I have come to fetch my niece, I want her to help me drink maize beer," said Tiu. He asked the girl whether she would come along. When they had gone a good part of the way, the girl said: "Why should I go with you who are so ugly," and so she went home again.

Then "Choe" offered to go. When he arrived, he went directly to the girl and asked her whether she would come with him and help him drink maize beer. The girl gave him a calabash bowl of maize beer and was willing to follow him. They departed. When they were quite near the village where there was a great drinking bout, the girl said she did not want to go with him, his legs were so black, and she turned back.

When he arrived, the chief asked him how he had fared. He said that the girl had turned back. All the other birds tried, but the girl did not want to go with any of them. Finally "Churincui" went.

"Watch out," said the chief, "he will surely get the girl to go with him." Churincui went directly to the girl and asked her whether she would go with him and help him /276/ drink maize beer. The girl was willing and followed him there and sat down with the other women.

Aguaratunpa walked around angrily.

The chief asked whether anyone could sing. Aguaratunpa dressed in his "tirucumbai" (Fig. 81) and prepared to sing, but he could do nothing but "pũhuaté, pũhuaté." Now Urapau came forth and wanted to sing, but he could only say "hũ, hũ."

Ce
539

/276 cont./

Then the chief asked "Hũiratucũhua" to sing and he sang:

"Huaté pũhuatẽkos rárásé mãnura lũhuaya chũshico ti, ti, ti, ti..."

There was a man there who was at odds with his brother and all the other birds, who did not take part in the drinking bout, but went about and hunted.

Many parrots were sitting on a tree. Among these was a white parrot. "That one I want to catch," he said, and he tried to catch it with a noose on a rod, but he did not succeed. He now aimed with his bow at the parrot. The latter started to talk and said: "Why do you want to kill me?"

The parrot now taught him how he should sing and told him that when he came into the midst of those who were drinking he should stretch his arm up over his head.

He now walked around those who were drinking and sang. Then he went into their midst and stretched his arm up. When he did this, those who were standing changed into birds and those who were sitting changed into stones, except Inõmu, Tatutunpa, Aguaratunpa, and Teyuhuasu.

Tatutunpa, Aguaratunpa, and Teyuhuasa did not sit with the others, but stood near by. Tatutunpa said to Aguaratunpa:

"You will see, I shall make the girl pregnant (1). /277/

1. Modified.

c

539
171

When she turns her body, it will have happened." He now dug a hole in the earth under the girl...

The continuation of Batirayu's story is almost identical with the one by Yambãsi.

In its basic characteristics this legend seems to me to be genuinely Indian. Nevertheless there are elements in it which seem to be borrowed from the whites, namely the story of the lies of the moon. These do not occur in Batirayu's version of the story. It also reminds me very much of the boy who used to call for help when there was no danger present. When finally the wolves were devouring him, no one paid any attention to him, -- a legend which is well known in Europe and which I heard as a child in Sweden.

Ee 539 171

/277 cont./

Part of this legend reminds one very much of a legend from the Yuracáre Indians given by D'Orbigny (1). There "Tiri," who,

Ee [113]

1. D'Orbigny. Voyage dans l'Amérique Méridionale /Journey in South America/. Vol. 3, 1. Paris, 1834, p. 212.

in order to avenge his mother, kills all the felines except the jaguar with the four eyes, who takes refuge with the moon, corresponds to Tatutunpa. In former times the Chiriguano and Chané were undoubtedly in touch with the Yuracáre Indians. When the whites conquered the land around Santa Cruz de la Sierra, the Chiriguano moved south and the Yuracáre to the north. On my last journey I also visited the Yuracáre Indians, whom I shall describe later in another book.

Ce 539

The Man Who Married the Daughter of the Thunder God, Chiqueritunpa.

Ce [115]

Told by the Chané Chief Bóyra.

In olden times there were once three poor men who had no relatives. They were very hungry. Two of them went forth to look for something to eat. First they came into a large forest through which went a path. /278/ After three days they came to a great plain. In the middle of the plain there was a house. They walked around the house, but found no entrance. Finally, however, a woman came out; it was Chiquéritunpa's sister. She bade them come in. "We are dirty," they said and did not want to go in. She brought maize beer to one of them. He drained four calabash bowls of maize beer. She brought the other one maize beer. He, too, drained four calabash bowls of maize beer. "Go now and bathe," she said, "and wash your heads." She gave them the root of the "yúag" (1).

Ce [137]

1. = mistol /Zizyphus mistol Griseb./.

/278 cont./

539 When they had bathed and washed themselves, they came back. She gave them urucú for painting themselves. "Go now and rest. Afterwards you shall fetch wood," she said and gave them an ax. They looked everywhere on the plain, but found no wood. "Did you not find any wood?" asked the woman.

"No," they said.

"Did you not see an old man there? He has wood. Give him a blow with the ax," said the woman.

They went back to the plain to look for wood. There they found the old man, but they were ashamed to give him a blow with the ax, and went back to the woman.

"Did you meet the old one?" she said.

"Yes," they answered, "but we were ashamed to kill him."

"Strike the old one, he is wood!" said the woman.

They went back to the plain and found him. They gave him a blow with the ax, and he changed into wood which they carried to the room. The woman cooked. Then she spun thread.

"Why did you come here?" she said.

"We were looking for a mother for ourselves. There were three of us, but we left one behind," they said.

"Why did you not take him along?" said the woman.

/279/ She let the men bathe. They bathed and the woman bathed too. They saw that she was a pretty woman.

"Here you shall make a hut and a trap and catch pigeons! When the pigeons come, they will turn into women. When they are bathing, you shall take their clothes and run!" said the woman. A mass of pigeons came and settled on the trees around the swamp. Among them was their great chief. The pigeons flew to the shore and turned into women and took their clothes (tiru) off. The men crept up; each of them took three garments and ran away. The women ran after them. /Fig. 128 appears here./ One of them threw two garments away and came into the house with one garment and one of the women. The other ran away with all three garments. The women caught up with him and thrashed him soundly. The one who had come with one garment came into the house with his wife.

Ce 539

/279 cont./

"Lie down and sleep!" said the sister of Chiquéritunpa.

The man lay down to sleep with his wife, who was the daughter of Chiquéritunpa. They slept together all day and in the evening she gave birth. The next day Chiquéritunpa came. He wanted to beat his daughter. He sent for a horse, a donkey, and a mare, in order to take his daughter and his son-in-law home. After they had eaten, they rode away.

The man who had been thrashed by the women wept. "Do not weep so much," said the sister of Chiquéritunpa. When they had ridden a short distance, they met a Christian who was working.

"What kind of work are you planning?" asked the man. "I /280/ want to sow mandioca and maize. I want to live here and I want to bring a woman here," said the Christian.

They rode on and met another Christian. "What kind of work are you planning ?" asked the man. In a bad humor, the Christian replied: "I want to sow hills with thorny bushes here."

C [415] [531]

Fig. 128. Calabash bowl. Chiriguano. Itatenbia. 1/4.

They continued their journey and met another Christian who was busy felling trees. "What kind of work are you planning?" asked the man. "I am chopping down poles for fencing for the animals, for I want to have livestock here. I am bringing everything here, I shall get myself clothing," said the Christian.

They rode on and met another Christian. "What kind of work are you planning?" asked the man. In a bad humor, the Christian answered: "I am working to harvest stones."

They rode on and met another Christian, who was doing carpentry work. "What are you doing here?" they asked. "I want to build myself a house where I shall have clothing and all sorts of other things," answered the Christian.

/280 cont./

539 They rode on and met another Christian. "What are you working at?" asked the man. In a bad humor, the Christian replied: "I want to sow chuchio (1) here, so that no one can pass."

1. See p. 18.

When they were near the house of Chiquéritunpa, his daughter said to her husband: "I shall dismount first with the boy, who can walk already. Then you shall dismount, and if you sit down on the bench you must not be surprised if it moves. If the house moves, you must not be surprised. You shall not greet my mother or my brother. You shall greet only my father."

When they arrived, she dismounted first and entered. She was followed by the boy, who was already able to walk. Last of all, the /281/ man got down from the horse. When he got down from the horse, it turned into a heap of bones. He went in and sat on a stool. It moved because it was a large snake. He acted as though he had not noticed anything. The house moved too, but he acted as though he were paying no attention to it. First his mother-in-law came and greeted him, but he did not respond to her greeting. Then his brother-in-law came and greeted him, but he did not respond to his greeting either. The brother-in-law proposed that they play, but he did not answer him.

"Tonight you shall not sleep with me. I shall sleep in a hammock, my /Fig. 129 appears here/ son in one, and you in a third," said Chiquéritunpa's sister to her husband. "Tomorrow you shall play with my brother," she said. They now lay down to sleep.

The next day the rooster cried early: "Jesus Christ, Jesus Christ!" When the first Christian whom they had met came to his field, he found it full of maize and mandioca and, in addition, a hut and a pretty wife. The second Christian, who had answered that he wanted to sow hills with thorny bushes, found his field changed into such. The third Christian found his fence for the animals already finished and full of fine livestock. The one who had replied he wanted to sow stones found his field full of stones. The one who had been doing carpentry in order to build himself

Ce
539

/281 cont./

a house found it already finished and full of clothing. The one who had answered in a bad humor that he wanted to sow chuchio found his field turned into thick brush through which no one could pass.

Chiquéritunpa's son proposed a game to his brother-in-law. "What kind of a game?" he asked. "Let's move the house," /282/ said Chiquéritunpa's son and shifted it with one arm. With all his strength the man moved the house away. "Now let's bring the horse back to life," said Chiquéritunpa's son and lifted up the legs of the horse on which the man had come. It turned into a very fat horse with a mouth that flashed fire. This, too, the man imitated.

The next day the man proposed a game to his brother-in-law, Chiquéritunpa's son. "What shall we play?" he said. "Let's take the sun down," said the man. With a long switch of chuchio he took the sun down. It became so warm that both Chiquéritunpa and his son ran away. The next day the man became chief.

C
[415]
[531]

Fig. 129. Clay vessel. Chiriguano. Caipipendi. 1/5.

The one who had been thrashed by the girls whose clothes he had stolen stayed with the sister of Chiquéritunpa. One day she told him he should go to a large lake. There he should dive in and bring up a handful of sand. This sand he should place in the house. He went to the lake, dived in, and brought up a handful of sand which he placed in the house. The next day the sister of Chiquéritunpa said: "Go look at what has become of the sand!" In place of the sand he found a pretty woman. "She shall be your wife," said Chiquéritunpa's sister.

/282 cont./

539 During the day he used to bathe with her in the lake. There he played with her, caressed her, and while bathing they squirted water at each other.

"Do not bathe with her so much in the lake. Remember that she is merely made of sand," said Chiquéritunpa's sister.

He did not listen to her, but played with her and fondled her down by the shore of the lake. One day, while he was playing with her, she grew thinner and thinner, until finally she had turned into a heap of sand. Weeping, the man went to the sister of Chiquéritunpa. Hayma opama! (And there was no more).

[177] This legend, as we see, is not free of European /283/ elements. In its principal features, however, it is purely Indian. None of the legends given here by me seems to me as imaginative as this one.

"Choihuihui's" Abduction of a Woman

Told by the Chané chief Bóyra.

In olden times there was once a great drinking bout. Aguaratunpa, Tatutunpa, Teyuhuasu, Inómu (1), Choihuihui (2),

1. Inómu's story has been told above.

2. A bird.

and many others were there. Aguaratunpa had gone to fetch Inómu. She stayed four days and drank with them. Finally her mother came; she was very angry because she had stayed away so long. She changed all who were there into birds and took Inómu home with her. Only Aguaratunpa, Tatutunpa, and Choihuihui remained there. Tatutunpa went home. Aguaratunpa, who had no permanent dwelling, roamed about and cheated people. Choihuihui set out on his way. He came to a house. A married woman lived there with her daughter. He greeted her. She offered him maize beer and he drank. Then he said farewell and left. Transformed into a choihuihui, however, he remained quite

/283 cont./

539 near in order to spy. After a while the husband of the woman came home. He took her along and they went to the field, she in order to harvest, he in order to dig. When they arrived there, they lighted a fire. He went off to dig; she stayed beside the fire with her little daughter and roasted maize. Choihuihui had followed them. He remained nearby. After a while the woman went off to relieve herself. When she went into the forest, Choihuihui embraced her. Transformed into a bird, he flew off with her.

When her mother did not come back, the girl began to weep. When the father heard this, he went there. He /284/ called his wife, but no one heard him. He looked for her and found Choihuihui's and her tracks. In vain he tried to follow them. After he had searched for a long time, he looked up the brothers of his wife, so that they might help him search. They searched, but found no one. The brothers believed the man had killed his wife out of jealousy. When they passed by a large tree, they saw in the crown the nest of a "tuyuyu" (1). The brothers told the man

1. Probably flamingo.

he should catch the birds in order to comfort his child. Since the tree had a high, straight trunk, they made a ladder, and the man climbed up. When he got to the crown of the tree, the brothers removed the ladder, so that the man could not come down. "You shall sit and starve to death there because you killed your wife," they said. The man started to weep. Finally he went to sleep, leaning against the trunk.

When he awoke, he was sitting in a hut. Beside him sat two pretty women. They asked him how he had got there. He now told how a man had come to his house, etc. (here the entire legend is repeated).

The women started to laugh. "Avayurupiagua led your wife away," they said.

Ce 539

/284 cont./

He asked them who their father was. "He has gone to Itica (2) to get some fish" (3), they said.

2. Rio Pilcomayo.

Ce [439]

3. The important trade in dried fish that is carried on between the tribes is described on p. 138 /omitted in the translation/.

The youngest said he should sleep with her, which he did. The oldest also wanted to sleep with him. "Won't your mother be angry if I do?" he said. "No, you shall sleep with us, for a man never comes here," they said. So he slept with both women.

After a few days the father of the girls came home. He brought along two large loads of dried fish. /285/ The father asked how he had got there. He told etc. (here the entire legend is repeated).

The father said he was not angry because he had slept with his two daughters and promised to help him get his wife back. "She is at Itica with Avayurupiagua," he said. "There is a big drinking bout there and we must go. You shall go with me and do as I say. First you should greet everybody and finally you should greet your wife. She will not recognize you. When she greets you and offers you maize beer, you will fling your arms about her and I shall hit you on the buttocks," he said. They now set out for Itica. When they arrived there, the father first greeted everyone. Finally the man greeted his wife. She offered him a calabash of maize beer. He embraced her and the old one slapped him on the buttocks. Transformed into a tuyuyu, he flew off with his wife. When Avayurupiagua saw this, he dashed angrily into his house to fetch bow and arrow. He shot off one arrow after the other, but was unable to hit them.

Ce [177]

This legend seems to me to be entirely free of foreign elements. The ladder mentioned refers to a long stick into which step-notches have been cut. The Chiriguano in particular, as well

/285 cont./
as the Chané on the Itiyuro, always use them for the maize granaries, which are built on piles (see Fig. 84b).

How Aguaratunpa Killed Tatutunpa and Was Then Killed Himself.

Told by the Chané chief Batirayu.

In olden times there were once two deranged girls. Not far from them lived Tatutunpa. They heard him play so beautifully on his "huiramimbi" (see Fig. 80a /see p. 22/). One of them said to the other: "Let us go and see who is playing so beautifully." They went to Tatutunpa, who was lying in his hammock. Tatutunpa took the youngest girl as his wife.

/286/ Aguaratunpa had learned that the girls had gone to Tatutunpa's. He set out, hid in the field where Tatutunpa was working, and killed him with a club. Then he carefully removed the skin of the head and put it on. Resembling Tatutunpa in this way, he went to the latter's hut.

"Look, your husband is coming," said the older sister. She put food on the table. Since Tatutunpa was in the habit of eating very little, only a few beans and a small bowl of maize beer, she did not serve any more. When Aguaratunpa came, he ate up everything and demanded more. When he had eaten this, he demanded still more. The girl asked herself whether this could really be her husband who was eating so much, but of course it could not be anyone else.

In the evening Aguaratunpa asked his wife to delouse him. She sat down and looked for lice on the head of Aguaratunpa. While she was looking, Aguaratunpa fell asleep. She saw that the skin on his head was sewed together, and realized that he had killed her husband and skinned him. She told her sister about this and they killed Aguaratunpa with a club.

/286 cont./

539
[115]

The Man Who Burned Up Añatunpa.

Told by the Chiriguano Indian Tambéi on the Rio Grande.

When people gathered honey, Añatunpa (1) would find

1. It is not said here which añatunpa is meant.

them and devour them.

Once there was a man who gathered honey. Then Añatunpa came and asked what he was going. "I am gathering honey," said the man. "Continue," said Añatunpa. When the man had gathered enough, he killed him and tossed him to Dyéri, who devoured him and even licked up the blood. Añatunpa killed many people in this fashion.

A man had gone out to gather honey. The /287/ toucan (1)

1. Rhamphastus.

said to him: "If Añatunpa comes, ask him to carry you to his house and kill you there."

While the man was gathering honey, Añatunpa came. "What do you want?" asked the man.

"I want to eat you up," said Añatunpa.

"Do not do that here, but carry me to your house instead and eat me there," said the man. Añatunpa now took the man on his neck and carried him to his house.

"Break off branches and build a fire on Añatunpa's neck," said the toucan. When Añatunpa went through the thick /Fig. 130 appears here/ brush, the man broke off twigs and branches and carefully lighted a fire on Añatunpa's neck.

"If you come to a low branch, cling to it!" said the toucan to the man. This he did. Soon Añatunpa noticed that there was burning on his neck and he started to run. The fire grew. His hair caught fire, and soon Añatunpa burned up completely and died.

/287 cont./

The Man Who Killed Añamupa.

539 [11 5]

Told by the Chiriguano Indian Tembiki on the Rio Grande.

Añamupa devoured all the human beings that he could catch. A man came along who was carrying wood to Añamupa's cave. "Come, let's play!" said Añamupa.

/288/ "What kind of a game?" said the man.

"You shall give me a blow on the forehead with an ax, and if I do not die, I shall hit you," said Añamupa.

Añamupa stood up straight, offered his forehead to the man, and the latter hit him directly in the middle of it. Since Añamupa's forehead was as hard as iron, this did not affect him. Añamupa now gave the man a blow on the forehead, killed him, and tossed

291 177 531 301

Fig. 138. Silver pin for fastening the tiri. The farm Indian, the ornamentation Spanish. Chiriguano. Pasapiti, 1/3.

539 him to Dyôri, who devoured him.

On another occasion another man came to Añamupa's cave. Añamupa proposed the same game to him. Then a fly, "Mbéru," called to him not to hit him on the forehead, but in the nape of the neck. When Añamupa, with eyes closed, stood up to receive the blow, the man went behind him, struck him in the nape of the neck, and Añamupa fell down dead. Dyôri asked him how he was able to kill Añamupa. The man told him what Mbéru had said.

/288 cont./

539 How Bisose Fetched Riches out of the Mountain.

[115] Told by the Chané Indian Batirayu.

A Chané, Bisose, wanted to fish in a deep pool. At first he caught many small fish. Suddenly he caught such a large fish that he was unable to pull it up. First he walked around the pool, because he was afraid to go in. Finally he stepped cautiously into the water, following the line with his hand. When he reached the deep water, he felt someone take hold of his leg and pull him into the depths. It was the big snake "Boyhuatu." It led Bisose around in the mountains and to Los Campos del Guanaco. Finally it led him through a narrow pass into the mountain. There it gave him blue stones and silver. Bisose loaded himself with them. When he tried to get out of the pass, it was so narrow that /289/ he could take only a little along. That is why these stones and silver things are so rare. Boyhuatu then led him back to the pool. He came out at the same place where he had gone into the water.

In this legend blue stones are mentioned among the treasures that Bisose brought out of the depths. These Indians [301] greatly treasure pierced turquoise and chrysocolla as beads for necklaces.

The Fox and the Jaguar.

[115] Told by the Chané chief Bóyra.

The fox met the jaguar in his field. The latter was busy sowing.

"Do you want me to help you, Uncle?" said the fox.

"Yes, Nephew. I want to get the digging sticks," said the jaguar.

"I will do that," said the fox and went to the hut of the jaguar.

Chane SF8

539

/289 cont./

When he arrived there, he said to the wife of the jaguar: "I am ashamed to tell you my request."

"Why?" she said.

"Well," said the fox, "the jaguar sent me here to sleep with you and your two daughters." The wife of the jaguar did not believe that.

"Yes, it is true," said the fox. "You shall hear what he says," and then he called: "Shall I take them all?"

"All," the jaguar called in response.

The fox then slept first with the wife of the jaguar and then with the elder daughter and then the younger one. She was still a virgin, and he hurt her (1). Then the fox went

1. Modified.

away. He ran in the grass so that his tracks would not be visible. He leaped onto a long tree trunk. Finally /290/ he came to a pool. He dived under and came out again on the other side. He ran as fast as he could until he came to a tree with a thorny trunk. He crawled up it and lay down to sleep. "Here I shall lie and dream about the wife and the daughters of the jaguar with whom I slept," said the fox. He lay down and went to sleep. /Fig. 131 appears here./

When the jaguar realized that the fox was not coming back with the digging sticks, he thought: "I must see what has become of the fox. That fox is certainly a swindler."

When the jaguar arrived home, his wife said to him: "How can you be so cruel and send the fox to sleep with us?"

Angrily the jaguar set out to hunt for the fox. He followed his tracks and came to the pool where the tracks of the fox came to an end. He looked for him everywhere. Finally he realized that the fox had dived into the pool. The jaguar then dived under too and found the tracks of the fox on the other side. He followed them and came to the tree. He hunted all around the tree for the continuation of the tracks, but could not find them. Then he looked up and saw the fox, who was sleeping. He climbed up, carefully broke off a twig, and tickled the fox

Ce
539

/290 cont./

in the nostrils. The fox sneezed, wiped his nose, and said: "Can the mosquitoes not leave me in peace just when I am dreaming about the jaguar's wife and daughters with whom I slept!"

/291/ Now the jaguar tickled him a little more strongly, and the fox woke up. The jaguar prepared to seize him.

The fox hunched himself up, and when the jaguar hesitated before seizing him, he jumped to the ground with one bound and started running as fast as he could. The jaguar ran after him. Finally the fox grew tired, however, and the jaguar caught him and swallowed him. The fox came to life again in the stomach of the jaguar. The latter threw him up. The jaguar devoured the fox again, but again the latter came to life in his stomach and was thrown up again. Once more the jaguar devoured the fox, who again came to life, etc.

[115]

When the Turtle "Carumbe" Killed the Jaguar.

Told by the Chiriguano Indian Yambási.

Once there was a great drinking bout. Aguaratunpa, Carumbe, and "Taturapua" (the ball armadillo) were there. The little son of the turtle was crying. When they asked him why he was crying, he said he wanted to have the claws of the jaguar to play with. The wife of the turtle told her husband he should fetch the claws of the jaguar so that the little one could play with them.

/291 cont./

539 The turtle set out and came to a "samuo" trunk with large, sharp thorns. He stool there and waited for the jaguar. In the distance he could hear his howling. The jaguar came closer, still howling, and found the turtle at the foot of the tree.

"What are you doing here?" said the jaguar.

"I am playing," said the turtle.

"What are you playing?" said the jaguar.

"I climb up the samuo and then I roll down," said the turtle.

"Let me see," said the jaguar, who had a desire to devour the turtle.

/292/ The latter climbed the trunk up to the crown and rolled down without injuring itself. This amused the jaguar, and the turtle had to climb up again. Once more it rolled down without injuring itself. The jaguar wanted to try it too. He climbed up and rolled down, but tore open his entrails on the thorns and died.

The turtle took home the claws of the jaguar as playthings for his little son.

The Love Story of the Hummingbird.

[115] Told by the Chiriguano Indian Yambási.

There were two girls who heard Chinu (hummingbird) play the flute. He played so beautifully that one of the girls said: "I want him as my husband." She went to the hummingbird and slept with him.

"Let us go into my house," said the hummingbird. When they got there, it was so small that there was no room for the girl. She therefore went back to her village.

In the evening the hummingbird came to the edge of the village and played the flute, in order to lure her. The girl listened and said: "It is the hummingbird who is playing." But she did not go back to him. Every evening the hummingbird

/292 cont./

539 came to the edge of the village and played his most beautiful airs, but the girl did not want to go with one who had such a little hut.

When the Tick, Yatéu, Ran a Race with the Ostrich, Yándu.

The tick and the ostrich wanted to put on a race to see who could run better. When they started running, the tick hopped on the ostrich and dug itself into the corner of its eye.

When the ostrich had run a short distance, it glanced sideways to see whether the tick was coming along. Since it was in the corner of its eye, it saw it at one side.

/293/ The ostrich hurried on. When it had run a stretch, it again glanced to one side and saw that the tick was still at its side.

The ostrich ran with might and main. When it was quite close to the goal, the tick hopped out of the corner of its eye and arrived there first.

The tick had won the race.

539 These little animal stories have a very widespread dis-
171 tribution. Thus, we find the story of the turtle and the jaguar almost unchanged in Santarem, at the confluence of the Rio Tapajo and the Amazon River (1).

[113] 1. Cf. Fredr. Hartt: Tortoise Myths. Rio de Janeiro, 1875.

Similar stories about foot races are also known from the coast of Brazil (1) /see footnote 1 above/. These last are found among us too, as is well known.

It has been proved (2), as was mentioned, that certain

2. Ehrenreich: loc. cit.

legends from North America and Asia have traveled as far as

c /293 cont./
539 South America. Since, however, this is not the proper place
171 for comparative studies with regard to the legends collected by me, I have contented myself with only presenting the material.

c
539 As we have seen, we learn to understand some of the religious conceptions of the Indians from the legends. They are also interesting from the viewpoint that a whole assortment of little features from the life of the Indians is reproduced. They give us a glimpse into their imaginative life.

c
539 Only the content of the legends collected by me, not
114 the form, is usable as research material. I hope that the
126 native South American ethnographers in particular will add to the collection made by me and also write down the legends in the original languages. In order to be able to do this, however, a complete /294/ mastery of them will be necessary. The best method would be to let the Indians tell these legends into a phonograph.

The Indians and Natural Phenomena.

Ee
[773] In one of the Chané legends the story is told of how Yahuéte, the two-headed jaguar, was on the point of de-
Ee
[776] vouring the moon. Maringay called Yahuéte "Yahuaróhui." These Indians explain eclipses of the sun and moon by saying
Ee
[171] that the sun and moon are attacked by Yahuéte. The Choroti, too, as has been mentioned, speak of a predatory animal that
[776] attacks the sun and the moon.

If one wanders with an Indian through forest and meadow on a starlit night, the starry sky is his compass and his watch. He will point to Orion or some other constellation and show how much farther it will move before one arrives.

Ee
824 He does not give names to many constellations, but he knows them all. The Chané call the part of the Milky Way nearest the Southern Cross "yándurape," that is, ostrich-way; the Southern Cross, along with a few adjacent stars, is

Ce 821 /294 cont./
"yánduinyaka," the head of the ostrich; the two largest stars in Centaurus are "yánduipoy," necklace of the ostrich; Venus is called "coemilla," morning; Orion with the sword "húirayúasa" (birds meet). Another constellation is "huázupucu," roebuck horn; another, "borévi," tapir. They call the Pleiades "ychu," but they do not know the meaning of the name, and this is the most important constellation of all.

Ce 821 If one sits with the Indians in their huts, they can indicate the position of the most important constellations in the sky without seeing them. They know their position at all times of the year.

Ce 821 805 Ce [241] The starry sky is not only the watch and the compass of the Indians. It is also their calendar. In this the Pleiades play an especially important part here, as among other Indians. When they first /295/ become visible on the horizon at dawn, the proper time has come for the sowing of maize. The fact that this relatively unimportant constellation plays such an important role in the astronomy of the Indians has given rise to fantastic speculations about Babylonian influence.

Ce 821 If one asks Indians about the size of the stars and their distance from us, they stand there perplexed and prefer not to answer at all. They understand, however, that they must be far away.

C 821 773 The stars do not play an important role in the legends. The Chiriguano chief Maringay, however, said there was once a brother who was playing with his little sister. They tried to catch each other, they sang and jumped. Now they are sitting in the firmament as two stars.

Two clusters of stars in the southern part of the southern firmament are the ashes of an old man and an old woman, a Chiriguano once told me. It was an evening in August.

Ce [821] [773] In legends, the sun is a man and the moon a woman. The Chané children stole fire from an old man, the sun, and the two-headed Yahuéte hid under the tiru of the moon-woman when he was being pursued by the son of the armadillo-god.

C /295 cont./
821 The waxing and waning of the moon, according to Maringay's explanation, was caused by the fact that a larger or smaller piece of it is put in the firmament.

C The sun rises over the water and then shines for us during
821 the day. In the evening it dips into the water again, and at
177 night it shines for the other human beings on the other side of the earth. This was Maringay's idea of the course of the sun. I believe, however, that he learned this from the whites.

Ee When a meteor, "baeréndi," falls, it means the death of
821 a chief. About a shooting star, the Chané on the Rio Parapiti said:
784 "He is going to sleep with his girl." Maringay was more
[763] realistic in his explanation. "The star lets something fall," said the old man.

Ee /296/ When it thunders, Chiquéritunpa is walking about.
821 The medicine men, "ipáye," are able to make rain. When
[789] the swallow, "máchurupimpi," flies low, it will rain, the
[825] Indians say. Another bird, "chóncho," announces rain. If
[784] one is going traveling, one should not put a jug in water, but
[484] dip up the water with a calabash; otherwise it will rain. In a
Ce myth about the destruction of the world related to me by the
821 Chané on the Rio Itiyuro, the world is destroyed by water.
773 The Chané on the Rio Parapiti told me how the world was
Ce destroyed by a storm. Otherwise the wind plays an unimportant
821 role in the myths. If one places a warmed jug in flowing
[784] water, there will be a storm, say the Chané on the Rio
[825] Parapiti. The rainbow, "yii," is a snake.

Chapter Eighteen

On the Life of the Chané and Chiriguano Indians (Continuation)

The Catholic Missions among the Chiriguano

Gradually all the Indians are bound to come under the influence of the whites. This is unavoidable. Day by day the areas in which they still live independently are diminishing. As soon as their territories have been conquered, they will be forced, in one way or another, to work for the whites and to become completely dependent on them. As a rule, they are also badly treated, exploited, and morally ruined.

In this unfortunate situation it is therefore fortunate that there have been and are self-sacrificing human beings who have done something and are willing to do something to help the Indians. These persons are the missionaries. It cannot be denied that they have tried and succeeded in doing important civilizing work among them. Enthusiasm and a willingness for self-sacrifice are required in order to become a missionary. No one could, for his own pleasure, spend his whole life in regions where the solitude must be terrible in the long run and where life offers no diversions or enjoyments.

For the missionary, the work of religious conversion is the most important thing. He wants to save souls from hell, "tatahuasurenda" (1). Fortunately, the Catholic missionaries

1. Tatahuasurenda = where the big fire is. Guarani word invented by the missionaries.

are wise enough to /298/ think a little about this life and to strive for improvement in the material conditions of life of the Indians.

Ee /298 cont./

177 797 The Indian, who loves an independent life, but is forced into the dance of civilization, does not want to become a mission child, but chooses this as the lesser evil. In the mission he is under guardians, but not under oppressors.

Ce 797 When my friend, the Chané Indian Batirayu, of whom I have spoken several times here, asked me whether it would not be best to ask the missionaries to come to the Chané on the Rio Parapiti, he thought of them as rescuers from the oppression of the white masters.

C 797 When I asked the Chiriguano chief Maringay whether he did not want missionaries to come to his village, the old man became quite indignant and said peevishly: "I have not done anything bad."

Ee 797 177 The greatest importance of the missionaries lies in the fact that they try to protect the Indians from the oppression and the vices of the whites. I have been pleased to see how the missionaries forbid liquor, the accursed liquor, in the mission stations.

Nevertheless, I do not believe in the future of the missions. It seems to me they are condemned to oblivion. To the extent that the Indians are given better treatment by the other whites and receive proper compensation for their work, they will leave the missions and forsake the guardianship of the Franciscan monks.

The missionaries, however, will always have the honor of having tried, at least to some extent, to protect the Indians from the other Christians. They have also earned honor for the studies they have made of the language, manners, and customs of the Indians.

Fear of the Rubber Regions

C 648 466 167 In a previous chapter I spoke of the migration of the Indians to Argentina. In the /299/ northernmost territory of the Chiriguano Indians another emigration is taking place. It differs from the first, among other things, by the fact that it is not voluntary. It concerns the rubber regions in northeastern

c

466
[167]
[464]

/299 cont./

Bolivia. Every Indian who goes to the Argentine sugar factories knows that, if there is no disaster, he will return. No one holds him back by force. From the rubber regions, on the other hand, no one ever returns.

Is it true, they say, that there is a giant there who devours human beings? Is it true that people /300/ are ground

Ce

466

up into rubber? Is it true that the meat that comes in tin cans is from human beings? These are questions which the Indians asked me.

The Chiriguano Indians, especially from the Caipipendi valley, were lured in a shameless manner to the rubber regions in northern

C

/300 cont./

648 466 Bolivia, where they were sold as laborers. Under the guard of armed men, they were brought down the Rio Mamoré by way of Quatro-Ojos.

I shall have a better opportunity, however, to discuss the relations of the Indians to the rubber industry in the book in which I shall report on the studies which I made in the rubber regions themselves and among the Indians located near them (1).

C [113]

1. Appeared in Swedish under the title Indianer och hvita i nordöstra Bolivia, Stockholm, 1911.

I shall therefore not go into this question in greater detail here.

E Ec 648 466 465

Compulsory Service for the Whites

The Chiriguano and Chané who work as servants in their own country for the immigrant white race are extraordinarily poorly paid. This is especially true in the remote regions where the higher prices for labor in the Argentine sugar factories, as the result of competition, have not been able to react on wages. The Chané on the Rio Parapiti, for example, are seldom paid more than 20 centavos (not quite 35 pfennigs) per day with board. The women earn about half as much. The Indians are paid their wages partly in spirits and sugar, partly in cloth and tools. The cloth is so poor that a shirt made from such material does not last much longer than the time required to earn it. As a result of this system, the Chané and Chiriguano, like their fellow-tribesmen in the rubber regions in northeastern Bolivia, sink into debt slavery.

/301/ It is to be hoped that the large projects initiated by the engineer Herrmann in San Franzisko on the Rio Pilcomayo will improve the Indian wage situation generally. If he will pay better than others, all the Indians will come to him, and the other employers will have to increase their wages.

Ee 648 [466]

/301 cont./

Thus, the Chiriguano and Chané are on the direct road to being drawn into the anything but fortunate struggle between employer and employee.

The Bolivian government should see to it that the fields of the Indians are entered in the land register, so that whites cannot take possession of them. The government should also make it a condition that no Indian may sell his land. In this

C 415 531

Fig. 133. Clay vessel. 1/9.
Chiriguano. Caipipendi.

Ee 648

way the government would guarantee the Indians the right of occupation of the land, but not the right of ownership.

Ee 648 466 465 167 425

/302/ The uncertainty and the oppressive wage conditions under which these Indians live naturally lead to emigration to Argentina and, above all, to the circumstance that many Indians abandon the land, not only as seasonal workers, but forever.

Ee 648 273 177

If the Bolivian government wishes to do something for the Indians, it must first of all try to find a remedy for the worst evil, namely, alcoholism. There is a tremendous difference between drinking maize beer and liquor.

Ee 648 273 177

/302 cont./

An Indian who has become intoxicated on native beverages is never as eager for quarrels and brawls as one who has tasted the infernal soup of the whites. Besides the fact that liquor damages the moral life and health of the Indians, it ruins them completely. I have seen with my own eyes how an Indian can give away his best cow for a keg of spirits.

Distilling for private consumption is still permitted in Bolivia. It should be forbidden, and likewise that anyone may sell alcohol any place he wishes.

Ee 648 177

The Bolivian military law that forces the Indian to perform military duty is quite unreasonable. It is very seldom enforced, to be sure, but when it is, and when the authorities come to get a young man for military service, he himself and all the other Indians of the region along with him are beside themselves with fright. One cannot demand that the Indians take part in the defense of the fatherland before they have the same rights as other citizens and know what their fatherland is.

It is unjust to demand that they should help to defend Bolivia, to defend the whites, who, according to their ideas, have stolen their land from them. The Chiriguano and Chané likewise love their country, but their fatherland is only the valleys and forests in which their fathers made clearings and their mothers painted clay vessels for the festivals.

Ee [484]

During the period of development which Bolivia is now experiencing, /303/ it is important to make use of Indian labor even here in the land of the Chané and Chiriguano Indians.

In spite of their unique culture, I have no great hopes for the future of the Chiriguano and Chané Indians. They will, however, become incorporated as an important element of the mestizo race, which in the future will be the sole rulers of the xerophytic forests of the Parapiti valley and the last spurs of the Andes toward El Gran Chaco.

Gradually they will probably forget their legends about Tatutunpa and Aguaratunpa and the other gods.

/303 cont./

000 The descendants of Maringay, Vocapoy, and the others will then perhaps study what has been written about their forefathers in this book, which is printed in a country where maize does not ripen and palms grow only under glass. They will perhaps fly to the north in order to see the ornaments with which the old people were adorned and the beautifully painted drinking vessels in which their ancestresses served maize beer at the festivals. /Ch. 19-20 and the Conclusion, pp. 304-330, are omitted in the translation. Neuntes Kapitel.

Das Land der Chané- und Chiriguanoindianer.

Wie ich ein Bild des Lebens der Choroti- und Ashluslayindianer zu geben versucht habe, will ich auch die Chané- und Chiriguanoindianer und meine verschiedenen Besuche bei ihnen zu schildern versuchen. Diese Indianer stehen bedeutend höher als die „Wilden" des Chaco. Sie leben zum allergrößten Teil in Abhängigkeit von den Weißen, und ihre alte eigenartige Kultur verschwindet immer mehr.

Die Chiriguanos sind auch jetzt zu einem ganz bedeutenden Teil Christen. Seit über 300 Jahren haben zuerst die Jesuiten und dann die Franziskaner sie mit wechselndem Erfolg zu dem alleinseligmachenden christlichen Glauben zu bekehren versucht. Bei den Chiriguanos befinden sich auch jetzt noch mehrere Missionsstationen, bei den Chanés dagegen keine.

In den Chanés und Chiriguanos lernen wir Menschen mit einer höheren Kultur kennen, Menschen, die von den Indianern, von denen wir in den vorigen Kapiteln gelesen haben, vollständig verschieden sind. Vergleiche zwischen den beiden Kulturtypen, die wir im Chaco antreffen, sind natürlich von Interesse.

Was den Leser vielleicht am meisten wundert, ist der Umstand, daß beide primitive Kulturen nebeneinander bestehen können und sicher jahrhundertelang bestanden haben, ohne ineinander zu verschmelzen, ja ohne voneinander zu lernen, und dies, obschon hier keine natürlichen Grenzen vorhanden sind.

Im Mai 1908 besuchte ich, wie gesagt, den Chanéhäuptling Vocapoy am Rio Itiyuro in Argentinien nahe der boli-

6:Nordenskiold SF10 Chiriguano

vianischen Grenze. Dies ist einer der Flüsse, der vergebens den Wildnissen des Chaco zu entrinnen sucht. Er entspringt den äußersten, urwaldbestandenen Quellen der Anden und verschwindet in den Trockenwäldern des Chaco.

Vocapoy lag im Streit mit den Weißen, die sein Land usurpiert hatten und seine Auffassung, daß sie nur seine Pächter seien, nicht gelten lassen wollten. Er bat mich um

Abb. 74. Vocapoys Dorf am Rio Itiyuro.

Rat, wie er die Weißen dazu bewegen könne, das Recht der Indianer an das Land anzuerkennen. Ich riet ihm, sich an den großen Häuptling der Weißen, den Präsident der Republik, zu wenden, und nahm Stellung als Feldmesser der Indianer an. Ich streifte mit den Indianern durch ihr Gebiet und zeichnete eine kleine Skizze, die Vocapoy mit zum Präsidenten nehmen sollte. Die Indianer hießen meine Skizze nicht gut, sondern zeichneten selbst eine Karte von dem Lande.

6:Nordenskiöld SF10 Chiriguano

Leider weiß ich nicht, ob Vocapoy die lange Reise nach dem Dorfe des großen Häuptlings vorgenommen hat, ich

Abb. 75. Chanéindianer. Rio Itiyuro.

erwarb mir aber durch die Feldmessung das Vertrauen der Indianer.

Als ich Ende Juli 1908 die Chorotis und Ashluslays verließ, begab ich mich über Yacuiba nach San Francisco am

6:Nordenskiold SF10 Chiriguano

Rio Pilcomayo. San Francisco war eine Missionsstation, die die Franziskaner unter den Chiriguanos gehabt hatten, die

Abb. 76. Chanéindianer. Rio Papapiti.

aber jetzt eingezogen ist. Nicht weit davon wohnen die Tapieteindianer, bei denen ich im August 1908 eine Woche zubrachte.

In Tihulpa eröffnete ich einige Tage lang ein richtiges

6:Nordenskiöld SF10 Chiriguano

kleines Materialwarengeschäft. Indianer und Indianerinnen, besonders die letzteren, drängten sich um den Ladentisch. Es war ein eigentümlicher Laden. Kam eine Indianerin mit Geld dorthin, um zu kaufen, wurde sie vom Ladendiener höflich abgewiesen, kam sie dagegen mit einem hübschen alten Tongefäß, so wurde sie die glückliche Besitzerin von Korallen, feuerroten Bändern, Ohrringen mit wirklichen „Diamanten", Ringen mit „Saphiren" oder von anderem Wackeren, womit sie dann beim nächsten Trinkgelage prahlen konnte.

In diesen Missionsstationen befinden sich immer zwei Dörfer, eins für die Heiden, eins für die Christen. Ich für meine Person fühlte mich immer in dem ersteren am wohlsten, und dies nicht allein deswegen, weil dort mehr hübsche, alte Gegenstände zu sammeln waren, sondern auch, weil man dort in seinem Benehmen freundlicher, taktvoller und feiner war. Die Missionskinder waren zudringlich und frech.

Bei Machareti ist eine große Talmulde, in welcher ein kleiner Bach fließt, der nach einem heftigen tropischen Regen wahrscheinlich zu einem brausenden Fluß anschwillt und sich in den Wildnissen des Chaco verliert. Ganz nahe der Mission verläßt er die hübsch zerschnittenen Berge, wo überall in den Rissen der Klippen kleine Petroleumquellen hervorsickern. Er fließt dann durch eine Hügellandschaft, die allmählich in das gewaltige Flachgebiet des Chaco übergeht. Die Vegetation in diesen Gegenden ist keine sehr üppige. Der Wald, wenn solcher vorhanden ist, ist dünn, niedrig, strauchig und einförmig. Die Felder scheinen reiche Ernten zu geben, die Dürre selten zu groß zu sein. Oft werden diese Gegenden von gewaltigen Heuschreckenschwärmen verheert. Wie große, rotbraune Wolken habe ich diese schädlichen Tiere die Wälder bedecken gesehen.

Von Machareti gingen wir über Itatiqui, einem ganz interessanten Chiriguanodorf in einer wasserarmen Gegend, nach dem Rio Parapiti.

Dieser kommt von Pomabamba und Sauzes, von den

6:Nordenskiold SF10 Chiriguano

Gebirgen der Quichuaindianer. Wenn er diese verläßt, ist er in der Regenzeit ein brausender, seine Ufer überschwemmender Strom. In der Trockenzeit führt er wenig Wasser. Auch der Rio Parapiti endet im Chaco. Während der Regenzeit verliert er sich in den Morästen, in der Trockenzeit verschwindet er in dem feinen Sand. Wenn der Rio Parapiti auf den Karten als südlichster Nebenfluß des Amazonenstromes stolziert, so ist dies also nur eine leere Prahlerei von ihm. Die Wälder längs des Rio Parapiti bestehen meistens aus Büschen und niedrigen, feinblättrigen Bäumen, Caraguatá und Kakteen.

In der Trockenzeit häuft der Wind große Dünen längs der Ufer des Flusses auf. Nachdem er die Berge verlassen hat, erhält er keinen Nebenarm. Der Rio Parapiti ist sehr breit, aber niemals tief. Während der trockensten Zeit ist sein Bett in eine Sandwüste verwandelt, wo der Wind mit dem feinen Flußsand spielt. Stürmt es, so wird der Sand über den Flußboden gepeitscht. Will man an einem solchen Tag herüber, so macht man sich vielleicht die Füße nicht naß, muß aber seine Augen hüten.

Der Rio Parapiti ist fischreich, die Fische sind aber winzig klein. Die Ufer sind recht fruchtbar, da sie aber während der Regenzeit überschwemmt werden, gehen die Ernten leicht verloren. In der Trockenzeit wird oft alles durch die brennende Dürre verzehrt. Auch die Heuschrecken hausieren in diesen Gegenden und hinterlassen in ihren eigenen unappetitlichen Körpern einen schlechten Ersatz für das, was sie zerstört haben.

Am Rio Parapiti wohnen ganz hoch oben am Gebirge die Quichuaindianer, dann kommen die Chiriguanos, hierauf nahe dem Flusse die Tapietes, auch Yanayguas genannt, danach die Chanés und zuletzt in den unbekannten Wildnissen die Tsirakuaindianer.

Mein erster Besuch am Rio Parapiti galt dem Padre Carmelo, der dort eine kleine Missionsstation unter den Chiriguanos hatte. Diesen Mönch habe ich sehr lieb ge-

6:Nordenskiöld SF10 Chiriguano

wonnen, er hatte eine so vertraueneinflößende Freundlichkeit. Er gehört zu den Missionaren, die hier erforderlich sind, Menschen, die sich für andere aufopfern wollen und können, die allen eine gleich große Freundschaft erweisen.

Ich setzte nun längs des Rio Parapiti nach Isiporenda, am Nordufer des Flusses, fort. Gegenüber Isiporenda wohnen die Tapietes. Einen Besuch, den ich bei ihnen machte, will ich später schildern.

Bei Isiporenda traf ich den ersten Chané oder, wie sie hier genannt werden, Tapuy. Ich besuchte dann den größten Teil ihrer Dörfer. Besonders machte ich mit einigen ihrer Sagenerzähler Bekanntschaft, von denen Batirayu, der Neffe des letzten großen Häuptlings Aringuis, mein guter Freund wurde.

Vom unteren Rio Parapiti begab ich mich über Charagua, einem beinahe ausschließlich von Weißen bewohnten Dorf, nach dem Caipipendital, wo ich mich bei dem Chiriguanohäuptling Tarviri aufhielt.

Man kann sich wundern, daß ein Mensch in diesem wälderlosen Tale, wo man nur ein salziges, schmutziges Wasser findet, wohnen will, im Caipipendital braucht man aber kein Wasser zu trinken, denn dort gibt der Mais herrliche Ernten und dort herrscht niemals Mangel an Maisbier. Die Bewohner des Caipipenditals sind reich, und herrscht in anderen Gegenden Not, so kommen die Indianer von weither zu diesen Stammverwandten, um ihre Kostbarkeiten gegen Mais einzutauschen.

Es ist auch für Sammler ein herrliches Tal. Silberne Schmucksachen, silberne Schalen, fein geschnitzte Musikinstrumente und viele andere Seltenheiten fanden wir in diesem Paradies des Ethnographen. Steinäxte, Ruinen, Grabfelder von verschiedenen Völkern beweisen, daß das Caipipendital lange von den Indianern hoch geschätzt war.

Tief hat das Wasser sich in dieses Tal eingeschnitten. In der Regenzeit regnet es wohl auch dort.

Von Caipipendi kehrte ich über die Berge durch ein seiner

heißen Quellen und seiner Schönheit wegen berühmtes Tal nach Charagua zurück, um dann längs der Anden in der Richtung nach Santa Cruz de la Sierra fortzusetzen.

Es war im Oktober 1908. Nicht ganz ein Jahr später, im Juli 1909, besuchte ich, nach umfassenden Flußfahrten weit hinten an der Grenze Brasiliens, den Chaco wieder. In einem anderen Buche werde ich diese Fahrten auf großen, schiffbaren Flüssen und durch Urwälder, deren üppiges Grün überwältigt, schildern.

Von Santa Cruz de la Sierra kam ich, wie gesagt, im Juli 1909 nach dem Chaco zurück. Ich reiste nun zuerst über den Rio Grande nach dem Rio Parapiti, um vor allem meinen Freund Batirayu zu besuchen.

Der Rio Grande ist der südlichste Nebenfluß des Amazonenstromes. Er kommt von den höchsten Bergen der Anden und fließt bei Sucre vorüber, welche Stadt lange der Stadt La Paz den Rang als Hauptstadt Bolivias streitig gemacht hat. Wenn er aus dem Gebirge tritt, ist er ein brausender, mächtiger Fluß. Weiter unten hat er einen höchst unbeständigen, sehr wenig bekannten Lauf. Nördlich von Santa Cruz de la Sierra nimmt der Rio Grande den Rio Piray auf und vereinigt sich schließlich mit dem Rio Mamoré. Einige Chiriguanos wohnen an diesem Fluß, auch wilde Tsirakuas und Sirionos streifen in den Urwäldern an demselben umher.

Zwischen dem Rio Grande und dem Rio Parapiti ist ein höchst wasserarmes, zum großen Teil mit vollständig undurchdringlichem Gestrüpp und niedrigem Buschwald voller Caraguatá und Kakteen bedecktes Gebiet. Diese einförmige, düstere Vegetation wird hier und da durch Hügel und Grasebenen unterbrochen.

Außer den wilden Tsirakuaindianern, die diese Dickichte unsicher machen, findet man hier eine andere Merkwürdigkeit, nämlich den Guanako (auchenia). Es ist ganz sonderbar, ein Tier wie den Guanako, den man sich nur im Zusammenhang mit den kalten Hochebenen der Anden oder den oft

6:Nordenskiold SF10 Chiriguano

unter Frost leidenden Pampas von Patagonien denken kann, in diesen oft von der Dürre verbrannten Gebüschen zu finden. Es wäre interessant, bestimmen zu können, ob dieser Guanako des tropischen Urwaldes wirklich derselbe ist, den man von kälteren Gegenden her kennt. Intelligente Weiße, mit denen ich hierüber gesprochen habe und die beide gesehen haben, halten sie gleichwohl für dieselbe Art.

Nach dem Rio Parapiti zurückgekommen, suchte ich Batirayu auf, mit dem ich schon 1908 intim bekannt wurde und der auch ein ausgezeichnetes Spanisch spricht.

Keinem Indianer, den ich kennen gelernt habe, bin ich so nahe gekommen, wie Batirayu. Er verstand, daß ich die alten Erinnerungszeichen aus Interesse für seinen Stamm sammele. Batirayu tat sein bestes, mir die religiösen Begriffe seines Stammes zu erklären. Des Abends saßen wir bei einer Zigarette in seiner Stube, und er erzählte von alten Zeiten, Zauberern, Häuptlingen und Geistern. Zuweilen kam ein alter Häuptling Böyra dazu, und von ihm hörte ich viele hübsche Chanésagen. Bis spät in die Nacht hinein saßen wir und plauderten bei einem flackernden Licht, das ich mithatte, um Aufzeichnungen zu machen.

Man irrt sich sehr, wenn man glaubt, daß die Gespräche mit diesen Männern nur ein interessantes Studium wären. Ich fühlte mich wohl bei diesen feinen, taktvollen, ja, warum nicht, gebildeten Menschen. Es war eine reine Erquickung, wenn man von den oft platten, inhaltlosen Weißen kam. Batirayu ist aber auch ein ungewöhnlicher Mann, der Stoff zu einem großen Mann, der zur Untätigkeit verurteilt ist.

Batirayu ist ein Chané. Diese Indianer sprechen jetzt dieselbe Sprache wie die Chiriguanos, und zwar Guaraní. Die meisten ihrer Sitten und Gebräuche stimmen auch mit denen der Chiriguanos überein, von denen sie wahrscheinlich unterworfen worden sind. Ihrem Ursprung nach sind sie indessen Arowakes und somit die am südlichsten Wohnenden dieser Gruppe, die in Südamerika und auf den Antillen eine große Verbreitung hatte und noch hat.

6:Nordenskiold SF10 Chiriguano

Wenn ich die Chanás und die Chiriguanos hier zusammen schildere, so geschieht dies, weil ihre materielle Kultur so gleichartig ist. Gleichwohl habe ich angegeben, bei welchem Stamm ich diese oder jene Beobachtung gemacht habe; dies gilt besonders für das religiöse Gebiet, auf welchem die Chanás, wenigstens am Rio Paraguay, viele alte Vorstellungen beibehalten haben, die den Chiriguanos unbekannt sind.

Botirayu erzählte mir, einige von den Chanás wüßten noch einige Worte der alten Sprache des Stammes. Besonders bei den Trinkgelagen, wenn sie betrunken sind, pflegten sie sich damit wichtig zu machen, daß sie unter sich die alte Chanásprache, die sonst den Charakter einer Geheimsprache hat, sprechen.

In Begleitung Botirayus begab ich mich nach dem Dorfe „Hoirapembe", wo die Indianer zu finden sein sollten, die am besten Chaná konnten. Es war nicht leicht, ihnen ihre Geheimnisse zu entlocken. Eigentlich waren es nur die Jüngsten, die am allerwenigsten wußten, die mir etwas mitteilen wollten.*) Eine alte Frau, die ausgezeichnet Chaná können sollte, sagte, erst im Totenreiche wolle sie mich unterrichten. Da die Indianer an diesem glücklichen Platze nicht von den Weißen, auch nicht von den Ethnographen belästigt werden, war das Versprechen der Alten nicht sehr freundlich.

Bei einer Menge Ausdrücke, die Schimpfwörter sind, wenden die Chanás ihre alte Sprache an, z. B. karitimisiyti, das sie mit Sohn einer H—e übersetzen. Eine Einladung zum Koitus nennen sie pocine. Auch Lieder finden sich in dieser

*)

	Chaná.	Chiriguano.	Mojo.

alten Sprache, z. B. siparakindowyé, siparakindowyé, siparakindowyé, tomiya, tomiya, tomiya, wollte sie keine Übersetzung wollen.

Vom Rio Parapiti aus besuchte ich wieder den Chiriguano-Häuptling Tarairi im Caipipendital, wo ich so viel alte Schmuckknochen und andere Kostbarkeiten wie möglich zu kaufen suchte. Außer Tarairi besuchte ich auch einen anderen Häuptling, Vombuy, einen alten Elfenmann, der mich immer zu umarmen und dabei zu sagen pflegte: „Ich bin Vombuy."

Abb. 77. Von der Frau des Chiriguanohäuptlings Mariaguy hergestellter Tonopfer. ½

„Ja, der große, mächtige Vombuy", fiel ich ein, worüber der bevorzugtgekommene arme Kerl sich sehr geschmeichelt fühlte.

Vom Caipipendital ging ich über Piga zur Mission bei Ivo. Dieser liegt in einer trockenen, einsamen, wasserarmen Gegend, nahe einigen mächtigen Bergen, und das Leben muß da fürchterlich sein. Als die Blattern in der Gegend stark grassierten, wollte Vater Bernardino den Eingang der Krankheit in die Mission mit Erfolg durch Vakzinierung aller am Platze wohnenden Indianer zu verhindern. Vater Bernardino ist ein wirklich uneigennütziger Mensch, ein wirklicher Missionar. Infolge der Vakzinierung starb in Ivo niemand an den Blattern, während die unheimliche Krankheit unter den Weißen, einige Meilen von der Station, fürchterlich wütete. Es geschah ihnen beinahe recht. War einer an den Blattern gestorben, so wurde der Leichnam auf einem mit Papierblumen und einem Kruzifix geschmückten Tisch gelegt. Um diesen herum betrauten sich die anderen Schweine und

6:Nordenskiold SF10 Chiriguano

trinken so lange obligat,[7]) bis sie auf den Tisch zu liegen kamen. Allein im Dorfe Cuevo starben in kurzer Zeit von zweihundert Personen sechzig. Ich habe die 140 besucht. Sie waren so lustig wie immer. Branntwein und Bier wurde in Massen verzehrt.

Dem Vater Bernardino wurde niemals die Ehre an diesem Werke zuteil, sondern den Medizinmännern, welche die Krankheit verhext hatten, so daß sie nicht nach Ivu kommen sollte. Auch die weißen Kolonisten ließen zuweilen die Medizinmänner kommen, um die Krankheit zu vertreiben. Auch sie glaubten nicht an die Vakain.

Abb. 58. Von der Frau des Chiriguanohäuptlings Maringay hergestellter Tongefäß. $^{1}/_{5}$.

Mit Ivu als Ausgangspunkt machte ich eine Exkursion nach dem Igüembetal, um den Chiriguanohäuptling Maringay zu besuchen. Es war ein hübscher Ritt auf hohe Bergkämme hinauf und in tiefe Täler hinab, durch eine oft grotesque, farbenreiche Landschaft. Diese Täler sind waldarm. Nur in einer gut geschützten Schlucht, in welcher ein Bach hervorsickert, ist die Vegetation üppig.

Mit dem alten Maringay wurde ich bald sehr gut befreundet. Der Alte war konservativ, hielt fest an alten Sitten und meinte, die Indianer sollten mit den Weißen auf gutem Fuße leben, ihre alten Sitten und Gebräuche aber unverändert bewahren. Sein Dorf war außerordentlich interessant und sehr reich an alten, hübschen Sachen. Die Keramik,

[7]) Trinkt jemand obligat mit einem, so muß dieser austrinken.

6:Nordenskiöld SF10 Chiriguano

die ich dort antraf, gehört zu dem Allerbesten, was ich bei diesen Indianern gesehen habe. (Abb. 77 und 78.)

Von Maringay kehrte ich über die Missionsstation Santa Rosa nach Ivu zurück. Die erstere hat eine wunderbare Lage. Gleich einer alten Burg ist sie auf einem engen Hügel gebaut. Unterhalb liegen in langen Reihen die von niedrigem Wald mit Mimosazeen, Kakteen, kleinen Algorrobos und anderen feinblättrigen Bäumen umgebenen graubraunen Chiriguanohütten. Dieser Wald ist selten so dicht, daß man nicht leicht ohne Waldmesser herauskommen kann. Als ich in Santa Rosa war, herrschte Trockenzeit und alles war verbrannt. Der Regen zaubert aber wohl auch hier das Grün aus dem trockenen Boden. Manchmal bleibt aber der Regen so lange aus, daß die Indianer keinen Mais bekommen, und das bedeutet — Hunger.

Von Santa Rosa sieht man weit hinaus über die Berge und über die große Ebene Boyuovis, über das Land, welches das Vaterland der Chiriguanos war, wo sie bei Curuyuqui ihren letzten Kampf mit den Christen gekämpft haben, die sich das Recht anmaßen, alle schwächeren Völker zu bestehlen.

Nach dem Ausflug bei Maringay verließ ich das Land der Chiriguanos und Chanés und machte meinen, in diesem Buche schon geschilderten zweiten Besuch bei den Chorotis und Ashluslays.

Das von den Chiriguano- und Chanéindianern bebaute Gebiet ist wirklich sehr ausgedehnt. Es hat eine wechselnde Natur, von üppigen Urwäldern bis zu äußerst wasserarmen, vegetationsarmen Tälern und Ebenen. Es ist teilweise sehr bergig, aber die Chiriguanos und die Chanés sind keine Gebirgsvölker. Sie halten sich unten in den Tälern auf und klettern nicht, wie die Quichuaindianer, auf Gipfel und Hochebenen hinauf.

Das Tierleben in diesen Gegenden ist arm, ja sehr arm. Ein Jägervolk könnte dort niemals wohnen. Hier und da ein Rehbock, ein Wildschwein, einige Strauße, das ist alles, was man an Großwild sieht. Auch das Vogelleben ist arm.

6:Nordenskiold SF10 Chiriguano

Die Zahl der Seen ist sehr gering, und ihre Größe nicht bedeutender, als daß wir sie in Europa Pfützen nennen würden. Am Rio Parapiti sieht man die ihrer kostbaren Federn wegen berühmten weißen Reiher[1]) ziemlich zahlreich. Von den Waldvögeln liefert nur das Huhn „pavas"[2]) einen Beitrag zum Essen. Zuweilen sieht man einen großschnabeligen „Tucan".[3]) Fette, mit Mais gemästete Tauben leben oft in Massen in den Feldern der Indianer. Im Rio Pilcomayo herrscht ein großer Fischreichtum, in den kleinen Flüssen sind die Fische klein und schlecht. Die Indianer, die diese Gegenden bewohnen, müssen Ackerbauer sein, und Maisbauer sind sie im allerhöchsten Grad. Mais ist für sie Essen, Trinken, Freude, alles!

Abenteuer habe ich von diesen Indianern nicht zu berichten. Jedermann kann unbehelligt unter ihnen reisen. Der größte Kummer des Ethnographen ist, daß er nicht alles Interessante und Alte, was er dort sieht, sammeln kann. Man kann nicht alles nach Hause mitnehmen.

Noch lebt in den Wildnissen des Chaco ein Chiriguanohäuptling Cayuhuari, in dessen Dorf kein weißer Mann gewesen ist. Es soll an einem großen See liegen. Dort weiden große Herden von Pferden und Kühen, und die Maisscheunen sind immer voll. Dort sind die Indianer reich, denn dort gibt es keine Weißen. So erzählt man wenigstens.

Cayuhuari, der seit der Empörung 1890 im Chaco lebt, hat eine weiße geraubte Frau als Schwiegertochter. Man sagt, er habe zusammen mit den Tobas die Zuckerfabriken in Nordargentinien besucht. Er hatte seine Schwiegertochter mit. Die Besitzer der Fabrik erboten sich, sie von den Indianern zu retten. „Ich will sie nicht verlassen," sagte sie. „Bei ihnen habe ich meine Kinder." Diese Antwort ehrt sie.

Die Sitten und Gebräuche der Chiriguanoindianer sind von mehreren Verfassern,[4]) meistens Missionaren, geschildert

[1]) Ardea. — [2]) Penelope. — [3]) Rhamphastus.

[4]) Die allermeiste Literatur finden wir von Domenico del Campana angeführt: Notizie etc. l. c.

6:Nordenskiold SF10 Chiriguano

worden, so daß wir mehr von ihnen wissen, als von den Chorotis und den Ashluslays.

Ein Teil von dem, was ich über diese Indianer berichtet habe, ist nicht neu, wenn auch in neuer Beleuchtung gesehen. Verschiedenes, besonders was das Religiöse betrifft, unterscheidet sich gleichwohl von den Schilderungen der verschiedenen Missionare. Was ich hierin gesammelt habe, ist von den Chanés, und die Missionare kennen die Chiriguanos am besten.

Was mich in verschiedenen Schilderungen der Missionare von den Indianern unsympathisch berührt, das ist, daß sie danach zu streben scheinen, ihre Fehler in allzu dunklen Farben auszumalen, damit ihre eigene „zivilisatorische Arbeit" so bedeutend wie möglich wirken soll. Die Missionare scheinen mir die Religion der Indianer nicht objektiv schildern zu können.

Wenn ich gelesen habe, wie die Missionare ihre eigene Eroberung des Landes der Chiriguanoindianer beschreiben, so hat es mir nicht gefallen, nur von dem Mut der ersteren und der Grausamkeit der letzteren zu hören. Ich leugne es nicht, die Missionare waren tapfer, mehr bewundere ich aber die Freiheitsliebe und den Mut der Chiriguanoindianer. Ist es den Mönchen zu schwer geworden, so sind ihnen beinahe immer Soldaten zu Hilfe gekommen. Die Indianer haben sich den Missionaren nicht nur infolge der „Religion der Liebe", sondern infolge Kugel und Blei unterworfen. Der Weg zur alleinseligmachenden Kirche ist nicht selten mit Blut getränkt worden.

[p. 163]

Zehntes Kapitel.

Vom Lande der Chané- und Chiriguanoindianer.

Indianer als Geographen.

Gibt es auf dem südamerikanischen Kontinent einen einzigen bewohnbaren Platz, der nicht von den Indianern entdeckt ist?

Diese Frage wage ich mit „Nein" zu beantworten. Auf den höchsten Gipfeln der Anden finden wir Indianer, in den trockenen Buschwäldern des nördlichen Chaco gibt es Indianer, in den tiefen Urwäldern von Ost-Bolivia streifen Indianer umher, die ungastfreundlichen Inseln um das Feuerland werden von Indianern bewohnt, in den Pampas in Argentinien haben früher viele Indianer gelebt.

Welch kolossale Zeit haben diese Menschen nicht gebraucht, um jeden Bach, jede Pfütze, jede Klippe, jedes Wäldchen auf dem südamerikanischen Kontinent zu entdecken. Vierhundert Jahre lang hat der weiße Mann mit allen seinen Hilfsmitteln Südamerika zu erforschen gesucht, und doch ist noch viel mehr unerforscht, als man gewöhnlich glaubt. Er kennt im inneren Südamerika alle die größeren Flüsse und Verkehrsstraßen, ungeheuer sind aber noch die Gebiete, die niemals der Fuß eines Weißen betreten hat. Die Indianer kennen jeden Winkel, oder haben ihn wenigstens gekannt.

Die Zeit, die zur Entdeckung dieses Kontinents und zur Anpassung an das wechselnde Klima, die wechselnde Pflanzen- und Tierwelt vergangen ist, ist sicher eine sehr, sehr

6:Nordenskiold SF10 Chiriguano

lange gewesen. Das beweisen auch die hunderte Indianersprachen, die von Südamerika her bekannt sind.

Das Gebiet, das jeder Indianer in der Regel kennt, ist kein großes, er kennt es aber genau. Ich habe, wie ich hier schon erwähnt habe, mit den Ashluslayindianern eine Wanderung von etwa 250 km in den Wäldern vorgenommen. Dies geschah in ihrem eigenen Land, und das kannten sie vollständig. Einzelne Individuen kennen infolge des Handelsverkehrs etwas von dem Lande der befreundeten Nachbarstämme.

Ich habe stets die Indianer gefragt, von welchen Stämmen sie gehört haben, und habe sie gebeten, diese aufzuzählen. Dies taten sie gern, solche Stämme aber, von denen sie glaubten, daß ich sie nicht kenne, erwähnten sie ganz einfach nicht. Sie wollen die Kenntnis des weißen Mannes vom Lande nicht unnötig erweitern. Dies ist der Grund, warum es oft so schwer ist, unter den Indianern einen Wegweiser zu finden. Wer den weißen Mann in ein diesem unbekanntes Dorf führt, ist ein elender, des Todes werter Verräter. Die Chorotis sagen immer, im Innern ihres Landes, vom Rio Pilcomayo an gerechnet, wo noch niemals ein Weißer gewesen ist, gebe es keine Menschen. Die Ashluslayindianer waren sehr erstaunt, als ich ihnen das charakteristische Besitztum der Tsirakuaindianer beschrieb und ihnen von den Yanayguas erzählte. Daß der weiße Mann diese Stämme kennt, war ihnen vollständig unverständlich.

Sehr umfassend sind die Kenntnisse der Indianer von dem Kontinent, den sie bewohnen, nicht. Kein Indianer südlich von Santa Cruz de la Sierra kennt z. B. die nördlich von dieser Stadt wohnenden. Der Rio Paraguay ist den Chanéindianern eigentümlicherweise bekannt. Die dortigen Stämme kannten sie nicht. Dort wohnt, sagten sie, ein großer Häuptling. Sie fragten mich, ob ich von diesem Häuptling ausgesandt sei, um alle Gegenstände aus alten Zeiten zu sammeln, damit sie nicht verloren gingen. Diesen großen Häuptling in Paraguay meinte ein alter Sagenerzähler, als er eine Abschiedsrede für

mich hielt, die folgendermaßen begann: „Nun kannst du deinem großen Häuptling sagen, daß du uns und unsere Armut gesehen hast . . ."

Das Orientierungsvermögen der Indianer ist viel besprochen. Der Indianer besitzt sicher eine sehr ausgebildete Beobachtungsgabe, sein Orientierungsvermögen ist aber nicht so bedeutend. Ich bin mit den Guarayúindianern im öst-

Abb. 79. Alter Chiriguano mit großem Lippenknopf. Tihuhpa.

lichen Bolivia etwa 250 km in tiefen, großen Wäldern, die sie nicht kannten, und in denen wir uns oft mit dem Waldmesser Schritt für Schritt einen Weg bahnen mußten, gewandert. Sie führten mich, wenn die Sonne von Wolken bedeckt war, oft irre, was ich an meinem Kompaß sah. Für einen weißen Mann, der aus dem Stadtleben direkt in die Wildnis versetzt wird, ist die Vertrautheit des Indianers mit der Natur merkwürdig. Ist man erst selbst an dieses Leben gewöhnt, so sieht man die Sache mit anderen Augen an.

6:Nordenskiöld SF10 Chiriguano

Die Entfernung von einem Platz zu einem anderen wird von allen Indianern dadurch angegeben, daß sie zeigen, wie weit die Sonne gehen muß, ehe man ankommt. Ist es weit, so sagt der Indianer, wie viele Nachtlager man bis dahin aufschlagen muß. Lange und kurze Wege sind ja auch bei uns in verschiedenen Gegenden verschiedene Begriffe. Was wir in der Stadt weit nennen, wird auf dem Lande oft kurz genannt. Für den Indianer sind Wege, die dem weißen Mann kurz erscheinen, in der Regel lang. Es fehlt den Indianern des Urwaldes die Marschfertigkeit, die wir bei den Gebirgsindianern finden.

Jedem Hügel, jeder Ebene, jeder Talschlucht hat der Indianer einen Namen gegeben. Die Chanés sagen, vor langer Zeit, als alle Völker an den Ufern des Parapitiflusses fischten, kam ein großer Geist (Añatunpa) zu Pferde und gab den verschiedenen Stellen Namen. Dieser Fluß soll Parapiti (wo getötet wird) heißen, diese Stelle Amboró usw., sagte Añatunpa. Von den Namen von Chanédörfern seien erwähnt: Húirayúasa (Vögel treffen sich), Aguaráti (weißer Fuchs), Aguarátimi (weißes Füchslein), Yóvi (grünes Wasser), Ouivarénda (wo es Chuchio gibt),[1]) usw. Die letztgenannte Pflanze, deren Blütenstengel von vielen Indianerstämmen in Südamerika als Pfeilschaft angewendet wird, ist jetzt durch die Rinderherden am Rio Parapiti ausgerottet. Die Chané, die ihre Pfeile früher aus Chuchio machten, bauen jetzt eine Art Schilf an, das sie, gleich den anderen Chacoindianern, als Pfeilschaft anwenden. Andere Orte sind nach Häuptlingen benannt, wie Tamachindi, Tamané und Corópa. Ein Dorf nennen sie Yahuanau. Früher war dort ein Sumpf, an dessen Ufern sich kleine schwarze Geschöpfe (Yahuanau) zu sonnen pflegten. Viele Chanéortsnamen sind unübersetzbar, von einem weiß ich, daß er unanständig ist. Einige indianische Ortsnamen sind sicher sehr alt, denn sie beziehen sich auf Pflanzen, Seen oder Sümpfe, die nicht mehr existieren. Im

[1]) Arundo saccharoides.

6:Nordenskiold SF10 Chiriguano

Caipipendital am Parapiti ist ein Dorf namens Tapiirenda. Das Tal ist jetzt ausschließlich von Chiriguanos bewohnt und keiner von ihnen erinnert sich, daß dort, wie der Ortsname angibt, Tapii (Chanés) gewohnt haben.

Die Ortsnamen der höherstehenden Indianer werden von den Weißen, auch wenn sie die Herren im Lande geworden sind, beibehalten. So haben beinahe alle von ihnen im Chiriguanogebiet bewohnten Plätze Guaraninamen, wie Charagua (Name der vom Wasser eigentümlich ausgeschnittenen Klippen), Carandaiti (wo Palmen wachsen). Die Ortsnamen der niedrigeren Stämme werden dagegen von den Weißen nicht bewahrt. So kennt kein Weißer die Mataco- oder Chorotinamen der verschiedenen Plätze am Rio Pilcomayo. Die Ansiedlungen der Weißen werden nach Heiligen, bolivianischen Staatsmännern und Forschungsreisenden benannt. Wird ein Stamm, wie z. B. die Chorotis, ausgerottet, so bleibt von dessen Sprache nichts in den Ortsnamen zurück. Dies dürfen Ortsnamenforscher nicht übersehen.

Durch die Verbindung mit den Weißen erweitern sich die geographischen Kenntnisse der Indianer bedeutend. Sie gehen immer weitere Wege, um Arbeit zu suchen, und sehen Länder, von denen sie früher keine Ahnung gehabt haben.

Der Indianer als Historiker.

Falls wir die Geschichte der Chorotis und Ashluslays schreiben wollten, könnten wir in der Zeit nicht weit zurückgreifen. Erst in den letzten Jahrzehnten sehen wir sie in der Literatur näher erwähnt. Die Chiriguanos kennen wir dagegen schon von ihren Kämpfen mit dem großen Herrscher Inca Yupanqui, aus der Zeit vor der Entdeckung Amerikas her. Über seine Versuche, das Land zu erobern, berichtet Garcilasso de la Vega.[1]) Seine Beschreibung der Chiriguanos als einer äußerst niedrig stehenden, menschenfressenden Rasse

[1]) Garcilasso de la Vega: The Royal Commentaries of the Yncas. Vol. I—II. Hakluyt Society. London 1869 u. 1871.

6:Nordenskiöld SF10 Chiriguano

ist sicher seiner eigenen Phantasie entsprungen. In den Gebirgstälern hat sich die Tradition von diesen Kämpfen noch bewahrt.

In der spanischen Zeit ist das Gebiet der Chiriguanos trotz der jahrhundertelangen tapferen Verteidigung Schritt für Schritt erobert worden. Erst noch 1890 unternahm ein Teil von ihnen einen letzten Empörungsversuch, wurde aber, wie erwähnt, in der Schlacht bei Curuyuqui, auf der Ebene von Boyuovis, besiegt. Etwa fünftausend Indianer hatten sich dort gesammelt und kämpften einen ganzen Tag mit den Weißen den ungleichen Kampf gegen die Feuerwaffen. Der Kampf hatte des Morgens begonnen, und des Abends, als es dunkel wurde, war er noch nicht beendigt. Die Lage begann für die Weißen höchst unangenehm zu werden, da ihre Munition beinahe zu Ende war. Der moralische Mut der Indianer war jedoch leider gebrochen. Sie verließen in der Stille der Nacht ihre Verschanzungen.

Ein sehr wichtiges Kapitel in der Geschichte dieser Indianer ist auch die lange und beharrliche Arbeit der Missionare, das Land der Indianer auf verhältnismäßig friedliche Weise zu erobern. Diese wird in der Literatur ausführlich behandelt.

Hier will ich jedoch nicht von der Geschichte dieser Indianer, wie wir sie durch die Literatur kennen, sprechen, sondern von dem Indianer als Historiker.

Spricht man mit den Indianern, so wissen sie von ihrer eigenen Geschichte nicht viel, ihre Tradition geht nicht weit zurück. Die Chanés am Rio Parapiti erzählten mir, sie hätten erst am oberen Rio Parapiti gewohnt,[1]) seien aber von einem großen Häuptling von dort vertrieben worden. Einige blieben, wo sie jetzt wohnen, andere begaben sich durch den Chaco nach dem Rio Paraguay, welcher Fluß, wie gesagt, den

[1]) Dies wird durch Viedma bestätigt: Descripcion geografica y estadistica de la Provincia de Santa Cruz de la Sierra. Coleccion Pedro de Angelis. Buenos Aires 1836. Tom. III. S. 180—181.

Indianern nicht unbekannt ist. Am Rio Paraguay finden sich auch Arowaken.

Die Chiriguanos wohnten zuerst am unteren Rio Parapiti und wurden von den Chanés von dort vertrieben. Dies ist

Abb. 80 a. Pfeife. „Huiramimbi". Tihulpa. b. Zeigt a im Durchschnitt. $^{2}/_{3}$

Abb. 81. Festtracht für Männer. „Tirucumbal". Chané. Rio Parapiti. $^{1}/_{10}$
b = Öffnung für den Kopf, a = Ärmlöcher.

möglicherweise „offizielle Geschichte", denn wahrscheinlicher haben wohl die Chiriguanos die Chanés aus den fruchtbaren Tälern des oberen Rio Parapiti gejagt.

Batirayu hat mir alles erzählt, was er über die Geschichte der Chanéindianer am Rio Parapiti wußte. Der letzte große

6:Nordenskiöld SF10 Chiriguano

Häuptling war Batirayus Onkel, Aringui. Dieser führte viele Indianer seines Stammes zur Arbeit nach Argentinien. Sein Vorgänger war Yámbáe. Vor ihm hatte Ochoápi die Häuptlingswürde bekleidet. Zu seiner Zeit begannen die Weißen ins Land zu dringen. Dieser Häuptling wird als ein bedeutender Mann geschildert, der die Sitten und Gebräuche der Weißen unter seinen Indianern einzuführen suchte. Bekannt ist Ochoápi wegen seiner umfassenden Reisen und seiner Verfolgung der Zauberer. Er soll in Buenos Aires gewesen sein. Vor ihm hatte Chótchori die Häuptlingswürde. Zu seiner Zeit waren die Weißen noch nicht bis zum unteren Rio Parapiti gekommen. Hier ist die Tradition zu Ende. Die hier erwähnten Häuptlinge waren aus demselben Geschlecht, die Regierung geht aber nicht vom Vater auf den Sohn über.

Von den Chanés am Rio Itiyuro könnte ich ein wenig Geschichte erzählen, will aber nicht durch zu viele Namen ermüden. Auch dort geht die Tradition nicht weit zurück, drei Generationen, das ist alles.

In den Sagen dieser Indianer, von denen ich weiterhin mehrere wiedergegeben habe, erfahren wir nichts über die Geschichte dieser Völker. Keine geschichtlichen Ereignisse scheinen dort zu Sagen umgebildet zu sein. Sie haben ganz andere Motive.

Es ist wirklich ganz eigentümlich, daß bei diesen Indianerstämmen ihre Geschichte, der Name ihrer Häuptlinge in Vergessenheit geraten ist, während die Sagen sicher, wenn auch in veränderter Form, jahrhundertelang von Generation zu Generation bewahrt worden sind. Für das hohe Alter der Sagen spricht vor allem ihre große geographische Verbreitung.

Die Gestalten der Sagen und deren Erlebnisse regen die Phantasie an, werden behalten und weitererzählt. Die geschichtlichen Persönlichkeiten und Ereignisse vergißt man.

Sucht man in den Chané- und Chiriguanohäusern, so findet man viele Sachen bewahrt, die jetzt außer Gebrauch sind,

6:Nordenskiöld SF10 Chiriguano

die sie aber als Erinnerung an frühere Zeiten ehren und oft nicht hergeben wollen. So sieht man hübsche, runde Pfeifen, „huiramimbi" (Abb. 80), die sicher von Generation zu Generation gegangen sind. Sie wurden früher bei Kriegszügen angewendet. Der alte Maringay hatte alles mögliche aus alter Zeit aufgehoben. Es bereitete mir ein großes Vergnügen, in den Verwahrungsstellen des Alten herumzuwühlen. Ich wollte gern etwas von ihm kaufen, es genierte mich aber, ihm Geld für seine Erinnerungen zu bieten.

In die Wände gestochen fand ich einst Bündel hübscher, ganz verräucherter alter Pfeilspitzen. „Würdest du mir sie nicht verkaufen wollen?" fragte ich meinen alten Freund zögernd. „Du sollst drei geschenkt bekommen", sagte Maringay. Nach dieser Abweisung ließ ich ihn seine lieben Sachen behalten.

Einmal ritt ich von Vocapoys Dorf, um einen alten Chané aufzusuchen, der eine hübsche alte Tracht hatte. Nach einigem Zögern zeigte er sie mir. Er hatte sie sorgfältig in anderes Zeug eingewickelt. Wie ein enthusiastischer Museumsbeamter ein altes Kleinod hervorholt, so wickelte er sie sorgfältig auf. Man sah förmlich, wie lieb sie ihm war. Obgleich ich ihm einen sehr hohen Preis bot, wollte er sie nicht verkaufen.

Daß diese Indianer die alten Erinnerungszeichen lieben, beweist, daß sie eine gewisse Kultur haben. Dies gilt jedoch nur für die Alten, die Jungen sind nicht mehr so, die verkaufen alles, ohne zu zögern. Was kümmern sie sich um eine abgenutzte, alte Festtracht, wenn sie ein rotes, flatterndes Halstuch und Hosen mit Rock dagegen bekommen können! Der Siegeszug der Hosen über die Welt hat auch diese Täler und Ebenen erreicht.

Die Chiriguanos und Chanés führen jetzt nicht mehr richtigen Krieg mit anderen Indianerstämmen. Bisweilen machen die Chanés am Rio Parapiti jedoch gelegentlich Streifzüge gegen die Tsirakuaindianer. Die Ashluslays behaupteten auch, wie mir mein Dolmetscher erzählt hat, daß

6:Nordenskiold SF10 Chiriguano

der Tobahäuptling Taycolique bei seinem Einfall in ihr Gebiet 1909 verschiedene Chiriguanos bei sich hatte.

Batirayu erzählte, die Chanés hätten früher die Köpfe der getöteten Feinde heimgebracht und sie bei Festen auf den Plätzen der Dörfer aufgestellt.

[p.173]

Elftes Kapitel.

Vom Lande der Chané- und Chiriguanoindianer.

Alltagsleben in den Chané- und Chiriguanohütten.

In der Regel habe ich mich in den Hütten der Chanés und Chiriguanos sehr wohl gefühlt. Das Leben in diesen Dörfern ist ganz gleichartig. Schildert man ein Dorf, so hat man sie beinahe alle geschildert.

Wie alle übrigen Indianer, die ich südlich von Santa Cruz de la Sierra in Bolivia besucht habe, leben diese Indianer in Dörfern. Einige dieser Dörfer sind recht groß und werden von einigen hundert Personen bewohnt. Oft liegen viele Dörfer nahe aneinander. Die Hütten liegen in der Regel um einen Markt, auf dem zuweilen Flaschenbäume gepflanzt sind, die in der Regenzeit Schutz verleihen. Die Märkte dienen als Spiel- und Versammlungsplätze. Die Hütten sind, im Gegensatz zu den runden Choroti- und Ashluslayhütten, viereckig, und ihre nach dem Dorf zu gerichtete Tür ist am Giebel angebracht. Sie sind aus Rohr oder Holzlatten und mit Dächern aus Gras. Nicht selten sind sie mit Erde verputzt.

Unter dem Einfluß der Weißen verändern aber die Chanés und Chiriguanos allmählich ihre Hütten, und viele Indianer bauen schon mit ihnen identische Hütten.

Keine Hütte hat hier ihre ursprüngliche indianische Form. Die echten Chiriguanohütten (die ursprünglichen Chanéhütten kennt man nicht) waren sehr groß; in demselben Hause wohnten bis zu 100 Personen und das ganze

Dorf bestand nur aus einigen großen Hütten.[7]) Diese entsprechen offenbar den aus Brasilien bekannten großen Familienhäusern, die ich in Bolivia nur bei den Chavchos, einem Panostamm aus Lago Rojo-Aguado, gesehen habe.

Schon zu Viedmas[8]) Zeit, Ende des 18. Jahrhunderts,

Abb. 83. Feuerstätte zum Maisbeerkochen. Chaminari. Rio Itiyuro. Rechts auf dem Bilde große Gefäße, in denen das Maisbier gärt. Das Haus ist mit Erde verputzt.

scheinen sie jedoch den ursprünglichen Hausotyp aufgegeben und kleinere Hütten gebaut zu haben.

In vielen Dörfern gehören zu jeder Hütte eine oder mehrere Maiscbrunnen (Abb. 84a), in denen Mais, Kürbisse usw. auf-

[8]) Viedma: l. c.

6:Nordenskiöld 33/10 Chiriguano

bewahrt werden. Diese Scheunen sind auf Pfählen gebaut und vielleicht eine Erinnerung aus der Zeit, wo die Chiriguanos und Chanés in sumpfigen Gegenden wohnten. Zu jeder Scheune gehört in der Regel eine Leiter (Abb. 84 b). Manchmal sind die Scheunen mit den Wohnhäusern zu einem Hause

Abb. 84 a. Maisscheune. Chané. Rio Bivuro

zusammengebaut. Solche Hütten habe ich in der Nähe von Machaveti und bei Yatavéti unweit Ivu gesehen. Nicht so selten stehen die Scheunen auf den Feldern weit ab von den Wohnhäusern.

Es ist in diesen Dörfern fein und rein. Hütten und Markt werden täglich gefegt und der Müll verbrannt.

Der Raum in den Hütten ist nicht zu gering bemessen.

6:Nordenskiold SF10 Chiriguano

[Facing p. 176]

Tafel 10. Caraguatá. Von den Indianern im Chaco vielseitig angewandte Pflanze.

6:Nordenskiold SF10 Chiriguano

In der Regel wohnt in jedem Hause nur eine Familie, die manchmal, außer den übrigen Familiengliedern, aus den Männern der Töchter besteht, welche während der Verlobung und im Anfang der Ehe bei der Schwiegermutter wohnen. Vor der Hütte ist die große Feuerstätte (Abb. 83), wo das Maisbier, und zuweilen auch das Essen, gekocht

Abb. 84 b. Hütte, aus der Konstruktion der Schwarme ersichtlich.

wird. In der Hütte ist ebenfalls eine Feuerstätte, wo man kocht und die man anbraucht, um sich bei kalten Nächten und Tagen zu wärmen.

Manche Nacht habe ich in diesen Hütten geschlafen. Sie sind in der Regel frei von Ungeziefer, was man nicht von den Wohnstätten aller anderen Indianer und von den Häusern der Weißen sagen kann. Die Lagerstätte besteht entweder aus einem Bett aus einer Art Bambusrohr, oder man legt

auf dem Fußboden auf einer Schilfmatte oder einem Fell. Hängematten sieht man ebenfalls in den Hütten, sie sind aber nicht allgemein. Im tropischen Südamerika hat die Hängematte ihr Heimatland, sie verschwindet aber nach Süden zu und auf den Bergen, denn dort ist es zu kalt, um sie anzuwenden.

Abb. 85. Strohsack. Chiriguano. Tarairí. $\frac{1}{10}$

Abb. 86. Haken zum Aufhängen der Sachen. Chiriguano. $\frac{1}{10}$

Am Dache der Hütte hängen auf Haken und Gestellen Kleider und Eßwaren, Mehlsäcke und anderes. Hier verwahren auch die Männer ihre Pfeile und Bogen, ihre Trommeln u. dgl. In Lianenschlingen pflegen Maiskolben zu hängen.

In einer Chaná- oder Chiriguanohütte ist es, besonders des Abends, wenn alle an das schöne, wärmende Feuer kriechen, wenn der Mond geht, die Alten Sagen erzählen, die Mütter ihre Kleinen zu Bett bringen, die jungen Paare abseits sitzen und lieben, sehr gemütlich.

Hier und da sieht man eine in Holz geschnitzte Sitzbank (Abb. 85) von einer besonders von den brasilianischen Indianern her bekannten Form.

Abb. 85. Chaniñas. Ein Pasquiti. In dem Tragseile hat sie einen Wasserkrug.

An den Wänden der Hütte entlang stehen immer eine Menge Tongefäße von allen Dimensionen. Manche davon sind so groß, daß ein Mann hineinkriechen könnte. Dort

6:Nordenskiöld SF10 Chiriguano

sind Töpfe, dort sind Rietschalen, dort sind feingemalte Gefäße, die bei den Festen hervorgeholt werden, und dort ist der Schatztopf, in welchem die Hausfrau alle Kostbarkeiten und Andenken der Familie verwahrt. In ihm liegen, falls das Haus „vermögend" ist, Kleider, Schmucksachen, Schalen aus Silber und Halsketten aus Türkis und Crysocol und vieles andere.

Sehr früh ist es still in den Dörfern. Es wird nicht, wie in einem Chorotí- oder Ashluslaydorf, die ganze Nacht ge-

Abb. 88. Tabakspfeife. Chiriguano. Caipipendi. $^{1}/_{2}$.

Abb. 89. Spatenstiel. Chiriguano. ca. $^{1}/_{10}$.

schwatzt. Die jungen Herren und die unverheirateten jungen Mädchen laufen nicht herum, um beieinander zu liegen. Die sittlichen Chaná- und Chiriguanomädchen werden von ihren Müttern bewacht, gehen nicht auf Abenteuer aus und nehmen keine Herrenbesuche an. Es kommen keine Nachtmahlzeiten, wie bei den Chorotís und Ashluslays, vor. Man schläft nämlich in diesen Dörfern des Nachts, d. h. wenn man nicht mit dem Maisbrauen für ein Fest beschäftigt ist.

Sehr früh des Morgens wird man in beinahe allen Dörfern durch Klagelieder geweckt. Immer ist dort einer, der einen Angehörigen verloren hat und ihn laut beweint. Ist jemand im Dorfe gestorben, so ist es für einen, der gern lange schläft, unheimlich im Dorfe.

6:Nordenskiold SF10 Chiriguano

In der allerfrühesten Morgenstunde stehen die Frauen auf, etwas später die Männer, und die Tagesarbeit beginnt. Das erste, was die Frauen tun, ist, daß sie Wasser holen und ein Bad, ein richtig erfrischendes Bad nehmen.

Die Wasserkrüge tragen sie auf verschiedene Weise. Am Rio Itiyuro tragen die Chanéfrauen sie auf der Schulter, am Rio Parapiti in einem Tragnetz (Abb. 87). Der letztere Brauch ist auch bei den Chiriguanos am gewöhnlichsten. Auf dem Kopfe tragen nur diejenigen Frauen Krüge, die mit den Weißen leben und ihre Sitten und Gebräuche angenommen haben.

Arbeitsteilung zwischen den Geschlechtern.

Wie bei den Choroti- und Ashluslayindianern, hat in der Regel auch hier, wie wir aus der untenstehenden Tabelle ersehen, jedes Geschlecht seine bestimmte Arbeit.

Tabelle, welche die Arbeitsteilung zwischen Männern und Frauen bei den Chanés und Chiriguanos ausweist.

	Männer	Frauen		Männer	Frauen
Fischfang	+	+[1]	Sammeln wilder Früchte und Wurzeln		+
Jagd	+		Keramik		+
Pflanzen, Roden	+		Holzarbeiten	+	
Säen	+	+	Netzstricken	+	
Ernten	+	+	Seilflechten	+	
Kochen	[2]	+	Mattenflechten	+	
Holztragen	+	+[3]	Hängemattenbinden		+
Wassertragen		+	Lederarbeiten	+	
Zubereitung berauschender Getränke		+	Waffenherstellung	+	

[1]) Die Frauen fischen in der Regel in seichtem, die Männer in tiefem Wasser.

[2]) Nehmen manchmal an der Zubereitung der Jagdbeute teil.

[3]) Bei den Chanés am Rio Parapiti.

	Männer	Frauen
Verzierung von Kalebassen	+	
Hausbau	+[1])	
Weben	+[2])	+
Fädenspinnen		+
Bandflechten		+
Viehzucht	+	+
Nähen	+	+
Korbarbeiten	+	
Tagewerke für die Weißen	+	+[3])

Vergleicht man diese Tabelle mit der auf Seite 94, so findet man, daß das schwere Holztragen und der Hausbau bei den höher stehenden Chanés und Chiriguanos beinahe von den Frauen auf die Männer übergegangen ist. Eigentümlicherweise sind gewisse Industrien, z. B. die Tongefäßherstellung, bei beinahe jedem primitiven Indianerstamm Frauenarbeit. Auf dieselbe Weise werden die Kalebassen überall von den Männern geschmückt, wie sie auch alle Holzarbeiten ausführen. Daß hier auch die Frauen fischen, kommt daher, weil verschiedene dieser Indianer an wasserarmen Flüssen leben, in denen nur kleine Fische leben, bei deren Fang der Mut und die Kraft der Fischer auf keine Probe gestellt wird.

Nahrungszweige.

Der Fischfang und die Jagd spielen für den Chané und Chiriguano keine bedeutende Rolle. Sie sind, wie ich schon vorher erwähnt habe, Ackerbauer, vor allem Maisbauer. Diese Indianer leben so ausschließlich von Mais, daß alle andere Nahrung für sie eine untergeordnete Rolle spielt. Eine Ausnahme machen die am Rio Parapiti wohnenden Indianer, die mehr süße Kartoffeln als Mais bauen, die in ihrem Land eine ausgezeichnete Ernte geben.

[1]) Am Rio Parapiti sammelten die Chanéfrauen das Material zu dem Dache, d. h. langes Gras.

[2]) Nur bei Maringay.

[3]) Unbedeutend, eigentlich nur am Rio Parapiti.

6:Nordenskiold SF10 Chiriguano

Folgende Pflanzen werden von den Chanés und Chiriguanos angebaut:

Süße Kartoffeln.
Mais.
Zapallo (Cucurbita pepo Lin).
Kalebaßfrüchte.
Bohnen in verschiedenen Variationen.
Baumwolle.
Uruku.
Tabak.
Tuna (z. B. bei Yatavéri). Opuntia.
Hirse.
Mandioca (selten).
Schilfrohr zu Pfeilschäften (am Rio Parapiti).

In den Pflanzungen dieser Indianer habe ich weder gewöhnliche Kartoffeln noch Bananen gesehen. Die süßen Kartoffeln sind, nach Batirayus Angaben, in später Zeit von den Weißen eingeführt. Der Tabakbau ist unbedeutend. Die Chanés und Chiriguanos sind keine großen Raucher. Sie rauchen meist Zigaretten in Maisblättern, selten Pfeife (Abb. 88). Bei ihnen braucht man seine Pfeife nicht seinem Nachbar zum Weiterrauchen zu geben.

Es ist eigentümlich, wie verschieden bei den Indianerstämmen der Tabakverbrauch ist. Die Aymaras und Quichuas, die Koka kauen, rauchen sehr selten. Sie finden keinen Geschmack daran. Ebensowenig rauchten die Chacobos und Atsahuacas, zwei Stämme, die ich auf meinen Reisen kennen lernte. Als ich einem Chacobo eine Zigarette anbot, machte er nur ein paar Züge, behielt den Rauch einige Augenblicke im Munde und warf dann die Zigarette fort. Die Chacobos bauen indessen Tabak, wenden ihn aber ausschließlich als Heilmittel an. Ist einem Chacobo ein „boro", eine Fliegenlarve, „Dermatomya", unter die Haut gekommen, so bedeckt er die Eintrittsstelle der Fliegenlarve mit Tabakpulver und kann nach einigen Stunden die tote Larve herausquetschen. Die Chorotis und Ashluslays sind leidenschaftliche Raucher.

6:Nordenskiold SF10 Chiriguano

Bei ihnen ist das Rauchen einer der höchsten Lebensgenüsse. Diese Gegensätze sind ganz sonderbar.

Die Chiriguanos und die Chanés haben ausgedehnte Anpflanzungen, die, im Gegensatz zu den Rodungen der Chorotis und Ashluslays in der Wildnis, gut gepflegt sind. Ehemals hat man Spaten aus hartem Holz mit schönen Stielen angewendet (Abb. 89), diese sind aber jetzt außer Gebrauch gekommen und vollständig durch eiserne Spaten verdrängt worden. Die Felder liegen nicht selten weit von den Dörfern, wie z. B. im Caipipendital. Dies hängt damit zusammen, daß nicht überall das ganze Jahr Wasser in der Nähe der Pflanzungen vorhanden ist.

Die gewonnenen Früchte werden, wie schon erwähnt, in auf Pfählen gebauten Scheunen (Abb. 84) verwahrt, um sie wenigstens etwas vor Ratten, Feuchtigkeit usw. zu schützen. Diese Scheunen sieht man, außer bei den Chanés am Rio Pilcomayo, überall.

Die Felder sind mit gestrüppförmig gebauten Zäunen eingezäunt, deren Übersteigung oft Schwierigkeiten macht. Eine Düngung der Felder kommt nicht vor. Dagegen läßt man einen ausgenutzten Acker brach liegen.

Die Zeit des Säens wird nach der Stellung des Siebengestirns, „ychu", bestimmt. Geht dieses sehr früh am Morgen über den Horizont, so ist Saatzeit. Wenn die Regenzeit beginnt, muß alles gesät sein.

Die Männer roden und säen. Bei der Ernte helfen alle mit, Männer, Frauen und Kinder. Bei den Chanés im Itiyurotal säeten die Männer den Mais, d. h. sie besorgten die größeren Pflanzungen, während die Frauen Gärtner waren und Kürbisse, Bohnen usw. pflanzten.

Die Chanés und die Chiriguanos sind keine großen Jäger. Vielleicht hat man früher mehr gejagt. Ihre Jagdwaffen bestehen aus Pfeil und Bogen. Zur Wildschweinjagd werden Keulen angewendet, zur Straußenjagd wurden früher die Boleadora, „churiena" benutzt. Schlingen und Vogelnetze kommen auch vor. Früher trugen die Jäger eine offen-

6:Nordenskiold SF10 Chiriguano

bar den Spaniern nachgeahmte, nach europäischem Schnitt zugeschnittene Tracht aus Leder.[1]) Diese durfte nicht im Hause hängen. Früher durfte auch bei den Chanés am Rio Parapiti kein Fleisch im Hause gekocht werden, sondern dies mußte ein Stückchen davon geschehen. Die Knaben sind natürlich eifrige Jäger kleiner Vögel. Sie benutzen manchmal, wie auch die Männer, Tonkugelbogen.

Man hat eigens für die Wildschweinjagd abgerichtete Jagdhunde. In einem Chanédorf am Rio Itiyuro sah ich, wie man allen Hunden ein rotes Kreuz auf den Kopf malte, damit sie nicht von einem in der Nähe grassierenden tollen Hunde gebissen würden. Es war wirklich spaßhaft zu sehen, wie diese heidnischen Chanés ihre Hunde mit dem Kreuzzeichen gegen die Tollwut schützten.

Batirayu erzählte mir, die Chanémänner dürften, wenn sie auf die Jagd gingen, in der Nacht vorher nicht bei ihren Frauen schlafen.

Der Fischfang wird in den verschiedenen Flüssen ungleich betrieben.

Im Rio Itiyuro fischen beinahe ausschließlich Frauen und Kinder. Dort gibt es auch nur kleine Fische. Ich sah dort drei Fischereimethoden. Angelfischerei, Fischfang mit Kalebasse und Fischerei durch Ausdämmen von Teichen. Die Angelhaken bestehen aus gebogenen Nadeln, die man von den Weißen bekommen hat. Flöße und Senkblei kommen nicht vor.

Der Fischfang mit Kalebasse geschieht folgendermaßen. In den Boden des Flusses werden mehrere Laubbüschel gesteckt, die Schatten geben, und vor jeden von diesen wird eine Kalebasse (Abb. 90) mit saurem, gemahlenem Mais (Abfälle vom Bierbrauen) gestellt. Die Fische sammeln sich in den Kalebassen, die von den Frauen von Zeit zu Zeit herausgenommen werden. Diese schleichen sich an die Kalebasse heran, legen schnell die Hand auf die Mündung, heben

[1] Schon Viedma erwähnt diese Tracht, S. 181.

6:Nordenskiold SF10 Chiriguano

sie hoch und entleeren dann den Inhalt in Gruben am Flußufer.

Eine andere, in dem erwähnten Flusse oft angewendete Art des Fischens ist das Aufdämmen länglicher Teiche im Sande, in denen die Fische sich sammeln. Die Fische werden nach Entleerung des Wassers aus den Teichen gefangen. Zuweilen läßt man den Teich in einer mit einem Ketscher verschlossenen Rinne enden, aus der die Fische nicht heraus können.

Aller Fischfang, den ich am Rio Itiyuro gesehen habe, geschah während der Trockenzeit an sonnenheißen Tagen.

Abb. 90. Fischfang mit Kalebasse. Rio Itiyuro.

Im oberen Rio Pilcomayo fischen die Chiriguanos mit von den Weißen erhaltenen Angelhaken, mit den Tauchnetzen der Chorotis ähnlichen, obschon kleineren Netzen und durch Schießen der Fische mit Pfeil und Bogen. Die zum Fischfang angewendeten Pfeile haben zwei oder mehrere Spitzen.

Im Rio Parapiti sah ich Chanés und Chiriguanos mit einem Netz von dem hier abgebildeten Typ (Abb. 91) fischen. Beim Fischschießen wenden die dortigen Chiriguanos Pfeile mit vielen feinen Spitzen an.

In diesen zuletzt genannten Flüssen fischen die Männer immer im tieferen Wasser mit Netz und mit Pfeil und Bogen, während die Frauen sich damit begnügen, kleine Fische in den Verdämmungen zu fangen, wenn der Fluß halbtrocken ist.

Nicht so selten nehmen die Indianer lange Reisen vor, um zu fischen. So pflegen die Chanés zuweilen während der

6:Nordenskiöld SF10 Chiriguano

Trockenzeit die Sümpfe, „Madrejones", in denen der Rio Parapiti sich verliert, zu besuchen.

Es ist merkwürdig, daß Völker, die so viel fischen, so wenige Fischereigeräte kennen. In meiner Schilderung der Chorotis und Ashluslays haben wir mit dieser Armut schon Bekanntschaft gemacht.

Moberg und der Verfasser wollten einmal am Rio Pilcomayo den Indianern etwas von unseren Erfahrungen im Fischfang zum besten geben und fabrizierten nun eine Reuse, über die wir nicht wenig stolz waren. Wir setzten sie in der vollen Überzeugung aus, daß sie am Morgen voller Fische sei. Holz und Abfälle aller Art war alles, was wir fingen, und ich kann nicht leugnen, daß die Indianer uns ein wenig auslachten.

Der Grund der Armut dieser Indianer an Fischereigeräten ist nicht der Mangel an Ideen, sondern ein anderer. Es passen ganz einfach wenige Fischereimethoden für diese Gewässer. Ein Netz des Nachts aussetzen, geht nicht an, denn wenn ein Palometafisch in das Netz gerät, schneidet er dasselbe mit seinen messerscharfen Zähnen sofort entzwei. Angelfischerei treiben, wo es solche Fische gibt, ist auch nicht verlockend, denn sie beißen die Angeln ebenso leicht, wie die Angelschnüre, ab, wenn sie nicht aus sehr gutem Material sind. In diesen tropischen Gewässern modern auch die Fischgeräte schneller, als bei uns, man darf sie also nicht eine ganze Nacht über im Wasser lassen.

Die Chiriguanos und Chanés haben keine Fahrzeuge. Sie sind dagegen außerordentliche Water, und hier während der Regenzeit in den Flüssen waten, ist gerade keine Kleinigkeit. Hat man jedoch einen dieser Indianer als Beistand, so kommt man, wenn es überhaupt möglich ist, doch hinüber.

Als eine Eigentümlichkeit kann ich erwähnen, daß ich während meiner ganzen Reise niemals einen eingeborenen Weißen oder Mestizen habe fischen sehen. In Bolivia ist es nicht fein, frische Fische zu essen. Am Rio Pilcomayo

6:Nordenskiold SF10 Chiriguano

aßen die Offiziere der Militärposten beinahe niemals die leckeren, frischen, lachsähnlichen Fische aus dem Flusse, sondern zogen Büchsenlachs aus Alaska vor. Da dieser, wenn er nach Bolivia kommt, sehr alt ist, schmeckt er schrecklich. Die Angelfischerei ist auch die einzige Fischereimethode, welche die Indianer von den Weißen gelernt haben.

Von Haustieren haben die Chiriguanos und Chanés nur die Hunde nicht von den Weißen bekommen. Diese Hunde scheinen mir jetzt stark mit fremdem Blut vermischt zu sein. Sie haben immer Namen, z. B. tirupotchi (altes Kleid),

Abb. 91. Netz. Chiriguano. Rio Parapiti. ca. 1/12.

chapikáyu (gelbe Augenbrauen). In der Regel haben die Chiriguanos und Chanés weniger Pferde, Kühe, Esel, Schafe und Ziegen, als die Chorotis und Ashluslays. Hühner und Schweine haben sie dagegen mehr. Zuweilen sieht man Enten, Perlhühner und Truthähne. In gewissen Gegenden, wie z. B. im Caipipendital, wo die Indianer reich sind, haben sie gleichwohl viel Vieh. Was sie besitzen, suchen ihnen die Weißen leider auf alle Weise abzuschwindeln. So ist es nichts Ungewöhnliches, daß ein weißer Mann oder eine weiße Frau mit einigen Fäßchen Branntwein in ein Dorf kommt und dasselbe mit einem Paar der besten Kühe der Indianer verläßt. Die Weißen werden reicher, die Indianer ärmer.

Die Menagerie gezähmter Waldtiere, die man in den Dörfern der primitiveren Indianer sieht, findet man bei

diesen Indianern nicht. Ein Papagei, der etwas Guarani spricht, ist jedoch in den Hütten nichts Ungewöhnliches.

Zubereitung der Speisen.

Den Schmutz, den wir bei der Zubereitung der Speisen und im Essen bei den Chorotis und Ashluslays treffen, findet

Abb. 92 a. Dämpfapparat. Chaná. Rio Ityuro.

man bei den Chanás und Chiriguanos nicht. Die Speisen sind dagegen schrecklich einförmig. Sie bestehen aus Mais in allen möglichen Formen, gekochtem Mais, geröstetem Mais, in Asche gebackenem Maisbrot, Maismehlbrei und

gedämpftem Maismehl. Das letztere wird in einem hier abgebildeten Apparat (Abb. 92) zubereitet.

Fleisch wird mit Mais als Suppe gekocht oder geröstet. Bevor es in den Topf gelegt wird, wird es sauber gewaschen. Die Fische werden in Klammern oder in Maisblättern über dem Feuer geröstet. Die kleinen Fische, die ich auf diese Weise zubereiten gesehen habe, werden erst beim Essen angenommen. Hat man viele Fische, so werden sie für den künftigen Bedarf getrocknet.

Besonders in Zeiten der Not werden auch verschiedene

Abb. 92 b. Oberes Tongefäß.
Das hier abgebildete Exemplar ist von den Mataco-Vejos, die seine Anwendung von den Chaná gelernt haben. $\frac{1}{10}$

wilde Gewächse gegessen. Zum Essen wird Salz angewendet, das jetzt von den Weißen gekauft wird. Früher holte man es aus den Bergsalzgruben am San Luis auf dem Wege von der Stadt Tarija nach dem Chaco, oder bereitete Salz aus salzhaltiger Erde, „yukin". Die mit Salz gemischte Erde wurde in eine Schale mit Wasser gelegt, sank zu Boden, und das Salzwasser wurde angewendet.

Frauen und Männer essen getrennt. Zu Hause geht es gewöhnlich so zu, daß die Männer zuerst essen und dann die Frauen und Kinder. Die Indianer wollen beim Essen Ruhe haben. Es ist deshalb höchst unpassend, sie während dieser wichtigen Beschäftigung anzusprechen.

6:Nordenskiöld SF10 Chiriguano

Sie essen, soweit ich es gesehen habe, nicht aus einer gemeinschaftlichen Schüssel, sondern jeder ißt aus seiner Schale. Nach den Mahlzeiten spülen sie den Mund und waschen sich die Hände, indem sie das Spülwasser über die Finger spucken.

Es schien mir, als würden hier wirkliche Mahlzeiten abgehalten, von denen die erste des Morgens, die zweite mitten am Tage und die dritte bei Sonnenuntergang eingenommen wurde.

Hat man in einem Hause Überfluß an Speisen, so ladet man auch die Nachbarhäuser ein. Ein besuchender Indianer wird sehr gastfrei aufgenommen. Er braucht nicht fortzugehen, ohne Maisbier oder Essen erhalten zu haben. In den Chanédörfern am Rio Parapiti setzten mir die Indianer, wenn ich zu ihnen zu Besuch kam, immer eine Schüssel mit süßen Kartoffeln vor.

Die Chanés essen keine Esel, Maulesel, Pferde, Hunde, Füchse, Geier oder Affen. Dagegen werden Puma und Jaguar für eßbar gehalten.

Wenn die Frauen in den Dörfern nicht zu kochen, zu brauen oder ihre Kleinen zu warten haben, sind sie doch immer fleißig. Wenigstens die älteren unter ihnen sieht man beinahe niemals ohne Beschäftigung. Sie spinnen, machen Tongefäße, weben. Ich habe diese Frauen schätzen gelernt, ich habe ihre liebevolle Fürsorge für die Kinder, ihren Fleiß, ihre Pflege des Heims, ihre Geschicklichkeit und ihren Geschmack bewundert.

Spiele.

Manchmal sieht man die Männer spielen. Das gewöhnlichste Spiel ist jetzt taba, das mit dem Sprungbein einer Kuh gespielt wird und das diese Indianer in den Zuckerfabriken gelernt haben. Auch Würfelspiele sind dort nicht ungewöhnlich. Die Regeln für diese scheinen ihre eigenen, oder vielmehr den Weißen nachgeahmte zu sein.

„Daro", wie die Chiriguanos das Würfelspiel nach dem Spanischen nennen, wird von zwei Personen mit von ihnen

selbst verfertigten Würfeln gespielt. In Tihuipa habe ich folgende Regeln für dieses Spiel (Abb. 93) aufgezeichnet.

Alle übrigen Kombinationen sind = 0. Wer zuerst zehn Striche hat, gewinnt. Die Striche werden auf dem Fußboden markiert.

Von eigenen Hazardspielen haben sie zwei. Das eine ist dasselbe, wie wir es S. 73 von den Chorotis und Ashluslays kennen gelernt haben. Die Chiriguanos nennen dieses Spiel „chúcaráy", die Chanés „chunquánti".[1])

Das andere den Chiriguanos und Chanés bekannte Spiel habe ich bei keinen anderen Indianern gesehen. Sie nennen es tsúcareta und spielen es mit einem Haufen Stäbchen, die auf der einen Seite konvex, auf der anderen eben oder konkav sind (Abb. 95).

Abb. 93. Spielregel für „Daro". Chiriguano. Tihuipa.

Zuerst wird ein Stäbchen (Máma) so ausgelegt, daß es auf den hinzeigt, der werfen soll (Abb. 96). Nehmen wir an, daß es so gelegt ist, daß die konvexe Seite nach oben gerichtet ist. Fallen zwei oder mehr Stäbchen kreuzweise übereinander, und zwar mit der konvexen Seite nach oben und ohne oben von einem Stäbchen mit der ebenen Seite nach oben berührt zu werden, so fallen sie dem Werfenden zu. Wäre das Máma so gelegt worden, daß die ebene Seite nach oben gelegt worden wäre, so hätten nur die gezählt, die mit der ebenen Seite nach oben ein Kreuz gebildet haben.

Man schlägt abwechselnd und jeder legt das Máma beliebig aus. Wer die meisten Stäbchen bekommen hat, hat gewonnen.

Hat man nur noch vier Stäbchen, so wird kein Máma mehr ausgelegt, sondern man kommt überein, ob die konvexen oder ebenen (konkaven) gelten sollen.

[1]) Vgl. Erland Nordenskiöld: Zeitschr. f. Ethn., 1910, H. 3 u. 4.

[facing p. 192]

Tafel 17. Palmenwald, unweit des Rio Pilcomayo.

Bisweilen sieht man die Frauen ein Kegelspiel, von den Chiriguanos in Tiéntpa „tarapia", von den Chanés am Rio Parapiti „tocotóre" genannt, spielen.

In Tiéntpa spielte man auf folgende Weise. Man stellte zwei Reihen Maiskörner, je zwei nebeneinander, als Kegel in einem Abstand von vier bis fünf Fuß auf. Zwei spielten

Abb. 94. Chamquanti spielende Chanékneben am Rio Itiyuro.

abwechselnd, indem sie die Maiskegel des anderen mit einer steinernen Kugel abzuschlagen versuchten. Wer zuerst alle Maiskegel des anderen abgeschlagen hatte, hatte gewonnen.

Am Rio Pilcomayo spielte man mit drei Kegeln auf jeder Seite. Der Abstand zwischen den Kegeln des Gegners war drei Ellen. Jeder Kegel bestand aus einem entmarkten Maiskolben und der Abstand zwischen ihnen sollte eine Handspanne[1]) sein. Die angewandten Bälle sind aus gebranntem Ton und hohl, mit kleinen, rasselnden Kugeln im Innern (Abb. 95).

[1]) Längster Abstand zwischen Daumen und kleinem Finger.

6:Nordenskiold SF10 Chiriguano

Das Leben der Indianerkinder.

Wenn man vom Leben in den Dörfern spricht, darf man auch die Kinder nicht vergessen. Die Kinder spielen, helfen aber auch den Großen. Sie werden wie die Chorotis- und Ashlusaykinder erzogen. In heiterer Freiheit verbringen sie ihr Leben, ohne Prügel und harte Worte.

Die Chiriguano- und Chanékinder haben mehrere Spiele und Spielsachen, welche man die Kinder der Wildnis in Bolivia niemals anwenden sieht und die mir alle echt indianisch zu sein scheinen.

Die Indianerkinder spielen vor allem die Spiele, die ich schon von den Älteren erwähnt habe. Von den Spielen der Chorotis und Ashlusays kennen sie das korkzyklische Ballspiel, das die Chiriguanos „tiira" nennen. Bei den Chanés habe ich es nicht spielen sehen. Als Tore pflegen sie Großen anzuwenden, und zuweilen schlagen sie die Bälle mit Rakette. Das ist hier ein Knabenspiel. Ein außerordentlich hübsches und schweres Spiel ist „tikki", das ich von den Knaben der Chanés am Río Parapití habe spielen sehen. Es wird von zwei, vier, sechs oder mehr Personen in zwei Abteilungen gespielt. Die Bälle aus massivem Gummi werden von einem der Spielenden erst in die Luft geworfen und dann mit dem Kopf nach der gegenüberliegenden Seite geworfen, wo er mit dem Kopf wieder zurückgeschlagen werden soll. Das Berühren des Balles mit der Hand ist verboten. Die Partei, die, je nach Übereinkommen, fünf- oder sechsmal den Ball verfehlt, hat verloren.

Abb. 29
Mädchen vom Tikiarspiel. ⅔

Das Tikispiel wird in einer der Sagen der Chanéindianer erwähnt. In dieser Sage sehen wir, wie schwer es den Chanés früher gefallen ist, den Gummi für die Bälle zu

erhalten, der, da es im Chaco keinen Gummi gibt, von weit her geholt werden muß.

Jetzt erhalten sie die Gummibälle von Santa Cruz de la Sierra. Ich habe das „Tiki" nur von Knaben spielen sehen. Früher wurde es nicht allein von den Männern, sondern auch

Abb. 96. Männer wird eingelegt. Tikiscretanspiel. Tikstyu. Chiriguano.

von den Gattinnen gespielt. Es ist besonders von den Chiquitos-indianern bekannt.[1])

Auch d'Orbigny[2]) erwähnt dieses hübsche Spiel von den Chiquitos. Am Rio Guaporé habe ich Chiquitano sprechende

[1]) Erlebnisse und ungemeine Geschichten. Wien 1799. S. 55.
[2]) d'Orbigny: Voyage. Partie historique. Tome 2. S. 394—395.

6:Nordenskiold SF10 Chiriguano

Gummiarbeiter das Spiel spielen sehen, die es außerordentlich gut verstanden, den Ball mit dem Kopf weiterzustoßen. Auch niedrige, den Boden beinahe erreichende Bälle fingen sie, auf dem Magen liegend, in gleicher Weise auf.

Spiele mit Gummibällen scheinen den Spaniern erst sehr spät bekannt geworden zu sein. Dies geht aus dem Erstaunen

Abb. 97. Die Stäbchen werden geworfen. Tobiasvertauschspiel.

hervor, mit dem Gumilla[1]) sie erwähnt. Merkwürdig, sagt er, sind die Bälle und die Art, wie mit ihnen gespielt wird. Der Ball ist groß und aus einem Holzsaft, Caucho genannt, gearbeitet, der bei einem leichten Stoß so hoch springt, wie ein Mann lang ist.

Gumilla erzählt, daß die Indianer am Orinoco mit der

[1]) Gumilla: El Orinoco Ilustrado. Madrid 1745. S. 190.

6:Nordenskiöld SF10 Chiriguano

rechten Schulter spielten. Traf der Ball einen anderen Körperteil, so verlor der Spielende einen Point. Er bewunderte ihr Spiel, da sie den Ball zehn-, zweimal und noch öfter warfen, ohne den Boden zu berühren.

Ein anderes neues Spiel ist „stokki", das die Chaschnaken am Río Parapití spielten (Abb. 102). Es wird von zwei

Abb. 98. Die Spielenden sehen nach, wo die Stäbchen gefallen sind.

Knaben mit Holzkriegsäbeln gespielt. Erst wirft der eine Knabe einen Pfeil auf den Boden, dann der andere, der dem so nahe wie möglich zu kommen sucht. Kommt er eine Handspanne oder noch näher an den Pfeil des Gegners, so gewinnt er einen Point, d. h. bekommt einen Strich. Wer zuerst sechs Points hat, wenn der andere keinen hat, hat gewonnen. Jeder spielt mit bis zu drei Pfeilen. Die Points zählen so, daß nur das gilt, was der eine mehr als der andere hat.

„Hairahoshoa" ist ein Spiel (Abb. 103), das nur von den jüngeren Chanáknaben am Río Paraguay gespielt wird. Es wird von zwei Knaben mit je einem Stäbchen gespielt. Der eine wirft sein Stäbchen so, daß die Spitze auf den Boden schlägt und so weit wie möglich abspringt. Nachher wirft der zweite. Wer am weitesten geworfen hat, bekommt einen Strich auf dem Boden. Wer zuerst acht Striche hat, wenn der andere auf Null steht, hat gewonnen.

Abb. 102. Geteilter Ball aus Tonscherben. ⅓ Chaná. Río Paraguay.

Das „Paranna"-Spiel habe ich von den Chiriguanos im Caipipendital spielen sehen. Es wird von zweien gespielt. Ein Knopf oder dergleichen wird als Tor auf einen Stein gelegt, worauf man mit runden Stäbchen aus Tonscherben wirft. Der Knopf soll herausgeschlagen werden, und wer

Abb. 103. Spielstock. ⅓. Tikuipa. Chiriguano.

Abb. 104. Rakett. ⅓. Tikuipa. Chiriguano.

demselben am nächsten kommt, hat einen Strich gewonnen. Das Spiel wird so lange fortgesetzt, bis der eine, je nach Übereinkommen, fünf oder mehr Striche hat.

Die Chaná- und Chiriguanokinder haben auch mehrere Spielzeuge, die hier abgebildet sind (Abb. 104—105). Von diesen ist „moro-moro" (Abb. 104) eigentümlich. Mit dem wird

6 Nordenskiöld SF10 Chiriguano

wenn die Fäden erst gewirbelt und dann gespannt werden, ein summender Ton hervorgebracht.

Nun habe ich meine Leser wohl ordentlich mit indianischen Spielen und Spielzeuchen gelangweilt. Vielleicht habe ich mich bei diesem in Südamerika so wenig studierten Gegenstande, der mich auf meiner Reise lebhaft interessiert hat, zu lange aufgehalten. Wie bei den Chorotis und Ashluslays, habe ich gern mit den Knaben gespielt. Dies ist auch eine Art und Weise, den Indianern näher zu kommen, ihr Vertrauen zu gewinnen.

Wie die Chorotis- und Ashluslaykinder, langweilen sich

Abb. 102. Maisbeilwerfspiel. $\frac{1}{3}$. „Stock". Chaná. Rio Paraguay.

Abb. 103. Stäbchen zum Hinterhauptspiel. $\frac{1}{3}$. Chaná. Rio Paraguay.

die Kinder der Chanás und Chiriguanos selten, wie diese sind es artige und gute Kinder. Auf den Spielplätzen in den Dörfern geht es in der Regel sehr munter zu. Dies gilt für die Heiden. Die Kinder, die in die Hände der Mönche geraten sind, sehen düster und verschlossen aus, sie haben schon etwas von dem zu kosten bekommen, was die Kinder der weißen Männer lernen, Erziehung und beginnende Zivilisation. „Du sollst . . ." „Du sollst nicht . . ."

Die Spiele und Spielzeuge sind vom anthropo-geographischen Gesichtspunkte aus von großem Interesse. Eine Mehrzahl von ihnen finden wir nicht außerhalb des Chaco und der angrenzenden Gegenden in Südamerika. Dagegen finden wir sie in Nordamerika. Infolgedessen habe ich den Schluß

6:Nordenskiöld SF10 Chiriguano

gezogen,[1]) daß die Spiele und Spielsachen Überbleibsel aus einer Zeit sind, in der der kulturelle Austausch zwischen Nord- und Südamerika größer als jetzt war, oder richtiger, daß Spuren eines von Norden ausgehenden Kulturstromes bis nach Argentinien hinunter gegangen sind. Eine merkwürdige Ähnlichkeit herrscht auch zwischen den Typen von Tabakspfeifen, die man im südlichen Südamerika und in

Abb. 105. Puppen aus Wachs. 1/1. Chané. Rio Parapiti.

Nordamerika trifft. Die Dreifußkeramik, die ich bei meinen Ausgrabungen im östlichen Bolivia, in Mojos, gefunden habe, deutet auch auf Einflüsse von Norden.

Alltagskleidung.

In den Dörfern, wo der Einfluß der Weißen nicht die alten Trachten verdrängt hat, tragen die Chané- und Chiriguanofrauen ein sackförmiges Kleidungsstück, „tiru" (Abb. 106). Dieses kann, wie aus den Photographien ersichtlich, auf verschiedene Weise getragen werden. Früher scheint der Tiru nicht die jetzige Form gehabt zu haben. Viedma[2]) sagt, die

[1]) S. auch Erland Nordenskiöld: Zeitschr. f. Ethnologie, 1910. H. 3 u. 4.

[2]) Viedma, l. c. S. 181.

6:Nordenskiold SF10 Chiriguano

Chiriguanofrauen hatten nur ein Stück Zeug um die Hüften. Sicher hat sich die Tracht unter dem Einfluß der „moralischen" Christen so entwickelt, daß sie „anständiger" geworden ist.

Abb. 106. Chanéfrau von Rio Parapiti, in „Tiru" gekleidet.

Von einheimischen Schmucksachen sieht man Halsketten aus Türkis- und Chrysocolperlen und aus schwarzen Körnern.

Nach eigenen Angaben finden die Indianer die Steinperlen in der Erde, wo alte Wohnplätze und Gräber sind. Die Mestizen im Tarijatal, die in ihren Feldern eine große Menge dieser Perlen finden, verkaufen sie den Chiriguanos

6:Nordenskiold SF10 Chiriguano

und Chanés zu hohen Preisen. Früher wurde eine Halskette aus diesen Perlen mit einem Pferd bezahlt.

Das Haar tragen die Chané- und Chiriguanofrauen halblang, mitten auf der Stirn gescheitelt und manchmal im Nacken oder auf dem Kopf mit einem Band zusammengebunden.

Die Männer tragen jetzt alle die europäische Tracht. Bei

Abb. 107. Gesichtsbemalung. Chiriguano. Itapeshia. Rote Farbe. A u. B — Männer. C u. D — Frauen.

der Arbeit sieht man sie jedoch nicht selten nur in einem die Geschlechtsteile schützenden Stück Zeug. Bei den Chanés am Rio Parapiti waren Mäntel gleich denen, die wir von den Chorotis und Ashluslays kennen gelernt haben, sehr gewöhnlich. Die älteren Männer, sowie auch die jüngeren in den Chiriguanodörfern am oberen Rio Pilcomayo, tragen das Haar lang, um den Kopf gewunden und von einem in der Regel roten oder blauen Band zusammengehalten. Nach vorn ist das Haar abgeschnitten, sie haben also Stirnlocken

und eine Locke vor jedem Ohr. Es greift jedoch immer mehr die Sitte um sich, das Haar kurz zu schneiden, um ebenso fein zu sein, wie die Weißen. An den Füßen tragen sie, wenn sie auf stringem oder dornigem Boden wandern, wie die Frauen, Sandalen.

Diese Indianer malen sich alltags nicht oft. Zuweilen sieht man eine Frau, die sich das Gesicht rot gemalt hat. Die Weißen behaupten, es bedeute, sie sei heiratslustig, oder, wenn sie verheiratet ist, lüstern. Ich wage jedoch nicht zu sagen, daß dies wahr ist. Einen roten Strich hier und da ins Gesicht malen sich die Frauen auch alltags, oder sie kleben ganz einfach eine Blume an jede Wange. Die Männer bemalen auch manchmal das Gesicht und den Körper rot. Als große Seltenheit habe ich ein paar Chiriguanofrauen gesehen, die auf dem Arm tätowiert waren (Abb. 108). Im Caipipendital haben die Chiriguanofrauen die abscheuliche Sitte, ihre sonst weißen und gesunden Zähne zu schwärzen. Viedma erzählt, daß die Chiriguanomänner ihre Zähne blau zu malen pflegten.

Abb. 108.
Tätowierter Frauenarm.
Chiriguano. Itapembia.

Reinlichkeit.

Die Chanés und Chiriguanos sind sehr reinlich. Sie beginnen, wie schon erwähnt, den Morgen mit einem Bad, und baden dann oft mehrmals im Laufe des Tages. Diese Reinlichkeit ist bei Stämmen, die oft in Gegenden wohnen, wo, wie z. B. im Chipipendital, großer Wassermangel herrscht, merkwürdig. In der Trockenzeit können sie dort niemals ein Bad nehmen, wenigstens die Frauen waschen aber ihren Körper jeden Morgen gründlich ab.

6:Nordenskiöld SF10 Chiriguano

Der Gegensatz, der sich hier in dem Reinlichkeitsgrade der verschiedenen Stämme zeigt, läßt sich, meiner Ansicht nach, durch ihre Wanderungen erklären. Die Chorotis, Ashluslays und Matacos, welche sich noch teilweise in Felldecken kleiden, scheinen mir, wie die Feuerländer und Patagonier, aus den kalten Pampas im Süden, wo ein Waschen leicht unangenehm war, nach dem Chaco eingewandert zu sein, während die Chiriguanos und Chanés vom Norden, aus den feuchtwarmen Urwäldern, von den großen Flüssen kommen, wo das Baden immer schön und erfrischend war. Nun, wo

Abb. 109. Kämme zum Kämmen des Haares, nicht zur Befestigung in demselben.

A. von den Chanés. B, C, D von den Chiriguanos.

sie unter denselben klimatischen Verhältnissen leben, haben die ersteren ihren Schmutz, die letzteren ihre Reinlichkeit bewahrt.

Im Thurn[1]) berichtet, daß die Indianer in Guayana sofort nach dem Essen baden, ohne daß ihnen dies schlecht bekommt. Dasselbe habe ich hier oft beobachtet.

Den Kopf schampunieren die Chiriguanos und verschiedene Chanés mit den Samen von „ayantéra", die sie mahlen. Zu demselben Zweck benutzen die Chanés am Rio Parapiti die Rinde des Mistel, „yúag". Auch die Nägel, und nicht

[1]) Im Thurn: Among the indians of Guiana. London 1883.

6:Nordenskiold SF10 Chiriguano

zum wenigsten die Zehennägel, werden sauber gepflegt. Zum Kämmen wenden sie in Holz geschnittene oder aus Rohrstäbchen zusammengebundene Kämme an.

Ihre Bedürfnisse verrichten die Chanés und Chiriguanos niemals ganz nahe den Hütten. Besondere Abtritte habe ich aber niemals bei irgend welchen Indianern, und auch nicht bei vielen Weißen in Bolivia, gesehen.

Die Chanés und Chiriguanos gehen mit ihren Kleidern sehr sorgfältig um. Sie halten sie rein und flicken sie, wenn es nötig ist. Jedes Geschlecht wäscht und flickt seine Sachen selbst. Der Mann näht hier vollkommen ebenso gut wie die Frau.

Ich habe hier von dem Alltagsleben bei diesen Indianern gesprochen. Nun will ich die wichtigsten Ereignisse in ihrem Leben, in ihrem Gemeinwesen, ihre Feste, ihre Industrie usw. schildern, um zuletzt zu ihren Sagen und ihrer Religion überzugehen.

[p.206]

Zwölftes Kapitel.

Aus dem Leben der Chané- und Chiriguanoindianer (Forts.).

Vom Mutterleib bis zum Grabe.

Streng arbeiten die Chané- und Chiriguanofrauen auch während der Schwangerschaft, bis sie gebären sollen. Im Dorfe Vocapoys war eine schwangere Frau, der ich eine von mir geschossene Taube schenkte. Vocapoy erklärte mir da ganz erregt, eine schwangere Frau dürfe keine Tauben essen. Kommt ein Chané- oder Chiriguanokind zur Welt, verursacht es seiner Mutter sicherlich nicht viel Schmerzen. Diese Frauen sind gesund und gebären leicht, wie alle Indianerfrauen, die eine gesunde Lebensweise führen und niemals eng anliegende Kleider getragen haben. Sie liegen auch nicht im Wochenbett, das muß statt dessen der Papa des Kleinen. Auch hier treffen wir diesen eigentümlichen Brauch, die „Couvade", die von so vielen Indianerstämmen her bekannt ist. Mehrere Tage soll der Mann liegen und Diät halten. Bei den Chanés am Rio Parapiti darf er die ersten Tage nur gekochten Mais und Maissuppe, später auch süße Kartoffeln essen. Mehrere Tage lang darf er kein Fleisch essen. Ißt er z. B. das Fleisch einer Ziege, so stirbt er, meckernd wie diese. Der Chiriguanoindianer Taco erzählte mir, er habe seinen dicken Magen deswegen bekommen, weil er diesen wichtigen Brauch nicht innegehalten habe. „Fünf Tage hätte ich liegen und Diät halten sollen", sagte er.

Die Sitte der Couvade hat, wie bekannt, in Südamerika eine sehr große Ausdehnung. Bei den Stämmen, die ich kennen gelernt habe, kommt sie sicher, außer bei den Chiri-

6:Nordenskiold SF10 Chiriguano

guanos und Chanés, bei den Chorotis, Guarayis und Chacobos vor. K. v. d. Steinen,[1]) der diesen Brauch ausführlich vom Rio Xingu schildert, sagt, er sei wahrscheinlich für alle brasilianischen Stämme bekannt. Dagegen scheint der Brauch der Couvade von den Quichuas und Aymaras, d. h. von der Gebirgskultur in Bolivia und Peru, unbekannt zu sein. Dies ist einer der vielen Gegensätze, die zwischen den Indianern des Gebirges und des Urwaldes bestehen.

Die Guarayiindianer in Nordost-Bolivia sagten mir, wenn ein Mann gleich nach der Entbindung seiner Frau auf die Jagd geht und z. B. einen Papagei schießt, so kann er sein Kind töten. In den ersten Tagen des Lebens folgt nämlich die Seele des Kindes dem Vater.

Sehr selten werden bei den Chanés und Chiriguanos außerehelliche Kinder geboren. Ich glaube, vielleicht irre ich mich, daß die Frauen dieser Indianer keusch sind, bevor sie heiraten. Am Rio Itiyuro befand sich unter etwa 500 Chanés nur ein von einer unverheirateten Frau geborenes Kind. Mißgestaltete Kinder werden sehr selten geboren. So gibt es, nach dem, was ich gesehen und Batirayu angegeben, im ganzen Parapitital unter 1500–2000 Chanés keinen Blindgeborenen, keinen Schielenden, keinen Idioten und nur einen mit mißgestalteten Extremitäten und vier Taubstumme. Stark stammelnde Indianer habe ich nicht beobachtet.

Ich weiß nicht, ob die mißgestalteten Kinder auch bei diesen Indianern gleich getötet werden, aber wahrscheinlich ist dies der Fall. Ich weiß auch nicht, ob Abtreibung der Leibesfrucht vorkommt. Sicher ist aber, daß diese gesunden Frauen selten Kinder gebären, die nicht wohlgestaltet sind. Im Parapitital fand sich gleichwohl, wie erwähnt, ein Knabe mit mißgestalteten Extremitäten. Das eine Hüftbein war zu kurz und der eine Arm auch verkrüppelt. Dieser Knabe wurde von allen mit außerordentlichem Wohlwollen be-

[1]) Karl v. d. Steinen: Unter den Naturvölkern Zentralbrasiliens. Berlin 1894.

handelt, und man drückte laut seinen Beifall aus, als ich ihm einige kleine Geschenke gab.

Wenn das Kind zu gehen anfängt, erhält es einen Namen. Diesen gibt nicht der Vater oder die Mutter, sondern seine Großeltern. Bei den Chanés am Rio Parapiti habe ich einige Namen aufgezeichnet. Ist es ein Knabe, so wird er z. B. yatérembi (Lippe der Zecke), huisoraca (Guanaco), tátonambi (Gürteltiercube), yándoiápe (Straußbrücken), vacainyáca (Kuhkopf), aguárachivi (Fuchshaare), derésa paravéte (deine armen Augen) genannt; ist es ein Mädchen, z. B. ácuayppeti (Guayavablüte).[1]) Ein großer Teil der Namen ist unübersetzbar. Zu diesem Namen kommt nicht selten ein Spottname. So wurde z. B. der Chanéhäuptling Boyra (Boy-Schlange) yúrubusu genannt, was Großmaul bedeutet. Der alte Boyra war auch ein Schwätzer, der für alles, was ein wenig unanständig war, eine große Schwäche hatte.

Ungewöhnlich lange stillen die Mütter, und es dauert in der Regel mehrere Jahre, bis sie wieder ein Kind bekommen. Vielleicht vertreibt sie auch ein wenig, wie die Chorotíkro, die Leibesfrucht, damit die Familie nicht allzu sehr belästigt wird.

In der Missionsstation in Ivu suchte ich über die Anzahl überlebender Kinder in 127 Chiriguanoehen eine Statistik aufzustellen und fand da, daß in 10 Ehen kein, in 27 ein, in 35 zwei, in 29 drei, in 13 vier, in 9 fünf und in 4 sechs Kinder waren. Diese Zahlen sind jedoch ganz unsicher. Sie zeigen jedoch, daß man hier, wie bei vielen anderen Indianervölkern, eine Art Zweikindersystem hat.

Corrado[2]) behauptet mit Bestimmtheit, daß unter den Chiriguanos Kindermord vorkommt. Das tut man in verzweifelten Fällen auch bei uns, das von Corrado angeführte Beispiel hat daher nichts zu bedeuten. Die Frage ist: kommt

[1]) Psidium guayava.

[2]) Corrado: El Colegio Franciscano De Tarija y sus misiones. Quaracci 1884. S. 326—327.

Kindermord und Abtreibung der Leibesfrucht als eine vom Stamme angenommene Institution, wie bei den Choroti, war?

Abb. 100. Chanáknabe. Bin Paraguay.
Er hat Pfeile mit stumpfen Spitzen in der Hand.

Die Chaná- und Chiriguanokinder werden auch, wie erwähnt, in Freiheit erzogen. Unter Spielen verleben sie die Kinderjahre. Allmählich beginnt das Kind den Eltern bei Kleinigkeiten, z. B. beim Wasser- und Holztragen, Feuerln

6:Nordenskiöld SF10 Chiriguano

der Haustiere, Fischen usw. zu helfen. Die Mädchen lernen von den Müttern das Spinnen, Weben, Anfertigen von Tongefäßen, Brauen des Maisbiers usw. Sie lernen alles durch Imitation. Die Knaben verfolgen die kleinen Vögel um das Dorf und lernen auf diese Weise den Waffengebrauch. Die Kinder begleiten die Eltern zum Fischen und Ackern. Der Knabe begleitet den Vater auf die Jagd und fühlt sich ordentlich stolz und tüchtig, wenn er mit der „gemeinsamen" Jagdbeute nach Hause gehen darf. Die Kinder sehen und lernen. Es macht ihnen Spaß, Vater und Mutter zu helfen.

Wie verschieden ist nicht die Kindererziehung in den Missionen, die auf Spionage und Angeberei basiert ist.

Mutterlose Kinder werden von den Verwandten aufgenommen. Nicht selten sieht man auch hier ältere Tanten die Kinder anderer liebkosen.

Wenn das Mädchen ihre erste Menstruation bekommt, wird sie in einen Verschlag in der Hütte, eine Art Schrank, gesetzt. Ihr Haar wird kurz geschnitten, und sie darf erst wieder heraus, wenn es halblang gewachsen ist. In Begleitung der Mutter darf sie ausgehen und das Notwendigste tun, z. B. baden usw. Zwischen der ersten und zweiten Menstruation muß sie Diät halten. Sie darf gekochten Mais und Mehl essen. Diese Sitte nennen die Chanés „yimundia".

In einem Chanédorf, Aguaráti, sah ich ein Mädchen, das in einem solchen Schrank saß. Sie spann. Ich guckte in den Schrank, was wohl unrecht von mir war, denn am nächsten Tage waren Mädchen und Schrank verschwunden.

P. Chomé[1]) erwähnt schon diesen Brauch von den Chiriguanos. Er sagt, die Indianer glauben, eine Schlange habe das Mädchen gestochen.

Wenn das Mädchen aus dieser Gefangenschaft kommt, ist sie heiratsfähig.

---

[1]) P. Chomé, S. 320. Derselbe Pater spricht auch von dem Brauche der Couvade bei diesen Indianern, S. 321. Lettres édifiantes. T. XXIV.

6:Nordenskiold SF10 Chiriguano

Wenn der Chanéknabe etwa 10—12 Jahr alt ist, wird seine Unterlippe von einem hierin besonders erfahrenen Mann durchbohrt. In das Loch wird ein Stückchen Holz gesteckt. Der Knabe muß einen Tag liegen. Sein Großvater kommt und reißt tiefe Wunden in seinen Körper, damit er mutig im Kampf und ein tüchtiger Jäger werde. Des Morgens, wenn es noch richtig kalt ist, führt er ihn baden, damit er ein richtiger Mann werde.

Einen Tag lang darf der Vater nichts verzehren, damit der Knabe nicht geschwätzig wird. Dies zeigt, daß die Indianer keine Schwätzer lieben.

Wenn der Knabe älter wird, erhält er statt des kleinen Hölzchens ein größeres, und ist er ein Mann geworden, so kann er mit einem großen Knopf, „Tembeta", in der Unterlippe herumstolzieren (Abb. 79). Diese soll aus Holz sein, in welches Türkisen- und Chrysocolstücke eingesetzt sind. Bei den Chanés und den meisten Chiriguanos haben jetzt nur die Alten die Tembeta. Beim Chiriguanohäuptling Maringay, der noch alte Sitten ehrt, wird allen Knaben die Unterlippe durchbohrt. Maringay gehört zu den Alten, die verächtlich sagen: Der „ava", der Mann, der keine Tembeta trägt, sieht wie eine „cuña" (Frau) aus. Männern das Schimpfwort Frau zurufen, heißt auf Chiriguanoweise beschimpfen. Diese, die „ava" sind, sagen von den Chanés, die kleine Tembetas haben, „cuñareta" (Weiber).

Jetzt werden die meisten Tembetas von den Weißen in den Gebirgsgegenden aus Zinn und Glasstücken angefertigt. Unter denen, die solche gemacht haben, ist der Italiener Pablo Piotti. Seine Werke sind sogar in europäische Museen gekommen, ohne jemals in einem Indianerkinn gesessen zu haben. Früher hatten die Chiriguanos auch Tembetas aus durchsichtigem Harz.[1])

Will der Chané- oder Chiriguanoknabe heiraten, so schickt er den Eltern des Mädchens allerlei Jagdbeute. Vocapoy

[1]) P. Chomé: Lettres édifiantes. T. XXIV, S. 317.

erzählte mir, daß er vor ihrer Hütte Holz legt. Wird das Holz angezündet, so bedeutet es Einwilligung, findet er das Holz unberührt, so ist er abgewiesen. Hat er mit dem Holz Glück gehabt, so hält er bei der Mutter des Mädchens um sie an. Diese antwortet dann, sie könne nicht wissen, ob er ein guter Mann wird, der seiner Frau Essen schaffen kann. Um dies zu zeigen, muß er bei der künftigen Schwiegermutter ungefähr ein Jahr lang dienen. Die Ehe ist somit hier eine Art Kauf.

Auf dieselbe Weise, wie die Chaná- und Chiriguanoeinwohner heutigentags werben, taten sie es vor zweihundert Jahren.[1]

In der Nacht vor der Hochzeit schläft der junge Mann bei seinem Mädchen. Die Hochzeit wird mit einem Trinkgelage ohne andere Zeremonien als vieles Maisbiertrinken gefeiert. Die Jungverheirateten erhalten Glückwünsche. In der Regel wohnen die Jungen noch einige Zeit in dem Hause der Schwiegermutter.

Die Ehen scheinen mir in der Regel glücklich zu sein. In dem Dorfe des Chanéhäuptlings Vocapoy hatte ich Gelegenheit, mehrere jungverheiratete Paare zu sehen. Das Glück des Honigmonats erschien mir ungebrochen, und die jüngen Frauen arbeiteten eifrig für ihre Männer. Bei den Indianern, wie bei anderen Völkern, gibt es indessen Frauen ungleichen Charakters. Es gab solche, die den ganzen Tag für ihr Heim arbeiteten, und solche, die nur dazu da zu sein schienen, um sich zu amüsieren.

Geschwisterehen sind verboten, Cousins und Cousinen dürfen sich dagegen heiraten (wenigstens bei den Chanés).

Dies ist dagegen, wie erwähnt, weder bei den Chorotis noch bei den Matacos gestattet.

Unter den Chanés und Chiriguanos gibt es solche, die mehrere Frauen haben. Dies gilt jedoch nicht für die Jungen, sondern für die Älteren, besonders für die Häuptlinge. Vocapoy hatte vier Frauen, die in verschiedenen Dörfern wohnten.

---

[1] P. Chomé, l. c. S. 319.

Taro soll sieben haben, Maringay hat zwei, die zusammen wohnen. Der alte Mandepora (Abb. 111) soll auch eine größere

Abb. 111. Der Chiriguanohäuptling Mandepora.

Anzahl haben. Diese älteren hohen Herrn lassen oft ihre Frauen sitzen und schaffen sich neue, junge und hübsche an.

Außer in diesen Fällen scheint der Altersunterschied zwischen den Gatten in der Regel nicht mehr, als ein paar Jahre zu betragen.

Spricht man mit den Missionaren über die sittlichen Verhältnisse unter den Indianern, besonders unter den Chiriguanos, so malen sie dieselben in schwarzen Farben. Der sittliche Wandel der christlichen Indianer ist, fürchte ich, auch nicht erbaulich, aber in den Tälern, wo der weiße Mann die Indianer nicht verdorben hat, habe ich niemals eine allgemeine Liebe, wie bei den Chorotis, vorkommen sehen. Typisch für alle Sitten ist Mariangays Dorf, und dort herrscht eine so strenge Sittlichkeit, wie ich sie sonstwo nicht gesehen habe. In diesem rein heidnischen Dörfchen kam es niemals vor, daß den Mitgliedern der Expedition ein Mädchen angeboten wurde, was dagegen in den Missionsstationen vorkam.

Folgendes Urteil gibt der Jesuit Peter Ignaz Chomé in einem Briefe von 1775,[9] von einer Zeit, da sie von der Zivilisation der Weißen noch vollständig unberührt waren, ab, ein Urteil, das ich hier wortgetreu wiedergeben will:

„Ce qui m'a fort surpris, c'est que dans la femme où ils vivent, je n'ai jamais remarqué qu'il échappât à aucune honnête la moindre action indécente à l'égard des femmes, et jamais je n'ai eu sortir de leur bouche aucune parole tant soit peu déshonnête."

Die Ehen der Chiriguanos schildert dieser Jesuitenpater indessen als sehr locker.

Mit der Ehe beginnt für diese Indianer das Leben im Ernst. Es besteht aus Arbeit und Maisbiertrinken. Die Arbeit habe ich schon ein wenig beschrieben, ihre Trinkgelage werde ich weiterhin schildern.

Das Leben der Indianer und der Indianerin schwindet schneller als das der Weißen. Das Alter eines Indianers ist, wenn man keine bestimmte Zahl hat, an die man sich halten kann, sehr schwer bestimmbar. Mariangay erzählte mir, er sei der Älteste seines Stammes, es lebe kein Alterspräsident von ihm mehr. Die Weißen sagten, Mariangay sei über 100 Jahr alt. Dies ist jedoch übertrieben. Als jungverheirateter,

---

[9] Chomé, l. c. S. 318.

18—20jähriger Jüngling, besuchte Huriguay den Präsidenten Belzu in Sucre. Dieser regierte zwischen 1848—1855, der hundertjährige Huriguay ist also offenbar nicht älter, als angeblich 80 Jahre. Ein 80jähriger Indianer ist also der Älteste seines Stammes. Bei den Indianern sieht man bei-

Abb. 102. Alte Frau. Ita Iriyuro.
Ihre Enkel waren ungefähr 18 Jahre und jünger.

nahe immer, daß derjenige, der erwachsene Enkelkinder hat, sehr gebrechlich und gebrauchsfähig ist und am Rande des Grabes steht. Die Indianer und Indianerinnen entwickeln sich schnell, altern aber auch schnell. Mit 50 Jahren ist der Indianer ein Greis, mit 70 ein sog. Hundertjähriger. Im Thurn[7]) meint ebenfalls, daß die Indianer nicht alt werden.

7) Im Thurn l. c. S. 190.

6:Nordenskiöld SF10 Chiriguano

Er glaubt, daß sie selten ein höheres Alter als 40—50 Jahre erreichen.

Maringays Haare waren leicht ergraut. Es gibt beinahe weißgeblaßaarige Indianer und Indianerinnen, aber sie sind selten (Abb. 112). Einen kahlköpfigen Indianer habe ich niemals gesehen. Wenn sie älter sind, ist das Gesicht stark gefurcht. Nicht selten werden sie im Alter blind, aber weniger oft taub.

Bei den Chorotis und Ashlodays ist der Anblick der Alten oft abschreckend, sie sind schmutzig, abgemergelt und triefäugig. Dies ist bei den Chanés und Chiriguanos nicht der Fall. Diese Indianer verstehen es, in Schönheit zu altern, und auch die Alten halten sich rein und fein.

Erkrankt der Chané- oder Chiriguanoindianer schwer, so läßt man, wie bei anderen Indianern, den Medizinmann kommen.

Die Chiriguanos und Chanés unterscheiden zwischen zwei Arten von Medizinmännern, die sie „ipáye" oder „ipáyepótchi" nennen. Die ersteren sind gut und heben die Verhexungen, die letzteren können die Verhexung heben und verhexen.

Im Scherz fragte ich einmal einen Chiriguano, ob Vater Bernardino in Ivu ein „ipáye" oder ein „ipáyepótchi" sei. Artig antwortete der Indianer, ein „ipáye". Die Stellung des Missionars unter den Indianern ist die des Medizinmannes, er übernimmt ihre Macht und ihren Einfluß.

Im vorhergehenden habe ich erzählt, daß die Weißen in der Gegend von Ivu einen indianischen Medizinmann zum Vertreiben der Pocken kommen ließen. Es kommt auch vor, daß sie glauben, von den Indianern verhext zu sein. Ein Kolonist, Gutierrez, hatte einen Indianer durchgepeitscht. Dieser verhexte ihn so, daß er krank wurde. Es klang in seinem Magen wie das Quaken eines Frosches.

Durch Räuchern suchen die Medizinmänner den Verhexer ausfindig zu machen. Wie es dabei zugeht, habe ich nicht gesehen. Der Verhexer wird, wenn er oder sie entdeckt wird, getötet.

Hier unten werde ich über die Verbindung der Medizinmänner mit den großen Geistern sprechen.

Im Auftreten und in der Methode der Medizinmänner scheint bei den Choretis und Ashluslays und bei den Chanés und Chiriguanos kein Unterschied zu herrschen. Es ist dasselbe Aussaugen fremder, durch Verbrennen in den Körper gelangter Gegenstände. Bei den letzteren sind die Medizinmänner geheimnisvoller, als bei den ersteren. Vielleicht hat die Berührung mit den Weißen bewirkt, daß sie selbst an ihrer Kunst zu zweifeln beginnen.

Ein Unterschied herrscht indessen in den gewöhnlichen Heilmitteln. Die erstgenannten Indianerstämme entnehmen ihre Heilmittel in der Regel dem Pflanzenreich. Man kocht Dekokte von gewissen Gewächsen. Die Chanés und Chiriguanos wenden dagegen, außer gewissen Pflanzen, animale Heilmittel an. So benutzen die Chanés am Rio Itiyuro das Fett vom Reiher für Geschwülste, das Wildschweinfett für das Fieber, das Jaguarfett für Knochenschmerzen und Tukanschnäbel für Frauenblutungen. Die Chanés am Rio Parapiti wendeten das Fett des Straußes gegen Brustschmerzen, der Iguanaeidechse gegen Conjunctivitis, des Huhnes gegen alles, das Maisbier gegen Erkältung an. Das Fett habe ich ausschließlich für den äußeren Gebrauch anwenden sehen.

Merkwürdig ist der Chanéindianer als Aseptiker. Ich habe mehrmals gesehen, wie sie Wunden nach einer höchst modernen Methode behandeln, nämlich mit gekochtem Wasser. Das ist etwas anderes, als wenn die Weißen Schweinexkremente und frischen Urin vom Menschen mit Salz zu demselben Zwecke anwenden. Die Ursache, daß diese Indianer eine so moderne Methode kennen, ist sicher ihre große Reinlichkeit. Sie sind daran gewöhnt, sich beständig zu waschen. Daß sie auf die Idee gekommen sind, das Wasser zu kochen, kommt wahrscheinlich daher, daß sie makroskopische Tiere in demselben haben töten wollen. Zum Verbinden von Wunden wenden die Chanés zuweilen frische Blätter an.

Sollte trotz der Anstrengungen des Medizinmannes die

6:Nordenskiöld SF10 Chiriguano

Verhexung nicht gehoben werden können und der Chané- oder Chiriguanoindianer sterben, so wird er oder sie in einem großen Tongefäß unter der Hütte begraben. Bevor der Sterbende richtig tot ist oder gleich nach dem Tode, wird er so zusammengefaltet, daß die Knie unter das Kinn kommen, und die Arme werden kreuzweise über die Brust gelegt. Am Rio Parapiti hat jahrelang ein Chanéindianer gelebt, der auf diese Weise zusammengefaltet worden war, der aber, bevor er in die Graburne gestopft worden war, von einem weißen Manne gerettet wurde. Der Tote wird angekleidet, mit einer Wasserkalebasse im Knie, in das Gefäß gesetzt. Das Wasser soll der Tote mithaben, wenn er auf den Bergen umhergeht, sagte mir der Chanéhäuptling Vocapoy. Das Gefäß wird in der Hütte vergraben und als Deckel ein anderes Gefäß darübergestülpt.

Bei Tatarenda in der Nähe von Yacuiba verbrennt man, wie ich gehört habe, nach dem Begräbnis die Hütte. Dies ist jedoch nicht das Gewöhnliche. Dagegen pflegt man die Hütte einige Zeit nach dem Begräbnis zu verlassen, um später wieder hinzuziehen. So geschah es z. B. in einem Chanédorf am Rio Itiyuro, in welcher ich kurz nach dem Begräbnisse war.

Die großen Maisbiergefäße (Abb. 113) werden als Sarg angewendet. Herrscht Mangel an Gefäßen, so begräbt man oft auf andere Weise. In einem Chanédorf, Copéri, am Rio Parapiti, begrub man kurz vor meiner Ankunft ein Kind in einer Haut unter der Hütte.

Auf den Gräbern ihrer toten Verwandten verleben diese Indianer ihr Leben, und oft ist es so voll in der Hütte, daß ein Nachbegräbnis in alten Töpfen notwendig wird.

„Der Christ schleppt seine Toten weit von seinem Hause fort. Wir Indianer, die eine größere Liebe für sie hegen, bewahren sie in unseren Häusern." So ungefähr sprach Vocapoy einmal zu mir, als das Gespräch auf diese eigentümliche Begräbnisart kam.

Wird ein Chiriguano von einem Jaguar getötet, so wird

6:Nordenskiold SF10 Chiriguano

er mit dem Kopf nach unten begraben, damit er nicht als ein solches Tier umgeht. Diese Vorstellung vom Jaguar, der ein Mensch war, ist besonders unter den Quichuas verbreitet,

Abb. 113. Chiriguanograb. Caipipendi.

wo dieses merkwürdige Tier, wie schon erwähnt, Uturunco genannt wird (vgl. S. 12). Heult der Fuchs des Nachts nahe dem Dorfe, so stirbt jemand.

Stirbt der Mann, so soll die Frau das Haar kurz schneiden.

[facing p. 220]

Tafel 18. Chanéfrau mit Kind. Rio Itiyuro

6:Nordenskiold SF10 Chiriguano

Hat sie ihn sehr geliebt, tut sie es zweimal. Erst wenn das Haar wieder lang gewachsen ist, darf sie eine neue Ehe eingehen. Stirbt ihr Vater oder ihre Mutter, so schneidet sie das Haar kurz, stirbt ihr Kind, ihr Bruder oder Schwager, so schneidet sie es halblang. Unter langen Haaren versteht man, daß sie bis zur Schulter reichen. Meine Frage, ob auch die Männer bei Trauer ihr Haar schneiden, wurde mit einem Gelächter beantwortet. Sie begnügen sich damit, eins der allerlängsten zu verkürzen. Die Männer dürfen sich erst ungefähr ein Jahr nach dem Tode der Frau wiederverheiraten.

Hat die Frau Trauer, so trägt sie keinen Schmuck. Als ich bei Maringay war, hatte seine Schwiegertochter ihr kleines Kind verloren. Während alle anderen Frauen im Dorfe zahlreiche Halsketten trugen, hatte sie keinen einzigen Schmuckgegenstand. Sie nahm auch an keinem Feste teil.

Die Indianer, welche die Missionare taufen, sehen es nicht immer gern, daß sie ihre Toten auf dem Kirchhof begraben müssen. Sie wollen wenigstens, daß die Toten Wasser mit ins Grab bekommen.

Man befreit sich nicht so leicht von alten, ererbten Vorstellungen, um sie gegen neue einzutauschen.

[p. 221]

Dreizehntes Kapitel.

Aus dem Leben der Chané- und Chiriguanoindianer (Forts.).

Häßliche Worte, Homosexualität, Selbstmord, Schamgefühl u. a.

In der Sprache der Weißen gibt es, wie bekannt, eine Anzahl Worte, die man in anständiger Gesellschaft nicht anwenden darf. Gewisse Körperteile dürfen Personen desselben Geschlechts nur mit lateinischen Namen nennen, während Personen verschiedenen Geschlechts in der Regel gar nicht miteinander darüber sprechen. Ein Wort kann für häßlich gelten, während ein anderes Wort für denselben Gegenstand beliebig angewendet werden kann. Der Grund, warum ein Wort verboten ist, ist sicher oft schwer zu ermitteln.

K. v. d. Steinen[1]) und Koch-Grünberg[2]) haben darauf hingewiesen, daß auch die Weiber unter den Indianern am Xingu und Rio Negro von den Geschlechtsteilen ganz offen, als von etwas Natürlichem reden. Ebenso ist es bei den Indianern, die ich kennen gelernt habe. Als ich nach Worten fragte, welche die allerintimsten Dinge berührten, gaben auch die Weiber, ja die jungen Mädchen, auf die allernatürlichste Weise Auskunft darüber.

Es gibt indessen Worte, die verboten sind. Solche Worte sind bei den Chorotis „ametché", das ein Schimpfwort ist, „ictivähi", das homosexuellen Geschlechtsverkehr bezeichnet, „huéle", das Onanie bedeutet, und „tévi" bei den Chanés

[1]) K. v. d. Steinen: l. c. S. 25.
[2]) Koch-Grünberg: l. c. Bd. I S. 133.

6:Nordenskiold SF10 Chiriguano

und Chiriguanos, das dieselbe Bedeutung wie ictivähi hat. Das Unnatürliche im Geschlechtsleben ist auch hier so schändlich, daß es sich nicht paßt, darüber zu sprechen.

Es gibt auch Indianer, die niemals über solche Gegenstände sprechen wollen. So beschaffen war z. B. ein Chiriguano, den ich auf meinem ersten Ausflug den Rio Parapiti herunter mithatte. Er stellte sich sogar so, als hätte er niemals von etwas Derartigem reden hören. Als ich ihn über die Homosexualität bei seinen Landsleuten befragte, stellte er sich dumm und sagte ungefähr: „Pflegen das die Weißen zu tun?"

Unter den Indianern gibt es gleichwohl, wie auch bei uns, solche, denen es Spaß macht, obszöne Geschichten zu erzählen. Ein solcher war der alte Chané Bóyra, er, der den Schimpfnamen yúruhuasu, Großmaul, hatte. Je schlimmere Sachen er erzählte, um so mehr amüsierte sich der alte Bóyra. Zuweilen erzählte er so, daß sogar mein Freund Batirayu, der zu dolmetschen pflegte, sich richtig genierte. Der alte Chiriguano Yambási war auch einer, der alle möglichen Unanständigkeiten zu erzählen wußte.

Bóyra erzählte, wie der Fuchsgott, Aguaratunpa, und die Iguanaeidechse, Téyuhuasu, in einem homosexuellen Verhältnis zueinander standen. Bóyras Erzählung war so außerordentlich realistisch, daß ich sie hier unmöglich wiedergeben kann. Er erzählte auch, wie der Fuchs sich mit einem Waldhuhn[1]) „Kése-Kése" verheiratete, das auch ein Mann war.

Aguara (der Fuchs) kam einmal zur Hütte des Waldhuhns.

„Wie geht es dir, Bruder?" sagte der Fuchs.

„Gut, komm, setz' dich, Bruder", sagte das Waldhuhn.

Der Fuchs setzte sich. Das Waldhuhn hatte viele Erdratten „angúyatúto" aufgehängt, die es getötet hatte.

„Willst du Erdratten essen?" sagte das Waldhuhn.

„Ja", sagt der Fuchs und aß eine. Er verlangte dann noch eine und noch eine usw.

---

[1]) Penelope.

6:Nordenskiold SF10 Chiriguano

Schließlich bat er darum, zwei für seine Kinder mitnehmen zu dürfen. Das Waldhuhn gab sie ihm. Der Fuchs, der keine Kinder hatte, fraß auch diese auf.

„Hast du eine Frau?" sagte der Fuchs.

„Nein, ich wohne hier mit meiner Schwester," sagte das Waldhuhn.

Der Fuchs ging hierauf fort. Als er zu einer Pflanze „supua" gekommen war, hing er seinen Penis auf, nahm eine Frucht herunter und setzte sie an die Stelle, wo der Penis gesessen hatte. Die Supua sieht nämlich wie eine Vulva aus. Der Fuchs nahm dann die Tembeta heraus und verstopfte das Loch. Er kam dann an ein Haus, wo einige Frauen wohnten.

„Wollt Ihr Tiru (Frauentracht), Halskette und Haarband mit mir gegen ein Pferd tauschen?" sagte der Fuchs.

„Wo hast du dein Pferd?" sagten die Frauen.

„Mit dem komme ich morgen", sagte der Fuchs. Er bekam nun Tiru, Halskette und Haarband, legte alles dies an und begab sich auf einem anderen Wege nach dem Hause des Waldhuhns. Als er dorthin kam, war niemand zu Hause. Er legte sich da in die Hängematte. Nach einer Weile kam das Waldhuhn nach Hause.

„Woher kommst du?" sagte das Waldhuhn.

„Von meinem Vater", antwortete der Fuchs. Der Fuchs kochte nun zwei Erdratten und aß sie auf. Dann kochte er noch zwei und aß auch diese auf. Hierauf kochte er noch zwei und aß sie auf.

Am Abend fragte der Fuchs die Schwester des Waldhuhns: „Wo willst du liegen?" „Hier", sagte sie.

„Dann lege ich mich neben dich", sagte der Fuchs. Ein bißchen davon legte sich das Waldhuhn. Als die Schwester eingeschlafen war, streckte der Fuchs die Hand aus und faßte das Waldhuhn an. Dieses kam und legte sich neben den Fuchs.

„Bist du verheiratet?" sagte das Waldhuhn.

6:Nordenskiold SF10 Chiriguano

„Nein, meine Mama hat mich nicht verheiraten wollen", antwortete der Fuchs . . .[1])

Der Fuchs schlief nun zwei Nächte bei dem Waldhuhn und wurde schwanger. Nach einiger Zeit gebar der Fuchs.

Eines Tages kamen einige Vögel dort vorbei. „Gib mir Bogen und Pfeil, ich will schießen", sagte der Fuchs. „Du kannst wohl nicht schießen, du bist ja kein Mann", sagte das Waldhuhn.

„Ich bin ein Mann", sagte der Fuchs, nahm Pfeil und Bogen und ging fort. Als er zur „Supua" kam, nahm er seinen Penis herunter und setzte ihn sich wieder an.

Man erzählte mir von einem Chanéindianer von Yacundai am Rio Parapiti, der sich in fremden Dörfern als Schmarotzer herumzutreiben pflegte. Die Indianer wurden zuletzt seiner über, und als er einmal vollständig betrunken war, schändeten ihn einige Chiriguanoindianer im Caipipendital. Er begab sich nach diesem Schimpf nach dem unteren Rio Parapiti. Als die Kenntnis von dem, was ihm in Caipipendi passiert war, dorthin gedrungen war, hängte er sich in Verzweiflung über diese Schande.

Eigentümlicherweise wird es unter diesen Indianern nicht als eine Schande betrachtet, in einem homosexuellen Verhältnis der Aktive zu sein, der Passive wird aber tief verachtet. Er wird als ein Weib betrachtet. Dies ist der Grund, warum ein Teil rücksichtslose Weiße unverbesserliche Indianer mit — einem Klistier bestrafen. Ein so gekränkter Indianer verschwindet für immer. Man nimmt an, daß er Selbstmord begeht. Mittels „tévi" bestraft ein Indianer seine ungetreue Frau und verläßt sie dann. Chanéknaben habe ich „tévi" spielen sehen.

Nach Westermarck[2]) ist die Homosexualität sehr verbreitet unter den Indianern Amerikas. Die Auffassung, daß dies eine Schändlichkeit ist, ist keineswegs überall so ausgeprägt, wie bei den hier erwähnten Indianern.

---

[1]) Als allzu realistisch ausgelassen.

[2]) Westermarck: Ursprung und Entwickelung der Moralbegriffe. Bd. II. Leipzig 1909.

6:Nordenskiold SF10 Chiriguano

Über Onanie habe ich bei den Chanés und Chiriguanos nichts gehört. Sie soll dagegen bei den Chorotis von den Männern, die beim Tanz von den Frauen übergangen werden, betrieben werden.

Perversitäten im Verhältnis zwischen Männern und Frauen, die im alten Peru gewöhnlich waren, scheinen hier nicht vorzukommen. Primitive Säugetierstellung beim Koitus soll bei den Chacostämmen gewöhnlich sein.

Mataco gab mir eine Wurzel, die sie als Aphrodisiakum anwendeten.

Das Verhältnis zwischen Menschen und Tieren ist in den Sagen der Indianer so intim verflochten, daß man nicht immer bestimmen kann, ob sie das eine oder das andere meinen. Die Sagen, welche die Liebesverhältnisse zwischen Menschen und Tieren schildern, sind keine Schilderungen von Bestialität, die bei diesen Indianern unbekannt zu sein scheint.

Das Schamgefühl ist bei diesen Völkern sehr verschieden entwickelt. Es scheint mir sehr stark von der Kleidertracht abzuhängen. Keiner dieser Indianer oder Indianerinnen, von denen ich hier erzähle, betrachtet es, soweit sie nicht vollständig verdorben oder zivilisiert sind, als unpassend, den Oberkörper zu zeigen. Die Chiriguano- und Chanéfrauen sind viel verschämter als die Chorotis und Ashluslays, wenn sie die Geschlechtsteile zeigen. Die letzteren wollten sich höchst ungern vollständig entkleiden, um photographiert zu werden. Den ersteren wagte ich so etwas nicht einmal vorzuschlagen.

Saß man des Abends am Feuer in der Hütte und war mit der Familie bekannt, so schienen sie gleichwohl ganz ungeniert zu sein. Die Choroti- und Ashluslaymänner sind sehr schamlos. Die Männer unter den Chanés und Chiriguanos dagegen weniger. Es ist sehr gewöhnlich, daß die Chiriguano- und Chanéfrauen, in einer Gesellschaft konversierend, stehend Wasser lassen und den Urin das Bein herunterlaufen lassen, was ja als weniger sauber gelten darf. Die Männer gehen dagegen immer abseits, um dieses Bedürfnis zu verrichten.

6:Nordenskiöld SF10 Chiriguano

Der Geschlechtsakt geht, wie erwähnt, bei den Ashluslays oft in Gegenwart von Zuschauern vor sich. Bei den Choroti-

Abb. 114. Junge Chanéfrau entblößt den Oberkörper, um sich photographieren zu lassen. Rio Parapiti.

tänzen mußte man sich in der Dunkelheit vorsehen, nicht über die liebenden Paare zu stolpern. Dergleichen sieht man niemals bei den Chiriguanos oder Chanés. Da viele in der-

6:Nordenskiold SF10 Chiriguano

selben Hütte liegen, sieht man gleichwohl auch bei ihnen vieles, was man immer sieht, wenn man Schlafgäste hat. Dies nicht zum wenigsten ist der Grund, daß das Geschlechtsleben selbst für die kleinen Kinder keine Geheimnisse hat.

Offenbar steigert das Zusammenleben mit den Weißen das Schamgefühl. Die Indianerinnen genieren sich sogar, die Brust zu zeigen. Die Moral sinkt in dem Maße, wie das Schamgefühl steigt.

Dies sollten alle diejenigen bedenken, die für nackte Heidenkinder Kleider nähen.

Viele meiner Leser finden vielleicht, daß dieses Kapitel nicht in meinem Buche hätte enthalten sein sollen. Es scheint mir gleichwohl richtig, etwas über die Abweichungen auf dem geschlechtlichen Gebiete zu sprechen. Es trägt zum Verständnis der Menschen, die ich hier schildere, bei. Natürlich habe ich hier nicht über all den Realismus, der bei den Gesprächen am Lagerfeuer manchmal zutage trat, sprechen können.[1])

Die natürliche Seite des Geschlechtslebens fassen die Indianer so ganz verschieden von dem, wie wir es in der Regel sehen, auf. All die Verderbnis, die in der zivilisierten Gesellschaft ist, treffen wir bei diesen Menschen nicht, verschiedenes findet sich aber schon hier. Was besonders die Homosexualität betrifft, so zeigen, wie bekannt, die Verhältnisse bei den Naturvölkern, daß die Ursache des Übels viel tiefer, als in unserer Hyperzivilisation liegt.

[1]) Wenn unsere täglichen Zeitungen, die wohl für die Öffentlichkeit bestimmt sind, über alles mögliche schreiben, so braucht man ja in einer Reiseschilderung nicht allzu prüde zu sein.

[p.228]

Vierzehntes Kapitel.

Aus dem Leben der Chané- und Chiriguanoindianer (Forts.).

Häuptlinge und Gesetze.

Die Häuptlinge bei den Chanés und Chirignanos haben eine ganz andere Stellung als bei den Ashluslays und Chorotis. Sie haben eine bedeutende Macht. Unter den Häuptlingen finden sich die großen Häuptlinge, die über mehrere Dörfer herrschen, und die Dorfhäuptlinge, die nur über ein Dorf oder einen Teil eines solchen gebieten. Von großen Häuptlingen, die ich kennen gelernt habe, sind bemerkenswert die alte Vuáyruyi, die Häuptling über die Chanédörfer am Rio Itiyuro ist, Taruiri, der über den größeren Teil des Caipipenditales herrscht, Mandepora (Abb. 111), der früher eine bedeutende Macht in und um Machareti hatte, und Maringay im Iguembetal.

Jetzt haben die Häuptlinge keine anderen Zeichen ihrer Würde, als silberbeschlagene Stöcke. Nach Corrado trugen sie früher einen großen Haarbüschel auf dem Kopfe, „yattira", sowie grüne Steine, die an den Ohren hingen. Bei den Festen und Tänzen hatten sie das Recht, die „yandugua", eine mit einem Bündel Straußenfedern geschmückte Stange, und „iguirape", einen mit eigentümlichen Figuren geschnitzten Stab, anzuwenden. Von diesen habe ich nur eine Yandugua erwerben können. Die übrigen habe ich nicht einmal gesehen.

Die Häuptlingswürde scheint in der Regel erblich zu sein. Doch sind Tüchtigkeit und die Kunst, seine Worte wohl zu setzen, erforderlich.

6:Nordenskiold SF10 Chiriguano

Vocapoy hat mir seinen Stammbaum mitgeteilt, den ich hier wiedergebe, da er sehr lehrreich ist, und ich zu glauben wage, daß es den Leser interessieren kann, einen indianischen Stammbaum zu studieren.

Vocapoys Stammbaum.

Wir finden somit, daß der eigentliche Häuptling am Rio Itiyuro eine Frau ist. Ich habe die alte Vuáyruyi besucht. Sie empfing mich, in ihrer Hängematte liegend, mit großer Würde. Da die Frau alt und schwach ist, regiert Vocapoy und sucht, so gut wie er kann, die Seinen gegen die Weißen zu schützen, die ihr Land vollständig in Beschlag genommen haben. Ich fragte Vocapoy, warum Vuáyruyi, als Frau Häuptling geworden ist. „Ihr Vater Hinu Parawa hat sie sprechen gelehrt", sagte Vocapoy. Es wird somit von diesen Indianern, um regieren zu können, als höchst wichtig betrachtet, die Sprache in seiner Gewalt zu haben. Diese Menschen können die Klugheit höher schätzen, als die Stärke. Niemand wird Häuptling, wenn er nicht ein älterer Mann ist. Der Mann der Vuáyruyi war nicht Häuptling, sondern nur „Prinzgemahl". Die Dorfhäuptlinge gehören ebenfalls dem Geschlechte Hinu Paravas an.

Taruiri ist auch nicht der richtige Häuptling, sondern vertritt einen jüngeren Verwandten, der infolge seiner be-

6:Nordenskiold SF10 Chiriguano

ständigen Betrunkenheit als untauglich betrachtet wird. Taruiri herrscht im Caipipendital, wo sein Gebiet noch frei ist, von den Weißen aber wohl bald usurpiert werden wird. In Ivu ist ein Chiriguanohäuptling, der auch Medizinmann ist. Dies ist das einzige Beispiel von Theokratie, das ich kennen gelernt habe.

Die Häuptlingsfamilien bilden unter den Chiriguanos und Chanés eine Art Aristokratie. Mehrmals habe ich Indianer sich mit ihren feinen Familienverbindungen großtun hören. Ein Chiriguano, der mich eine längere Zeit als Dolmetscher begleitete, war eifrigst bemüht, mir einzuprägen, daß er mit den bekanntesten Oberhäuptlingen verwandt war.

Wie der Verfasser dieses Buches als Sohn von Adolf Nordenskiöld vorgestellt zu werden pflegt, so pflegten die Indianer in ähnlicher Weise die Söhne ihrer „großen Männer" vorzustellen.

Ich bin sogar hinter ein bißchen Betrügerei mit dem Stammbaum gekommen. Ein Chané behauptete, direkt von dem großen Hinu Parava herzustammen, was aber nicht wahr sein soll.

Will man bei diesen Indianern hübsche Sachen aus alten Zeiten finden, so hat man sie zuerst bei den Häuptlingsfamilien zu suchen. Sie bewahren die alten Kleinodien.

Immer mehr beginnen die weißen Behörden die Häuptlinge zu ernennen. Man kann also in einer Gegend einen von den Weißen gestützten Häuptling und einen legitimen finden.

Die Häuptlinge haben eine große Macht, und man gehorcht ihnen, im Gegensatz zu dem, was bei den Chorotis und Ashluslays der Fall war, soweit ich gesehen habe, immer. Sie besitzen den Boden (wenigstens in gewissen Gegenden), aber nicht für eigene Rechnung, sondern für den Stamm. Braucht man in einem Chané- oder Chiriguanodorf Träger, so erhält man sie von dem Häuptling, und kein Indianer weigert sich, die Befehle des Häuptlings auszuführen.

Obschon der Häuptling einen so großen Einfluß hat,

6:Nordenskiold SF 10 Chiriguano

arbeitet er doch in derselben Weise, wie die übrigen Indianer. Vocapoy z. B. trug selbst das schwere Holz zum Maisbierkochen nach Hause, und seine Frau mußte kochen und fegen, wie die anderen Frauen. Dem Beispiele der Weißen folgend, haben jedoch jetzt einige der zivilisiertesten und reichsten Indianer, wie Taco, Diener aus ihrem eigenen Stamme, aber dies ist nicht das Ursprüngliche. Dagegen ist es, wie ich an anderer Stelle schon erwähnt habe, nichts Ungewöhnliches, daß die Mataco-Vejos und die Tapiete für die Chiriguanos und Chanés arbeiten.

Als wir im Dorfe Vocapoys von der Jagd heimkehrten und mit dem Häuptling unsere Beute teilten, nahm seine Frau alles an, ging aber dann in den Häusern herum und gab den Nachbarn alles, was sie erhalten hatte.

Abb. 119. Kalebasse. Chiriguano. Itapenbia. 1/8.

Man kann hier nicht von reich und arm in demselben Dorfe sprechen, obschon auch der Anfang zu einem Adelstand vorhanden ist. Dagegen gibt es arme und reiche Dörfer. Einzelne verhältnismäßig reiche Indianer gibt es, diese leben aber, wie Taco, wie die Weißen.

Der Häuptling ist Richter und war früher Heerführer.

Vocapoy sagte mir, Totschlag werde in der Weise bestraft, daß der Totschläger dazu verurteilt wird, bis zu einem halben Jahre für die Familie des Getöteten zu arbeiten. Ein Dieb bekommt bis zu fünfzig Rutenschläge und wird, um nicht getötet zu werden, nach einem anderen Dorf geschickt. Nach Vocapoy ist es die Hauptaufgabe des Häuptlings, Blutrache zu verhindern, indem man die Verbrecher fortschickt, damit sie nicht gemordet werden. Vater-, Mutter- und Kindesmord sind, seiner Behauptung nach, in seiner Gegend unbekannt.

Nach Batirayu, dessen Angaben zuverlässiger als die Voca-

6:Nordenskiöld SF10 Chiriguano

poys sind, beschäftigt sich der Oberhäuptling der Chanés am Rio Parapiti mit keinen anderen Verbrechen, als mit Mord, Verführung einer anderen Frau und Verhexung. Mord mit vergiftetem Chicha, „bád-dyási", kam früher bei den Chanés vor. Mörder und Verhexer wurden verbrannt. Der Verführer einer Frau wurde aller seiner Habe beraubt. Im übrigen wurden Diebstahl und andere Verbrechen durch Duell geschlichtet. Hatte jemand gestohlen, so riefen der Gekränkte und der Dieb ihre Verwandten herbei, und man kämpfte auf dem offenen Platz im Dorfe.

Die Behörden der Weißen greifen jetzt immer mehr in die Rechtsverhältnisse der Indianer ein.

Im Krieg mit anderen Stämmen führte der Häuptling den Befehl, wie sie es auch bei den Empörungen der Indianer gegen die Weißen getan haben.

Nach Vocapoy besitzt der Häuptling den Boden für den Stamm. Batirayu sagte, das Recht an dem Grundbesitz werde so geordnet, daß jeder anbaut, was er will. Schon bebauter Boden hat seinen Besitzer, wenn er auch jahrelang brachgelegen hat. So wird auch Brachland vererbt.

Die Erbschaften werden im übrigen dadurch bedeutend eingeschränkt, daß der Tote einen Teil seiner Kostbarkeiten mit in das Grab nimmt.

Wie bei den Ashluslays und Chorotis, ist auch hier das Besitzrecht gut ausgebildet, und die Frauen besitzen auch das, was sie anwenden und herstellen. Wie bei den genannten Stämmen, ist auch hier die Mildtätigkeit sehr groß, wenn sie auch dank unserer „Zivilisation" und der Mission weniger ausgeprägt ist.

Das Chiriguanogemeinwesen — das ursprüngliche Chanégemeinwesen kennen wir nicht — hat eine viel festere Organisation gehabt als das Gemeinwesen bei den Chorotis und Ashluslays. Die Chiriguanos waren ein Eroberungsvolk, das wahrscheinlich die Chanés unterjocht und mutig und erfolgreich gegen die Inkas gekämpft sowie lange der Invasion der Weißen Widerstand geleistet hat. Hätte es statt der

6:Nordenskiold SF10 Chiriguano

vielen Häuptlinge nur einen einzigen gegeben, so hätte die Eroberung des Chiriguanolandes ganz sicher das Leben doppelt so vieler Weißen gekostet, als jetzt. Leider haben in den Kämpfen der Weißen gegen die Indianer beinahe stets einige Häuptlinge auf der Seite der Feinde gegen ihren eigenen Stamm gekämpft. Bei dem letzten, durch den Kampf bei Curuyuqui entschiedenen Aufruhr hatten die Weißen eine Hilfstruppe von ein paar tausend Indianern, mit denen sie zusammen deren Stammfreunde bekämpften.

Wie sich alles im Leben der Indianer verändert, wenn die Weißen ihr Land erobert haben, so verwandeln sich auch die sozialen Verhältnisse. Wenn Vocapoy, Maringay, Mandepora und einige andere in den Tongefäßen unter den Hütten liegen, dann ist das Ende herbeigekommen, dann haben die Indianer keine anderen Gesetze als die der Weißen, keine anderen Behörden, als deren Vögte. Die Chanés am Rio Parapiti haben, wie erwähnt, keinen Oberhäuptling mehr. Batirayu ist diese Würde angeboten worden, er will aber nicht der Knecht der Weißen sein, dazu ist er zu stolz. „Es ist nicht wie in alten Zeiten", sagte Batirayu zu dem wunderlichen Weißen, der das Vertrauen und das Verständnis der Indianer suchte.

[p.234]

Fünfzehntes Kapitel.

Trinkgelage bei den Chanés und Chiriguanos.

Erzählt ein Chané oder Chiriguano eine Sage, so beginnt er sie oft so: „Vor langer Zeit war einmal ein großes Trinkgelage." Berichtet er von etwas, was passiert ist, von der Krankheit eines Verwandten oder dergleichen, so sagt er: „Es war vor oder nach dem Fest." Bei diesen Festen hört und sieht man auch das meiste, was von der alten Kultur dieser Indianer übriggeblieben ist. Da kommen die schönsten Tongefäße zum Vorschein, da sieht man Trachten aus früheren Zeiten, da werden die Steinschmucksachen aus den Schatztöpfen hervorgeholt.

Eine Hausmutter bei uns ist stolz, wenn sie ihren Gästen schöne Tischtücher und schönes Porzellan zeigen kann. So denken auch die Chané- und Chiriguanofrauen. Beim Feste will jede Frau, daß das Maisbier in ihrem Hause in schöneren Tongefäßen als denen der Nachbarinnen aufgetragen und in Kalebassen serviert wird, die eleganter geschmückt sind, als bei einem anderen.

Deshalb beschäftigen die Frauen sich vor jedem Feste mit der Herstellung von Tongefäßen und die Männer mit der Verzierung der Kalebassen. In den Chané- und Chiriguanodörfern sieht man auch prächtige Sammlungen von Tongefäßen. Besonders einige Frauen verstehen es, diese mit ausgezeichneter Geschicklichkeit und Eleganz zu malen. Man sieht beinahe niemals drei Krüge, die sich vollständig gleichen. Jede sucht bei dem Feste mit etwas Originellem aufzutreten, etwas Neues und Hübsches zu malen. Was die lineare Orna-

4:Nordenskiold SF10 Chiriguano

mentik betrifft, so versteht man es, die alten Ornamente zu variieren, man versteht es aber nicht, oder will sich nicht von ihnen frei machen und neue Bahnen brechen. Die

Abb. 116. Chanámädchen trinken Maté in einem Mirasol. Rio Paraguay.

Indianerin ist in ihrer Kunst konservativ und vermag sich nur, wenn sie ihre Motive direkt aus der Natur nimmt und Tiere malt, von den Vorbildern aus der Zeit der Mutter oder

6 Nordenskiöld SF10 Chiriguano

Gefäßmuster freimachen. Keineswegs alle Frauen in den Dörfern sind Künstlerinnen. Es gibt solche, denen die Natur die Gabe der Kunst verliehen hat, und richtige Pfuscher. Wer kann Tongefäße so malen, wie die eine Frau des Chiriguanohäuptlings Moringay? Sie sind weitberühmt in den Tälern, und jeder versucht, ihre Werke durch Tausch zu erwerben. Nicht zum wenigsten ich habe ihre sichere und geschmackvolle Kunst bewundert. Die Frau des Chanohäuptlings Vocapoy (Taf. 29) ist auch kein Stümper.

Wo die Indianer reich sind, d. h. große Maisernten haben, da ist die Keramik schön. Wo man arm und der Kampf ums Dasein hart ist, da hat man nicht viel Zeit zu künstlerischer Arbeit. Wenn die Kunst im Indianerheim gedeihen soll, muß Freude und Munterkeit herrschen.

Die jüngere Generation wird, fürchte ich, deutsches Porzellan und Emailgefäße vorziehen, und damit wird auch die Chiriguano- und Chanokunst zu dem vielen Schönen und Feinen gehören, das vor der brutalen Zivilisation des weißen Mannes verschwindet. In vielen Dörfern muß man schon in den Winkeln der Hütten herumkramen, wenn man mit sicherer Hand und natürlichem Geschmack gemalte Gefäße finden will. Das Schlimmste ist jedoch, daß die Weißen Gefallen an den Tongefäßen der Indianer zu finden beginnen. Dadurch entsteht Massenherstellung. Für die Weißen ist alles gut genug, da braucht es weder schön noch gut gearbeitet zu sein. Sie wünschen nicht das Geschmackvolle und Einfache, sondern das Grelle und Merkwürdige, „curiosidades", wie der Kreole sagt. Vor diesem Merkwürdigen müssen sich unsere Museen hüten, denn das gibt eine unrichtige Vorstellung von dem rein Indianischen.

Die Frauen brauen das Bier zum Feste. Dieses soll aus Mais (am liebsten gelbem oder weißem) sein, und nur die armen Chanós am Rio Parapiti müssen sich oft mit Bier aus süßen Kartoffeln begnügen. Ist Algarrobo vorhanden, so wird auch aus dieser Frucht Bier gebraut. „Es ist gut und berauscht so schön", sagen die Indianer.

6:Nordenskiöld SF10 Chiriguano

Ist die Maisernte reich, so herrscht Freude in den Dörfern, dann ist Speise und Trank in jeder Hütte. Mißrät die Maisernte, dann ist keine Freude, die Magen sind leer und auf dem Festplatz ist es still. Sind die Scheunen voll Mais, dann ist der Indianer stolz und kümmert sich nicht um Weiße, Unterdrückung und Sorgen. Ist die Scheune leer, dann ist er untergeben und düster.

Nachdem die Frauen den Mais aus den Scheunen geholt und die Männer Holz und die Frauen Wasser herbeigeschleppt

Abb. 117. Kochen des Maisbieres. Chané. Rio Itiyuro.

haben, beginnt das Brauen. Erst wird der Mais in großen Mörsern gestoßen. Nacht und Tag hört man, wie die fleißigen Frauen stoßen. Der gestoßene Mais wird gesiebt und dann in gewaltigen Tongefäßen mit Wasser gemischt und gekocht. Hierauf wird ein Teil herausgenommen, gekaut und ordentlich mit Speichel vermengt. Dies wird dann zu dem übrigen geschüttet und muß, nachdem es geseiht ist, in großen offenen Gefäßen bei schwacher Wärme gären. Mit großen Holzspaten (Abb. 118a) oder mit geschafteten Schulterblättern (Abb. 118b) rührt man in den Töpfen um. Es ist der Stolz jeder Frau, gutes Bier, „cangui", und viel Bier zu brauen. Sie sind auch

6:Nordenskiöld SF10 Chiriguano

rastlos fleißig. Den ganzen Tag sieht man sie arbeiten, und auch des Nachts beschäftigen sie sich mit Kochen und Mahlen. Keine Familie darf sich der Zubereitung von Cangui entziehen.

Daß Speichel angewendet wird, erscheint vielleicht unsauber. Anfangs dachte ich dies auch, bald war ich aber so verhärtet, daß mir auf Indianerweise mit Speichelhefe zubereitetes Cangui besser schmeckte, als das von den Weißen auf zivilisiertere Weise gebraute.

Kenner, nicht allein Indianer, sollen derselben Ansicht sein wie ich. Wichtig ist jedoch, daß das Cangui kalt getrunken wird, lauwarm ist es ekelhaft. Wenn es lange gestanden hat, ist es etwas berauschend, jedoch nicht so stark wie das Algarrobobier.

Beim Canguitrinken geht es sehr zeremoniell zu. Vorn sitzen auf Bänken und Schemeln (Abb. 85) die Männer, und hinter ihnen, auf dem Boden, die Frauen. Die älteren Damen bekommen die besten Plätze. Die Wirtin bringt das Cangui in ihren feinsten Tongefäßen, „yambuy", herein und stellt diese vor ihre Gäste (Abb. 77 u. 78). Wem ein Gefäß mit Cangui hingestellt wird, der muß servieren. Das gilt auch für die Häuptlinge. Sogar ich habe auf Indianergesellschaften serviert. Es ist nichts Ungewöhnliches, daß die Männer die Frauen bedienen und umgekehrt. Man füllt das Cangui in verzierte Kalebassen, die man der Reihe nach umherreicht. Jeder muß austrinken. Wer sich weigert, ist unhöflich und ungebildet. Sich selbst einzuschenken, ist nicht passend. Will man gegen den Servierenden höflich sein, so trinkt man erst seine Schale aus, füllt sie dann selbst und bietet sie jenem an. Trinkt man alles, wozu man eingeladen wird, dann ist man der Freund der Indianer. Weigert man sich, dann fassen die Indianer Mißtrauen zu einem. Ein alter Chané sagte auch einmal zu mir: „Du bist ein netter Christ, schon am Morgen trinkst du Maisbier mit uns." Wenn Moberg mit Beute beladen von der Jagd heimkehrte, drängten sich die jungen und hübschen Frauen um den glücklichen Jäger und bewillkommneten ihn mit einer Kalebasse Maisbier.

6:Nordenskiold SF10 Chiriguano

Was waren die Mühseligkeiten der Jagd gegen die des Trinkens, denn die Frau, deren Schale er unberührt ließ, vergaß niemals den Schimpf. Wenn man Feinde hat, kann das Canguitrinken gefährlich sein, denn wer weiß, ob nicht jemand etwas von den eigenen Exkrementen oder Haaren in das Bier gelegt hat, so daß man verhext wird und stirbt. Dergleichen geschieht in diesen Dörfern.

Bei den Festen kommen oft Züge von Indianerhumor zum Vorschein. Ein Scherz ist z. B. zu tun, als ob man Cangui in einer umgestülpten Kalebasse herumreicht, ein anderer, einen zu bitten, auf einem unförmlichen Rohr Flöte zu blasen.

Tanzmasken werden von den Chiriguanos und Chanés jetzt nur während des Karnevals, dem großen Zechfest der Christen, getragen. Diejenigen, die ich gesehen habe, hatten die Form von menschlichen Gesichtern (Abb. 119).

Sehr verschiedene Ansichten herrschen unter den Indianern, ob die Masken hier ursprünglich indianisch sind oder nicht. Vocapoy sagte, die Idee zu ihnen sei ursprünglich von den Weißen gekommen. Batirayu behauptete dagegen, als Knabe am Rio Parapiti bei den Chanés von den jetzigen verschiedene Masken gesehen zu haben, die bei ihren großen Festen benutzt wurden. Seiner Ansicht nach haben die Chanés Masken angewendet, bevor die Weißen ins Land gekommen sind.

A B

Abb. 118. Suppenspatel. Chiriguano.
A = Tihuipa. 1/4.
B = Caipipendi. 1/4.

6:Nordenskiöld SF10 Chiriguano

Man hatte damals auch Klappern aus Früchten um die Beine und Federschmuck aus Papageifedern auf dem Kopfe.

Die Chiriguanos und Chanés zerstören immer die Masken nach dem Karneval. Sie werden entweder verbrannt oder in den Fluß geworfen. Die Chanés nennen die Masken „añañya".

Eigentümlich ist es, eine wie große Rolle der Karneval jetzt als Fest bei den Indianern spielt. Dies kommt sicher daher, daß die Weißen da Massen von Branntwein verteilten und daß die Indianer, die bei diesen arbeiten, dann einige Tage frei bekamen.

Zu den Festen kommen die Gäste oft aus weiter Ferne. Sie treten dort in ihren feinsten Kleidern und Schmucksachen, neu bemalt und fein gekämmt, auf. Die meisten alten Trachten und Schmucksachen sind jedoch schon verschwunden. Frauen in hausgewebten Kleidern mit Halsketten aus Chrysocol und Türkis sieht man jedoch noch. Das silberne Diadem und die silbernen Nadeln, die zur Festtracht gehören, habe ich indessen niemals im Gebrauch gesehen. Die blauen Trachten der Männer (Abb. 81) mit silbernem Brustschmuck sieht man oftmals in den Hütten bei den Alten verwahrt, zu den Festen werden sie aber nicht angewendet. Bei den Chanés im Itiyurotal habe ich die Indianer bei einem Canguifest tanzen sehen. Um einen „Yambuy" mit Cangui standen einige der alten Männer zu zweien, ein eintöniges Lied singend und den Takt mit den Füßen schlagend. Die Frauen gingen langsam im Takt des Liedes außerhalb des Kreises der Männer auf und nieder.

Bei den Chanés und Chiriguanos verdrängt die Tracht des weißen Mannes alles Alte und Hübsche, und von meinen vielen alten Häuptlingsfreunden unter diesen Indianern verachtet nur allein Maringay die Lumpen der Weißen.

Der Branntwein dringt immer mehr bei diesen Indianern ein, und die zeremoniellen, gutmütigen Maisbierfeste verwandeln sich in rohe Trinkgelage.

Ich vergesse nie eine Nacht im Dorfe Vocapoys. Die

6:Nordenskiold SF10 Chiriguano

Männer waren zu den Christen gegangen, um Branntwein zu trinken. Als sie zurück kamen, fielen harte Worte und die Messer kamen hervor. Der Branntwein hätte blutige Opfer gefordert, wenn die mutigen Frauen sich nicht mit Feuerbränden vom Maisbierkochen zwischen die streitenden Männer geworfen und sie, nachdem sie sie getrennt hatten, unter beruhigenden Schmeichelworten nach Hause gebracht hätten.

Sechzehntes Kapitel.

Aus dem Leben der Chané- und Chiriguanoindianer (Forts.).

Kunst und Industrie.

Die Chiriguanos und Chanés sind Stämme, deren Kunstindustrie sehr hoch steht. Besucht man eine der Hütten der weißen Ansiedler in diesen Gegenden, so wird man nicht viele Erzeugnisse einheimischer Industrie, nicht viel von eigener Kultur sehen. Ich weiß rein gar nichts, was diese Menschen können, was mit der Keramik und Webetechnik der Indianer konkurrieren kann. Sicher ist, je mehr die Indianer „zivilisiert" werden, um so weniger leisten sie kunstindustriell. Von den Weißen lernen sie nicht viel mehr, als Branntwein bereiten und trinken. Die indianische Kunstindustrie verschwindet hier allmählich, je mehr die Indianer mit den Weißen in Berührung kommen, sie wird aber nicht umgebildet. Sie verbleibt zum großen Teil rein indianisch bis zu ihrem schließlichen Untergang. Eine Industrie ist indessen jetzt in den Händen der Weißen, und zwar die Metallindustrie. Die silbernen Schmucksachen, welche z. B. die Chiriguanos und Chanés anwenden, werden von den Schmieden in den Dörfern der Gebirgsgegenden gearbeitet. Die halbweiße oder quichuaindianische Bevölkerung, die wir in den Gebirgen westlich vom Lande der Chiriguano- und Chanéindianer antreffen, ist recht kunstfertig. Besonders die Webetechnik steht dort hoch. Vom Westen haben die Chiriguanos und Chanés sicher viel gelernt.

So finden wir die für die Chiriguanos charakteristische Serérepfeife (Abb. 120) in Sammlungen von der Küste Perus[1]);

[1]) Serére kommen noch bei den Lenguas, Ashluslays, Chiriguanos, Chanés, Churápas und Yuracáres vor.

6:Nordenskiöld SF10 Chiriguano

die Nadel zur Befestigung der Frauenkleider (Abb. 130) ist in ihrer Form typisch peruanisch, ebenso der silberne Haarauszieher, von dem ich indessen kein Exemplar habe. Die Festtracht des Mannes (Abb. 81) scheint mir ebenfalls peruanischen Schnitt zu haben. Möglicherweise hat sich jedoch der Einfluß von Peru unter den Chiriguanos erst nach der Eroberung der Hochebene durch die Spanier geltend gemacht.

Abb. 120. Serérepfeife. Chiriguano. 1/4.

Boman[1]) hat nachgewiesen, daß die Chiriguanos, oder richtiger der Gúaranistamm, zu welchem diese Indianer gehören, sich früher viel weiter südwärts ausgedehnt haben als jetzt. Er hat dort die für sie so eigentümlichen Graburnen angetroffen.

Die materielle Kultur der Chanéindianer unterscheidet sich nicht sehr von der Kultur der Chiriguanos im allgemeinen. Die Chanés, die mehr abgesondert am Rio Parapiti wohnen, haben dagegen eine vollkommen selbständige Keramik, die wir bei den Chiriguanos nicht wiederfinden. Vergleichen wir im übrigen die Industrieerzeugnisse der Chanés und der Chiriguanos, so finden wir keine größeren Unterschiede, als wir sie in den verschiedenen Chiriguanodörfern auch finden.

Sammelt man z. B. Tongefäße im Iguembetal und im Caipipendital, welche beide Täler von Chiriguanos bewohnt werden, so wird man unwillkürlich finden, daß die Keramik, obschon in Ornamentik und Form stark verwandt, doch

[1]) Boman: Antiquités de la Région Andine. Tome 1–2. Paris 1908.

6:Nordenskiöld SF10 Chiriguano

auch lokal variiert. Über die individuellen Variationen habe ich schon gesprochen (S. 235).

Von den verschiedenen Industrien steht bei den Chiriguanos und Chanés besonders die Keramik hoch (s. die Abb.). Sie sind auch geschickte Weber und Verzierer von Kalebassen. Korbflechten kommt vor, jedoch meist im nördlichen Teil ihres Gebietes. Federarbeiten werden jetzt nicht mehr angefertigt. Von Caraguatábast werden nur Seile und Fischnetze, und am Rio Parapiti Hängematten und Tragnetze gemacht. Die für die Chacostämme so charakteristischen Taschen aus diesem Material werden niemals von den Chiriguanos und Chanés angefertigt, aber zuweilen durch Handel zwischen den Stämmen erworben.

Abb. 121. Tongefäß. Chiriguano. Caipipendital. 1/4.

Bei den Chanés am Rio Itiyuro habe ich die Topfherstellung verfolgt. Der Ton wird gemahlen und mit zerstoßenen, gebrannten Krugscherben gemischt, damit das Gefäß nicht beim Brennen entzwei geht. Die Tongefäße werden auf gewöhnliche Indianerweise aus Rollen aufgebaut. Zum Glätten werden eine Muschelschale oder ein Maiskolben ohne Samen sowie ein schmales Bambusstäbchen angewendet. Der Maiskolben macht parallele, feine Ritzen.[1]) Das Bambusstäbchen wird auch bei der Herstellung zum Abmessen benutzt, um richtige Verhältnisse zu bekommen.

---

[1]) Aus ähnlichen Ritzen an Tongefäßen, die man bei archäologischen Ausgrabungen findet, kann man sehen, daß die Hersteller der Tongefäße Mais gehabt haben. Dies habe ich z. B. an Tongefäßen von Ojo de Agua in Quebrada del Toro in Nordargentinien gesehen.

6:Nordenskiold SF10 Chiriguano

Hiernach wird das Gefäß einen Tag im Schatten getrocknet, bevor es gebrannt wird. In der Regel hat man nur ein oder ein paar Gefäße gleichzeitig in Arbeit.

Abb. 122. Brennen von Tongefäßen. Chané. Rio Itiyuro.

Die gröberen Gefäße sowie alle Kochgefäße werden nur mit Fingereindrücken und aufgelegten Tonschleifen ornamentiert. Die feineren Gefäße werden später bemalt (s. Taf. 19).

6:Nordenskiöld SF10 Chiriguano

Mit einem Pinsel aus Agutihaaren[1]) werden die Ornamente in Weiß, Dunkelbraun und Schwarz bemalt. Die weiße Farbe ist eine Erdart (Kaolin), die anderen werden aus Schiefer und Sandstein zubereitet. Man malt freihändig und komponiert die Ornamente aus dem Gedächtnis und nicht nach Modellen. Holz, Maiskolben und Kuhexkremente werden um das Gefäß gehäuft. Das Brennmaterial wird angezündet und muß eine Viertelstunde oder, wenn das Gefäß groß ist, noch länger mit kräftigem Feuer brennen (Abb. 122).

Falls das Gefäß gemalt ist, wird es mit Harz, „taraviruti", das von einer Mimosoidee gesammelt ist, und mit Harz von palo santo (s. S. 93) gefirnißt. Das erstere gibt einen gelblichen Glanz, das letztere sieht wie grünschwarze Glasur aus.

Fertigt man einen Topf an, so tauft man ihn, bevor er erkaltet ist, damit das Wasser in demselben schnell kocht.

In Maringays Dorf malte man einzelne Gefäße mit einer Mischung von Uruku oder einer anderen Farbe und einem Pflanzenfett. Wie dies letztere bereitet wird, habe ich nicht sehen können.

Die Chiriguano- und Chanéfrauen sind geschickte Weberinnen. Das Material für die indianischen Gewebe ist in der Regel Baumwolle und manchmal auch Schafwolle.

Da durch die Weißen große Massen Zeug eingeführt werden, verschwinden die einheimischen Gewebe immer mehr. So sah ich bei den Chanés im Itiyurotal keine Webstühle und einheimische Gewebe waren sehr selten.

In der Regel sind alle Gewebe dieser Indianer ohne Ornamente oder diese sind sehr einfach. Die Mädchen in den Missionen lernen von den Mönchen allerlei Blumen, wie Rosen, Veilchen usw., sticken. Dies machen sie ausgezeichnet. Merkwürdigerweise hören die Indianerinnen nach dem Verlassen der Nähschule auf, diese Ornamente anzuwenden. Es wäre richtiger, wenn die Missionare die Indianerkinder

[1]) Dasyprocta.

6:Nordenskiöld SF10 Chiriguano

Ornamente lehrten, die sich deren Phantasieleben anschließen. Die Resultate ihrer Arbeit würden dann ganz andere sein.

Einige Chanéfrauen haben vor ein paar Generationen von einer Quichuafrau Ornamente weben gelernt, die man noch jetzt auf verschiedenen Chanégeweben sieht. Es waren stilisierte Tiere und Menschen. Die Pflanzenornamentik

Abb. 123. Webstuhl. Chiriguano. Tihuïpa.

macht wenig Eindruck auf die Indianerinnen. Tier- und Menschenfiguren regen ihre Phantasie an und sie lehren sie ihren Kindern.

Die Chiriguano- und Chanémänner sind tüchtig im Verzieren von Kalebassen (Abb. 126), schnitzen hübsche Pfeifen (Abb. 120) und verstehen das Ledergerben, was sie wohl von der Weißen gelernt haben.

Von plastischen Darstellungen von Tieren und Menschenfiguren sieht man bei diesen Indianern nicht viel. Die Ton-

6:Nordenskiöld SF10 Chiriguano

gefäße haben manchmal Tierformen. Die Chanéfrauen am Rio Parapiti formten klumpige kleine Puppen aus Wachs für die Kinder (Abb. 105). Einige der Tongefäße sind mit Tierfiguren bemalt. Ein Gefäß vom Rio Itiyuro, das ich durch Tausch erworben habe, ist mit Baumfiguren geschmückt. Vereinzelt sieht man Tongefäße in Form von Früchten.

Menschen und Tiere darstellende Zeichnungen habe ich an den Wänden in einigen Chanéhütten und an einigen Chiriguanokalebassen aus dem Caipipendital gesehen.

Abb. 124.
Sieb. Rio Parapiti. 1/8.

Abb. 125. Korb. Chiriguano.
Caipipendi. 1/8.

Von Korbarbeiten sind die Siebe bei den Weißen so beliebt, daß sie durch den Handel weit über das Chiriguano- und Chanégebiet hinaus verbreitet werden. Im übrigen arbeiten die Chanés und Chiriguanos wenig Körbe. Massen von Korbarbeiten finden wir bei den Indianern erst, wo die paarblättrigen Palmen beginnen, und das ist bei Santa Cruz de la Sierra.

Wenn wir eine Sammlung von den Chiriguanos und Chanés anlegen, dürfen wir nicht vergessen, daß sie durch den Handel zwischen den Stämmen viele Sachen von den Matacos, Tobas, Chorotis und Tapietes erhalten haben, sonst bekommen wir eine unrichtige Vorstellung von dem großen Unterschied

6:Nordenskiold SF10 Chiriguano

zwischen der materiellen Kultur der hier genannten Chacostämme und der Chiriguanos und Chanés.

Wenn wir die materielle Kultur der Chorotis und Chanés mit der hier ebenfalls beschriebenen der Chorotis und Ashluslays vergleichen, müssen wir u. a. an folgendes denken. Die Chiriguanos und Chanés machen Korbarbeiten — die Chorotis und Ashluslays niemals. Die ersteren verstehen es, die Tongefäße vor dem Brennen zu bemalen, was den letzteren unbekannt ist. Die Chiriguanos und Chanés arbeiten niemals Taschen aus Caraguatá usw. Vergleichen wir im übrigen sämtliche Arbeitserzeugnisse der Chanés und Chiriguanos mit denen der Chorotis und Ashluslays, so finden wir, daß die allermeisten vollständig verschieden sind. Die Herstellung gewisser Sachen, wie der Serére- (Abb. 120) und Huiramimbipfeifen (Abb. 36 und 80) haben die Chacoindianer wahrscheinlich von den Chiriguanos gelernt, dies ist aber verhältnismäßig unbedeutend.

Abb. 126.
Verzierte Kalebaßschale.
Chiriguano. Yacuiba. 1/1.

Wir sehen hier, wie zwei Kulturen hunderte Jahre lang nebeneinander existieren können, ohne zu verschmelzen.

Folgen wir dem Rio Pilcomayo nach den Gebirgen herunter, so treffen wir zuerst die Quichuakultur, dann kommen die Chiriguanos und Chanés und hierauf die chaquensische Kultur, die ganz gleichartig die Matacos, Tobas, Chorotis, Ashluslays sowie die Lenguas und andere Stämme im Chaco Paraguay umfaßt. Diese drei Kulturen sind vollständig verschieden.

[p.250]

Siebzehntes Kapitel.

Aus dem Leben der Chaná- und Chiriguanoindianer (Forts.).

Sage und Religion.

Es war einmal ein alter Indianer, der des Abends am Feuer in der Hütte zu sitzen und von alten Tagen, von Tieren, Menschen und Geistern zu erzählen pflegte. Lauschend sammelte sich die Jugend um ihn. Der Alte erzählte und erzählte. Mit Mund, Augen, Händen und Füßen erzählte er.

Einer der Jungen nach dem anderen verließ gleichwohl bald den Kreis der Lauschenden und legte sich schlafen. Zuletzt saß der Alte allein am erlöschenden Feuer und erzählte sich selbst von den Abenteuern des Fuchsgottes und des Gürteltiergottes.

Dieser Alte steht vor mir als der Vertreter alter Traditionen, einer Kultur, die verschwindet. Die Jungen hören ein Weilchen zu, bald wird es ihnen aber zu viel. Sie haben neue Interessen. Sie haben angefangen, mit in dem großen Tanz zu tanzen, den die Christen Zivilisation nennen, wo meistens um das goldene Kalb getanzt wird.

Ich habe auch als Lauscher dort gesessen und mir die Sagen erklären lassen. Ich glaube, die Alten hatten mich gern, weil ich ein so großes Interesse für ihre alten Erinnerungen gezeigt habe. Wenn ich sie nun wiedergebe, hoffe ich, daß der Leser mit mir und meinen alten Freunden Nachsicht haben wird, mit mir, weil ich nicht so gut zu erzählen vermag wie die Alten, und mit den Alten, weil sie alles lieben, was ein wenig frivol ist.

6:Nordenskiold SF 10 Chiriguano

Die Sagen geben uns einen Einblick in die Vorstellungen des Indianers vom Leben im Jenseits und von den Geistern. Teils durch sie und teils durch die Erklärungen, welche mir die Indianer gegeben haben, können wir ihre Religion verstehen. Wir werden hier von dem Weltuntergang und dem Raub des Feuers, vom Besuch im Totenreich und vor allem von den Abenteuern der Geister hören, wir werden davon hören, wie sie einander und die Menschen betrugen, hören von ihren Kämpfen und Lastern.

Morallehre ist in diesen Sagen sehr wenig enthalten. Die in denselben Handelnden sind oft „tunpa", d. h. sie besitzen übermenschliche Kräfte, das ist alles.

Infolge der Berührung mit den Weißen sind die Sagen nicht frei von fremden Elementen. Die meisten sind jedoch rein indianisch.

1. Der Weltuntergang und der Raub des Feuers.

Erzählt von dem Chanéindianer Batirayu vom Rio Parapiti.

Es war einmal in alten Tagen ein sehr armer Mann, der in den Wäldern umherirrte und keinen festen Wohnsitz hatte. Wenn er in die Dörfer kam, jagte man ihn fort und hetzte die Hunde auf ihn. Als der Mann sah, daß man ihn in keinem Dorfe wohnen lassen wollte, machte er sich eine Hütte, „tocay".[1]) Dort kamen allerlei schöne Vögel zur Hütte, und die meisten wurden bald so zahm, daß er sie fangen konnte. Der Mann dachte: „Gehe ich mit diesen prächtigen Vögeln in ein Dorf, so nimmt man mich vielleicht auf." Er nahm nun die Vögel und ging in die Dörfer. Alle fanden die Vögel schön, nirgends wollte man ihn aber wohnen lassen. Der Mann ging nach seiner Hütte zurück. Eines Tages kam Añatunpa[2]) in Gestalt eines schönen Vogels zu ihm. Was ist das für ein merkwürdiger Vogel, dachte der Mann. Aña-

[1]) Tocay ist eine Hütte, in welcher der Jäger verborgen liegt, um von dort Vögel mit Schlinge oder Pfeil zu fangen.

[2]) Der Große Geist (s. S. 257).

6:Nordenskiöld SF10 Chiriguano

tunpa sagte, er sei gekommen, um ihm zu helfen, und gab ihm ein Paar Flügel.

„Wenn du in ein Dorf kommst, sollst du die Flügel bewegen und dann donnert es," sagte Añatunpa. „Wollen sie dich trotzdem nicht wohnen lassen, so erhebe die Flügel."

Der Mann ging in ein Dorf, wo ein großes Trinkgelage stattfand. Man wollte ihn nicht aufnehmen. Er bewegte die Flügel und es donnerte. Man glaubte, die Medizinmänner seien es, die donnerten, und kümmerte sich nicht um ihn. Wieder bewegte er die Flügel und es donnerte. Man glaubte immer noch, es seien die Medizinmänner, die donnerten, und kümmerte sich nicht um ihn. Als er endlich sah, daß man ihn nicht wohnen lassen wollte, sondern ihn fortjagte, erhob er die Flügel, die er verborgen hatte. Da kam ein Sturm, der riß alle fort, außer zwei Knaben und einem Mädchen.

Diese, die nun allein waren, wollten kochen, aber sie hatten kein Feuer. Sie hatten Kürbis und Mais, konnten sie aber nicht rösten. Da kam ein alter Mann, die Sonne, mit einem Feuerbrand zu ihnen. Er röstete einen Kürbis und aß ihn, als er aber fort ging, nahm er das Feuer wieder mit. Er wollte ihnen nichts davon abgeben. Als der Alte das nächste Mal kam, beschlossen sie, ihm das Feuer zu stehlen. Als er an dem mitgebrachten Feuerbrand einen Kürbis röstete, schlug einer der Knaben mit einem Knüttel darauf, so daß die Glut umhersprühte. Der Alte sammelte sie schnell auf. Einen ganz kleinen Funken fanden sie gleichwohl unter einem halben Kürbis, der auf der Erde gelegen hatte. Sie machten nun Feuer an. Huapi (der Webervogel?) sagte zu ihnen, sie sollten das Feuer gut aufbewahren, so daß es niemals ausgehe. Er sagte ihnen auch, sie sollten, wenn das Feuer erlösche, mit dem „Tatay"[1]) Feuer reiben.

Der jüngere Bruder nahm nun seine Schwester zur Frau. Der ältere hatte keine Frau. Sie legten einen Kürbis in eine kleine Hängematte und wiegten sie. Der Kürbis wuchs zu

[1]) Feuerzeug aus Holzstäbchen.

6:Nordenskiold SF10 Chiriguano

einem Mädchen, das bald zu einer Frau emporwuchs. Diese nahm der ältere Bruder zur Frau. Von diesen beiden Paaren stammen alle Chanés.

2. Der Weltuntergang und der Raub des Feuers.

Erzählt von dem Chanéhäuptling Vocapoya.

Ein Jüngling hatte sich in den Wald begeben und in einer Lache das Bild eines schönen Mädchens gesehen, dem er folgte. Er blieb eine lange Zeit bei ihr, einen Monat, und seine Mutter glaubte schon, er sei tot, und schnitt sich die Haare ab. Sie glaubte, er wäre von einer Schlange gebissen worden oder dergleichen. Eines Tages kam der Sohn jedoch nach Hause und erzählte, daß er ein hübsches Mädchen gefunden, mit dem er sich verheiratet habe. Die Mutter sagte ihm da, er solle sie holen, und braute eine Masse Maisbier, um ihre Ankunft zu feiern.

Der Jüngling kam mit seiner Frau, und sie war hübsch und wohlgekleidet. Während des Festes verwandelte sie sich und wurde sehr häßlich. Hierüber machte die Schwägerin eine Bemerkung, und sie wurde böse und verließ sie und ging dahin zurück, woher sie gekommen war, indem sie erklärte, sie werde sich rächen. Sie sagte jedoch, man solle erst einen Knaben und ein Mädchen in ein großes Tongefäß setzen. Ein Bruder und eine Schwester wurden zusammen mit den Samen von Mais, Kürbis und Bohnen in ein Tongefäß gesetzt und der Krug gut zugedeckt. Als dies geschehen war, begann es fürchterlich zu regnen, und Häuser und alles wurde mit Wasser bedeckt. Der Krug floß jedoch oben. Alle Menschen und Tiere ertranken in dem steigenden Wasser. Lange floß das Tongefäß umher und der Knabe und das Mädchen begannen schon groß zu werden. Das Wasser sank dann, als sie aber aussteigen wollten, war der Boden noch sumpfig, und sie mußten warten, bis er getrocknet war.

Als sie aus dem Tongefäß kamen, säeten sie von den mitgehabten Samen Mais, Kürbis und Bohnen. Diese reiften in einem halben Monat. Sie hatten kein Feuer. In einiger

6:Nordenskiold SF10 Chiriguano

Entfernung sahen sie Feuer. Es war „Tostó",[5]) ein Watvogel, der an den Flußufern schreit, der Feuer hatte. Als sie sich dem Feuer näherten, verschwand es jedoch weiterhin.

Der Frosch versprach, ihnen Feuer zu rauben. Er hüpfte zu Tostós Lagerfeuer und setzte sich, vor Kälte bebend, daran, um sich zu wärmen. Von Zeit zu Zeit scharrte er die Glut näher zu sich hin, gleichsam um sich besser zu wärmen, und als niemand es sah, steckte er einen kleinen Feuerbrand in den Mund und hüpfte davon.

Zu dem Knaben und dem Mädchen hingekommen, machte er Feuer ab, und seitdem haben die Chanéindianer Feuer. Die Schwester und der Bruder, die nun groß geworden waren, verheirateten sich, und sie wurde schwanger. Sie bauten sich eine Hütte. Das Mädchen bekam Kinder. Als diese Kinder groß waren, verheirateten sie sich miteinander. Von ihren Kindern stammen alle Chanés. Von den Kindern des ältesten Knaben stammen die Häuptlinge her.

Es kann ja eigentümlich erscheinen, daß ich zwei ganz verschiedene Sagen gefunden habe, die denselben Stoff bei demselben Volk behandeln. Dies ist dadurch zu erklären, daß die Chanés ein zersprengter Stamm sind, der keine eigene, selbständige Kultur mehr hat.

Die erstgenannte Version ist wahrscheinlich ihre eigene, während sie die andere von den Chiriguanos geliehen haben. Domenico del Campana[6]) erwähnt, daß diese letzteren eine Flußsage haben, in welcher zwei Kinder auf ähnliche Weise in einem Tongefäß gerettet werden.

Die Chorotis und die Matacos berichten, daß die Welt durch Feuer, die Chanés am Rio Paraguay, daß sie durch Sturm und die Chiriguanos und Chanés am Rio Itiyuro, daß sie durch Wasser untergegangen sei.

Die erstgenannten leben auch in Gegenden, wo große

[5]) Ein anderer Chané erzählte mir, daß der Frosch das Feuer vom schwarzen Geier gestohlen habe.

[6]) Domenico del Campana: l. c. S. 22.

Pampabrände gewesen sind, am Rio Parapiti herrschen oft schwere Stürme und die Chiriguanos sind wahrscheinlich aus Gegenden gekommen, wo große Überschwemmungen gewöhnlich sind.

Daß diese Weltuntergangssagen innig mit der Natur des Landes, in dem sie entstanden sind, zusammenhängen, ist, wie Ehrenreich[1]), Im Thurn[2]) u. a. gezeigt haben, sicher. Ehrenreich sagt, eine solche anthromorphe Auffassung der Sonne, wie hier in der ersten Sage, sei in Südamerika selten.

Besuche in Aguararenta (dem Dorfe der Füchse).

Retirayu erzählte mir folgendes über den Glauben der Chanéindianer vom Leben im Jenseits und dem Totenreiche. Aguararenta (aguara = Fuchs, renta = Dorf) ist ein Dorf, wo die Toten, ata, wohnen. Es liegt im Osten. Des Nachts sind die Toten dort in Menschengestalt, am Tage gehen sie als Füchse, Ratten und andere Tiere umher oder gehen in einen Baumstamm. Jede Nacht sind in Aguararenta große Trinkgelage. Alle Chanés, Kinder, Frauen und Männer, kommen dorthin. Auch Verbrecher (tipiyepétchi) und Mörder kommen nach dem genannten Dorf. Niemand wird im Totenreich der Chanés bestraft.

Auch Lebende haben Aguararenta besucht und erzählt, was sie dort gesehen haben. Ein paar solche Erzählungen will ich hier wiedergeben. Sie geben uns einen guten Einblick in die Vorstellungen der Indianer vom Jenseits.

Das Mädchen, das seinem Mann nach Aguararenta folgte.

Erzählt von einem Chanéindianer in Aguaruti (weißer Fuchs) am Rio Parapiti.

Ein Mädchen wollte sich mit einem Mann verheiraten, aber er starb. Sie hatte ihn sehr gern gehabt. Am Morgen,

---

[1]) Ehrenreich: l. c. S. 50—51.

[2]) Im Thurn: Among the Indians of Guyana. London 1883, l. c. S. 375.

6:Nordenskiöld SF10 Chiriguano

am Tage nach seinem Tode, während es noch finster war, stand sie vor dem Hause ihrer Eltern und stieß in den Mörser. Da kam jemand und erfaßte den Mörserstab.

„Wer bist du?" fragte sie.

„Ich bin es," sagte er. Es war ihr toter Mann. „Willst du mitkommen?"

„Ja", sagte sie, da sie ihn sehr liebte.

Er begab sich nun fort in der Richtung, wo die Sonne aufgeht. Sein Gesicht war verhüllt, damit niemand es sähe. Sie ging hinter ihm her. Sie gingen durch den Wald, sie gingen über die Pampas und wieder durch den Wald. Am Tage schlief er und des Nachts war er wach.

Als der Vater seine Tochter vermißte, ging er, um sie zu suchen. Er folgte ihren Spuren. Vor diesen ging eine Fuchsspur. „Ada hat meine Tochter genommen", sagte der Vater. Zuletzt fand er sie tot am Wege. Er machte sie jedoch wieder lebendig und brachte sie nach Hause. Als sie über die Pampas gingen, sahen sie einen Fuchs umherstreifen. Am folgenden Tage starb sie. Der Vater weinte. Da kam der weiße Kondor „Ururuti" und sagte, er solle nicht klagen. Ururuti nahm ihn auf den Rücken und flog mit ihm nach Aguararenta.

In Aguararenta schlief man am Tage und war wach des Nachts. Als der Vater dorthin kam, trank man Maisbier. Ururuti brachte ihn nach dem Hause seines Schwiegersohnes. Er redete seine Tochter an, sie antwortete ihm aber nicht. Sie sah nicht wie ein Mensch aus. Wieder redete er sie an, er bekam aber keine Antwort. Er ging nun zu Ururuti, der ihn nach Hause brachte. Weder er noch seine Frau beweinten die tote Tochter.

Am folgenden Tage starb der Vater.

Version 2. Erzählt von Batirayu. Es war eine Frau, deren Mann gestorben war. In der Nacht kam er zu ihr in der Gestalt eines Mannes und schlief bei ihr. Er bat sie, mit ihm nach seinem Dorfe Aguararenta zu kommen. Sie folgte ihm. Als sie unweit des Dorfes kamen, hörten sie Gesang

6:Nordenskiöld SF10 Chiriguano

und Tanz. Sie ging mit ihrem Mann nach dem Marktplatz, wo ein großes Trinkgelage stattfand. Sie sah dort viele Tote, die sie kannte. Die Toten hatten jedoch Angst vor ihr und hielten sich fern von ihr. Sie blieb dort, bis es Morgen wurde. Da verschwanden alle Hütten, und sie befand sich auf einer Ebene voller Fuchsspuren. Ihr Mann verwandelte sich in eine Ratte (angúya). Sie blieb dort den ganzen Tag, auf dem Stamm einer Algarrobo sitzend. Als es finster wurde, kamen die Menschen wieder und es fand dort ein großes Trinkgelage statt. Am Morgen sagten die Toten: „chéahata húirasécuera (ich gehe als Baumstamm), chéahata augúyara (ich gehe als Ratte), chéahata kárakárara (ich gehe als Geier), chéahata águarára (ich gehe als Fuchs), chéahata ándirára (ich gehe als Fledermaus)" usw. Sie kehrte nach Hause zurück. Ihr Mann sagte, er werde kommen, um sie zu holen. Nach drei Tagen war sie tot. Sie war ihrem Mann nach Aguararenta gefolgt.

Der Chiriguanohäuptling Maringay erzählte mir von einem Mann, der am Wege eingeschlafen war. In der Nacht kam seine tote Frau zu ihm, und er schlief bei ihr. Als er erwachte, war sie verschwunden. Er nahm das im Schlaf Erlebte als Wirklichkeit an. Bei den Chanés und Chiriguanos ist der Glaube an ein jenseitiges Leben, wie bei anderen Indianern, auf Träume gegründet. Sie treffen im Traume einen Toten, sie besuchen im Traume das Totenreich. Es ist indessen unrichtig zu sagen, daß die Indianer an ein Leben im Jenseits glauben. Er weiß, daß es ein solches gibt, denn Lebende haben die Toten gesehen, haben mit ihnen der Liebe gepflogen, haben Maisbier mit ihnen getrunken, haben sie sich in Füchse, Ratten, Baumstämme usw. verwandeln sehen.

Geister- und Tiersagen.

„Die Toten sind aña", sagte Batirayu. Unter diesen gibt es mehrere, die Tunpa (am besten mit groß zu übersetzen) sind und übermenschliche Kräfte besitzen.

Der Größte unter den Añatunpas ist Yamándutunpa.

[facing p. 258]

Tafel 20. Sagenerzähler. Chané. Rio Parapiti.

6:Nordenskiöld SF10 Chiriguano

Andere der Großen sind Mariutunpa und Tipaytunpa. Chiquéritunpa, der in einigen der hier wiedergegebenen Sagen auftritt, ist der, der den Donner hervorbringt. Chiquéritunpa heult des Nachts, wenn es Krieg gibt. Diese Añatunpa greifen in das Leben der Menschen ein, besonders die Zauberer stehen mit ihnen in Verbindung. So erzählte Batirayu, daß die Añatunpa des Nachts zu Tsuhuandico, einem großen, jetzt verstorbenen Zauberer, kamen und mit ihm Maisbier tranken. Sie sagten ihm, wenn es regnet, wenn jemand krank wird, ob eine Mißernte eintritt usw. Batirayu berichtete auch, daß Angúya, ein Verwandter des Aringui, der letzte große Häuptling, den Añatunpa Tabak anzubieten pflegte, wenn sie bei Tsuhuandico waren. Die Añatunpas tranken nur ganz wenig Maisbier. Wenn sie kamen, sah man sie nicht, man hörte aber gleichsam das Klingen von Sporen.

Diese Zauberer haben eine ungeheuere Macht, sie können verhexen, denn Krankheit und Tod haben ihren Grund in Verhexung. Unter den Chanés ist Tambápui der größte Zauberer. Er ist der Enkel des Tsuhuandico und Sohn des Yapandáy, der ebenfalls ein großer „ipáye" war.

In den Sagen treten Yamándutunpa, Mariutunpa und Tipaytunpa niemals auf. Dort spielen Aguaratunpa (der Fuchsgott) und Tatutunpa (der Gürteltiergott) die größte Rolle. Aguaratunpa hat Tembeta (s. S. 211). Sie haben menschliche Leidenschaften, und besonders die Geschichte des Fuchsgottes ist eine Schilderung von allerlei Kniffen und Verbrechen. Der Gürteltiergott ist etwas besser und steht auch höher.

Vocapoy erzählte mir, er habe einen alten Mann gekannt, der in den Bergen einen Tunpa gesehen habe. Er war eine Handbreit groß und wohlgekleidet. Das Wasser rann von seinem Körper.

Batirayu glaubte steif und fest an die Existenz der Añas und Añatunpas, an ihre Verbindung mit den Zauberern und an deren Macht. Daß Aguararenta existiert, davon war er fest überzeugt. Der Wahrheitstreue der Sagen von den Aben-

6:Nordenskiold SF10 Chiriguano

teuern und Erlebnissen der Aguaratunpas und Tatutunpas, die ich hier unten wiedergeben will, stand er skeptisch gegenüber.

In der Religion dieser Indianer existiert somit zuerst ein Kern von Wahrheit, an den sie glauben. Hierzu kommen die Abenteuer und Taten, die sie am Lagerfeuer von den Geistern erzählen und die wenigstens die Intelligenteren, die Denkenden unter ihnen, selbst als Sagen auffassen.

Diese Sagen will ich hier unten wiedergeben.

Der Begriff eines großen, allmächtigen Gottes ist den Chanés fremd. Jetzt wissen sie indessen alle direkt oder indirekt etwas vom Christentum, wodurch die Vorstellung an einen großen Gott einzudringen beginnt. Vocapoy, der kein Christ war, erzählte mir einmal, die Chanés glaubten an einen großen Gott, Tunpa.

Batirayu sagte, er glaube nicht an einen Gott, wie ihn die Christen beschreiben. Er wunderte sich, daß die Christen die Armen bedrückten und so viele Schlechtigkeiten begingen, da sie doch lehrten, daß die Sünder mit der Hölle bestraft werden. „Wie kann man wissen, wie es im Himmel aussieht, da niemand, der dort gewesen, zur Erde zurückgekommen ist", sagte Batirayu.

„Und so sagen sie, daß wir Flügel bekommen sollen", sagte er und lachte höhnisch.

Den Missionaren nach glauben die Chanés an ein höchstes Wesen,[1]) Tunpahétte-vae, den wirklichen Gott. Der Name klingt schon verdächtig. Ich stehe der Annahme, daß dieser ursprünglich ist, sehr skeptisch gegenüber. Als ich mit den Missionaren über die Religion der Indianer sprach, erstaunte ich über ihre Unwissenheit. Sie verachten die Vorstellungen der Indianer und halten es nicht der Mühe wert, sie näher kennen zu lernen. Es gelingt ihnen niemals, sich von der katholischen Vorstellung zu befreien, daß die Indianer, die, wie wir, von Adam und Eva herstammen und zu denen San

[1]) Vgl. Domenico del Campana: l. c. S. 39.

Thomas gepredigt hat, nichts von ihrem „ursprünglichen Glauben" wissen.

Zwei der Tunpas, die hier in den Sagen auftreten, haben Tiernamen, Aguaratunpa (Fuchsgott) und Tatutunpa (Gürteltiergott). In den Sagen finden wir einen intimen Zusammenhang zwischen Menschen und Tieren.

Batirayu sagte: „Alle Tiere sind Menschen gewesen."

Die Erschaffung der Welt, wie der Fuchsgott, Aguaratunpa, den Algarrobobaum fand und wie er den weißen Kondor, Ururuti, fing.

Erzählt von zwei Chanéin[illegible]ern am Rio Parapiti.

Es wird erzählt, daß im Anfang ein Tunpa war. Er machte die Erde mit dem Himmel und alle Sterne, die Sonne und den Mond. Es wird erzählt, daß diese Erde nichts trug, daß sie ganz kahl war. Tunpa setzte da allerlei Früchte hinein, um die Armen zu speisen, wie die Caraguatá und die Mangára. Es wird erzählt, daß dort eine Algarrobo war, die Mutter aller Bäume. An diesem Baum waren allerlei Früchte. Dieser Baum hat sich in der ganzen Welt vermehrt. Hierauf kam Tunpa, nahm den Mutterbaum mit und ließ die Sprößlinge hier. Es wird erzählt, daß Tunpa die Voreltern von uns und auch die Voreltern der Weißen geschaffen hat. Den Avas[1]) und Chanés gab Tunpa einen Holzspaten und einen langen geschnitzten Stock, „carúmpa" genannt, Pfeil und Bogen, ein Schaf, eine Ziege, ein Huhn und einen Hund, damit sie alle diese Tiere vermehren und damit sie sich mit diesen Werkzeugen ernähren. Den Weißen gab er Gewehre, ein Pferd, eine Stute und eine Kuh und alle möglichen Werkzeuge aus Eisen, damit sie mit diesen arbeiten.[2])

Es wird erzählt, daß die kleine Viscacha,[3]) „Tacumbo-

[1]) Ava = Chiriguano.

[2]) Dies ist sicher ein moderner Zusatz zur Sage. Dasselbe finden wir in einer hier wiedergegebenen Matacosage.

[3]) Lagostomus.

6:Nordenskiöld SF10 Chiriguano

cumba", diese Bäume, die vom Mutterbaum zurückblieben, beaufsichtige. Sie hatte diese Bäume sehr gut beaufsichtigt, keinen einzigen Samen hatte sie fortführen lassen. Sie hatte die Blüten gekostet, sie aber bitter gefunden, bis sie Frucht gaben. Als sie reif waren, säete sie die Samen. Als diese wieder gereift waren, säete sie diese wieder. Im folgenden Jahre hatten sie alle reife Frucht gegeben.

Aguaratunpa war zum Hause der Tacumbocumba gekommen. Diese war eine alte Frau. Sie bot Aguaratunpa von diesen Früchten, die sie bewacht hatte, und er fand sie sehr gut. Er fragte, wie sie heißen. Sie erwiderte, diese Früchte heißen „mä".

Als sie ihm die Früchte anbot, setzte sie sich neben Aguaratunpa, damit er kein einziges Samenkorn mitnehme. Aguaratunpa verbarg in einem hohlen Zahne eines der kleinsten Samenkörner. Als er zu essen aufgehört hatte, reichte ihm die Alte Wasser zum Mundausspülen, damit kein einziges Samenkorn zurückbleibe. Mit dem Finger untersuchte sie Aguaratunpas Mund, konnte aber kein einziges Korn finden. Wieder fragte Aguaratunpa die Frau, wie der Baum heiße, und nahm Abschied. Den Namen des Baumes nennend, setzte er seinen Weg fort. Nicht weit davon fiel Aguaratunpa, vergaß den Namen des Baumes und kehrte zu der Alten zurück, um zu fragen. Darauf setzte er seinen Weg fort. Wieder fiel er, wieder vergaß er den Namen, und wieder kam er zu der Alten zurück, um zu fragen. Da sagte sie: „Du hast etwas Samen mitgenommen, und so untersuchte sie noch einmal seinen Mund, konnte aber nichts finden. Hierauf ging Aguaratunpa weiter, bis er zu einer offenen Ebene kam. Dort säete er den Algarrobosamen, den er mithatte. Dann zog er weit umher. Nach einigen Jahren kam er zurück und fand schon eine große Algarrobopflanze vor. Wieder zog er weit umher. Als er zurückkam, blühte die Algarrobo. Er nahm eine Blüte und kaute sie. Sie war bitter. Wieder zog Aguaratunpa in die Welt hinaus. Als er zu seiner Algarrobo zurückkam, fand er sie voll reifer Früchte. Er nahm eine

6:Nordenskiöld SF10 Chiriguano

auf, die auf die Erde gefallen war, und kostete sie. Sie war süß und gut. Er suchte nun nach jemand, der den Baum für ihn bewachen wollte. Er fragte zuerst einen Käfer, „Nyákira", dieser wollte aber nicht. Dann fragte er „Húiran", einen kleinen schwarzen Vogel, der wollte aber auch nicht. Nun fragte er einen anderen Käfer, „Tikitikiru",[1]) und dieser versprach ihm, den Baum zu bewachen. Kommt jemand, der von deiner Algarrobo Früchte stehlen will, so will ich singen: „Tikitikiru, tikitikiru, ko mä séramátata, tiki, tiki", sagte er. Aguaratunpa war nicht weit gegangen, da hörte er: „Tikitikiru, tikitikiru, ko mä séramátata, tiki, tiki." Aguaratunpa eilte zurück. „Hier sind (Tuáta) der Floh, (Yatéu) die Zecke und (Isáu) die Blattschneideameise gewesen und die haben Früchte von deiner Algarrobo gestohlen", sagte Tikitikiru. Die Zecke hatte ein großes Tragnetz mitgehabt, um die Früchte zu tragen, und die Blattschneideameise war auf den Baum geklettert, um sie abzubeißen. Aguaratunpa eilte ihnen nach. Zuerst erreichte er die Ameise. Er trat auf ihre Mitte. Darum sind alle Ameisen so schmal um den Leib. Dann nahm er die Zecke auf und trat mitten auf sie, so daß sie ganz platt wurde. Zuletzt bekam er den Floh und trat auf ihn, glitt aber aus, so daß er ihn seitwärts drückte. Darum sind alle Flöhe klein und zusammengedrückt. Tikitikiru überließ nun Aguaratunpa die Algarrobo, damit er sie selbst bewache. Er spannte seine Hängematte auf und legte sich zur Ruhe. An einem Zweig sah er noch eine Frucht, die die Diebe zurückgelassen hatten. Aguaratunpa rief nun den Wind herbei, und der schüttelte den Zweig, an welchem die Algarrobofrucht saß, so daß sie herunterfiel. Die Frucht fiel Aguaratunpa mitten ins Auge. Der Fuchsgott war nun tot.

Bald kamen alle Geier, um von Aguaratunpa zu essen. Sie schickten den Kolibri „Chinu", um ihren großen Häuptling, den weißen Kondor, Ururuti, zu holen, damit dieser von Aguaratunpa esse.

---

[1]) Wahrscheinlich eine Carambycide.

6:Nordenskiöld SF10 Chiriguano

„Hütet euch, er ist nicht tot, er stellt sich nur tot, um unsern großen Häuptling zu fangen," sagte einer der Geier, „Kara-kara".

„Gewiß ist er tot", sagte die Fliege „Mbéru" und kroch unter dem Schwanz des Fuchsgottes hinein und aus einem Nasenloch heraus, durch das andere hinein und so unter dem Schwanz wieder heraus.

„Er ist nicht tot", sagte Kara-kara.

„Er ist tot", sagte die Fliege und legte Eier in Aguaratunpas Augen, so daß sie voller Würmer waren. Als der weiße Kondor kam, näherte er sich Aguaratunpa, um zu essen.

„Hüte dich, er ist nicht tot", sagte der Geier.

„Er ist tot", sagte die Fliege und kroch wieder unter Aguaratunpas Schwanz hinein und durch das eine Nasenloch heraus, durch das andere hinein und dann unter dem Schwanze wieder heraus.

Der weiße Kondor begann nun von Aguaratunpa zu essen. Dieser fuhr nun auf, nahm ihn gefangen und band ihn mit einer Kette von Silber.

„Eine Herde Pferde will ich dir geben, wenn du mir die Freiheit schenkst", sagte der weiße Kondor.

„Ich habe so viele Pferde, daß ich nicht mehr brauche", sagte Aguaratunpa.

„Ich will dir große Felder geben, wenn du mir die Freiheit schenkst", sagte der weiße Kondor.

„Ich habe so viele Felder, daß ich nicht mehr brauche", sagte Aguaratunpa.

„Ich will dir meine beiden Töchter zu Frauen geben und ein Haus, in dem du wohnen kannst, wenn du mir die Freiheit schenkst", sagte der weiße Kondor.

„Ich brauche deine Töchter nicht, denn ich habe in allen Dörfern Frauen", sagte Aguaratunpa.

„Ich will ein ganzes Haus mit silbernen Schalen, ‚cagua', füllen und es dir geben, wenn du mir die Freiheit schenkst", sagte der weiße Kondor.

„Ich habe so viel Silber, wie ich brauche," sagte Aguaratunpa, „und ich habe dich gefangen, um dich zu töten. Kannst du mir aber den weißen Gummiball, ‚toki', schenken, damit ich damit spielen kann, so will ich dir die Freiheit schenken", sagte Aguaratunpa.

An eine lange silberne Kette gebunden, flog Ururuti, um den weißen Gummiball zu holen. Als Aguaratunpa ihn bekam, schenkte er dem weißen Kondor die Freiheit. Der Strauß, „Yándu", und die Fledermaus, „Andira", spielten Ball. Der eine warf den Ball, fing ihn mit dem Kopf auf und stieß ihn dem anderen zu, der ihn wieder mit dem Kopfe auffing und zurückstieß (vgl. S. 193). Als der Ball durch die Luft flog, fing der weiße Kondor ihn auf und verschwand. Aguaratunpa schickte nun einen Vogel, „Tavatan", um den schwarzen Gummiball zu holen, und das ganze Dorf spielte. Mit dem Strauß spielte Aguaratunpa. Mitten im Spiel tauschte er den Ball gegen einen Stein aus und warf ihn. Der Strauß fing ihn mit dem Kopf und fiel tot nieder. Als er wieder lebendig wurde, hatte er einen plattgedrückten Kopf, wie jetzt alle Strauße. Mit dem schwarzen Gummiball verschwand die Fledermaus.

Abb. 127. Tongefäß. Chiriguano. Caipipendi. 1/3.

Nun ist die Geschichte aus.

Tatutunpas und Aguaratunpas Verheiratung.

Sage, erzählt von dem Chanéindianer Agilera am Rio Parapiti.

Es wird erzählt, dort war einmal ein großer Häuptling, Chiquéri, und dort waren auch Tatutunpa und Aguaratunpa. Sie lebten alle weit, weit fort von hier. Am weitesten wohnte der große Häuptling. Dieser hatte Tatutunpa kommen lassen, um ihm seine Tochter zur Frau zu geben. Tatutunpa kannte viele Künste und Aguaratunpa kannte auch viele Künste.

6:Nordenskiöld SF10 Chiriguano

Tatutunpa machte sich auf den Weg. Er ging ganz langsam und wartete an vielen Stellen. Wo er Feuer anmachte, wuchs hohes Gras. Zwei bis drei Tage, nachdem Tatutunpa sein Haus verlassen hatte, kam Aguaratunpa und fragte, wohin Tatutunpa gegangen sei. Man sagte ihm, Tatutunpa sei zu dem großen Häuptling gegangen. Aguaratunpa folgte ihm nun und traf ihn nicht weit davon. Bevor sie ankamen, fanden sie eine Pflanze namens „ihuahuasu"[1]) am Wege. Aguaratunpa sagte zu Tatutunpa, er solle die Früchte abpflücken, damit sie sie essen könnten. Er ging in den Wald unter die Pflanze. Bevor noch Tatutunpa eine der Früchte hatte berühren können, schüttelte Aguaratunpa die Pflanze, so daß alle Früchte auf Tatutunpa fielen. Dieser, der jung und hübsch war, wurde nun einäugig und alt. Nun war Aguaratunpa der jüngere und schönere von beiden. Sie setzten nun ihren Weg zu dem großen Häuptling fort. Tatutunpa hatte eine Halskette, die Aguaratunpa ihm, bevor sie ankamen, abgelockt hatte.

Der große Häuptling glaubte, Tatutunpa, der alt und häßlich war, sei Aguaratunpa und dieser Tatutunpa. Er gab dem ersteren seine schönste Tochter zur Frau und dem letzteren gab er eine seiner allerhäßlichsten, die auch einäugig, wie er, war.

Aguaratunpa begann zu arbeiten, um den Acker zu roden und zu säen. Während er arbeitete, band er sein langes Haar auf. Als er von der Arbeit kam, war er ganz schmutzig. Tatutunpa tat nichts. Er lag den ganzen Tag neben seiner Frau und flötete auf einer runden Holzpfeife (Abb. 80). Als seine Schwiegermutter sah, daß er nicht arbeitete, sagte sie: „Dieser Mann denkt gar nicht an seine Familie."

Da er dies hörte und wußte, daß Aguaratunpa schon viel gearbeitet hatte, fragte er seine Frau, ob ihr Vater keinen alten Acker habe, den er bebauen könne. Die Schwiegermutter sagte da zu ihrer Tochter: „Warum fragt jener Mann

[1]) Vgl. S. 51.

nach einem Acker, er, der so faul ist. Besser wäre es, wenn Aguaratunpa, der arbeitet, danach fragte."

Tatutunpa ging mit seinem Stock und seiner Frau nach dem alten Acker des Häuptlings. Er ging auf den großen, wüsten Acker, grub ein wenig Erde auf, hob einen Erdklumpen auf und warf ihn in die Luft. Der Erdklumpen fiel zur Erde und zerbröckelte in viele Stücke. „Diese Erde ist nichts wert", sagte er und fragte seine Frau, ob nicht irgendwo eine große Ebene sei, die er bebauen könnte. Sie sagte, es gäbe eine große Ebene. Sie begaben sich dorthin und gingen mitten auf die Ebene. Tatutunpa grub ein wenig Erde auf, warf wieder einen Erdklumpen in die Luft, dieser ging aber nicht entzwei, sondern fiel ganz nieder. Er sagte zu seiner Frau, diese Erde lasse sich sehr gut bearbeiten. Sie gingen nach Hause.

Am anderen Morgen begab sich der alte Tatutunpa mit seinem Spaten nach der Ebene, wo er ein wenig gegraben hatte, und steckte ihn in den Boden. In ganz kurzer Zeit wurde die ganze große Ebene ganz allein von dem Spaten gereinigt. Tatutunpa rief nun den Wind herbei, der mit großer Stärke kam und alles schlechte Zeug wegblies. Nur das Allerfeinste war stehen geblieben. Hierauf rief er den Wirbelwind, der den Acker ganz frei fegte. Tatutunpa bat die Papageien um Samen, sie kamen aber mit untauglichen Samenkörnern, die alle entzwei waren. Als er sah, daß diese Samen nichts taugten, bat er die Enten und Tauben und die ganz kleinen Tauben, sie möchten mit allerlei Samen kommen, und diese taten es auch. Sie säeten sogar selbst. Als die Saat beendet war, begab sich Tatutunpa auf dem Wege, der nach seinem Hause führte, heim. Er war noch nicht weit gekommen, da drehte er sich um, um nach seinem Acker zu sehen. Er sah, daß die Pflanzen schon zu keimen begannen. Wieder ging er ein Stück und wendete sich wieder um, um nach seinem Acker zu sehen. Die Pflanzen waren schon groß. Wieder ging er weiter und drehte sich wieder um. Da fand er seinen Acker schon in Blüte. In der Nähe seines Hauses

6:Nordenskiold SF10 Chiriguano

wandte sich Tatutunpa wieder um, um nach seinem Acker zu sehen, und fand, daß alles, was er gesäet hatte, schon reife Früchte trug.

Bei Aguaratunpa, der so fleißig gearbeitet hatte, war noch nichts reif oder in Blüte.

Am folgenden Tage sagte Tatutunpa zu seiner Frau: „Wir wollen gehen, um nach unserem Acker zu sehen. Sie gingen nach dem Acker und die Frau sah, daß alle Früchte reif waren. Tatutunpa gebot ihr, ein Feuer anzumachen, um Mais und alle anderen Früchte zu rösten. Er sagte ihr, sie solle einen Maiskolben, zwei Bohnen und einen Kürbis ausgraben, aber nicht mehr. Nicht einmal dies vermochten sie aufzuessen.

Danach gingen sie nach Hause und sagten zu der Alten, sie solle mit ihnen kommen und alles abernten, was sie zu essen wünsche. Die Alte glaubte ihnen nicht, sondern glaubte, sie hätten gestohlen. Sie konnte nicht glauben, daß sie etwas zu ernten hätten, da sie nicht gearbeitet hatten. „Ich gehe lieber zu meiner anderen Tochter, die fleißig gearbeitet hat", sagte die Alte.

Aguaratunpa begab sich nun zu Tatutunpas Acker und stahl Kürbisse, die er nach seiner Anpflanzung brachte. Mit Stäbchen und Dornen befestigte er die Kürbisse an den halbgewachsenen Kürbisstengeln. In der Dämmerung kehrte er heim und sagte zu seiner Frau, sie solle ihre Mutter bitten, in seinem Acker Kürbisse zu ernten. Die Tochter ging zu ihrer Mutter und sagte: „Wir wollen nach dem Acker gehen, um Kürbisse zu holen." Vergnügt machte die Alte sich auf den Weg, denn sie hatte gesehen, daß sie viel gearbeitet hatten, und sie glaubte ihrer Tochter. Sie gingen, fanden aber nicht mehr Kürbisse, als wie sie in einer Getreideschwinge einernten konnten.

Am folgenden Tage bat wieder Tatutunpas Frau ihre Mutter, mit aufs Feld zu kommen. Die Alte glaubte ihr gar nicht, als aber der Alte, ihr Mann, sah, daß sie so hartnäckig waren, befahl er ihr, zu gehen. Ärgerlich machte sich die Alte

auf den Weg. Tatutunpa ging vor ihr, auf seiner Pfeife flötend. Als sie auf den Acker kamen, sah die Alte, daß er voll von allerlei Früchten, Mais, Kürbissen, Bohnen und Kalebassen war. Die Alte wurde richtig vergnügt, sie konnte ihre Freude kaum mäßigen.

Als sie nach dem Ackerrain kam, sah sie eine gewaltige Kalebasse und sagte zu ihrer Tochter, diese wünsche sie für sich. Während sie plauderten, fiel die Kalebasse auf die Alte, diese fiel hin und konnte sich infolge der schweren Kalebasse, die sie drückte, kaum bewegen. Die Tochter kam ihr zu Hilfe und versuchte die Kalebasse zu heben, sie vermochte es aber nicht. Sie rief ihrem Manne zu, er solle kommen und ihr helfen. Dieser blieb jedoch eine lange Weile fort, und erst als die Alte dem Tode nahe war, kam er, hob die Kalebasse auf und setzte sie wieder an ihrem alten Platze fest. Die halbtote Alte hob er auf.

Als sie sich nach einem Weilchen erholt hatte, sahen sie sich weiter den Acker an. Die Alte wollte einen Maiskolben abbrechen. Tatutunpa sagte ihr, sie solle seinen Acker schonen und nur den Kolben abbrechen. Sie erntete nun zwei Maiskolben und zwei von allen anderen Früchten, ohne etwas zu zerstören. Alles, was sie abgeerntet hatte, setzte sofort wieder reife Früchte an. Mit den Früchten beladen, ging sie nach Hause. Sie erzählte ihrem Manne, daß Tatutunpa schon einen großen Acker habe. „Das ist somit der Tatutunpa, den wir haben kommen lassen", sagte der Alte. Aguaratunpa hat uns betrogen."

Am folgenden Tag sagte Tatutunpa zu seiner Frau: „Wir wollen nach unserem Acker gehen." Sie gingen dorthin. Er grub nun ein Loch, in welchem er ein Feuer machte. Als das Loch richtig warm, richtig rot war, nahm er eine sehr große Kalebasse und kroch in dieselbe hinein. Er bat seine Frau, die Kalebasse zuzustopfen, in die warme Grube zu legen und die Kalebasse, wenn er pfeife, umzudrehen, damit er hinaus könne. Die Frau tat so, wie er gesagt hatte. Als er pfiff, drehte sie die Kalebasse um und Tatutunpa kam

heraus, schön und jung, mit allen seinen alten Schmucksachen geschmückt.

Nach einem Weilchen wärmte Tatutunpa die Grube wieder und seine Frau kroch in die Kalebasse. Er bedeckte diese und warf sie in die Grube. Als sie pfiff, drehte er die Kalebasse um. Jung und schön kam sie aus derselben.

Sie kehrten nach Hause zurück und nahmen ein Quebrachostäbchen mit, um damit Feuer anzumachen. Als sie nach Hause kamen, war die Alte mit dem Brauen von Maisbier beschäftigt.

„In dieser Nacht wird es sehr kalt und deshalb habe ich dieses Stäbchen mitgenommen, damit wir etwas haben, woran wir uns wärmen können", sagte Tatutunpa. Aguaratunpa hatte viel „Tartago"-Holz mit nach Hause genommen, es reichte aber nicht die ganze Nacht. Mitten in der Nacht war das Holz zu Ende. Er ging zur Feuerstätte seiner Schwiegermutter, die beim Maisbierkochen war. Als die Alte sah, daß ein Fuchs sich zu ihrem Feuer schlich, steckte sie ein Stück Holz in Aguaratunpas Hinteren. Mit dem Holz im Hinteren sprang er davon, für immer in einen Fuchs verwandelt.

Die Entstehung der Arbeit.

Erzählt von dem Chanéindianer Batirayu.

Tatutunpa hatte einen Zauberspaten. Stellte man ihn des Abends in den Acker, so war der Acker am Morgen fertig gegraben. Aguaratunpa kam eines Tages in Gesellschaft seiner beiden Brüder zu Tatutunpa. „Wir wollen um deinen Spaten spielen", sagte er. „Wenn es blitzt, wollen wir in den Blitz sehen, und derjenige, der nicht blinzelt, gewinnt den Spaten. Darauf ging Tatutunpa ein.

Aguaratunpa lieh sich nun die Augen der Heuschrecke „Tu-ku", die keine Augenlider hat, Tatutunpa und Aguaratunpa setzten sich und stierten nach dem Himmel. Als es blitzte, blinzelte Tatutunpa, aber nicht Aguaratunpa, der die Augen der Heuschrecke hatte. Er hatte den Spaten gewonnen. Als er ging, nahm er gleichwohl nicht den Spaten,

6:Nordenskiold SF10 Chiriguano

der selbst grub, mit, sondern einen gewöhnlichen hölzernen Spaten.

„Nehme ich den Spaten mit dem hohlen Stiel, so können auch die Faulen Mais bauen, mit dem hier aber muß man arbeiten, um Mais für seine Familie zu schaffen", sagte Aguaratunpa zu seinen Brüdern.

Der Heuschrecke gab Aguaratunpa die geliehenen Augen zurück.

Wie Aguaratunpa seinen Bruder nach dem Himmelsgewölbe schickte.

Erzählt von dem Chanéindianer Batirayu.

Aguaratunpa lebte mit seinem Bruder zusammen. In einem Korb hatte er zwei kleine Papageien. Eines Tages flogen sie nach einem Acker, wo sie Mais aßen. Als sie nach Hause kamen, hatte der eine Maismehl um den Schnabel: „Woher hast du das?" fragte Aguaratunpa. „Von einem Acker weit hinten, wo die Sonne untergeht", sagten die Papageien.

Am folgenden Tag schickte Aguaratunpa die Papageien fort. Wohin sie flogen, dahin folgte er ihnen. Als er hinkam, brach er Mais ab. Da kam der Besitzer des Ackers und sah, daß jemand Mais gestohlen hatte. Aguaratunpa verbarg sich, der Besitzer fand ihn aber, da er sich, als er den Mais abbrechen wollte, in Hände und Füße geschnitten und überall Blutspuren hinterlassen hatte.

Der Besitzer sagte zu Aguaratunpa: „Warum hast du mir Mais gestohlen, hättest du mich darum gebeten, hätte ich ihn dir gegeben." Er brach viele Maiskolben ab und belud Aguaratunpa damit, der sie nach Hause brachte. Er legte sie neben die Tür.

Als er am folgenden Morgen erwachte, hatte der kleine Haufen sich in einen großen verwandelt, der bis an das Dach reichte.

Aguaratunpas Bruder fragte ihn, woher er den Mais habe. „Es ist weit weg," sagte Aguaratunpa. „Es gibt keinen Weg, und du kannst nicht hinfinden."

6:Nordenskiold SF10 Chiriguano

Der Bruder machte sich aber doch auf den Weg und kam an den Acker, wo er „anday"[1]) fand, von dem er aß. Dieser war vergiftet, und er starb. Tot fand Aguaratunpa ihn. Er sagte, er wolle ihn wieder lebendig machen. Aguaratunpa nahm eine Pflanze, „ihuahuasu". Mit dieser schlug er ihn. Er sprang über ihn, erst gerade über den Körper, dann vom Kopf bis zum Schwanz.

Der Bruder wurde wieder lebendig und sagte: „Ich habe lange geschlafen." — „Du hast nicht geschlafen, du bist tot gewesen", sagte Aguaratunpa. Dieser schickte den Bruder zum Himmel.[2]) Wenn es donnert, dann geht der Bruder Aguaratunpas spazieren.

Über den Sohn von Tatutunpa und wie er seine Mutter gerettet hat.

Erzählt von dem Chiriguanoindianer Yambási am Rio Grande.

In einem Hause war ein Mädchen Inómu, das niemals einen Mann gehabt hatte. Vor dem Hause war ein großes Trinkgelage. Dort waren Aguaratunpa, Tatutunpa und Dyori. Die Eltern des Mädchens nahmen sie mit und setzten sie da auf den Boden, wo man mit Maisbiertrinken beschäftigt war. Aguaratunpa fand, daß Inómu sehr hübsch sei. Das fand auch Tatutunpa. „Ich werde das Mädchen schwanger machen", sagte er und begann zu graben. Aguaratunpa stellte sich davor. Tatutunpa grub sich in die Erde und unter dem Mädchen hinauf.[3]) Als Tatutunpa geendet hatte, kroch er wieder heraus und erzählte Aguaratunpa, was er getan.

„Ich will auch versuchen", sagte Aguaratunpa und kroch in den Gang hinein. Er war nicht weit gekommen, da blieb er stecken. Tatutunpa packte ihn am Schwanz und zog ihn heraus.

---

[1]) Kürbis einer wohlschmeckenden Art.
[2]) Ara = Himmelsgewölbe, Weltraum.
[3]) Gemildert.

6:Nordenskiold SF10 Chiriguano

Als das Mädchen nach Hause kam, rief ein Vogel „Araqua", daß sie schwanger sei. Am folgenden Tage wurde sie groß. Sie war hochschwanger. Ihre Mutter war erbittert. Sie sagte, sie wolle weit fort zum Vater gehen und gebären. Inómu ging zur Höhle Tatutunpas und warf das Kind hinein, ohne ihm Milch zu geben. Das Kind schrie täglich, und die Mutter sah nach ihm, wenn sie aber kam, kroch es in die Höhle. Eines Tages kam „Yahuéte", der Jaguar mit zwei Köpfen, von denen der eine trocken war, riß ihr die Augen aus und führte sie lebend fort.

Der Großvater ging nun aus, um den kleinen Tatutunpa zu fangen, indem er ein Netz vor die Höhle legte, in welchem dieser sich fing. Er führte ihn nach Hause. Dort wuchs er schnell und begann groß zu werden. Er wurde mit Honig großgezogen. Eine Tages verlangte der kleine Tatutunpa Pfeil und Bogen. Der Großvater machte ihm einen Pfeil mit einer stumpfen Spitze aus Wachs. Mit dem ging er aus und jagte. Wenn er den Stamm traf, fielen alle Tauben tot herunter. Es war eine große Masse. Als Tututunpa nach Hause kam, fragte der Großvater, wie er so viele Tauben habe töten können, und da erzählte er, wie es zugegangen war. Auf dieselbe Weise tötete er viele Vögel. Eines Tages sah er fünf Araquavögel auf einem Baum. Tatutunpa schoß nach dem Baum, aber nur vier fielen herunter. Der fünfte sagte: „Du tätest besser, deine Mutter zu suchen, als Vögel zu schießen."

Als Tatutunpa nach Hause kam, bat er den Großvater, ihm eine Keule aus „Huirapucu[1]) zu schaffen. Er schlug mit ihr gegen einen dicken Baumstamm, mußte aber zweimal schlagen, um den Stamm abzubekommen. Tatutunpa sagte da zu dem Großvater, sie tauge nichts, und verlangte eine Keule aus „Urundey".[2]) Er schlug mit ihr gegen einen dicken Baumstamm und schlug den Stamm mit einem Schlage ab. „Diese ist gut", sagte Tatutunpa.

[1]) Huirapucu ist ein weiches Holz (Salix Humboldtiana).

[2]) „Urundey" ist rotes Quebracho oder nahestehend.

In Begleitung Dyoris machte sich Tatutunpa auf den Weg. Auf dem Wege tötete er einen Tapir. Dyori[1]) teilte ihn in vier Teile und fraß ihn auf. Sogar das Blut leckte er vom Boden auf.

Tatutunpa fand die Mutter blind im Walde. Sie bat ihn, die Jaguare zu töten, die sie gefangen hielten. „Sie kommen zur Tränke, um zu trinken", sagte sie.

Tatutunpa machte sich einen kleinen Schuppen, in welchem er sich verborgen hielt. Dyori versteckte sich hinter ihm. Zuerst kam „Embaracaya"[2]) mit ihrer Beute. Mit einem Schlage zertrümmerte Tatutunpa ihren Kopf und warf sie und ihre Beute Dyori hin, der alles auffraß. Auf dieselbe Weise tötete er „Yahuapinta"[3]) und die anderen Katzentiere. Er warf sie Dyori hin, der sie alle auffraß. Zuletzt kam Yahuéte, der zwei Köpfe hatte. Er bat Inómu um Wasser. Yahuéte trug einen Tapir, den er getötet hatte. Inómu wies ihn zur Tränke.

„Nein, gib mir hier Wasser, es hält sich jemand an der Quelle verborgen", sagte Yahuéte.

„Nein, es ist niemand da, und wie soll ich, die ich blind bin, Wasser holen können, ich falle ja", sagte Inómu.

Yahuéte ging zur Tränke. Als er dorthin kam, schlug Tatutunpa mit der Keule, um ihn zu töten, traf aber nur den trocknen Kopf und Yahuéte sprang davon. Tatutunpa folgte ihm. Als Yahuéte sich verfolgt sah, verbarg er sich unter dem „tiru" (S. 200 erwähnte Frauentracht) des Mondes.

„Wo ist Yahuéte?" fragte Tatupunta.

„Das weiß ich nicht", antwortete die Frau (d. h. der Mond). Das war die erste Lüge.

„Er ist unter deiner ‚tiru' verborgen", sagte Tatutunpa und ging weiter.

Der Mond rief ihm da nach. „Yahuéte frißt mich auf."

---

[1]) Dyori wird immer als der Unersättliche geschildert. Er entspricht dem Móconomóco in den Sagen von Mojos.

[2]) Eine große Wildkatze.

[3]) Puma (Felis concolor).

6:Nordenskiold SF10 Chiriguano

Tatutupa ging zurück, um ihm zu helfen. Er sagte da, es sei nicht wahr. Tatutupa ging wieder weiter. Er rief nun wieder: „Yahoite frißt mich auf." Als Tatutupa zurückkam, sagte er, es sei unwahr. Tatutupa ging wieder weiter. Wieder rief der Mond, Yahoite wolle ihn auffressen. Tatutupa kehrte aber nicht mehr zurück. Nun war Yahoite wirklich im Begriff, ihn zu fressen.

Als Tatutupa zu seiner Mutter zurückkehrte, sagte er, er werde dafür sorgen, daß sie wieder sehen könne. Aus Taubenschmutz und Ton machte er Augen und setzte sie in ihre leeren Augenhöhlen. Inimu rieb sich die Augen, öffnete sie und konnte wieder sehen. Tatutupa führte nun seine Mutter nach Hause.

Batiraya hat mir dieselbe Sage mit einer langen Einleitung erzählt, die in Yambáis Erzählung fehlt. Diese Einleitung will ich hier wiedergeben.

Es war einmal ein großes Trinkgelage. Dort waren viele Vögel versammelt. Der Häuptling befahl Aguaratupa, ein Mädchen Inimu, die in einem Nachbardorfe war, zu holen, damit sie auch mit ihnen trinke. Aguaratupa ging. Als er ins Haus des Mädchens kam, traf er ihren Vater.

„Guten Tag, Onkel", sagte Aguaratupa.

„Setze dich", sagte der Vater.

„Nein, ich bin gekommen, um meine Nichte zu holen," sagte Aguaratupa. Er fragte nun, ob das Mädchen mit ihm gehen wolle, was es bejahte. Das Mädchen machte sich fein, nahm seine Halskette um, zog seinen besten „tiru" an und folgte Aguaratupa.

Als sie eine Strecke Weges gegangen waren, sagte das Mädchen: „Warum soll ich mit dir gehen, der du so häßlich bist", und so kehrte sie um. Als Aguaratupa ankam, fragte der Häuptling ihn, wie es gegangen sei. Er erzählte nun, daß das Mädchen umgekehrt sei.

„Urapua" (der schwarze Aasgeier) erbot sich, das Mädchen zu holen. Urapua machte sich auf den Weg. Als er ins Haus des Mädchens kam, sagte er:

6:Nordenskiold SF10 Chiriguano

„Guten Tag, Onkel."

„Nimm Platz", sagte der Vater.

„Nein, ich bin gekommen, um meine Nichte zu holen, sie soll mir helfen Maisbier zu trinken", sagte Urapua. Er fragte das Mädchen, ob es mitgehen wolle. Sie erklärte sich einverstanden und machte sich in Ordnung. Als sie halbwegs gekommen waren, sagte das Mädchen: „Warum soll ich mit dir gehen, der du so häßlich bist." Sie kehrte nach Hause zurück.

Als Urapua ankam, fragte der Häuptling, wie es ihm ergangen sei. Er erzählte, das Mädchen sei umgekehrt.

„Tin" erbot sich zu gehen. Als er in das Haus des Mädchens kam, sagte er:

„Guten Tag, Onkel."

„Nimm Platz", sagte der Vater.

„Nein, ich bin gekommen, um meine Nichte zu holen, sie soll mir helfen Maisbier zu trinken", sagte Tin. Er fragte das Mädchen, ob es mitgehen wolle. Als sie ein gutes Stück Weges gekommen waren, sagte das Mädchen: „Warum soll ich mit dir gehen, der du so häßlich bist", und so ging sie wieder nach Hause.

Da erbot sich „Chow" zu gehen. Als er ankam, ging er direkt zum Mädchen und fragte sie, ob sie mit ihm kommen und ihm helfen wolle, Maisbier zu trinken. Das Mädchen gab ihm eine Kalebassschale Maisbier und war bereit, ihm zu folgen. Sie gingen. Als sie ganz nahe dem Dorfe waren, wo ein großes Trinkgelage war, sagte das Mädchen, es wolle nicht mit ihm gehen, er habe so schwarze Beine, und kehrte um.

Als er ankam, fragte der Häuptling, wie es ihm ergangen sei. Er erzählte, daß das Mädchen umgekehrt sei. Alle die übrigen Vögel versuchten, aber mit keinem wollte das Mädchen gehen. Zuletzt ging „Chorincui".
